which will unite the hopes and the good will of men toward the establishment of world peace. Pope Pius XII put the matter lainly in more than one allocution: "The Catholic doctrine on the state and civil society has always been based on the principle that in keeping with the will of God the hations form together a community with a common aim and common duties."

Today we welcome to our plenary con-

Vocation a statesman of historic importance who has been a leader in the first successful attempt to express in charter and constitutions and in the practical agenda of delibration and goverance this last best hope of world beace.

General Romulo has participated in every session of the United Nations since its inception in San Francisco in 1945. He has served with wisdom and courage as President of the General Assembly, and twice as President of the Security Council. Elected secretary-General by a nearly unanimous vote, he was vetoed by the Soviet Union.

Originally a newspaperman, whose honest its perceptive reporting earned him a Puller prize in 1942, he was aide to General MacArthur at Bataan and Corregidor, and returned to the Philippines in the battle of Leyte. Since then he has been his country's leading diplomat, a voice that is heard and understood not only by the West but by all nationalities and estates of Asia. He has been one of the builders of the house of peace in our time, an eloquent spokesman in Washington for his country and in the East the best friend the United States has.

Wherefore the president and trustees of Boston College, empowered thereto by the supreme authority in the Commonwealth of Massachusetts, have summoned Carlos P, Romulo into the circle of the honorary doctors of the university, and now joyfully proclaim him doctor of laws, honoris causa.

The New York Medical College, for the first time in its history of 100 years, conferred an honorary degree, doctor of human letters, and chose General Romulo for such a distinction with this citation:

Gen. Carlos P. Romulo, author, educator, statesman, soldier, you have made the world a better place by your distinguished leadership in the battle for freedom for all men.

By pen, by word, and by sword you have helped to widen the areas of respect for the individual; you have struggled to create the essential climate in which men of science and knowledge can work for the good of mankind; you have fought oppression and tyranny; you have labored for the dissemination of knowledge; you have sought to broaden educational opportunities for all; and by your courage, ideals and statesmanship you have brought about a deeper understanding between nations.

All men of learning and science salute your life's work and the principles upon which it is founded.

In recognition of your achievement, the trustees and faculty of New York Medical College Flower and Fifth Avenue Hospitals are privileged to confer upon you pro causa honoris et pro merito the honorary degree of doctor of human letters.

Senator Theodore F. Green, of Rhode Island, distinguished alumnus of Brown University, in introducing General Romulo to the alumni and graduates of Brown University, delivered the following address:

The privilege of presenting the principal speaker of the evening has been granted to me and I am very happy to welcome to Brown University, as an honored guest, a personal friend and a stanch friend and ally of the United States, Ambassador Carlos P. Romulo.

Early in life, as a high school student, he demonstrated his oratorical skill and his dedication to the struggle for freedom by delivering an impassioned speech entitled "My Faith in America," and when the judges of the contest announced him as the winner his father said, "You know what this means, Carlos. It means the university in the United States for you. Your mother and I are proud."

Since then we all have become proud of the magnificent achievements which have been accomplished by Carlos Romulo as, in turn, a student, newspaperman, editor, author, lecturer, soldier, and diplomat.

He was graduated from the University of the Philippines with a bachelor of arts degree and, at Columbia University, which he attended as a reward for winning the oratorical contest, he earned a master of arts degree.

Returning to his home in the Philippines, he became an assistant professor of English at the university and, later, head of its English department. Coincidentally, he was gaining fame as a newspaperman and editor for Manila newspapers and as a director of Manila radio stations.

His great interest in the relations between these United States and the Philippines was further stimulated by increasing threats of Japanese domination in the Far East, which occasioned his making in 1941 an extensive tour of the countries neighboring the Philippines. The reports which he sent out from those countries warning of the dangers of a Japanese invasion and of the general apathy, won for him the 1941 Pulitzer prize and great respect for his distinguished correspondence.

After Pearl Harbor he was inducted into the U.S. Army as a major. The assignment given to him by Gen. Douglas MacArthur was to serve as press agent and keep all Filipinos informed of the progress of the war. His untiring and loyal service throughout World War II resulted in his promotion to the rank of brigadier general.

He witnessed the occupation of his beloved homeland by the Japanese and became known as the last man to leave Bataan. Not only did he witness destruction and horror in his country, but he also suffered prolonged separation from his wife and four sons witnout the comforting knowledge that they continued alive and free, until the return of General MacArthur to the Philippines and the liberation of the islands reunited the family.

In 1945, General Romulo returned to the United States as chief of the Philippine mission here and continued to work for Philippine independence and for a world organization to make and maintain the peace.

He led the Philippine delegation to the first session of the United Nations Assembly in London in 1948 and continued to add to his great prestige and influence at subsequent sessions there. He was elected President of the Fourth General Assembly in 1949 by a vote of 53 to 5. This surprised nobody because he was not only an important world leader, but also a genial and friendly member of the assembly. Philippine President Elpidio Quirino made him Secretary of Foreign Affairs in 1950 and for the following 2 years, General Romulo devoted his full time to fighting communism in his own country.

in his own country.

He supported Ramon Magsaysay in his candidacy for the presidency and when the latter was elected in 1953, Romulo was sent back to Washington as the president's personal representative and later was appointed Philippine Ambassador to the United States, in which post, I am glad to say, he continues today.

At every opportunity he has written and spoken eloquently and powerfully of his love for and faith in the United States of America and the Philippines, and also of his fear and hatred of colonialism, communism and militarism.

He is the author of several widely acclaimed books including "I Saw the Fall of the Philippines," "I See the Philippines Rise," "Crusade In Asia," "The Meaning of Bandung." "The Magsaysay Story," and other books which reveal his deep understanding of and passion for finding solutions of the problems not only of the Far East but also of other parts of the world.

Ambassador Romulo has been awarded degrees by 35 universities including Harvard, Temple, Notre Dame, and Boston College. He was nominated for the Nobel Peace Prize in 1951 and 1953. More recently, the Freedoms Foundation of Valley Forge honored him with the Freedom Leadership Award for 1958.

For several years it has been my pleasure to know Carlos Romulo personally. I have met with him at the Philippine Embassy, at sessions of the House of Representatives while he was a Delegate from the Philippines, and at sessions of the United Nations General Assembly. With each year of our friendship, my respect and affection for him has continued to grow.

Soldier, diplomat, scholar, and author, Ambassador Romulo embodies the essence of each of those great professions. And, furthermore, he possesses the ability to express his experiences and his philosophy of freedom and tolerance.

So, it is an especial satisfaction to me to present to you, my fellow Brown alumni, the voice of freedom, the Honorable Carlos P. Romulo, Philippine Ambassador to the United States.

Mr. Speaker, I wish to commend for the careful perusal of the Members of the House, two of the commencement addresses delivered by General Romulo. The one he delivered on the campus of Boston College was highly praised by the Boston newspapers. It is seldom that we hear a good word for what America has done for the world. General Romulo analyzes the Marshall aid plan 10 years after its operation in Europe and makes a substantive discussion of how it contained communism in a critical period.

In his address before the New York Medical College he takes another view of the American people, a singular view these days when we hear of nothing but derogatory statements criticizing everything that we do. For this analytical observer of the American scene presents to the world the spiritual American, and it is inspiring and heartwarming to hear such words from one who has not hesitated in the past to tell us frankly our weaknesses and yet can also see our virtues and project them to other peoples with such convincing eloquence.

I include these two remarkable addresses in my remarks as follows:

EXCERPTS OF COMMENCEMENT ADDRESS DELIV-ERED BY GEN. CARLOS P. ROMULO, FORMER PRESIDENT OF THE FOURTH GENERAL AS-SEMBLY OF THE UNITED NATIONS, UPON RE-CEIVING THE DEGREE OF DOCTOR OF LAWS HONORIS CAUSA, FROM BOSTON COLLEGE, JUNE 8, 1959

The proposed shift in emphasis from military to economic aid that we hear nowadays in Washington is of great interest to us in Asia. We recall the Marshall aid plan which provided a solid foundation for the entire security structure in Western Europe and its conception must be counted as one of the great creative acts of statesmanship in our time.

To my mind, this was indeed its principal merit: that it was a great creative act. It conceived of security as a positive, not a negative, function; a problem not merely of military defense but of the revival of the real source of the strength and stability of nations—economic health, political stability, moral integrity, and above all, freedom.

After more than a decade we can look back and really appreciate what is accomplished. For the Marshall plan channeled a substantial portion of the wealth and power of the United States into a constructive enterprise of noble scope and purpose; nothing less than the economic rehabilitation of an entire community of nations to the end that they might be strengthened sufficiently together to preserve and safeguard their own cherished liberties. International communism has tried very hard but it has so far falled to produce anything to match this inspiring spectacle of the mightiest Nation on earth unselfishly expending

so much of its substance to help other nations to remain free. No amount of hostile propagands can cancel the massive infusion of strength which the Marshall plan has given to the countries of the Atlantic alliance, nor its tremendous effect upon governments and peoples elsewhere as a shining example of the generous spirit which imbues the foreign policy of the leading power of the free world.

Back of the plan, of course, was the fresh realization that the four freedoms could no longer be preserved or defended piecemeal. They were in truth, in the most literal sense, indivisible. Freedom of speech and of the press, freedom from want, freedom of worship—each was meaningless without the others. It was inevitable, therefore that the problem of achieving security for the free nations of Europe should involve also the task of creating or reestablishing the economic, social, and political conditions under which all of these freedoms could flourish. Military power was important, but it was not enough. For the Communist threat was not confined to the military sphere alone, it was also economic, political, moral—a total challenge to the democratic way of life.

So it has been in Europe; so it is in Asia, in the Middle East, in the Far East, in the Philippines, all over the globe. It is an inescapable fact that right now the danger of armed aggression is the main preoccupation of the big powers in Geneva. Consequently, their major effort is concerned with alliances, rearmament, the building up of military strength. They are seeking in power, freedom from one kind of fear-from the fear of attack and of possible subjuga-tion. The strengthening, the defense of the other freedoms is being temporarily subordinated to the overriding need for security from potential aggression. To a certain extent, even freedom from want is being held in abeyance in favor of the requirements of military preparedness.

The true nature of the challenge and the all-embracing scope of the struggle should not be lost sight of. It should not be forgotten that, in the final analysis, it is not only the safety of the nations but also the essential dignity and the inalienable rights of every man that are at stake. Is man but the creature of an all-powerful state, to be directed, used and disposed of according to the will of a government whose powers are not derived from the consent of the governed; or is he endowed with certain rights and freedoms of which no one, not even the state, can deprive him without just cause? This is the ultimate issue, and the free world must not forget or ignore it. For hardly a day passes without some new evidence, some grim reminder that many of these rights and freedoms are under ruthless and systematic attack on the other side of the Iron Curtain. Man's memory is short and it is good to recall specific cases:

Over there, freedom of speech and of the press is a mockery. Has the American public forgotten the case of William Oatis?

Freedom from fear is an illusion where there is no security of person, no sanctity of domicile, no fair trial and due process of law. Have the Americans forgotten the case of Fred Voegler? Ask him; he knows.

Freedom of conscience, of thought, and of worship are not only nonexistent. Whoever upholds them is tortured, terrorized, ostracized, liquidated. Have we Catholics and has the world forgotten the case of Cardinal Mindzenty? Ask him, the virtual prisoner that he is languishing away in an embassy room.

Freedom to live a life of one's own choice, freedom to live in dignity on a sovereign people has been ruthlessly destroyed by Soviet tanks and Communist troops—ask the Hungarian freedom fighters and the Dalai Lama and the hapless people of Tibet.

These are among the famous, the celebrated cases. Less well known but perhape even more significant is the flight of hur dreds of obscure, ordinary people from Eastern to Western Europe, from North to Sous Vietnam, from Tibet to India, men as women seeking asylum from persecution, trying desperately to escape the intolerable burden of slave labor, or hoping merely breathe the air of freedom again, and to fee think, speak and worship as their conscient moves them. They flee in an irregular by continuous stream—it is an exodus, and the direction is toward freedom.

It may be a comparatively easy matter if the free nations of the world in which the seek asylum and new homes to satisfy the expectations of these refugees from total tarian despotism. The real test is for the nations to fulfill the highest hopes of the own peoples that their essential rights a freedoms will not only be respected approtected but constantly advanced to constantly advanced

This challenge the peoples of the free wormust accept and overcome if they are have real security and the strength to provide the form and from any direction. We are holing in Asia, in the Philippines, in the East that in this new developing trend more stress on economic aid and less on military that is currently being discussed your Congress, that the same creative that inspired the Marshall aid plan magain be formulated with such changes course as are dictated by new condition characteristics of the areas to which it to be applied.

EXCERPTS OF ADDRESS DELIVERED BY GE CARLOS P. ROMULO, PHILIPPINE AMBASSAN TO THE UNITED STATES, BEFORE THE 185 GRADUATES OF THE NEW YORK MEDICAL COL LEGE, JUNE 9, 1959

To be a world leader such as America, today and as England was yesterday, is to like a lightning rod; it is to attract all jealousy, envy, hatred of a divided world is to be unappreciated, disliked, misrepresented and traduced.

It is not surprising therefore that America should be presented with various faces: "Ugly American" in Southeast Asia, the hiding American in Bolivia, the uncertain American in the Middle East, the uncouth American in England, the bungling American whoever happens to be in the minority part in Washington.

As I address the graduates of 1959, you men and women who are about to face a undertake their responsibilities as citizens a free nation, it seems to me most appropriate to enjoin them that it is their duty project to the world the American that little known, the America that has been suffered since she became a world leader, the merged since she became a world leader, the abundance and your atom bomb.

abundance and your atom bomb.

It is spiritual America and the spiritual American.

The image of the Pilgrim father and of the Revolutionary soldier is now a mere blur of cause it has been supplanted by the glams of the cowboy, the publicity of the most of the cowboy, the publicity of the most open a time the focus of world attention upon a time the focus of world attention used to be Concord, Bunker Hill, Valk Forge. Now it is Little Rock, Las Vegs Hollywood, the Appalachin rendezvous.

The spiritual American who is God-fest ing, who originated the idea of the equal:

of man because he knows we are all created In the image of our Lord, who proclaimed it a time when it was a political heresy so to do, who fought for it because he believed it to be an inalienable right, he is the forgotten man to the outside world.

The spiritual American who has estab-The spiritual American who has country more the shed and sustains in his country more demosynary institutions than any other country in the world, who takes care of the shear the mentally aged, the feeble and the infirm, the mentally handicapped, the deaf and the blind; who personally supports with his means more campaigns for charitable institutions and drives for funds for the fight against cancer, Pollomyelitis, sclerosis, heart diseases, and other dread scourages of humanity, than any other citizen anywhere, he is not known outside his home country.

The spiritual American who as a Rotarian, a Qvitan, a Lion, a Jaycee, a Surroptimist-Bervice clubs that cannot and do not exist in totalitarian regimes—bands together with his neighbors to serve a worthy community Project, who devotes time, effort, and money foster international good will and bring his country closer to other peoples, the world does not know him for the generous, civicspirited, warmhearted human being that he is.

The spiritual American who goes to his church or his synagogue, who has more temples of worship in his country than in all the countries of the world combined, who takes his religion so seriously he does not spare himself in supporting it, who considers the Holy Book so sacred and precious it is one one of the most treasured heirlooms in many an American family, this, too, is the American the world seldom hears about.

The global struggle in which America is how engaged is not a fight for strategic areas or for natural resources. It is a fight for man's mind and man's heart. Military superiority and economic supremacy are not enough to win such a struggle. Fighting an atheistic ideology and Marxist dialecticism, you are fortunate you have as your arsenal and your God-loving and your reservoir as a God-fearing and Cod-loving Nation, the immeasurable power of faith and of the spirit. This is the power that wins without destroying, that builds and uplifts to assert itself not to win any victory but to foster and develop concord, good will, understanding, and peace. It is spiritual America that can win friends and allies, and it is when the spiritual American is better known all over the globe that the highest values of the American way of life will be better appreciated by the rest of mankind, and freedom and democracy pre-

The Fate of Berlin

EXTENSION OF REMARKS OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. BOSCH. Mr. Speaker, just prior to the report of our Secretary of State to the American people on the recent Foreign Ministers' Conference, it is well to know a little about the history of the city of Berlin.

Under leave to extend my remarks, I include an article from the June 1959 issue of the German News which I believe will be of interest to my colleagues:

THE FATE OF BERLIN-THE POLITICAL SITUA-TION OF THE GERMAN CAPITAL CITY

On August 11, 1919, Germany ceased to be a constitutional monarchy and became a republic. Berlin remained the capital. With her defeat in 1945 Germany surrendered the rights of sovereignty to the Allied Pow-What was left of Germany was divided into zones and the respective military commanders took over all governmental func-tions. In the Treaty of Potsdam all German territory East of the Oder and Neisse Rivers was put under Polish or Soviet administration, pending a final peace treaty. Berlin was divided into four sectors and received a status independent of the four occupation zones. On July 7, 1945 the four respective military commanders took over officially the

administration of Berlin. In March 1948 the Allied government of Germany broke down, with no German government to take over its functions. United States and British zones agreed upon an economic union. Later the French zone joined as well. This "United Economic Area" created its own semigovernmental institu-

Central Germany, under the control of the Soviets was administered by a "German Economic Commission". On June 16, 1948, the Soviet members of the Allied Control Commission and of the Allied Kommandatura of Berlin left. Berlin's function as the capital of Germany ceased. The blockade and Soviet police terror forced the freely elected German City Council to move to West Berlin. On November 30, 1948, the Soviet commander appointed a second City Council and a Mayor, completing the split of the

In the first post war years Berlin was more than ever dependent upon areas in the Soviet zone of Germany for food supplies and raw materials. Exploiting this situa-tion the Soviets tried to put pressure on the Western sectors by making communications with West Germany difficult. The three air corridors remained open. But already in the beginning of 1948 train service was curtailed. British and American military trains were subjected to inspection. On March 20, 1948, the Soviets left the Allied Control Commission and a few days later started to throttle off all lines of communication between Berlin and West Germany. The roads were blocked, the trains ceased to run and the rivers were closed to barges. The ship-ment of coal and even milk from the Soviet zone were discontinued, thus imposing a tremendous strain on the population of West

In connection with the monetary reform the Soviets severed all lines of communication between the Eastern and Western sectors of Berlin. On June 25, 1948, General Lucius Clay ordered the airlift. Flown into Berlin were supplies, out of Berlin children and sick or old people as well as industrial products. On the 300th day of the blockade, for instance, 927 aircraft landed in Berlin bringing in more than 6.000 tons of supplies. Since the two airports of West Berlin could not accommodate this traffic, another aerodrome was built in the record time of 3 months. Finally the Soviets gave in and lifted the blockade.

The latest threats, uttered by former American Communist Eisler, indicate that the Communists intend to run Western troops out of Berlin by yet another block-ade. The situation will again be critical. It should be remembered that the future of Germany's capital city cannot be separated from the future of Germany as a Berlin's fate is Germany's fate is Europe's fate. A free Berlin is a claim to and a first and necessary step toward reunification and peace in Europe. Youth Looks at Its Elders

EXTENSION OF REMARKS

## HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 27, 1959

Mr. SANTANGELO. Mr. Speaker, on June 22, 1959, I had the privilege of attending the graduation exercises of the James Otis Junior High School located within my congressional district. - I was impressed by the words of the valedictorian, an outstanding student named Richard Paloini, age 14, who graduted with high honors from this junior high school.

In recent months, we have seen disclosures of the rise of juvenile delinquency and the impression has been gathered that youth are rebels without causes, vandalizing, looting, and running amuck. The good that youth accomplishes is lost in the glaring headlines of juvenile gang fights and shocking disclosures of horrible incidents, which, if performed by adults, would be serious

It was a refreshing experience to hear a young man plead eloquently for the cause of youth and an understanding of its accomplishments and an appreciation of its problems. The following valedictory remarks by Mr. Paolini in the presence of several public officials; the school's principal, Mr. Maurice Bleifeld: the assistant superintendent, Miss Marion Clark, I am sure will prove as inspiring and informative to the readers as it was to the listeners:

Youth Looks at Its Elders (By Richard Paolini)

Mr. Bleifeld, Miss Clark, teachers, parents, Mr. Bieliea, Mass Cataline relatives, friends, and fellow graduates, the older generation today invariably looks upon its nast with nostalgia saying, "Kids were older generation today invasion, "Kids were its past with nostalgia saying, "Kids were voung. We had more different when we were young. We had more respect. We never did what they are doing."

I would like to read you a quotation:
"The students hide their favorite readings and hate their teachers. They are exasperated at the difficulties of their studies and do not know what good it does them. Although they go through the regular course of instruction, they are quick to leave when they are through. This is the reason for the failure of education today."

What I have just read was written by Confucius in the 5th century B.C.

Every age, it seems, has had its problems with children. And each age feels that its younger generation violates the laws of society most. The positive aspects of our youth are forgotten. Our newspapers today, to promote sales, force upon the public the sensational aspects of youth in our society—murders, gang wars. Our literature, movies, and television all play upon the sordid activi-

ties of a misguided few.

I wish to reiterate the word "few," for it is but a handful of adolescents who prompt glaring headlines of teenage crime. what of the rest of us—the overwhelming majority who never make the headlines? Why? Because we are striving to become decent and productive members of society, and our activities do not usually sell newspapers or attract attention. It has been the lot of the majority, then, to remain unrecognized. It is high time they were.

June 23

During our 3 years at Otis, we have been fortunate indeed to witness and to take part in many worthwhile activities which point up the positive aspects of our students—the Harlem Hospital Projects, the Junior Red Cross, clearing the schoolyard and empty lots, the school sanitation drive, articles and editorials in our school newspaper, and the restoration of the synagogue on 105th Street, for which we received the mayor's "Salute to Youth Award" for the best community service by a school.

Through these activities we have disproved the reputation a few boys have forced upon the young people of East Harlem. We have proved that the words "East Harlem" and "juvenile delinquency" are not synonyms; that the misdeeds of a few boys do not reflect the actions of an entire community.

We are leaving Otis today. We can be proud of our school and our contributions to it. Let us hope that what we have accomplished may remain an inspiration to those who follow us.

Our thanks to Mr. Bleifeld and our teachers for their patient, guiding hands, and their untiring efforts to instill in us an appreciation for democracy and the democratic way of life.

Thank you.

## East and West and the Summit

EXTENSION OF REMARKS

## HON, KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mrs. ST. GEORGE. Mr. Speaker, some weeks ago I was privileged to read a lecture delivered by His Excellency Ambassador Quaroni, of Italy, in Bonn, Germany

I have asked our very good friend, the Ambassador of Italy to the United States, His Excellency Manlio Brosio, whether there would be any objection to my putting the lecture in the Congressional Record. I have received word today from Ambassador Brosio that after consultation with his colleague in Bonn, they have no objection to the lecture being placed in the Congressional Record.

Mr. Speaker, I have read many speeches, lectures, and articles on Russia. Some have been passionate, some objective, and some very slanted either to the right or the left.

This treatise on the U.S.S.R. and what it stands for in our world and in the world to come is the work of a scholar, a scholar with knowledge and understanding. It is not the work of some bright individual who has spent 10 days or possibly 6 weeks in the Soviet Union and comes back with all the answers, most of them incorrect and undigested at best.

This lecture, delivered originally in German and presented here in a translation, is something that we need and can study over and over. It is the work of one who understands both the East and the West and knows that between the two stands the U.S.R., who to so many in both the East and the West is a rather terrifying enigma.

Ambassador Quaroni understands the enigma. He has lived with her and so he is able to explain and solve the riddles of her personality as very few have done, and certainly none have done better.

EAST AND WEST AND THE SUMMIT CONFERENCE (Lecture by His Excellency, the Italian Ambassador to Bonn, Dr. Pietro Quaroni)

First of all, I should like to thank you, Your Magnificence, most sincerely for honor which you have shown me by your invitation to address the Free University of Berlin. The Free University of Berlin is not like other universities: it was created at the time of the Berlin blockade, at a moment when the will to resist of the people of Berlin evoked the admiration of the whole world. I ask to be forgiven if I permit any inaccuracies to mar the language of Goethe. but I have preferred to speak in German, in the hope that you might understand me better. I say "hope", because it often happens that when a foreigner speaks our own language, we cannot but think: Why does he not speak his own language, it would be so much easier to understand him.

During my first stay in Moscow, the most prominent personality of the Western diplomatic corps was without doubt the German Ambassador, Count Brockdorff-Rantzau. Although he had the reputation of being an extremely proud man, he always showed me-at that time I was still a young secretary-a certain measure of paternal benevolence. Once when we were discussing the book of a German journalist who had stayed in Moscow for about 2 months and then had written a long book about Russia, Count Brockdorff said to me with a smile: "My young friend, you will have the same experience. After a few months, it is very easy to write a book about Russia: after a year. it is much more difficult, and after two years it is impossible."\ I repeat his remark only because I wish to say that those who are called experts on Russia—and I mean the true experts-are people who are extremely careful and extremely modest in their opinions about events in Russia. They are people who are always prepared to recognize how little we really know about Russia.

But there are nevertheless a number of firm positions on which—at least in my opinion—one can always fall back. And some of these points I would now like to discuss.

Firstly: When thinking or speaking about Russia, one should never forget that the leaders of Russia are Communists, that is, they think as Communists, and their logic is always only the logic of dialectical materialism.

This I consider essential and fundamental. There are two schools of thought about Russia: Some people—and I should say that perhaps they constitute the majority—believe that, particularly in regard to their foreign policy, the Russians are mere pragmatists, that is that they are more or less like all the other great powers. Contrariwise, I am firmly convinced that the Russians are first of all Communists and then politicians. This holds true both for their domestic and their foreign policy, and by no means less so for their foreign policy than for their domestic policy. And I am also convinced that if this fact is not correctly understood and appreciated, it is impossible to understand the basic direction of Russian policy.

Naturally things are never either quite black or quite white. It is one of the firm tenets of Communist policy that the existence, the development and, therefore, the power of the Soviet state as the fulcrum of world revolution is essential for the future of communism. Once this tenet has become an article of faith, it is not always easy to draw a clear line of demarcation between the policy of Russia as Russia and the policy of communism.

When one attempts to analyze the police of Phillip II of Spain, one sees a great mu titude of diverse elements: The power Spain, the glory of the House of Hapsbur the concept of absolute royal power, and on. But if one were to forget, among t diverse elements of this unusual cocktain that the concept of a mission to defend as spread the Catholic faith was the supres and decisive element, our understanding the policy of the Spanish kings would deed by very limited. The same holds tro for the policy pursued by Moscow. The are always diverse elements in this police but the decisive element invariably remain communism. The Communists, and esp, cially the Russian Communists, have developed their own peculiar form of logic. Whi do statesmen do when they must make decision? They consider the general poll ical situation, they estimate the presumable attitude of the different powers, and this the probable developments of their police But all this depends on a "sensitive fee ing": on a flair for political developmen and situations. In our world, a good politician is a man whose flair for politics, who instinct for future developments, is super to that of his colleagues. The Russi statesmen likewise base their decisions up an analysis of the situation, but they ways do so as Communists, and it is the intrinsically Communist attitude which the essence of their policy. Our analysis a situation is amateurish, pragmatic; the is scientifically based upon Marxian di lectics. A Western statesman who makes mistake is merely someone who lacks sound political instinct. A Communist wh makes a mistake is a man who has insuf ciently studied, or incorrectly applied, di lectics; a mathematician who has made error in calculation, because he who ful understands and correctly applies dialection cannot err. Thus, a Communist state man can be pragmatic, Communist-pres matic, in his decisions, albeit pragmati But he is a dialectician, a Communist, the analysis of the situation which dete mines his decisions.

I do not know whether I have succeede in discussing this quite clearly with your Perhaps it would be better to mention a fer examples:

If I, as a Western diplomat, wish to discuss what an Italian political party will on given circumstances, what should I de I should consider the opinions of the morprominent personalities of this party, the influence within the party, and I should present the consensus of these opinions.

A dialectician, however, would say to me No, that is not the right method. First we must see what social class that party resents, for it will be the interests of the class which will determine the party list.

Let us turn our attention more closely foreign policy. There is a treatise by Len's which even today is authoritative: purporialism as the Last Stage of Capitalism. The basic concept of this book is as follow. When internal class conflicts have reached a certain climax within a given country, governing class, being unwilling to renount its privileges, will attempt to strengthen internal position by external expansion. It is reason a capitalist society which is the initial stages of its decline—as we all today, even the United States—tends, perhaps better is driven to go to war.

perhaps, better, is driven, to go to war, or this inherent trend towards war can be velop in two directions: War between capitalist states or a coalition of all capitalist states against the Communist work which by its mere physical existence represents a threat to capitalism, because it offer to the exploited masses of our world a direct solution for their problems. The policy of the Soviet Union must, then, logically everything within its power in order to pro-

note war between the capitalist states and to prevent an anti-Communist coalition. This means that the Soviet Union must be every means at its disposal to intensify the conflicts between the classes and between the conflicts between the classes and

between the capitalist states.

In the third volume of his "History of opplomacy" Potemkin tells us how Soviet diplomacy skillfully exploited the diverging interests of capitalist countries during the order to preceding the Second World War, in order to prevent an anti-Russian coalition at any time. And in its basic aspect it cannot be denied that what Mr. Potemkin tells as is true.

We on our side understand very well that the Russians fear a coalition and that they suffer from a kind of siege complex. this reason, there are people in all of the countries of the West who believe that we aust convince the Russians that we do not intend to attack them, that in reality we are very peaceable. Perhaps it would be hore precise to say that most of us desire only to be left in peace. It is said that thless we can convince the Russians that We have no thought of aggression, there cannot possibly be any relaxation of tension. This may be true theoretically, but practically—in my opinion—this argument overlooks one little element: that the Russians Over there are Communists, and, being Comnunists, they cannot believe that capitalists can truly be peaceful. Here I should like to mention, in passing, that to the Russians in non-Communists are capitalists; to exbe better to say that those who are not better to say that those will communists are actually Fascists. For Moscow, even Mr. Bevan is a Fascist.

The Russians were at one time prepared to believe that a man like Roosevelt really had peaceful intentions toward Russia, because he was not class conscious. It was this attitude which enabled him to place attitude which enabled him blas full trust in the possibility of peaceful cooperation between America and Russia. But so the Pussian Communists argue so the Russian Communists argue this is and can only be a temporary state of affairs, for either Roosevelt himself will become class conscious—and in that event he will pursue the basic biological anti-Communist policy of capitalism, or else his class will depose him and elect another resident who is more class conscious. In accordance with their own nature capitalists are aggressive, especially toward the souls. Soviet Union. It follows that a people which truly desires to live in peace must above all liberate itself from its capitalist elements: it must become truly democratic. If it fails to do this, a good Communist is infortunately unable to put any faith in it. It is impossible to inspire the Russians with confidence in us and in our policies for the confidence in us and in our policy being very reason that the Russians, being Communists, cannot repose any confidence us as capitalists. The Communists are convinced — scientifically convinced — that they know us and our innermost reactions nuch better than we know ourselves: that we can deceive ourselves, but that we canhot deceive ourselves, but that deceive them, and that they, as Commuulsts, must not let themselves be deceived about us. Here, I should really add that I do not understand why today there is so huch talk about confidence in foreign pol-For centuries, foreign policy has been Conducted without this confidence, and in the last century the great powers of Europe were able to live in peace for almost a hundred years. I mean peace at least in the sense that all of the wars which took place that the wars which took place that the wars which took place that the wars which took place the wars which took place that the wars which took place the wars which wars which the wars which the wars which the wars which the wars which was which was which which was which which was w during this hundred years could be localized geographically and historically. And not-valled among the great powers. I am afraid that this company of confidence has introthat this concept of confidence has introduced a quite unnecessary element into present-day diplomacy.

You may ask me: If this is really so, why do the Russians themselves talk so much about coexistence? It is one of the difficulties of our age that both sides use words. such as peace, democracy, freedom, and that the selfsame words convey different, and sometimes even contradictory, concepts. The word coexistence was coined in Russia. But what does coexistence really mean to the Russians? During the early days of more classical Marxists, still field to the belief that a Communist revolution was impossible in a country which did not have a sufficiently developed capitalist society; that the seizure of power by the Communists in Russia was only an accident, a fortunate accident, but an accident nonetheless. world revolution, the revolution of the European West, was bound to follow. And this revolution, above all at least the German Revolution, was expected by the Russians, by Lenin, from the very first day. Lenin died in the belief that the European Communist revolution was imminent. But the Occident, Europe, has gravely disappointed the Russian comrades: that revolution has vet to come.

Naturally, the Russians and the Communists did not draw the conclusion therefrom that Marx's entire theory was wrong. They still believe as firmly as ever that the rev-olutionary transition from capitalism to communism is inevitable. I repeat—this transition is not a matter of volition; it is an imminent biological process, just as the butterfly must inevitably emerge from its chrysalis. It is almost incidental that Communist society is better than that of the capitalists. Capitalist society contains within itself the germs of Communist society, and these will develop, whether one wants it or not. In his own peculiar way of por-traying similes Khrushchev has told us this very well: "You do not ask a pregnant woman whether or not she wants to give birth to a child. When the day comes, the child is born."

Thus, all the nations of the world, including the United States of America, must become Communist some day. But that does not mean that this transition will take place everywhere at the same time. we know that we all must die, even if-Bossuet said-we do not always believe it. But that does not mean that all persons who were born on the same day must also die on the same day. The same holds true for the transition from capitalism to com-There is a certain period during which capitalist states and Communist states must live side by side on this earth. It will be a transitional period, probably; also, a fairly long one, in which the Communist states will represent the strong vigorous future, while the moribund capitalist states will drag on their tragic existence as the remnants of a past condemned by history—but it will only be a transitional

This means—I do not know whether I have made myself sufficiently clear—that for the Russians coexistence is the mere statement of a fact, of a factual situation. That does not mean that the Communists accept the existence of capitalist society as final. And naturally it also does not mean that the Communist world has renounced its sacred duty of doing everything within its power to facilitate and to accelerate this process of development. Our good friend Khrushchev has told us so quite frankly. He once said to a group of foreign diplomats in Moscow: "My little doves, you must all become Communists, and we shall help you on your way." And only a few weeks ago he frankly stated: "The Soviet Union is always ready to end every war, except, of course, the class war."

We in the West attribute an entirely different meaning to this word coexistence. For us, coexistence means that the Russians might become reconciled to the idea that one part of the world can remain capitalistic or democratic, and yet continue to survive on more or less friendly terms with them. When we speak of coexistence, we mean that the Russians should finally more or less be content with what they have, and leave us in peace in our own countries.

Unfortunately we shall never find this kind of coexistence—at least, not in our life-The Russians are not inclined to leave us in peace. That is what I mean when I say that it should never be forgotten that the rulers of Russia are Communists. The fundamental principles of their ideology-and I have only touched on a few of their principles: there are still many othersare inseparable from the Communist state of mind, and determine the entire course of Russian policy. A change of Russian policy towards the West will become possible only if somebody comes to power in Russia who is no longer a Communist, or at least not so much of a Communist. And this will not happen by tomorrow.

In this sense Khrushchev is just as good Communist as Stalin. His friends, like his opponents, are equally good Communists. Is Khrushchev really the successor of Stalin? Can he attain to the position held by Stalin? We cannot say—we must continue to wait and see. But all the people who are fighting for power, those whom we already know, and those who may be the men of tomorrow, whom we can only see emerging far beyond the horizon—they all are Communists. Whether one comes and another goes is purely an internal Russian affair. For the foreign policy of Russia, and it is only that which is of interest to us, these changes make no difference: whether the leader of Russia is one man or a team, whether he is named Khrushchev or Molotov or Suslov or something else is all the same to us. Does this mean, you may ask, that nothing new will ever happen in the Soviet Union? Of course not, there is no country where nothing happens.

Russia is digesting communism. This is not the first time that Russia has had to digest an alien civilization. It also happened in the time of Peter the Great. order to create a new Russia which would be to his own liking Peter the Great upset Russian society with little regard for human life, human dignity, and human suffering. Peter the Great wanted to transform Russia into a land of officers and engineers. After his death his successors conducted an unending struggle for power, but nevertheless the basic elements of the Petrine re-forms remained undisturbed. This struggle went on for almost a century, and during that time Russia digested the new ideas in its own way. At the end of this period of digestion we have the courtiers of Alexander I, who certainly were not the officers and engineers envisaged by Peter the Great, but who also had nothing in common with the boyars of Alexis Michailovich. I suggest that something similar will also happen to communism: Russia will adjust this new form of government and form of life to its own spirit and its own way of life, and the result will be a society which may not have much resemblance to Stalin's dreams, but probably will even less resemble our own society. But these are speculations con-cerning the future, the very distant future. In Russia everything takes a long time, and this development will also take a long time. I think we should make no mistake. In our age, people move at supersonic speed. Ideas, however, move forward slowly, they go on foot just as they did a thousand years Events in Russia occur, as formerly, on two levels: On top, they are fighting for power, and this fight for mere power is often disguised by the different interpretations of Communist theory. But mostly it involves no more than theological hairsplitting; quietly Russia is digesting communism and preparing the new society.

What is happening in Russia below the surface, how the new classes are organizing behind the curtain of the classless societythese may be most interesting questions. But it is likely that they will be interesing only to our grandchildren. What affects us and concerns us are the political foreign relations between the East and the West. And in this sphere nothing will change until a non-Communist heads the Government; so long as there are Communists at the head of the Government, everything will remain as it used to be. It is an open question how many Russians are members of the Communist Party, and how many of these party members are truly convinced Com-munists. But the organization of the party has been created so that only those people who are true, genuine, ruthless, unrelenting Communists can reach the top and attain leadership, so that the reactions of individual people and also of individual factions, however interesting they may be for the fu-ture, have no real influence on the present situation.

Should one, then, reach the conclusion that there can be absolutely no new developments in the field of foreign policy? This is also not true, but has nothing to do either with the people in Russia or with us. We are now in a situation where there is a balance of power between America and Russia. It began some time ago, but it is only since relatively recently that people have begun to take account of its implica-

Formerly, the situation was different. The Americans had or believed that they had an absolute preponderance in atomic power. The Russians had or believed that they had an absolute preponderance in conventional weapons. Conventional weapons mean, more or less, the weapons with which the Second World War was fought. This peculiar posi-tion made it possible for both sides to believe that they could win a war easily and quickly. Now both have begun to be convinced that such a war would not be easy, and that it would be possible only in connection with tremendous losses. A new word has been found for the present situation, and, of course, it is English: a nuclear stalemate. I do not know how this word could best be translated literally into German, but I can translate it for you politically in a good old well-known phrase. It is called 'the balance of power'. A time will come— as we all hope—when right and not might will be decisive in international relations; but this is only a hope. And it is very, I repeat, very dangerous to suppose that the hope of a possible future is a political reality today. Today, just as in the last millenaries of history, as known to us, power is still decisive. Under such circumstances the only means which mankind has found to maintain the peace is, indeed, the balance of power.

I should like to mention something else in this connection. That the Americans have never wanted war, that is, a preventive war, is a fact which does not need to be discussed. It is of no significance that a few theoreticians have spoken or written about it: the aggressive intentions of the United States and of NATO are something which exists exclusively in the broadcasts of Radio Moscow. But also, I do not believe that the Russians really want, or have wanted, war. I do not believe that the Russians wish to spread communism by force of arms. There have been moments in the history of Soviet Russia, which now is already forty-one years old, when such an intention could be attributed to the Russians:

for example, the campaign against Poland in 1920. It cannot be denied that at that time the Russians believed that they could communize Poland with the help of the Red Army, and that from Poland they could support the revolution which was then breaking out here and there in Germany. But that was all. Such critical moments, as, for instance, the Berlin Blockade and the attack against South Korea, offer no indication to the contrary. The Russians thought that they could carry both operations through without severe consequences. When they saw that they were mistaken they quickly found a way to liquidate the operation. It may be said that Russian policy always contains a certain element of risk. There is always an element of risk in every policy, but the Russians have never taken their foot off the brakes, and they do not show any tendency to do so now.

Russia is a dictatorship, of that there can be no doubt, but it is not true that all dictatorships are aggressive, at least not insofar as they do not go to extreme consequences. A comparison between Stalin and Hitler or Mussolini is not exact: both of our dictators were firmly convinced that they had a momentary preponderance of power which was only temporary: it was a question of now or never. With the Russians and the Communists the contrary is true: they are convinced that time is working for them. They can wait; the transition of the entire capitalist society to Communism is an historically and biologically inevitable development. Whether it takes place ten years earlier or ten years later does not make any great difference. The Russians believe in the Cold War; they do not believe that the tran-

sition to a hot war is necessary, or even advantageous, for their ends. I am firmly convinced that Khrushchev was expressing his honest opinion when he told us in the course of one of his numerous conversations: "In order to ensure the victory of Communism throughout the world war is not necessary; peaceful competition will be enough."

I should like, here, and only in passing, to

emphasize something else. We should always give careful attention to what the Russian leaders say; they have the good, or bad, habit of always telling us the truth. When I say, "the truth," I should add that we must understand clearly what various words, such as peace, freedom, and so on, mean in the Communist jargon. But it is not difficult to understand this meaning; it is sufficient merely to study the sacred writings of communism cursorily; they are all at our

disposal.

I believe, therefore, that the Russians tell us quite clearly and quite frankly what they are thinking, what they are doing, what they are going to do. But we want to disbelieve it, particularly so when it interferes with our own ideas. We put an interpretation upon the statements of the Russians which may be pleasant for us, but which is not the interpretation of the Russians. happens constantly, and it is the cause of many a misunderstanding. I have said that the Russians do not want war. I should add that the Russians also do not want peace, at least not peace as we understand it. In this respect our grandfathers had much more simplicity and were much more reasonable than we. For them, when there was no war, there was peace. We do not like to accept such a clear and simple concept of world affairs. We are not happy about this idea of a peace which is merely not war. We want a peace which is organized in accordance with the law, a peace with treaties which settle every little detail, a peace with judges and sheriffs. Only that is what we call peace. One might also call it total peace. But unfortunately that is what we cannot have, and what we shall not have. If we can

content ourselves with a peace which merely not war, and which is based on balance of power, we can have it. We have already had this kind of peace, but noth more, for the last 15 years. I have to you, and I emphasize it again, that I lieve that the Russians really do not wa nor seek, war. But this should not be terpreted in the sense that we can afford pleasure of a complete or even partial armament. When we say the Lord's Pra we say: "And lead us not into temptation This applies to people, but it is probs even more applicable to nations and to world powers. Russia should not be led be temptation. Much is said about the gressiveness of NATO. May I remind that in the year 1950, when the NATO ganization really began its labors, the B sians in Germany alone disposed of 28 divisions quite ready for war, disions which could be deployed at moment, upon telephonic orders from M cow. Opposed to these Soviet divisions forces of the West-if by forces we are understand really battleworthy divisions not merely divisions which exist on pa (there are always plenty of paper divisions consisted of not quite two full divisit That is temptation. At that time there a story that someone asked Field Mars Montgomery whether he believed that Ruscians had the atom bomb and Mo gomery is supposed to have answered: don't know whether the Russians have atom bomb, but I am sure that they do have bloycles, because if they had bloyc they would have been in Bordeaux long at What do the Russians mean when t

What do the Russians mean when be tell us that peaceful competition is enough to insure the final victory of communist only means that they believe that capitalist society is incapable of overcomplits inner contradictions, that it is not a to adjust itself to the new conditions of the conditions of

age.

But they also believe, as I have alree told you, in our aggressive intentions; believe that this spirit of aggression will crease as our economic and social struct becomes increasingly deranged, and that peaceful and undisturbed development the Communist world must await the do fall of the last capitalist power. For reason, they are particularly interested preventing our stabilization; wherever posterior ble they must aggravate our internal external conflicts; they must make et possible effort to separate the so-called derdeveloped countries from the politi and economic influence of the West. are persuaded by their dialectical philo-phy, that if we, the West, lose the possib ity of exploiting these countries, we sp also lose the foundation of our propert and that then we shall be ripe for a 50 inner development as revolutionaries.

That means, in other words, the Russe must continue in their present course action, with one, but also one very imports reservation. Their policy may lead to brink of war—and I mean a hot war only to the brink, not further. Even too a war could endanger the very existence the Soviet Union; why risk this danger was

it is really not necessary?

Where is the brink of war? When there a balance of power, it is obvious that be sides must move very carefully. When the is no such balance of power, one can also so about much more carelessly.

It is within this narrow frame that possibilities of an understanding between East and the West are embraced. On one side, there is the challenge of peace competition; on the other, the challenge of balance of power; there is nothing

What does this mean in practical teres.
We must renounce any possibility of a total

Peace. Total peace may have a variety of mennings. It may mean that we can impose upon our opponent our own solution of every problem. But this kind of a peace is possible only as a consequence of total victory: it implies an unconditional surrender. This must be excluded in the very nature of tangs.

But total peace can also mean that there a a possibility of solving, if not all, yet at least the most important, the most urgent moblems. Unfortunately, this is likewise sciuded. The balance of power can protect is from war for a very long time, but only on condition that we renounce the solution of many important problems. Which problems should, and which should not, be approached is a question which can only be answered after long and careful experiments.

This is really the crisis of the present foreign policy; both sides understand very clearly that we cannot, or must not, go to But both sides as yet do not understand that we also cannot have peace, or at least only a very limited, very unsatisfactory kind of peace. In a situation like the present the only possible agreement is the acceptance of the status quo by both sides, But the West cannot accept the status quo, and the East still less so. What is possible in the present position of the relations between the East and the West is at bast only a small and temporary relaxation of tension, which is more a matter of atmosphere than of facts, and which really should never be taken seriously. This means that a real pol-ley cannot be based upon the ethereal lestening of tension. It is like having malaria. You have an attack, the fover rises, then it lalls again, and the attack is over. But it will return: you have not got rid of your malaria just because you do not have an attack of fever. Decreasing and increasing tensions are cyclic symptoms of the cold war. As nobody wants to plunge into hot war, tension must lessen now and then. But then the tension always increases again. that is possible in our day are a few de facto agreements. But even such agreements are impossible in some instances, and probably they are the most important ones.

I have just said that we have not yet entrely faced up to the consequences of this situation which has been created by the balance of power, and this applies in par-ticular to the Soviet side. The Russians— in accordance with their theories as Communists—are fully convinced that our society ety is suffering from serious inner conflicts, and they firmly believe that these conflicts will make it possible for them to influence the Policy of the Western powers. They are dialectically convinced that the working classes classes of the West entertain peaceful and talon, feelings which are not shared by the sentiments toward the Soviet dominant capitalist class. Theoretically at least, it should therefore be possible to combei the Western governments, through the Working classes, to accept the terms of the Soviet Union.

It is true that we too, think along somewhat similar lines. Much is said today about the great domestic—particularly, economic—dimculties of the Russians; for instance with regard to the decentralization of industry and the reorganization of agriculture. It is believed that they also have serious political dimculties. That is probably true, although we do not know exactly where the greater dimculties lie. And it is further said that the Russians need a certain measure of disarnament in order to reduce the burden of their military budget on their finances. It may well be true—I mention it in passians that the Russians really desire a certain measure of disarmament, but for this disarmament they certainly are not prepared to sacrifice their will to power.

The difference between us and the Russians inheres in the fact that our propaganda cannot get through to the Russian masses, and that in any event, Russian public opinion cannot exert any influence on their government, at least as matters stand now. And we all know this.

Contrariwise, Russian propaganda can get through to our masses. And in our countries, public opinion cannot simply be ignored by the Government. The Russians also know this, and they certainly are not missing any of their opportunities. It goes without saying that if we had

It goes without saying that if we had the same opportunities we would also make use of them.

In this sense it can be said that a summit conference is only one aspect of the propaganda diplomacy of the Soviets: a propaganda which is directed at our own public opinion and at the countries which, as it is said, stand outside of the two blocs,

And therein, without doubt, there lies a certain weakness of our side. We have not as yet adjusted ourselves to this new propaganda diplomacy and probably we are unable to do so. We believe that the object of diplomatic negotiations is to reach an agreement couched in strictly legal terms, now, and as used to be the case in the That is why we are so cautious. When we make a proposal we always suppose that it is possible that the other party might accept it, and then it would be binding upon us. The Russians make their proposals upon the assumption—which often enough is psychologically well-founded—that we will not accept their proposal. Thus they can portray themselves before public opinion as peace-loving people. But they do not consider themselves bound by their own proposals. The London Dis-armament Conference is a good example: Under the pressure exerted by Stassen and Moch we had accepted practically all of the proposals and conditions of the Russians. This was a bitter disappointment for them, and consequently they completely reshuffled the cards and finally they rejected their own proposals. Our own public opinion and also our own diplomacy still have a lot to learn before they will have a better understanding of the rules of propaganda diplomacy, or, if you prefer, of mass diplomacy, in a balance of power era.

I have already mentioned that the only possibilities between the Russians and ourseives are confined to a few strictly limited factual agreements. We shall be able to know what kind of an agreement is possible, and what not, only if and when the Russians are convinced that their propaganda diplomacy cannot have any real suc-In this sense, the summit conference is really only a phase, an appearance, a maneuver on a grand scale. It is my opinion that the preparations for this conference are just as important as the conference itself. If we are prepared to say "No" the Russians do, and to insist upon our "No" without becoming impatient and without expecting a miracle, if our public opinion is neither too nervous nor too optimistic, then we may perhaps be in a position to find out how far the Russians are willing to go to meet us. And then the Russians, too, will see how far we are able, or want to go. Then, and only then, will it perhaps become possible to achieve something useful, but always on a very modest scale. Unfortuntely, we must renounce any great hopes, any utopian dreams, any expectation of great miracles. Our dreams are dangerous. They do not promote peace, they can only aggravate the tension. We must be modest, very modest; and realistic, very

Trust should be created. But it is impossible to convince people that we do not want war, when these people, steeped in the

prejudices of their theories, believe that we dream only of war against the Soviet Union, and that, because we are capitalists, we are dirty bourgeois pigs. We can only hope that some day the Russians will convince themselves that we cannot make war on them, because it is impossible for us to win this war, at least, quickly and without tremendous losses, just as the Russians are not in a position to win any war against us easily and quickly. With, the passage of time this too can come about, but it cannot be achieved through diplomatic negotiations.

Limitation of armaments? What, in fact, does this limitation amount to? It is an attempt to maintain the balance of power cheaply. But heretofore we have tried to achieve this for a long time, and in circumstances which were much more favorable than those obtaining today. A truly great power will never renounce the full development of its own power potentialities in order to make it easy for its antagonist. The limitation of armaments is genuinely desired only by those powers which do not have the money with which to arm. The limits of armament are determined by the financial resources of a State. Many times the Russians have announced the demobilization of hundreds of thousands, or millions, of soldiers. Although we have no means of veri-fying this, I am convinced that it is true. But it was not a genuine disarmament; on the contrary, it was only because the Russians cannot simultaneously develop their atomic armament and maintain their conventional armament. In respect of the Russians there is also another difficulty. A lim-Itation of armaments without any control is unthinkable. But the Russians cannot agree to such a control for reasons of domestic policy.

I believe that here in the West it is not fully understood that the inner strength of the Soviet Government rests on the conviction of the Soviet masses that there is no power in the world which can successfully oppose their Government. If a group of people wearing any kind of an official badge on their caps were given the right to go where they liked in Russia, and to open doors that are locked, then the ordinary Russians might come to believe that there is something in the world which is more powerful than their own Government. And that might well be the beginning of the end.

Thus, quite apart from everything else, we stand before these alternatives: either disarmament without control or, more exactly, the extremely limited control which the Russians are willing to accept—or no disarmament at all.

Many people believe that the atomic weapons which the Americans and the Russians now possess constitute a potential of destruction so great that it really makes no difference whether it is increased still further. I do not know whether this is 100 percent true from the point of view of nuclear military strategy. It is likely that we are not far removed from this position, and probably it will afford the only possibility of a genuine limitation of armaments, once both sides are convinced that there really is no point in accumulating still more atomic weapons, and that the conventional weapons are, after all, really not so important in comparison to all of the various kinds of nuclear weapons. But this is likewise not a matter which can be settled by diplomatic negotiations. It can only develop by itself, out of the reality of the facts.

What, then, can we really expect from a summit conference? Only that the Russians may convince themselves of the necessity of accepting the presence of the other side as a fact which may perhaps be unpleasant, but which nevertheless is a fact,

and that they may begin to draw the conclusions from this simple fact. It would seem quite a simple proposition, but, things being what they are, the cold war is an attack and a counterattack of two ideologies: the Communist ideology and the Western ideology, which we understand as democracy and freedom. There is an essential difference between these two ideologies. The Western ideology possesses its own inherent worth: the people who believe in this ideology hope that other peoples—and perhaps even all peoples—will adopt the same political and moral ideology. But our idea of democracy and freedom can fully justify itself even if only a few peoples accept this ideology.

For Communism, it is rather different; in the long run Communism cannot tolerate any other ideology. Communism is justified only if it is the sole possible solution of the problems of our society: there is no salvation other than by Communism. If it can be proven that salavation is possible outside of Communism, then the entire Communist theory must collapse. This is the true reason why the Communists are so bitterly opposed to the Socialists; for if it can be proven that a better society, more or less as they conceive of it, can also be achieved by the methods of democratic Socialism, what then remains of Communism?

That is also the reason why it is impossible for Moscow and Tito to come to a real understanding. Tito is a Communist who believes that Communism can be erected by methods which are not quite the same as those of the Soviet Union. If, however, the possibility of an individual interpretation of Communist doctrine were to be acknowledged, the entire world organization of Communism would collapse. You will now understand why it is not so easy to reconcile the Russians to the existence of a capitalist world, and to the limits which this existing situation imposes on Communist expansion. What is required is a psychological adjustment to a completely new situation, and this can be attained only very slowly. A summit conference could at best constitute a modest first step in this direc-

One of the most frequent criticisms heard here and there against the so-called NATO policy is, that it is not a constructive policy, because it is founded upon the basic concept of negotiating with the Russians from a position of strength; that is, of attempting to force the Russians into some kind of a surrender by building up our striking power.

If the policy of the Atlantic Alliance was truly such, I would be among the first to criticize this policy. But the fact is, that nobody has ever dreamt of negotiating with the Russians from a position of strength, we have wished only to avoid having to negotiate with the Russians from a position of absolute weakness. And that is something entirely different. If you are in a position of absolute weakness you do not negotiate, you surrender. Nobody expects, nobody has any illusions, that we can compet the Russions to surrendes. But the Russians likewise ought not to have any illusions of being able to thrust us into a position of defencelessness. It is, therefore, my un-shakeable conviction that we must make every effort, that we must do everything which lies within our power, to maintain a reasonable balance of power between us and the Eastern bloc-not in order to force the Russians into a surrender or near-surrender, but, instead, solely to preserve the peace and in order to avoid being forced to surrender ourselves.

Ladies and gentlemen, it is not true that armaments lead to war. The people who held high office in governments are never completely stupid, nor are they fools. Wars are made only when somebody has reason to be-

lieve that his power is superior to that of his opponents. There will be no war so long as there is a balance of power, and if the balance of power can be maintained only by an armaments race, this does no necessarily lead to war.

When we reflect upon our relations with the Russians, we must never forget that we are not facing an ordinary imperialist power. The ideological element, which is always the decisive factor in Soviet policy, completely alters the situation. So long as this ideological element remains the basis of Soviet policy any possibility of reaching an understanding must overcome sharply defined obstacles. An understanding is always based upon a compromise, and a good compromise is always only a compromise to the extent of about 50 percent. An ideological imperialism cannot agree to certain compromises. The Holy King, Louis IX, of France, was not only a saint but a very clever politician. But do you believe that for the sake of any kind of interest of French foreign policy he would have sacrificed to Islam one foot of Christian soil? Our mutual Emperor, Frederic of Hohenstuafen, also was a very clever politician, but he was no ideologist. To achieve his own purposes of foreign policy he would without hesitation have surrendered Christian territory to the Moslems. I do not want here to compare Mr. Khrushchev to St. Louis, but. without doubt, he is also no Emperor Frederic II.

The Russian Communists hold to the most terrible of all faiths: scientific faith. I must ask you to bear with me for repeating this constantly, but I consider it to be of the greatest importance. They believe that they possess a scientific key for the exact inter-pretation of all questions of domestic and foreign policy. And by virtue of their scientific faith they believe that our world is doomed, that sooner of later we must all become Communists. When Mr. Khrushchev told the Western diplomats in Moscow: "Your children will be Communists," he did not say it in a spirit of macabre humor; he firmly believes in what he says. In the eyes of the Russians we belong to the past, an anachronistic past which vainly tries to defend itself; history has condemned us to death. The Communists cannot resign themselves to abstaining from a further advance for any reason except that it is physically impossible for them to advance. The advance of Islam was first halted by force of arms before the walls of Constantinople. It would have been impossible to bind these Arabs by a simple treaty to cease to propagate their faith. The limitations which can be set to such advances, the liimtations which the Russians will accept, are but two: firstly, the physical and military impossibility of spreading communism by war. That, I repeat, the Russians do not want; they do not want to endanger the existence of the Soviet Republic. For this reason the West must carefully preserve the balance of power. Secondly, the domestic impossibility of promoting the social disintegration of a country by their Communist propaganda. Therefore, we all, we countries of the West, must always be careful to preserve our domestic stability-socially, politically, and economically.

These two limitations cannot be established by diplomatic treaties—they can only be de facto limitations.

Will we have a summit conference or not? This question cannot as yet be answered with certainty. And in my opinion it is one which is not really of great importance. A genuine lessening of tension is impossible so long as there is an ideological division of the two worlds. A genuine lessening of tension is impossible without tolerance, and tolerance is the daughter of a certain kind of scepticism. He whose belief is firm cannot be tolerant.

In order to attain to a small, limited lessening of tension, a lessening of tension which will exist more as a matter of fact than by virtue of treaties, we shall need great deal of time and patience. A summit conference would at best be a small step along this path. But if there should not be a summit conference, it would also be small step along the same path. This might mean that we were beginning to understand the limitations imposed by impossibility Talleyrand, who And that is also important. was not at all a bad diplomat, once said "Diplomacy is the art of the possible That sounds somewhat pessimistic, does I, too, am a pessimist, but in the sens that I do not believe in miracles. After all what do we really expect of the Russians In the span of one lifetime my generation has endured two World Wars. It is natural that we have had enough and that we cherish only one dream: to put on a dressing gown and slippers and to sit quietly in a comfortable armchair. Such a wish is only to natural, but unfortunately it will not be out lot. There are generations which were born with slippers; there are generations which were born with boots; and, may God merciful to us, we belong to those who wer born with boots. Therefore we alway dream that one fine morning we shall walk up and find that the Russians have sudden become nice and peaceful people, that the have grown little wings on their shoulder and have turned into pretty white little angels.

Unfortunately we shall not see such miracle. And if we think that at some spectacular meeting, any of the heads of the tacular meeting, any of the heads of governments of our time will be able to solve the problems of our world, the problem the coexistence of communism with demorracy, we are deceived by an illusion. if we believe that any other heads of govern ment on our side will be able to solve the problems by any different approach, then are likewise deceived by an illusion. The problems will be solved only when power the other side passes into the hands of other people, who have new ideas and are with out ideological spectacles. You will say the even then it will not be easy. Russia, even a non-Communist Russia, will remain a great power, a great power in the full sense of the word: a new Russia, and it is not easy come to terms with the youthful strength such a great power. such a great power. When we dream of new Russia, we are really dreaming of Russia as she was at the beginning of the 200 century. Than too the dream of the 200 century. century. Then, too, that Russia was a power a danger, but—if I may say so—a comfortable danger. danger. All that is past and it cannot return. Even with a non-Communist Russithe basic question, the question of limiting the spheres of power of Russia and America will be difficult to define. As long as the problem remains unresolved, we must patient.

patient.

In one of his speeches, Mr. Khrushchev he given us—in my opinion—a master description of the situation as he sees it. said: "We are confident of the final victor, of communism. For this victory, we do not need war, peaceful competition will enough." This is the crucial question. Peaceful competition. What does peaceful competition mean? Both worlds, the communists and the democracies, have the domestic difficulties; there will always be difficulties in this world. A society without difficulties is a petrified society, and we not live in a petrified society. On the contrary, the whole world is in motion, and we are moving with it. The Russians are firm convinced that communism is the only possible way of overcoming the difficulties the historical world crises of today. The conviction is their strength. In order to withis peaceful competition, we must protect that our democratic, or, if you like, our capture is the strength of the contraction of the contraction, or, if you like, our capture is the contraction of the contraction, or, if you like, our capture is the contraction of the contrac

Wastic, society is likewise able to overcome wese difficulties. And not only that, but we Tust also prove that our society, our system, to overcome these difficulties better and the easily than communism; that is, at the of less human suffering. The Commuats do not deny the human suffering which companies their history. They only claim at it could not be otherwise; the conflicts the capitalist world can be cured only by regery, energetic, merciless surgery. We must prove that this is really not necessary. the can prove this, if we can succeed in our Gorts, then we will have won; then we will have won the cold war. For when speaking the relations between the East and the vet, ladles and gentlemen, however we wish to characterize these peculiar relations: cold at, coexistence, peaceful competition; it al-Tys amounts to one and the same thing. Smeone said once: "A rose can be given many names, but it still is a rose."

It is the task of all of us to win the cold a: it is a problem which does not permit arybody to remain neutral. But in order tin, one must believe in the possibility of It is not sufficient to pay a mere b service to the ideas of freedom and democ-ncy. Our falth must stand upon as firm a foundation as that of the Communists; if besible, our faith must be stronger than that of the Communists. It would have been im-possible to overcome the blockade of Berlin it we had not believed in the justice of our cause and in the possibility of victory. In a certain sense, the whole Western World is in state of blockade. We must have full condence in the possibility of our victory; there hust be no sentiment for surrender. A war anot we won when from the outset people re convinced of defeat. But for the victory of the people of Berlin, courage and faith ere not enough; they also needed the air-Dosible without the shield of the might of the United States. The Russians tolerated the airlift only because they knew that an attack against the airlift might mean war sainst the United States. We still need this shield in order to keep the peace, in order to be a developing our beautiful of so developing our beautiful of so developing our breserve the possibility of so developing our oclety that it will adjust itself to the new requirements of our times—in a few words: that we shall win the peaceful competition

All this, ladies and gentlemen, will take a dong time, at least years, and probably decades. The situation will not change over alght. There will be no miracles, there is no hope of changing our conflict-ridden, unpleasant situation from one day to another. dy any new plan, by any audacious project, by any new plan, by any audacious project, by any clever idea. It is a slow and painstaking back to lay each brick upon another.

Big Farmers' Free Ride on Public Stirs Scandal

EXTENSION OF REMARKS OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. ROOSEVELT. Mr. Speaker, it is no secret that tremendous pressure has been and continues to be placed on Secretary of Labor Mitchell, who has proposed changes, based on the Wagner-peyer Act, with respect to the hiring and treatment of farmworkers, and who has proposed public hearings on the said changes or regulations.

On June 11 of this year, Don Harris, staff labor writer for the Los Angeles Mirror-News, laid it on the line in his article, "Big Farmers' Free Ride on Public Stirs Scandal." I believe the facts and observations presented bolster the position of those of us who have publicly commended the Secretary for his stand and for those of us who have introduced legislation to bring farmworkers-America's forgotten people-under minimum wage protection.

The article follows:

BIG FARMERS' FREE RIDE ON PUBLIC STIRS SCANDAL

(By Don Harris)

There is a story simmering beneath the surface in Washington today that soon may explode into one of the Nations' biggest scandals.

It concerns the almost desperate attempts by powerful farm lobbies to block public hearings over the plight of 2 million American farm workers.

Ostensibly, the lobbylsts are out to scuttle Labor Secretary Mitchell's plan to virtually force growers to hire Jobless domestic farm workers before importing foreigners.

#### FEAR SUBSIDY EXPOSED

But the Mirror News learned from reliable sources what they really fear is that public hearings would arouse taxpayers to the point where they'd demand not only an end to the bracero import program, but an end to the multibillion-dollar farm subsidy program as well.

For public hearings would let the taxpayer know that less than 5 percent (242,000 farms) of the Nation's farmers hire anybody to speak of.

And that this same 5 percent of large and corporate growers get the bulk of the millions of dollars poured into crop supports every year.

Commerce Department surveys show also that this same 5 percent markets 22 percent of all the cattle in the United States and 42 percent of the sheep, and produces 47 percent of the fruit, 62 percent of the vegetables, 37 percent of the cotton, and 57 percent of the potatoes in the Nation.

The surveys show also that 9 out of 10 farm families harvest their own crops.

That in itself, Mitchell is known to feel, would destroy the myth being spread by the Farm Bureau lobbyists that his labor rules would hurt the small farmer.

#### TAXES PAY FARM HANDS

What it all adds up to, observers say, is the fact that the taxpayer is virtually subsidizing not only the large growers' crops, but his labor costs as well.

This is the call to arms dispatched by William H. Tolbert, top lobbyist for the Na-tional Farm Labor Users Conference, over Mitchell's proposed new rules for hiring do-

"Do anything you can, anywhere, to stop them and to prevent the issuance of them (the rules) and the holding of the public hearings."

#### DEMOS BACK MITCHELL

Meantime, 35 Democratic lawmakers, including Representatives ROOSEVELT, MILLER, and COHELAN from California, have lined up with Mitchell in the fight.

They signed a statement commending Mitchell for his proposals to improve conditions of agricultural workers.

And they deplored the efforts of the large growers to block the new rules—and the public hearings.

"The fundamental issue is the responsibility of our Government to protect the basic rights of a long-neglected group of citizens," the statement said.

#### DOMESTIC BENEFITS

Briefly, Mitchell's proposed changes in the Wagner-Peyser Act would require growers to provide adequate family housing and trans-portation for domestic laborers, pay them the prevailing wage rate, and make growers use the U.S. Employment Service interstate labor-recruiting program.

As it is now, the large growers import up to 500,000 braceros annually, circumvent the interstate recruitment program, and drive down prevailing wages.

All this at a time when 2 million American farm laborers are working only an average of 144 days a year for an average annual wage of \$892.

And through pressure from farm lobbyists the workers have been excluded from all the social benefits (minimum wage, jobless pay, workmen's compensation, etc.) other American workers enjoy, except social security.

#### LEGAL OPINION SOUGHT

Mitchell's administrative rule changes are now before the U.S. Attorney General for an opinion on their legality.

Farm bloc Congressmen forced that move by threatening to pass a resolution condemning him for attempting to legislate by administrative edict.

The Attorney General's opinion is expected any day now.

The public hearings on the rules are scheduled for this summer.

## Increases for the Soil Bank

EXTENSION OF REMARKS OF

## HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. BREEDING. Mr. Speaker, I would like to go on record at this time in favor of a larger and more realistic appropriation for the conservation reserve program.

My reasons for doing so are two: First, I believe that the authorization for the 1960 conservation reserve program contained in H.R. 7175 is inadequate to carry out the goals contemplated by the Congress when the Soil Bank Act was originally approved. Furthermore, the limitations imposed by the provisions seem to me to be either impossible of administration or so restrictive as to hamstring the program and render it ineffective.

Second, I wish to go on record as believing that recent newspaper articles critical of the administration of the conservation reserve with respect to contracts entered into on State-owned land have been written without full understanding of the facts and this criticism has been unfair to this situation in particular and to the farmers of America in general.

These newspaper articles have appeared in recent weeks in various parts of the country and they exhibit a misunderstanding of the farm problem and of the various Federal programs which the Congress has enacted in attempts to solve these problems. Because of this misunderstanding and the misrepresentations in these articles, the writers of them are doing the Nation's farmers a

disservice and are creating public criticism of congressional programs which is undeserved.

For a good many years, the farmers of America have produced more than can be consumed domestically and sold for export at reasonable prices. This overproduction has averaged about 10 percent of the total in recent years and the carryover of stored surplus has reached unmanageable proportions. These surpluses act to depress the prices which farmers receive for their goods. The economic condition of most farmers has been adversely affected by the squeeze between falling prices and the rising costs of production which has attended the inflationary movement since the Korean war.

The whole national economy has been depressed as a result of the depressed farm economy and it has been generally held that the Government should take steps to alleviate this situation in the interest of the overall national welfare.

An approach to the agricultural overproduction problem was suggested in 1956 and the necessary legislation to carry it out was included in the Soil Bank Act of 1956.

In its simplest form the Soil Bank Act provided for a national conservation reserve. The conservation reserve has as its objective the rental by the Government of sufficient acreage, to be held from production for a specified period of years, to bring a balance between national production and consumption. During the time the land is placed in the conservation reserve it is devoted to uses which contribute to the conservation of soil, water, forests, and wildlife. This makes sense to everyone who has given thought to the problem.

The program has been in operation for 3 years and some 23 million acres have been placed in the conservation reserve on a voluntary basis by the Nation's farmers. To achieve the original objective of bringing a balance between production and consumption, it will be necessary to place at least twice this acreage in the reserve.

Under the law, and the regulations pertaining to the conservation reserve, farmers who have control of land, either by ownership or by lease, can place land in the conservation reserve for periods of from 3 to 10 years. Only land which is currently being used for the production of crops is eligible for contract.

Certain restrictions have been set up which control further the eligibility of land which can be placed in the conservation reserve. In the event land has been newly purchased it cannot be placed in the conservation reserve for at least 1 year unless the county agricultural stabilization and conservation committees—which administer the program at the local level—find that the new owner would farm the land himself in the absence of the conservation reserve program.

Land owned by the Federal Government is not eligible to be placed in the conservation reserve. Since November 25, 1958, country clubs, golf clubs, cemetery associations, or State, county, town, or local governments or subdivisions

thereof are prohibited from being payees under a conservation reserve contract.

The regulations also limit producers to a maximum annual payment of \$5,000. While this tends to limit participation by large landowners, it has the advantage of making the program available to a greater number of small landowners. As presently being administered, the general aims of the program, approved by the Congress, are being carried out.

I believe that sufficient acreage can be attracted into this program to bring production down to the level of national consumption. When that is accomplished surpluses will disappear and farm income should become more stable. In the meantime, a valuable contribution will have been made to the conservation and wise use of millions of acres of land which will always be at hand for use in the event of future need or emergency.

Furthermore, assistance has been given through the program to hundreds of thousands of small farmers in making adjustments to a more favorable economic situation. I believe that this is just the type of program recommended by the editors of Life magazine in the editorial which was so critical of the price support program and the big subsidy payments to large corporate farming operations. I cannot understand why Life magazine included the soil bank in their blanket indictment while recommending such a program in the same article

Neither can I understand the reason for the criticism in the recent series of articles in the Washington Daily News.

It is true that the conservation reserve annual payments equal \$6.50 per acre or more on many contracts in Colorado and New Mexico. However, these payments are determined by the productive capacity of the land as compared with other farmers in the vicinity. The rates are set by local farmers who have knowledge of productivity, land values, and other factors that go to make up fair rental rates for land. The ownership of the land is not a factor in setting the rate.

Many acres of State school land in the West have been rented to farmers for years at relatively low rental rates, usually because the renters must expend considerable sums to make productive use of these lands. Where these lands have been placed in the conservation reserve the rate per acre at which these lands are rented from the State may be much less than the conservation reserve annual payments. However, I believe that the comparison is unfair because this ignores the other costs which these renters have been put to in renting this State-owned land. Furthermore, since conservation reserve rental rates are the same for comparably productive land in the vicinity, whether State-rented land or privately owned land, it would appear that the rates were fairly established, and that the Government is getting production adjustment as planned. If anything is improper with this situation, it is the low rates which some States are forced to accept as rental payment for State school lands.

I believe that the newspaper publicity which has attended these isolated cases is unfair to all parties involved and is unfortunate in the impression believe created that the soil bank conservation reserve is not a sensible approach to the agricultural surplus problem, as well a being an aid to making land use change which are badly needed in many parts the country.

The Members of this Congress can of the Nation and the farmers of this Nation no better service than supporting the soil bank program at the \$450 ml ion level for 1960 without the addinimitations better left to those responsible for administering the program.

Congress Should Enact a Nonpuniting

EXTENSION OF REMARKS

## HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. PELLY. Mr. Speaker, honesty ethics are not provisions that can be legislated in a way to assure against the control of unions by racketeers or gan sters who infiltrate a labor union. In stead of including high sounding phrase our task through a labor-management reform bill as I see it is to establish standards and rules to assure union members the protection of a democratic mechanism for the union members it itself to exercise control over honesty its own affairs.

Certainly I do not support any proposed law to burden labor with mountains of redtape and to provide for Government bureaucrat to regulate the internal affairs of each union. Actually I happen to believe that punitive overly restrictive provisions of any law we pass would be a boomerang and defeat the very objectives of such legislation in the long run. Meanwhile if weaken the willingness and incentive union members to be active in the union affairs, likewise we would achieve the reverse of our purpose.

Mr. Speaker, what is needed now is simple law to protect the rank and in members of unions and assure them voice in union activities and at the same time to protect the public from abuses both business organizations and unions. But outside the framework of such protective provisions, under the law Government should not have any role such referee or arbitrator in legitimate collective bargaining discussions or in weighting disputes in one direction or another in the real purpose of any bill passed to Congress should be to provide to labor not to business, a means of curbing in ternal evils in trade unions; and conversely give to business, not to labor, means of remedy to internal evils business.

Regulation and public disclosure requirements need not be as burdensor

or penalties so great as to prevent any legular union members accepting re-

Consibility of a union office.

By the same token I would hate to see Congress succumb to the temptation of passing an overly technical bill. aw, calling for simple procedures with equirements that are not complicated. high-sounding so-called bill of rights easily could end in a mass of conflicting hterpretations and thus aggravate abor-management disputes and create

costly legal conflict. The need it seems to me is for the enactment of a law which will allow legitimate unions to function effectively. If such can be obtained with even reluctant Support of labor and business leadership, Source of future irritation and con-Sicting election issues will be removed. Otherwise I would guess management for example, or possibly labor, might end to far worse than at present. We have seen that happen on the State level in my State of Washington. The defeat of \$ 50-called right-to-work law did not end with the situation as it had been before. Instead labor came out of their victory both angry and organized. Business since then has had to contend with an aroused antagonist determined to press advantage. As I see it, business and abor both will fare better in the long run with a labor reform bill fair to both parties, business and labor. Obviously neither is going to be completely pleased With any measure Congress passes. But either side be too dissatisfied, and we legislators will not have heard the end of this issue. We will be sorry indeed if any continuing irritant is left to come

back like a ghost and haunt us each year and especially each election year. So as I say, Mr. Speaker, I believe if Congress fails to act or cannot agree on a fair nonpunitive bill, the future will hold only added contention and difficulty due to ever-increasing pressures.

The Congress has a job to do. The sooner we do it the better. Let us pass a fair labor law and go home and be prepared to defend what we do to our constituents on merit and not on emo-

## Fair Trade

EXTENSION OF REMARKS

## HON. BRUCE ALGER

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. ALGER. Mr. Speaker, for the benefit of the Members of the House, I submit the following statement of Dr. the following statement stewart M. Lee, chairman, department of economics and business administra-lon, Geneva College, Beaver Falls, Pa., before the Special Subcommittee on Fair Trade of the Senate Committee on In-terstate and Foreign Commerce, in opposition to all bills which would establish ederal sanction for resale price mainenance:

My name is Stewart H. Lee. I wish to thank the committee for the opportunity of presenting this statement in opposition to all bills which would establish Federal sanction for resale price maintenance. I live at 206 Oakville Road, Beaver Falls, Pa. June 1950, I have taught economics and business administration courses at Geneva College. For 2 years I taught economics courses at the University of Pittsburgh. At present I am chairman of the department of economics and business administration at Geneva College.

I received my bachelor-of-arts degree from Geneva College, and master-of-arts and doctor-of-philosophy degrees from the University of Pittsburgh. My doctoral dissertation, which was accepted at the University of Pittsburgh, summer, 1956, was entitled "Some Economic Implications of Resale Price Maintenance With Particular Attention to the Discount House."

I have been a contributor to publications of the Council on Consumer Information, headquarters at Colorado State College, Greely, Colo., and the American Marketing Association's publication, the Journal of Marketing.

I am not representing any group. I am speaking before your committee as an economist, as an educator, and as a consumer. In years of study and research on the subject of resale price maintenance, I have come to the conclusion that little good if any has come or will come to our economy by the passage of such laws, and that some harm and possibly a good deal of inequity have been present under resale price maintenance laws, and that this type of legislation would create an even worse situation by forcing resale price maintenance upon States which have rejected it.

I would like to speak briefly on the reasons put forth by the proponents for the need of fair trade laws, and attempt to meet their arguments.

1. Fair-trade proponents say that these laws are needed to prevent loss leader selling and predatory pricing.

We already have protection from this type of pricing on the national level in the following: The Federal Trade Commission Act. section 5, states, "That unfair methods of competition in commerce are hereby declared unlawful." And more precisely the Robinson-Patman Act, section 3, states, "It shall be unlawful for any person engaged in com-merce \* \* \* to sell, or contract to sell, goods at unreasonably low prices for the purpose of destroying competition or eliminating a competitor. In addition most of the States have passed so-called loss-leader or unfair practice acts to prohibit the very pricing practices which the proponents of fair trade say they need protection against.

In addition one will find in studying the testimony presented at previous fair-trade hearings, and the Federal Trade Commission's 1945 report on fair trade, that when loss-leader bills have been introduced to meet this problem of predatory pricing, proponents of fair trade shied away, wanting to have no part of such loss-leader bills.

Studies in Canada and studies by the Federal Trade Commission do not substantiate the fears of loss-leader selling. These studies have indicated that there is very little real loss-leader selling being done.

2. Fair trade proponents say that these laws are needed to protect small business.

There seems to be little doubt that fair trade laws have helped big business get bigger in at least three ways; (1) Big businesses can develop their own private brands and create a market for these and undersell fair traded products; (2) they can handle fair traded products and get a wider margin than they would normally get on non-fair-traded products, and in this way increase their

profits and/or reduce prices of non-fair-traded products and put the squeeze on small business because of these fair trade (3) big businesses are the only ones that can afford national advertising which helps to protect their markets from the competition of small business which cannot afford such large advertising outlays.

If fair trade laws are needed to protect small business, then the question might well be raised: Are there no small businesses in Washington, D.C., Alaska, Missouri, Texas, or Vermont? These areas have never had a fair trade law. In the States in which fair trade laws have been invalidated, have small businesses disappeared? Prior to the passage of any of the fair trade laws were there no small businesses in the United States? Are there no small businesses that sell furniture and major appliances, items which the manufacturers have rarely fair traded? objective statistical study of these questions might produce some very relevant informa-tion, information which I feel should be obtained before a vote should be cast on this piece of legislation. Congress has never seen fit to pass a fair trade law for the District of Columbia. Does small business really need this so-called protection?

Are lower costs of production and distribution to be passed on to consumers or not? Or is an artificial price protection law to be made available for all regardless of costs? One might well ask where our standard of living would be today if this type of protection had been in existence during the turn

of the century.
3. Some fair trade proponents say that fair trade laws are needed to prevent quality

deterioration of their products.

Up until 1931 on the State level and 1937 on the national level, fair trade laws were not in existence. During the over 150 year period prior to the passage of these laws are we to assume that quality deterioration ran rampant? Since most goods are not fair traded, or have not been fair traded, are we to assume then that quality deterioration is present in most products? Furniture and most major appliances have not been fair traded. Is one to assume then that there is quality deterioration in these products since they are not fair traded? I believe that this argument is just another attempt to strengthen the financial position of the manufacturers who are mainly in the national market. Do these same manufac-turers feel that the products they purchase for their own plants are being deteriorated since practically none of these items is fair This I feel is a very weak argu-

4. Fair trade proponents state that fair trade laws are necessary in order to have an orderly market for distributing their products or sales will decline.

The facts as presented in Electrical Merchandising would seem to contradict this contention. This trade publication predicts the following percentage increases-in 1959 sales over 1958 for these products which have generally been fair traded:

Units	1958 (in thous- ands)	1959 (in thous- ands)	Percent increase
Fry pan-skillets	3,750	4, 500	20, 0
Irons: Automatic Steam Travel	1, 100	1,500	36. 4
	3, 975	5,000	25. 8
	476	500	5. 3
Mixers: Portable	1, 995	2, 500	25, 3
	770	1, 000	20, 9

<sup>5.</sup> Fair trade proponents state that fair trade laws should be permissible since there are other forms of price maintenance which

There are at least seven different methods by which retail prices may be maintained by the seller through the marketing channel to the ultimate consumer. These include such practices as: (1) consignment selling; (2) selling through manufacturerowned retail stores; (3) granting of franchises; (4) selling direct from manufacturer to retailers who will abide by the manufacturer's suggested retail price; (5) selling direct from manufacturer to consumer; (6) having your own private brands made up; and (7) the entire public utility field.

In each of the above cases except No the seller who establishes the retail price assumes additional marketing responsibilities and risks in order to be able to maintain his price. In No. 7 the price is determined and enforced by the Government. Under this proposed law the sellers would not be assuming any additional responsibilities or risks as suggested in the above conditions, but they would be getting the legal benefit of price protection. If a seller is really interested in maintaining prices, it seems rather logical that he should be willing to assume some of the additional risks involved in marketing his products. Since there are already many ways to maintain price additional method of maintaining price without having him assume additional risks in the marketing

Since the demise of fair trade in the electrics field the following companies have instituted programs in an attempt to stabilize price by assuming some additional responsibilities in marekting:

 Sunbeam has instituted a consignment program for certain products in some areas.
 The Toastmaster division of the Mc-

(2) The Toastmaster division of the Mc-Graw-Edison Co. has instituted a directshipment-to-retailers program for one toaster on a trial basis.

(3) Schick is now distributing its electric shavers on a direct-to-dealer distribution basis.

(4) Dormeyer has adopted an authorized

franchised distributor program.

6. Fair trade proponents state that farmers have price supports and labor has the minimum wage, so small business should have fair trade. There is a very important difference. The price supports level and the minimum wage level have been established by Congress, while the fair trade price is established at the discretion of the manufacturer. Do the advocates of fair trade want Congress to establish fair trade price?

7. Fair trade proponents state that bargain prices offered by discounters on name brand items are offset by high profit margins on less familiar brands. This is reductlo ad absurdum. With or without fair trade retailers are going to have different profit margins on different products. Where price competition in a product is keen the profit margin will be low, and where price competition is restricted, e.g., by fair trade, the profit margin will be higher as will be illustrated later with figures published by the National Association of Retail Druggists.

After much study and a careful analysis, it seems that not one of these arguments can be used as a valid defense for the passage of a fair trade law. What would appear to be the most valid argument and the most honest argument would be that resale price maintenance laws maintain and improve the profit picture for the seller by maintaining and increasing retail prices.

It might well be that the most important consideration with regard to fair trade bills has to do with their impact upon the prices consumers must pay for their products.

In order for a product to be fair traded it has to bear a trademark, brand, or name of the producer. This very condition tends to bring this product a stop away from the economist's concept of pure competition because the very trademark or brand name tends to create differentiation among the products in the minds of the consumers, This is best illustrated by Bayer aspirin. The heavy advertising of the trade name has created, in the minds of the buyers, a product difference which does not exist. So Bayer aspirin sells in fair trade areas for 67 cents a hundred, 5 grains U.S.P., while one can purchase another aspirin, 5 grains U.S.P., at as low as 9 or 11 cents per 100 in the same fair trade area. Yes, there is competition between the Bayer and 9-cent aspirin, but the consumer is aware of Bayer. Thus, Bayer has been able to gain a control over price in the marketplace which indicates a move away from pure competition. This is developed more completely in this additional statement from my doctoral dissertation which I would like to submit for the record.

Facts which have been presented by proponents of fair trade in the past to show that fair trade prices increased less than nonfair trade prices in inflationary periods is to the economist almost perfect proof that the product was not selling in free and open competition. If a product is really selling in free and open competition then the seller has to sell close to his cost of production including just enough profit to keep him in The very fact that some fair trade business. prices did not increase during an inflationary period indicates that the price was already at a level higher than would prevail under conditions of free and open competition. This, too, is developed more completely in my additional statement.

Are these products really selling in free and open competition? Mr. E. S. Herman, in his testimony before the House subcommittee which held hearings on fair trade legislation during the last session of Congress, had data to show than in 20 areas in which fair trade contracts have been used, that the 20 largest producers produced 96 to 100 percent of all that was produced; that the 8 largest producers produced 81 to 100 percent of all that was produced and that the 4 largest producers produced 65 to 99 percent of all that was produced. These figures would seem to indicate that instead of free and open competition being the requirement for maintaining prices that the real requirement is to have a considerable degree of concentration.

The antitrust laws prohibit horizontal combinations which will restrain competition, but resale price maintenance laws permit a so-called vertical price-fixing program which has as its ultimate effect horizontal price fixing. This point is also developed more fully in my additional statement.

I have attempted to outline briefly some economic principles which illustrate how fair trade creates an upward pressure on price, now I would like to present some empirical evidence. These facts and figures have been developed by myself and a number of other persons over a period of time, and give a reasonably wide and varied picture as to the cost of fair trade prices to the ultimate consumer.

I feel that I would be correct in saying that no one knows how much fair trade costs consumers, but the results shown in the following studies would seem to indicate that fair trade does cost the consumer.

1. Table I is a comparison of fair trade prices and the prices which I actually paid for 20 items. The total I paid was 30.6 percent below the fair trade prices.

2. Table II is a comparison of fair trade prices and lowest discount prices for five electrical appliances in a study made by the St. Louis Better Business Burcau. The total for the discount prices was 30.8 percent below the fair trade prices.

3. Table III is a comparison of former fair trade prices and prices in Sears, Roebuck catalog as developed by the Consumers Information Bureau. The total price for the 10 items from Sears was 30 percent below former fair trade prices.

4. In the testimony presented by Al Akerman, Jr., executive secretary, Nation Anti-Price-Fixing Association before Senate Subcommittee of the Select Committee on Small Business, June 1958, on discoult house operations, he presented an amount showing fair trade prices and prices charge by Eckerd's of Tampa Inc., whose total prices are prices was 31 percent below the fortrade prices.

5. The Wall Street Journal, July 11, 18 quoted a sales manager of one large man facturer, "Take a toaster that lists for \$17 and has been selling for \$12.88 since the for fair trade, that price will firm soon about \$13.95." That price would be 22 pecent below the fair trade price. Another executive of a Philadelphia department stowas quoted in the same Wall Street Jours as stating, "Prices have stabilized at about to be approximately 30 percent below the fair trade price.

6. Masters Mall Order Co. of Washington D.C., in its 1956 discount price list had it following discount prices below fair trade Kodak, 20 to 29 percent below fair trade Revere, 25 to 30 percent below fair trade Argus, 20 to 25 percent below fair trade Bell & Howell, 20 percent below fair trade Ronson, 30 percent below fair trade. Sunbeam, 33 items averaged 26 percept below fair trade.

General Electric, 25 to 30 percent belliair trade.

Toastmaster, 6 items averaged 28 percel below fair trade.

Revereware, 54 items averaged 25 perceibelow fair trade.

7. A Department of Justice study in Ist of the prices of 736 products in drugstor in Washington, D.C., and in fair trade are showed that the Washington, D.C., prices were 28 percent below the fair trade prices. And another department study of 245 ites in the appliance field showed Washington, D.C., prices were 27.7 percent below the fatrade prices. These figures were present at the hearings in July 1954 on a fair trade of the Washington, D.C.

8. A Department of Justice study in 18 of 132 rapid turnover, fair trade, consumitems revealed these facts. First, of the items surveyed, an average of 119 were available in each city. Second, of the 119 items available some 77 on the average sold blow the fair trade prices in each of the cities. Thus, consumers in the sonon-fair-trade area purchasing these items could effect savings of 27 percent low their fair trade value of \$2,033.20. third, even if consumers in the area purchased all 119 of the items able, items which include those selling fair trade as well as below fair trade price consumers would, nonetheless, still have fected an average saving of 19 percent belothe fair trade figures of \$2,279.34.

Apart from these overall figures, the six vey revealed a rather wide range in privavings below fair trade levels in each of eight cities.

9. Table IV shows the former fair trait prices and catalog prices for Sears. Roebut Montgomery Ward's, and Spiegel's. The prices are not 1-day specials.

Sears was offering 11 Toastmaster products at 19 percent below former fair prices: and 1 Sunbeam product at 17 percent below former fair trade prices.

Ward's was offering 15 General Elect's products at 23 percent below former trade prices; and 9 Sunbeam products at percent below former fair trade prices.

Spiegel was offering seven General Electroproducts at 20 percent below former trade prices; nine Sunbeam products appercent below former fair trade prices;

Toastmaster products at 17 percent be-

low former fair trade prices.

Table V shows advertised prices of elecheal appliances, not at discount houses, but to orthodox retail stores. These figures retal that Woodward & Lothrop, Washington, D.C., was selling two Toastmaster products 23 percent below former fair trade prices. Cimbel's, New York, was selling seven Toastaster products at 27 percent below former lar trade prices. Kaufman's, Pittsburgh, as selling eight Sunbeam products at 26 Percent below former fair trade prices.

10. Table VI shows the actual items purased by me in November 1958, while in Washington, D.C. Twenty-five Items were Purchased at a total price which was 20.4 ercent below the fair trade prices which were charged in Pennsylvania.

11. In April of this year while attending conference in Washington, I purchased 28 drugstore items at a total cost of \$26.55. The identical group of items if purchased in by home town would have cost \$36.43 due to take trade. The dollar savings—\$9.88; the bercentage saving-27.12 percent.

12. The following statistics are taken from article in the "Information Bureau" section of the National Association of Retail Orneggists Journal, entitled "What Is the Value of Fair Trade to Pharmacy?" (Apr.

10, 1959 issue, pp. 36, 38, 44.)
The results of the survey presented in the ARD Journal reveal that nonfair-trade tems had an average gross profit of 26.29 betcent, and fair trade items had an average gross profit of 33.66 percent. In other words item costing 66 cents would sell for 81 under fair trade but an item costing 66 cents and not sold under fair trade would sell for only 84 cents. Thus the average fair trade Drice in this study was 19 percent more than the nonfair-trade price.

This study also stated that fair trade items counted for 32.16 percent of total sales. Using these figures developed in the NARD ournal, it is possible to project an estimate as to the cost of fair trade to consumers just in in one field, the drug and proprietary store.

In the report of the Department of Comherce, Bureau of the Census, U.S. Census of Business: 1954, "Retail Trade," volume II, drug and proprietary stores' total sales were \$2.252 million. If we can accept the figures presented presented in the Journal as being accurate, then approximately 32.16 percent of these sales were in fair trade items, and fair trade items cost 19.36 percent more than nonfair-trade items, so fair trade pricing cost the Consumers \$326,990,000 more just in drug and proprietary stores.

13. In a recent study published in Home purnishings Daily, April 2, 1959, retail prices were published. were published for 9 electrical appliances in 30 retail stores in 8 cities. This price study revealed the following:

Product	List price	Aver- uge retail price	Sav- ings over list	Percent list above average
General Electric:			100	AR AN
CONCERNATION OF THE PARTY OF TH	\$21,95	\$15, 10	\$6, 85	45.4
The state of the s	18.95	14. 38	4, 63	32, 2
Minim:	80, 105	62.47	27, 48	44.0
Mixer HM Iron 84 Pry pan FPM	21,00	14.61	6.39	43.7
Par pan kusa	17, 95	13, 05	4, 90	37.5
Townster	19, 95	15.88	4.07	25. 6
Prop. 3 1 1124	19, 95	14, 12	4, 83	34.2
Rkillet 8A1	17.95	12.06	5, 29	41.8
	19, 95	16, 08	3, 89	24. 2

tormer fair trade prices of these companies, brices one could expect to be the actual prices if this this fair trade bill is enacted into law. So on these nine items this bill would have the tendency to raise the actual price 24.2 percent to 45.4 percent.

In these many studies the non-fair-trade price was 17 to 31 percent below the fair-trade price. This is just a study with regard to individual purchases. What is the impact of fair trade when projected to the entire economy? Unfortunately we have no complete or exact studies, but the following statistics give some idea of the possible range of the cost of fair trade to the consumer.

1. In the House hearings on the McGuire Act in 1952, the cost of fair trade to consumers, which was presented by Dr. Joseph Klamon, was estimated close to \$2 billion.

2. Nation's Business, a publication of the Chamber of Commerce of the United States, in its March 1955 issue stated, "Depending on whose estimate you use, somewhere be-tween 4 and 20 percent of all retail sales—which means between \$7 billion and \$34 billion a year is sold at fair-trade prices. The best guess is around 7 or 8 percent, which would be some \$12 to \$14 billion annually." Using these figures, 4 percent to 20 percent, and 1957 total retail sales figures-since fair trade was abandoned in 1958 by many—and the previous figures developed on the cost of fair trade from the many studies one arrives at the following as possible total costs to consumers.

Estimated cost to the Nation's consumers due to fair trade: Total retail sales for 1957,

\$200 billion.

Minimum projection (4 percent of sales or \$3 billion fair traded): 17 percent, mini-mum cost \$1.4 billion; 24 percent, average cost \$1.9 billion; 31 percent, maximum cost \$2.5 billion.

A middle projection (7½ percent of sales or \$15 billion fair traded): 17 percent, minimum cost \$2.6 billion; 24 percent, average cost \$3.6 billion; 31 percent, maximum cost \$4.7 billien.

Maximum projection (20 percent of sales or \$40 billion fair traded): 17 percent, minimum \$6.8 billion; 24 percent, average \$9.6 billion; 31 percent, maximum \$12.4 billion.

These figures would seem to indicate that fair trade has been costing American consumers from \$1.4 billion to \$12.4 billion annually.

Let me be the first to admit that these figures are nothing but educated estimates, and until more accurate figures are developed only estimates can be used, but in the testimony of the proponents of a Federal fair trade bill the impression is certainly given that many, many products need the protection of fair trade pricing, and that many retailers need this protection. If those proponents feel that these estimates are very far out of line then they would seem to be defeating their own arguments that fair trade is vital to the survival of small business and to the maintenance of quality

In reality these figures may well be too conservative on a projected basis, because this bill would make fair trade pricing applicable to all 50 States and the District of Columbia. This would encourage many manufacturers who have never fair-traded their products to do so.

In a period of potentially dangerous inflation it is extremely questionable if a bill should be passed which has all the indications of inflating prices even more. If this bill will not have an upward pressure on price then the proponents of fair trade are to be congratulated for working so diligently for the passage of legislation which will keep the prices of the products they Testimony was presented by the NARD in the House hearings that an A. C. Nielsen & Nielsen survey proved that the weighted average price of each brand, as paid by the collective American consumer, was approximately the same in both the fair trade and non-fair-trade areas of the country in which the survey was conducted. If this survey is a true picture, then it is quite obvious that no fair trade law is needed.

At the present time the difficulties in the

enforcement of resale price maintenance laws, the growth and acceptance of the discount house, and the changing retail pattern seem to obviate these resale price maintenance laws. It is assumed that this country is committed to a system of economic organization predominantly of free enterprise. Many of the virtues of free enterprise are confined to free and effectively competitive enterprise.

Evidence seems to indicate that resale price maintenance legislation and an effectively competitive system are incompatible. A choice must be made between an economy in which Government regulation becomes more important or an economy which is to be based upon the free enterprise system. The choice does not rest upon the acceptance nor rejection of resale price maintenance legislation, but the passage of such legislation is indicative of a trend away from a freely competitive economic system.

"Dan" Emmett's Songs Still Live

EXTENSION OF REMARKS

## HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. LEVERING. Mr. Speaker, I am proud to announce to the House of Representatives that on Thursday, Friday and Saturday of this week, Mount Ver non, Ohio, the birthplace and buris place of Daniel Decatur Emmett, the composer of "Dixie," and other famous songs, will hold a 3-day celebration if honor of the 100th birthday of "Dixie-

I am sure that my colleagues from the South, and the North, and the East and the West will be happy to learn of this commemoration of a noted song, and of its composer, who was the father ominstrelsy in the United States.

There has been a revived interest ! Daniel Decatur Emmett and "Dixie" this year. One evidence of this revived in terest is a feature story which was car ried in the Cleveland (Ohio) Plate Dealer, issue of Sunday, June 7, 1953 relating to the song and the composed Under leave and Mount Vernon. granted me, I am inserting this excellent story by George J. Barmann in the CONGRESSIONAL RECORD:

The article follows:

DAN EMMETT WHISTLED "DIXIE" INTO HISTORI

(By George J. Barmann)

Mount Vernon, Ohio, June 6 .- The 50 pizzicato of autumn rain was playing alors the streets of New York that Saturday night in 1859, when Dan Emmett, his fiddle fixed in its case under his arm, left the theate and started back to his boardinghouse.

He hadn't gone more than a block or t when Jerry Bryant, for whom he was working as a musician, with Bryant's Minstreet caught up with him, and they squeezed int a musty doorway of a tobacco shop. Neith felt like much, really. The show was slipping Attendance was bad.

"Dan," sald Bryant suddenly, "our number are getting stale. I got to have a fresh tund Can't you compose a new walk-around, some thing that'll catch with the boys, that'll take their minds off this war talk, something I the git-up-and-git style?"

"That's a big order, Mr. Bryant," he sald "but I'll see what I can do."

#### YOU BEITER HAVE IT

"Yes," the minstrel man said, "I got to had something by Monday. Dan, you better have it by then or, well, you'll wish you were p.

Two days to write a song, Emmett though A man can't do a piece likt that. But he in his kitchen chair there by the window night. No use, though; it wouldn't come Next day, Sunday, was cold and wet, and by was still staring out at the shapes of brid and dripping roofs. and dripping roofs.

"What a morning," Dan said to his wife Catherine, who had come into the room. wish I was in Dixie."

"You show people," she said, "you keen saying about being in Dixie, What's mean?"

"Well," he said, "it's a common expression When things aren't going well where are, you wish you were in Dixle \* \*
Dixle \* \* in Dixle."

For Daniel Decatur Emmett, minstr musician, and man from Mount Vernon, the was the magic moment. Years later, in at interview with a reporter from the New York News, he was recalling that morning in boarding house.

JUMPED UP AND GOT TIN WHISTLE

"Suddenly," he said, "I jumped up, my tin whistle, and sat down to the tab to write. In less than an hour I had the first verse and chorus. After that, it is easy. When my wife returned, I sang it for her. 'It is all finished now except the name sez I? What shall I call it? Sez she. Call it I wish I was in Dixle's Land.'" "I agree and we gave it that name. and we gave it that name. 'How do you the song?' sez I, 'I like it first rate,' sez she

No one in Mount Vernon is brash enough to say what "Uncle Dan" used back in those days, but there are plenty of people who y they knew him, all right. Wintermuth that he comprehers seeing Emmett that he remembers seeing Emmett scratch out "Dixie" on his violin in the old opera house here.

Dan Emmett was born on October 29, 1815, of Irish descent. He had little education in the schools and when he was 13 he started to work for the Huron Reflector in Norwalk, Ohio. Later he came back here to write on the local Western Aurora.

Pretty early the boy showed a talent for rusic. When he was 15 he wrote "Old Dan massic Tucker." And at 17 he left for a 3-year enlistment in the Army and was a fifer. After this, he joined a circus band and he kept on studying and practicing music.

GETS IDEA FOR MINSTREL SHOW

It was in 1847 that Emmett, in New York with a circus band, got the idea for a minstrel show. He was staying at a theatriboardinghouse, and three other men there got up a little blackface entertainment.

In the old Branch Hotel, down in New York's Bowery, Dan performed with the troupe. Their cork-smudged faces and troupe. Their candy-striped suits and their playing of Emmett's "Old Dan Tucker" started an uproar. The audience yelled for more-and the minstrel show was born.

The Virginia Ministrels is what Dan Emmett called his show. They went up and down the country, north and south, and they were so good that they went to Eng-land. But over there they fell flat because the English somehow were not amused by all this.

Dan Emmett came back to America and took up with the circus again. So one day he went back to New York and joined Byrant and his minstrels, the kind of show he liked best. He worked as a fiddler and a comic and did an occasional composition.

Then it was that he wrote "Dixle's Land," which later became known simply as "Dixie." Wintermuth said Dan got \$10 for the job.

"Dixie" was moderately popular right from the beginning, but it really caught on when it was played in the South. There is a question about where in the South, just as there is some disagreement about exactly what prompted the writing itself. Some say its fame was secured in New Orleans, in the fateful spring of 1861. Others say it was in Montgomery and in Charleston.

"TURKEY IN STRAW" ANOTHER OF WORKS

Anyway, it spread quickly, in parlors, in saloons and in the streets, to become the marching and rallying song for the Civil War that was breaking across the land.

Dan Emmett wrote other little ditties of the "Old Dan Tucker" style: "Turkey in the Straw," and "Blue Tail Fly."

Equare dancers have been cavorting to "Turkey in the Straw" for years, and its catchy tune and rhythm have excited symphonic composers. Burl Ives, the famous folk singer, has done much to help revive Emmett's music.

Dan had some quaint titles for other tunes he wrote: "Pompy O'Smash," "Ledder Breeches," and "Back Action Spring" and "Dar He Goes, Dats Him."

Long after the Civil War, Dan Emmett came back to Mount Vernon to sit in the rocking chair on his front porch and talk with neighbors about the times he had. This was in 1888. It seemed that Emmett was to stay here for good. But he had one more tour left.

It happened when Al G. Fields, who was king of the minstrel men then, came to town in 1895. He dropped in on Emmett and persuaded this man who made America minstrel mad to make a last circuit of the boards. It was a triumphal procession. In city after city the 80-year-old composer was cheered wildly as he stood in tears on the stage and the band blared out "Dixie." He was the star again.

STAMP IS SOUCHT TO HONOR EMMETT

Dan Emmett died in Mount Vernon on June 28, 1904.

In Mount Vernon today, Congressman ROBERT W. LEVERING, whose home is at nearby Fredericktown, says he wants the Post Office Department in Washington to issue a special stamp to honor the composer of "Dixie." He rejects the idea that the song was strictly a southern tune. He has justification for his feelings.

President Lincoln came out of the White House to address a joyous crowd on the lawn that night after the news arrived that Confederate forces had surrendered at Appomattox. The U.S. Military Band was there to help celebrate the victory.

'What's your favorite selection?" leader of the band called to the President through the noise.

"Play 'Dixie,' " Lincoln called back. "We have captured the Confederacy. Now 'Dixle' belongs to the Union."

So Dan Emmett gave the Nation its first national song of native origin. "The Star-Spangled Banner" and "America" and "Yankee Doodle" all are tunes with overseas

But there's no mistaking the banjo twang and the tambourine jangle of "Dixie."

## The Procrustean Bed of Administrative Regulation

EXTENSION OF REMARKS

## HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. ROGERS of Texas. Mr. Speaker, I commend to the attention of all the able speech of the Honorable OREN HARRIS, of Arkansas, chairman of the Committee on Interstate and Foreign Commerce of the U.S. House of Representatives

The speech itself, is the best evidence of its outstanding quality and depth. THE PROCRUSTEAN BED OF ADMINISTRATIVE REGULATION

(By. Hon. OREN HARRIS, Chairman, House Committee on Interstate and Foreign Commerce)

Mr. Chairman, members of the Great Lakes Conference, and guests, the topic of my re-marks this morning, "The Procrustean Bcd of Administrative Regulation," will recall to you one of the Greek legends learned during your days of youthful academic application. You remember how Procrustes, the robber, put up weary travelers on a bed which he kept for his nefarious purposes and how at night, after his visitor had fallen asleep. would tie the victim to the bed and proceed to fit him to it by cutting off his legs if they were too long or stretching them if too short. This wicked business continued to plague the Grecian travelers until that great Athenian, Theseus, rid the country of this scourge

Now the objective of the Subcommittee on Legislative Oversight is to determine the extent to which statues enacted some years ago are, like Procrustes' bed, so limiting or so extensive in scope as to force the independent administrative agencies to operate within unrealistic bounds, and, further, to free them from disrupting pressures tending to exert harmful influence upon the faithful discharge of their duties.

ORIGIN AND PURPOSE OF THE SUBCOMMITTEE The Legislative Reorganization Act of 1946

provided that:

\* each standing committee of the Senate and House of Representatives shall exercise continuous watchfulness of the execution by the administrative agencies concerned of any laws, the subject matter of which is within the jurisdiction of such committee;".

Subsequently this provision was incorporated in the House rules and, in February 1957, when the House of Representatives was considering the resolution authorizing the 'legislative oversight" activities of the Committee on Interstate and Foreign Commerce, Speaker Rayburn took the floor to comment:

"I trust that the gentlemen will set up a subcommittee \* \* \* to go into the administration of each and every one of these laws to see whether or not the law, as we intended it, is being carried out or whether a great many of these laws are being repealed

or revamped by those who administer them."
On March 6, 1957, the authorizing resolution having passed, I appointed the Special Subcommittee on Legislative Oversight. Shortly thereafter, funds were requested to enable the responsibilities indicated to be carried out. On April 11, 1957, the appropriation resolution passed and the Subcommittee thereupon undertook to establish itself as a working organization. To achieve its broad purpose, it became necessary that the Subcommittee undertake:

(1) To examine the basic legislation which might be so limited in scope as seriously to restrict the carrying out of the regulatory functions intended by Congress, so broad as to cause the agency to operate in areas not intended by Congress, or so ambiguous in language as to create honest doubt regarding the specific limitations within which Con gress desired that the agency exercise its regulatory powers;

(2) To study the actual operational functioning of each agency to see if it has been performing with an acceptable degree of efficiency and with propriety and in a man-

ner best serving the public interest; and
(3) To render each agency free from pressures and influences which might cast a cloud of suspicion upon the integrity of its decisions.

#### EXAMINATION OF BASIC LEGISLATION

Now let me discuss with you the first of the subcommittee's three undertakings which I have just presented. That is the need, in many instances, for changes in the law which established and now governs each agency and which, for one or more of the reasons mentioned, requires amendment in order that the particular agency be enabled to function in the manner intended by Congress and in the best interests of the general

The memorandum of the subcommittee announcing the hearings, which were begun in January 1958, stated that the questions to be presented at these hearings should be directed toward the following:

"Powers given in any enabling statute. Their possible inadequacy. Attempts to ameliorate these by agency rules. Changes in areas regulated."

As the result of the hearings and the studies made of the information obtained through them, the subcommittee made a number of specific recommendations to Congress for legislative changes. One, for example, was a recommendation that section 7(c) of the Natural Gas Act be amended to enlarge and clarify the authority of the Federal Power Commission to grant temporary certificates in cases of emergency after notice and no objection.

The subcommittee has also recommended "A study of the effect of court decisions on the congressional intent as mainfested in the various organic acts creating the commissions, as well as in any amendment."

#### FUNCTIONING OF THE AGENCIES

A. Their adherence to basic legislation: In its initial outline of policy, the subcommittee indicated it would approach this aspect of the problem through examination into the two following questions:

"(1) Whether the law has been and is being faithfully executed by the agency in

the public interest, and

'(2) Whether the law and the statutory standards it contains have been and are being interpreted by rule, or internal pro-cedures, to enlarge the area of regulation beyond that intended, and to administer it through procedures not intended by the Congress."

The subcommittee regarded as particularly requiring further legislative inquiry: (1) consistency of agency findings, absent amending legislation or court decisions, as to what constitutes the public interest; and (2) the reasons for frequent variation in the application of criteria from case to case.

B. Organization and operation: In the early policy pronouncement "outlining the scope of the subcommittee's activity", one of the subjects slated for examination was the operation of the commissions. As you are no doubt aware, except for the Interstate Commerce Commission, the President not only appoints the commissioners but also specifically designates the chairmen. Selection of the chairman by commission members and limitation of his term of office as such, and assurance of each commissioner that he will be entitled to serve out his full term, except for improper performance of his duties, should tend to reduce executive influence upon the agencies.

To strengthen the commissions in this regard, the subcommittee recommended that The chairman of each commission should be selected by the members thereof and his term as chairman should be for not longer than a 3-year period" and "The President should be authorized by law to remove any member of any commission for neglect of duty or malfeasance in office, and for no

other cause."

## INDEPENDENCE OF ADMINISTRATIVE AGENCIES

A. Agency contacts with others: An extremely difficult and delicate problem exists in the matter of seeking, under the circumstances of many currently accepted practices. the maximum freedom and independence of administrative agencies without unduly restricting proper communications essential to the conduct of normal business. This situation obtains largely in association or contacts between an agency on the one hand and, on the other, individual members of the regulated industry, associations of such members, officials in the executive department of the Government, and offices of Members of Congress.

There is certainly a legitimate field for proper types of communication between agencies and interested persons in the cate-gories mentioned. Much information of great value to the agencies is constantly being provided them from such sources. And persons in these groups can submit to agencies numerous requests and inquiries which are highly proper and appropriate and which help to expedite the carrying out of the administrative process.

On the other hand, unless care and caution are constantly exercised and observed in this field, such activities can quickly expand to the point where they go beyond the limits of propriety and create situations fraught with danger to all involved. The great difficulty lies in drawing clearly and equitably the line of demarcation limiting this type of action.

This situation has required the subcomittee to give earnest consideration to following:

1. The degree of identification of the reflatory agency with those whom it regular

2. Actions of the executive department which might exert undue pressure up the agencies: and

3. Contacts or communications by Mobers of Congress which serve subtly to fluence agency action.

As a step toward keeping contacts of types enumerated within proper bounds. subcommittee has recommended the folloging across-the-board legislation applicable to all administrative agencies:

"Any communication, written or nonwi ten, to or from a commissioner or commi sion employee, pertaining to any proceed which by law or by commission rule or pr tice must be determined upon the reco shall be included in the public record-memorandum containing the substance any such nonwritten communication shi be included in such record."

B. Individual conduct in agency matter I would like now to discuss a subject wh presents one facet of perhaps the m fundamental problem in self-government That problem is, what effective measure can be put into practice which will be a reasonable prospect of winning the served confidence of the public in the partiality, fairness, and integrity of the ministration of the law?

We are well aware of the difficulty establishing morals by legislation. The mitted difficulty of establishing morals law does not mean, in my view, that cannot improve the administration of and justice by means of a published code ethics, setting standards of conduct for who participate in administrative proces The task of formulating such a calls for the careful thought and creat ability of members of the bar, especial those practicing before administrative age cies, and commissioners and staff person of the appraise them. of the agencies themselves.

A code of ethics by itself is of little pritical use. The ability and character of administrators and the men appearing ber them are of more importance. Moreover, Valentine B. Deale, Esq., of the District of Columbia bar, testified before the committee:

"Ethics in the administrative process linked with efficiency of administrative erations. The climate for fast deals of arrangements is good when administrations are marked by excessive delay inadequate procedures, complexity of relations, poor public information provision and so forth.

"On the other hand, efficient operation tend to keep everyone on a straight narrow path.

As a result of the subcommittee's cons eration of this most serious problem-report contained a recommendation for statutory code of ethics with civil and crisinal sanctions governing commission methods bers and employees and those appears before them.

## EX PARTE PRESSURES

When commissions are entrusted with power to give licenses or franchises of thority worth millions of dollars, it is a for gone conclusion that certain selfish intere will begin to put on the pressure. If paraphrase the Federalist, the seekers are franchises were angels, there would be an need for ethics or even criminal law in field. These presumes the seekers of the see field. These pressures, generally by ex par communications between commission men bers and personnel on the one hand and terested persons or institutions on the other constitute perhaps the greatest obstacle

nance in the administrative process. Ununately, the hearing record of the submittee is replete with instances of imper ex parte pressures upon commis-ers. While this type of activity apparently ex-

in every branch of government, its most espread use and damaging influence is t in connection with the exercise by the ncies of their adjudicatory and rulemakpowers. And it is the operation of this sure in these two areas that I would like discuss somewhat further. All will agree, leve, that the commissions, when exering their responsibilities in adjudicatory reedings, as for example when licenses or achises are sought by contending applians, should hold to the standards of proor Clark M. Byse of the Harvard Law chool said in a statement made before our abcommittee. "\* \* if the adjudicative tm is utilized, that is, if Congress says that a decision shall be based on evidence adthe ethical standards applicable to dees and to lawyers in court proceedings would not be applied to the administrative did not be applied to the administrative

You will appreciate, then, the deep feeling tou will appreciate, then, the desprise disappointment experienced by members our subcommittee upon learning. In the hances when both commission members and thorneys appearing before them had enhard in highly questionable actions in conction with adjudicatory proceedings.

Now when we consider the matter of ex lette communications in connection with mlemaking proceedings of an administrative sency, the issue is not so clear cut. De of administrative activity can be spread the a wide spectrum. Some of the rules laid down are of such broad and genapplication that they apply with equal application that they apply the control industries to all members of a particular indusand, to substantially the same degree, these them all. In other instances of rule-baking, while the proceedings appear to be traloping a policy of broad application—tleast this appears theoretically so—a real-back view of the situation will reveal that the the view of the situation will reveal that the the view of the situation will reveal that the interior industry members. Certainly in the interior situation justice to the few so directly decreed requires that they be apprised of all below. relevant matter considered by the commiston in arriving at its decision. And there seems to be nothing inequitable in the application of a policy of no ex parte communication of a policy of no ex particle of a policy of in connection with such rule-making proceedings. Because rulemaking, in its numerous forms

of application, does so often directly affect one or a few members of a regulated indusor a few members of a regulated and have little or no effect upon the bulk of the members thereof—the question arties: Should not the prohibition against Should not the pronounced to inthence Commission action be applied to e rulemaking proceedings where the pritate rulemaking proceedings which the right of an individual is at stake in the be applied to adjudicatory proceedings?

which the Supreme Court recently viewed this matter in the Sangamon Valley televition case. There, in a rulemaking decision spendic. is interesting to note the manner in thending its table of area allocations of telehalon channels, the Federal Communications Commission withdrew VHF channel 2 ton Springfield, III., and assigned it to St. Louis, Mo. ta springfield appealed the decision and the court ourt of appeals sustained the Commission. The appeals sustained the Supreme Court for a writ of certiorari.

The U.S. Department of Justice, in its brief the U.S. Department of Justice, in the the Supreme Court urging denial of the with Supreme Court urg., stated:
Court urg., s

court's attention to certain testimony given

before the Subcommittee on Legislative Oversight of the House \* \*, subsequent to the decision by the court of appeals affirming the Commission's order. The testimony indicated that after the rulemaking proceedings here had been initiated by Notice of Proposed Rulemaking, and while it was under consideration by the Commission, representatives of the St. Louis operator was interested in having a new VHF channel assigned to St. Louis, and representatives of the petitioner and the other applicant for channel 2 in Springfield, made ex parte presentations with respect to merits of the rulemaking proceedings to various members of the Commission."

The Supreme Court granted the petition for certiorari, stating that, in view of the representations of the Solicitor General's brief concerning the conduct brought out in the congressional hearings, "the judgment of the court of appeals is vacated and the case is remanded to the court of appeals for such action as it may deem appropriate."

The Department of Justice, in its brief before the court of appeals on remand, urged that the case be returned to the Commission on the grounds that the ex parte approaches disclosed in the subcommittee hearings (1) violated the rules of the Commission and (2) departed from "the cherished judicial tradition embodying the basic concepts of fair In support of this second ground the Department urged that:

"Even were the Commission's procedure slient on this score, considerations of basic fairness would require a ban on ex parte pleas in this type of administrative proceedings, involving as it does an allocation of specific channels among several communities, and a resolution of conflicting claims asserted by competing parties in relation to the use of valuable spectrum rights. The need for fairness cannot turn on whether the label 'quasi-legislative' or 'quasi-judicial' be applied. The outcome of this proceeding, we emphasize, affected particular interests in a concrete, substantial way. Where, as here, fundamental fairness requires the consideration and resolution of the subjectmatter to be conducted on the basis of full. open presentation by the interested parties, no proceeding should be sustained on appellate review where it appears that this basic requirement has not been scrupulously observed."

The court of appeals accepted both grounds pressed by the Department of Justice, vacated the Commission order and remanded the case to the Commission for an evidential hearing to determine among other things, the nature and source of all ex parte pleas and other approaches involved in the

#### INTERFERENCE BY GOVERNMENT OFFICERS

I have mentioned earlier that a cause of great concern to the subcommittee, one that bears on the independence of the agencies, is the effort sometimes made by various branches of the Government to influence the course of agency decision. In a number of instances the Congress has provided by statute that certain officers of the executive branch may participate in matters in the jurisdiction of the independent commissions. Such participation is often necessary in the interests of an overall governmental policy on budgetary matters, national defense, or the conduct of foreign policy. In such instances the Congress has tried to provide expressly for the kind of cooperation essential to a coordinated approach to special prob-lems while maintaining for the agencies a free hand in their conduct of day-to-day administration.

Yet, just last month, the Department of Justice sought to interfere in a matter that was exclusively within the province of an independent Commission. You will remem-ber that in February of this year the Federal Communications Commission ruled that the equal-time provision of section 315 of the

Federal Communications Act was applicable to a television station which had shown an incumbent officeholder and his major opponent for reelection on various news telecasts. Mr. Lar Daly, another candidate for the office, alleged that such appearances, presented by the station solely as news stories. constituted such use of the station's facilities as to entitle him under section 315 to equal opportunities to use the station's air time. When the Commission ruled in Mr. Daly's favor and directed the licensee to grant him equal time, the large broadcasters quickly asked the Commission to reconsider. On May 7 the Attorney General sought

from the Commission permission to file a memorandum setting forth the Govern-ment's official view that the Commission should reverse its interpretation of section 315. On June 17, 1959, the Commission released an interpretive opinion in which it denied the petition for reconsideration and

upheld its earlier ruling.

The objection that many Members of Congress had to the action of the Attorney General in the Lar Daly case has nothing to do with the rightness or wrongness of the Commission's interpretation of section 315. But at the time the Department of Justice applied to file its memorandum some six bills had been introduced in the Congress which would have the effect of exempting newscasts from the coverage of section 315, and thus accomplishing the result desired by the Department of Justice. The Attorney General's action is particularly interesting because in 1955 the House Committee on Interstate and Foreign Commerce solicited the views of the Department of Justice concerning a bill that would similarly amend section 315 to exempt news coverage from its equal-time require-ment. At that time the present Attorney General declared in a letter to my predeces-sor as chairman of the committee that "whether or not this bill should be enacted constitutes a question of legislative policy concerning which the Department of Justice prefers to make no recommendation."

It would appear that the Department's reticence to press its views before a com-mittee of Congress disappears when the same issue is presented to one of our independent agencies.

#### H.R. 4800

As the result of the subcommittee's hearings during the preceding Congress, I introduced, on February 19, 1959, bill H.R. 4800 which proposes certain amendments to the basic legislation governing the six inde-pendent administrative agencies with respect to which our studies were conducted. The provisions of this bill deal in detail with many of the subcommttee's recom-mendations which I have related to you. This proposed legislation is designed to protect and assist the agencies in the performance of their official responsibilities and it is hoped that hearings on the bill will begin in the near future.

MOST RECENT ACTIVITY OF THE SUBCOMMITTEE

The subcommittee is presently nearing the conclusion of 8 days of panel discussions participated in by representatives of six of the major regulatory commissions, prac-ticing attorneys, officials of the regulated industries, representatives of the Federal Trial Examiners Conference, trade associ-ations and bar associations. This panel has had under discussion four topics which should interest all persons engaged in activities in the field of administrative regulation. They cover (1) measures to prevent the exertion of influence upon commission members or employees, (2) the role of hearing examiners, (3) the role of commissioners and their staffs, and (4) the efficiency of the commissions.

In the conduct of this panel discussion every effort has been made to have the participants express their individual views which may or may not be the officially adopted viewpoint of the commission of which the participant is a member or employee. The subcommittee, although in-terested in knowing the official views of each of the commissions, desired at this time to have a free, objective and fair presentation of the views of all the participants. It is through hearings of this character that the subcommittee expects to acquaint itself with many aspects of the problem with which it might otherwise not become famil-The results to date have been most informative and illuminating and have, to an appreciable extent, better equipped the subcommittee to perform its responsibili-

#### CONCLUSION

While the subcommittee's inquiries into the field of improper pressures have received the most widespread publicity, this should not be allowed to overshadow the more fundamental and important matters entrusted to it for investigation, study, and recom-mendation. It is not a "hatchet" committee. As I stated to you at the very beginning of my remarks, the subcommittee's objectives include the releasing of independent agencies from the Procrustean bed of any duly restrictive or vague basic legislation. operational difficulties, or improper pressures or influences from whatever source they might emanate.

If, in the course of the performance of its responsibilities, the subcommittee finds evidence of wrongdoing, it has the duty to bring to light all of the attendant facts. But it is the wrongdoers and not the subcommit-tee that must bear the blame for such happenings. They are the ones who have brought upon themselves the discredit and publicity for their actions.

Despite the magnitude and complexity of its task and limitations imposed upon it by conditions beyond its control, our subcommittee has developed the need for a number of important changes in the various laws governing the administrative agencies. Our investigations have aroused citizens generally to a more acute realization of the need for continuous efforts to find solutions which are in the public interest.

We live in a highly developed form of society. Reasonable governmental regula-tion of economic and other power exercised by private persons and groups is necessary for the general public welfare. This is especially true in the fields of transportation, power, communications, fair business practices, and investment. Congress, as representative of the people, cannot engage in the day-to-day surveillance which is needed. Delegation of a certain amount of governing power must, therefore, be made to specialized and expert regulatory commissions. But this delegation does not mean abdication. It rather in-creases the responsibility of Congress.

So long as the regulatory acts sketch only a general outline to be completed and clarified by administrative commissions themselves and opportunity for judicial review is not present in many important situations, there should not be any relaxation in the vigorous exercise of the constitutional power of legislative control and supervision.

#### Attack on Navy Patrol Plane

EXTENSION OF REMARKS

#### HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. JOHANSEN. Mr. Speaker, I share the deep concern expressed in many newspaper editorials over the recent attack on a Navy patrol plane off North Korea by Communist jets and the lack of adequate explanation of the inability of the plane to defend itself.

Under leave to extend my remarks, I include two excellent editorials; one from the Kalamazoo Gazette of June 19, published in my district, and one from the Chicago Tribune of the same

The editorials follow:

[From the Kalamazoo Gazette, June 19. 19591

#### IN A TOUGH PRECINCT

In most American cities a policeman is required to carry his badge and pistol at all times, off duty as well as on.

And in tough precincts, patrolmen cus-

tomarily work in pairs.

Yet in a tougher precinct, the skies over the Sea of Japan, an American Navy plane was patroling alone and underarmed when it was fired on by Red-starred MIGs.

Somebody blundered. We do not know who. Maybe we never will,

Initial reports were contradictory. The plane commander was quoted as saying his forward guns were inoperable because of lack of spare parts. The Navy Department a little later said they had been removed to make room for reconnaissance equipment.

Wherever the blame is ultimately placed,

it shouldn't happen again.

If it turns out that the Navy is the victim of an austerity program, then Congress, now loudly demanding investigations and swers, ought to begin at home. But if the plane were sent out, inadequately armed and alone, into precisely the kind of area the Communists choose for their murderous forays, then the Navy officers responsi-ble should be asking their hometown policemen for advice.

It has been suggested that the Communists timed their attack to add to the tensions at the foreign ministers' conference at That would be a typical Red tactic, although doomed to failure since it is bound to stiffen the West's resistance to international hoodlumism.

The attack has been called an act of war, which it is, although attempted murder would seem to be a more accurate term, under the circumstances.

Some have suggested that the plane's helplessness was itself an assurance of its peaceful mission. Maybe so. But if we were to follow that theory to its logical conclusion we would be disarming our troops in Europe and calling our forces home from the Orient.

Our intentions are peaceful, certainly, but we need not and must not abandon the right of self-defense. Nor should we fear that shooting back at attackers would precipitate a worse situation.

If the Communists ever decide to start a war the initial shot will be incidental. If they are bent on harassment only, even up to and including murder, then adequate defense is not only the best answer but the best preventive. Our planes are less likely to be attacked if they are well armed and, better still, if they follow the example of cops in tough precincts.

## WHY CAN'T WE DEFEND OURSELVES?

President Eisenhower expressed dismay Wednesday that a Navy patrol plane attacked by two Communist fighter planes was unable to retaliate with fire from its guns. The statement makes clear that our military aircraft have authority to defend themselves against unprovoked attack, which is as it should be, for there have been 33 encounters of this kind with the Communists since

The question remains why the Navy plane did not return Red fire when it was shot up over the Sea of Japan. There are conflicting explanations of the failure, and a Kary board of inquiry has been convened to be vestigate. Its report must be clear candid.

The two tail guns of the plane were operating condition. Confusion over plane's intercommunication system held action by the gunner until his guns been knocked out and he had be wounded. Turret guns had been remove when the plane was converted from and submarine to patrol duty. There remains two other guns in a forward turret. The never went into action, and the presum tive reason is that they were inoperable cause of lack of parts.

This explanation will be as unsatisfactor to the American people as to the Preside, who said that inability to respond to att was of particular concern to him because his long military experience. American that it is inviting murder to send America aircrews into exposed quarters without ad quate means to defend themselves. fact that the attack occurred over into national waters and was in violation of ternational law does not detract from foolhardiness of failing to make provise for Communist cussedness.

Related to this fact is one of even greet importance. It bears on the question, why, with defense expenditures annual running to \$40 billion or more, with amp funds and great quantities of arms flow to allied nations as gifts, an American mi tary plane is sent in a virtually defense condition into a situation of risk.

If a plane is converted for different m sions from those for which it was intende it should not be sent out until it has all the defensive armament that it needs, wi some to spare. But if the report is stained that the guns necessary to the fense of the 14 Americans carried by the plane were out of action for lack of partitles. there is a condition approaching crimin negligence.

The situation is reminiscent of what b pened during the Korean war, when, and American forces had been engaged months, there were still serious shortal of ammunition with which to supply men in the front lines against the Co munists.

The incident over the Sea of Japan flects dangerous apathy and complacency the command level. The tensions of cold war are such that our military leads ship is warned to be prepared for attack any day and at any hour. The plane whi came under attack was obviously not of war basis, as it should have been. The cident, while grave enough and profour irritating to Americans who are tired being pushed around by Communist thus is just a harbinger of the colossal disast that would overtake this country if it we not thoroughly never the country if it we not thoroughly prepared and on an allalert when exposed to a major Commun assault.

In the nuclear age, a nation gets no so ond chance. We must insist that the mineral articles are already as a stable broad are already as a stab tary establishment stop dawdling achieve instant readiness.

Poison in Your Water-No. 131

EXTENSION OF REMARKS

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVE Tuesday, June 23, 1959

Mr. DINGELL. Mr. Speaker, pure ant to permission granted I am inse

onal Record an article appearing in he San Francisco (Calif.) News of Jugust 27, 1958, entitled "United States eeking To Halt Pollution Fish Deaths."

UNITED STATES SEEKING TO HALT POLLUTION FISH DEATHS

(By Ed Neal)

Uncle Sam may step in and do what the tate of California seemingly can't—end the belodic slaughter by pollution of fish in the upper Sacramento River.

Thousands of steelhead and salmon have Thousands of steelhead and same the toxic steel killed since 1940, victims of the toxic steers of Spring Creek. This tributary steam enters the Sacramento River just bove the Keswick Dam.

In normal rain years the poison is dilited by adequate water releases from hasta Dam. But in subnormal seasons, the loison turns killer.

In 1955 the legislature even mediately in 1955 the legislature even middle sciences. The report pinned make a \$20,000 survey. The report pinned own Spring Creek as the culprit, declaring Waters are very acid and carry in solution the concentrations of iron, zinc, and cop-ber, all of which are waste mine products. But the report is decaying in the files of he Central Valley Water Pollution Board.

Mow Uncle Sam has entered the picture in the form of the U.S. Fish and Wildlife service. Paul F. Berg, acting supervisor for Fish and Wildlife's basin studies, discoses the current Trinity River project is the control of the contro perfect vehicle to end Spring Creek pollution for once and all.

"Certain features," he says, "can be built connection with construction of connection with construction of spring Creek power facility to accomplish this."

Berg discloses that "we are appraising all vallable data concerning the extent of the samage to the fishery resulting from this length of the samage to the fishery resulting from the samage to the fishery resulting beautiful beau bollution, to determine the correlation behate the potential economic benefits to the shery that could result from abatement.

Re's asking the help of Sacramento River thermen to pinpoint previous pollution the He's particularly anxious to know the

He's particularly

We have records of kills reported in 1940, 1944, 1948, 1949, 1955, 1956, and 1957. Some the specific data was not recorded and the kills could have taken place unobserved furing some of the years not listed.

If you have any dope, write him (Paul F. Berg), c/o U.S. Fish and Wildlife Service, D. Box 1317, Sacramento 8.

Deer hunters seem to be having their broblems during the current coastal season. To quote Ken (Red) Chisholm, the rifie extent at Roos-Atkins, "Those blankety-blank bucks are sticking too close in the brush bucks." h Marin County."

Then he went on to elaborate. "There's too much feed under the brush. We know they're in the brush, but you almost have to then on the brush, but you almost have to tep on one to flush him," he said, borrowng a term from the pheasant hunter's book. Ken also admitted he missed one last "I got off a snap shot at a running buck about 75 yards away, but I didn't con-

Then consider the plight of another Marin Bortsman, Les Sadier of Stinson Beach.

The other night, about 1 a.m., he heard a hoise out in his vegetable garden. He hashed a light, and over the fence went a forked horn. But Les is a fisherman, not hunter.

Bill Nittler, the Abercrombie and Fitch Runsmith, tried his luck near Cloverdale last keek. Bill didn't even fire a shot, but three of his partners scored on a trio of threepointers.

EXTENSION OF REMARKS

## HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the script of a national broadcast over the NBC network on June 15, 1959 by Wilma Soss, president of the Federation of Women Shareholders in American Business.

PEOPLE'S CAPITALISM WITHIN OUR TIME

Here is a pocketbook postscript to image minority.

Stockholders are a minority, too. But they are much less of a minority than they used to be. We'll know more about that this week when the New York Stock Exchange makes public its census of stockholders. Last week I forecast that the census will show there are more small stockholders, more employee-shareowners, and more women stockholders than ever before. It will also show that shareownership has gone up among laborers, clerical, and sales help, and doctors too.

GROWTH IN NUMBER OF STOCKHOLDERS IN UNITED STATES

My guess is that by now at least one out of every 10 adults 1 (maybe more) in the United States owns stock in publicly held corporations. But it will remain for the sizzling 1960's before we reach the projected 20 million shareowners. It will be closer to 12 million stockholders this year.

A survey of Current Business by the U.S. Department of Commerce shows median family incomes up from \$5,000 a year to over \$6,000. Six thousand two hundred dollars was the median income of shareowners in 1956, but it will be higher this year.

#### SURPRISE INCOME GROUP

It is no surprise when one out of three or four proprietors and executives turn out to be a shareowner, especially in these days of stock options often exercised on borrowed money at discount prices. But it was a surprise in 1956 to discover that half of all adult shareowners were in households with incomes between \$3,000 and \$7,500 a year.

Actually, about 10 percent of the shareowner population report household incomes under \$3,000. This includes retired folks.

#### STOCKHOLDERS ARE GETTING YOUNGER

Stockholders are younger than they used to be. They are no longer to be found chiefly among our senior citizens, most often pictured at stockholder meetings. At one United States Steel meeting, one of the most articulate stockholders was a baby-crying.

In 1956 only about 13 States and the District of Columbia made it easy to give stock to children. Now 49 States have laws facilitating stock gifts for minors. In 1952 the average shareowner was 51 years of age. My guess is that this year the average age will be lower.

STOCKHOLDERS BETTER EDUCATED THAN THEY USED TO BE

In 1952 almost 20 percent of those owning stock had gone only as far as the 8th grade in school or less. Today, the largest amount of stockholders are likely to have high-school diplomas, although only about a third of the shareowner population probably has a college degree.

PEOPLE'S CAPITALISM NEW WITHIN OUR TIME

About 10 times as many people own stock indirectly as directly. Over 100 million people own stock through insurance, pension funds, mutual savings banks and other financial institutions, including investment trusts. According to the National Association of Investment Companies, roughly 1,800,000 people own stock indirectly through open-end trusts, popularly known as mutual funds. Socialism in this country has taken the form of welfare capitalism and it ranges from Federal social security to noncontributory pensions in corporations. fare capitalism has become a part of the people's capitalism. People's capitalism is the goal of the New York Stock Exchange. It aroused much interest on the part of Mr. Khrushchev and some of the Russians. This form of capitalism is something new within our time and corporate democracy is part of it. One cannot exist without the other. What is corporate democracy?

According to Webster, "a democracy is government in which the supreme power is retained by the people and exercised by representation as in a republic." In corporate democracy the power resides in the stockholders and is exercised through directors who are elected by the stockholders.

POLITICIANS SHOULD TAKE A NEW VIEW OF STOCKHOLDERS

Although stockholders are also voters in local, State and Federal Government, you never see a picture of a politician kissing a stockholder, for fear it would be a kiss of political death. The old-fashioned idea, that a stockholder is a symbol of greed, wealth, and selfishness, still prevails around election time, even though big business has to depend on small stockholders for its capital. Actually the change in our tax structure has led largely to other forms of investment for the really rich, including investments in tax-exempt bonds. With the inheritance tax, there are fewer big fortunes than there used to be. So the stockholder who owns only a few shares is becoming increasingly important in financing U.S. industry. What's more, small shareowners are beginning to take this importance seriously.

Stockholders are hard to organize. Stockholders who belong to managerial or labor groups, tend to express themselves through organizations that express their class interests. Employee-shareowners in companies which have an open ballot, instead of a secret ballot, tend to be apathetic if not downright fearful of making known their views. Then too, the largest single group of shareowners is housewives. Therefore, stockholders as a group have not been an especially rewarding electorate for politicians, who could capture their votes at other levels.
Inflation is not alone in beginning to

change all this: Part of the growth in stock ownership and a change in the attitudes of the shareowner population have come about within this minority group through the so-called minority stockholders.

THE ROLE OF THE MINORITY STOCKHOLDER

The minority stockholder is really a misnomer-actually it is the large shareowner who is in the minority today. Sometimes an articulate stockholder is referred to as a professional stockholder. These are the stockholders who make a career of attending stockholder meetings, armed with proxies, a knowledge of parliamentary procedure, stockholder rights, managerial weak points, and occasionally a motorized megaphone to insure being heard. These stock-holders are professional only in the sense They receive no pay and often of training. little thanks for exposing what they be-lieve to be the cause of the silent or uninformed majority. Sometimes they are called hecklers and they, in turn, are heckled, giving an annual stockholders' meeting the sound of the bleachers at a ball The better the show, the bigger the game. attendance next year.

History shows all progress has been spear-headed by a minority. It is nearly always the fate of a minority in running counter

<sup>1 1958</sup> census shows one in eight.

to an accepted view—to be ridiculed. What is ridiculed today often becomes the fashion tomorrow. The fact remains that during the past 20 years crusading minority stockholders have laid down the ground rules for stockholder meetings, ploneered postmeeting reports, made annual meetings more accessible and democratic, and made cumulative voting a controversial issue.

Minority shareowners have dramatized issues that otherwise would have escaped general notice. For example, recently the annual meeting of the second largest railroad, a five-share owner, also representing other stockholders, appeared in mourning "to match the passing of the dividend while cuts in salaries over \$50,000 a year had been reinstated."

Independent shareowner resolutions on company proxy statements are usually reported as having been "overwhelmingly defeated." This is partly due to the size of the institutional vote which generally supports the management and because, stockholders, unmarked proxies can be cast against shareowner proposals.

Because of issues brought out by an articulate minority, managements have been strengthened and managements have fallen \* \* \*. All in all, the activity of the minority stockholders has improved the lot of the stockholder generally.

CORPORATE DEMOCRACY VERSUS NATIONALIZA-TION OF INDUSTRY

The new census will show a wider distribution of stock ownership. Share ownership, together with profit-sharing plans in such companies as Sears Roebuck and Pitney Bowes is the American way of owning industry \* \* instead of nationalizing it in the name of the people—which sometimes is in name only. Stock ownership by the people and corporate democracy—called people's capitalism—may prove our most convincing answer to communism in the eyes of the world.

Stockholders are a minority today that may become a majority tomorrow. Just work, wait and see.

Next week I'll be back at this same time with another pocketbook postscript to image minority—the women.

My views are my own and not necessarily those of the National Broadcasting Co. or the Federation of Women Shareholders in American Business.

## Jeannette District Memorial Hospital Completed

EXTENSION OF REMARKS

## HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. DENT. Mr. Speaker, under leave to extend my remarks in the Record, I include the following: When a small, vigorous community succeeds in completing a community project of the magnitude and importance as the Jeannette District Memorial Hospital it is certainly worthy of note.

In our busy daily routine of trying to analyze and solve the complexing problems of our modern society, we sometimes fail to take note of the numerous occasions when people collectively and voluntarily perform a community service that puts meaning in the phrase "our way of life,"

I am proud of my hometown and our neighboring communities for their generous support of this needed public service project.

All of us are looking forward with personal and community pride to the day in the very near future when our dreams come true.

Our town is further blessed with a daily newspaper and a staff from top to bottom that always supports our com-

munity efforts.

It is a real pleasure as a friend and fellow townsman to put into the Congressional Record the attached special report from Marian Hollendonner, whose fine work as a journalist, manager, reporter, editor, and community worker, over recent years in our community has earned a well-deserved reputation as an observer and commentator on our area, its peoples, its work, and its institutions.

After reading her editorial entitled "Our Dream Soon Will Come True" you can understand why I am so proud of my hometown, its new hospital, and the people who have made our dream come true.

#### OUR DREAM SOON WILL COME TRUE (By Marion Hollendonner)

I saw a dream walking the other day. Almost running. Hurrying to come true. It was the Jeannette District Memorial Hospital, dream of everybody in the greater Jeannette-Irwin area for the last 12 years.

I went through the hospital from top to bottom on a conducted tour to find the answers to questions I had been hearing on all sides: "What's with the hospital? Why doesn't it open?"

Take my word for it, nothing's gone amiss or is likely to. The hospital is staffed—51 doctors have accepted the opportunity to be a part of the institution; another 145 employees have been hired, nurses, aldest clerks, accountants, custodians, help of all kinds; and the equipment is installed.

But preparing a hospital for occupancy and operation after the building shell is finished, is the biggest, most complicated job you can imagine.

#### PARTIAL OCCUPANCY IMPOSSIBLE

It's not like a family's building a dream house and moving into part of it while the carpenters are still hammering and the plasterers and painters are stapping stuff on the walls. That kind of inch-by-inch occupancy is not possible. This dream must be complete.

Every pill must be in the pharmacy, every hypodermic needle sterilized, X-ray apparatus ready, therapy room prepared, laboratory complete, office organized with its IBM machines, kitchen fully equipped, oxygen piped into every room, blankets, bed linens, towels, rubber gloves, bandages, casts and a million other items must be "at the ready."

As one of the Sisters of Charity who will head a department told me, "before occupying and operating this hospital, we have to be prepared so that no patient will become worse or expire because of lack of equipment or facilities. Everything must be adequate and complete. And we need the same facilities for one patient as we need for a hundred. We must be ready to cope with any emergency, any disease, any condition of any patient the minute we open our doors. For we are dealing with people and their lives."

To all of you who have a nickel's worth in this venture—and most of us have much more than that—I say this Jeannette District Memorial Hospital will be a jewel perfection, our community's most propossession when it finally does open.

#### A WONDERFUL SITE

The building is well laid out and built last. The results of intelligent forethous and planning are visible throughout. To exterior is beautiful, the view delights And I quote one of the administrating standard a nun of many long years experience hospitals, when I call the facilities "fablious."

Let me tell you about the facilities the most impressed me, to whet your appeter for what you'll see when open house is not in the next 6 weeks.

The boilerroom has both gas furnaces standby oil equipment. A generator can switched on if electric power should fail.

The hospital has its own laundry.

The hospital has its own laundry. there's a sewing room for repairs and replenish linen and toweling supplies.

#### RUN BY FOOD CONCESSIONAIRE

The kitchen is dazzling with stainless set and includes, in addition to the expectal lineup of modern appliances, through sthrough refrigerators, an icemaker, and latest in food carts. Each food cart serve 20 patients at one time and has set rate space for hot and cold items while sold coffee and milk flow from soda-fountain-it spigots.

Theh kitchen and the cafeteria for the stand help will be run by the same food concessionaire who feeds the guests at Duquesne Club, the Carlton House and Gateway Plaza in Pittsburgh.

There are four nurseries in the obstetred department, a regular one, one for the organism, one for the little "premmies," and of for the suspects—those babies who may evelop infectious or contagious complication.

An intercommunications system on each floor is connected with a little flat microphone under each patient's pillow. This lows the patient immediate contact with nurse's station. No signaling with a light pushbutton bell for these people. The tercom was custom built for Jeanney hospital.

#### SOFT MUSIC IN LOBBY

There is a record player broadcasting music in the lobby. There is a private missions office where the patient and family can pour out their woes—finance physical and emotional—in private.

There is a chapel whose altar will be ma

of marble from Italy.

A dictaphone is installed in a soundpring room off the operating room so the docton dictate direct to the medical recomments about the patient's condition.

#### A LIPESAVING MACHINE

A "beautiful machine"—again I quote gi guide, one of the nuns—will be avaliable quick use in the operating room in case patient's heart might stop during an opation. "It may never be used," my inforant commented, "but it may save some one's life."

#### THERE ARE NO WARDS

All but three of the rooms for paties are double. Those three are single. The are no wards. The walls and ceilings of done in a combination of pastels—piblue, green, gray and yellow—none exact alike. Drapes are plain in these same cox, and are interchangeable for any room, wild prints or exotic flowers to give paties the heebie-jeebies.

The beds raise and lower for the trones or shortles for comfortable dangle instead of just raising or lowering at he and foot. The double rooms can be divided by drawing drapes attached to tracks in the ceiling to insure privacy when desired. The double rooms can be divided by drawing drapes attached to tracks in the ceiling to insure privacy when desired. The desired by the ceiling to feathers,

A medicart, used to carry medicine around to patients at stated intervals, has a unique tool-proof card system to eliminate any chance of neglect or wrong dosage. Instrusound waves.

The hospital prints its own forms-79 of hem—on a multilith machine. They indude the most complicated kind of tabulation charts for medical records.

#### A WONDERFUL TEAM

I have deliberately refrained from desighating what Sisters of Charity I met while touring the hospital—simply because these administrators comprise a tremendous, com-Pact team. They are dedicated, efficient, in-senious, superbly trained and businesslike. This team is a great part of the reason why our hospital is destined to rate with the best in the country. These nuns and men and women volunteers from the city are now on the job, literally running, to get the hospital open.

Another reason why our hospital will be a ewel-our dream come true-is that it is built with a heart as a foundation—the heart of this community as illustrated by the money and muscle everyone has poured

And as the hospital's prestige grows so will our community burst with pride. Just wait 'in you see it. Jeannette's newest industry.

# Control and Abatement of Air Pollution

EXTENSION OF REMARKS OF

## HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. SAYLOR. Mr. Speaker, the Air Pollution Control Association is holding its 52d annual meeting in Los Angeles this week. The organization, its membership, its operations, and the convention program—all are of extreme importance to this Congress, for a broad understanding of these items can be the basis for effectuating a savings of millions of dollars to American taxpayers.

In the House Interstate and Foreign Commerce Committee at this time are proposals to extend, in duration, and function, what is known as the Federal air pollution control law. I am hopeful that the proposed legislation will get no further; but if it comes to the floor, Members of the House will be better qualified to make their decision by using the background information that I present today.

Public law 159, 84th Congress, authorized a program for research and technical assistance—to obtain data and to devise and develop methods for control and abatement of air pollution—by the Secretary of Health, Education, and Welfare, and the Surgeon General of the Public Health Service. I do not know how much has been accomplished by this office in the interim period, but I an convinced that any increase in appropriation or authority would be a mistake and would constitute an unnecessary contribution to the cause of inflation and Federal extravagance. My conclusion is based on these two premises: First, the Air Pollution Control

Association and its members have made remarkable strides in the problem of atmospheric sanitation; further intrusion into the field of air pollution by the Federal Government is unnecessary and undesirable. Second Public Health Service participation in this work has already enkindled another bureaucratic blaze which, if fanned by more tax dollars, will spread throughout the country and engulf an increasing amount of the duties and responsibilities of private enterprise.

Anyone who has lived in western Pennsylvania or in other industrial regions understandably has a very intense interest in the problem of air pollution. I remember not too far back when I would drive toward Pittsburgh on a sunny morning only to meet a growing darkness as I approached the Turtle Creek area. By the time I arrived in the Triangle, visibility had been reduced considerably and anyone not familiar with the air pollution situation would have the impression that it was a cloudy day. Pittsburgh lived up to its reputation as the Smoky City. Dust and grime on window sills and floors were a persistent menace to the housewife. Many men had to change shirts twice a day. The combination of smoke, dust, fumes, and odors made the city particularly displeasing to visitors who were not accustomed to prevailing atmospheric conditions in industrial areas.

Suddenly Pittsburgh, through the initiative of its industrial and civic leaders, was transformed into a clean city. Through science and engineering, industries learned how to reduce the pollutants. They found that any fuel could be burned with a minimum of smoke if proper equipment and proper combustion methods were utilized. They invested millions of dollars in such equipment and in various types of filters and other apparatus to reduce discharge from stacks and vents. Through community cooperation and industry's willingness to spend money-and without Federal funds-Pittsburgh has emerged as a modern and beautiful city. Service clubs, church groups, industries, labor unions, and individual residents pitched into clean up their community, and the results stand as a tribute to this cooperative effort.

We still have our atmospheric contaminants in industrial areas. Despite the almost miraculous progress that has taken place, there is no comparing the cleanliness of-for instance-Washington, D.C., with that of my own city of Johnstown or the other towns where mills and factories are the principal sources of livelihood. There is much more work to be carried on in the field of air pollution control, but I question whether we can afford to permit the Federal Government to involve itself any

From time to time the success of local air pollution programs has attracted attention in Congress, but this recognition has perhaps been too infrequent to emphasize just how much progress has been taking place at the community level. In 1951 our former colleague from Columbus, Mr. Vorys, spoke at length on the

effectiveness of air pollution control action in his home city. We have also been advised of progress in Pittsburgh and other metropolitan areas; unfortunately, what the APCA members back in a hundred or more other cities are doing has gone unnoticed in Congress.

Headquarters of the APCA are at Mellon Institute in Pittsburgh. This organization is made up of more than 1.200 individual members, including technical experts from Federal, State, and municipal Governments. A great assortment of industries and companies are represented, including manufacturers of aluminum, steel, chemicals, soap, cement, rubber, automobiles, and a variety of other commodities; refineries, coal producers, oil companies, and electric utilities; and, in addition, numerous producers of air pollution control equip-

Last year the APCA convention was held in Philadelphia, May 25-29. Topics included incineration, status of the automobile exhaust problem, evaluation of wind tunnel studies, health effects of air pollution, and other technical and administrative subjects. Over the years the APCA has come to be recognized by leading officials in Government. President Hoover, President Truman. and President Eisenhower are on record with tributes to the association. Its work has been the subject of comment by the Secretary of Commerce and the Department of Health, Education, and Wel-

I was therefore astonished to read a statement from the Public Health Service dated July 25, 1958, that contained this paragraph:

Air pollution is becoming increasingly serious as population growth and industrial expansion add to the volume of pollutants discharged into the far-from-limitless ocean of air that surrounds us. Although the problem has recently received considerable attention from governmental bodies as well as from industries and voluntary organizations, there has been no opportunity for representatives of all these groups to meet together to assess their progress and to develop a coordinated plan for future action.

This message was contained in an invitation to the National Conference on Air Pollution, which was held in Washington in November under the auspices of Public Health Service. - The message was, of course, without basis in fact. Through the Air Pollution Control Association, there has for more than half a century been an opportunity for representatives of government, industry, and voluntary organizations to meet for the purpose of assessing progress on air pollution problems and to develop coordinated plans for future action.

I assume that the statement by the Public Health Service was an oversight. In any event, it should put Congress on notice that there is a grave danger that such lack of information can be extremely costly. I do not know how much the National Conference on Air Pollution cost the taxpayers of this country. Perhaps the Public Health Service has submitted this information to one of the interested committees of Congress. It would be particularly significant to determine whether the U.S. Government underwrote expenses of any of the delegates not on the Federal payroll.

In contrast to the National Conference on Air Pollution, the annual meetings of the Air Pollution Control Association are not in any way subsidized by the Federal Government. The only cost involved is the traveling expenses of those Government workers who attend the APSA meetings. I notice that the Los Angeles program includes participation by a number of employees of the Federal Government. This cooperation should be encouraged. APCA offers a platform for the many groups interested in clean air. The convention should be especially educational for whomever was responsible for the letter of invitation to the Public Health Service Conference last year. Perhaps other Public Health Service officials will then recognize that the proposed increase in appropriations and extension of activities of PHS are not necessary.

Most of all, the APCA convention reminds Congress of the deep interest of public officials, industries, associations, and individual companies in the problems of air pollution. I am hopeful that this knowledge will result in a vote against the amendment to Public Law 159 if it ever comes out of committee. That amendment would give Public Health Service an additional \$2 million per year for air pollution control activity. I think the proposal is unnecessary. It is a challenge to Congress. We appropriate billions of dollars annually, but we must never overlook an opportunity to save whatever comparatively small amounts are involved in any legislation. Increasing funds for this activity would not only constitute extravagance and contribute to the inflationary spiral; it would encourage extension of Washington's great bureaucracy which, if not checked, can bring economic catastrophe to this country.

Air control problems are essentially local problems. Topography of the land and prevailing atmospheric conditions preclude the application of a single air pollution control law to a variety of localities. If Los Angeles, in order to solve a serious smog problem, finds it necessary to invoke an ordinance requiring special equipment for muffler and exhaust pipes, let Los Angeles do so. Other cities may follow suit if they so desire. There is positively no need to set up a giant office in Washington to determine what laws are best to keep air clean in the communities of our land. In certain areas of our country regional air control districts that include portions of two or more States have been created. Those developments are as they should be, but to inject Federal authority or supervision into such projects is a presumption that should not be tolerated.

Our best wishes for a successful APCA convention are in order. If the APCA and its membership continues its dedicated efforts with the same vigor that has marked past accomplishments, then we may rest with the assurance that further Federal encroachment is unwarranted and unwanted.

Hon. Albert M. Greenfield Speaks at 75th Commencement Services of the Philadelphia Textile Institute

EXTENSION OF REMARKS

## HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. TOLL. Mr. Speaker, my home city, Philadelphia, is justly proud of the Philadelphia Textile Institute, which this year celebrated the 75th anniversary of its founding.

A guest speaker at the commencement services on June 6 was one of Philadelphia's most distinguished civic and business leaders, the Honorable Albert M. Greenfield. Under leave to extend my remarks, I include Mr. Greenfield's speech:

REMARKS OF MR. ALBERT M. GREENFIELD AT THE 75TH ANNIVERSARY YEAR COMMENCE-MENT OF THE PHILADELPHIA TEXTILE INSTI-TUTE, SATURDAY, JUNE 6, 1959

Ladies and gentlemen, it is roughly 6 months ago since I had the opportunity to receive your president, Dr. Hayward, and representatives of your trustees who apprised me of the oncoming 75th anniversary of the founding of the Philadelphia Textile Institute. On this occasion, they refreshed my memory on the development and growth of your school, and invited that I serve as chairman of the honorary committee for this, your diamond jubilee year.

Those who are here today know the Philadelphia Textile Institute to be a unique institution; unique in that it is the oldest and largest technological school of its kind in America. Unique, too, in that it is the only one of its kindred institutions which has not been absorbed into a State college system. Unique in that, while providing a rounded education in the humanities, it gives specific service to an industry so important to our national economy. Unique in that it has maintained its independent, voluntary character exemplifying the private initiative traditional in the growth of higher education in America.

You are intimately acquainted with these several characteristics of the institute; yet, it is important that they be restated from time to time so that they become living values and guideposts in the future development of this institution. The major educational institutions in our Nation which have made the greatest contributions to the development of knowledge and research have each proceeded from this same background. The industry, to which this college is dedicated to supplying trained leadership and dedicated to serve with men of broadgaged executive and technical knowledge, similarly proceeded from this background—the characteristics of which are the exercise of private initiative, individual energy and the use of each man's resources to the highest level of his capacity in making his contribution to his fellow man.

It is for reasons of this kind that I have been glad to serve as chairman of the honorary observance committee, and to invite the Nation's leaders in government, in industry, and in education to voice their support and to felicitate you during this jubilee year. This committee, today, is comprised of men of the highest statute in our national life—from our former Presidents of the United States, through members of the Cabinet, the U.S. Senate, Governors of our

various States and the leadership in industry, and business, and finance from all corners of our Nation—each of whom brings recognition to your accomplishments in both the worlds of commerce and education, and of the contribution of your graduates to their community and to the Nation.

It is worthwhile to note that, beyond educational services to your student body, this college has just completed its work on your 7,500th research project for your industry and that you have served over 750 corporations, universities, and governmental agenticles in research activity. And, as in mosforward looking institutions, what has been accomplished is but groundwork for the task yet to be undertaken and the goals yet to be achieved.

To accomplish such goals, the Philadel phia Textile Institute faces the same problems as every other institution of higher learning in this country. Of these, you have heard much in the past few years for there is, at last, a concerted effort to acquaint our people as to their responsibility to education to assure its continued growth in this bountiful land.

The only possible answer to the needs of education appears almost as soon as the problem is stated. It is that as a Nation of independent people and uncentralized edu cation we must now come to a collective decision that we can afford to and, indeed must spend more on education. We can po longer be content with half measures. must push forward even more energetically than we have and call now for a mobilist' tion of private citizens, government, industry, the teaching profession, students, and their parents-indeed, all friends of learn ing-to meet the problem which confront us. The initial and strongest support mus come from those who have enjoyed the fruits of higher education—the graduate and former students of our colleges.

Further support, of course, must come from the various levels of government from private foundations, from private in dividuals and from corporations who receive the benefits to our society which process from our educational institutions.

You will welcome the report which I have been asked to make at this time that the special progress fund for this anniversary year—subscribed to largely by alumni, foster alumni, students and their parents—bas passed its initial goal of \$75,000—a 200-per cent increase over voluntary giving in past years.

To accomplish the task set forth in genting this institution for its responsibilities for the future, this is but a beginning. matching sum will be sought by the Year end to enable the Institute to extend and improve its educational and research serices. It becomes our part—and especially the part of those with closest ties to the college through their alumni status and through the industry which it serves—to assure that the Philadelphia Textile Institut attains its full position of prestige in educational achievement and in industry contribution.

The Flow of Gold

EXTENSION OF REMARKS

## HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. CHENOWETH. Mr. Speaker, there is great concern in this country

over the depletion of our gold stocks. I wish to include in my remarks an editorial from the Washington Evening

Star on this subject.

Mr. Speaker, this editorial calls attention to the fact that for the first time in 20 years our gold reserves are below \$20 billion. The writer of the editorial does not share the apprehension of others Over the decline in our gold stocks, but does admit that the situation-cannot be ignored. I personally feel that the situation is much more serious than the editorial indicates. I would like to see us replenish our gold stocks, and this can be done by increasing the production of gold. The present price of \$35 per ounce is wholly unrealistic. The producers of gold are entitled to a fair price, which Will enable them to resume operations.

I also feel that there should be a free market in gold, and that citizens of the United States should be permitted to own and possess gold, as are the citizens of foreign nations. I have introduced a bill authorizing private transactions in gold, and a number of similar bills are bending. I would like to see this legislation passed at this session. This would be a start to working out a satisfactory solution of our gold problem.

The editorial follows:

THE FLOW OF GOLD

When the Treasury Department this week hands over to the International Monetary Fund approximately \$344 million in gold, our gold reserves will drop below \$20 billion for the first time in 20 years. The decline has been irregular for the past decade, from the high point of \$24.5 billion in 1949, but has been continuous and more rapid for the past 18 months. The largest drop was recorded in 1958 at \$2.3 billion and there are estimates that it may be as high as \$2 billion in

For the record, the transfer to the IMF honors a commitment—approved by Congress and the President—to increase our subscription to that agency. The bulk of the gold outflow, however, has been of a different king. kind-namely, its delivery on demand to foreign nations having dollar balances sufficient to cover their purchases of the metal. There have been numerous explanations for this movement of gold, but it is significant that it marks a confidence-lacking "flight that it marks a confidence-lacking from the dollar has pretty much fallen of its own lack of weight. There has, in fact, been an increase in net dollar balances (not converted into gold) over the past year—and by approximately a half billion in the first quarter of 1959 alone.

The more valid explanation seems to be that our sales abroad, down substantially for more than a year past, have been running behind the total dollar value of our import purchases, plus foreign investment of American can private capital and the various types of foreign aid (military and nonmilitary). Foreign nations that have thus acquired a surplus of dollars—and particularly those like Great Britain, most of the countries of Western Europe and Japan, whose economies have grown much stronger in recent years—are taking the opportunity now to boister their own currency reserves in gold. It might properly be pointed out that this strengthening of the of the economies of friendly nations has been one of our own hopes in the postwar

Against this background there remains the question of whether alarm is justified about our changing gold position. The consensus is that it that it is not, but neither should it be

observed with indifference. By law, the Government is required to hold an amount of gold equal to 25 percent of all Federal Reserve currency and deposits belonging to member banks. The balance on hand this week will amount to about 40 percent, representing an excess margin of about \$8 billion. There are, furthermore, both private and governmental ways to check the gold drain if necessary. One of the best and surest ways is for American business and industry to protect and improve its competitive position in world markets-a way that requires cost controls, good salesmanship and quality of production. Curtailment of foreign-aid spending abroad, particularly in areas of greatest economic recovery, is one of several alternatives available The course of events to Government. through the remainder of 1959 should tell whether the first way is coming to pass, or whether there may be need to invoke some of the others

## Tribute to Postmaster General

EXTENSION OF REMARKS OF

## HON, AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, June 22, 1959

Mr. JOHANSEN. Mr. Speaker, as a sequel to the dedication on June 13 of the new post office at Kalamazoo, Mich., the Kalamazoo Gazette paid a richly merited tribute to the Honorable Arthur E. Summerfield, Postmaster General, who participated in the dedication ceremonies.

Under leave to extend my remarks, I include this editorial:

#### BUSINESSLIKE GOVERNMENT

Postmaster General Arthur E. Summerfield's visit to Kalamazoo for the dedication of our new post office was both a pleasure and a privilege for this community.

It was an opportunity to get acquainted with the dynamic Cabinet member who has revitalized the moribund Post Office Department, and a chance to see an example of the improvement being made throughout the biggest business-type service organization in the world.

Summerfield, a successful Michigan businessman before he was drawn into public life, is an outstanding representative of the kind of people with whom President Eisenhower has been able to surround himself.

Memories are often short. We forget the past and take the present for granted. It is appropriate, therefore, to recall that when Summerfield took over the Department in 1953, not a post office had been built since 1938. Postal facilities averaged 50 years old—obsolete, inefficient, wasteful.

Our new post office is only 1 of 3,000 built since Summerfield took charge, as part of a program of 12,000 and including mechanization and automation. The Department is now utilizing machines that sort letters at a rate of 18,000 an hour, cancel stamps too fact for the eye to follow. And only the other day Summerfield presided over the experiment of transmitting mail by guided missile.

This is businesslike government, resulting in a brand of progress beyond the imagination and executive capacity of the oldfushioned professional politician.

From the outset, Summerfield broke with political tradition. In the past, the winning party had often rewarded its national chairman by making him Postmaster General-in

addition to his party duties. Usually he kept on politicking while career men ran

Summerfield promptly resigned as Republican national chairman to give full time to the direction and improvement of an operation that, doing a business of \$20 billion a year and employing more than half a mil-lion people, is too big and too important to be run on a part-time basis.

Both in attitude and in method, this represents the best in modern government, a conspicuous example of what the President has sought in choosing his official family

from the ranks of the ablest.

Remarks of Dr. Frederic H. Barth at the 75th Anniversary Year Commencement of the Philadelphia Textile Institute. June 6, 1959

EXTENSION OF REMARKS

## HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. TOLL. Mr. Speaker, on June 6. 1959. I had the privilege of attending the 75th anniversary of the founding of the Philadelphia Textile Institute, the oldest and largest technological school of its kind in America.

Among the distinguished speakers at this memorable occasion was the Honorable Frederic H. Barth, an outstanding educator, who only yesterday was appointed acting postmaster of the city of Philadelphia.

Pursuant to permission granted, I include Dr. Barth's remarks at the commencement services:

REMARKS OF DR. FREDERIC H. BARTH AT THE 75TH ANNIVERSARY YEAR COMMENCEMENT OF THE PHILADEIPHIA TEXTILE INSTITUTE, SATURDAY, JUNE 6, 1959

Fellow alumni and friends of Philadelphia Textile Institute, those of us who have shared in the formulation of plans for the diamond jubilee year of our college, may feel justifiable pride in the revitalized spirit that has become manifest among old grads and young alike, who together have given ex-pression to their belief in the future of their college by a dramatic increase in alumni giving. Our alumni family has taken the mature view that attendance and graduation from Philadelphia Textile Institute should mark but the beginning, not the severance, of ties to education; that the educated man recognizes some responsibility to his alma mater to help nurture it so that It can continue to bear the fruits which he enjoyed, for future generations. This calls for a lifelong partnership which can be a rewarding one in satisfactions and in prestige.

The principal aims of the Diamond Jubilee Alumni Progress Fund are to spur Philadelphia Textile Institute's growth of reputation in educational accomplishments and research ability. With its alumni family and friends made aware and receptive to the college's opportunity in its 75th year to take up slack and alert itself to the challenge of the future, which it must meet as spirited patriarch among the textile colleges our Nation, the potential is great for fulfillment of the role we envision for it.

We have seized 1959 by the forelock, and we do not intend to loosen our grip on progress. We have enlisted a new kind of

leadership among our alumni who, by reason of personal and business success, are willing to provide their college with a bonus for investment in improvements in quality of its education. I want to salute at this time William A. Popp, 1938, founding chairman of the President's Club, which now boasts 18 members who gave \$1,000 or more to the fund. Frank H. Kaufmann, 1937, founding chairman of the Prestige Club, has enrolled 57 members who contributed \$250 or more; and Charles P. Hoffner, 1949, has enlisted 95 members in the 75'ers Club of which he is founding chairman. Membership in these newly formed clubs remains open, and we hope that by the end of the year their numbers will raise a strong voice in shaping the future of Philadelphia Textile Institute. These chairmen have rendered a yeoman service and their enthusiasm has been contagious and invigorating to the campaign. And I want to thank Peter J. Osborne, 1949, who has devoted his efforts specifically to the building of an organizational structure in the class agents division of the alumni progress fund. These and other men have carried the brunt of the work, and they deserve the thanks of the entire alumni body and of the trustees of the college.

In addition to this vigorous leadership has been the fine support which has come from Joseph A. Golden, alumnus of the class of 1928, who is serving as chairman of the foster alumni division. This phase of activity is geared to solicitation of leading executives in textiles and related fields of industry who recognize Philadelphia Textile Institute's value in developing a dynamic executive-level educational program to meet the requirements of a revitalized

textile world. These and other facets of our diamond jubilee alumni fund are still in progress. Even more significant, we have not lost sight of the fact that there is no better time than now to make Philadelphia Textile Institute better known in Philadelphia and throughout the Nation. In order effectively to accomplish this important goal, a 75th anniversary observance honorary committee was formed, comprising a cross-section of na-tional leadership. To Albert M. Greenfield, chairman of this committee, goes the sin-cere thanks of our board of trustees and our alumni association. Mr. Greenfield's general interest in higher education impelled him to accept this assignment, and to bring to the diamond jubilee the favorable climate which permeates our activities. I want to take this opportunity, also, to express alumni thanks to Mr. Greenfield for the special gift he made, in the sum of \$3,000, spur our campaign. This created incentive to reach our initial goal. I hope that Mr. Greenfield, as chairman of the honorary committee, will favor us with some remarks. He needs no introduction. He has earned for himself the coveted title of "Mr. Philadelphia" for his vast accomplishments in the business world and in civic and philanthropic life of our community and the Nation. We are proud of the part he is playing in helping to shape the future of this oldest and largest independent textile college in America. Thank you.

Undesirable Neighbor

EXTENSION OF REMARKS

## HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 22, 1959

Mr. JOHANSEN. Mr. Speaker, sometimes basic truths are better expressed in the vernacular of the man on the street than in the flawless language of diplomacy.

A constituent and friend of mine in the Third Congressional District, Mr. Forest Sweet, of Battle Creek, Mich., wrote me recently in this vein about the negotiations at Geneva and the prospective summit conference.

Under leave to extend my remarks, I include his homely, but realistic, comments:

I am a simple man and probably oversimplify complex matters, but suppose we treat the commies, Russia as well as China, as we would an equally undesirable next door neighbor. We know he is there—we can't get rid of him—but we ain't gotta have anything to do with him. We tried to be pleasant and neighborly and got snarls and threats in return, so why not build a barbed wire fence and make him stay on his own side and we stay on our side? I ain't versed in diplomacy but, since he wants to talk with us about affairs in the neighborhood, I'd give him one more chance and tell him first: You'll act like a gentleman or we won't even recognize your existence from then on. If Ike told Herter to tell Gromyko to tell Khrushchev that same thing, might get a decent basis for summit talks.

## California's Junior Logging Conference

EXTENSION OF REMARKS

## HON. CLEM MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mr. CLEM MILLER. Mr. Speaker, under leave to extend my remarks I wish to present a most useful and beneficial program, sponsored by the forest products industries of California, to familiarize our youth with the prospects and future for lumber and logging. Spearheaded by the Redwood Region Conservation Council in northern California, we hope that its fine example will spread elsewhere in the United States wherever lumber and logging are prevalent:

THE JUNIOR LOGGING CONFERENCE

The oldest industry in America is the forest products industry, yet none is undergoing more astonishing changes right now than those businesses established on wood and other products from our forests. Each year sees new gains in research, new advancements in land management practices, more acreage certified to tree farming and continuous forest crop production, to cite only a few examples.

Equipment manufacturers who provide the saws and milling machinery, the tractors and trucks, even the tires for these heavy work vehicles, all are perfecting new production techniques and new methods for making an old, hard job easier and more efficient. More and more mills are installing automatic units to do jobs once done by hand. Equipment to supply the needs of this dynamic industry is undergoing tremendous changes.

In the face of these new developments, it is no wonder that each new generation of workers entering forest employment, particularly in the vast forests of our Western States, finds itself caught up in a program of learning methods and techniques which are brandnew and cannot be learned from old hands who have been doing the same thing the same way for generations.

In the Redwood-Douglas-fir region of northwestern California, leaders of the forest products industries have taken concrete action to help new employees bridge the gap between past and future, between school and job.

Spearheaded by the Redwood Region Conservation Council, a nonprofit forest products industries conservation education organization with headquarters in Santa Rosa, a program has been developed in cooperation with the California State Department of Education to provide forestry, logging, and lumbering courses to students in high school anticipating forest employment upon graduation. This program, established in 1953, will be operating in nine high schools in the fall of 1959, with approximately 400 boys enrolled in these forestry, logging, and lumbering courses. Other schools in the region have incorporated some phases of the program into farm forestry units taught in conjunction with vocational agriculture courses.

The Redwood Region Conservation Council has, just this year, produced in cooperation with the Foundation for American Resource Management, a curriculum outline for forestry instructors at the high school level which will help teachers save much research time by giving them a compact base from which to start working up their individual classroom curriculums. In other ways too Redwood Region Conservation Council has attempted to bridge the gap between school and community, between educator and businessman. Local industries are encouraged to lend support to high school instructors in need of community cooperation.

Perhaps the most outstanding example of the fruits of such cooperation is the annual Redwood Region Conservation Council Junior Logging Conference, held in the spring prior to the close of the school year. At this time over 100 boys are invited to a 3-day session of intensive forest employment training. Seven such conferences have been held.

They convene, usually at Mendocino woodlands which is a rented campsite on the Jackson State Forest in Mendocino County with a faculty numbering about 55 of the region's recognized leaders in the forest products industries, as well as educators and personnel from the State division of forestry and the U.S. Forest Service, both public agencies cooperating wholeheartedly in this program.

In the region, the junior logging conference faculty has become widely known as the million dollar faculty since to purchase the skills and services of the men who comprise it for 3 days would probably run close to that amount. For this program, all give voluntarily of their time and energy, even to bringing along the necessary equipment for demonstrations, including such items as chainsaws, tractors, planting tools, aerial cameras and wood sample kits.

The facilities of the Union Lumber Coat Fort Bragg and of contract loggers operating on the Jackson State Forest are made available to the boys who have an opportunity to view first hand many examples of subjects they may have met previously only on the pages of their classrooms textbooks. Daylight hours are devoted to an extensive program of field trips, tours and in-camp demonstrations on a wide range of subjects all related to the production and harvest of the forest crop and the manufacture of goods from that harvest.

Evenings are devoted to speakers and panel discussions on many subjects, ranging from job opportunities, industrial safety and technical details on the structure and use of wood to open forums for question and answer exchanges.

Evenings are also devoted to what might be termed "philosophy sessions" as industry leaders and youngsters discuss the ramifications of working and living in a free enterprise society. Human values, opportunities to the energetic, possibility of success and the sacred right to be a failure if you like, without interference from anyone, are brought into open discussion. In many instances, this is the first time students have had an opportunity to examine these concepts. Economics is included, and it is made abundantly clear that no product can be sold on the open market for less than the costs involved in its making, including labor, processing, plant investment, shipping and other factors. Many of the students have had no classroom study in economics, many hold fuzzy ideas as to what money can and cannot do, about the source and expenditure of tax monies, about the power and the significance of the individual.

The purpose of all this is singlefold—to help boys become men; the kind of men who will be workers and, in some cases, leaders in the forest products industries of the redwood region in the near future.

The Junior Logging Conference is a ploneer attempt to teach not only the newest developments in industrial technology, not only the goals of evercontinuing research for better ways to do things, but also to inculcate very fundamental and vitally significant attitudes into the lives of young men. These attitudes are what men live by and color all that they do and seek in life.

In a tremendously complex technological economy, where more and more often men are trained and counseled to be specialists in some particular field to the exclusion of everything else, there is a need for men who have fixed values and unlimited goals. There is a need for men who will stand or fall on their own ability, asking no intervention from agencies of government. There is a need for men who are conscious of their own power as individuals, who have explored their own potential and who know their own limitations.

Such men have built the forest products industries of the Redwood-Douglas-fir region in California. In the Redwood Region Conservation Council Junior Logging Conference they have pooled their resources and their energies to help bring up a generation of men of similar inclination to take over the reins of operating industries in their own time.

The Junior Logging Conference program was the first of its kind in the United States. The idea has spread to other forest areas and it is the hope of the Redwood Region Conservation Council that it will continue to grow, that each forest region in the Nation will see the merits of the program and seek to establish similar programs. It is even possible that other kinds of industry will find value in programing of this kind and that through this pioneer program American industry will move to take some responsibility for educating young men destined to be the workers of tomorrow. When such youngsters step into the vacancies in the ranks of industrial employment they bring to their employers not only youth and strength, but sound values and a willingness to work and learn and grow with the industry of their choice.

## The Public Is Demanding a Sound Dellar

EXTENSION OF REMARKS

## HON. RUSSELL V. MACK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. MACK of Washington. Mr. Speaker, letters that I am receiving daily

convince me that the American people are extremely concerned over excessive Government spending. Under leave to extend my remarks in the RECORD, I include such a letter received from Mr. Frank L. Davies, of Vancouver, Wash.:

MAY 27, 1959.

Hon. Russell V. Mack, Member of Congress, Washington, D.C.

Dear Congressman Mack: People in many countries have been ruined or impoverished by inflation caused by excessive government spending. I am worried about inflation in the United States and depreciation in the value of the dollar. If our Government keeps spending more than it takes in, we certainly will have more inflation and prices will keep on going higher.

If this happens my savings will be worth less, my business will be worth less, my insurance will be worth less, my bonds will be worth less, my income will buy less, my social security will buy less.

I hope you will vote only for essential expenditures, and against waste and appropriation bills favoring special interests. If we are to survive as a strong Nation, we must avoid further inflation.

Let's keep the dollar sound.

Sincerely,

FRANK L. DAVIES, Vancouver Oil Co.

VANCOUVER, WASH.

The United Nations Must Investigate the Red Chinese Crimes Against Tibet and Against Civilization

EXTENSION OF REMARKS

## HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. JUDD. Mr. Speaker, under the leave to extend my remarks in the REC-ORD, I include the following editorial from the Washington News of June 22, 1959. The crimes of attempted genocide against the completely peaceful Tibetan people are exactly what the world must expect any Communist regime to commit whenever it thinks it has a good chance to get away with it. But what is com-pletely inexplicable is that some Americans still advocate bringing the United Nations down to the level of such lawlessness by accepting Red China into membership instead of insisting, in accordance with the United Nations Charter, that a government seeking admission must first qualify by bringing its international behavior into harmony with the charter. If the United Nations is to survive as a useful international agency, it must, as a minimum, live up to its own principles and investigate, expose, condemn, and oppose the Communist rape of Tibet.

The editorial follows:

[From the Washington Daily News, June 22, 1959]

TRAGEDY IN TIRET

Tibet is far, far away—about 7,500 miles from Chicago over the North Pole. It is a mystical land—and, few Americans know or care very much about it or its Buddhist people. But few will read the latest statement by the Dalai Lama without compassion and sympathy for the Tibetans, and extreme indignation at Red China.

The spiritual and temporal leader of Tibetans, now exiled in India, tell for the first time the tragic story of the Red Chinese rape of his country—from the day in 1950 when Red China's armies came in, through the day, early this year, when he was forced to fiee. It is a story of how for 9 years Red China has been doing to Tibet what Soviet Russia did to Hungary in a few weeks.

And the end doesn't seem to be in sight the Dalai Lama accuses Red China of attempting to liquidate the Tibetan race by swamping the country with 5 million Chinese. The Nazis committed genocide (extinction of a people) with gas chambers; the Red Chinese way is slower but effective,

This way, familiar in the history of Communist aggression, is described by the Dalai Lama as "a reign of terror which finds few parallels in the history of Tibet. Forced labor and compulsory exactions, systematic persecutions of the people, plunder and confiscation of property belonging to individuals and monasteries, and the execution of certain leading men in Tibet—these are the glorious achievements of Chinese rule in Tibet."

In 1956 there was a brief period of hope for more reasonable Chinese policies. Indian Premier Nehru got Peiping to piedge that these repressive policies would be modified. But Red China broke that piedge as quickly and violently as it had broken its 1950 promise to respect Tibet's domestic autonomy.

Continued repression brought this year's "spontaneous upsurge" of the Tibetans. Red China's brutal suppression of the uprising, and the flight of the Dalai Lama.

After weeks of contemplation he has spoken, and he asks for only one thing—an international commission to examine the serious charges he has made against Red China. He is willing to accept the verdict of such a commission.

Red China will never agree to such an investigation, just as Soviet Russia never would agree to a United Nations investigation of the Soviet rape of Hungary. But just as an investigation of Hungary was made over Moscow's protests, so an investigation of Tibet should be made, too.

If, as the Dalai Lama suggests, Red China's objective is to wipe out all traces of Tibet and its people, then the records of civilized man at least ought to include the evidence of how it was done and by whom.

## Success Story of an Integrated Farm Co-op

EXTENSION OF REMARKS

## HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 15, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, a Wisconsin farm cooperative which has practiced vertical integration at the grassroots is thriving and has blazed a trail that many other rural communities would do well to imitate. Located in my home district, the A-G Cooperative Creamery of Arcadia grew out of two rival co-ops which were cutting each other's throats. It is now a unified and expanding setup offering a variety of services to more than 1,060 members.

An article in News for Farmer Cooperatives, a publication of the Farmers Cooperative Service of the U.S. Department of Agriculture, tells the success story of the A-G Co-op. Under leave to extend my remarks, I would like to include this article in the RECORD.

VERTICAL INTEGRATION AT THE GRASSROOTS (By Henry H. Bakken and G. S. Grewal, University of Wisconsin, Madison, Wis.)

Too much cooperation of the wrong kind may be as bad as too little cooperation of the right kind. This was the conclusion of the farmers of Arcadia, Wis., in 1924. In this rich farming community the dairymen had formed two rival cooperative creameries, one called Glencoe and the other Arcadia, both located in the same village.

After years of internecine war between the rival organizations, the only thing they had to show for their effort was indebtedness, frustration, and ill will. The managers of the two associations had the good sense to realize the futility of such rivalry and they took the initiative in persuading the membership that they had much more to gain by working together than they could possibly hope to realize through continuous competitive conflict.

In 1925, this line of reasoning led to the merger of the two creameries under the name A. G. Cooperative Creamery. Arthur C. Schultz, former manager of the Arcadia Creamery, was selected to manage the new enterprise, with assets of about \$40,000. From the beginning, Mr. Schultz has been dedicated to the notion that the primary purpose of a cooperative is to render service to its membership.

As soon as the success of the new creamery was assured, the dairymen, many of them also poultry producers, took steps under Schultz' leadership to convert the Glencoe Creamery building into a cooperative hatchery as a subsidiary of the A. G. association. They began the hatchery business in 1927 on a very modest scale, supplying the needs of some of their members who at the time maintained relatively small flocks of layers.

#### BEGAN HANDLING FEED IN 1928

Both cows and hens require feed, so in 1928 the A. G. Cooperative Creamery began buying feed concentrates in wholesale quantities and selling its supplies directly to members from the car door. In 1929 it acquired an elevator building without milling facilities to hold inventory supplies which might be obtained both from the standpoint of cash discounts and prices.

Throughout the great depression years of the thirties, the Arcadians marked time, simply building and strengthening the organizations they had established with such high hopes in the twenties. After this fateful decade passed, however, the A. G. Cooperative began bursting out at the seams. In 1941 the creamery reequipped to receive whole milk, and from that time on, less and less farm separated cream was received until all milk deliveries were in whole form. The demand during the war for milk powder hastened this development, and in 1945 the creamery installed a modern spray.

By the year 1946, the best in this history of the creamery, it was diversified to the point where it offered for sale a number of dairy products such as processed whole milk, cream, skimmed milk, buttermilk, butter and milk powders. Total sales exceeded \$1 million, and capital assets reached the quarter million mark.

Before 1944 the A. G. Cooperative Creamery was actually a private corporation operated informally as a cooperative, 'In 1944 it decided to reorganize and the new association was incorporated under chapter 185, Wisconsin Statutes, as a bona fide cooperative.

In the meantime, the association was undergoing other changes. A new tile building was constructed in 1941 to receive poul-

try for slaughter, and the hatchery continued to expand in volume of output to 60,000 chicks annually. A new manager of the hatchery employed in 1942 pushed volume up to 125,000 chicks in 1943, 150,000 in 1944, and 175,000 in 1945.

In 1950 the patrons and managers of A. G. became interested in the production of broiler chicks. A scouting party of the association was sent out on an investigational tour of the broiler industry, notably in Indiana. What they saw on this trip, they liked. When they got home, they prepared a feast of chicken and invited businessmen and intertested farmers to the banquet.

On this occasion they gave a report of their findings. This was so inspiring that a complete program was drawn up to initiate the venture in the Arcadia area. Under the details of this program, growers had to agree to:

1. Finish four batches of birds per year, each in 10 to 12 weeks.

2. Purchase chicks from the A. G. Cooperative hatchery.

3. Use one brand of feed purchased from A. G. to insure uniformity of quality of the finished birds.

4. Process and market their birds through the A. G. association.

The first batch of broilers raised by four producers was delivered in May 1951. The management established a goal to produce at least 5,000 birds each week of unexcelled quality. More and more producers came forward to enter this program until production mounted to the point where new facilities for slaughter were required. In 1952 the association acquired a brewery building in Arcadia and converted it into a poultry slaughtering and cold storage plant—beginning operations here early in 1953. This building was destroyed by fire in January 1959.

Production of broilers rose from 5,000 birds weekly in 1952 to 60,000 in 1957. This annual production of 3 million birds weighing approximately 10 million pounds live weight is now being delivered by 110 members. All broiler production is pooled on a quarterly basis and the average price realized by the association for each 12-week period determines the settlement price with the growers.

In order to keep the broiler industry going on full schedule, 108 farmers keep laying flocks of approximately 65,000 breeder hens to supply the A.G. hatchery with a sufficient number of eggs to produce 3 million broiler chicks for 8 hatches of 450,000 per setting. In addition, another half million chicks are hatched to supply the farms with egg laying strains. This is the only cooperative hatchery in Wisconsin; it is also the largest hatchery in operation in the State.

#### EXPANDED FEED FACILITIES

To keep pace with the increasing demand for feeds and feed concentrates, the cooperative had to expand its facilities for grinding, mixing, and delivering supplies to the farms of its milk and poultry producers. In 1955, a new addition to the old elevator was built and equipped with modern machinery. Three years later the co-op completed a second elevator for processing and mixing commercial feeds.

These new mills have many labor-saving devices for automatic loading and unloading and elevating or transferring supplies from place to place in the mills. The association has acquired bulk delivery trucks and effects a savings of \$4 to \$5 a ton compared with stack deliveries.

The A. G. integrated cooperatives of Arcadia completed the fiscal year 1957 with a total volume of business approaching \$7 million. Payments in the form of equity reserves totaled nearly \$190,000. There are nearly 1,150 farmer patrons in the system

and their ownership in the business now exceeds the million dollar mark.

Another facet of poultry production was initiated late in 1958 by A. G. in a program to market high quality, large eggs throughout the year. The main reason for this venture in egg production is to take advantage of the high premium for large eggs at all times, and particularly during the months of September, October, and November.

During 1959, the A. G. Cooperative will furnish each of its egg producers with approximately 1,500 pullets a month to assure continuous production of large eggs. This association has already developed a market outlet for this quality in one of the best egg markets in the Middle West.

Plans are afoot for further integration in producing, processing, and selling agricultural products grown in the Arcadia community. The value of this association as a business builder to other enterprises in the area is inestimable. The success of the debt free A. G. Cooperative Creamery is contagious and the future appears brighter to folks within its sphere than in many other agricultural communities. Truly the farmers of Arcadia have blazed a trall that many other rural communities would do well to imitate.

## U.S.S. "Squalus"

EXTENSION OF REMARKS

## HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mr. LIPSCOMB. Mr. Speaker, the June issue of Klaxon, a publication by the U.S. Submarine Veterans of World War II under the editorship of Mr. Bob Parry, California commander, Submarine Veterans of World War II, contains a very interesting and informative article commemorating the 20th anniversary of the sinking of the submarine U.S.S. Squalus off the New England coast in May 1939.

The Squalus disaster was one of those once-in-a-while occasions that truly grips the heart and mind of the Nation. All of us, I am sure, were constantly at hand in spirit during the heroic Squalus rescue operations. Though, tragically, a number of men lost their lives, the whole country rejoiced over the fact that a newly developed rescue chamber proved successful in bringing alive to the surface a portion of the crew from the unflooded sections of the submarine.

I know many will be interested in reading this account of the Squalus disaster. Under leave to extend my remarks, I submit the Klaxon article for reproduction in the Record:

#### U.S.S. "SQUALUS" (SS192)

The keel of the soon-to-become famous SS192 was laid October 18, 1937, at the U.S. Navy Yard, Portsmouth, N.H., and on March 1, 1939 was commissioned U.S.S. Squalus with Lt. Oliver F. Naquin, U.S. Navy, as first commanding officer.

On May 23, 1939, while operating off the coast of New Hampshire and making her 19th trial dive, the main induction valve failed to seat properly allowing water to flood the after section of the ship through the 31-inch line. She settled stern first in 240 feet of water, with 25 members of her

crew and 1 civilian representative trapped in the flooded portion of the ship.

Soon after the time her surfacing message should have been received, Rear Adm. C. W. Cole. commandant, Portemouth Navy Yard, alerted her sister ship, U.S.S. Sculpin (SS 191) to look for the missing submarine in the designated diving area. She soon spotted a red smoke signal, marked the location and made contact with the personnel of the Squalus through the marker buoy, containing a telephone, previously released by her, however, this contact lasted only a few moments before the cable was broken. The submarine had been on the bottom 5 hours by this time.

Quickly the whole Nation was alerted. Divers, salvage, and submarine experts were immediately dispatched to the scene of the disaster. Preliminary observations made by a Navy diver and at 11:30 the following day the U.S.S. Falcon (ASR2), which had rushed to the area from New London, Conn., lowered the newly developed McCann rescue chamber over the side and contact was established with the entrapped men through the forward torpedo room hatch. Presh air, dehydrating material, food, and hot coffee were furnished the survivors. Harold C. Preble, civilian naval architect, Lt. (jg.) John C. Nichols, and five crew members made the first trip to the surface after having been confined in the sunken submarine for a period of 29 hours, thus becoming the first persons to use the Mc-Cann diving chamber for which it was intended-a result of improved rescue equipment after the experiences of the ill-fated \$4 and \$51 in previous years.

The second trip of the chamber was completed within the following hour, carrying Roland Blanchard, F2c.; William D. Boulton, Sic.; Lawrence J. Gainor, CEM; Judson T. Bland, EMic.; Lloyd B. Maness, EM3c.; Francis Murphy, Jr., QMic.; Robert L. Washburn, S2c.; Warren W. Smith, SM2c.; and Raymond P. O'Hara, PhMic.

The third trip followed without incident

With nine survivors.

The fourth and most harrowing trip commenced at 7:45 p.m. to bring up the last of the known survivors, Lt. O. F. Naquin; Lt. W. T. Doyle, Jr.; Allen C. Bryson, Flc.; Eugene D. Cravens, CMic.; Charles S. Kuney, Y2c.; Donato Persico, Sic.; Carol M. Pierce, M2c.; and Charles A. Powell, RM2c.

While the diving chamber was being brought to the surface, the downhaul cable, which controlled the ascent of the chamber became fouled, making it impossible to continue raising the chamber. It was decided to lower the chamber and send down a diver to unshackle or cut the downhaul cable, thereby freeing the chamber. This was accomplished, but as the chamber was again being raised by the retrieving cable attached to the top of the chamber, the strain proved too great and the cable almost severed. The chamber was again lowered to the bottom.

Two divers were sent down in quick succession to bend on a new retrieving cable, but both became entangled in the myriad of cables and lines, could not accomplish the task, and had to be returned to the surface.

Due to nightfall and weather conditions it was decided to attempt raising the chamber by the badly frayed retrieving cable. The chamber was deliberately ballasted to give it an almost negative buoyancy and it was raised gently by hand from aboard Falcon.

The last of the survivors were evacuated at 0025, May 25, after 36 hours in the submarine and over 4 dramatic hours in the rescue chamber.

A fifth trip of the chamber was made the afternoon of May 25 to the after torpedo room hatch to assure no survivors were in this section of the ship, and it was discovered the room was flooded.

Rescue operations were secured and the submarine salvage experts began the dif-

ficult and arduous task of raising Squalus from such a great depth.

Major difficulties were encountered in the salvage operations due to the extreme depth, chilling waters, the stern being deeply imbedded in mud and weather conditions.

On August 12 the submarine was raised 80 feet from the bottom, towed 2 miles, and then she struck an uncharted pinnacle and grounded. Finally on September 13, she rose from the bottom, her bow broke the water and then misfortune struck as she again plunged into the murky depths. That very same day the determined salvage crew again raised her and this time they met with success. That night, after laying on the ocean's floor for 113 days, Squalus was towed home into the Portsmouth Navy yard, thus climaxing the grueling salvage task seldom, if ever, paralleled in the Navy's history.

She was decommissioned November 15,

Immediately an extensive \$1,400,000 overhaul was undertaken and she was recommissioned May 15, 1940, as U.S.S. Sailfish (SS192) with Lt. Comdr. M. C. Mumma, Jr., as commanding officer and several of the Squalus survivors as members of her crew.

The SS192, despite her unfortunate start in the U.S. Navy, was in Manila Bay when World War II commenced, and on December 13, 1941, fired a brace of torpedoes at three Japanese destroyers, scoring one solid hit, thus sinking one of the first enemy warships accounted for by the U.S. Navy, and received her baptism of 20 depth charges.

After completing 12 war patrols, officially credited with sinking 45,029 tons, earning 9 battle stars on the Asiatic-Pacific Area Service Ribbon, Presidential Unit Citation and Philippine Defense Ribbon, she returned to her home at the Portsmouth Navy Yard, and on Navy Day, October 27, 1945, was decommissioned amid elaborate ceremonies and her conning tower now stands at the Navy Yard gate.

The following personnel lost their lives in U.S.S. Squalus:

Ens. Joseph H. Patterson; James A. Aitken, FC3c.; John J. Batick, EM1c.; Joshua Casey, Fic.; John A. Chesnutt, CMM.; Robert L. Coffey, EM2c.; Eivin L. Deal, MM2c.; Lionel H. Fletcher, EM3c.; Kenneth R. Garrison, CMM.; Robert F. Gibbs, TMic.; John P. Hathaway, Fic.; Eugene A. Hoffman, MM1c.; Alexander B. Keegan, Sic.; John P. Marino, S2c.; Huie K. McAfee, EM2c.; Alfred C. Priester, TM2c.; Frank H. Schulte, MM2c.; Bascom S. Scyphers, EM1c.; Sherman L. Shirley, TM1c.; Jack J. Strong, MM1c.; John M. Thomaia, MM1c.; Robert P. Thompson, SC3c (attempted to escape through the after battery compartment hatch, undogged the hatch, and his body was later washed out that hatch which was found open by the divers); Marion L. Ward, RM3c.; Robert R. Weld, F2c.; Donald Smith, civilian, General Motors representative.

On this, the 20th anniversary of your supreme sacrifice for your country and the U.S. submarine force, we the U.S. Submarine Veterans of World War II pause to remember and appreciate your devotion to duty and contribution to our submarines of today.

## Poison in Denver's Water

EXTENSION OF REMARKS

## HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, our distinguished colleague from Michigan [Mr. DINGELL] has regu-

larly called attention in the Appendix to water pollution. Let me add another entry. It is an article by Bill Miller which appeared in the June 21 issue of the Rocky Mountain News, which newspaper is widely circulated in the district I represent.

It is my privilege, Mr. Speaker, to help call the attention of all Americans to the threat of our water, our greatest physical resource:

Your Water Is Threatened by Pollution (By Bill Miller)

Last weekend a Colorado Congressman charged that the U.S. Chemical Corps operations at Rocky Mountain Arsenal have contaminated underground water in the area.

Representative BYRON L. JOHNSON, Democrat, of Colorado, said the contamination "has ruined farms, destroyed plant and animal life, and is threatening the water supply of Brighton."

This is just one phase of the water-pollution problem in the Denver metropolitan area—a problem that is growing more and more complex as the population increases.

Equally as shocking as Johnson's disclosure, however, are these startling facts:

During the winter months of low stream flow a waterplant in the area was taking in a domestic water supply for treatment that was 100 percent sewage flow.

Most of the sewage-disposal plants in the area are overloaded. At peak periods operators bypass the plants and dump raw sewage into streams.

Downriver water districts, which use the stream water for domestic water supplies, are forced to treat this effluent and attempt to make it drinkable.

Although State laws limit the amount of human waste pollution that can be dumped into streams, this limit is exceeded by many sanitation districts several hundred times.

The same State laws outline a testing procedure which measures the quantity of oxygen utilized in the blochemical oxidation of organic matter. This legal limit also is exceeded several hundred times by many districts

Truck farmers north of Denver use this polluted water for irrigation purposes. Still unanswered is the question: Can this polluted water contaminate vegetables?

In and around Denever, there are 45 authorities in the business of collecting and disposing of sewage.

Some experts are convinced that's 44 too many

There are in the area 21 municipal sewage treatment plants—plus a half-dozen, including the one at Rocky Mountain Arsenal referred to by Johnson, operated at military installations by the U.S. Government.

Having this many treatment facilities in the area, at first glance, looks good. But most of them are too small,

OVERLOADS ON PLANTS INCREASING

They are overloaded now and the loads are increasing as the population grows.

National studies show that per capita costs of these small plants are far greater than costs for large treatment plants.

Thus, the collection and disposal of sewage is one of the biggest, most expensive, and complex problems facing metropolitan Denver. It will get bigger, more expensive and more complex.

It's a problem that concerns every householder, every community and special area water or sanitation district, cities—large and small—the State and the U.S. Government.

There is no State money available for this purpose while Federal aid for the entire State in 1958 was limited to \$636,675.

The 1959 allotment from the U.S. Government for construction of sewage plants is \$635,700. All of it already has been spoken for,

Colorado's Department of Health is responsible for seeing that streams, lakes, and other waters of the State are kept free of pollution by human wastes.

This agency tests stream water-and effluent entering streams from sewage plantsto determine if State health laws are being met. In most cases, they are not.

A law, passed by the last general assembly, gives the department authority that previously was lacking.

A lawsuit developed between Denver and the department.

DENVER ITSELF A VIOLATOR

Denver, which has primary but no secondary treatment of sewage, is an offender. In 1957, the State told Denver it should

build a secondary treatment plant—at an estimated cost then of \$8 to \$10 million,

Denever has not complied.

Denever is not the only offender. Districts along Clear Creek (no longer very clear) also are violating State law.

Clear Creek is a source of drinking water for thousands, from Golden to the stream's junction with the Platte River.

This water, of course, is filtered and chlorinated before it is pumped into water lines.

Clear Creek drains into the Platte River as does sewage from the Depever plant. Fortunately, no community below Denver now depends on the Platte for drinking water.

Brighton, for instance, uses deep wells. But these wells are being endangered, according to Representative Johnson, fault sanitation procedures at the arsenal.

Streams and rivers in this semiarid area have still another vital function-that of recreation.

Cherry Creek as it meanders through Denver is lined with concrete walls. It is bordered on both sides by trees, shrubs, and The stream flow is small but pleas-

Denver violently opposes the plans of Glendale, a small community surrounded by Denver, to build a sewer plant and dump effluent into Cherry Creek.

Regional planners tell us that creeks and rivers, such as the Platte, Clear Creek, and Bear Creek, should be developed as recreation sites.

But continued use of them as open sewers can destroy their use for these purposes. For instance, the Platte, north of Denver, is worthless to fishermen.

With population rushing toward the 1 million mark, sewage—its collection and disposal—no longer can be ignored.

Sewage, and the watercourses utilized to dispose of it, do not recognize political boundaries.

Or do epidemics that could result if the problem is not solved.

Sewage is not popular as a subject of polite conversation.

But it's a problem that multiplies, even though we would like to ignore it.

It's a problem that begs for metropolitan cooperation-one that cannot be solved without this cooperation, plus the expenditure of millions of dollars.

The Rocky Mountain News will examine these problems and offer possible solutions,

## Executive Censorship

EXTENSION OF REMARKS

## HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 26, 1959

Mr. MOSS. Mr. Speaker, studies conducted by the Special Subcommittee on Government Information, at the direction of Hon. WILLIAM L. DAWSON, of Illinois, chairman of the House Committee on Government Operations, show that only by constant vigilance can the Congress prevent unjustified restrictions which executive agencies seek to impose upon the availability of information to the Congress and the public. The subcommittee recently received from Senator HUBERT H. HUMPHREY, of Minnesota, an account of some of the censorship obstacles encountered by the Senate Subcommittee on Disarmament, of which the Senator is chairman. His statement illustrates the necessity for congressional committees to be ever alert for attempts by executive agencies to misuse secrecy labels which are intended solely for the protection of genuine security matters, not for hiding information which may cause controversy or be against policy.

The statement follows:

EXPERIENCE OF THE SENATE SUBCOMMITTEE ON DISARMAMENT ON THE DECLASSIFICATION OF GOVERNMENT DOCUMENTS AND TESTIMONY

(Statement of Senator HUBERT H. HUMPHREY, chairman, to the Special House Subcommittee on Government Information)

Achieving a balance between informing the public and preventing the dissemination of information which would be injurious to the Nation's security is one of the great problems that confronts our Government at the present time. In this effort both the executive and legislative branches have a responsibility.

The Congress has been wise to establish special committees to study this problem and to take or recommend action when agencies of the executive branch appear to be restricting unduly the availability of information to the public. In addition to these special committees the other committees of the Congress must also be alert constantly to guard against the deliberate or inadvertsuppression of important data when national security is not involved.

The purpose of this testimony is to share with the Special Government Information Subcommittee of the House Committee on Government Operations the experience of the Senate Foreign Relations Subcommittee on Disarmament with the declassification of information by the executive branch. I am presenting this statement in response to a request from the distinguished chairman of the subcommittee, John E. Moss.

It is not my intention to suggest that the specific cases I cite be investigated further. Rather, it is to show that information is withheld for reasons that cannot be justified in the name of national security and to stress the need for yigilance on this matter by all congressional committees.

Over the past year the Subcommittee on Disarmament held a number of hearings, many of them in executive session. In all cases the executive session was held because the witness requested it. Usually, after such a session the transcript of the hearing was submitted to the executive agency or agencies involved for review. The executive agency then marked those parts of the testimony that, in its opinion, should remain classified. In order to determine whether this classification was justified, the subcommittee and its staff reviewed carefully the testimony after it was returned by the executive officials. When the reason for the classification was not self-evident, the executive officials were questioned about it. Frequently a reason other than security was given for restricting the information. When these erroneous reasons were pointed out the

executive officials often lifted the classifica" tion label.

The experience of the Subcommittee of Disarmament suggests that in a great many cases the executive branch censors testimony for insufficient reason. In order to correct this practice the committees of the Congress and their staffs ought to review carefully all testimony which executive depart ments ask to have classified. The review should seek to determine the reasons for continued classification and whether the are valid. Such a procedure would redound to the benefit of the electorate by providing our citizens with an opportunity to become better informed. Members of Congress would also be in a much better position to perform their constitutional responsibilities

The cases which follow illustrate the various points I wish to bring out:

1. The Central Intelligence Agency, in reviewing testimony given by a noted scientist. had classified a passage of testimony. When questioned as to why, the CIA official indi-cated he did not agree with the conclusion of the scientist and incorrect information When challenged should not be given out. further on the point, the CIA representative agreed to let the scientist's conclusion stand

2. The Atomic Energy Commission at first classified portions of testimony given by one of its chiefs of divisions that there was no evidence the Soviet Union was developing testing, or producing so-called clean nuclear weapons; that is, weapons with reduced radioactive fallout. The Commission was asked whether it was not in the interest of the United States to have this information brought out. The Commission reviewed the matter and decided that the information was of interest and agreed to leave in that portion of the testimony.3

3. The Department of State had struck out of testimony questions by the chairman and answers by a witness regarding a study being made by the Government on U.S. overset bases. When it was pointed out by the subcommittee that this information was contained in a news conference of the Secretary of State, the Department officials then said the testimony had been deleted because ! seemed irrelevant. It was suggested that ! was not the function of the Department in reviewing testimony for publication to rule on the relevancy of the discussion, particularly questions the chairman considered sufficiently relevant to raise in the first place. The Department then agreed to leave in the discussion on the oversea base problem.3

4. The Department of the Army and the Department of Dafense classified testimony relating to the results of Operation Sage brush, simulated war maneuvers of the Armed Forces using tactical nuclear wcapons The Army refused to remove the classifica-tion even after it was pointed out that at the time of the maneuvers, in October 1955, reporter wrote extensive stories about them and that these news accounts could only have been written as a result of considerable background briefing on the part of military officers. Part of the reason why the Armi wished to continue to classify the information, according to one officer, was that the results indicated the Army didn't know quite what it was doing in the maneuvers. Evel if this were true, said the officer, the information should not be released.4

5. The Department of the Army requested the elimination from the record to be Pub lished several portions of testimony submitted by Army Chief of Staff, Gen. Maxwell Taylor. When challenged on the classifications tion, over 90 percent of what had been taken out was restored. Among the passages finally declassified were those containing general discussions of page 200. discussions of new nuclear weapons devel opment and the tactical uses of these weap ons. They also put back statements the

Footnotes at end of speech.

general had made on the necessity of improving our nonatomic or conventional weapons capabilities if a nuclear weapons test ban should go into effect, general information on the fabrication of nuclear weapons, expressions of opinion regarding the reliability of agreements with the U.S.S.R., views on the psychological impact of a nuclear test suspension on people around the world, and the effects of nuclear failout.

6. The Government continues to classify significant information dealing with seismology, the study of earthquakes and movements in the interior of the earth. This includes testimony given before the Disarmament Subcommittee and documents submitted to the subcommittee by executive agencies. The subcommittee has never received a satisfactory explanation as to why such studies should be kept secret.

The reason that such studies should be made available is that advances in the science of seismology are needed and neces-sary to improve our knowledge about the detection and identification of underground nuclear explosions. It is to the interest of the United States to speed up our work in this field so that we may have a better conception of the capabilities of a control system for the cessation of nuclear weapons tests. An expanded research program in seismology is essential and a number of wellqualified and prominent seismologists and geophysicists have recommended specific projects; yet, the detailed description of these projects and the estimates given for the workability of certain theories for the detection and identification of nuclear weapons tests remain closed to the public and to scientists throughout the country. What is particularly of concern is that some of our scientists who have visited the Soviet Union within the past year report that in some fields in seismology the Soviet Union is much more advanced than the United States and that in many respects more money is being spent on fundamental research in seismology in the Soviet Union than is being spent in the United States.

This suggests to me that the Department of Defense should not be the primary agency-responsible for developing programs in the field of seismology and related scientific fields. Perhaps if this work were lodged in the Coast and Geodetic Survey of the Department of Commerce or the National Academy of Science, the scientists of the country would have access to the results of studies made and experiments conducted.

The six cases discussed briefly illustrate that Government agencies mistakenly classify information and deny it to the public. These are not the only cases that could be cited, but I believe the ones I have submitted amply demonstrate the need for vigilance on the part of congressional committees to review carefully all transcripts which contain classified information. If this is done, then perhaps executive agencies, too, will exhibit greater awareness of the public's need to know and will exercise greater care in the future in the classification of testimony.

I would not want to end this statement without emphasizing that in most cases over-classification of information is not a deliberate effort to deceive the people or to protect the Government from criticism. Generally I think it is due to a habit of being over-caucious; in other words, to follow the rule to classify when in doubt.

<sup>1</sup>Hearings of the Subcommittee on Disarmament, "Control and Reduction of Armaments," pt. 17, testimony of Dr. Hans Bethe, p. 1539, discussion of the number of earthquakes occurring each year in the U.S.S.R. and Chinal equal to a given yield of nuclear explosive.

\*Since preparing this statement I am pleased to report that some of this information has been released. Some material contained in the Berkner Report on Seismic Improvement was released on June 12. There is the possibility that more of such information will be forthcoming.

## The American Philippine Science Foundation

EXTENSION OF REMARKS

## HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 9, 1959

Mr. ANFUSO. Mr. Speaker, I take great pleasure in reporting that one of our most loyal and stanch allies, the Republic of the Philippines has embarked seriously upon a program of scientific development and modernization. To help promote this movement a group of tried and true friends of the Philippines have inspired, formed and organized the American Philippine Science Foundation. led by Gen. Carlos P. Romulo, the Philippine Ambassador to the United States and President of the Fourth Assembly of the United Nations, as president, the distinguished Nobel physicist, Dr. Arthur H. Compton, as cochairman and His Excellency, Carlos P. Garcia, as honorary pres-

This group includes Messrs. Alexander Calhoun, vice president of the First National City Bank of New York; James Jacobson of the Chase Manhattan Bank: Mr. Paul C. Smith, former editor and general manager of the San Francisco Chronicle and former president and board chairman of the Crowell-Collier Publishing Co.: Mr. John E. McKeen, president of Chas. Pfizer & Co., Inc.; Dr. George E. Armstrong, formerly Surgeon General of the U.S. Army and now vice president in charge of medical education at New York University; Mr. Richard Reuter of CARE; Prof. Frederick Pfitzpatrick of Columbia; Mr. Max Abelman, philanthropist and former officer Manufacturers Trust Co., and public relations expert, and other prominent citizens.

The events leading to this important development may be summarized as fol-

Founded in 1954, for the first 5 years of its existence, the Foundation engaged in an educational campaign in the Philippines on the essential role that science and technology play in the viability of a modern nation. This campaign reached a climax when Dr. CoTui, formerly professor of experimental surgery at New York University, founder and vice president of the American Bureau

for Medical Aid to China and now director of laboratories at the Creedmoor Institute, was invited by President Ramon Magsaysay early in 1957, to study the science needs of the islands. The report of the survey was finished after the late President's untimely death and was rendered to President Garcia in April and June 1957, months before the advent of Sputnik I.

In part I of the report, attention was drawn to the dangerous scientific and education deficit of the country and a nine-point program was recommended. These points called for all-out Government support of scientific work, for the establishment of a coordinating agency close to the Chief Executive, for the enhancement of science education, for revision of tax laws to attract philanthropic aid, for simplification of administrative machinery to expedite scientific development, and finally for the Philippines deliberately to assume the role of the cultural center of southeast Asia. In part II, untapped sources of possible aid from abroad were pointed out: namely the thousands of American friends of the Philippines and the large overseas Filipino communities in the United States.

This program coincides with that of the present administration in the Philippines. During the Philippine congressional session of 1958, Republic Act No. 2067, fathered by Senator Emanuel Pelaez and called the magna carta of Philippine science, was passed, providing for speedy development of science and technology. The National Science Development Board was established, with the chairman, Dr. Pauline J. Garcia, formerly Secretary of Health, enjoying a 6-year term and having cabinet status. Science teaching is being intensified and science talent searches have been instituted under the direction of the Science Foundation of the Philippines, of which Dr. Juan Salcedo, Jr., formerly Secretary of Health, is President. An intensive research effort on Kadang-Kadang, a disease threatening the coconut industry, the industry of greatest magnitude there, has been initiated. Modernization is also taking place in other scientific fields.

Meanwhile, here, the APSF in the United States is shifting from the educational role to a more active one. President Garcia, on his visit to this country in 1958, made a sizable personal contribution to help get the activities underway and smaller sums have been contributed by American firms and overseas Filipino groups. The support of CARE was won in spending over 3 high school science libraries with promise of 17 more when the need arises. With its still slender resources, the APSF has sent over information on upto-date world science and educational developments. However, more, much more, aid is needed to bring the scientific structure of the Islands to the point where it will be able to sustain a nation of now 24 million and rapidly growing.

All patriotic Americans should rejoice in this development and I call upon all and sundry, private individuals as well as corporate bodies and foundations, to do their utmost to encourage this movement. Its philosophy is in perfect consonance with that of the report of the President's Science Advisory Committee, recently made public. There is probably no better way to help the Filipinos help themselves for all time than this of helping them build their scientific structure and thus enabling them to achieve the fulfillment of their national destiny. In the ultimate analysis, their failure will be our failure and their success our success and science and technology may well spell that difference, for in this rapidly changing world, scientific progress is national defense in depth for them, for us and for the entire world.

## Washington Report

EXTENSION OF REMARKS

## HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following newsletter of June 20, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

JUNE 20, 1959.

The Mutual Security Act (foreign ald) passed 271 to 192 (Alger against) after 3 days' debate. Approximately \$3,500 million was involved, mainly allocated to military assistance (\$1,440 million), economic (\$1,900 million)—which includes defense support (\$750 million), Development Loan Fund (\$700 million), technical assistance (\$209 million), special assistance (\$250 million), and contingency fund (\$100 million).

Military assistance goes to 37 countries (26 of these also get economic aid). Our 1,700 combat ships, 42,000 planes, and 900.-000 men are increased by our allies by 2,500, 30,000, and 4.9 million, respectively. We also maintain 250 oversea military installations to support our far-flung Strategic Air Command (SAC). Since inception in 1949, United States has spent \$22 billion and other nations \$122 billion in the joint military effort. (Yugoslavia got \$800 million.) NATO (North Atlantic Treaty Organization) gets most of the funds, although South America, the Mideast, Asia, and Far East are included.

Economic assistance (\$1,900 million) is dispensed as defense support. Development Loan Fund, technical assistance, and special assistance. Defense support goes to 12 nations-Korea, Republic of China (on Formosa), Vietnam, Philippines, Laos, Cambodia, Thailand, Pakistan, Iran, Turkey, Greece, and Spain. Actually, it is twofold.
(1) Outright grant to help support economically the increased military capability, and (2) grants and loans to develop economically the industries and standard of living. The Development Loan Fund is continued and expanded by \$700 million to provide increased loans, repayable in local currency (so this becomes a gift). Technical assistance is offered to 49 countries and 9 territories, designed to introduce innovations and increase skills, also to improve standards of living with emphasis on health, education, agriculture, industry to lay basis for long-term benefits. We provide (1) U.S. technical experts, (2) materials for demonstration projects, (3) education in this country for foreign people, (4) U.S. colleges contracting to organize educational institutions in foreign countries. Special assistance provides health and education programs in West Berlin, Afghanistan, Bolivia, Burma, Ethiopia, Haiti, Indonesia, Israel, Jordan, Liberia, Libya, Morocco, Nepal, Somalia, Sudan, Tunisia, and Yugoslavia. This is conceived to be "economic aid that is necessary to achieve political, economic, humanitarian, or other objectives of the United States." The contingency fund is at the disposal of the President for discretionary use to further any alm of the act as the President may see fit.

Historically, foreign aid extends the lendlease philosophy of World War II. Earlier, aid in World War I was in the form of loans with interest, some later canceled. After World War II, \$3 billion was spent through UNRRA (United Nations Relief and Rehabilitation) in liberated countries to purchase goods for immediate needs. Then the International Monetary Fund was established for currency convertibility, and the World Bank for reconstruction loans. The Marshall plan for European economic recovery provided \$5 billion a year for 4 years. Always, the overall purpose was twofold: (1) Survival from aggression; and (2) continuation of our free society. The magnitude of U.S. foreign aid is \$124 billion since July 1, 1940, to June 30, 1959, \$49 billion through World War II, and \$75 billion since then (plus this bill). In addition, we have \$3,420 million in international funds.

The area of agreement in debate over foreign aid includes recognition of the need for: (1) Disaster relief to other nations; (2) combatting the threat of Soviet imperialism; and (3) stable economic relationships of the United States and other nations in their respective growth. The area of disagreement embraces everything else. Probably there are as many differing views as there are Mem-bers of Congress. Basically, there seem to be two prevalent attitudes. Some believe governmental foreign aid is necessary and permanent in the immediate and long-run interest of the United States, that weaker countries must be aided, that the national interest is in the humanitarianism of our Government. Others believe in the "fortress America" argument, that the United States must concentrate on its own military and economic strength, relying less on strong allies, and that humanitarianism or charity begins at home and is not, as now practiced, the role of government.

Perhaps arguments for and against will highlight these differences. For (1) help build a strong free world alliance essential to U.S. security; (2) help U.S. allies build adequate defenses without imperiling their basic economy; (3) provide a more economical defense for United States in money and manpower; (4) help deter Soviet aggression and to meet it more effectively if deterrence falls; (5) help raise living standards in the less developed areas and thus make Communist claims less attractive; (6) lay foundation for world prosperity by building self-sustaining economies; (7) help develop favorable attitude toward United States; (8) help stimulate increased private American investment in underdeveloped areas; (9) help increase American exports and develop markets in underdeveloped areas: (10 help provide employment for Americans.

Arguments against (generally in same order): (1) United States is providing much larger percentage (of its national income) on military contribution than the allies. Are our allies really neutrals? Will these nations use these arms against each other or us? (2) United States is imperiling its own economy by giving away borrowed money. U.S. debt is greater than that of all the world, it operates at a deficit, its gold supply is being drained by these gifts to others, its currency is becoming soft in the world market. (3) Such outpouring of our wealth,

therefore, is not the economical way. thing imperiling our basic economic strength weakens (a) our military potential and capability, and (b) our freedom, now and for future generations. (4) We do not deter Russian aggression by spending when one of their own dedicated aims is to "spend us into bankruptey." (5) The fallacy of com-munism successfully preying on poverty is not borne out in fact, though many accept it unquestionably. Raising economic standards does not, in itself, dispel communism. (6) Self-sustaining economies cannot be imposed by U.S. dollars or know-how, but by development from within the individual country. (7) The attitude toward United States will not be determined by monetary help. We cannot buy friends or allies. (8) Private American investments will result from presence and recognition of oppor-tunity for profit. (9) Foreign aid as a sub-sidy for American business and employment is wrong. On the contrary, such aid has built industries abroad for which taxpayers paid and which now compete with our industries and our employment to U.S. detriment, although it may not be a permanent dislocation.

Unanswered questions include: (1) What is effect and relationship between foreign aid gifts and trade balance between recipient nations and United States? (2) Has U.S. private investment gone up or down in these nations? (3) Have these nations benefited. measured by their economic growth? (4) How much buying is done abroad and in United States with these foreign aid dollars? (5) How much have private U.S. banks loaned to private investors in foreign economic endeavors? (6) What relationships are there between the Export-Import Bank. the World Bank, and foreign aid's Develop. ment Loan Fund to particular nations? (7) Is the investment guaranty program sound (8) How much Public Law 480 agricultural surpluses are given away in relationship to foreign aid, and how much and what happens to these local currencies thus generated? I see it, the foreign aid program is self-defeating and is badly in need of review. We help neutrals or enemies and alienate friends. We rely on materialism when freedom, free enterprise, and deep-seated spiritual beliefs are our ruling precepts. We expound charity, simultaneously manipulating our gifts as instruments of foreign policy. This confuses everyone, including ourselves.

My conclusions are these: (1) Our Government intends that foreign aid shall be continuous and global; (2) the threat of Communist aggression rules out our continu ing to dispense lavish foreign aid when our own economy is threatened and our defenses are inadequate; (3) in a number of recipient countries our foreign aid helps to strengthen political systems hostile to our own; (4) our foreign aid speeds rather than retards the growth of communism; it inflates our economy; it is partially responsible for the alarm. ing flight of gold from our control; it is destroying our foreign markets and increase ing unemployment among American workers (5) by the very nature of the foreign aid we extend, it must be inefficient and wasteful; and (6) our governmental foreign aid program is unsound in principle.

My recommendations are these: (1) That our traditional generous private charity and governmental grants to relieve disaster be continued; that we encourage the expansion of our private missionary efforts; (2) that in countries which we are morally obligated to defend and which are directly threatened with Red aggression, military assistance for the time being—should be continued, but on a realistic basis; (3) that foreign ald which directly or indirectly promotes governments that are hostile to our constitutional concepts of government be terminated immediately; (4) that so long as governmental foreign ald is continued, the recipient

thould pay a part of the cost of the proposed Project; that our aid should terminate when e conditions on which that request is based have been remedied; that private technical, edentific, and educational assistance be exlended only to friendly peoples who seek our ald on a cash or loan basis; (5) that until loreign aid is terminated, the Congress take steps properly to exercise close supervision and control over the manner in which all loreign ald funds are being spent; that all luture economic aid, plus what can be salaged from unexpended foreign aid funds, be Averted to and handled by the Export-Im-Port Bank; Our Bank; (6) that the \$3.9 billion re-quested by the President for the fiscal year 1960 be reduced \$2 billion and that each Year thereafter foreign aid be substantially reduced until terminated within 3 years; and (7) that military matters be left to our military and foreign affairs be left to the State Department, and their existing organlations, so we can dismantle the huge 12,500 Person foreign ald bureaucracy, and stop the duplication of effort.

One Hundredth Anniversary of Unification of Italy

EXTENSION OF REMARKS

OF

## HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. ANFUSO. Mr. Speaker, I am today introducing a concurrent resolution which expresses the sense of Congress that the President extend official greetings from the United States to the beople of Italy on the occasion of the centennial anniversary of the unity of Italy, which occurs in March of 1961. In connection with the celebration that is to be held that year in the city of Turin, the cradle of Italian unity, the resolution provides for official participation by the United States in the celebration in recognition of the progress and achievements of the people of Italy during the past century.

The centennial anniversary of the unification of Italy and its emergence as a free and united nation capable of shaping its own destiny is a great event in the history of the Western World. I believe it would be of invaluable bene-At to the whole free world to participate in this celebration, in order to demonstrate to nations all over the globe what a free and determined peoble can achieve. I am informed that a major international exhibit will be held connection with this anniversary celebration with this stress the achievements of human labor and the human mind over the last 100 years. In that case, the free world will have much to gain by this exhibit, while the neutral and the anti-Western nations will have much to learn from it.

One hundred years ago this month, in June 1859, the troops of the Kingdom of Sardinia were victorious over the forces of the Austro-Hungarian Empire in battles at San Martino and Solferino in northern Italy. They were supported by the French Army, their ally in the war against a numerically superior enemy.

When the smoke of battle had subsided and the short war of 1859 had ended, it was clear that the decisive struggle for the unification of Italy under an Italian ruler had been won. Although Austria still held Venice, its grip on the rich Po Valley had been broken loose and a great nationalistic tide surged forward with increasing speed.

The goal of the unity of Italy, the dream of the creation of a single nation out of a myriad of small states, many of them under foreign domination, but all of them maladministered and economically unbalanced, was now moving forward. The small kingdom of Piedmont and Sardinia, under the liberal King Victor Emmanuel II, had become the guiding force behind the unity movement which became known in history as "Risorgimento Italiano," a new political renaissance. Victor Emmanuel was fortunate in his choice of a Prime Minister, the celebrated Camillo Benso di Cavour, one of the outstanding statesmen of the 19th century.

Following the retreat of the Austrians from Milan and Lombardy, the latter regions accepted the rule of King Victor Emmanuel. A few bold political strokes in 1859 and 1860 resulted in the annexation of the many small states, following plebiscites expressing the will of the people. It is in this period that we learn of the exploits of Garibaldi and his volunteers in the expedition which cul-minated in the downfall of the Bourbon dynasty in the campaign of 1860. Garibaldi's name has since become legendary and is known to millions of schoolchildren the world over. There were, however, many other able and patriotic Italian leaders who labored for years to help make Italy what it is today-one of our most trusted allies and a dependable friend.

The Risorgimento was truly a national movement and a great magnetic force that was forging a strong nation out of small and weak states. Their citizens were all of common blood, common language, and common national aspirations, yet they were subject to different laws, different rulers, and different destinies. The patriots, who were condemned as conspirators, were jailed and tortured. They were the Italian counterpart of the Paul Reveres and the Benjamin Franklins in America, of Washington, Jefferson, Adams, and the others who fought in the American Revolution and gained the independence of our Nation.

In post-Napoleonic Europe of the 19th century it was difficult to introduce innovations to the people stressing the principles of freedom as proclaimed by the victory of the American Revolution and embodied in the U.S. Constitution. The United States was a new nation, comprised of people who settled on a new continent and shaping their own history as they went along, but free from any historical bondage once they were successful in casting off British domination. This was not true, however, in the case of Italy and Germany. In the aftermath of the napoleonic era, these two nations suffered from the old bondages of feudalistic practices and the

absolute rule of too many and inept hereditary princes and kings.

Centuries of political divisions had created barriers which seemed insurmountable. Forces totally alien to Italy had become entrenched over the years, such as Austrian domination in the north, the Bourbon dynasty in the south and in Tuscany, and others. If a new nation had to be created, it required a truly national movement with concomitant forces working in each region toward a common goal. It also required as leader one of the small states active in the national movement. The Kingdom of Piedmont and Sardinia was the logical leader, since it took the lead in granting to its subjects a liberal constitution in 1848 and in forming a constitutional government along democratic lines. It had the necessary leaders, the administrative organization and a willing ruler to accept this challenge.

Over the coming 2 years, between now and 1961, the people of Italy will relive the events and the experiences associated with the struggle for unity a century ago. It is to be hoped that they will find renewed strength to tighten the bonds of their national unity in order to enable Italy to emerge unscathed from the ideological struggle of today, which threatens to undo from within what has been achieved over the past century. There will be many celebrations as the events of 100 years ago are relived in ceremonies in all parts of the country.

The major national celebration, however, will take place in the city of Turin, the capital of Piedmont and the recognized cradle of Italian unification in 1861. There, in the austere Baroque palace which housed the first parliament of the delegates of Italy, where modern Italy was proclaimed a unified nation in March 1861, solemn ceremonies will be held to observe this centennial anniversary.

From March to October 1961 a series of spectacular events will reenact those fateful years of Italian history and three major exhibitions will bear witness to the progress of Italy and of world civilization over the last century. Two of these exhibitions are to be devoted strictly to Italy, its history and its achievements. The third exhibition is to be international in character and scope, and all nations have been invited to participate. The organizing committee, which is presided over by the Premier of Italy, the Honorable Antonio Segni, intends to honor at these exhibits the accomplishments of human labor in the various nations, their well-being, their cultural progress, and their efforts to improve the standard of living of their people.

U.S. participation in the celebration has been officially presented to the U.S. Government by the "Comitato Per Le Celebrazioni Del Primo Centenario Dell-Unita d-Italia"—Committee for the Celebration of the First Century of the Unification of Italy—through the good offices of the Italian Embassy in Washington. The above-mentioned committee is represented here by the America-Italy Society, a private non-profit organization whose offices are located in New York. Mr. Peter Grimm

is president of the society and Mr. Peter G. Treves is treasurer.

No doubt this initiative will have also the full support of all the organizations of Americans of Italian extraction, and of all of the associations, agencies, and individuals in this country who care for the development of intimate relations of friendship existing between Italy and the United States.

Mr. Speaker, I am happy to introduce this concurrent resolution designed to express the friendly feelings of the people of the United States toward the people of Italy as they approach their centennial anniversary as a unified and independent nation. I trust that we shall participate, together with other nations, in the great celebrations scheduled in 1961 as a token of our esteem and our moral support of Italy's unity and independence in this crutial period in world affairs.

The Risks in Rejection of Fake Soviet Negotiations Are Less Than the Risks in Going Through the Motions While the Kremlin Gains Time To Wear Down or Divide the West

EXTENSION OF REMARKS

OF

## HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. JUDD. Mr. Speaker, under the leave to extend my remarks in the Record, I include the following article by Edgar Ansel Mowrer:

WEST BERLINERS PREFER NEGATIVE TO NEGOTIATION

(By Edgar Ansel Mowrer)

Berlin.—Whatever the final outcome of negotiations with the Russians about this city, thoughtful Berliners believe they will have served no useful purpose. The reason is, they say, when a thug demands your pocketbook you do not negotiate with him about it. You tell him where to go. Therefore, they would have preferred that the Western Three had simply answered the Soviet ultimatum with a ringing "No." For they favor the status quo over any likely alternative.

Their reasons are three. First, they believe that a refusal to negotiate would have brought the reunification of Germany nearer, and not postponed it further, by convincing the Russians that the westerners are not going to give an inch—even—until Germany is reunited.

Second, they fear that any concessions to the Soviets over Berlin are bound to lead the Russians to ask for more concessions and eventually get them—naturally, all for the sake of peace.

Third, they feel that Berlin is such a thorn in the Soviet flesh that eventually the Rus-

sians will be willing to pay a lot for having it removed. They are aware of the English contention that "the West is weaker at Berlin, short of war, than the Russians, therefore must be ready for concessions." This they laugh at.

For they think they know that the Kremlin could not wage a successful war and has even more reason for avoiding it than the West. Naturally, in any war, they know even better than Prime Minister Macmillan that they and their city would be the first victims. Yet they have convinced themselves that if the West is unwilling to fight if necessary for Berlin, it will eventually have to surrender or fight somewhere else. Many accuse the British in particular of being ready to purchase a brief peace with the U.S.S.R. at Germany's expense.

Yet although they insist that Berlin must and will be both free and reunited at some not too distant day, actually they have been disappointed so many times that their optimism is wearing thinner. In 1945, when Germany and their city were divided, they felt sure that the Western allies would soon catch on to Soviet intentions and compel Moscow to free its unwilling captives.

This confidence was confirmed by the successful Anglo-American airlift. Then in 1953, at the time of the East German revolt, when the West failed to intervene, it fell with a dull thud. It has never entirely revived since. Even the acceptance of negotiations with the Soviets over an insolent Soviet demand for an independent West Berlin has dealt it a severe blow.

Now, the West Berliners who discussed the matter with me feel each further year of division lessens the chance of reunification without war. For if Western flexibility is doing nothing else, it is weakening the will to resist of the East Germans. It is to complete this weakening, West Berliners believe, that Khrushchev is so determined to get the Western Powers out of Berlin.

Khrushchev's German victims are not growing to like communism any better but, having lost most of their hope in an approaching liberation, they are beginning to wonder if the Communists, after all, do not have the laws of history on their side.

Germans have always bowed to a strong government that knew its own will. Compared with the nervous pacifists of the West, Soviet Communists certainly seem full of unyielding determination. "They play to win," was the way a West German described the German Communist leaders. Sooner or later, he and other West Berliners feel, the people of East Germany are likely to come to terms with their Communist masters, not because they are reconciled, but because they can see no hope of a change.

Obviously any such loss of hope would make German reunification more difficult if not impossible. Reunification is the only thing—short of surrender by the West—that can at long last end the cruel and unnatural plight of a city cut in two by politics.

Therefore, West Berliners oppose not only anything that even looks like a concession to the Russians but any possible Western desire to make free Berlin less disagreeable to Khrushchev and company. For, as an economics professor insisted with great heat, "The only way to get anything from the Russians is to make it dangerous for them to refuse. Believe me, Moscow is even less prepared for war than Washington. For God's sake, tell your President not to be bluffed by empty Russian threats."

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Prints, plus 50 percent: Provided, That a discount of a caceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 725.

## LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Prints as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the susual number. Nothing in this section relating to estimates shall apply to reports of documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

#### RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, when Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 permonth, and where single copies may also purchased. Orders are also accepted for the printing of speeches in pamphlet form.

#### CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

# PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Prints to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

t

# Appendix

Tribute to John W. Carpenter

EXTENSION OF REMARKS

## HON. LYNDON B. JOHNSON

IN THE SENATE OF THE UNITED STATES Wednesday, June 24, 1959

Mr. JOHNSON of Texas. Mr. President, some of the great chapters of American history have centered around the rise of a farm boy to a position of great eminence in business and industry.

Such was the story of John W. Carpenter, who, at 77, died last week in Dallas. In the passing of Mr. Carpenter, his home town, his State, and his Nation suffered a loss.

His first job, at 19, was with a utility company in east Texas, where he dug postholes for \$30 a month. He later returned to head the same company.

But, despite the high positions he later held in business and industry, Mr. Car-Penter remained a friend of the farmer, and believed that prosperity came from the soil.

He once expressed his philosophy this

I like farming. I like to improve Mother Parth. I like to make two blades of grass grow where only one grew before.

The Dallas News, in an editorial of June 18 and a news story of June 17, set down in words the feeling of John Carpenter's friends and neighbors when they learned of his passing. I ask unanimous consent that both be printed in the Appendix of the RECORD.

There being no objection, the editorial and the article were ordered to be brinted in the RECORD, as follows:

[From the Dallas Morning News, June 18, 19591

## A GREAT CITIZEN

The Horatio Alger prescription for success The Horatio Alger prescription for state has drawn American satire's attention for decades, but it stands up well as a recipe for light. for living. It was a simple thesis that the man who lives a clean life, works hard, gives his best, forges ahead. Probably John W. Carpenter did not read Horatio Alger in his youth. Touth he did not have time. But he lived up to the prescription. His was that kind of a life. And of a life. He was that kind of a man. And he succeeded.

John Carpenter believed in the concrete taings upon which communities and regions can build to greatness, in light and power, in what mass transport in highways, in what water can do and what can be done with it, He reached the top by working for and with these things. Texas Power & Light and southland Life stand high as monuments to his lifework. He has not lived to see what the eventually his greatest contribution. will be eventually his greatest contribution to his next to his native region and State, the completed development development of the Trinity River.

Dallas has lost a great citizen. Our good fortune was that John W. Carpenter was

spared to a long and full life in which his powers could be and were exercised to the fullest for Dallas, Tex., and the Nation.

[From the Dallas Morning News, June 17, 1959]

TRIBUTE PAID TO CARPENTER, A FARM BOY WHO WORKED HIS WAY UP

John W. Carpenter, who throughout his 77 years built monuments to himself in the hearts of the countless he helped by his genius and who lived to see a great monument in stone and steel tower over the city he loved, is dead.

"The loss will be great, for he was a great citizen and a great friend of Dallas and her people," declared a shocked and saddened friend of some 30 years, Mayor R. L. Thorn-

Carpenter, a farm boy who worked his way to the top by helping others—for he believed that the best way to help others was to broaden their opportunities to help themselves-was chairman of the board of the Southland Life Insurance Co.

The loss of the man who had long been identified as a builder of Dallas and Texas was already beginning to be felt Tuesday night as word of his unexpected death spread

among his longtime friends and associates.

Mayor Thornton said of him: "He was one of the most vigorous citizens of his age. He was always on the firing line for Dallas.

Ben H. Wooten, president of the First Na-tional Bank in Dallas, declared that "his foresight, vision, and courage has been one of the great factors in the building of Dallas, the State and the Southwest."

Expressing sorrow at the news of Carpenter's death, Lester T. Potter, president of the Dallas Chamber of Commerce, commented: "We should particularly recognize that he was a great man \* \* \* productive over a period of many years in the life of his community.

"His death," said Potter, "leaves a loss, there's no question about that."

Through most of his lifetime, Carpenter had been associated with the public utility business. Long a friend of the farmer, he

believed that prosperity came from the soil.

He once said, "I like farming. I like to improve Mother Earth. I like to make two blades of grass grow where only one grew before."

His intense devotion to agriculture was exemplified by his work with the Texas Research Foundation at Renner, which he served as cochairman of the board of trustees.

And, he believed that electricity was one of the ways that prosperity could come to the farmer. In 1932, he wrote, "If Texas agriculture is to be made a healthy, prosperous industry the farmer must have available a standard of living equivalent to that of his city neighbor, with equal training and responsibility.

"Electricity is another, an important one, of the many agencies which are making it possible to realize this goal."

Carpenter expanded his theory into thousands of miles of transmission lines reaching into rural homes throughout the State.

His first job, at 19, was with the Corsicana Gas & Electric Co. where he dug postholes at \$30 a month. He later returned to head

the company.

He came to Dallas in 1917 as vice president and general manager of Dallas Power & Light Co., later assuming the same position with the Texas Power & Light Co. which he later headed.

A big-framed man with a strong jaw and steady gray eyes, Carpenter throughout his life kept the driving energy and habits of hard work that in his early days carried him in 7 years from a newly hired posthole digger to a utility company executive.

Deliberate of movement, he was quickly able to concentrate his entire attention on any subject brought up and his associates loved to tell him his mind worked swiftly as a steeltrap, enabling him to make prompt decisions, and act immediately whatever the circumstances.

That his energy was abundant was mani-fested in the fact that he managed or organized nearly 25 major companies in the Southwest, including some 11 utility companies, the Southland Life Insurance Co., Lone Star Steel Co., and the St. Louis & Southwestern Railway Co.

Carpenter had been president of the Trinity Improvement Association and is credited with having as much to do with the Trinity's development as any other man.

There is practically no civic, charitable, or community enterprise of any type which he has not headed or of which he has not been a director.

A Dallas leader ones said of him: "If I were asked to pick out the most powerful single citizen of this town, I think I'd pick Carpenter. This is a town of many powers, not just one; but I have a feeling Carpenter could probably push more issues one way or the other than any man."

On April 4, this year, he saw dedication of the huge, towering building of the com-pany which he headed push its way higher than any other building in Dallas, or any west of the Mississippi.

Just as he believed in the advancement of the farmer, he believed in the education of his fellow human beings.

He was instrumental in the establishment Texas Technological College at Lubbock and served on its first board of regents. He held an honorary LL.D. degree from the college. Later Southern Methodist University conferred upon him the honorary degree of doctor of engineering.

Throughout his varied and fruitful life he never forgot his beginning.

"I am," he said once, "a sentimentalist. Which is all right as long as you don't let it run away with you."

#### An Interview With Senator Humphrey

EXTENSION OF REMARKS

## HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Wednesday, June 24, 1959

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interview with the senior Senator from Minnesota [Mr. HUMPHREY] by Courtney Sheldon, and published in the Christian Science Monitor of June 10, 1959.

The exchange demonstrates the keenness of mind of the senior Senator from Minnesota. I think the Senate will find his comments most edifying.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

NEW TACTICS TO WIN OBJECTIVES-A CAPITAL INTERVIEW WITH SENATOR HUBERT H. HUMPHREY

#### (By Courtney Sheldon)

(Third in a series of interviews on Capitol Hill to record the viewpoints of Senators SYMINGTON, KENNEDY, and HUMPHREY, each of whom is generally considered a serious prospect for the Democratic presidential nomination in 1960.)

WASHINGTON .- Minnesota Senator HUBERT H. HUMPHREY, once a college professor in political science, twice elected mayor of Minneapolis, and now a leader of the northern. liberal wing of his party and the possible choice of that faction for the Democratic presidential nomination next year:

Believes that a Soviet move toward an acceptable nuclear test ban agreement is one of the things that Khrushchev will make at a

summit conference.

Recommends that the United States program its farm production 5 to 10 years in advance to help underdeveloped countries improve their diets and feed their hungry.

"What issues do you feel the Democrats should concentrate on in 1960, Senator

HUMPHREY?

"Well, I think you will find that issues will vary in different areas of the country. In my part of the country, the utter failure of this administration's agriculture policy will still be an issue, for example.

"A countrywide issue will be the failure of the administration to really plan economic growth. Now here is a difference, I think, between liberal Democrats and Republicans. Some of us believe in the broad outlines of national planning for economic growth.

"I believe, for example, that we can't leave things to the accident of chance. I think that in the light of the kind of competition we are facing internationally from Soviet communism we have to make better use of our resources.

There are some limits to them and they ought to be programed and utilized. At the same time we must provide the widest opportunity for individual decision within that great national plan. We do, however, need goals to strive for-objectives to accomplish."

"Now on international affairs what issues

of consequence do you anticipate?'

"Well, here the Republicans take fixed positions and try to hold them without getting into the field of maneuver and using new tactics to win objectives.

"We haven't won anything. We have been lucky to hang on. The same administration that tried to repudiate the doctrine of containment, which we had for a period after the Soviets were pressing so hard in Western Europe, has embraced containment even more than the previous administration.

"It has been incapable of understanding the social revolution that is going on in the world. Conservative government, by its nature, tends to embrace the status quo. It approaches change with fear and timidity.

Would you favor more or fewer periodic summit meetings just to exchange views?"

"I would favor more. I wish we could these summit meetings a little less of a circus or bazaar. Meetings of heads of state would be better if there were not quite so much headline attention until something was done '

"You favor more contacts with the Soviets all along the line, such as yours with Khrushchev?

"I wish you could see the volume of letters that comes everytime any American, including myself, meets with the Soviets. You'd think that somehow or other we were going to catch political leprosy.

"It seems to me we have more to gain from meeting with them than they have from meeting with us. And I enjoy the idea of intellectual competition, as well as political

and psychological competition.

I like to have the opportunity of telling the Soviets a little about the way of our life, and doing it in a friendly and polite manner, and I think it is a good idea for them to see our country. They live under gross misconception as to what American life is all about. This misconception could lead to dangerous miscalculations."

"Do you feel that we have gone too far or not far enough in our efforts to the Soviets on a nuclear test ban agreement?

"I really believe that in the past few months we have been very sincere and have gone quite a way with the Soviets on a policy of trying to reconcile differences. I had a feeling in January that maybe we were being a little too stiff. That has been changed.

"While bringing to the attention of the Geneva delegations the new scientific data, we have demonstrated a willingness to adapt ourselves to this new material and to give the Soviets an opportunity to join with us in further scientific research for better means of inspection.

"I hope the Soviets will come around ultimately and I think they will. I believe this is one of the things that Khrushchev will do at a summit conference."

'If that did not come about, would you favor unilateral banning of atmospheric

Atmospheric tests, I would. lieve we have nothing particularly to gain in atmospheric tests militarily and we have a great deal to lose, both psychologically and possibly in health.

"We can do these tests underground. can do them at extraordinarily high altitudes which is a much safer process from a human health point of view.

"Now on the farm problem, is there really

any feasible long-range solution?"

'A sound national agricultural policy must be based on expanded soil conservation; adequate farm credit; continued research not only in production but in uses of food and fiber; a price support or income protection system designed to aid the family farm production pattern-with definite ceilings on the total of commodity loans or payments to any one farm producer.

'Farm price supports should be extended only when farmers accept production and marketing controls; there should be no supports for products or producers who fail to comply with necessary production regula-

tions.

"And finally the means of income protection or price supports should be variedwhatever works best for any commodity or producer. By this I mean the Secretary of Agriculture should be authorized to use crop loans, compensatory payments, pur-chases, extended credit, and even retirement of unneeded acres.

"Production plans must include not only the domestic and normal export needs, but also food and fiber for strengthening our foreign policy in the food deficit areas, plus food for the needy at home—possibly the use of food stamps for those on social security plus others who receive all too inadequate allowances.

"I believe that this Nation would be better served by an agriculture of smaller units. I suggest that we look upon this production of food and fiber as a great economic asset in the cold war and that we utilize it as par a definite international economic program; that we work with the under developed countries and see what their food deficits are, and then start to help these countries improve their diets and feed their

"This programing of farm production for international use should be done 5 to 10 years in advance so that the recipient nations and our farm people can plan on it."

## Statement by Dalai Lama Made at Recent Press Conference

EXTENSION OF REMARKS OF

## HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES Wednesday, June 24, 1959

Mr. MANSFIELD. Mr. President, ask unanimous consent that the official translation of the prepared statement issued by the Dalai Lama in Mussoorie. India, on June 19, be incorporated in the Appendix of the RECORD.

There being no objection, the translation was ordered to be printed in the

RECORD, as follows:

[From the New York Times, June 21, 1959] TEXT OF DALAI LAMA

Ever since my arrival in India I have been receiving almost every day sad and distress ing news of the sufferings and inhuman treatment of my people. I have heard almost daily, with a heavy heart, of their increasing again, creasing agony and affliction, their harass ment and persecution and of the terrible deportation and execution of innocent men These have made me realize forcibly that the time has manifestly arrived when, in the interests of my people and my religion and to save them from the danger of near annihilation, I must not keep silent any longer but must frankly and plainly tell the world the truth about Tibet and appeal to the conscience of all peace-loving and civilized nations.

To understand and appreciate the significant cance and implication of the recent trage happenings in Tibet, it is necessary to refer to the main events which have occurred in the country since 1950. tI is recognized by every independent observer that Tibet had virtually been independent by enjoying and exercising all rights. exercising all rights of sovereignty, whether internal or external. This has also been impliedly admitted by the Communist government of China for the ernment of China, for the very structure the terms and conditions of the so-called agreement of 1951 conclusively show that it was an agreement between two independent and sovereign states.

#### AGGRESSION IS CHARGED

It follows, therefore, that when Chines armies violated the territorial integrity Tibet they were committing a flagrant act of aggression.

The agreement which followed the invasion of Tibet was also thrust upon its people and Government by threat of arms. It was near accepted by them of their own free Consent of the Government was secure under duress and at the point of bayonet

My representatives were compelled to also the agreement under a threat of further military operation military operations against Tibet by invading armies of China leading to the utt Tavage and ruin of the country. Even the Tibetan seal which was affixed to the agreement was not the seal of my representatives but a seal copied and fabricated by Chinese authorities in Peiping and kept in their possession ever since.

While I and my government did not voluntarily accept that agreement we were obliged to acquiesce in it and decided to abide by its terms and conditions in order to save my people and country from the danger of total destruction.

#### MINISTERS FORCED OUT

It was, however, clear from the very beginning that the Chinese had no intention of carrying out the agreement. Although they had solemnly undertaken to maintain status and power as Dalai Lama they did not lose any opportunity to undermine my authority and sow dissension among my People. In fact, they compelled me, situated as I was, to dismiss my Prime Ministers under the threat of their execution without trial because they had, in all honesty and sincerity, resisted the unjustified usurpation of power by representatives of the Chinese Government in Tibet.

Far from carrying out the agreement they began deliberately to pursue a course of Policy which was diametrically opposed to the terms and conditions they had them-

selves laid down.

Thus commenced a reign of terror which finds few parallels in the history of Tibet. Forced labor and compulsory exactions, systematic persecution of the people, plunder and confiscation of property belonging to individuals and monasteries, and the execution of certain leading men in Tibet—these are the glorious achievements of Chinese rule in Tibet.

During all this time, patiently and sincerely, I endeavored to appease my people and to calm down their feelings and at the same time tried my best to persuade the Chinese authorities in Lhasa to adopt a policy of conciliation and friendliness. spite of repeated fallures, I persisted in this Policy till the last day, when it became impossible for me to render any useful service to my people by remaining in Tibet. It is in these circumstances that I was obliged to leave my country in order to have it from further danger and disaster.

## COMMISSION IS PROPOSED

I wish to make it clear that I have made these assertions against Chinese officials in Thet in full knowledge of their gravity because I know them to be true. Perhaps the Peiping government are not fully aware of the facts of the situation but if they are not prepared to accept these statements, let them agree to an investigation on the point by an international commission. On our part I and my government will readily agree to abide by the verdict of such an impartial

It is necessary for me to add that, before It is necessary for me to add that, below I visited India in 1956, it had become in-creasingly clear to me that my policy of anity amity and tolerance had totally failed to create any impression on the representatives of the Chinese Government in Tibet.

Indeed they had frustrated every measure adopted by me to remove the bitter resentby my people and to bring about peaceful atmosphere in the country for the peaceful atmosphere in the the purpose of carrying out necessary rethe benefit of my people, I had practically hade up my mind, when I came to India, not to return a manifest to return to Tibet until there was a manifest change in the attitude of Chinese authori-tics. ties. I therefore sought the advice of the Prime Minister of India, who has always shown me unfalling kindness and consideration. After his talk with the Chinese Prine Minister and, on the strength of assurances given by him on behalf of China, Mr. Nehru advised me to change my deci-

#### NEHRU'S ADVICE FOLLOWED

I followed his advice and returned to Tibet in the hope that conditions would change substantially for the better and I have no doubts that my hopes would have been realized if the Chinese authorities had on their part carried out the assurances which the Chinese Prime Minister had given to the Prime Minister of India.

It was, however, painfully clear soon after my return that the representatives of the Chinese Government had no intention to adhere to their promises. The natural and inevitable result was that the situation steadily grew worse until it became impossible to control the spontaneous upsurge of my people against the tyranny and oppression of the Chinese authorities.

At this point I wish to emphasize that I and my government have never been opposed to reforms which are necessary in the social, economic and political systems prevailing in Tibet. We have no desire to dis-guise the fact that ours is an ancient society and that we must introduce immediate changes in the interests of the people of Tibet. In fact, during the last 9 years several reforms were proposed by me and my government but every time these measures were strenuously opposed by the Chinese in spite of a popular demand for them, with the result that nothing was done for the betterment of the social and economic conditions of the people.

#### LAND REFORM DESIRED

In particular, it was my earnest desire that the system of land tenure should be radically changed without further delay and large landed estates acquired by the State on payment of compensation for distribution among tillers of the soil. But the Chinese authorities deliberately put every obstacle in the way of carrying out this just and reasonable reform. I desire to lay stress on the fact that we, as firm believers in Buddhism, welcome change and progress consistently with the genius of our people and the rich traditions of our country but the people of Tibet will stoutly resist any victimization, sacrilege and plunder in the name of reforms, the policy which is now being enforced by representatives of the Chinese Government in Lhasa.

I have attempted to present a clear and unvarnished picture of the situation in Tibet. I have endeavored to tell the entire civilized world the real truth about Tibet, truth which must ultimately prevail however strong the forces of evil may appear to be today. I also wish to declare that we Buddhists firmly and steadfastly believe in peace and desire to live in peace with all peoples and countries of the world. Although recent actions and policies of the Chinese au-thorities in Tibet have created strong feelings of bitterness and resentment against the Government of China, we Tibetans, lay and monk alike, do not cherish any feelings of enmity and hatred against the great Chinese people.

#### PEACEFUL SOLUTIONS SOUGHT

We wish to live in peace and ask for peace and good will from all countries of the world. I and my Government are therefore fully prepared to welcome a peaceful and amicable solution of the present tragic problem, provided that such a solution guarantees preservation of the rights and powers which Tibet has enjoyed and exercised without any interference prior to 1950.

We must also insist on the creation of a favorable climate by the immediate adoption of essential measures as a condition precedent to negotiations for a peaceful settlement. We ask for peace and for a peaceful settlement but we must also ask for maintenance of the status and right of our state and people.

the gentlemen of the press I and my people owe a great debt of gratitude for all that you have done to assist us in our struggle for survival and freedom. Your sympathy and support have given us courage and strengthened our determination. I confidently hope that you will continue to lend the weight of your influence to the cause of peace and freedom which the people of Tibet are fighting for today. Gentlemen, I thank you one and all on behalf of my people as well as on my own behalf.

## Alton McClellan, Texas Baptist Father of the Year

EXTENSION OF REMARKS

## HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES Wednesday, June 24, 1959

Mr. JOHNSON of Texas. Mr. President, Alton McClellan, a courageous and respected citizen of Stamford, Tex., has recently been named Texas Baptist Father of the Year.

This event is made especially noteworthy by the fact that Mr. McClellan is a victim of polio, and has been paralyzed in his legs by his deadly disease since 1943. But this is not all; polio has stricken Alton McClellan's wife and son as well. Fortunately, the latter two are now fully recovered. The story of Alton McClellan is an inspiring one. It is another illustration of the importance of medical research, a cause which is being so effectively led by the distinguished senior Senator from Alabama [Mr. HILL] and the distinguished junior Senator from Oregon [Mr. NEUBERGER]. Senators will find the story of Alton Mc-Clellan, as reported in the Dallas Morning News, of much interest.

Mr. President, I ask unanimous consent that the article and the editorial from the Dallas Morning News of June 18, 1959, entitled "Baptist Dad of Year Led in Polio Struggle" and "Baptist Dad of Year," be printed in the Appendix of the RECORD.

There being no objection, the article and the editorial were ordered to be printed in the RECORD, as follows:

BAPTIST DAD OF YEAR LED IN POLIO STRUGGLE

The Salk vaccine didn't come soon enough for Alton McClellan of Stamford, who was named the 1959 Texas Baptist Father of the Year, Wednesday.

Polio has struck three times at the radio repairman's home. McClellan will never walk again, but fortunately the disease left no permanent scars on his wife and son who also fell victim to polio.

McClellan, the father of three children, used his experience to help teach his boy to "I knew how tough it was for walk again. him," he said.

A devout Baptist, McClellan said it is more important for a father to set a good example for his children than to be able to walk.

Sponsored by the Baptist Standard, denominational magazine, and the 1½-million-member Baptist General Convention of Texas, the award is made each year to honor Texas Baptist fathers who have made outstanding contributions to Christianity.

McClellan was stricken with polio after returning from the first all-American bomber raid over Rome in 1943. He was later sent to a veterans' hosiptal in Arkansas for 14 months.

He came out of the hospital in a wheelchair, still paralyzed in the legs but able to use of the upper part of his body.

After finishing his education at Texas University and marrying his hometown sweetheart, McClellan returned to Stamford to join his father in the radio repair service business. When his father died in 1953, McClellan took over the shop and expanded it to include television repair.

The family leads a normal life, filled with hobbies, music lessons, and church activities.

In addition to teaching a Sunday-school class, McClellan has been a deacon for 6 years, an officer in brotherhood, teaches in study courses, and is active in training union.

Asked his advice on raising children, Mc-Clellan said: "Fathers need to play more with their children and be more liberal with oldfashloned discipline when it is needed."

#### DAD OF THE YEAR

The Baptists of Texas have the custom to pick out the Baptist Father of the Year. For 1959 he is Alton McClellan of Stamford.

McClellan fell victim to polio while in the service in 1943, came out of 14 months in hospitals deprived of the use of his legs by paralysis, but otherwise very much of a man. This he proved by finishing his education at the University of Texas, marrying his hometown sweetheart, and joining his father in the radio repair business.

Polio attacked both his wife and his son, but both recovered completely. McClellan taught his own son to walk again. He supports his family and has a thriving shop. He teaches a Sunday-school class and is an officer in his church. Legs or no legs, he is still tall in the saddle.

McClellan of Stamford is quite a man.

#### A Christian Home

EXTENSION OF REMARKS

## HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 24, 1959

Mr. GRANT. Mr. Speaker, Dr. Henry L. Lyon, pastor, Highland Avenue Baptist Church, Montgomery, Ala., recently delivered a sermon entitled, "A Christian Home," which should interest the people of every race and creed.

Dr. Lyon is known for his unselfish work for all people and is one who loves his fellow man.

The sermon follows:

#### A CHRISTIAN HOME

(A sermon delivered by Dr. Henry L. Lyon, pastor, Highland Avenue Baptist Church, Montgomery, Ala., May 3, 1959)

Scripture (Genesis 2: 15-25; Acts 16: 15b): "Come into my house, and abide there."

In the beginning we read a passage (Genesis 2: 15-25) that gives us a word picture of the first home, that of Adam and Eve. And now we come to Acts 16: 14-15. "And a certain woman named Lydia, a seller of purple of the city of Thyatira, which worshipped God, heard us: whose heart the Lord opened, that she attended unto the things which were spoken of Paul." Here we find a

good woman, a good Christian, who ministered to God's servants as they held a revival meeting on the river's bank at Philippi. 'And when she was baptized, and her household, she besought us, saying, 'If ye have judged me to be faithful to the Lord, come into my house, and abide there." Lydia extends an invitation, "Come into my house." What was she saving? "Paul and Silas, I invite you to come into my home." That is one of the highest privileges any individual has, that he can exercise in the life that now is. It works two ways: first, the privilege of saying "I have a home and I invite you to come to my home"; second, it is a privilege to be invited into a real home. I had rather be invited into a home (and I mean every word of it) than to receive an invitation to any meeting regardless of whatever the occasion might be. When I am invited to a home, I am invited into a unit, a segment of the greatest institution of the entire world. It was established many, many years before Jesus Christ came into the world.

The picture of the first home is very inter-Man was formed of the dust of the ground and God breathed into his nostrils the breath of life, and man became a living soul, made in the spiritual image of God. We are further told that God looked down on the man and saw that it was not good for him to be alone. God now provides Adam with a wife. God caused a deep sleep to possess him. A rib closest to man's heart is removed for the purpose. God did not take a part of his head to symbolize that woman was to be above man; neither did he take a part of man from his lower extremitles to symbolize that woman was to be beneath man. Woman came from a place very close to the heart of man, that she might be loved by him. So we see this picture of the first home, that of a kingdom. When we think of a kingdom, we think of a king and a queen. And that is just the teaching of both the Old and the New Testament. The father is the king and the mother is the queen; not ruling, not reigning, not bossing, but near and dear to-gether in the home—loving one another, working together, serving together, building together. And one day the highest, the most God-given privilege that any man or woman ever enjoys is theirs-to give to the world a son or daughter. This privilege is to make this world a better place in which to live or a more sinful world. All this being true, Highland Avenue Baptist Church is giving an entire week with the emphasis upon the importance of the home, the Christian home. This is true also throughout the entirety of the Southern Baptist Convention-praying in our homes, meeting at the church, rededicating our homes to God.

Home is so important this morning. realize that I am a product of my own home where my mother and father lived. This last week it was necessary for me to go to the State Department of Archives and History here in our city to look up some information concerning those who have gone before me, loved ones and relatives. It was necessary for me to get photostatic copies of several sheets of the past census records—some going back to 1850. The 1850 census record was so fragile that they had to microfilm it, and we had to look at the record through a special machine. We came on to the census of 1860, 1870, and 1880, and on to later years. Here is one of the photostats of the 1870 census. As I look down here I find the name of my great-grandfather and great-grandmother. In a later census I see the name of my own father. He was only 5 years old at this time. As I looked at all those pages and studied the information, I could not help but say to myself again, "What I am to a large extent has been determined by what these people were back there in those days."

There are some people who would have you

believe that what you are is determined al together by acquired characteristics, by that which one gets from environment. picture, we see the development of character in the light of one being a sponge that you absorb character by the process of moral osmosis without exercising much effort-free from thoughtful decisions. But don't you believe that. Life is shaped and fashloned by environment, but also I want you to know that medical scientists believe and recognize that the bites, the urges, the stings, the biases of life are inherited. Blood does tell. Blood is certainly involved in those factors that determine how high of You can how low an individual will go. You can not wave your hand and say "I will dismiss blood; I will dismiss everything that has gone on before me, and what I am right now I am going to be the master and king

Not only does blood tell with us who are living now but it will tell with unborg generations. There are going to be some of your boys and girls who are going to wrestle with some terrific difficulties in life. and those difficulties are going to constitute that which you and you and this preacher. all of us, have passed on down to them in the body, in its structure, in the bites, the stings, and urges of life. And what about the institutions—God's institutions of home church and green and are the still and green and structure and green and green and structure and green and structure and structure and green and structure and struc church, and government, that we shall hand down to posterity? This means that those of us who are mothers and fathers right now ought to recognize that the greatest con tribution we can make to the world is not by making large amounts of dollars and in vesting those dollars; in building social pres The greatest contribution you make the kind of young men and women you give to the world. I am wondering on the basis of what has already happened in your home with your little boy and girl (maybe some of you have young men or women who will graduate from college this year) what their future will be. I ask you to face the ques tion on the basis of how much you pray and the moral and spiritual example set by you in the home. What can the world ar-ticipate coming to guide and sustain it insofar as the contribtuion from your home is concerned.

I believe these things are right in the deep of my heart. This morning I made this statement to a group of intermediates: "p the days of your courtship, in the days your schooling, realize that one day you will stand before the stand before the marriage altar and take the marriage vows to make a home. This ought to be of such great importance that, as you look into the face of the boy or girl you with, you should challenge your heart with this question: What may I expect in the way of a home if I stand before the marriage altar one day to take this man or this woman to be my companion? Can I afford to consider marriage with him or her when I re alize that this one will be the father of mothers of my children'?" This is long range thinking. That is building for the tomorrows. These teachings are not found in the textbooks of today. Oh, they do have a fee courses in eugenics—but they do not have the spiritual stiller than the spiritual stiller. the spiritual sting that causes young people to want to be something and to help other to be something.

I would be a traitor to truth if I did not say to you that the American home of 1958 involved with two great enemies. The inst I do not hesitate to mention, nor the first I do not hesitate to mention, nor the second. The first is alcoholic beverage. You say "Why, oh why, preacher, can't you preach a sermon without preaching on probable beverage?" I have been doing a join of thinking in the last few days and reading in the paper about the five men who ing in the paper about the five men who am somewhat confused about the State of Alabama. We build our Kilby Prison, our Draper Prison, and we put men in prison

When they violate the laws of our State, When they commit crimes of passion when their blood has been fired by alcoholic beverage. We send them to prison and yet, at the same time, Alabama is in the business. I was talking with a prisoner who said "I bought the liquor that put me in prison from a State of Alabama liquor

There is no place whatsoever for alcoholic beverages in the home whether you drink a lot of it or whether you just drink your cocktails. It reaches down on the inside and takes away the very marrow of woman-hood and manhood. The American home literally staggers in its stupor of drunken-

hess and debauch. That is our first enemy.
If you have ever opened your mind and heart, please open them now. The next danger that faces the American home is that which certain people would do to the human race in these hours. I am not a lanatic. I want you to face the truth. In these hours the Supreme Court and the Congress of the United States are willing to make a social experiment and thereby gamble with the future of America on the basis of saying that if we integrate and amalgamate into one race, we will settle all of our Problems. This calls for a complete invasion of the American home.

If God had wanted one race, he would not have brought into being different races. The existence of different races is the work of God. Some of us as older people pull ourselves away and say, "I will have nothing to do with it. All of my children are grown up and married." As grandfathers and grandfathers. grandmothers you need to consider the possibility of becoming the grandparents of a mulatto. You say "But there is no danger of that happening in my family. We are well bred." The brainwashing operation of the prediction of the predi the present hours speak differently.

In these hours, not only the children and the young men and women but even the grandparents have been brainwashed. What kind of homes are we going to have tomortow in America? Let me give you a picture of the future. If we continue to accept the interest of the future of th integration propagands of this hour, we are Roing to have standing at the altars of some of our churches a white girl and a Negro boy, or vice versa, being married by some of the white preachers who say today that You cannot be a preacher of the Gospel uns you believe in integration of the races. and what are we going to have and see in our hospital nurseries? Dear God, help us. You are going to see a mixed breed of people. I appeal to white people. I appeal to Negroes. Let's save America. Let's save our homes from the ravages of this certain trag-edy. edy. It is not right under God and I am Some say "Our preacher gets excited and I wish he would shut up." Why do you want ne to shut up? Is it because you are in business. business and you are afraid that someone will think you have the same ideas that Your preacher has might mean the loss of customer? church said that not long ago, and he sug-Sested had that not long age, am that I move. I am not moving. I am the pastor of Highland Avenue Baptist Chine. Church, a church of white people, and it is soing to stay that way if I have anything to do with

We are about to go into summer camps and your boys and girls will be told: "If you want to do that want to be accepted; if you want to do that which is right, you are going to have to bractice integration and amalgamation."
This will do untold harm to the future homes of homes of our country.

The glory of the home is seen in its devo-on to God. The American home should The glory of the nome store ton to God. The American home shours support the church. Some of you support every other institution, some of them good, and have a many dollars in their support the church one and have given many dollars in their sup-port. Some of you have not given one

dime to the support of your church. up and support your church, not only with dollars but by your presence and prayers. A chair occupied by your boy or girl in Sunday school can be a means toward keep-

ing them out of the electric chair.

We are in a predicament today. We have men in responsible positions of public leadership who say they want to do something for little children. Oh, I appeal to your heart as I appeal to my own heart-let's do something for all little children: white, black, yellow, red, all children; let's bring them to God and teach them that God loves every one of us, and that one is just as sacred in his sight as the other. There is not a white boy or white girl in Mont-gomery, Ala., that is fit to be the husband or wife of a Negro woman or a Negro man, And there is not a Negro man or Negro woman that is fit to be the wife or husband of a white man or white woman. Why is this true? Because God did not make them fit for one another. It is not his will for them to integrate or amalgamate.

The glory of the American home is seen in its freedom, its freedom to worship God according to the dictates of conscience. We have lost a lot in these days. We have lost our States rights and we have drifted into an hour when there are those who have developed an operation, that if they find any person who opposes them, they will have him declared mentally incompetent. In these hours, friends, let's live for God in our homes. Young men and women, one day when you stand before the marriage altar to take the vows of marriage, I im-plore you to treasure the pure blood of your family. I dare you to build homes that will honor God and be an uplift to humanity.

Jobs, Markets, and Foreign Imports, the Threat From Abroad

EXTENSION OF REMARKS

## HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. STRATTON. Mr. Speaker, in the past I have had occasion to call the attention of the House to some of the problems posed by foreign imports. I have pointed out the way in which unfair competition from abroad has taken away the jobs of our own working men and women and has jeopardized American business operations. In this connection, I was very much interested in reading an editorial which appeared in the Albany Times-Union, June 22, 1959, and under leave to extend my remarks I include the editorial:

JOBS, MARKETS, AND IMPORTS

Prof. Walter Hallstein, of West Germany, delivered an interesting address at a luncheon given recently by the American Committee of United Europe.

Professor Hallstein is president of the Common Market, the economic organization of six European nations-France, Italy, West Germany, Belgium, the Netherlands, and Luxembourg.

In his address he thanked the United States for prior assistance and expressed the hope that there would be a new round of tariff cutting.

Two points were not discussed to any de-

1. What is to be done by the countries of the Common Market regarding quotas of imports from the United States? There is no use cutting tariffs if our exports to those countries are so limited as to leave us out of that market altogether.

2. What is the difference in price between American goods and European goods based on the lower standard of living in European countries and, therefore, the lower price of labor? For instance, in 1957, the average hourly wage of American steelworkers was

In the following countries of the Common Market, it was—West Germany, 67 cents; Luxembourg, 89 cents; Belgium, 77.5 cents. It is to be noted that whereas in 1936, the United States imported 268,810 tons of steel. in 1958, this country imported 1,702,819 tons of steel.

Thus far, in 1959, for the first time in American history, the imports of steel products have exceeded exports.

What effect does this have upon American labor? The Wall Street Journal recites the story of nearly 1,000 watchmakers employed by the Elgin National Watch Co. voluntarily taking a cut in wages up to 10 percent.

The American machinemade product is not superior to any other machinemade product, but the price is higher. As a result this country's products have become outpriced in many markets of the world, and we have been giving American manufactured goods away as foreign aid.

Now, in some commodities, European and Japanese competition is becoming acute even in our domestic market. American goods are being outpriced at home.

The most dangerous competition from

Europe is in automobiles.

Basing itself on American aid and the export of capital by American automobile companies, the European automobile industry has waxed strong and aggressive and is now competing with American automobiles not only in the markets of the world but in the American domestic market.

One result of this competition is the increased use of automatic machinery to cut the cost of labor. Industry has no alternative if it is to remain in business, as wages

are the principal cost of industry.

This will ultimately increase unemployment, which is a social danger in any country and a terrible one here.

However, as the machine becomes more automatic, it can deprive man of the opportunity to earn a living. This country has experienced the consequences of mass unemployment and wants no more of it.

The export of American capital benefits a few people-those who own the exported capital. It does not help American industry to keep Americans at work.

And that is the issue before us now. Some argue that if Switzerland can produce as good a watch for less money, why bother to make them here at all? Why bother to make anything here? Where shall we get precision tool makers and workers should war come?

Shall we import them from Switzerland?

A Tribute to Stephen F. Austin State College and Its President by Dr. Walter Prescott Webb

> EXTENSION OF REMARKS OF

## HON, RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Wednesday, June 24, 1959

Mr. YARBOROUGH. Mr. President, last February, Dr. Ralph Steen, a distinguished historian, was inaugurated as President of Stephen F. Austin State

College at Nacogdoches, Tex.

At the inauguration ceremonies, another distinguished and well-known Texan delivered a highly meaningful address. The man was Dr. Walter Prescott Webb, known throughout our State and Nation for his scholarly and distinguished work in the field of history. An immediate past president of the American Historical Association, he is a visiting professor in history at the Rice Institute in Houston, Tex., and for years was a distinguished professor of history at the University of Texas.

Stephen F. Austin State College at Nacogdoches, an old Spanish town in the eastern part of the State is now in the midst of a building program involving several million dollars. This exemplifies our State of Texas and the South looking boldly forward and working to-ward a better future.

A great deal of the credit can go to the institution's president, Dr. Steen, who has distinguished himself as a historian and educator, and now as head of this fine new school in an historic setting.

Portions of Dr. Webb's address have been reprinted in the Houston (Tex.) Post, and in these thoughtfully considered words are a graphic picture of the man, and the philosophies which are reflected in the progressive attitude of Dr. Steen and the school and the South.

I ask unanimous consent to have printed in the Appendix of the RECORD the condensation of an address by the beloved Dr. Walter Prescott Webb entitled "A Corner of the Old South." as printed in the Houston Post for June 11, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Houston Post, June 14, 1959]

A CORNER OF THE OLD SOUTH

(By Dr. Walter Prescott Webb)

Each college has general obligations which it owes to a very large area in common with all the other colleges and universities. is the general business of Stephen F. Austin, of its sister colleges, of the university and the A. &M. to train young people for service to the Nation, for service to the State of Texas which supports them all. But Stephen F. Austin has a unique obligation to be of special service to the geographic area in which it is located, to a circle drawn around Nacogdoches as a center with a radius of 200 miles. That is Stephen F. Austin's special domain. There its opportunities are greatest, and its obligations inescapable.

I think the problems of the college in relation to this area can best be examined when the area is seen in its natural setting. In an attempt to place the Nacogdoches area in that setting, I will start with the whole United States and wind up with the area surrounding this college. The whole United States consists of three great regions which are generally accepted by us all, the North, the South, and the West. It is obvious that Nacogdoches does not belong to the North, geographically or culturally. That leaves us to place it as between the West and the South. It will help here to observe that Texas is divided into two great sections, commonly known as west Texas and east Texas. West Texas belongs to the American West, and east Texas belongs to the Old

South. The pines on this campus furnish all the proof we need that this east Texas is part of the Old South. The houses reflect the fact; the accents of the people indi-cate it, and the old families with their aristocratic traditions, presumptions, offer ample proof that this is a little corner of the Old South.

Since this is true, then the problems of this college situated in the westernward corner of the Old South are pretty much the same problems that face all the colleges all over the Old South, not only the colleges,

but the universities as well.

I am sure that by this time the regents, the president, the faculty, and the visitors think they know what I am going to say next, and they are dreading a little to hear me say it. Well, I'm not going to say it, and if I were to make a hundred speeches over the Old South, I would be careful to avoid the subject that is now on our minds.

I do avoid this issue because it is not germane to the future, to the opportunity, and to the highest obligation of this institution. This issue reminds me of what a very wise and humane President said when his advisers came and asked what he was going to do about Brigham Young and the Mormons who were cutting capers in Utah. This President said, "I am going to do what I used to do in plowing a field where one of these big pine trees had fallen down. The tree was too big to move, too green to burn, and so I just plowed around it. It is my opinion that the time has come when the South-including east Texas-should go on and plow around one great obstacle in order to get on with its crop. After all, the log does not occupy more than a small part of a very fertile field which will respond bountifully to the right sort of cultivation.

Let us take a look at the great field which the South is, at how much there is of it, and what it will produce, ignoring for the present the log that is too heavy to move and too green to burn.

What I am advocating is a positive rather than a negative approach to the problems of the South, to the problems of this corner of the South known as east Texas. Since about 1840 the South has been nourishing a negative attitude, much concerned with seeing that something was not done. It has not spent enough time studying what could be done, what might be done to the benefit of the region. It has since 1865 looked back nostalgically to what it considered the good days, the days of dominance and glory. It has nursed its resentment of what happened following the Civil War when the South was exploited with a cruelty and relentlessness without parallel in modern history. That cruelty and exploitation left a bitterness which has not even yet passed away.

As a result of the Civil War and what

followed, the South did not keep pace with the economic development of the Nation. Poverty became almost the common lot, and that poverty showed its ugly head in all the affairs of men, in bad health, inadequate education, in soil depletion and human deterio-

No wonder the South looked back on a better time, no wonder it took a negative attitude toward what was happening, when everything happening was detrimental to it. No wonder it romanticized the past and built an unreal halo around the leisurely life of an older age. The South was the sick man of the Nation, the sick region, and its dreams were largely induced by the fever of poverty. Its sensitivity was that of the period and poor. This is a dark picture, but no darker than the reality which it represents.

I think it could be shown that from 1870 to 1930 the South's condition became progressively worse. By this I mean that it. dropped further and further behind the North and the West in wealth, in welfare, in education and in health. It dropped so far behind that the South became a Nation problem. It had created a crisis.

Now the demands of a crisis are often met by revolution or during revolution. The election of 1932 marked the beginning of \$ revolution induced by a national crisis of which the South was a part. The economy had collapsed in 1929 and the revolution that was inaugurated in 1932 was designed to rebuild it on different principles.

Fortunately for the South when the economy collapsed, it took down with it the polltical forces that had historically been responsible for the exploitation and degreds tion of the South. Those political forces fell in the election of 1932, and have never been able to reestablish their evil influence.

It was in the midst of this revolution that a group of Southerners were called to Wash; ington by National Emergency Council and asked to draw up a report on the condition of the South, and to make recommendations for doing something about it.

President Roosevelt addressed a letter to this group in which he stated that the South was the economic problem No. 1 of the Na-

tion. In part he said:

'No purpose is closer to my heart at this moment than that which caused me to call you to Washington. That purpose is to obtain a statement \* \* of the economic con ditions of the South, a picture of the South in relation to the rest of he country, in or der that we may do something about it.

"My intimate interest in all that con-cerns the South is, I believe, known to all of you; but this interest is far more than a sentimental attachment born of a considerable residence in your section and of close personal friendship for so many of your people. It proceeds even more from my feeling of responsibility toward the whole Nation. It is my conviction that the South presents right now the Nation's No. 1 economic problem—the Nation's problem not merely the South's. For we have an economic unbalance in the Nation as a whole due to the whole, due to this very condition of the South.

"It is an unbalance that must be righted for the sake of the South and of the Na" tion."

In due time the committee issued "The Report on Economic Conditions of the South," including Mr. Roosevelt's bold and undiplomatic statement.

I am convinced that this report marked the turning point in the history of the South. Until that time it had been going downhill all the way, since that time if has been going and the state of the sta has been going up, improving its position in reference to the North and the West and in reference to the Nation. In some cases its progress has been spectacular-

Of each \$100 in demand bank deposits in 1930, the North had \$78, the South \$1 and the West \$11. Twenty years later 1861. North's part had dropped from \$78 to \$60 the South's share had almost doubled, from \$11 to \$20, and the West's share had in-creased from \$11 creased from \$11 to \$20. In that 20 years 1930-50, the individual income in each sec tion increased. The northern individual income increased 119 percent; the western increased 148 percent, but the southern increased 225 percent. In 1930 the South paid in individual income to 1930 the South paid in individual income to 1930 the South paid. in individual income tax less than \$6 out of each hundred, but in 1950 the South had nearly three times as much, or \$16, an increase of 266 percent. crease of 266 percent.

I would have little confidence in the marvelous progress the South is making it were based on political action in Washington. I would argue that what was down in Washington manual argue that what was down in Washington manual argue that was down in Washington manual argue that was down in Washington manual argue that was down in the washington manual argue that was down in the washington manual argue that was down in the washington and washington arguer that was a superior washington and washington arguer than the washington and washington arguer than the washington arguer that washington arguer than the washington arguer than the washington arguer than the washington arguer that washington arguer that washington arguer that washington arguer that washington argu in Washington marks the first step in pulting the South on its way to helping itself. Though I have not compiled the figures show what has happened since 1950. I see evidence everywhere that the progress

continuing. Furthermore, I believe that the improvement has only just begun.

What the South needs today more than any other one thing is for its people to catch a vision—not of a glorious past, but of a far greater future. They need to see that the South today is the most thriving of the three regions. It is not the richest by by far, but its wealth and its general welfare are increasing more rapidly than that of any other region, and that is what I mean by most thriving.

What I would do, if I could, is this. Would convince the southern people that their future is brighter than it has ever been in history; I would so inspire them that they would get so busy realizing on the opportunitles ahead that they would forget the degradations and injustice of the past, drown their bitterness in success, and revenge the bast by becoming the prosperous region of the Nation.

I suspect that these words are falling on skeptical ears, that many feel that now the University professor is talking through his academic hat. We have been so accustomed to thinking the South must play third fiddle that we have difficulty seeing it in a leading tole. You would like to believe that what I

have said is so, but you want the proof.
All right. I'll give you the evidence on which I have based my statements. I'll talk which I have based my statements. In terms of wealth and the resources from which it is derived. I'll talk of three forms of wealth; first, that produced from the farm and what and the ranch, what grows on them and what lies beneath them. Second, I'll talk of trade and manufacturing. Third, I'll tell you of a slient revolution in technology which has placed the South squarely in the path of destiny.

Let us look at the South, not as the enormous area, but as a piece of real estate which mous area, but as a piece.
We are figuring on buying. This makes we are figuring on buying. What are the pomanageable in our minds. tentials? What are the natural advantages?

What are the assets? They are indeed many. 1. The South is the only region in the United States that fronts the sea on two sides. From Virginia to Key West it looks east to Europe across the Atlantic; from Key West to Brownsville, it looks south to Latin America. The South's shoreline along the Atlantic is 1,099 miles; along the gulf 1,659 miles. It has a total shoreline of 2,758 miles. It has nearly 4 times the shoreline of the North, more than twice that of the Pacine coast, and nearly 600 miles more seacoast than the North and West combined. If there is a potential fortune in the sea, then the South has the easiest access to more than half of it.

2. It has one-third of the good farmland the Nation, and this land is now being made better by the year.

3. It has two-thirds of all the land with 40 inches of rainfall or more, an asset too great to be measured.

4. It has a long growing season which gives it an advantage in the production of food and her of livestock and feed. Because of these things, the South is the richest region in renewable resources. It was once a great natural forest, of which a tiny sample survives on this campus. It is again becoming a great forest, and I can see that east Texas has much etter forests now than it had when I taught here in 1926.

5. It has in the interior the greatest supply of fresh water, if we exclude the Great

6. In minerals it produces 45 percent of the oil, all of the sulphur, and it has enormous, hous deposits of coal and iron which have hardly been touched.

Now I want to ask this question of you businesamen, regents, citizens: Would you consider the purchase of a piece of real estate that had all these natural advantages, all of this real and potential wealth

as a good investment? In short, would you buy the South? Well, why don't we start doing it?

But I am not through. I have not touched on the industrial potential, which is in some ways even more exciting than the natural resources. It is common knowledge that the industrial revolution is at last entering the South. We say it is industrializ-ing. We have evidence of this industrialization all over east Texas; we have it in the paper mill at Lufkin; we have it in the steel production at Daingerfield. We have it all along the gulf coast from Beaumont to Corpus Christi. There on the salt water it is having its greatest boom. I need not elaborate any further.

What I do want to do is to point out a silent revolution that has occurred in technology which almost inevitably makes the industrial future of the South, of east Texas, not bright, but brilliant. Manufacturing, especially from minerals, never is developed through the use of one mineral. Industry develops by bringing together a combination of resources. Such a combination was found in Pennsylvania and West Virginia, and out of this combination grew the steel industry which has meant so much to this country. The three resources found in juxtaposition there were coke and coal, lime, and iron ore. This trilogy ushered in the age of steel, and did much to give the North its dominance in the American economy.

Due to a technological revolution South now possesses such a trilogy of resources. I refer to the petrochemical industry which has already made great headway along the east Texas gulf coast. This new trilogy is oil, sulfur, and fresh water. The South, including Texas, produced 45 percent of the oil, 100 percent of the sulfur, and it has an unlimited quantity of fresh water. The petrochemical industry is still in its infancy, and its future is so great that the imagination cannot encompass it at this time. It would be a mistake to say that the South, like Br'er Rabbit, has fortunately fallen into the brier patch of opportunity. It is more accurate to say that the South has stood still and the brier patch has grown up around it. But there it is, and we should make the most of it.

One other feature I want to mention: it is that at last the South is developing capital centers with enough money to develop its own resources. It no longer has to go north to obtain capital in moderate amounts. Texas capital financed the paper mill at Lufkin, the steel mill at Daingerfield, and it is being invested in the oil fields of the Northwest and Canada, and in many other enterprises. The South is slowly becoming an exporter of capital.

What the South needs now, most of all, is more people who understand the advantages it has, and the forces that are operating to give it a great future. These people need to see a vision of the South, not as it once was, but as it is and can be. I believe the southern people can be made to see this vision. What they need is information and the information is available. What I would like to do, if I could, would be to bring together 10 men from each southern State, give each of them the facts on which the vision is based, and persuade them to return to their respective States, and sell the idea to a hundred more, and these to a thousand more so that the South would turn its whole attention to developing is enormous potential.

Well, I have wandered far from the man who is being inaugurated, apparently but not really. I have been talking to him all the time because he is going to direct the affairs of a State college set in a pine forest in a corner of the South that is old and that is new. I have tried to give him a perspec-tive on the region in which he operates and

which he will serve. I would like to engage his interest in the program I have suggested. and I would also like to engage the interest of his regents, his faculty, his patrons, and all the citizens of east Texas. I would like for all of them to catch vision of what this country might be and can be.

Of course those who have dreams never quite realize them. The teacher never quite reaches his goal in aiding the student to develop his own talents. The president never quite reaches his goal of having a faculty that is perfect; and maybe the regents never quite reach their goal of having a perfect president. But all of us get farther by trying. A dream of some sort lies behind every achievement.

All of us are really teachers and teachers do not reap the harvest of the seeds they plant because they plant for posterity and mankind. It was the poet Shelley who phrased this truth as only the poet can.

The seeds ye sow, another reaps; The wealth ye find, another keeps; The robes ye weave, another wears; The arms ye forge, another bears.

This same truth I read in a story of the life of Gen. William Booth, the famous missionary in London who founded the Salvation Army.

His young missionaries would go out to their work in the slums, and come in completely discouraged, with their spiritual ears beat down. In trying to rebuild their spirits, according to this story, Booth would quote a passage whose author I have never been able to identify. I have often felt that this quotation should be written in invisible ink and be framed also over the desk of a new president. It runs: "Sow the seeds and fear not the birds for the harvest is not yours."

### The Right To Know

EXTENSION OF REMARKS OF

## HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES Wednesday, June 24, 1959

Mr. CHURCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Right To Know," which appeared in the June 18 issue of the Meridian (Idaho) News-Times.

I believe this editorial is indicative of the growing discontent among the people of this country with the creeping concealment that has come to remove more and more areas of Government business from public view.

The people's right and need to know how their lives are being affected and how their money is being spent must be jealously defended in every era. News-Times has performed a valuable service in contributing to that defense.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### THE RIGHT TO KNOW

That business of Congressmen paying fancy salaries to their relatives—including even teenage sons and daughters—is bad enough.

But even more serious than the misuse of our tax money is the fact that the guilty Congressmen can refuse to let the public know who is on their payroll.

Talk about an incredible situation. Here are men, elected by the people and spending the people's money, who can legally tell the people, "It's none of your business how we run our office."

It's as though the superintendent of a firm refused to tell the firm's owners who was on the payroll, or how much they were

being paid.

Unfortunately, the congressional-payroll scandal is only part of a growing trend—a trend toward depriving the people of freedom of information.

Politicians and bureaucrats-big little—are violating every principle of democracy by setting themselves up as censors of what the people shall be told. Often they hide behind the claim of national security-even when no security is involved.

An example of that was cited by Idaho's Senator Frank Church, who has introduced an amendment to establish a public information policy for the Mutual Security Act.

It was regarding the amount of rent the United States was paying Brazil for use of an island as a guided missile station. There was no secret about the base being therebut the amount of rent was "classified material," not available to the public.

As Senator Church said, "Certainly, the safety of the United States cannot be adversely affected by letting the American public know how much the project is costing them. If the people are being gouged, they have the right to know it."

That situation, like the congressional nepotism scandal, is on a national level but the creeping web of censorship extends also to many State, county, and even municipal levels. So this fight for freedom of information isn't just a campaign of journalists-it concerns every man and woman and child in our Nation.

So far, Idaho has been fortunate-with only a few smalltime bureaucrats attemptto make private secrets out of public

But, if we lose our freedom of information on a national level-and we're losing more of it each day-it won't matter much what happens on our State level.

It will be too late to speak up then. you can speak up now-to your Senators, Representatives-in protest against needless withholding of information from

And we'd better speak up. Freedom of in-formation is so basic a part of democracy that, without it, all our other freedoms will be in dire jeopardy.

#### Poultry Prices and Government Policies

EXTENSION OF REMARKS OF

#### HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Wednesday, June 24, 1959

Mr. COTTON. Mr. President, prices paid to farmers for eggs and poultry have plummeted downward in recent months to levels that can mean real hardship for many farm families, including some in New Hampshire where poultry is a leading source of farm income.

The basic cause of the price decline is overproduction. While the present surpluses are a result of several factors. there are good reasons for believing that the Federal Government itself has busily promoted and even financed some of the production increase that is now dragging the poultry farmer closer and closer to disaster. My colleague from Delaware, Senator John J. Williams, recently detailed the ways in which lowinterest Government loans have been used to expand poultry production. He very properly denounced the "ridiculous situation" of six different Federal agencies loaning money to expand poultry production at a time when overproduction plagues the industry.

Poultrymen have scant chance for success in their efforts to reduce production and bring their markets into reasonable balance as long as the financial power of the Federal Government is arrayed against them. The U.S. Department of Agriculture should put a prompt halt to all loans for poultry production until the supply situation gets back to

The Government must take its share of the blame for the badly scrambled state of the egg business today and must set its own house in order without delay.

Poultrymen have been hard at work on their own answers to their problems. The President of the New Hampshire Poultry Growers' Association, Mr. Robert Horsburgh, of Fremont, N.H., recently testified before a House Agriculture Subcommittee and presented the suggestions adopted at a special meeting of the association.

The association flatly rejected the concept of price supports and marketing quotas which have only made bad situations worse when applied to other farm commodities, and they called for an orderly reduction and elimination of price support programs on feed grains which have only produced higher costs to poultry farmers.

Mr. Horsburgh, in his testimony before the House committee, made one statement which I believe merits the special attention of the Senate and the Nation. He declared, "In my considered opinion the overwhelming majority of our New Hampshire poultrymen value their freedom of action so highly that they are willing to suffer through the present crisis rather than ask for any long-term Federal help with its resulting controls." That is the kind of spirit which will solve the problems of the poultry industry. He went on to emphasize that New Hampshire poultrymen are engaged in a positive program of their own to build better markets for their products.

At the very least the poultry farmers of New Hampshire and the Nation are entitled to the assurance that the Government will not actively pursue policies which will take them straight into trouble. So far, its "helping hand" has done them more harm than good. I believe poultrymen can work out a sound solution to their problems if the Government stops its poaching and removes the roadblocks it has put in the way.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the testimony of Mr. Robert Horsburgh, president of the New Hampshire Poultry Grower's Association before the House Agriculture Subcommittee, as well as an editorial from the Washington Daily News of June 22, en titled "Uncle Sam's Egg Scramble.

There being no objection, the address and editorial were ordered to be printed in the RECORD, as follows:

STATEMENT OF ROBERT HORSBURGH, PRESIDENT NEW HAMPSHIRE POULTRY GROWERS' ASSO CIATION BEFORE HOUSE AGRICULTURAL POUL TRY SUBCOMMITTEE, JUNE 18, 1959

Mr. Chairman, my name is Robert Hors' burgh, from Fremont, N.H. I am an inde pendent market egg producer and president of the New Hampshire Poultry Growers Association, with a paid membership of 462 A special meeting of our association was called on June 15 for the purpose of polling members on questions facing the industry that their views might be presented to this subcommittee. We feel that you are more interested in the views of the majority of poultrymen in an area than in the personal views of their leaders which may or may not reflect majority opinion. Our membership voted that I should appear at these hearings to insure that this subcommittee was made aware of the following resolutions adopted at the special meeting:

1. Resolved that the New Hampshire Poultry Growers' Association go on record being opposed to any grain company com peting against independent poultry grower by indulging in so-called integration move ments which involve the financing and/or raising of breeders, broilers, replacement birds, and market egg birds in the State of New Hampshire and the United States as a whole

whole.

We feel that the abandonment of this practice will greatly eliminate the drastic overproduction of all poultry products which has caused financial chaos to all poultrymen

2. Resolved that the New Hampshire Poultry Growers' Association strongly use the lowering in an orderly manner and even tual elimination of price supports on basic feed grains.

The New Hampshire Poultry Growers billion in inventories and loans for support programs a national scandal that endangers the basic soundness of our economic system

(3) Resolved that the New Hampshire Poultry Growers' Association oppose direct Federal support of price, and control of production of poultry and eggs, except for energy gency surplus removal and stabilization that avoid any long term storage of poultry of

poultry products.

(4) Resolved that the New Hampsh Poultry Growers' Association urge the Federal Trade Commission and the Justice Description partment to continue to investigate chall, store buying and marketing practices as well as integration. as integration of production to insure there are no monopolistic tendencies or restrains of trade involved. of trade involved.

(5) Resolved that the New Hampshift Poultry Growers' Association oppose marketing quota bills, H.R. 6901; H.R. 1118 H.R. 7149; and the marketing order H.R. 7563; H.R. 7565; H.R. 7573; and H.R. 7557 scheduled for heart 7557 scheduled for hearing before the Hould Agricultural Poultry Subcommittee June and 15, 1059 and 18, 1959.

Perhaps you may justifiably criticize thes resolutions as being negative in character and offering no positive suggestions to the subcommittee for action subcommittee for action. After listening special meeting it is my considered opinion that the overwhelming majority of our New Hampshire poultrymen value their freedom of action so highly the the active debate of our members at of action so highly that they are willing suffer through the present crisis rather that ask for any long-term Federal help with resulting controls. What they are doing in a positive manner is working to help them selves have better representations. selves have better representation in the

tetplace. This effort is presently on a reexpanded in cooperation with other regional Morts to form the basis for a national pro-

We appreciate the opportunity to present truly representative poultrymen's Views from the State of New Hampshire. Thank you.

From the Washington Daily News, June 22, 19591

Since January 1, the Government has spent 512 million of the taxpayers' money buying th eggs. This is a futile effort to prop the Prices, now the lowest in 18 years because of A big surplus.

One of the reasons for the oversupply is that this same Government, now busily stor-ing eggs, has been equally busy promoting

Six different agencies have been out soliciting farmers to borrow money to build more henhouses and produce more eggs. Parmers Home Administration alone, Senator J. WILLIAMS reports, was responsible for increasing the flocks by a half million

layers in the last 2 years.
"Only last week," the Senator said, "my attention was called to an order from the top office of the Farmers Home Administra-tion to one of their field offices that if that office could not report more loans to farmers they would lose their jobs and their office be

For more than 2 years the Marketing Serv-For more than 2 years the Markening of the agriculture Department has been warning poultrymen they were overproducing—urging them to hold back. But other branches of the Government, some in the tame department, have been stepping up their loans to increase broiler and egg production. The Small Business Administration done has lent nearly \$41/2 million for this. purpose in these same 2 years.

If you think that egg you had for break-fast was scrambled, have a look at what the Government has done to the egg business.

Will Clayton: Statesman of Vision

EXTENSION OF REMARKS OF

# HON, RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Wednesday, June 24, 1959

Mr. YARBOROUGH. Mr. President, the American people are indebted to a great many people in our history for contributing to the whole effort which has made this Nation what it is today and raised it to the position of free world leadership it now enjoys.

One of the men who contributed to this stream of leadership and statesmanship was Will Clayton of Texas.
His guidance helped bind the ties of interest more firmly with our European neighbors who are part of the free

Mr. Clayton and other men who have helped make America great are discussed in true. in William E. Bohn's column "The Home Front," in the New Leader magazine.
Mrs. Ellen Clayton Garwood's letter is
quotal in the New Leader magazine. quoted there. I ask unanimous consent to have printed in the Appendix of the RECORD, the article of Mr. Bohn which appeared in the New Leader for June 22, 1959, under the title "Statesmen and Presidents."

There being no objection, the article was ordered to be printed in the REC-ORD, as follows:

THE HOME FRONT (By William E. Bohn)

STATESMEN AND PRESIDENTS

On April 27 I wrote a column entitled, "Will Clayton and the Marshall Plan," the springboard for which was a short biography of the Texas statesman, written by his daughter, Ellen Clayton Garwood. In my little essay I ventured this remark:

"If at the time the Marshall plan was fashloned we had had in the State Department the sort of pronouncement-making routineers whom we have been watching for some years, Europe would surely have gone

Mrs. Garwood spoke with modesty about her father's talents and achievements. But, like many other Texans, she is interested in government, and my little remark about the sort of men required in Washington caught her eve. I promptly received a letter which

is too good to keep concealed:

"My book is only the first that will eventually be written about Will Clayton and his contribution to creative government policies, and I am grateful that you have recognized that these policies need to be emphanized that these poincies need to be emphasized—that we need more action and fewer 'pronouncements.' Teamwork by 'a set of realistic, energetic men' can accomplish much, of course, but what I hoped to point up in my book (something in which I perhaps failed) was that this teamwork, essential as it is, is not enough. It has to be sparked, triggered by an outstanding dy-namic individual at the helm and such a person can be produced only by a free society-one which, in the tradition of Christ, emphasizes the individual quite as much as the masses.

"Thus the modern trend toward State ownership (which finds its apex in complete State capitalism or communism) must be modified and blended with a return to emphasis on free enterprise (private capitalism) in order that we may come forth with a government philosophy—neither all State capitalism nor all private capitalism-for our new close-together world. This philos-ophy is one which my father preaches and exemplifies: Freedom for the individual, preserved in a gradually developed free trade throughout the world-a start having been made in the General Agreement on Tariffs and Trade (GATT), which he fatheredand help for the masses, carried out by State subsidies to tide over industries and labor that must reconvert, by State loans or grants from developed to underdeveloped nations.

"Some of these ideas were put into motion when my father was in the government. But to put them into motion there was the need of a strong and compassionate individual to do the pushing, much as a symphony orchestra, in order to do justice to a great composition, must be led and pushed by a Toscanini or a Charles Munch. fear sometimes for our seeming inability to come up with strong, middle-of-the-road leaders; we have anemic middle-of-theroaders and strong rightists and leftists, but what we need-I think you will agree-is an inspiring statesman of integrity who can blend creatively the best of both. I wanted my study of my father's life to show that this was and is possible."

I am presenting this letter in the hope that it will add something useful to the present great discussion of the Office of the Presidency. During the past two national

campaigns, we have had the most inadequate examinations of candidates and programs anyone could imagine. The Republican campaign managers have been largely re-sponsible for this, for they have replaced sponsible for this, for they have replaced political argument with Madison Avenue publicity techniques. A really good man, Adlai Stevenson, was buried under mountains of slick printed and televised stuff, and as a result we have had two terms with a President who has obviously and openly enjoyed his great office as a nice, easy job on which to float into history.

I can remember the regimes of great Presidents—Grover Cleveland, Theo-dore Roosevelt, Woodrow Wilson, and Franklin D. Roosevelt. They were all men who stood up like mountains. They thought their own thoughts. Each of them stood up for what he believed and, Congress or no Congress, put through a good part of his program. What this country is now is due largely to these four men.

In her short letter, Mrs. Garwood said enough to indicate that we are passing through a time which requires both courage and wisdom. No one can tell what our Government will be like 10 years from now. What sort of combination of the suggested principles in our society will give us the best life and how can we attain it? Where do we want to go and how can we get there?

The one sure thing is that we cannot stay where we are. Somehow, during the next few months, our two parties must select candidates which can be depended upon to do something toward leading us in the right direction—something comparable to what was done by the men whose achievements have marked the political chapters of my life. This time let us pick a fifth man as great as the other four.

Authority of Office of Civilian and Defense Mobilization in Disposition of Stockpile Minerals

> EXTENSION OF REMARKS OF

## HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES Wednesday, June 24, 1959

Mr. CHURCH. Mr. President, I received this week a letter from the Idaho Mining Association, by A. J. Teske, assistant secretary, detailing the concern of the mining industry in my State about reported plans of the Office of Civilian and Defense Mobilization to seek legislation to broaden its authority to dispose of stockpile minerals.

This letter graphically depicts the state of mind of minerals producers in this country about the off-again, onagain, topsy-turvy policy of this administration in its dealings with the hardpressed domestic minerals industry.

I have assured Mr. Teske that not only is there no plan among western Senators to give OCDM broader authority to dispose of stockpiled minerals, but on the contrary, every effort is being made in the Committee on Interior and Insular Affairs to see that existing authority will not be used to depress the domestic industry, already reeling from so many blows.

I joined in a resolution to prevent this action as to copper, and I am a cosponsor of a bill which would require review by the Senate Committee on Interior and Insular Affairs of any OCDM decision to dispose of stockpiled minerals, before it could become effective.

I ask unanimous consent that Mr. Teske's letter be printed in the Appendix

of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JUNE 15, 1959.

Hon. FRANK CHURCH, U.S. Senator, Senate Office Building,

Washington, D.C.
DEAR SENATOR: The May 28 issue of Engineering and Mining Journal's weekly Metal and Mineral Markets carried an item of extremely ominous tone to domestic mining interests.

The article, originated by the McGraw-Hill Washington News Bureau, read, in part, as follows:

"The Office of Civilian and Defense Mobilization (OCDM) is readying a piece of legislation-the proposed new Federal stockpiling law-which would relax present restrictions on Washington's authority to dis-

pose of excess stockpile items.
"The bill would set up a single national materials reserve inventory, including all material now in several stockpile cate-

gories:

"First, the supplemental stockpile of foreign metal and mineral commodities received in barter exchange for surplus U.S. crops; second, in the Defense Production Act inventory of domestic metals and minerals acquired under incentive purchase support programs; third, the Government's tin stockpile; and fourth, Interior Department's inventory of domestic metals bought to support market prices.

"The new materials reserve inventory would take from the national stockpile, commodities that are now in excess of three goals. Now, commodities in the national stockpile cannot be disposed of without ex-

press congressional approval."

The article goes on to say that under the new proposal the OCDM could dispose of any or all of the materials reserve inventory without the consent of Congress, although it would be required to give Congress 90 days' notice of proposed sales. In addition OCDM would have broader discretionary authority in deciding what materials in the national stockpile are "excess" or "obsolescent", and thus transferable to the reserve inven-

In effect, the proposed legislation would suspend over world metal markets like a sword of Damocles an estimated \$4 billion worth of surplus. A more effective depressant on metal prices would be difficult to conceive.

Since the proposal has already been approved by the Bureau of the Budget and appears to represent the weight of opinion within the administration, the McGraw-Hill bureau saw fit to report that congressional observers are betting that some eventual disposal is in the cards.

It is the considered opinion of this association that it is completely unreasonable to entrust sole responsibility for administration of such a program to a group of bureaucrats who have demonstrated so little foresight and ability in permitting these vast surpluses to accumulate.

Much of the excess material was acquired against the better judgment of the mining industry, as in the case of the President's accelerated stockpiling program from 1954 to 1957. To use such materials now to prolong the mineral market depression would be add-

ing injury to the original insult of ignoring the advice of mining men.

Furthermore, the proposed disposal program is extremely discriminatory. A substantial amount of these surplus metals were obtained through barter exchange for sur-plus farm crops. Thus, the weight of a burden on the agricultural segment of the economy was removed at the cost of increasing the burden on the mineral producing segment. And all the while, that part of the mining industry which has managed to continue operating without subsidy is forced to continue to contribute through taxes to the grandiose farm subsidy program.

The fact that the advocates of minerals disposal have pledged to administer the new program in an orderly manner so as not to adversely affect normal markets is hardly reassuring in view of the bureaucrat's numerous sanctimonious promises, when each new stockpiling program was proposed, that the metals acquired would be held intact so as not to constitute a market threat to do-mestic producers. The new proposal represents an unconscionable breach of all these previous pledges and could hardly be expected to breed any confidence in new promises.

The executive committee of the Idaho Mining Association earnestly urges that you use every means at your disposal to oppose this latest threat to the welfare of the do-mestic mining industry. Not only would the proposed legislation exert a profound influence on metal prices for many years to come; it would also place domestic mineral producers completely at the mercy of a handful of Government bureaucrats and planners whose past ineptitude requires that even now the U.S. Government must continue to buy and add to its stockpiles foreign metalsat prices substantially above what domestic producers are able to get. A case in point is the shutdown early this month of the Nation's only cobalt mine in Lemhi County, Idaho, while the Government continues to purchase foreign production.

The thinking of the Idaho Mining Association on this matter of stockpiles conforms more closely with that embodied in S. 2048 and H.R. 7121. These bills would preserve the traditional legislative control over Executive actions by barring Government sales of metals and minerals acquired under the Defense Production Act unless the proposed dispositions are approved in advance by both the Senate and House Interior Committees. It is reported, however, that these bills apply only to acquisitions under the Defense Production This association would favor extension of this coverage to barter and market support stockpiles as well.

Yours very truly,

IDAHO MINING ASSOCIATION, A. J. TESKE,

Assistant Secretary.

Foreign Imports Are Forcing American Business To Move Abroad, With a Consequent Loss of American Jobs

> EXTENSION OF REMARKS OF

#### HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. STRATTON. Mr. Speaker, one of the serious consequences of the increasing competition we face from foreign imports, a competition which undermines business activity and jobs in this coun-

try, is that American firms, in order better to compete with this competition, begin to move abroad themselves. know that this has already happened in other industries. When it does happen, then the businesses themselves may survive, but the jobs of American citizens connected with them are lost. Certainly we must do everything we can as legislators to prevent this unfortunate develop-

Some indication of the extent of this threat as it relates to the carpet industry can be gained by reading an editorial which appeared in the June 5 edition of the Amsterdam Evening Recorder.

Incidentally, I have been advised that 2 million yards of wilton carpet imported from Japan represents some 60 percent of the wilton production of Mohasco Industries Co., of Amsterdam, N.Y., one of the great carpet manufacturing plants in this country. It is time that we recognized this threat to our own economy

Under leave to extend my remarks, I include the text of this editorial, together with a reprint of a news article from the Journal of Commerce which also appeared on June 2, 1959:

[From the Amsterdam (N.Y.) Evening Recorder, June 5, 1959

MADE IN JAPAN

Announcement of the largest carpet contract ever negotiated between the United States and Japan is creating quite a stir in textile circles, and well it might. One does not need to be in the industry to appreciate where this could lead.

The agreement between the Philadelphis Carpet Co. and one of Japan's largest trading corporations will involve production of about

2 million yards of witton carpet annually.

Present plans call for weaving, spinning and dyeing operations to be handled by Japa. Technicians and designers from nese mills. the United States will supervise production

A spokesman from the Philadelphia firm Herbert E. Doerr, Jr., says the new Japanes subsidiary will in no way affect operations at the Philadelphia mills. Perhaps not, but it will certainly affect those who are de-pendent upon the domestic textile industri for their livelihood. There is just so much carpet purchased in the United States each year, and every yard made abroad is the much less that has to be manufactured here.

Saying that the highest quality control standards will be maintained, Doerr indicate that the foreign-made carpets will retail of an average of from \$7.95 to \$9.95 per yard This is considerably less than the price of

wilton carpet produced in the United States.

No one who lives in Amsterdam should have to be told what an influx of Japanes carpeting could do to the carpeting could do to the carpeting could do to the carpeting could do carpeting could do to an industry alread suffering from the steady lowering of textile tariffs during the past quarter of a century This could very well prove to be the stra that breaks the camel's back.

At the same time, textile manufactured can hardly be blamed for trying to operate a profit. Patriotism is a fine thing, but does not balance the books at the end of fiscal period. If American firms are beliff forced to move operations abroad in order to stay in business it is time we all to a closer look at what is going on.

Since the end of World War II the United States has spent billions of dollars to support industry in foreign nations. We, as taxparers, pay our full share for this support program. In return, we are permitting the refinations we help to rule downstia marks. nations we help to ruin domestic market for our own industries. It does not make much sense.

The time to alleviate this threat is long overdue. We are not going to maintain leadership in the world market by creating a ridiculous situation whereby foreign companies, supported in part by our taxes, are literally threatening our own industry.

What is happening in Philadelphia today could happen in Amsterdam tomorrow unless corrective action is taken now. The warning is too obvious to be ignored.

| Prom the Journal of Commerce, June 2,

U.S. CARPETING MILL FORMS JAPANESE IMPORT SUBSIDIARY

Philadelphia.—A new importing firm to fell Japanese carpeting in this country has been set up, it was announced here by Herbert E. Doerr, Jr., president of Horizon Carpets, Inc. Horizon Carpets is the new subsidiary for the Philadelphia Carpet Co., established in 1846, of which Mr. Doerr is vice president in charge of sales.

This is the largest agreement ever arranged between Japanese carpetmakers and a U.S. company and establishes Horizon as the world's largest importer of carpets from the Far East. Mr. Doerr said. The new firm will act as selling agent in this country for Mitsul Co., Ltd., of Osaka, Japan, one of the world's largest trading corporations which represents virtually every Japanese carpet mill, he added.

The agreement calls for about 70 percent of the entire Japanese carpet output, an estimated 2 million square yards annually, to be sold in this country by the new firm.

#### PREVIOUS IMPORTS CITED

The significance of the agreement stands out when the volume of carpet imports is considered. A total of 548,000 square yards of machinemade carpets was imported from Japan in 1958.

In the first quarter of 1959 the imports from Japan of such carpets more than doubled compared to the same period in 1958, reaching 223,000 square yards, the American Carpet Institute reports. Hooked rugs and braided rugs from Japan, however, are not included in these figures.

First shipments of Japanese carpets are expected to be received at Horizon Carpets warehouses in New York and Los Angeles sometime in July.

#### TYPES DESCRIBED

Four different lines of fabrics are expected to be available initially, with an additional four scheduled for late fall delivery. All the Japanese fabrics will be 100 percent wool Jacquard Wiltons. They are expected to retail in this country between \$7.95 and \$9.95 a square yard.

a square yard.

"Japanese mills do produce less expensive carpets," Mr. Doerr said, "but we will import only the better quality goods."

The new importing firm has already assigned experienced American technicians to Japanese mills. These experts in weaving, spinning, and dyeing techniques will work directly with Japanese manufacturers.

Top officers of Horizon Carpets include H. E. Doerr, Sr., vice president, John P. Doerr, treasurer, and Thomas M. Hyndman, secretary.

## Is the USDA Antifarmer?

EXTENSION OF REMARKS

# HON. HUBERT H. HUMPHREY

IN THE SENATE OF THE UNITED STATES
Wednesday, June 24, 1959

Mr. HUMPHREY. Mr. President, I have had occasion from time to time to

draw the attention of my colleagues to the antifarmer attitude of the press in general.

It is therefore with pleasure that I wish to point out that in some publications there are indications of a growing understanding of the unfortunate and unfair administration of farm programs by the present Secretary of Agriculture. An editorial in a recent issue of the magazine County Agent Vo-Ag Teacher raises some extremely pertinent questions on this subject. I ask unanimous consent that this editorial be printed in the Appendix of the Record in order that all Members of Congress will have an opportunity to consider the import of the question raised.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the County Agent Vo-Ag Teacher]
IS THE USDA ANTI-FARMER?

Is the Department of Agriculture antifarmer? If it is not—it certainly acts like it is.

The U.S. Department of Agriculture is one of several agencies in the Government charged with running programs concerning special factors of the economy. For example, the Labor Department has the interests of the city worker at heart (and favors the minimum wage), the Veterans' Administration looks after the veterans (and refrains from advocating big cuts in benefits), and the Commerce Department is on the side of business and industry (and has never advocated an end to shipping subsidies or oil-depletion allowances). The State Department, for its part, fights for foreign aid as though its top officials were running for election in foreign countries.

All the programs run by these agencies contribute something to the national well-being. The majority of lawmakers over the years, Republican and Democrat, favored these programs or they wouldn't now be in existence. They were developed through give-and-take between Government officials and Congress. Significantly, none of these agencies is demanding major legislative changes which reduce benefits for people they represent—either long-range or short-

The U.S. Department of Agriculture, on the other hand, has a 6-year record of advocating legislative changes intended to withdraw benefits from the industry for whom it acts as spokesman. Is agriculture less important to the national well-being than, say, foreign aid, which costs about \$3 billion of direct benefits; or veterans' benefits, which cost about \$5 billion a year? Certainly the current farm program is not working, but does that mean that there is no need for a farm program? Is it possible that at least some of the blame for the failure rests with the U.S. Department of Agriculture bureaucrats?

Perhaps the biggest disservice the U.S. Department of Agriculture has performed for farmers is the damaging publicity which it not only condones, but actually puts out in the form of public speeches. No other similar agency puts out so much propaganda about the economic sector it's supposed to represent.

No other agency has done so much in its sphere of influence to damage the economic status of the sector it serves without providing compensating influences. Most recent examples are the reduction in feed grain and ollseed price supports and the revision in the parity index. Reliable estimates indicate these two moves alone will cost farmers at least three-quarters of a billion in income this year if market prices follow supports

down as the U.S. Department of Agriculture fully expects them to.

A further major disservice performed by the U.S. Department of Agriculture is its part in erecting an insurmountable wall of animosity between itself and the Congress. This, more than any other single factor, is what's preventing enactment of sorely needed farm program reforms. The U.S. Department of Agriculture brass takes the easy way out, and blames Congress—while the surplus problem gets worse. Why is it that most law-makers, both Republican and Democrat, just don't believe that U.S. Department of Agriculture spokesmen are out for the best interests of agriculture? Is it all politics?

Are the best interests of agriculture and the Nation furthered by stubborn insistence on a favored idea, or by honest effort at compromising differences—as most other Government agencies do all the time in their negotiations with Congress? Congress shows no intention of giving the U.S. Department of Agriculture what its leaders say it needs. Perhaps all problems would be solved if Congress were abolished.

Whether the U.S. Department of Agriculture is sympathetic to agriculture depends solely on the policy decisions of a handful of political appointees at the top—and not on the 98,000 able workers who daily do their level best to serve agriculture.

These employees, along with farmers everywhere, may well ask: If the U.S. Department of Agriculture is not antifarmer, why is it doing everything in its power to run the farmer down?

Are the Doctors Withholding a Cure for Cancer?

EXTENSION OF REMARKS

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES
Wednesday, June 24, 1959

Mr. NEUBERGER. Mr. President, perhaps because of my own recent illness and because I have taken an active role in medical-research legislation. I receive quite a few letters from many parts of the Nation alleging that doctors have deliberately withheld a possible cure for cancer.

I never have believed such charges. I think they are without substantiation in fact. To begin with, doctors themselves are human beings. They and their loved ones are subject to all human ills, and among these ills is cancer. Doctors and doctors' loved ones have succumbed to its ravages. If doctors have never withheld from distribution potential cures for infantile paralysis or scarlet fever or diphiteria, why should they do so with the more serious disease known as cancer? No genuine proof sustains so grave a claim against our physicians.

While I think the medical profession can be criticized legitimately in some spheres, I regard as without merit or proof the charge that doctors have suppressed a cure for cancer. What possible reason could motivate so sinister an act?

This same view has been expressed effectively in an editorial entitled "Are the Doctors Withholding a Cure for Cancer?" which was written by the nationally known author, Harry Golden,

from the June issue of the Carolina Israelite, published by Mr. Golden at Charlotte, N.C.

I ask unanimous consent that Mr. Harry Golden's editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the Record, as follows;

ARE THE DOCTORS WITHHOLDING A CURE FOR CANCER?

Wherever I go around the country I find someone, perfectly sincere, who believes that there is a positive cure for cancer but that "the doctors refuse to let the people in on it."

I also receive manuscripts of articles in which the writers tell of these mysterious cures for cancer and arthritis, and the essays go into the details explaining why the medical authorities find it to their interest not to reveal this information to the public. It should also be stated that in Chicago there is a highly respected and competent pathologist who has accused the medical profession of refusing to put his positive cancer cure to the test it deserves. My logic tells me that there is one major flaw in all of these charges of withholding cures, and this major flaw is that the accusers refuse to think of doctors and even of medical bureaucrats as people, and they are people you know. I am sure that there are doctors who have crippling arthritis, and I am equally certain that there are wives and mothers and children of doctors who have cancer, and that a doctor here and there has had to stand aside helplessly and watch a loved one suffer the terrible agony of the last stages of cancer. So, why would he withhold anything that would bring comfort and prolong the lives of their own fiesh and blood? Nonsense. I do not believe any of this, and I return the essays with this argument and up to now no one has come back with an adequate rebuttal.

The medical profession over the years has been stubborn on many things, and the American Medical Association drove me to drink when it threw its weight around against the reelection of Senator Frank P. Graham, of North Carolina; but as far as withholding cure is concerned, I do not believe a word of it. There are too many in on it, and too many doctors are strong individualists. In fact there were quite a few doctors right here in North Carolina who even supported Frank Graham with all their hearts and all their energies.

#### The Boundary

EXTENSION OF REMARKS

## HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES
Wednesday, June 24, 1959

Mr. AIKEN. Mr. President, I have received a very fine poem or song entitled "The Boundary," from Mary Nims Bolles, of Bellows Falls, Vt.

In view of the ever increasingly close relationship between the United States and Canada, Mr. President, these verses are very timely, indeed; and I ask unanimous consent that they be printed in the Appendix of the Record.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

THE BOUNDARY

Where the hearts of men are fervent
And the souls of men are free
There's a bound'ry line that stretches
West and East from sea to sea;
And it's not patrolled by soldiers,
Uniformed and brave and rash,
Through the balsam-scented forest
It is just a woodsman's slash.

Canada and U.S.A.
Where no taunting bugles play
When dawn lifts from the Atlantic
Over Fundy's roaring bay.

No trench mars the golden acres
Of the windswept fields of grain,
Nor do battlements and watch towers
An uneasy peace maintain.
On five inland seas the commerce
Of two nations safely rides,
For no demon of destruction

Canada and U.S.A.
Where no taunting bugles play
When the sun goes down in splendor
Where Vancouver guards the bay.

Ever lurked beneath their tides.

North and South across the border Traffic burdened highways lead, And the nations meet and mingle Knowing neither race nor creed, North the Union Jack is waving Emblem of a nation's pride And the Stars and Stripes as proudly Float upon the southern side.

Canada and U.S.A.
Where no taunting bugles play.
Can't you see those flags awaying
East and West from bay to bay?

There's a boundary line untroubled By distrust and discontent, And it reaches West and Eastward Clear across a continent. Stronger than a might of legions That for conquest seek release, Is our ancient pledge unshaken,

And the po. ple's will for peace.

Canada and U.S.A.
Where no taunting bugles play
And three thousand miles unguarded
Faith in God and man display.
—Mary Nims Bolles,
Bellows Falls, Vt.

The People Have Their Say: What First District People Think on Key Issues Before Congress

EXTENSION OF REMARKS

## HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mr. QUIE. Mr. Speaker, this year—for the second year in succession—I mailed out many thousands of public opinion questionnaires to as many first district residents as I could reach.

I am a strong advocate of public opinion questionnaires, because I believe that a questionnaire helps both the people back home and the person they have elected to represent them.

It enables the people to easily inform their Congressman of their thinking on important questions confronting Congress, and it enables the elected representative to receive the views from as many people as possible on these issues.

This is not to say, Mr. Speaker, that the sole duty of a Congressman is to discover which way the winds blow and vote accordingly. But each Member of Congress has a vitally important obligation to inform himself of the views of the people who he is striving to represent.

Exactly 96,531 questionnaires were mailed from my Washington office to people in the First Congressional District of Minnesota. The number of questionnaires returned to me represents 12 percent of the total.

The questionnaire of 1959 asked seven major questions on the central issues befor the Congress and on key aspects of U.S. policy.

Before I review the results of the questionnaire, I would like to point out that many people in the first district worked with me to make this questionnaire possible. They were volunteers—people who donated their time and energies to the the task of addressing envelopes for the questionnaires. Their task was truly an enormous one and without their help I could not have succeeded with this project.

The tabulation of the questionnaires shows an interesting expression of opinion. I do not say that this poll is an index to the thinking of all the people of the first district—but I believe it can be said that the poll provides some expression of the thinking of many people in southeastern Minnesota.

The largest single expression of views came on the very first question, which dealt with the balanced budget. This heavy concentration of opinion cannot be dismissed or ignored. It is most significant.

In answer to the question: "Should Federal spending be kept within the President's budget of \$77 billion" 95 percent of those who returned the questionnaire answered yes. Only five percent voted no.

The second largest bloc of opinion came on a question on labor reform. First district people were asked if Congress should enact labor reform legislation which would (a) regulate the administration of union dues, and (b) further restrict secondary boycotts and blackmall picketing.

Ninety-one percent of those answering the question responded "yes" to section (b).

Eighty-nine percent supported section

Looking at the results of this tabulation, it is possible to draw a composite picture of the thinking of a majority of the people who answered the questionnaire.

A clear-cut majority of those who returned the questionnaire thoroughly endorse the President's balanced budget. They feel that if Congress adopts programs over and above the budget, is should raise taxes.

They do not support Federal aid to help pay a portion of teachers' salaries. They heavily back up the idea of labor

reform. They reject a broadened social Security plan to include medical services (to be financed by an increased tax on employee and employer.)

On the subject of foreign policy-with respect to the cold war and the world Communist conspiracy—a majority beleves that our affairs are being conducted "about right." But a great many believe that our policy should be even more firm. Only a handful of those responding to the question feel that our policy has been too firm so far as Soviet Russia is concerned.

With this summary, I now present the complete results:

Questionnaire

	Percent	
	Yes	No
1. Should Federal spending be kept within the President's budget of \$77,000,000,000?  Lucrose adopts programs which will increase the cost of Government above the President's budget at the cost of Government above the President's budget.	95	5
budget, should these programs be paid by:  (a) Increasing taxes?  2. Do you favor increasing Federal gasoline taxes from 3 cents to 4½ cents per gallon to maintain a payasset of the state	82 11	18 89
Be-you-go basis in Federal gasoline taxes from 3 cents to 452 cents per ganon to manusar a pay     Bo you favor a new Federal-aid program to help pay a portion of teachers' salaries'.      Should Congress enact labor reform legislation which will:	64 21	36 79
(a) Regulate the administration of union dues?  (b) Further restrict secondary boycotts and blackmall picketing?  (c) You favor the general idea of broadening social security benefits to include medical services, to be 6.	91 89	9
7. What do you think of our foreign policy with respect to the cold war and the world Communist tongiracy?	26	74
(a) About right? 54 (b) Not firm enough? 41 (c) Too firm? 3		

#### Bela Kovacs of Hungary

EXTENSION OF REMARKS OF

## HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 24, 1959 Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Rec-ORD. I include the following recent obituaries from the Washington Post and Evening Star of June 23, 1959, respectively. Bela Kovacs was a long-time enemy of the Communists and it is hoped that some day the free world will learn the reasons behind his apparent last minute reconciliation with the Communist regime.

[From the Washington Post, June 23, 1959] BELA KOVACS OF HUNGARY

VIENNA, June 22.—Bela Kovacs, 65, who fought communism and lost as leader of Hungary's Smallholders Party; died in a hos-Jital in south Hungary today after a long illness, Radio Budapest said.

He had been in a hospital for the last 6 months.

After World War II Kovacs headed Hungary's biggest party, the Smallholders, and also was Minister of Agriculture. He was arrested arrested by the Russians in 1948 when they took over Hungary and only released in 1953 after Stalin's death.

Royacs returned to Hungary from Siberia

Kovacs returned to Hungary
as a sick and broken man.
During the 1956 revolution Premier Imre
Nagy made him Minister of Agriculture
again. After the crushing of the uprising
Kovacs was under house arrest for a time.
In October 1958, he was surprisingly made
a member of Hungary's Communist Parlia-

Several months later Kovacs broke 2 years of Political silence and publicly praised the Communist regime.

[From the Evening Star, June 23, 1959] BELA KOVACS, FOE OF REDS

VIENNA, JUNE 23.—Bela Kovacs, 55, a militant anti-Communist when he headed Hungary's Smallholders Party just after World

War II, has died in political obscurity. Budapest radio reported Mr. Kovacs died Sunday at a hospital in Pecs, in his home district in southwest Hungary. He had been reported seriously ill last week.

Mr. Kovacs fought in the anti-Nazi underground, then opposed the Communists as head of the Smallholders, a once-powerful party of peasants and businessmen.

The Communists destroyed the party after taking over Hungary in the late 1940's and exiled Mr. Kovacs to Siberia. He returned in 1953, his health broken.

Mr. Kovacs was named agriculture minister in the short-lived Imre Nagy cabinet during the anti-Russian revolt. Some said he was appointed without his own consent.

Last fall his name appeared on the Communists' single-party election list for Par-liament. Early this year, he issued a state-ment supporting the Communist govern-ment, apparently under pressure from the

#### For Admiral Byrd: A Memorial

EXTENSION OF REMARKS

## HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I am including an excellent editorial which appeared in the Nashville Banner, Nashville, Tenn., on Friday, June 12,

All of us owe the late Rear Admiral Byrd a debt of gratitude for the many accomplishments he made during his period of service for his country. It would be fitting to erect a memorial in the memory of such an illustrious son. The editorial endorsing such a proposal will be of interest to each Member of Congress and it follows:

FOR ADMIRAL BYED: A MEMORIAL

Senator WILLIS ROBERTSON of Virginia has made the appropriate suggestion that a memorial be erected-on Memorial Avenue, in Arlington County—to the late Rear Adm. Richard E. Byrd. And Congress should act swiftly on the authorizing legislation he has introduced.

Admiral Byrd, scientist, intrepid explorer, public servant, belongs in the Hall of Fame public servant, belongs in the Hall of Fame—and unquestionably will be nominated for that when, as the rules prescribe, a quarter century has elapsed after his death.

The memorial proposed would be eminently in order, recognizing the stature and achievement of one who spent his life in

the service of his country.

There would be no public expense involved. for the National Geographical Society, under whose auspices Admiral Byrd did much of his exploration, will pay for the monument. The site would be picked by the Secretary of the Interior, and would be on public land.

He lifted the curtain on the present stage of scientific progress. Truly he linked the poles—the first man ever to fly over both, the North and the South, bringing factual data within the scope of textbooks study, and keeping America in the vanguard of both science and territorial gains in a quarter vital to future need. His work, including five expeditions to the Antarctic, was the forerunner of missions accomplished in the International Geophysical Year. At the time of his death 2 years ago he had been picked to direct the American phase of that designated as "Operation Deepfreeze."

History will record this career of distinguished labor—dedicated to the welfare and security of his country; but public interest of a grateful nation seconds the Robertson proposal. The Byrd Memorial belongs.

Amsterdam, N.Y., Helps Itself in Fighting Unemployment and Attracting New Industry

EXTENSION OF REMARKS

## HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. STRATTON. Mr. Speaker, one of the serious economic problems which has confronted my district has been unemployment. To deal with this problem I have, as Members are aware, introduced several pieces of legislation designed to improve the opportunities of these hardhit communities in helping themselves to get back on their feet economically. I still feel strongly that legislation of this type should be enacted without further delay.

Nevertheless, Mr. Speaker, even the best legislation can not be effective unless the individual communities are also prepared to work to improve their own conditions and unless they have set up appropriate machinery to attract new industry. In this connection, the experience of the city of Amsterdam, N.Y., which is in my congressional district, and which has been particularly hardhit by unemployment, should be of great interest to all of us. Amsterdam has established a remarkable record in helping itself get out of this economic pinch and in bringing in new business. Something of the effect which this program has had in Amsterdam can be gained from an editorial which appeared on

June 22 in the Amsterdam Evening Recorder, and under leave to extend my remarks I include the text of the editorial:

THE DIRECT APPROACH

While in certain circles it might be considered bad manners to blow your own horn, it certainly is one way to make sure others know what type of music you can play.

A good example is the extensive direct mail campaign being carried out by the local chamber of commerce. It has been successful in providing the initial contact for several of Amsterdam's new industries.

The progress made in filling the industrial space left vacant by the departure of Bigelow-Sanford was outlined at a recent meeting of the chamber. Louis Shapel, Grossman representative, stated that close cooperation and coordination of activities were largely responsible for the success already achieved.

Because of these coordinated efforts, 15 new industries are presently located in the former Bigelow-Sanford property. While many of them are not too large, combined they employ 727 people. The average annual total payroll of these workers amounts to well over \$2 million, filling an important ecomplexity.

nomic gap in the community.

Amsterdam has a lot to offer industry. But outsiders have no way of knowing this unless we tell them about it. Because the Amsterdam Chamber of Commerce has gone all out to advertise what we have in the way of industrial inducements, our community is the better for it. We hope the letterwriting campaign will continue to be as successful in the future as it has been in the past.

## Resolutions Adopted by the Pennsylvania Federation of Democratic Women, Inc.

EXTENSION OF REMARKS

OF

## HON. ROBERT N. C. NIX

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 24, 1959

Mr. NIX. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I again have the privilege to include four resolutions adopted by the Pennsylvania Federation of Democratic Women, Inc., at its recent convention in Reading, Pa.:

Whereas we are proud that the Democratic leadership in the U.S. Congress has stepped so vigorously into the vacuum created by the fallure of the President to exert national leadership both in foreign and domestic affairs: and

Whereas we are proud that the Democratic Members in Congress from Pennsylvania have represented our State with so much ability, integrity, and devotion: Now, there-

Resolved, That we, the delegates to the 32d Annual Convention of the Pennsylvania Federation of Democratic Women, meeting in Reading, Pa., this 10th day of June 1959, do hereby commend the Speaker of the House, the Honorable Sam Rayburn, and the majority leader of the Senate, Senator Lyndon B. Johnson, as well as each and every member of the Pennsylvania delegation to Congress, and express our heartfelt appreciation to them for the outstanding work they are doing for our country; and be it further

Resolved. That a copy of this resolution be spread upon the minutes of this meeting and forwarded to Speaker Rayauan, Senator Johnson, and each Democratic Member of Congress from Pennsylvania. Whereas we have repeatedly called upon the Democratic Members of Congress from Pennsylvania to support and advocate the equal rights amendment to the Constitution of the United States and to resist any attempts to weaken or change the amendment as it has been introduced; and

Whereas the amendment is now before Congress again for consideration: Now,

therefore, be it

Resolved, That we, the delegates to the 32d Annual Convention of the Pennsylvania Federation of Democratic Women, meeting in Reading, Pa., this 10th day of June 1959, do hereby call upon the Pennsylvania Members of the Congress of the United States to advocate and support the equal rights amendment without any changes therein; and be it further

Resolved, That a copy of this resolution be spread upon the minutes of this meeting and forwarded to the Members of Congress from Pennsylvania.

Whereas unemployment continues to be an acute problem, particularly in Pennsylvania, where we have the largest number of so-called distressed areas in the country; and

Whereas the Congress of the United States has before it legislation to authorize Federal loans and other alds to industry and local governments in such distressed area: Now, therefore, be it

Resolved. That we, the delegates to the 32d Annual Convention of the Pennsylvania Federation of Democratic Women, meeting in Reading. Pa., this 10th day of June 1959, do hereby call upon the Pennsylvania Members of Congress to advocate and support Federal aid for distressed areas as a means for relieving unemployment therein; and be it further

Resolved, That a copy of this resolution be spread upon the minutes of this meeting and forwarded to the Pennsylvania Members of Congress.

Whereas the increasing number of children entering our public schools has created tremendous problems in providing adequate buildings, teachers, and textbooks; and

Whereas no State in the country, including Pennsylvania, can adequately meet its own demands for educational systems: Now, therefore, be it

Resolved, That we, the delegates to the 32d Annual Convention of the Pennsylvania Federation of Democratic Women, meeting in Reading, Pa., this 10th day of June 1959, do hereby call upon the Pennsylvania Members of Congress to advocate and support Federal aid to education legislation so as to guarantee for each child in America an up-to-date modern educational system; and be it further

Resolved, That a copy of this resolution be spread upon the minutes of this meeting and forwarded to the Pennsylvania Members of Congress.

American Export Lines Cited for Excellence in Maintenance of Sanitation by the U.S. Public Health Service

EXTENSION OF REMARKS

HON. HERBERT ZELENKO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 24, 1959

Mr. ZELENKO. Mr. Speaker, excellence in the maintenance of sanitation is worthy of widespread approval and is particularly noteworthy when it affects

the transportation facilities which are in constant use by the general public. Such a development has recently occurred in the citation by the Surgeon General of the Public Health Service to the American Export Lines, of New York City, for the fourth consecutive year.

The award is based upon the inspection during the last calendar year of each of the 28 vessels operated by the American Export Lines which earned a rating of 95 or better on the official Health Service inspection including no less than 166 separate items of sanitary construction and maintenance. Most significant is the fact that similar citations to American Export Lines were awarded in 1956, 1957, and 1958.

The presentation of the citation was made by Mark D. Hollis, Assistant Surgeon General, to L. S. Andrews, vice president in charge of operations, during ceremonies on one of the company's vessels in Hoboken, N.J. Joseph B. O'Connor, regional director of the Department of Health, Education, and Welfare, gave formal approval to the award.

Mr. Frazer Bailey, one of the best known and mostly highly respected executives of the maritime industry, is managing director of Export.

Included in the fleet of this company are two 1,000-ton passenger carriers, the SS Independence and the SS Constitution.

Ships of American Export Lines call at ports on the U.S. North Atlantic coast, the Mediterranean, Black Sea, Red Sea, north Africa, India, Pakistan, Ceylon, and Burma.

Judge Prescribes Haircuts for Delinquents

EXTENSION OF REMARKS

## HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. BRAY. Mr. Speaker, the relationship of haircuts to juvenile delinquency has perhaps not been adequately explored. Somewhere in the myriad investigations of delinquency and its cause perhaps a relationship of this sort has been noted. At any rate the following editorial from the June 22 issue of the Indianapolis Star points to an new approach for those who believe a return to the razor strop would lessen the delinquency problem:

SHEAR TRUTH

A judge in Pennsylvania says that almost every boy who has come before him in the last year for a serious crime has needed, decent haircut. The judge tells them the first step on the road to reform must be into a barbershop.

This is sound advice, although it may sound superficial. A trim haircut does not make the man. Many famous men, to whom the world owes thanks, wore locks flowing to their shoulders, or wigs, or powdered and beribboned their manes. They were doing what everyone else did.

However, like the lads of today with unshorn hair, they were different from the rest of humanity. They were more learned, wise, braver or had more integrity. What the Judge is telling the boys is: If you are going to be different, be good and different.

#### Military Justice

EXTENSION OF REMARKS

## HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 24, 1959

Mr. SANTANGELO. Mr. Speaker, a great deal of confusion exists in connection with my amendment to bar defense contractors from receiving funds under the defense appropriation bill if defense contractors hire retired military or naval personnel above the rank of colonel who have been connected with the service within the last 5 years.

Several people believe that present law adequately provides against undue influence. Others claim military regulations cover the situation and no legislation is necessary. The fact belie the assertions. It is apparent that while there are statutes seemingly affecting the situation of undue influence on former subordinates and friends by retired officers, the enforcement of the statutes are ineffective and are being used in insignificant areas. Just laws and just regulations apply to the powerful and weak alike. It is no answer to enforce them againsts the lowly and the insignificant while doing nothing with respect to the mighty. I quote the applicable statutes.

Pirst, 10 U.S.C. 6112(b) (1956):

If a retired officer of the Regular Navy or the Regular Marine Corps is engaged for himself or others in selling, or contracting or product of the selling or contracting or war or negotiating to sell, naval supplies or war materials to the Department of the Navy, he is not entitled to any payment from the United States while he is so engaged.

Second, 67 Stat. 437, 5 U.S.C. (Supp. IV) 59c (1953):

No payment shall be made from appropriations in any act to any officer on the re-May, Regular Marine Corps, Regular Air Geodatt Geodetic Survey, and Public Health Service for a period of 2 years after retirement who selling or for others is engaged in the selling of or contracting for the sale of or negotiating for the sale of two any agency of the long the coast of the Department of Defense, the Coast the Department of Defense, the Coast dard, the Coast and Geodetic Survey, and the Public Health Service any supplies or war mat-

The distinction between these two statutes should be carefully noted. The first part of the carefully noted offifirst act applies (a) only to retired officers of the Regular Navy and Regular Marine Corps, (b) as long as they hold their their retired status, (c) who, for themselves or others, sell, contract or negotiate for the sale of naval supplies or war materials to the Navy Department. The second statute applies (a) to retired regular officers of all Armed Forces—and other listed Government departments— (b) only for a period of 2 years after retirement, (c) who, for themselves or other others, sell, contract or negotiate for

the sale of any supplies or war materiels to the specified Government departments-including the Department of Defense. Neither statute applies to reserve officers; and it appears that neither statute applies to retired permanent enlisted personnel, advanced to commissioned rank on the retired list under the provisions of 10 U.S.C. 6151(1956).

Title 18, chapter 15, section 281, provides for a fine of \$10,000 or a prison sentence for whoever being the head of a department, or other officer or employee of the United States or any department or agency thereof, directly or indirectly receives or agrees to receive any compensation for any services rendered or to be rendered by himself or another, in relation to any matter in which the United States is a party or directly or indirectly interested, before any department, agency, court martial, officer, or any civil, military, or naval commission.

The next section of 281 reads as follows:

Retired officers of the Armed Forces of the United States, while not on active duty, shall not by reason of their status as such be subject to the provisions of this section. Nothing herein shall be construed to allow any retired officer to represent any person in the sale of anything to the Government through the department in whose service he holds a retired status.

In the enforcement of the foregoing provisions, there is much to be desired. A recent article by a newspaper man, Jack Steele of the Washington Daily News, demonstrates the inadequacy of present laws and regulations and its ridiculousness in its application. I set forth the article, which is self-explanatory and imposes several questions:

NAVY RETIREE LOST PAY FOR SUPPLYING BEER, BUT 720 OTHERS HOLD JOBS WITH DEFENSE FIRMS

(By Jack Steele)

A retired Navy lieutenant commander recently was forced to forfeit his retirement pay during an 8-month period in which he allegedly sold beer to officers' clubs and ships' stores.

This is the only recent case uncovered by investigators for a House Armed Service Subcommittee in which a retired military officer has been penalized or prosecuted for representing a defense contractor or supplier.

It was cited today by Chairman F. ED WAED HEBERT, Democrat of Louisiana, to il-lustrate the "incongruity" and "fuzziness" of present laws and regulations covering the employment of retired officers by munitions makers.

SEVEN HUNDRED AND TWENTY-ONE IN JOBS

The Defense Department reported last week that 721 high-ranking retired officers hold big-paying jobs with 88 major muni-tions and missile firms—each with defense contracts running into many millions.

None apparently is in danger of losing

his retirement pay, since these retired generals and admirals are not technically engaged in "selling" to the Defense Department.

The low-ranking Navy officer who did lose his retirement pay temporarily was Comdr. Ronald Anthony. He retired July 1, 1957, and soon thereafter took a job with the Hoffman Cigar Co., of Norfolk, Va., which also was a sales agency for Budweiser beer.

Lieutenant Commander Anthony argued that he was engaged in sales promotion and

public relations in pushing the beer to officers' clubs, Navy exchanges and ships' stores in Norfolk. He insisted that he did not actually sell or negotiate sales of the beer.

#### BULING

But the Navy's Judge Advocate General asked the General Accounting Office for a ruling on his case.

Comptroller General Joseph Campbell ruled last January 6 that Lieutenant Com-mander Anthony had to forfeit his Navy retirement pay for about 8 months while he held this beer-selling job.

Mr. Campbell based his ruling primarily on a rider to a 1956 appropriation bill which bars retirement pay for Navy and Marine officers while they are engaged in "selling, or contracting or negotiating to sell, naval supplies or war materials" to the Navy

This law, which has no time limitation, does not apply to Army or Air Force officers.

An earlier (1953) law bars retirement pay for officers of any service if they engage in selling military supplies or war materials within 2 years after their retirement.

#### QUESTION

But the big question these laws pose is: What constitutes selling?

This was conceded yesterday by Navy Secretary William B. Franke in a TV interview with Represenative HEBERT.

Mr. Franke noted that the law covering retired Navy officers is more stringent than that which applied to Army and Air Force

He suggested that all military officers who retire should observe some time lag before they take jobs with defense contractors. But he did not say whether this should apply only to selling jobs.

The HÉBERT subcommittee is expected to open hearings on the problems created by retired officers working for defense contractors in a couple of weeks.

We eagerly await the hearings to be conducted by Representative HÉBERT.

### Establishing Rules of Interpretation for Federal Courts Involving the Doctrine of Federal Preemption

SPEECH

OF

#### HON. HAROLD B. McSWEEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 3) to establish rules of interpretation governing questions of the effect of acts of Congress on State

Mr. McSWEEN. Mr. Chairman, I rise in support of H.R. 3. First, I should like to commend the gentleman from Louisiana [Mr. Willis] author of the majority views found in the report of the Committee on the Judiciary to accompany H.R. 3. These views are written clearly, and they intelligently explain the desirability of having an expression from Congress which would guide the Supreme Court and eliminate the doctrine of preemption in that narrow area of concurrent legislative jurisdiction.

This is the very restricted area in which both the Federal and State governments may constitutionally legislate. Until recently it was the jurisprudence of the Supreme Court that Federal law was supreme if the Federal act expressed the intent of Congress in specific lan-guage to preempt, but that State law would be effective in the absence of this specific preemption.

The Supreme Court has recently applied its doctrine of Federal preemption to invalidate laws of the States where the Federal act did not express a specific intent to completely occupy a field of legislation and where there was no conflict between the Federal and State laws. Or the Supreme Court has inferred a preemptive intent on the part of Congress. H.R. 3 is a simple and concise provision to eliminate this new preemption concept and to restore the concurrent powers of the States.

Much has been said in opposition to this bill about problems which it will cause. The case against H.R. 3 has been exorbitantly overstated. All legislation can be said to raise problems. The pattern of centralization of authority in the Federal Government by Congress has been, regrettably, well developed in re-cent years. Certainly this trend toward centralization should not be developed

beyond Congressional intent.

I urge the passage of this legislation as necessary to restore to the States the authority which the preemption doctrine has recently destroyed.

#### Can Union Power Be Curbed?

EXTENSION OF REMARKS

## HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. HIESTAND. Mr. Speaker, those of us who are trying to pass legislation to protect the public against harmful union practices are under constant attack by union leaders who want no restraint on their vast and arbitrary powers. It is a source of great encouragement therefore that such a leading liberal monthly magazine as the Atlantic Monthly carries in its June issue an article which accurately diagnoses the problem we face. Let me quote the concluding paragraph of this article:

Unions have achieved their present position largely through public indulgence, and if the public becomes less indulgent, union power can be curbed. What is needed is a general awakening to the real nature of the problem. In its fundamentals monopoly power is the same whether used by laborers or by businessmen, and it has the same adverse effect on the rest of society, with an inflationary influence to be added in the case of labor. It has been subjected to reg-ulation in business; how much longer will it go unregulated in the labor area? Will the rest of society continue to accept the prin-ciple that a labor union's freedom in the pursuit of its own self-interest shall be unrestrained?

The author of this study, Prof. Edward H. Chamberlin of Harvard University is an internationally recognized expert on

monopoly and competition who holds an M.A. degree from the University of Michigan. In order to show the wide esteem in which his work is held, I need only to point out that Mr. Walter Reuther, president of the United Auto Workers Union, referred favorably to Professor Chamberlin's work on business monopoly in a statement before the Subcommittee on Antitrust and Monopoly of the Senate Judiciary Committee on January 28, 1958, which was 1 day after Professor Chamberlin's pioneering work on labor monopoly, "The Economic Analysis of Labor Union Power" was published. It is to be hoped that Mr. Reuther and other labor leaders will in time come to view Professor Chamberlin's work on labor monopoly as sympathetically and as favorably as they view his writings on business monopoly.

Mr. Speaker, at this point, under leave granted, I wish to insert Professor Chamberlin's article in the RECORD:

CAN UNION POWER BE CURBED?

(By Edward H. Chamberlin)

Profesisonal economists are ordinarily expected to approach economic problems from a public point of view rather than from that of any particular special interest. Yet it is a fact that in general they have been strongly associated with an attitude critical toward business and have said little in criticism of labor.

To explain this situation one must recall the long tradition of sympathy for the cause of labor dating back to the gloomy days of Ricardo and Malthus in the early 19th century; the weak position of the individual laborer vis-a-vis his employer in those times when unionism was a cause, not a business; the liberal economic tradition with its overwhelming distrust of bigness, of monopolistic forces, and of concentrations of power in any form; and the fact that such concentrations have been prominent for many years in industry but lacking until recently in

We know that much of this explanation is anachronistic today. In particular, there is the striking growth of union power in the last 20 years. Prof. Sumner H. Slichter has dramatized it by pointing out that we live not, as we used to think, in a capitalistic society but in a laboristic one. Certainly most of us have a time lag in our thinking. and the economist's distrust of power has not yet been transferred in any substantial degree to labor. But I do believe that such a transfer is in process. Indeed, the most disturbing thing to my mind is not so much that people are unaware of the significance this growth in labor union power but that so many seem to think that nothing can be done about it. I do not believe that anything in the field of social policy is inevitable, and we ought to stop saying that it is, however great the difficulties to be

The belief that nothing can be done about labor unions is held in large part because of their political power. Now labor, like business or farmers or other interest groups, must in the political field be a formidable mixture of the good and the bad, and I do not attempt to make an evaluation here. I raise the question of political power only because of the defeatist argument that nothing can be done to regulate labor unions. Union leaders have the problem not only of delivering their own vote but of appealing effectively to nonunion labor— still roughly two-thirds of the nonagricultural working force—and to the many di-verse and powerful nonlabor elements in

For example, at a convention of the American Farm Bureau Federation held in Boston last December a stiff labor platform was adopted which called for a continuation of the investigation by the McClellan committee and the enactment of bans on secondary boycotts, blacklisting, recognition picketing, hot cargo practices, the allocation of markets, control of production or prices, col-lection of shakedown fees for unloading trucks, and "make work" and featherbedding practices.

is also encouraging to recall that the Taft-Hartley Act, which set a precedent for subjecting labor unions in some measure to public regulation, was passed in 1947 over the opposition of organized labor (and over a veto by President Truman); that its lending author, Senator Taft, from the highly industrialized State of Ohio, was reelected in 1950 despite the desperate attempt of big labor to unseat him; and that the Taft-Hartley law, after 12 years, is still on the books. It is encouraging, too, that Arizons Senator Goldwarez, the leading exponent in the Senate of curbing union power, was reelected recently in spite of efforts by the UAW in faraway Michigan to defeat him.

The belief that nothing can be done about labor union power reduces to the be-lief that nothing will be done about it. kind of fatalism is particularly evident with respect to the inflationary problem. Creep ing inflation, we are told, is inevitable all we can do is to accept it and learn to

live with it.

Now the doctrine that inflation is in-evitable is very closely linked with a par-ticular kind of inflation, namely the cost-push type. We know a great deal about how to control inflation of the demand-pull variety by well-established monetary and fiscal techniques. No one believes that such infiation is inevitable, though it may approach inevitability in wartime. If the way years are omitted, prices have risen veri little in the United States over the last hundred and fifty years. Years of rising or stable prices, and many of these latter

have been years of prosperity. Inflation of the cost-push variety is held to be inevitable partly because the conventional methods of control are not effective against it. For many reasons, the upward pressure on wages exerted by individual unions is strikingly insensitive to fiscal and credit restraints. credit restraints. And so, when one limits his thinking to fiscal and monetary measures, it is easy to conclude either that nothing can stop the upward cost push or that it can be stopped and that it can be stopped only at an unaccept able social cost of rising unemployment and loss production. By holding demand check, the economy is indeed slackened cost increases are harden to a general cost increases are harden to a general cost increases are harden to a general cost increases. cost increases are harder to pass on. ployer resistance to wage demands is creased, strikes are harder to win, and was so economists like to speculate on how high unemployment must go before it begins act as a brake on wage demands. The great mistake, I think, is in trying to control wage-push inflation by methods which are inappropriate for the lob. demands are correspondingly reduced. inappropriate for the job.

It becomes necessary to go back and as a very simple and fundamental question.

What is the source of the problem? If it is If It is most obvious way to seek a remedy would be to reduce the power, and the to reduce the power, and this is in fact the gist of my proposal. An alternative proposal would be to strength on the proposal to the proposal would be to strengthen management by such devices, for example, as the pooling arrange ment among airlines which has recent received so much publicity. Perhaps all might have some of both. But stranger enough I have found in discussing the matters that many who are horrified at thought of weakening unions have no

lection whatever to strengthening management. ment. They would prefer to equalize power at a higher level, for bigger and better struggles, whereas I should prefer a measure of the struggles. of disarmament.

Inflation is only one aspect of the general Problem. The basis of labor union power is similar to that of any monopoly power—

Control of a market through collective action-but with the superimposition of decisive elements unique to the labor market.

The monopoly problem is simply one of maximum gain, both by the suppression of internal competition and by closing the path of entry to any from outside who would by their participation tend to break down the monopoly. This is precisely the method of monopoly in both the industrial and the labor areas. The striking difference between them is that monopoly in industry has been recognized as a matter of public concern for a long time and has been subjected with at least partial success, to a program of regulation: whereas labor monopoly, hidden by the attractive phrase "collective bar-Saining," has hardly been recognized, let alone brought under control.

The control of monopoly generally involves the application of some standard of fairness, and in industry this standard has usually been found by a reference to competitive markets. Two procedures in applying the competitive criterion have been developed. In the case of public utilities and certain forms of transportation, monopoly permitted and subjected to direct regulation. Here the lack of alternatives open to the consumer is recognized by imposing the obligation of service on the company. Here too, public commissions, subject to court review, regulate rates and earnings in accord principles designed to bring about a rough correspondence between earnings in the regulated and in the competitive sectors of the economy, with allowance for such cial factors as stability of income, risk, and so forth.

For the great bulk of the industrial area which remains, the attempt is made to preserve competition by forbidding agreements in restraint of trade, forbidding mergers under certain conditions, and outlawing certain specific practices which are regarded as detrimental to healthy competition. The expectation seems to be that enough competition can be preserved to give the public at least a reasonable protection against the abuses of concentrated private power and against the consequences of Government regimentation.

The success of these policies may be questioned: I think everyone would agree that there is room for improvement. get perspective on the policy, however, by comparing the prevailing spirit of American industry with that of continental Europe, where cartelization is generally accepted and where since agreements in restraint of trade are not forbidden, all manher of informal and tacit agreements and generally restrictive mentality dominate the picture. I once heard the contrast put in this form: If a European retailer has an item titem on his shelf for some months without its being sold, he is likely to raise the Price because of the cost he has incurred in keep the cost he has a merican in keeping it for that time; the American retailer, on the contrary, will lower the price so as to get rid of it and make room for something else. The notion of not engaging too vigorously in price competition is a universe. universal phenomenon in some degree, but willingness to gain business at a rival's expense United States, and I think the antitrust laws in this country are an important part of the reason why this is so.

Concentration of economic power in the labor field is paradoxically very great, partly because few people are aware of it. It

is hidden because the gains which are made, say in terms of wages or so-called fringe benefits, are made immediately speaking from the employer instead of from the pub-

There is a common belief that higher wages come out of profits; and this is often superficially the case as a short-run proposition. Yet such a belief is in direct conflict with a fundamental longrun principle of economics as hoary and as generally re-spectable as the famous law of supply and demand, namely, the law of cost: that prices tend to conform to cost of production, including a normal allowance for profits. The principle is a rough one, and it ought to be elaborated if space permitted, pecially as to the amount of profit which it includes. But there is no reason to expect wage increases, any more than increases. in the cost of raw materials, to be met out of profits; both are paid in the end by the public in the form of higher prices.

Through the law of costs, the power of labor to raise money wages, and so indirectly to raise prices, is fundamentally no different from the power of business to raise prices directly. Monopoly wages, like monopoly prices, are paid in the end by the public; and it is for this reason that there is exactly as much public interest involved in the regulation of monopoly in the labor field as in

the field of industry.

Now the problem of industrial monopoly power, even at those times in history when it has been of the greatest public concern, has never been associated with inflation. How is it, therefore, that such an association is made in the labor field? There are several reasons for this: The practice of wage settlements over wide areas on a pattern basis, so that one increase means many more; the institution of the annual wage increase, augmented by the growing practice of embody-ing it in long-term contracts; competition among labor leaders to outdo their rivalsand we must include competition from employers in nonunionized areas to do even better, so as to avoid unionization; and finally the fact that wages are more important than profits as an element in prices. The role of union power in cost inflation would seem to indicate that the control of this general inflationary force may be achieved only by putting a damper on thou-sands of individual wage and price increases.

How then to hold them in check? The decisive elements unique to the labor market which are mainly responsible for the fact that labor has too much power are not a part of collective bargaining per 'se. They are accretions of power which have developed partly through specific exemptions by Congress and through court interpretations, partly through a failure to understand the problems, but mostly through an uncritical public indulgence which can only be explained by a confused belief that since the labor cause is good, the more power in the hands of labor the better. As a practical matter, it seems to me that progress could be made in reducing union power by attacking directly those accretions which clearly rest upon privileges and immunities of laborers as compared with other citizens, and which it is therefore reasonable and fair to correct on the simple ground of equal treatment for all.

A recent booklet entitled "The Legal Immunities of Labor Unions," by Dean Emeritus Roscoe Pound of the Harvard University Law School analyzes an impressive list of such immunities. They are treated under the headings of torts (civil wrongs), contracts, restraint of trade, duties of public service, the right to work, racketeering, centralized power, and irresponsibility. Legal immuni-ties are related to economic power, and each such immunity therefore contributes its bit to wage-push inflation. Certainly the appeal of equal treatment for all is a strong one in a democracy. Why should it not apply in this area?

On the more purely economic front, the power accretions are startling. The practice of making a deal with the teamsters to honor a picket line has nothing to do with free speech, as the Supreme Court seems to think it has because it involves picketing, and it has nothing to do with collective bargaining. It is simply a power gadget to deprive an employer not only of the services of his own workers who are on strike but of all other goods and services as well. The old legal principle that a service of such vital public necessity as transportation must not be closed or obstructed clearly corresponds to the economic realities. Yet it has not been adapted to development of recent decades in the transportation field. Most firms in mod-ern times are heavily if not totally dependent for their existence on private trucking. In fact, the teamsters derive most of their power not from the racketeering with which they are ridden but from their control over transportation, including the freedom with which they can choke off this vital service from any specific business enterprise they please.

The threat of potential violence and intimidation through the device of the picket line are powerful factors-so powerful, in fact, that nowadays a firm rarely attempts any operations at all if a strike has been called, although it would be within its legal rights to do so. For all practical purposes the alternative of making a bargain with anyone other than the union has been removed. Even the attempts a few months ago in the bus strike in Massachusetts to run a few buses operated by supervisors for schoolchildren were successfully blocked by masses of pickets surrounding the buses. Boycotts, hot cargo rules, refusals to work with nonunion labor or on materials produced by nonunion labor or by the wrong union are used with impunity to close the channels of trade and commerce. These and other privileges and immunities which tremendously augment union monopoly power are unique to the labor market.

Many of these developments are a logical conclusion of what seems to be the overrid-ing principle that a union's economic power must not be compromised. In the further matter of agreements and alliances, for instance, anything is legal so long as only labor groups are involved. No-there is one qualification of mock seriousnes. A union may restrain trade as much as it pleases and combines with others agains other unions, against nonunion laborers, against some particular employer, or against the general public, provided only-in the quaint language of the Hutcheson decision—it is acting in its own self-interest.

I have seen a statement by an important labor leader before the Joint Economic Committee of Congress to the effect that even to raise the question of whether unions have too much power is to question their very right to exist. This is the union point of view, and it seems to be widespread. Yet what could be more absurd? Has anyone ever held that to reduce and regulate monopoly power in the business area was to question the right of business to exist?

We need only to make the distinction between collective bargaining and the appli-cation of further pressures, to make clear that such pressures may be reduced as the public interest and ordinary fairness require, without imperiling the existence of unions, Should a union be allowed to strangle a business economically by arranging with the teamsters to cut off its transportation? It seems to me we might as well ask if a physically strong customer in a retail shop should be allowed to twist the arm of the shopkeeper in order to drive a better bargain

I suggest as a good general rule that no employer should have brought against him pressures exerted by anyone other than his own employees. To implement such a principle fully may seem too much to hope for, but it should not be overlooked that there is an opening wedge in the outlawing of the secondary boycott by Congress in the Taft-Hartley Act. It remains, after closing some of the loopholes which have developed in this prohibition, to make progress in applying the general principle more widely. There seems every reason to think that the questions of alliances in the labor field, interunion relationships, and the extent of single-union control are as much a matter of public concern and of regulation as are intercorporate relationships and agreements in industry.

A national policy of encouraging collective bargaining, adopted in the middle thirties in the belief that labor's bargaining power was weak and needed to be strengthened, has encouraged not merely collective bargaining but the development of a wide power complex. The careless view that labor must have enough power to win may have been understandable when labor was the underdog. But pilots who can close down airlines in negotiating for top salaries of well over \$20,000 a year are not underdogs. And when a few hundred workers in New York who merely deliver newspapers after they have been produced can deprive 10 million readers of printed news and inflict losses, not only on their employers but on a whole community, estimated at \$50 million, it seems clear that the time has come for a reevaluation of where the power now lies.

As this article is being written, the fastapproaching crisis in the steel industry provides an example on a national scale of where the power lies. However one may judge the demands of the steel workers and wage-price relationships in the industry, the simple fact remains that the Nation will be offered its choice between a long-drawn-out strike which would deal a heavy blow to economic recovery or an inflationary increase in costs. Indeed, it may very well get both.

The increase in wages (or fringe benefits) will be inflationary for two reasons: (1) Whether at once or after an interval, steel prices will be higher, and so will the prices of all things made of steel; (2) less obvious but much more important, an increase in steel wages (already among the highest) must be followed by other wage increases. This is so because of the pattern phenomenon: if steel workers get more, inexorable pressures are created to bring other wages in the whole structure into line. So the wage-price spiral works not only vertically from wages to prices but horizontally from wages to other wages, and especially so when a key industry like steel is involved. With these considerations in mind, the question of whether or not certain steel companies could increase wages without raising their own prices (whatever the answer) recedes into proper perspective.

The choice between a disastrous closing down of the steel industry and another round of inflation is indeed a hard one, and if unions had less power other alternatives with a measure of concern for the public interest might have a hearing.

Unions have achieved their present position largely through public indulgence, and if the public becomes less indulgent, union power can be curbed. What is needed is a general awakening to the real nature of the problem. In its fundamentals monopoly power is the same whether used by laborers or by businessmen, and it has the same adverse effect on the rest of society, with an inflationary influence to be added in the case of labor. It has been subjected to regulation

in business; how much longer will it go un-regulated in the labor area? Will the rest of society continue to accept the principle that a labor union's freedom in the pursuit of its own self-interest shall be unrestrained?

## Jewish War Veterans-M.D.R. District Council Memorial Service, May 31, 1959

EXTENSION OF REMARKS OF

## HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. BURKE of Massachusetts. Mr. Speaker, on Sunday, May 31, 1959, me-morial services were conducted in the name of the Mattapan, Dorchester, Roxbury District Council, Jewish War Vet-erans of the United States. It was my privilege to be the principal speaker at these exercises. To me it was a dual honor because the Honor Veteran of 1959 selected by the district council was Robert A. Carpenter who was killed in action during the battle of Levte. The Carpenter family were my neighbors in the Mattapan section of Boston, Mass. JEWISH WAR VETERANS OF THE U.S.A., M.D.R.

DISTRICT COUNCIL MEMORIAL SERVICE, MAY 31, 1959

Raising of colors: "Star-Spangled Banner." COMMANDER. In the name of the Mattapan, Dorchester Roxbury District Council, Jewish War Veterans of the United States, I summon all comrades within hearing to join in reverent tribute to our departed comrades, whose names remain forever on our rolls. Though their faces have vanished from our midst, they will abide with us through the precious memories we retain. They still guide and direct our actions, through the inspiring examples of patriotism and manly performance of duty, which they have pro-

To our comrades who surrendered their lives on the battlefield, in the hours of our Nation's greatest peril, we pay the highest measure of tribute. We likewise here honor all our comrades who wore the uniform of the United States, who returned to safety to serve their Nation in peace as in war, and were then called to their eternal rest.

One of the chief objects of the Jewish War Veterans of the United States is, "To honor the memories of our heroic dead and shield their graves from neglect."

Comrades, let us pray for the eternal peace of those who have departed. To those who have honored us in life and in death, let us pay a full measure of our And let us here highly reloyal devotion. solve to dedicate our own strength and lives to the ideals of democratic freedom for which they gave their utmost.

CHAPLAIN. Lord, Thou has been our refuge in all generations. Before the mountains were brought forth, before Thou hadst formed the earth and the world, even from everlasting to everlasting, Thou art God.

But man Thou turnest into dust and "Return unto me, all you children of men." Man is like grass which flourisheth and groweth up in the morning, but in the evening is cut down and withereth.

We bring our years to an end as a tale that is told. Teach us to number our days that we may get us a heart of wisdom.

Let Thy work appear unto Thy servants and Thy glory upon their children. And let the grace of the Lord, our God, be upon us.

COMMANDER. We are here to pay tribute to the many heroes of all races, and of all creeds, who in their lifetime rendered patriotic service to our country. Let us bow our heads and let our voices be hushed in memory of every American soldier, sailor and marine who made the supreme sacrification in the defenses of our Nation.

CHAPLAIN. Lord, our God, Thou who art our inspiration in life, Thou who givest comfort and consolation in death, we pray this day that Thou mayest send Thy comforting influence into the homes which are marked by the gold star of bereavement. To the widows and orphans of all who have fallen in defense of our Nation's ideals; to the parents, the brothers and sisters; to all who were deprived of their dear ones, through the devastation of war, grant Thy Divine consolation.

We pray Thee, O our God, that the spirit of patriotism may abide with us strongly peace as in war; that the service rendered America by us, the living sons and daughter of Israel, may be as eloquent and challenging as the sacrifices of our brethren who gave their lives in battle.

Bless America and the world with peace that there may be no further need for the instruments of war. Let all the Nations beat their swords into plowshares and their spears into pruning. Let them learn was no more. Give all mankind such under standing and counsel, that living together in peace and in harmony, they may promote their mutual welfare and perpetuate the ideals of our Nation.

Let us in 1 minute of silence, recall out own precious memories of departed col rades, and each speak in his own heart the prayer that loving memory calls forth.
One minute of silence. And may the

souls rest in peace.

Chairman Albert Schlossberg, Congress man Burke, Cantor Kischel, Commande Cohen, distinguished guests, ladies and gen tlemen, it is indeed a great pleasure for me as chairman of this Memorial Day service to welcome you and extend to you the Mattapan, Dorchester, Roxbury District Council, Jewish War Veterans of the U.S. for your participation in this annual Memorial Day observance. We of the Jewish War Veterans of the U.S.A. deem it a sacred dust to honor the memory and shield from new lect the graves of our heroic comrades. join in honoring the memory of all men women, who died in the service of our be loved country, without regard for their or creed. We welcome, in addition to guests who will address you this morning.
Mr. Melvin R. Lubin, commander of the New England Region No. 1, Jewish War erans of the U.S.A., Messrs. Bernard Julis and Jack Smith, past commanders of the M.D.R. District Council, J.W.V., and Mr. seph Carpenter, brother of the "Honor yet eran" of 1959. eran" of 1959.

principal speaker, a resident of my of hometown, Milton, Mass., and current representing the 12th We are indeed fortunate to have, as representing the 13th Massachusetts District having been elected to the 86th Congress November 1958. Our distinguished gus was registrar of vital statistics for the city i Boston under the late Mayor Maurice in the Tobin. For 10 years our guest served in the Massachusetts Legislature, 4 years of which he served as assistant to the served to the ser he served as assistant majority leader to then speaker of the house, Congression THOMAS P. O'NEILL, JR. He was house charman of the World War II Veterans Problem and Korean Veterans Commission. Duris World War II Congressman Burke was special agent in the military intelligence, at tached to the 77th Infant. tached to the 77th Infantry Division in

South Pacific. Ladies and gentlemen, our distinguished guest, Congressman James A. Burke.

Congressman James A. Burke. Mr. Chairman, members of the Jewish War Veterans of the U.S.A., ladies and gentlemen: Memorial Day, with its sad and sacred memories, has come again. This is a day consecrated to the fighting men of the United States who gave their lives in the honor of our country. Their precious memories are clustered about us for they have not left us—they live as does our country, the leader of the free world against communism.

Almost a century ago when the great Civil War became a part of our history in which thousands of lives were lost to protect our heritage and billions of dollars were spent to preserve the life we know today the United States emerged without dismemberment.

Today the great struggle between slavery and freedom has passed from our national scene and those whose families were broken and separated are now reunited as brothers and fellow citizens of the United States of America.

Thus it is those who sacrificed their lives and died in the struggle of the Civil War and the wars since to protect the honor and heritage of the United States should be remembered on this day.

Yet with all of our sacrifice we today are leaders of the free world in a fight against communism which has the theory to destroy, and batter our great country into submission

We all know this—despite the fact we today are honoring our men and women who sacrificed their lives so that this country might live and be nourished in the lives of free men.

All the pomp and ceremony, the sighs and supplications, the eulogy and tribute of today can weigh naught with voiceless lips and hearts that are long since still.

The import and value of this Memorial Day stand only insofar as we, the men and women upon whose shoulders rest the burden and duties of the present hour, realize and remember the principles for which they have fought, and each for himself resolves that the light shall not be dimmed, that the effort they remember they are the standard or the standa

they put forth shall not have been in vain.

Although this day was originally set aside
in memory of the departed comrades of the
Civil War, it has now so developed itself as
to embrace a nationwide tribute to all those
fought for our country and have now passed
to their reward.

So when the time comes for us to pass on to those who shall succeed us that which they whose memory we honor today fought and conserved for us we can truly say in the words of Kathryn Lee Bates in the mighty lines of "America, the Beautiful"

O beautiful for patriots dream That see beyond the years Thine alabaster cities gleam Undimmed by human tears.

And because it is a holy and wholesome thought to pray for the dead, may it please almighty God that "they rest in peace."

Chairman Schlossers. Officer of the day, You will escort to the memorial, Mr. Joseph Carpenter, brother of our honor veteran, Robert A. Carpenter, for the placement of the memorial wreath:

The Lord is my shepherd; I shall not want. He maketh me to lie down in green pastures; He leadeth me beside the still me in the paths of righteousness for His hame's sake. Yea, though I walk through the valley of the shadow of death, I will and Thy staff, they comfort me. Thou preparest a table before me in the presence of mine enemies; Thou anolntest my head with

oil; my cup runneth over. Surely goodness and mercy shall follow me all the days of my life; and I will dwell in the house of the Lord forever."

Let us all rise for the traditional memorial and Kaddish prayer to be chanted by Cantor Irving Kischel, of Temple Shalom, Milton.

#### EL MOLEY RACHAMIM

"O God, who art full of compassion, who dwellest on high, grant perfect rest beneath the shelter of Thy divine presence, in the exalted places among the holy and pure, who shine as the brightness of the firmament, to all those who have gone to their eternal home, the plety of whose life forms the subject of our meditation today. We beseech thee, Lord of compassion, shelter them evermore under the cover of Thy wings, and let their souls be bound up in the bond of life, and may they repose on their resting places, and let us say, Amen."

OFFICER OF THE DAY. Firing squad, pre-

OFFICER OF THE DAY. Firing squad, prepare to fire three volleys. Comrades, present arms.

Detachment from Headquarters, First Naval District, fires three volleys. Bugler sounds taps.

Order arms.

Closing remarks by Mr. Samuel Cinamon, commander, Department of Massachusetts, Jewish War Veterans of the U.S.A.

### Holt Succeeds Brehm

EXTENSION OF REMARKS

## HON. ROBERT A. EVERETT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 24, 1959

Mr. EVERETT. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the Record, the following editorial from the Commercial Appeal, "Holt Succeeds Brehm." This editorial which follows was written by the Honorable Frank R. Ahlgren, editor of the Commercial Appeal a very outstanding newspaper of the Nation. Mr. Ahlgren is a member of the board of trustees of the University of Tennessee and himself an outstanding leader not only in Memphis but in the Midsouth as well.

Both Dr. Holt and Dr. Brehm have been foremost leaders in Tennessee education as well as throughout the Nation. We feel that we are very fortunate in our great State of Tennessee to have a distinguished, hardworking and capable gentleman such as Dr. Andrew D. Holt to take over the presidency of our uni-

Dr. Holt is a native of Milan, in my congressional district, the son of the late Mr. and Mrs. Andrew David Holt and an alumnus of Milan High School. Dr. Holt, who is 54 years of age, has been an educator all of his adult life. He began his career as a grade school-teacher at the age of 20.

In 1949 he was elected president of the National Education Association, after serving several years as executive secretary of the Tennessee Education Association. He received his bachelor's degree at Emory University in Atlanta and his master's and doctor's degrees at Columbia University. He became an administrative assistant to Dr. Brehm in 1950 and in September 1953 was named vice president of the university.

[From the Commercial Appeal, June 20, 1959] HOLT SUCCEEDS BREHM

Tennesseans in particular and those concerned with the welfare and progress of education in general will welcome the news that Dr. Andrew D. Holt succeeds Dr. C. E. Brehm as president of the University of Tennessee.

Dr. Brehm leaves office because he has reached the compulsory retirement age of 70 after 42 years spent in the intelligent, energetic service of Tennessee. His service of 2 years as acting president of the university and 11 years as president was preceded by distinguished endeavor in the College of Agriculture. The considerable expansion of the university in the number of students—from around 4,000 to more than 16,000—and in the variety of courses offered in greatly expanded physical facilities is the best and most significant testimony to his value to the institution.

Dr. Holt is a native of west Tennessee, Milan to be exact. As he moves up to assume new responsibilities, there is hardly a rung on the educational ladder he has not touched. He even served as athletic coach once upon a time. He taught in high school and was principal of the training school here at Memphis in what was then the West Tennessee State College and is now Memphis State University. He served in numerous other capacities with distinction before he went into the university field.

From 1950 to 1953 Dr. Holt was assistant to the president of the University of Tennessee and has been vice president there since the latter date. He is, in consequence, fully conversant with the university's operations and its needs.

Tennessee teachers will probably recall Dr. Holt best as the man who battled with courage and persistence to obtain better salaries when he was executive secretary of the Tennessee Education Association. It may be noted that Dr. Holt is cognizant of both national and world pictures in education. He was chairman of the White House Conference on Education and a delegate to a world conference on the same theme. He has been president of the National Education Association. The honors and accomplishments named, however, are but a few of the many to his credit.

West Tennesseans, as well as people in other grand divisions of the State and those in too many other States to mention, will recall Dr. Holt as a most personable and agreeable companion and a speaker of charm and ability. He has proved that a man may be friendly and reasonable and at the same time a tenacious fighter for the things in which he believes.

Tennessee is fortunate that a man of Dr. Brehm's ability will be followed by another of similar talents as head of the University of Tennessee.

#### Future of the Dollar

EXTENSION OF REMARKS

## HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 24, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following articles from the June 29, 1959, issue of U.S. News &

World Report which present a thorough analysis of the American dollar and its stability. Since this is indeed a problem that can become major in proportions, I felt these articles should be bought to the attention of all Members of the House for their careful study and consideration:

FUTURE OF THE DOLLAR-WHY GOLD IS BEING LOST AND WHAT IT MEANS

(A tide of dollars from United States has built up the economies of large areas of the Now those areas are competing with United States. That's what lies behind the drain on this country's supply of gold. Does this mean that the once-mighty dollar is in danger? There's no sign of a "run" from the dollar. But experts say United States may have to change its policies to check the outflow.)

The American dollar-once the proud symbol of a solidly solvent United States—today sells at a discount under the currencies of many other nations.

No longer is the dollar the unquestioned leader among currencies.

Instead, questions are being raised in many parts of the world about the dollar's future. There are predictions that the dollar, sooner or later, will have to be "de-

valued"-reduced in value in terms of gold. What has happened? Is the dollar really

in trouble?

To find answers to those questions, the economic unit of U.S. News & World Report has delved deep in to the economic forces now at work. At the same time, leading authorities on money were interviewed in Europe and this country to get further insight into the dollar's future.

The conclusions that emerged are those that follow:

The dollar no longer is the scarce currency it once was. Aid from the United States, spending by Americans abroad, investments abroad by American companies, buying of foreign goods have enabled the outside world to pile up almost \$15 billion in claims on U.S. gold and goods. Those claims are continuing to grow at a high rate.

The outside world has grown strong once again and can compete with the United States on equal or better than equal terms in a growing number of markets. As a result, it is becoming a question whether the United States can continue to give foreign aid and carry the present load of military spending abroad without running into trouble. It may become necessary to call on nations in Western Europe in particular to bear more of the cost of maintaining American military forces abroad.

Loss of gold to date, in itself, is not serious. If the outside world should lose faith in the dollar and try to turn its dollars into gold, the result could force drastic remedies. However, there is no present sign that a "run" from the dollar is even a remote prospect.

The dollar's old position as a currency of impregnable strength could be restored quickly by drastic cuts in foreign aid, or by a reduction in spending abroad by this country's military forces. Military spending ac-counts for about 3.4 billions a year, which just about equals this country's deficit last year in international payments.

#### NOW AND WHAT'S TO COME

The net of all those conclusions is that the facts indicate no present ground for serious worry about the future of the dollar in relation to other currencles.

Why all the stir, then, over what is happening to the dollar?

The answer is found in a number of facts. In 1958 the United States lost \$2.3 billion in gold-a record loss for postwar years that dramatized the situation surrounding the dollar. The Treasury announced on June 19 that the gold supply will drop to a 20-year

low when \$343,750,000 is paid to the monetary

Dollars, once scarce, had become some- PAID OUT BY THE UNITED STATES TO OTHER COUNTRIES thing of a glut on the market.

If trends at work in 1958 were to be shortlived, the resulting problem would not be important. However, in 1959 those same trends have persisted. There is nothing immediately in sight to suggest that they might be checked.

American business, for example, continues to find it difficult to expand its sales abroad. At the same time, with business activity rising, this country has had to buy more raw materials from abroad. People, too, have found foreign-made goods attractively priced and have bought more imported automobiles and other goods.

That isn't all. U.S. companies, attracted by lower wages in other countries and by growing markets in other countries, have continued to increase their investments abroad. Tourists spend more dollars than ever. U.S. gifts of dollars hold high, and American military forces abroad continue to spend at the rate of \$3.4 billion a year.

It not is a question how long all of this can go on without creating a problem of major proportions for the dollar. The appearance of that problem is clearly recognized outside the United States.

#### FINANCING THE COMPETITION

The United States, thus, with unprecedented generosity, has built up the nations of Western Europe and Japan into formida-ble competitors. The United States has helped other nations develop mass-production industries. It has made gifts of capital equipment. Its industries have been generous with advice and training. The result is that today more and more American industries find themselves face to face with competitors they helped to build up.

What the facts disclose is this: Much of the outside world is restored to full economic health. Western Europe, in industrial strength, today rivals the United States. The United States, even so, is continuing to bear the major burden of defending Europe and of defending Japan. It is maintaining military forces overseas at high cost. The United States, as well, is bearing the major share of aid to underdeveloped nations of the world. This, too, is costly in dollars.

The dollar's problem is found to trace directly to those facts.

As a result, this question is beginning to raised abroad even before it is being raised in the United States: Is the time near when Japan and Germany and France and Britain-among others-will have to share more of the burden of defense and of aid to underdeveloped areas of the world?

Interviews with leading monetary thorities in Europe reveal that they think the answer is going to be "Yes." It probably is going to become necessary sometime to sit down and to work out an arrangement that relieves the United States and its dollar of part of the present burden being placed upon

#### EXPORTS VERSUS IMPORTS

A glance at the accompanying tables helps you to understand what is going on.

How other countries are piling up U.S. gold and dollars

PAID OUT BY THE UNITED STATES TO OTHER COUNTRIES

[Millions of dollars]

Excludes military ald.

The United States, you will notice. ceived less income from abroad in 1958 than in 1957. The totals were \$27.7 billion in 1957 and \$23.5 billion in 1958. Most of this drop resulted from sales of less mer chandise to customers in other countries The income from investments abroad and most other earnings have held high. In this year, so far, there is no sign that exports of goods are growing. During the first months of the year, exports were running below the levels of 1958.

On the other hand, look at what the United States is paying out to other coun tries. Buying of goods from abroad dropped moderately in 1958 from 1957, but not nearly as much as sales of U.S. goods to people abroad. This year imports have been rising and the surplus of exports over imports likely to shrink further.

The surplus of exports over import vanishes when other payments are examined This country last year spent nearly \$3.4 billion to maintain military forces abroad. made grants of \$1.6 billion for economic ald and nearly \$1 billion in Government loans Then private investors placed \$2.9 billion in plants and other facilities abroad. Alto gether, this country's payments to other nations in 1958 amounted to \$26.9 billion-

#### A RUN ON U.S. GOLD?

This left the country with a net deficit in world transactions of \$3.4 billion. And the signs point the the signs point to another large deficit in the current year. Total dollar claims neid outside the country amount to \$14.9 billion. This may reach more than \$19 billion before the end of the current year. The gold supply of the country is \$20.5 billion.

Does this mean that the United States could lose all of its gold? The answer to that question, briefly, is "no."

To the \$14.9 billion in dollar claims, ternational institutions, such as the International Management national Monetary Fund, add \$1.7 billion but this is not a claim on gold. Some \$2.7 billion is held by private business firms and individuals, who cannot get gold directly. A total of \$12.4 billion is held by private banks abroad, central banks, and foreign governments. Of this sum, central banks, and and governments hold \$8.6 billion, which the total most likely to be converted into gold if the dollar should run into danger.

#### BOLSTERING THE DOLLAR

It is against this background that moves now are being made to firm up faith in the dollar. The Federal Reserve Board is committed to a policy of preventing infiation through excess expansion of credit. The Pederal Government is moving toward a balanced budget. These steps are giving rise to a situation that indirectly supports the

Rising interest rates, for example, are likely to persuade foreign holders of dollars to invest their money in this country rather than take gold. The outflow of gold, in fact, is considerably smaller this year than last and so far has gone principally to the Netherland. lands and Japan.

Competition from industries abroad is forcing American companies to pay closer attention to costs. Industries now are less willing to grant wage increases that force up costs and prices. Price rises are leading to loss of markets abroad. They also are opening American markets more widely to foreign goods. The U.S. share of world trade in manufactured goods dropped in 1958 to the lowest level in 8 years, while the share of Germany and Japan jumped substantially during this period.

Inflation control in the United States thus is becoming more than an academic argument. Maintaining the value of the dollar now is being viewed widely as necessary both to protect the country's gold supply and to keep and hold markets in the United States and abroad.

This remedy may help to correct the present U.S. deficit in world accounts in years

ahead. The fact remains, however, that the United States has been running a deficit ever since 1950. This persistent outflow of dollars is leading many analysts to believe that the time is fast approaching when U.S. Policies will have to be changed.

#### A CURRENT SURPLUS

Actually, on current transactions, the United States runs a surplus. The country consistently has an export balance in merchandise trade, although the balance has been reduced recently. Private investors also receive nearly \$2.9 billion a year from investments in other countriesis likely to increase in years ahead. a figure that

Altogether, on such accounts, the United States last year had a surplus of \$5.2 billion. The deficit in balance of payments resulted from such things as foreign aid, military spending outside of this country, and the dollars invested abroad by American business a

Outflow of payments by the U.S. Government amounted to about \$6 billion in 1958. Of this total, about \$3.7 billion went to countries in Western Europe in the form of billion. military spending, military supplies and services and economic assistance.

## LESS AID FOR EUROPE

Now it is being suggested that Western Europe could forgo aid and help the United States to reduce its deficit in dealing with other countries of the world.

The industrial countries of Europe have staged a strong recovery in productive capacity and in output. Much of this resulted pacity and in output. Much of this results of the many years of U.S. aid. These countries can compete with the United States in world markets and even in the U.S. many world markets and even in the U.S. man U.S. market. They also are able to support a rising standard of living in their own countries. In addition, European businessmen are making investments in other areas, such as Africa and Latin America. And the countries of Europe and able to accumulate reserves of gold and dollars.

This development indicates that Britain Ahls development indicates that broadened Western Europe now are able to take over the costs of their own defense and to dispense with grants of aid. If all such U.S. payments to Europe were ended, the deficit payments to Europe were ended, the deficit

that this country now runs in world accounts could be partly eliminated.

It also has been suggested that Europe is in a position to take on a greater share of the cost of developing the undeveloped areas of the world. This again would help the United States to end its deficit and strengthen the dollar as a world currency.

These changes in policy can be made only through new arrangements between governments. However, European experts in monetary affairs have lately been saying that perhaps the time is near for talks on the problem.

#### WHAT'S REALLY CAUSING THE WORRY ABOUT GOLD

Since 1950 the U.S. gold reserve has shrunk by \$2.3 billion.

Possible claims from abroad against U.S. gold have increased 8 billion.

As a result United States now holds only 20.5 billion in gold, smallest reserve in 13

Foreigners—including governments, banks, private citizens—hold 14.9 billion in U.S. dollars. These dollar holdings, potentially, could become claims against the gold remaining in the U.S. stockpile.

In a real emergency, therefore, the United States could lose so much gold that enough would not be left for the reserve against currency and bank deposits required by law.

Actually, such an emergency is unlikely. The United States, if necessary, could stop selling gold. Also, U.S. gold is sold only to foreign governments or central banks, and these hold only 8.6 billion in U.S. dollars. The dollars held by private banks and citizens in foreign countries could not be turned in for U.S. gold unless these holdings were first transferred to official agencies abroad.

#### FUTURE OF THE DOLLAR AS FOREIGN EXPERTS SEE IT

(This gives you a detached viewpoint on the U.S. dollar and its problems. Is the dollar really in trouble? The European bankers and financial authorities quoted here speak from long experience in dealing with troubled currencies.)

What follows is an authoritative summing up of the British Treasury's view of what is happening to the dollar:

Question. "In view of the continuing loss of gold from the United States, do you believe that the dollar is overworked or wob-bly?"

Answer. "I do not think the dollar is at all a weak currency. America has enormous gold reserves and, although she has got an adverse balance of payments at the moment, it is because of the large foreign aid. She hasn't got an adverse balance in the ordinary sense of living beyond her income."

Question. "How long can the United States tolerate this adverse balance and the loss of gold?"

Answer. "It's desirable that there should be some redistribution of the gold reserves, but obviously it couldn't go on forever at the present rate because the reserves would run out eventually."

Question. "How should the United States cope with the problem? Should it curtail foreign aid to check the loss of gold?"

Answer. "I don't think there is any urgent need to reconsider the American foreign-aid program. I think you will have to be think-ing about what the real problem is—that is, whether your exports recover.

"You see, world trade is recovering now. It seems to me extremely likely that American exports will also rise as expansion is going on all over the place. But, clearly, if this went on and your exports didn't recover at all, then I think you would have to get other countries to carry some of the burden of foreign aid that you're carrying yourself

Question. "Do you think, then, that there is a good chance this problem of the loss of gold will solve itself through an expansion of American exports?"

Answer. "Well, I think that is the first thing to look at. Yes, I think there is a reasonable chance of that. It seems to me quite likely that your costs are falling, now that production is rising. Labor productiv-ity in America is rising quite fast at the moment."

Question. "So you think American export prices are becoming more competitive?"

Answer. "I should have thought that would be the position. You see, with a bigger volume of output to spread the overhead. your costs must be improving. And, of course, if your customers are richer they will buy more."

Question. "Is it correct to say that you do not see the United States heading into an early crisis because of the outflow of gold?"

Answer. "The United States is in a very strong position at present. All this loose talk going on about a gold crisis is absolutely silly. Foreign aid is so important in the general political situation it would be a mistake to do anything rashly or in a hurrythough I think that, if your exports didn't recover and you went on losing gold at this rate, you would have to sit down with other countries to talk about the problem of foreign aid.

'I think it should be solved cooperatively."

#### A SWISS SIZE-UP: RESULT COULD BE DEVALUATION OF DOLLAR

The consensus among bankers in Switzerland can be outlined in the following way: The American dollar has been relatively weak in the Swiss market for foreign currencies. This weakness is due to an abundance of dollars not offset by an expansion in the demand for dollars.

Swiss experts recall the experience of this country in 1936. Switzerland at that time had the highest prices in Europe and found that it was difficult to sell goods abroad. Instead of reducing wages and prices to regain its competitive position, this country took the "easy" way out and devalued its currency.
The feeling here is that the United States

may face somewhat the same problem in the not-distant future. American prices often are high compared with prices that can be offered by competitors abroad. It seems impossible politically to reduce wages in the United States to correct this situation. In the end, the result could be devaluation.

If the dollar should be devalued in the future, the question among experts here is whether the new price of gold would be \$50 an ounce compared with the present \$35, or whether the increase should be to \$70 double the present price.

#### A BANKER SAYS: "WHAT HAS HAPPENED SO FAR IS HEALTHY"

Another view of the gold and dollar problem is presented in this London interview with the chairman of one of Britain's biggest and most important banking establishments with a worldwide organization:

Question. "Do you consider the loss of gold that's been going on for some 15 months a serious problem for the United States?'

Answer. "Well, part of the trouble in analyzing this is that people are mulling together two quite different problems—the gold loss and the trouble the U.S. Government is having with its bond-financing policy. Now, I have no doubt that the bond business is a practical problem that will be solved.

"Now look at the gold problem separately from that of the problem of debt manage ment. One thing you find here in Britain is that most of the comment is an echo of the animated discussion in the United States of this problem. After all, when a high American official says this is a matter of concern, then we in Britain must take it seriously. But, in fact, as we see it, what has happened so far is healthy and to the credit of the United States."

Question. "Do you think American gold re-

serves are in danger?"

Answer. "If you measure reserves against quick liabilities, Britain has been living with a ratio the wrong way by 4 to 1 for a long time. To have a ratio the right way of 2 to 1 is beyond the dreams of bliss. One reason for American anxiety about the recent adverse balance of payments is the fact that it is a novelty for you in America."

Question. "What do you consider the

cause of this unprecedented adverse balance

of payments?"

Answer. "There's wide appreciation here in Britain of the two principal reasons for the loss of gold in the United States. First, the free world, and Europe in particular, has recovered, and trading up and down the world is on more or less equal terms. Second, the United States has continued deliberately to pursue very enlightened economic policies as a creditor nation accepting the responsibilities of world leadership. You have continued to send dollars abroad through aid and investment even during the period of re-

Question. "When does the fall in gold re-

serves reach the danger point?"

Answer. "Nobody knows what the danger point in reserves is. In our own experience, people have warned that, if gold and dollar reserves fell below a certain level, we would have a disastrous crisis. Yet the reserves frequently have fallen below that so-called danger point and there has been no crisis. What matters is not any figure but what is in men's minds-that is, what men around the world think of the future outlook in your country."

Question. "Do you expect the problem to

Answer. "Well, if you talked to bankers on the Continent-particularly Swiss bankersyou would be told that the United States is heading into a serious crisis as a result of the loss of gold and the fall in the reserves. I

just don't follow that.

"I have lived in America and I think I know American ways. The United States has a record of taking action to deal with problems such as this-maybe a little late and maybe after a lot of talk and confusionbut you have a record of coping with these problems. But I don't think that the existing facts warrant drawing a graph showing a loss of gold in the months ahead along the same lines as has occurred in the past 15 months or so. Frankly, I don't know whether, even if the United States does nothing, the loss of gold will continue."

A FINANCIAL EXPERT: "REVALUING GOLD WOULD NOT HELP AT ALL"

This exclusive interview, held in London, is with Maxwell Stamp, a director of Philip Hill, Higginson & Co., Ltd., one of Britain's principal merchant-banking firms. Mr. Stamp is a leading British authority on international finance.

Question. "In your opinion, Mr. Stamp, does the loss of gold constitute a real threat to America?"

Answer. "The answer is: If it goes on for several years, something will have to be done about it. But, in the meantime, it's a healthy thing. I would expect that there is a very good chance that natural forces will bring about a correction in due course."

Question, "Would an increase in the gold

price help solve things?"

Answer. "I don't think that is appropriate at all. Revaluing gold would not help at all in the circumstances. Nor do I think there is any call whatsoever for devaluation of the

"I'm not one who thinks that America is pricing itself out of the market. I think that we tend to be very unduly impressed by the

fact that, in certain particular lines in which one would expect it, America is relatively uncompetitive. I'm thinking, for instance, of heavy electrical machinery, where you have a large amount of rather highly skilled labor involved, and, therefore, expensive labor."

"I would expect that, as the enormous amount of money that America is spending on research comes into play, there will be a continual flow of new products from America. These will be unobtainable elsewhere-at any rate, while they are new. This will boost American exports pretty well.

"We've also go to see what effect the opening up of the British market fully to American imports is going to be. If you take things like costume jewelry, for instance, that seems to me to be a thing into which the Americans are very good and very competitive. There are all sorts of things in which they are extremely competitive.

"One has got to remember, too, that large numbers of countries all around the world outside the United States have been adopting restrictive monetary policies to get their own balance of payments straight. No one wants to keep restrictive monetary policies on a moment longer than is necessary. As and when the balance-of-payments problems get solved outside the United States, and reserves grow because of the loss of gold from the United States-one would expect that relatively easier policies will be adopted that will have a natural corrective action on the outflow of gold from the United States."

Question. "Are you advocating a walt-and-see policy for the United States for the

time being?"

Answer. "That would be very, very strongly my opinion. After all, America still has a very, very large amount of gold. There is another factor which one has to remember. That is this: One of the reasons for the loss of gold has been the very heavy amount of investment abroad by Americans and the American Government. This has to be serviced. After all, if you put up a new plant abroad it takes time before the profits are repatriated to the United States. But these are an asset of the United States outside the United States.

"This is not the sort of situation in which the loss of gold, which is being used to make these investments abroad, ought to cause you any trouble. After all, these assets abroad are there—they're earning, they're profitable and, ultimately, the profits will be repatriated back to the parent companies. I would expect that this, too, would have a very powerful corrective influence.

Question. "If the loss of gold continues over the next year or so are there corrective measures that would be practical for the United States to use?"

Answer. "One of the things is the relative rates of interest. As long as foreigners are content to leave dollars in the form of dollars in the United States rather than take them out in the form of gold, the gold losses will be moderated. You can make it worthwhile for people to bring back gold to the United States by offering a sufficiently attractive rate of interest. The higher the short-term rates are relative other people's short-term rates-and longterm rates, too, if it comes to that—the less the tendency there will be for gold to flow

Question. "So you see no immediate threat to American gold reserves?"

Answer. "If you look at the gold stock, which is still \$20 billion-that still is a lot The fact that something like 13 billion is earmarked against currency is a pure luxury in this day and age. a level that can be reduced or eliminated altogether. There are very few countries that still have a gold backing for their currency. All you need gold for is to redeem your currency if foreigners want to change I'd have it into gold or other currencies. thought that this is a case in which you can sit back and watch how things develop."

Statement of Judge Henry Ellenboges of the U.S. Delegation to the 14th Ser sion of the Commission on Narcotic Drugs, April 29, 1959, at Geneva-Switzerland

EXTENSION OF REMARKS

## HON. THOMAS E. MORGAN

OF FENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. MORGAN. Mr. Speaker, under

leave to extend my remarks in the AP

pendix of the RECORD, I wish to include copy of the statement made by Judge Henry Ellenbogen, an advisor to the U.S. delegation to the 14th session of the Commission on Narcotic Drugs, recently held at Geneva, Switzerland, Judge Ellenbogen was a Member of Congress from 1933 to 1938 when he resigned to run for judge of the Common Pleas Court of Allegheny County. He still holds that position. He has long been in terested in the problem of narcotics and

has had an opportunity to study the matter both as a legislator and a judge In the later capacity he made a thorough study of narcotics and habit-forming drugs. Pursuant to the study, he ad dressed the 10th Judicial Conference of the Commonwealth of Pennsylvania

which was held on January 28, 1958, at the Dauphin County Courthouse, Har risburg. He has a fine background of knowledge on narcotics and is well

qualified to speak on the subject. statement before the Commission at Geneva is very comprehensive, and since the topic is one of timely interest to each one of us, I refer it for your attention

The statement follows:

STATEMENT OF JUDGE HENRY ELLENBOGEN OF THE U.S. DELEGATION TO THE 14TH SESSION OF THE COMMISSION ON NARCOTIC DRUGS APRIL 29, 1959, AT GENEVA, SWITZERLAND

Mr. Chairman, I deem it an honor and privilege to address the distinguished Chair man and the eminent members of this Commission.

I have had the opportunity to learn of the problems created by the illicit traffic in nar cotic drugs both as a legislator and as indeed

As a Member of the Congress of the United States, it was my duty to consider the nature substance, and form of the laws that were necessary to combat and root out the brought about by the illicit traffic in. use of narcotic drugs. As a judge for more than two decades I have seen personally poisonous and the destructive effects of national cotic drugs on the human body and the great and permanent danger to society.

I hope you will permit me this personal reference. I have had in my court all man ner and kind of crimes and criminals. have found the sale of and the traffic in that cotic drugs one of the foulest of all crimes The illegal sale of narcotic drugs is a crime against the individual to whom they are sold and a crime against the body of the society.

NARCOTIC DRUG ADDICTION THREATENS OUR

#### YOUTH

Narcotic drug addition is finding many of its victims among the young people of all nations. For instance, in the United States of America about 13 percent of all known addicts are under 21 years of age. In the larger cities the percentage of juvenile addicts is far greater. For instance, a survey conducted in Chicago in 1952 revealed 5,000 known addicts of which one-third or more were under the age of 21 years. As is the case with adults, 90 to 93 percent of the Juvenile addicts are addicted to heroin.

The spread of narcotic drug addition among our youth has been considered such danger that the Congress of the United States in the Narcotics Control Act of 1956. signed by President Eisenhower on July 18, 1956, provided that sellers of narcotics to persons under 18 years of age shall be punished by death in the discretion of the jury. The State of Texas passed a statute effective April 24, 1957, which provided, for a second offense of illegal sale of narcotics to persons under 19 years of age, a mandatory sentence of 10 years to life or even death. The State of Missouri by a recent statute adopted Au-Sust 29, 1957, provided for selling, giving, or delivering any narcotic drug to a person under 21 years of age a mandatory sentence of imprisonment of 10 years to life and a fine of \$10,000, or death, at the discretion of the jury hearing the case. In my own State of Pennsylvania the legislature passed house bill 56 which provided for the death penalty for sellers of heroin to persons under 18 years of age at the discretion of the jury hearing the case. However, the bill was vetoed by the Governor. Th State of Minnesota by a statute effective April 2, 1957, provided for imprisonment of 10 to 40 years and a fine of \$20,000 for furnishing narcotic drugs to persons under 18 years of age.

Vast narcotic drug addiction poses a dire and appalling threat to the future of all nations. If left uncontrolled, it can enguif a nation in ruinous destruction, perhaps as devastating as an atomic explosion.

I submit that the work of this Commission is as important as any of the other permanent commissions of the United Nations. Narcotic drug addiction is comparable to a contagious disease. Every drug addict eventually infects others, usually among his friends and associates. Every one of the new addicts will again infect others, and so the vicious circle continues. Once addicted, permanent cures are difficult and infrequent.

MOST DRUG ADDICTS BECOME CRIMINALS AND ARE RESPONSIBLE FOR MUCH CRIME

The cost of drug addiction is fantastically high. In the United States the average drug addict must spend from \$50 to \$100 per week to obtain the drugs to satisfy his craving. Since few persons can afford such sums of money, most drug addicts eventually resort to crime to obtain the necessary funds. There is general agreement between law enforcement agencies concerned with narcotics and medical authorities that in order to obtain the funds which they need to buy narcotic drugs, mostly heroin, male drug addicts commit burglaries, robberies, holdups, lar-cenies, and many other crimes including occasionally, though not typically, crimes of violence. violence such as assault and even murder; the female dope addict usually becomes a shoplifter and a prostitute.

The carefully considered respect of the Council on Mental Health on Narcotic Addiction of the American Medical Association adopted by the American Medical Association in June 1957, states that there is general and the state of addicts eral agreement that "the majority of addicts do engage in crime (other than violations of the narcotic laws) after they become addicted in order to support their habits." It is startling to read the reports of the experts on the number of crimes caused by drug addicts. Some authorities estimate that in the large metropolitan areas as much as 50 percent, and in the country as a whole about 25 percent of all crimes are attributable to illegal traffic in narcotic and habit-forming

Whatever the precise percentage may be, there can be no doubt whatsoever that any substantial reduction in the illegal traffic in narcotic drugs and in the number of drug addicts would bring about a substantial reduction in crime.

NATURE AND CHARACTER OF DRUG ADDICTION

Drug addiction has been defined by the Interdepartmental Committee on Narcotics in its report to President Eisenhower of Pebruary 1, 1956, as "a state of periodic or chronic intoxication, detrimental to the individual and to society, produced by the re-peated consumption of a drug (natural or synthetic)" U.S. Senate report of the Committee on the Judiciary, Apr. 25, 1956, No.

Dr. David W. Maurer (lecturer on narcotic addiction), and Dr. Victor H. Vogel (medical officer in charge of European activities U.S. Public Health Service), in their book, "Narcotics and Narcotic Addiction" (1954), adopt the definition of Vogel, Isbell, and Chapman, as follows: "Drug addiction may be defined as a state in which a person has lost the power of self-control with reference to a drug, and abuses the drug to such an extent that the person or society is harmed. It should be noted that addiction implies a compulsive and repetitious use of the drug, and that the harm done the user varies with the degree of personality disorder which characteristizes the addict. \* \* \*"

#### TOLERANCE AND DEPENDENCE

The American Medical Association report, referred to above, has this to say about tolerance and dependence:

"Tolerance is defined as a diminishing effect on the repetition of the same dose of the drug or, conversely, as a need to increase the dose in order to obtain the original degree of effect. Despite intensive research, the mechanism of tolerance is still unknown. The degree of tolerance which can be developed to the opiate drug seems almost boundless. Authentic cases have been recorded in which adicts took as much as 5 grams (78 grains) of morphine intravenously in less than 24 hours. \* \* \* Tolerance inevitably follows repeated administration of the opiates. \* \* \* Tolerance is manifested both by decrease in the intensity of the effect induced by a given dose of the drug and by decrease in the duration of observable action of the drug. If the dose of morphine the addict is taking is held constant for a period of weeks or months and the drugs are given at intervals of 6 hours, signs of mild abstinence ultimately appear or 5 hours after each injection. means that most patients receiving drugs in clinics would periodically wish to have their doses adjusted upward. What the final upper limit would be is unknown as are the physical effects of long-continued taking of large amounts of opiates."

I want to emphasize that addiction is not nullified by tolerance. The addict does not lose his craving for the drug. Rather his need for it increases, and the quantity needed to produce the desired effect must be

Continuing with the American Medical Association report, "Emotional dependence refers to the psychological meanings of the use of drugs and the effects of drugs. Psychological dependence is, of course, related to the effects opiates create within the central nervous system. These drugs have the peculiar property of depressing primary drives. They diminish hunger, thirst, fear of pain, and sexual urges. They allay anxiety, create a sense of pleasant relaxation, freedom from worry, and enable the user to engage in fantasy.

"The development of physical dependence creates a new biological need, the satisfac-tion of which is directly pleasurable just as is the satisfaction of hunger or thirst. addict tends to discard the usual methods of adaptation to life situations. Taking the drug often becomes the answer for all of life's problems. This creates a tendency to an indolent parasitic existence in many

"Physical dependence is defined as the development of an altered physiological state which is brought about by the repeated administration of the drug and which necessitates continued administration of the drug to prevent the appearance of the characteristic illness which is termed an abstinence syndrome. When an addict says that he has habit, he means that he is physically dependent on a drug. When he says that one drug is habit-forming and another is not, he means that the first drug is one on which physical dependence can be developed and that the second is a drug on which physical dependence cannot be developed. Physical dependence is a real physiological disturb-

"Physical dependence is important in that it tends to make chronic opiate intoxication continuous rather than intermittent. forces the addict to seek his drugs by any and all means. The first concern of many addicts becomes obtaining and maintaining an adequate supply of drugs."

#### DRUG ADDICTION IS A COMPLEX PROBLEM

Drug addiction is a complex social, economic, medical, psychiatric and legal prob-lem. It is a local, state, national and international problem.

Without overlooking the various aspects of this difficult problem, the experience in the United States proves that severe penalties strictly enforced, are an effective weapon in

reducing drug addiction.

This is the viewpoint of the Government of the United States, that is, the Federal Government, and of the governments of the

individual States.

In keeping with this belief and on the basis of actual experience, the penalties for the violation of our narcotic drug laws have been steadily increased and what is equally important, these penalties in most instances have been made mandatory.

#### PENALTIES

On July 18, 1956, the Congress of the United States passed and the President signed, the Narcotics Control Act of 1956. It provides a sentence of not less than 5 or more than 20 years for a first offense for illegal sale of narcotics, and for a second or subsequent conviction, a sentence of 10 to 40 years. These sentences are mandatory. The act prohibits a suspension of sentence and the granting of probation or parole. The Federal Narcotics Control Act of 1956 was influential in causing the imposition of increased penalties for the violation of narcotic drug laws by many of the States. Some of the recent State legislation is as follows:

In the State of Alabama an amendment to the State narcotic drug law adopted Septembber 4, 1957, provided the following mandatory penalties:

For unlawful possession of narcotics: 2 to 10 years in prison for a first offense; to 20 years for a second offense; 10 to 40 years for a third offense.

For unlawful sale of narcotics: 5 to 20 years for a first offense, and a possible fine

of \$20,000; 10 to 40 years for subsequent offenses.

No probation or suspension of sentence may be granted for any narcotic offense ex-cept for a first offense of unlawful possession of narcotic drugs.

In the State of Colorado an amendment of the statute adopted March 26, 1957 imposed the following mandatory penalties for the violation of the narcotic drug laws:

For unlawful sale of narcotics: 5 to 15 years in prison, with no probation or parole until the minimum sentence has been served.

For the unlawful possession of narcotic drugs and other narcotic offenses: 2 to 10 years for a first offense; 5 to 15 years for a second offense. No probation is granted for a second offense

In the State of Illinois an amendment to the State narcotics law, effective January 1, 1958, made the unlawful possession of narcotic drugs a felony punishable as follows: 2 to 10 years in prison for a first offense; 5 years to life imprisonment for a second or subsequent offense; no probation or suspension of sentence is possible upon con-

viction of a second or subsequent offense.

For unlawful sale of narcotics: 10 years to life imprisonment for a first offense; life imprisonment for a second offense; no probation or suspension of sentence is granted for any offense or unlawful sale of narcotics.

In the State of Minnesota House File 318, effective April 2, 1957, provided the following penalties for narcotic law violations: 5 to 20 years in prison and a fine of \$10,000 for a first narcotic offense of any type; 10 to 40 years and a fine of \$20,000 for furnishing narcotic drugs to persons under 18 years of age, or for a second subsequent conviction of any narcotic violation.

In the State of Missourl an amendment to the State narcotic drug control law, adopted August 29, 1957, imposed the following mandatory penalties:

For a first offense: 2 to 20 years in prison; for a first offense of being a drug addict, the court may suspend execution of sentence and place the offender on probation on condition that he enter a U.S. Public Health Service hospital within 30 days after conviction and remain until discharged by the medical officer in charge. No parole, probation, suspen-sion of sentence, or other form of judicial leniency may be granted for any narcotic violation except for medical treatment of addicts.

Five to 30 years in prison for a second offense, or a first narcotic conviction by a person previously convicted of any felony relating to narcotic drugs; 10 to 50 years for a third offense, if previously twice convicted of any narcotic law violation; 25 years to life imprisonment for a fourth or subsequent

Ten years to life imprisonment, a fine of \$10,000, or death, at the discretion of the jury, for selling, giving, or delivering any nar-

cotic drug to a person under 21 years of age.
In my own State of Pennsylvania, the recent law of July 19, 1957, provided the following increased mandatory penalties: For unlawful possession of narcotic drugs:

2 to 5 years in prison for a first offense; 5 to 10 years for a second offense; 10 to 30 years a third offense.

For unlawful sale of narcotic drugs: 5 to 10 years in prison for a first offense; 10 to 20 years for a second offense; life imprisonment for a third offense.

Except for a first offense of unlawful possession of narcotics, no probation, parole, or suspension of sentence may be granted, and the minimum sentence is mandatory.

The State of Ohio has had a minimum penalty of 20 years since 1955 which has almost completely driven out illegal traffic These are a few representative examples of recent Federal and State legislation imposing severe penalties for the violation of narcotic drug laws.

The increased penalties have had a most salutary effect in reducing narcotic drug addiction. The U.S. Bureau of Narcotics under the able leadership of Dr. H. J. Anslinger prepared a number of graphs which show the very substantial reduction in narcotic drug addiction which followed the imposition of severe penalties. In the District of Columbia there were only 60 addicts for the first 11 months of 1958 as compared with 200 addicts for all of 1956. In the State of Ohio there were 37 addicts for the first 11 months of 1958 as compared with 92 addicts for all of 1956. In the State of Texas there were 175 addicts for the first 11 months of 1958 as compared with 523 addicts for 1956. In the State of Louisiana there were 50 addicts for the first 11 months of 1958 as compared with 142 addicts for 1956. And in the State of Illinois there were 631 addicts for the first 11 months of 1958 as compared with 908 addicts for 1956.

The strictest laws are of little use unless there is an adequate and well-trained staff to discover and arrest law violators.

In that connection the U.S. Bureau of Narcotics, Department of the Treasury, under Dr. Anslinger established in 1956 a school of training course for State and local law enforcement officers. In the first 2 years of its operation that school trained 376 law enforcement officers, including 26 from foreign countries. Through this school the U.S. Bureau of Narcotics is rendering effective assistance to the several States and to the local governments in their efforts to suppress the abuse of, and illegal traffic in narcotic drugs in their respective areas by training enforcement staffs and increasing their effectiveness.

We have not overlooked the treatment of drug addicts in the United States. The Federal Government has two splendid hospitals which are especially devoted to the treatment of drug addicts. They are located in Lexing-ton, Ky., and in Fort Worth, Tex. Several of the States have established splendid hospitals for that purpose. An important step in eliminating drug addiction is the passage of statutes which permit the compulsory commitment of drug addicts by the courts. Many of our States have enacted laws for the compulsory commitment of drug addicts. These States are Alabama, Arizona, California, Colorado, Connecticut, Delaware, Flor-ida, Georgia, Idaho, Illinois, Iowa, Louisiana, Maryland, Massachusetts, Michigan, Minne-sota, Mississippi, Missouri, Montana, Nebrassota, Mississippi, Missouri, Montana, Nebras-ka, Nevada, New Mexico, New York, North Carolina, Oregon, Rhode Island, Pennsylva-nia, Tennessee, Texas, Vermont, Virginia, Washington, and Wisconsin.

Such laws for the compulsory commitment of narcotic drug addicts are in pari materia with laws for the commitment of the insane; they are valid under the police power or the State.

Thank you, Mr. Chairman, for permitting me to speak.

Poison in Your Water-No. 132

EXTENSION OF REMARKS

## HON, JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the ConGRESSIONAL RECORD an article appearing in the Denver (Colo.) Rocky Mountain News of August 20, 1958, entitled "City Needs Money To Obey Health Order, Mayor Says":

CITY NEEDS MONEY TO OBEY HEALTH ORDER, MAYOR SAYS

Mayor Nicholson said Tuesday the State board of public health "can do all the ordering they want, but without the dough there isn't much we can do."

The board found Denver guilty for the second time in 2 years Monday of dumping inadequately treated sewage in the South Platte River.

Witnesses claimed it would cost the city \$10 million to meet the problem by installing a secondary treatment facility at its East 50th Avenue and Marion Street sewage plant.

"Where are we going to get the money.
I'd like to ask them," Nicholson said.
The mayor added he won't decide whether

to appeal the decision in the courts until he receives an order from the board.

William F. McGlone, Denver attorney and board president, said he will draft a formal order with Assistant Attorney General Sam Freeman this week.

McGlone announced the board's action became final and unanimous Tuesday after two board members visited the plant and inspected the river.

McGlone said the board would give Den-ver "a reasonable time" to comply with the

## Edwardsville, Pa., Now Celebrating Its 75th Anniversary

EXTENSION OF REMARKS OF

## HON, DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the REC ORD, I include the following news story from the Wilkes-Barre Sunday Independent of June 21, 1959:

EDWARDSVILLE LAUNCHES JUBILEE CELEBRATION WITH HUGE PARADE

Edwardsville opened its celebration of the 75th anniversary of the borough yesterday afternoon with a parade that spread over blocks and took 90 minutes to pass.

It featured groups of men and women costumes, floats, bands, fire apparatus, police units, and the numerous organizations of the town. Among them was a beautiful float by Edwardsville Lions Club with Miss Edwards ville, the teenage queen and their cours Miss Edwardsville, selected Friday night reign over the diamond jubilee, is Miss Mar garet Mary Wallace, daughter of Mr. and Mrs. Peter Wallace, 28 Green Street, Edwards ville.

The teenage queen is Rita Chepulis.

JONES, DANDO ATTEND Back for the celebration and participating in the parade were two prominent men who have their roots in the borough. They were Justice Benjamin Jones, of the supreme court, and Harold Dando, sheriff of Buts County, after retiring from the State policy Justice Jones acress as the state policy of the suprementation of the state policy of the state polic Justice Jones served as borough solicitor years, while Dando is a native son.

Brothers of the Brush were out strong with over 300 members marching in line, followed

by 200 Sisters of the Bonnet.

Among other groups participating were the entire membership of Edwardsville fire department in uniform, civil defense units, and police under James Garrahan, and members of the kangaroo court.

POLICE HEAD PARADE

Kingston and Wilkes-Barre motorcycle police and a detail of State police headed the parade, followed by a military color guard. Hugh Jones was the marshal, assisted by

A. J. Hozenipa, Burgess Chester Petroski, Hayden Evans, Frank Troski, and Ben Davis. The various units included: clergymen, ecial guests, borough and school officials, Alexander's Band, Lions float with marchers, Republican women of Edwardsville with float, Woodward Hill Auxiliary, Edwardsville firemen, Sisters of the Bonnet with floats, Navy, Army and Air Force vehicles, St. Joseph's Post of Catholic War Veterans with float, Kingston VFW drum and bugle corps, civil defense police, Girl Scouts, Boy Scouts, Ed-Wardsville Little League, Luzerne and Swoyerville fire engines and ambulances, Edwardsville High School band, Brothers of the Brush, mounted units, Edwardsville fire and ambulance units, floats by Spaulding, Hudak's and Suzanne's, Old Slocum float and marchers, Rruk's float with Corner Cafe unit. Rolls Royce cars by Ed Eyerman and Lewis Wolfe.

The anniversary book will be distributed Tuesday and the mammoth firemen's parade will be held Wednesday night. The climax to activities is scheduled for Saturday night with a grand ball in Russian Club Hall, Main Street.

## Alaska Only for the Young?

EXTENSION OF REMARKS OF

## HON. ERNEST GRUENING

OF ALASKA

IN THE SENATE OF THE UNITED STATES Wednesday, June 24, 1959

Mr. GRUENING. Mr. President, Alaska is our youngest State, and is a young man's country. The average age in Alaska is 26, which compares with the national average of 29.8.

But Alaska is not only for the young. It is for youngsters of all ages—from 9 or younger to 90 and beyond. Alaska welcomes people imbued with a pioneer spirit, regardless of their age or previ-

ous condition.

These facts are well set forth with specific examples in an article entitled "Alaska Only for the Young?" written by Donnis Stark Thompson, and published in the July issue of a most excellent publication called the Alaska Sportsman published in Alaska's capital Juneau. In this issue of the magazine, the article is profusely illustrated with wonderful photographs; but, unfortunately, these cannot be reproduced in the Congressional Record, and must be left to the imagination of the reader.

For those who are interested in Alaska, as millions of our fellow Americans are, I know of no better way of setting acquainted with the 49th State than to read the issues of this excellent magazine of the great outdoors, which is filled with stories of everyday adventure on the last frontier, as we Alaskans have long fondly called our 49th State.

I ask unanimous consent that the article be printed at the conclusion of my remarks in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Rec-ORD, as follows:

> ALASKA ONLY FOR THE YOUNG? (By Donnis Stark Thompson)

Alaska is said to be the country of the young, the last of the "last frontiers," where the brave, venturesome youth comes after leaving friends, home, mother and everything else except hope behind, to pit himself against a hostile wilderness.

Some of my neighbors on the Kenai Peninsula, home of the moose and the huge brown bear, don't quite fit into the popular

formula.

Take Jessie Ainsworth, who lives alone seventeen miles out of the little town of Kenai. Her tiny one-room log cabin overlooking Island Lake is surrounded by spruce, cottonwood and birch trees, and sometimes

by bears.

Jessie is a red-headed, dynamic 62-yearold who served as a mess sergeant with the WAC's in the South Pacific during World War II and was in Manila when peace was declared. Her two children grown, she was casting about for the next step in her life when she wrote from her home in Arizona to a friend in Seward and jokingly asked about a job. The reply was a telegram saying to catch the next boat to Alaska-the job was waiting.

She has been here ever since. During the winters she worked, usually as a cook in the Seward Sanatorium, and in the summer she stayed at her cabin. Last winter she drove the seventeen miles back and forth to Kenal and worked in a restaurant so she could live

in her cabin.

Jessie has plans to build a larger house and add modern conveniences as she can afford it. Now, she must carry all her water from the lake. She cuts all her firewood. She does without a lot of things, including electricity and a telephone, but she has many compensations. She is free, she is independent, she lives in what must be the loveliest spot on earth, and for her every day can be a day of discovery

While Jessle and I were talking, a hummingbird flew from flower to flower in her yard. Her face lighted up with wonder. hummingbird. I didn't know hummingbirds got this far north. That's the first one I've ever seen up here in this country."

She told me about different animals she had observed, then pointed to strips of salmon hanging in her cabin. "It bothers me something awful, having that in here, but I have to because of the bears." Then she told me about having to shoot a black bear a few days earlier when it decided to move in on her.

"It was terrible," she said. "I hope I never have to shoot another one. The moaning and squealing as he died was something awful. Some people like bear meat, but I couldn't stomach it. I gave it all away to the neighbors."

Denny Sternes is no raw youth, either. Born in Cork, Ireland, 76 years ago, Denny came to Detroit in 1888 and was working up north as a government surveyor in During the winter of 1955 he made his move to the Kenai. He drove the Alaska Highway alone, and arrived at the home-stead on which he had filed.

The temperature was 35° below zero. walked the section line for 1 mile, decided the land was his, then took from his pack two blankets, one air mattress, and a piece of canvas that he fashioned into a tentlike shelter, and settled down for his first night on his claim. Next day he started felling logs and peeling them meticulously for his dream house, an ambitious 27- by 37-foot log cabin.

Since then Denny decided that homestead wasn't quite to his liking and gave it up to try a different location. He made a trip "outside" and back, alone in his 1948 car, and has put in many solid working hours to raise a little capital. He's a brickmason and steelworker by trade, and he gets many calls for concrete work in an area where such skills are rare.

#### SEVENTY-SIX, GOING STRONG

Denny talks of selling his investments back in Detroit for money to start a big concrete and cement plant up here. At 76, he is still eagerly searching the horizons of the future.

The second time I saw Denny he said. "Say, Sis, I'm leaving tomorrow for a caribou hunt up in the hills. I heard about it and I'm goin'. Why don't you come along?"

I had plausible excuses for not going, but I wasn't fooling myself. I couldn't have be-gun to keep up with that Irishman, the way

he gets around.

Irene Van Sky, 61, lives in a house little bigger than the attached woodshed which she herself fills every fall. Born in Kentucky, reared in Ohio, she came to Alaska to be near her son and his family. Instead of moving in with them, however, she got a homestead of her own. She built her first cabin, which was 10 by 12 feet. Of her present cabin she says, "Oh, I had help on it. The help did the bossin' and I did the

She has done a tremendous amount of clearing, and the scattered garden plots and berry patches represent an immense achievement where every square yard of clearing, without machinery, means an unbelievable amount of drudgery. She has more than 5,000 strawberry plants, besides potatoes, rhubarb, tomatoes, and cucumbers. Every old stump, every upturned tub or kettle, is sprouting one of her experiments. I marveled at her strawberries and how she raised

"Raise 'em?" she yelped, "Why, I can't kill 'em. They're takin' the place over." She went on to say, however, that she has trouble getting any berries because the birds "Just this morning I chased 8 or rob her. "Just this morning 10 spruce hens out of there."

"Oh, well," I told her, "spruce hen season opens in a couple of weeks, so you can get your strawberries back in the form of fried

chicken."

#### BEAR IN THE BERRIES

She told me of being at the far end of the berry patch when a black bear ambled across the road, across the end of the patch, and on into the woods.

"You know," she said, "out here I've thought a lot about what I'd do if I saw a bear. Well, I didn't do a durned thing, and neither did he."

To get some cash, the hardest crop to raise on the Kenai, she sells plants and garden produce, baby sits, and once raised rabbits. She has to carry all her water, and in winter she has to melt snow for water for the rabbits. That was too much bother.

Irene is an avid fisherman. She told me about catching her first silver salmon. "Only 12 pounds, but he put up such a fight I was so scared I saw yellow spots. My son asked me what I'd do if I tied onto one of those big kings, and I told him I'd quit fishing and go hunting."

Of Alaska she says she loves it and would do it all over again-homesteading, clearing and all, except the rabbits. In fact, the only thing in the world she could think of that she really needs is a well with a pump. Then she added, "And a moose this fall, naturally."

J. W. and Wilma Thompson, 68 and 62 respectively, have been living in and out of Alaska since they went to Nenana in 1944, she to teach and he to superintend the school there. In between periods of raising corn on their farm in Iowa, they have lived in Nome, Fairbanks, and Seldovia. Each time the call of the North grew stronger, until finally they homesteaded at Kenai. teaches, J. W. has a tiny office where he practices law and handles real estate. Being a veteran of World War I, he did not have to clear any of his homestead to prove upon it.

One of J. W.'s more interesting Alaskan experiences happened a couple of years ago. All the young men of the family had gone on an extended moose hunt, only to return weary, discouraged and mooseless and find a moose just waiting to be butchered. J. W. had bought a hunting license and 2 hours later bagged a moose only a few miles from

J. W. heartily recommends moose hunting for that exhilerating something different for

those past 65.

Homesteading in Alaska fits into the life pattern of Fred E. Burgess. Now 66, he was born on his uncle's homestead in the Palouse country in Washington, reared on a homestead in Idaho, homesteaded a sagebrush farm in Oregon. He and Mrs. Burgess toured Alaska in 1957 and went home thinking.

Recently I found Fred on his Kenai homestead, surrounded by his potato patch and a line full of drying clothes, waiting for his wife to finish up their business down in

Although his formal education ended with the eighth grade, Fred has been a lifelong student, particularly of forestry and forest conservation. He became interested in this subject in France during World War I, when he noted how much more progressive the French were than the people back home in the matter of conserving their trees. He has served on many irrigation, reclamation and conservation boards, sometimes as chairman for many years.

Fred is optimistic about Alaska's future. He dreams of making his homestead a model

tree farm.

I glanced about the cabin, small enough to allow th occupant to stay in bed and flip the sourdoughs on the stove, and wondered fleetingly just what a person would bring to such cramped quarters. What, of 66 years' accumulation, would one consider necessary, and what could be left behind?

Almost in answer to my thought, Fred dragged a battered suitcase from under the bed and removed a sheaf of worn, folded papers. Not without embarrassment he explained that these were some poems he had written many years ago, and he wondered whether I'd like to read them. There I sat in his tiny shanty on a claim and read stirring, beautiful words of patriotism—words that are rather out of fashion in this blase

Ed and Claudine Perkins, 65 and 60, live on a high cliff overlooking Cook Inlet and an incomparable view of snow-covered peaks on the Alaska Peninsula. Claudine was a teacher for 19 years. Ed was a carpenter—a trade that is coming in handy now that they're building their fine log cabin with a "patio and everything"—and a forester with various forestry organizations in the Western States.

Their children grown, they came to Alaska in 1952 and made several trips back and forth before they admitted that they had fallen under the "spell of the North." Moving here permanently meant giving up a brautiful home in Seattle, but Seattle is only 5 hours away by plane and they have visitors from home every now and then. Some are impressed, some downright appalled.

As Claudine put it, "We had this fellow up here and he just couldn't get over it. He kept saying, 'How could you give up that wonderful home in Seattle, where you had everything? All you had to do was push a button, and here you don't even have electricity. You even have to carry water to flush that modern tollet you brag about.' He kept that up all the time he was here, and he couldn't even see the inlet below us, or the mountains across, or the woods behind

"And while he was here we talked about a camping trip we were going to take.' Claudine paused to giggle, but I thought his remark might well echo the thoughts of many of their friends. "He said, 'Camping trip. Great Scott. You're camping all the

Yes; it's true, Alaska is a country of the young—the young at heart.

#### Is It Worth It?

EXTENSION OF REMARKS

## HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks I wish to include the final article in a series which has been appearing in Look magazine written by Mr. Earl Mazo which presents a very objective picture of the Vice President. These articles have been a condensation of Mr. Mazo's book entitled "Richard Nixon: A Political and Personal Portrait," which is being published by Harper & Bros. and appeared for the first time on the newsstands yesterday. I feel sure that this most interesting and stimulating biography which has been written in a most authoritative and fascinating way will undoubtedly become one of the Nation's best sellers:

IS IT WORTH IT? (By Earl Mazo)

RICHARD NIXON will not run for President in 1960 if he feels he will have to strongarm his way to the nomination. His Presidential fever is not that high. He says, happen to think the Presidency is the toughest job in the world. I do not intend to get on the treadmill Taft was on or that Stassen has been on-of seeking the nomination at all costs.'

Nixon has various reasons for his seeming willingness to bow out of politics at this time (an action he also contemplated at the start of the 1952 campaign and before the 1956 campaign). "I shudder at the thought of going through another campaign," he says. "It is a backbreaking, brutal test of the mental, nervous, and physical system.
Unfortunately, the high-pressure campaigns are getting worse."

He also believes that his family would be

far better off financially if he had renewed his law practice instead of going into politics after World War II. He worries that he may not be able to save adequately for his children's education. "I came to Washington 12 years ago with \$10,000 in Government bonds, my GI life insurance, a 1946 Ford, furniture, and \$14,000 worth of life insurance. Today, I have an equity in a house; we have a lot invested in furniture. | The family is better and more expensively clothed.

and its living standard is considerably high er.] But my net worth today is pretty small."

Nixon's current financial status is this "I own no stocks or bonds. [He cashed his Government bonds to buy his first house.] The only real property I have an interest in is the house in which we live on Forest Lane in Washington. The purchase price was \$75,000, and I have a \$50,000 mortgage on it with interest at 5 percent. In addition to that, we have only that amount of money in the bank which is necessary for current expenses. I have my retirement fund, which I contribute to on the same basis as Members of the Senate. | He pays \$218.75 a month and will be eligible for a pension of about \$15,000 a year when he is 60.] I have increased my life insurance, but I have increased it in term insurance. On this basis, you get more coverage for your money, but get nothing back unless you die. [His total of life insurance is \$39,500, including the \$10,000 GI policy.] The only other things and what one columnies the assurance and what one columnies the and what one columnist likes to refer to as 'the fabulous gifts' I have received on my trips around the world. I own no real estate other than my house. I don't own a lot. a piece of land any place. My wife owns nothing ing. We actually spend everything we get in. That is the way it has to be, if I am to do my job properly.'

The Vice President's gross salary is \$35,000 year, plus a \$10,000 expense allowance Nixon gets his check the last day of every month. After all the deductions-including \$485 for Federal income taxes—his monthly take home pay is \$2,202.09. It hardly compares with the income he could earn. Of an any-time-you-want-to-come basis. has been offered the presidency of a large California business enterprise and a partner ship in a New York law firm, each guarantee ing him an annual income of more than

\$100,000.

After a dozen years of an exceptionally successful political career, the net worth breakdown in dollars and cents shows NIXO today to be only a little better off, relatively. than he used to be. He says he regards himself—the knowledge and personal potent tial he has piled up—as the only really m-portant investment he has made for his family. "The only thing is, the health angle could ruin it." he adds. "If anything hap-pens to me physically, at this age, I would have only a short time to get account it. have only a short time to get around it. That's perhaps the major risk I am taking at the present time. at the present time—the one in health. It's a gamble."

During his childhood, Nixon was susceptible to illness; when he was 4, he nearly died of pneumonia; and during his senior year in high school and the senior year. in high school, he had a severe attack of un dulant fever. But today he is physically sound, despite the fact that he seeming! takes few precautions to stay that way.
would rather read than exercise. He is avid sports fan (he reads the sports page every morning before the regular news) and is more intimate with scores of baseball games going back many years and the relative standing of players than he is with spe cific election returns. He is not much of performing sportsman, however. He plays golf only occasionally. He does not hunt of fish. He is a nonjoiner of organizations. Sixteen-hour workdays were a play Sixteen-hour workdays were common to him before he was 16—and they still are. of can't do anything about it," he told me. still have to learn how to pace myself." major forms of relaxation would seem to propping his feet up on his desk while work ing or talking in his office, and listening his hi-fi set at home.

Nixon's Quaker upbringing excluded many relaxing pastimes available to members other sects. For example, card playing looked on as an unnecessary frivolity and gambling as a sin. However, during the war, Nixon became known as the only sane and sensible poker player in the South Pacific.

As a lawyer, he was able to qualify for a direct commission in the military service, and joined the Navy as a lieutenant, junior grade. After routine training, he shipped to New Caledonia and detailed to the naval air transport organization known as SCAT. Lester Wroble, a Navy friend and now vice president of a paper company in Chicago, says Nixon earned a three-pronged reputation at their first war-theater outpost, place called Green Island. With supplies and materials wheedled out of visiting naval craft, he set up what became known as "Mixon's Hamburger Stand," where officers and men supplemented their less appetizing service rations without charge. Occasionally, too, Nixon got hold of various items not on the Government issue list, like bourbon whisky, that were priceless to the men, and he shared everything with all hands.

His prowess at poker was impressive. played bridge in law school for the first and last time," Nixon relates.. "I never played Poker until I joined the Navy." The Green Island poker games ran to high stakes, as they did at other lonely outposts around the world. Wroble remembers one pot of

\$1,100. But Nixon avoided the wild hands. "Dick never lost, but he was never a big winner," says Wroble. "He always played it cautious and close to the belt. He seemed always to end up a game somewhere between \$30 and \$60 ahead. That didn't look like showy winnings, but when you multiplied it day after day, I'd say he did all right."

By hard work and by playing "close to the belt," NIXON has managed to do all right for a good part of his life. His ancestry dates back almost as far as any can in North America. Kinsmen of his mother came to Delaware from Wales in 1699. His father's line on this continent began when a James Nixon emigrated from Ireland in 1753. On his father's side, Nixon's forebears were tough, strait-laced, Bible-pounding Methodlats. His mother's family were devout Quakers. Richard was born in Yorba Linds, a farming village 30 miles inland from Los Angeles, on January 9, 1913. In 1922, the

family settled in East Whittier, Calif.

Family Intimates see Richard Nixon as a composite of his father, mother, and grandmother. Nixon says, "My grandmother set the standard for the whole family: honesty, hard work, do your best at all times. She had strong feelings about pacifism and very strong feelings on civil libertles. At her house, no servants ever ate at a separate table. They always ate with the family. There were Negroes, Indians, and Mexicans she always was taking somebody in."

The jutting jaw, thick eyebrows, upswept note and tendency to jowis that caricaturists have made Nixon's trademark are actually Milhous family imprint. The Vice President's brothers have the same no-nonsense look, and so does Hannah Nixon, their amall, dainty mother.

Allowances and spending money unheard-of among the five Nixon boys. first son, Harold, was born in 1909; Richard, in 1913; Donald, in 1914; Arthur, in 1918, and by and Edward, in 1914; Arthur, have died. Donald is now employed by a California. California milk company, after having tried in successfully to establish a chain of drivein restaurants which featured a triple-decker sandwich called the "Nixonburger." Edward is a Navy pilot.) Hannah and her husband Frank Nixon worked hard to lift their for their forms. their family from its early poverty. Richard began earning his own way at 10 or 11, just as soon as he was big enough to hire himself out as a part-time farm laborer. He later had lobe had jobs pumping gaseline and culling rotten apples and did two stints as a barker for the wheel of chance at the Slippery Gulch Rodeo in Prescott, Ariz. Nixon barked for the legal front of the concession, where the prizes were hams and sides of bacon. This was a come-on for the back room, which featured

Much of Nixon's early life centered at the East Whittier Friends Meeting House, the Quaker church where he and his family attended one form of service or another four times on Sunday and several times during the week. Nixon played the organ at the meetinghouse and taught Sunday school. Dr. Albert Upton, professor of English and drama at Whittier College, Nixon's alma mater, says, "The DICK I knew so well in college was not what I would call a militant Quaker.

He was just a typical Quaker."

Merton G. Wray, a schoolmate of Nixon and now a Whittier attorney, says, "I cannot reconcile his massive-retaliation policy in politics and as a public official with what I understand of the Quaker philosophy and of their fellowship of reconclination." Wray, who was often an opponent of Nixon in speaking contests during school years, adds, Since high school, Nixon has had the uncommon ability to take advantage of a situation before and after it develops. His success is due to knowing what to do and when to do it."

Nixon's brother Donald recalls, "Dick always planned things out. He didn't do any-thing accidentally. \* \* He wouldn't argue with me, for instance, but once, when he had had just about as much of me as he could take, he cut loose and kept at it for a half to three-quarters of an hour. He went back a year or two, listing things I had done. He didn't leave out a thing. I was only 8 and he was 10, but I've had a lot of respect ever since for the way he can keep things in his mind."

Dr. Upton says he was touched when he saw pictures of Nixon genuinely weeping on the shoulder of Senator William F. Knowland at the Wheeling, W. Va., airport after Nixon's dramatic 1952 telecast concerning the Nixon fund. "Once, I had to teach him how to cry," says Dr. Upton, "in a play called "Bird in Hand." He tried conscientiously at rehearsals, and he'd get a pretty good lump in his throat—but that was all. But on the evenings of the performances, tears just ran right out of his eyes."

During his 3 years at law school, Nixon's morale rose to peaks of enthusiasm and dropped to valleys of despair, which is characteristic of him even today. Friends gave him the nickname "Gloomy Gus" because he would complain, "I'll never learn the law; there is too much of it," when his grades were the highest. A schoolmate, who observed him studying late one night, advised him not to worry. "You've got an iron butt," he said, "and that's the secret of becoming a lawyer."

"I have a fetish about disciplining myself," Nixon admits. When provoked, he can swear a blue streak—but only among friends. He dislikes social affairs, especially formal dinners, but he has disciplined his bore-dom. "I found when you get bored, you get dom. "I found when you get bored, you get tired," he says. He watches his diet care-fully, figuring "the worst thing in the world is to eat heavy food when you have a lot of work to do." He is particularly fond of cottage cheese and ketchup.

He is probably the fastest dresser in high office, with a record of 8 minutes for formal clothes and 21/2 minutes for regular wear. He tends to deprecate himself, even in speeches. He makes a point of reading editorials that are critical of him or of a policy he favors, but often passes over or merely scans the laudatory comments. He has never watched himself on a filmed television program, and though he has a Kinescope copy of the "Nixon Fund" telecast, he has never taken it out of its can.

None of his law-school friends expected him to go into politics. Nixon himself recalls harboring no grandiose ambitions in the political field. "I wanted to enter the he says, "but I wasn't a youngster who wanted to be President."

Mrs. Nixon says that there was no talk of political life at all, either before or after their marriage. She has also said, "It would not have been a life I would have chosen." Any enthusiasm Pat Nixon may have felt for her husband's choice of career was dampened by the fund episode in 1952 and the terrifying experiences in South America. where she and the Vice President were stoned and spat upon and came close death. There is no indication that she has changed her views now that her husband stands on the threshold of the highest office in the land.

Of Nixon's predecessors, seven Vice Presidents have been elevated to the White House on the death of Presidents. Three of the nine Presidents in this century alone have taken office by succession. But only one Vice President, the controversial Martin Van Buren, has been elected on his own, without first succeeding to the office. (NIXON broke a precedent when he became the first Republican Vice President to be reelected.)

It is generally conceded that if Nixon suc-

ceeds to the Presidency before the next election, he automatically will be the Republican nominee. Democratic National Chairman Paul M. Butler believes Nixon will get the nomination in any case. "The first objective of our efforts is Nixon," Butler says. He is our common target." Nixon himself wonders why "the Democrats continue to make me their major target if, as Truman says, I am the easiest man to beat."

Since Nelson Rockefeller's triumph in the New York gubernatorial election has cast him as the serious Republican rival, Nixon has been willing to share or even shed the glory-and the abuse-of being front runner. "Potentially, Rockefeller could be a strong candidate for President," says Nixon. "He is photogenic, has a good voice, and he likes people and shows it in the way he meets them. In addition, he showed the ability to select and use expert professional advice in his campaign for Governor." With or without himself as a candidate,

Nixon sees a hard, challenging road ahead for his party, with not a single State or section safely Republican. He is satisfied that President Eisenhower and most Republican Party leaders "appreciate the fact that my primary desire is to see the administration succeed, and to rebuild the party so that this nomination would be worth something to somebody-maybe somebody else." Since Eisenhower has told him several times of his very strong feeling that it would be improper for him to show any favoritism between potential candidates, Nixon does not expect an endorsement from Ike-either for himself or for anyone else.

If Nixon does ascend to the Presidency in 1960, he will bring along many strong and seemingly unshakable habits and convic-

Essentially a cautious individual, he doesn't wish away risks. Few contemporaries can match his political boldness, and he is one of those rare politicians who would rather listen than talk. He constantly probes for opinions. Frequently, the eleva-tor operators, and maintenance men and clerks on Capitol Hill make more sense to him than his colleagues.

He is often said to have no interest in the

welfare of minorities and to sail with the political winds on civil rights. This is one of his failings as a politician. One has to dig long and hard to become convinced of his sincerity in this area. Intimates have always known that Nixon has no sense of racial or religious bigotry. Tolerance has been a way of life in his family. (A Quaker great-grandfather ran a station on the slave-rescuing "Underground Railroad" in southern Indiana.) As a student, Nixon wouldn't abide, and helped prevent, the exclusion of a Negro boy from a school club. Later, in law school, he was infuriated to learn that some officials of the American Bar Association had once tried, on religious grounds, to keep Louis D. Brandeis, whom he greatly respected, from being confirmed as an Assoclate Justice of the Supreme Court.

That Nixon is sincere on civil rights is certainly not to say he would refrain from using the issue politically. He has done so and will do so again. But his position on specific facets of the problem, such as school desegregation and compulsory fair-employment-practices laws, clearly is not tailored to capture bloc votes, since he favors a gradual program of desegregation and opposes as unworkable the idea of a Federal law to end discrimination by force. common surmise in Washington that Nixon would welcome racial antagonisms to split the Democratic Party and win the Negro votes in Eastern and Western States. Such a development could decide the Presidential election. The fact is, however, that he wants tensions eased and the problem of discrimination solved-and he would welcome a bipartisan effort to bring that about, though knowing full well that removal of the civil-rights issue would be a boon to the Democrats.

Nixon disagrees fundamentally Eisenhower on how to deal with this delicate "I feel strongly that civil rights is primarily a moral rather than a legal question," says Nixon. [Eisenhower sees it as a matter of enforcing the law, whether you like it or not.] "Laws play a necessary part, of course," Nixon points out. But he also contends it is "unrealistic to assume that passing a law or handing down a court decision will solve this problem. Where human relations are concerned, a law isn't worth the paper it is written on, unless it has the moral support of the majority of the people." It is his belief that "the place to start mobilizing the moral conscience of America is among our young people; they have the minimum of prejudice.'

As for school desegregation, he says, "The moderate approaches which have been put into effect in Nashville and Louisville are very constructive. They are reasonable and sensible and provide a possible formula which might spread all over the South in a way that would be workable and realistic."

Over the years, Nixon has altered his position on some issues. His espousal of Federal aid in certain fields of education and his support for freer world trade are typical. The most significant change, however, has come about in his interest in foreign affairs. In this field, he is the administration'sand perhaps the Nation's-leading advocate of Big Aid over Big Guns. "In the next 10 years, our greatest external danger will be not military, but economic and ideological," Nixon insists. Therefore, he believes, it is more important to provide money for peopleto-people and cultural-exchange programs than for missiles and submarines.

Nixon sees a "critical need" for corrective labor legislation stronger than that proposed by Senator John F. KENNEDY in 1958 and again in 1959, but he firmly opposes the right-to-work approach. "All that the right-to-work movement accomplished in 1958 was to serve as a red flag in bringing out a tremendous organized labor vote which was predominantly pro-Democratic," he says. "Right to work states a general principle that sounds good, but such measures in practice have been relatively ineffective. They don't touch the abuses that need to be dealt with. Those who supported right to work with their time and money would have

been far better advised to have contributed to the election of candidates to the State and national legislatures who could be counted on to consider and vote for necessary labor legislation."

Tax reform is another issue on which Nixon has firm personal convictions.
"While popular politically, the idea that we can get more tax revenue simply by soaking the rich is phony and unworkable, because the tax rates now are at such a level that we have dried up that source," he says. "You couldn't squeeze any more taxes out of the people in the higher brackets at this point than you could get juice out of a cue ball." Nixon favors a program that would lower taxes in the higher brackets, which "have reached the point of diminishing return," reduce corporate taxes and revise excise taxes. "This would have the effect of stimulating economic growth by unleashing capital and encouraging new capital," he says. "This, in turn, would lead not only to more revenue for the Government, but even more important, it would inevitably produce

more and better jobs."

What kind of President would Nixon be? To begin with, he would probably be the hardest-driving Chief Executive and the most controversial since Theodore Roose-There would be nothing haphazard. nothing bland about his administration, nor any doubt about its political identity. It would have holdovers from the Eisenhower regime, but under Nixon, they would move more energetically. And when the party's call to battle sounded, Cabinet members and other administration chieftains would most likely take to the hustings instead of touring faraway places or tarrying in Wash-

ington, as has become customary.
While Nixon would head the Republican Party in fact as well as name, the out-right partisanship of his administration would probably be less rigid than many anticipate and hope for. The first cries of disappointment probably would come from party leaders lining up at the White House door for patronage.

Lacking experience as an executive, he would of necessity have to stop writing all his own speeches, handling all his own press relations, being his own aid, and trying to manage all the activities for which the President is responsible. In addition, he would be haunted by some episodes from his career as a razzle-dazzle campaigner and congressional investigator. To uphold executive immunity in his administration after having demanded, as a Congressman, that President Harry S. Truman's people testify before Congress, for example, Nixon would need the best of his political skills.

In fundamental outlook, a Nixon administration probably would not differ radically from the Eisenhower administration. Essentially, it would maintain the familiar image of being conservative on domestic matters and internationalist in foreign affairs. But a Nixon administration undoubtedly would differ from Eisenhower's both in approach to problems and in make-

It could be expected to have businessmen in some important positions, but would never be a businessman's administration. It would also have brain trusters: "Frankly, Republican administrations and the Republican Party need, above everything else, a broader intellectual base. We have not used adequately the talents available. We have not called enough on our educational leaders, the so-called eggheads." There would be labor leaders, scientists and individuals of diverse talents in high positions. Furthermore, Herbert Hoover, Truman, Eisenhower, and maybe even Henry Wallace would be offered specific assignments. "Ex-Presidents and ex-Vice-Presidents should be constantly

consulted; their advice should be sought, and they should be asked to do special missions for the President." For all the bitter ness of his past campaigns, Nixon wouldn't hesitate to utilize his worst enemy if he felt that person was the best man for a particular position. The Vice President under Nixon would find himself burdened with even more than the record number of responsibilities Nixon has received under Elsenhower.

There would be little room for speculation about a Nixon administration's position on any issue of consequence. This approach would be selective, however, since Nixon considers himself "practical in the sense that I don't believe in taking issue simply for the sake of a fight." His maxim on com-promise is: "A leader must always conserve his resources for the battles that count-He must look at the major objectives of his administration \* \* \* and must never become involved in a fight on a minor issue which might prejudice his chance to win on s major issue."

As President, Nixon would probably have foreign relations as his primary interest-He would have a strong Secretary of State, one who could best fit the Dulles mold. deal with the Communists, Nixon is convinced American diplomats must have quality of unshakable conviction and character which an individual develops only through experience in handling the toughest practical problems." Nixon see that quality in a few well-known political and diplomatic figures, and also in several labor leaders. union official is often on the guest list when the Vice President entertains for visiting statesmen. Some labor leaders probably would have important State Department assignments after an overhaul of our overses personnel policies, which undoubtedly would be Nixon's first major task.

NIXON's solid belief in the importance of fate and circumstances in politics makes his honest observations seem coy or evasive. Concerning his political past and future, he told me, "I have been in a very fortunate position as a political man since the time I started. The positions I've gotten, first the House, then in the Senate, then the Vice Presidency, generally have come to me. happened that I was at the right place at the right time. This can change. The only thing that I will do so far as the future is concerned is continue to do the most effect tive job I can for the country and, of course for the party. And then what should happen will happen."

### Protecting Our Planes

EXTENSION OF REMARKS OF

## HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 24, 1959

Mr. FLOOD. Mr. Speaker, leave to extend my remarks in the REC ORD, I include the following editorial from the New York Times of Tuesday, June 23, 1959:

#### PROTECTING OUR PLANES

The problem of how to deal with attacks on our lightly armed reconnaissance plans in neutral waters and over the high seas more complex than it might seem to be of the surface. We were rightly outraged when a Navy patrol plane was attacked and badly damaged last damaged last week in waters at least 35 miles off the coast of North Korea by two Com

munist jet fighters. The much slower Amercan plane was not adequately armed to meet

this type of assault.

It should be borne in mind, first of all, that the function of this American plane was not combat. It was doing a nonbelligerent job for which it had been especially equipped. It had reason to do that job, and every right to do so, especially in the light of the repeated reports of Communist violations of the Korean armistice terms. Some sort of constant watch is obviously imperative, but it can be kept without our provoking hostilities.

On the other hand, it has been urged that auch noncombat planes should not be made atting ducks for trigger-happy Communist
MIG pllots, Korean, Chinese, or Russian.
They could be accompanied by our own jet aghter escorts on each patrol mission. But in that way these missions would be turned into potentially combat missions and we would certainly be accused of having invited any clashes that might occur. We do not wish to be placed in the position of swagger or bluster or of taking actions that could be regarded, even mistakenly, as aggressive or as asking for trouble.

For this reason, we have thus far leaned over backward, in the matter of a general Policy, to prove our peaceful intent. But that, also, does not solve the long-range problem of how to deal with unprovoked attack from an enemy that is less scrupulous than we are: Our military authorities, therefore, are making a careful review of the whole question in the effort to find some Solution that would preserve the lives of our then and at the same time preserve a desira-ble national position. That is not easy.

Meanwhile, the decision as to whether strong escort is required at any given time or place is to be left to the commanders in the field. as a temporary measure. It is not, however, a permanent solution, and further study will be required.

#### Oregon's Centennial

EXTENSION OF REMARKS

## HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Thursday, June 11, 1959

Mrs. GREEN of Oregon. Mr. Speaker, the action by this House and the other body in admitting to statehood the new States of Alaska and Hawaii was an action in which I was proud to join. New interest in Hawaiian statehood has risen in the past few days because of the approach of next Saturday, when the people of Hawaii will hold their primary, and, as is expected, vote their approval of statehood. But, without in any in any way detracting from the legitimate pride which every American feels in the two youngest members of the Pederal family, I would like, at this time, to remind by colleagues of the birthday celebration of one of the older sisters.

The State of Oregon, putting aside the laboration of the older sisters. fabled womanly reluctance to talk about her age, is very proud of having reached the century mark and in my city of Portland there is being held a grand centennial trade fair and exposition to mark the event. Throughout the State State, innumerable communities are holding their own Oregon centennial celebrations. In the Washington Post

for June 21 there appeared an article about Oregon's birthday celebration. I ask unanimous consent that it appear at the conclusion of these remarks.

From the Washington Post and Times Herald, June 21, 1959]

NEW STATES STEP ASIDE FOR CENTENNIAL

PORTLAND, OREG .- Now that their first hurrahs are subsiding for the moment, the new 49th and 50th States are going to have to step aside and give up some of the limelight to an older sister, the 33d State,

Oregon's 100th birthday is upon us and the old girl is planning a real wingding, a centennial exposition at Portland lasting until September 17. That, however, is not the only magnet which will draw tourists to that northwestern paradise.

Don't settle for just a quick visit to the exposition, moving on to squeeze all the Western States into one trip. You haven't western Oregon when you have taken the usual tour of the area around Portland, the Columbia River Gorge, and Mount Hood-magnificent though they are.

In the east, in the central, and southern areas, on the Pacific Coast, this star in our

flag shines brilliantly.

Rent a car in Portland to drive through the forests and farms of the coast range for at least a few days along the Pacific. You'll agree with the entry in the Lewis and Clark

Journal: "Ocean in view. Oh, the joy." One of the joys is Highway 101, whose beauties in California are known to so many. It's thrilling in Oregon, too. In fact, from the northernmost tip of Washington to southern California, 101 is surely one of America's most varied and spectacular roads.

Its 440-mile stretch in Oregon is an admirable example of State foresight. Less than 30 miles of the wonderful beach evpanse is private property. All the rest is reserved under the State park system for free

Fishing and resort towns along the coast, mostly whiteshingled and bright with flowers, are faintly reminiscent of New England.

But there's a more uncluttered feeling because of the miles of unspoiled scenery, the deep forest just a little way inland and the differences in history.

The hardier pioneers of the Oregon Trail, Lewis and Clark, the earlier British, Spanish, and French navigators and the fur traders have all left their mark.

Any of these spots could be the setting for

a truly adult western:

Astoria, settlement of the fur traders, where you can follow the whole story of the Northwest in the carved friezes on the Astor column. With its history, the tower gives column. With its history, the tower gives you a stupendous view of the homes and gardens climbing the steep hills, the fishing fleets and the great mouth of the Columbia where it rolls into the Pacific.

Fort Flatsop and Seaside, the end of the trail for the Lewis and Clark Expedition, one of the grandest treks of all time. They wintered here in 1805-06.

Seaside now is one of the most attractive resort towns along the whole western coast. Vacationers from Seattle, Portland and other Northwest cities love its great wide beach and promenade along the ocean but a lot of eastern travelers pass it up.

Lookouts like Cape Perpetua, named by Captain Cook in 1778; and towns and bays and cliffs with Indian, Spanish, or English names all have vivid stores to remind us that Sir Francis Drake and the Spanish explorers of the 16th century knew this coast long be-fore the Pilgrims landed in Massachusetts.

Maybe you can take your history or leave it alone. There's plenty of fun and fine living in each of the towns along 101 plus every imaginable sport in the outdoors around them.

Trim fleets at Newport, Waldport, Depoe Bay, Astoria, and other centers take you out for exciting deep-sea fishing.

Other sportsmen try their hand at surf casting, or go for striped bass and other varieties in the famous fresh water streams threading the forest.

Swimming; beach parties; digging for those unsurpassed razor clams; renting a crab ring to snare your own big, tender, hardshell crabs; golf on splendid courses with distracting views of sea and mountains: riding, hiking; hunting for agates on Agate Beach (if you know how to tell an agate from an ordinary pebble) are all available. There's plenty of room for every activity.

If you do nothing but gasp at scenery your trip will be greatly rewarding.

The entire route is varied by remarkable rock formations and islets offshore where the sea birds cluster.

The highway climbs and winds, around and over great cliffs and headlands, above secret little coves where the surf boils, then along smooth miles of sand where it rolls

up gently for joyful swimming.

Farther south, near Florence, the fantastic cliffs and headlands fade into miles of white sand dunes. Local residents claim these are the largest dunes in the country.

Again you get into rugged country, rugged but flowery too-covered with rhododendrons or azaleas or other blooms according to Reason

Then the world-famous Rogue River fish-ing heaven and on to meet California's coast and the redwood groves.

Still you've seen only one segment of Oregon-but what a segment it is.

## Camp St. George, Mountaintop, Pa., Awaiting 15,000th Camper When It Opens on June 28

EXTENSION OF REMARKS

## HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the REC-ORD. I include the following newsstory from the Wilkes-Barre Sunday Independent of June 21, 1959:

AWAITING 15,000TH CAMPER-CAMP ST. GEORGE OPENS JUNE 28 FOR 40TH SEASON

Camper No. 15,000 will be welcomed when Camp St. George, Mountaintop, opens for his 40th season next Sunday. The camper, who will be honored, will be identified after records are checked

The camp, which was founded 40 years ago by the late Reverend Joseph E. Klump and a group of volunteer workers from St. Boniface Church, operates 20 days each Summer. The first 10-day period is for boys and the second

period is for girls. The age limit is 8 to 18 years, inclusive, for boys and girls.

St. Boniface Branch 75, Knights of St. George, has handled the camp project for the last several years as a part of its youth

activity program.

The camp president is Henry Stegmueller

Situated on Wilkes-Barre-Hazleton Highway, across from St. Jude's Church, the camp comprises 50 acres, 8 modern cabins, a mess hall, playground area, swimming pool, pavilion, baseball diamond, Indian trails and picnic tables and benches for parents and guests.

President Stegmueller announced the following camp committee for this season:

Leonard Krackenfels, Joseuh F. DeVizia, Henry Stegmueller Sr., Thomas Koval, Rev. Joseph C. Ward, Ray Cronauer, Stewart Kline, Ray Woods, Thomas Woods, Al Carpist, Ludwig Rauscher Jr., Joseph Greenfield, James Walsh, Carl Blaum, William Nylon, Eugene Burke, Donald Ruddy, John Stankus, John P. Mager, Harry, Heck, Clarence A. Cronauer, Gerald Stilp, Peter Shiner, and Joseph Greenfield Jr.

## Cardinal Urges Schools Teach About Communism

EXTENSION OF REMARKS OF

## HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 24, 1959

Mr. McCORMACK. Mr. there is no person in the world who has a better insight into and understanding of the evilness and destructive determination of the Communist mind, and of the vicious intent of atheistic communism, than His Eminence Richard Cardinal Cushing, Archbishop of Boston.

On Sunday, June 21, 1959, over TV channel 4 of Boston, Mass., Cardinal Cushing discussed communism in contrast with our way of life. He also pointedly called attention to the apathy of our people, an observation I thoroughly agree with.

The remarks of Cardinal Cushing should be read as widely as possible.

In my remarks, I include the text of the remarks of Cardinal Cushing:

CARDINAL URGES SCHOOLS TEACH ABOUT COMMUNISM

What is the difference between communism and our way of life? The communistic way of life is naturally rooted in the ma-terialistic philosophy behind communism. There is nothing new in the communistic philosophy. It is over a hundred years old in its crystallized form and it was put into that form by Marx and Engels \* \* \* and then perpetuated and further elaborated by Lenin and Stalin \* \* \* I sometimes call them the four horsemen of communism.

In the materialistic philosophy of communism, the only thing that exists is mat-ter \* \* \* the natural order. There is no order above the natural order. There is no Supernatural Order \* \* \* everything stems from matter, hence they use the expressiondialectic materialism, which embraces a form of philosophical theory that everything comes from matter and only from matter.

Therefore, in the Communist way of life, which is the application of the theory behind communism, we live only for a time

\* \* the old pagan theory \* \* \* "Drink and be merry, for tomorrow we die." The great difficulty is in the practical application of the principle \* \* the root source of communism \* \* you must live in a slave state \* \* a police state. The whole thing is absolutely unnatural for all who believe in God \* \* \* and the dignity of the masterpiece of God-namely man,

#### INNATE DIGNITY

Now in our way of life, we follow a philosophy that is rooted in spirit to value the existence of God and the fact that every man is a child of God, irrespective of his race or creed. He has an innate dignity because he is composed of a body and soul, The soul is the principal of his life made in the image and likeness of God—it's immortal, it's destined to live for eternity, and in accordance with our philosophy of life, man has God-given rights and should live in accordance with this philosophy of life \* rooted in the spiritual values and in the belief of the Supernatural Order must have love for one another \* \* friend or foe \* \* \* we must love everyone.

That in a summary way expresses the difference between the communistic philosophy and Christian philosophy, rooted in the existence of God and existence of order.

Jews and Christians of all types accept the spiritual values emanating from God and supernatural force, and if we hold fast to the supernatural order, we are not going to be brainwashed in the avalanche of propaganda which seems to get most of the publicity, especially in our country, whereas our rebuttal of this propaganda does not get a similar measure of publicity.

And, indirectly, multitudes of our people are being deceived and partly brainwashed by this propaganda machinery of the Communist Party, which is somehow or other very active in this country and gets this propaganda over the media of information like television, radio, the press, and maga-zines—all done in a very subtle manner but it is done-and we have not been able to counteract all that—by getting an equal amount of publicity—or the publicity we get is not featured enough. The result is that we all accept communism as another political movement, a new social order— whereas the whole thing is intrinsically evil.

What about instructing children about communism? Personally, I have been convinced, even though many do not go along with me, that we should teach communism in the upper grades of our high schools and in our colleges-and we should teach it for what it is-an intrinsic evil-like a medical student being taught about cancer and about the nature of cancer. Our children should be taught about communism-an evil influence—the most potential enemy that ever confounded a God-fearing people in the history of mankind. The point is, many do not believe in that because they think if we teach the children communism, some of the children might think of this as gooda new way of life.

The problem is to get the right teachers to instruct the children in the trends of communism. I don't know how we can arouse our people from apathy and indifference unless we teach communism.

I was speaking the other day to an admiral in the U.S. Navy who had spent many years in the Intelligence Service. He had read an article I had published on communism and he said. "I am a frightened man-for the simple reason that I am tremendously dis-turbed by the spathy and indifference of the people at large.'

I only hope and pray that many others will come along of the caliber of Mr. Dulles. He was the outstanding man in my opinion, not only in national life, but in international and diplomatic circles who really comprehended the evils of communism, and always kept on the straight line to the end-doing business with the Communists, but at the same time he knew he couldn't trust them, and knew it was impossible to do business with them. He laid the foundation of a future policy toward Communist philosophy. He always stayed on the line written across the fundamental principle that communism is anti everything that we hold near and

#### LACK OF INTEREST

But let me tell you one thing. If I were invited to give a talk this day, and it was announced that I would talk on communism, I think I would be talking to myself. The people do not seem to be interested-that is sad-it doesn't seem to augur well for the future, it is a shame to find that the greatest country in the world should be sold down the river of deceit and sold rapidly away because of lack of interest, lack of enthusiasm, for the ideals and welfare of the country.

People are tainted today by the material istic philosophy of life-even if we defeated the Communists tomorrow, and they ceased to exist, we would still be impressed by the materialistic philosophy of life that is very evident in practice. Whether it is embedded in the average person is to be doubted, but from the way that we are living in a marterial letter. terialistic aura, it is very evident to me that the battle of the future may not come for hundreds of years.

It is the battle for the minds and souls of men between the two philosophiesmaterialistic, that this life is the be-all and end-all, and the spiritual rooted in love of God and one another. Teach communism and at the same time, teach about God.

I think you have to understand that there are different types of Communists. of them are only nominal Communist For example, there are people who are look ing for a better social and economic order They are deceived to the extent that the may think communism is the answer their social and economic problems, specifically to problems of unemployment.

#### OTHER GROUPS

There are others who are Communists from a viewpoint of political theory. The do not accept democracy or any other of ganized form of government. They the theoretical Communists to the extent they feel th they feel that communism is the answer the worldwide problems of inequities among peoples—and so on. Then, there is a third group of Course a third group of Communists—the sincered dedicated Communists—the since bers—the card carriers—and the "fellow travelers" of the party. These individual could be sincere. Many of them are dedicated to this cated to this particular cause of communism

They are the masters of deceit because following the manifesto of communism. following the dictates of their leaders. are convinced that in order to establish universal communistic state, they can bypast every law of morality, of justice, of honest It is specifically stated in the writings Marx, Lenin, and Engels—and in the marks of Stalin and Khrushchev—that and thing goes." Their nay is not nay the yea is not yea.

ary. He is selling communist is a mission workers and neighbore workers and neighbors. He is an apostle communism. Some of them have suffer a good deal \* \* within the party itself \* \* and, yet, they remain to his fellow workers and the suffer a good deal \* \* within the party itself \* \* and, yet, they remain to his fellow workers and the suffer itself \* and, yet, they remain firm whether is through fear or misinformation, of exaggerated idea that communism solution of all the world's problems; the of the matter is that wherever you have Communist identified with the party, to man is dedicated to the cause—they are apostles of the cause. As a result, they infiltrate. They have their fifth column. They could even infiltrate into the Cathol Church but they could seem to the Cathol Church but they cause they are caused to the cause—they are caused they cause they cau Church, but they could never penetrate One of them told me himself that they ha been trying to infiltrate into the various ligious groups—"We have even been trying infiltrate into your own group, and we acconvinced that we can do it—but. We also convinced that also convinced that we cannot penetrate

#### REDS CLEVER

If we are alert—if we understand the technique of their methods—the so-could Communist mind—and if we act according and act against their subtle propagands, will find that little by little we will be ing the initiative; but, they are clever. identify themselves with good movement. They insist upon the fact that there shi be no such thing as segregation of peop on the basis of race, creed or color, anyone who believes in God in my opider follows along that idea—we are all children of God-we all were created for the same destiny-but they hold that we should love and help one another. And they violate this

Principle more than any people on earth.

They always talk about the rights of labor, the only thing the working man has to lose is his chains they say—but they put chains on the feet of millions of laborers in slave labor groups. But they identify themselves with good causes and are again masters of

The one thing Communists fear most is religion. Bob Considine, a feature writer, was telling me that in the interview with Khrushchev everything was beautiful until thee they mentioned religion. Then Khrushchev lost poise and portrayed his true character. They know full well that in order to survive they must conquer the world. Unless they do that they are done, and they will pass as at the contract the property of the passed. pass, as other false philosophies have passed from this earth. It is for the free world to hold fast to God, religion, spiritual values, and at the same time take a personal the same time take a personal to the same take a personal to the same sonal interest in their own government, and elect the best of leaders who believe in the the existence of God and in the dignity of man. Unless we have leaders of that type, regardless of political party, well, they can succumb to the deceitful propaganda of communism.

We should pray more, speak to God more; that's prayer, after all. Christ our Lord gave us only one prayer. "Our Father." We should speak to God in our own simple way, and speak to God as our Father, no matter what our faith may be. All of us can do this. If we are close to God, we will be close to one another.

NEED ENTHUSIASM

We should pray for Communist leaders. Communist Party members. They may be sincere. Let us give them credit to the ef-fect that entere. Let us give them credit to the erfect that they are sincere. If we had the enthusiasm of some of the outstanding Communists in the world, and applied it all to the community of the world, and applied it all to the community of the commu the moral principles of the love of God and love of man throughout the world, we would be a face of this would be able to change the face of this

We are not articulate enough with regard to religion and our belief in God, and the result is that materialism and secularism are creeping to the result is that materialism and secularism are recepting to the result is that materialism and secularism are recepting to the result is the result in the result in the result is the result in the result in the result is the result in the result in the result in the result is the result in creeping into our lives and we are bypassing

Not everyone can comprehend the prin-ciples behind communism, not everyone can be an be an articulate missionary for our way of life, but everyone can pray, speak to God

in behalf of what is good, fine and eternal.

If we are what is good, fine and eternal. If we are concerned about ourselves, we should be concerned about our children's children. I tell you we're not leaving them much much. I tell you we're not leaving much. They will carry the burden of the mistakes of this generation. Let's all begin to come back to God in prayer and reparation and severyone. tion and meditation. Pray for everyone, friend and foe. Let's have a comeback to the God, comeback to prayer, comeback to the ideals of this Nation under God.

God love you all.

Heavy Electrical Machinery

EXTENSION OF REMARKS OF

HON. WILLIAM E. HESS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 24, 1959

Mr. HESS. Mr. Speaker, some very interesting information was given to me recently by the general manager of the Allis-Chalmers Manufacturing Co. plant, in Cincinnati, Ohio. I asked him to furnish me certain facts in regard to the purchase of heavy electrical machinery, which is highly important to our national defense.

Under leave to extend my remarks I in-

clude the following statement furnished me, which I believe will be of interest to all Members of Congress:

During the first quarter of 1959 the following orders for large steam turbines were placed in this country.

Manufacturer	Number of units	Unit size (kilowatts)	Customer
Allis-Chalmers Do General Electric Westinghouse Do Brown Boveri	1 1	340, 000 22, 000 200, 000 325, 000 00, 000 200, 000	Consolidated Edison. Black Hills Power & Light. New England Electric. Public Service (New Jersey), Kansas City R.P.U. Los Angeles Department of Water and Power.
Do Parsons.	3 1	22, 000 500, 000	Medina Electric Co-op. Tennessee Valley Authority.

The first five items totaling 947,000 kilowatts, you will note, were all placed with U.S. manufacturers and are all being paid for with private funds.

The last three items totaling 966,000 kilowatts involve public moneys, either Federal or municipal. To produce this 966,000 kilowatts of turbine capacity will require in the neighborhood of 2 million man-hours of direct labor and something over 700,000 hours of indirect labor. In other words, these or-ders will cause this country to import some 2,700,000 man-hours of labor, much of which would fall within the highly skilled category. Machines involved are of such nature that high production methods are not possible due to the many variations in size and other factors. It is, therefore, entirely probable that approximately the same number of manhours would be involved abroad as in this

Recently there has been considerable agitation, and I believe some sympathy within Congress, to increase unemployment benefits and also for the Federal Government to create employment. The action of the private utilities, as indicated by the first five items in the above tabulation, indicates that they are helping to absorb a considerable amount of labor by placing their orders here. Where the purchases are with public funds, as in-dicated by the last three items, there is a tendency to increase unemployment, or at the best, there is no tendency to aid in decreasing unemployment. It seems to be entirely inconsistent to increase a bad condi-tion on one hand and then lay out funds with the other to alleviate that condition.

I realize that some authority in determining whether equipment of the class mentioned above is to purchase in the home market or imported, lies with the Office of Civil and Defense Mobilization. However, I believe it is the function of Congress to establish major Federal policies and I hope that you can see your way clear to establish a policy whereby heavy equipment necessary to the country's welfare and defense will be purchased from domestic manufacturers. There are a number of other strong reasons for taking such action but I am sure you are already familiar with these and I am not going to attempt to indicate them here.

Better Than Coffin

EXTENSION OF REMARKS OF

## HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. ALGER. Mr. Speaker, it is a little understood fact that today we can get more medical and hospital care for our dollar than ever before. The cost of living is much higher because of inflation over the years; that is, the dollar buys less. Therefore, the necessities of life cost more dollars.

This brings us to the record fact, seemingly a dilemma in view of the dollar's decreased buying power, that as life expectancy is being increased because of improved medical care, older citizens on fixed income are hurt. An editorial from a northeast Georgia newspaper quotes a colleague on this subject, "Today's hospital costs better than coffin."

TODAY'S HOSPITAL COSTS BETTER THAN COFFIN

"I think one reason hospital costs are going up and have gone up is that the pa-tient now comes out on his own feet rather than in a coffin."

This is the opinion of U.S. Congressman THOMAS B. CURTIS of Missouri. He goes on to say; "People get an awful lot more for \$1 of medical and hospital care today than they ever got before."

Congressman Curits believes that the increased cost of living today indicates, in many cases, an increase in the quality and standard of living. Among these increases are better medical care and longer life.

These same years of added life, though, are levying a tax of inflation on America's older citizens, thus creating an economic problem, the Congressman said. His suggested solution: Modern nursing homes which can care for the aged at reduced rates.

Government, Congressman Curris said, will always play an active role in solving social problems, but he stresses the individual's role in bringing about improvements and he urges medicine to take an interest in governmental activities at the grassroots level.-From Georgia Health magazine.

The Marine Corps and Security

EXTENSION OF REMARKS

### HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. WILSON. Mr. Speaker, a recent editorial in the San Diego Union briefly. but factually, summarizes the logical need to strengthen the U.S. Marine Corps as the Nation's force in readiness. It reflects the concern of so many of our thinking citizens that a Marine Corps of 175,000 is not adequate in these times; that a corps so reduced will not be

able to provide the three combat divisions and three air wings the Congress

has established by law.

We, of course, as Members of this body, know that in fact the three divisions and three wings will have to be maintained at considerably less than full strength so long as the corps is held at 175,000. This thoughtful editorial comment on the nature of the calculated risk we take in reducing and even eliminating combat-ready Marine units, measured against the seriousness of the continuing threat so clearly and succinctly described will, I hope, help to prompt a careful reconsideration of this problem by all Members.

Under leave to extend my remarks. Mr. Speaker, I ask unanimous consent that the editorial "The Marine Corps and Security" be reprinted in the REC-ORD. I commend it to the serious atten-

tion of our colleagues.

[From the San Diego Union, June 8, 1959] THE MARINE CORPI AND SECURITY

Despite the lessons of history and the harsh facts of the current world situation the leadership of the House of Representatives steamrollered attempts to increase Marine Corps strength from 175,000 to 200,000 men. But there is good reason to believe that the Senate will rectify a situation so inimical to national security.

Two of the most powerful Members of the Senate, Mike Mansfield, Democrat, of Oklahoma, and Paul Douglas, Democrat, of Illinois, have served notice that they want a Marine Corps of 200,000 men. And they want it at the earliest possible moment. In this they have the concurrence of Lynpon John-

son, the Senate Majority Leader.

In a recent speech on the floor of the Senate, Senator Russell Long, Democrat, of Louisiana, reminded his colleagues that they are charged under the Constitution "with raising and supporting armies." Senator JOHNSON warned that although the intent of Congress was misread last year when the Marine Corps was cut back to 190,000 men, it will not be permitted to be misread at this session.

The lesson of Korea must not be forgotten. When that war broke out, those who seek to make a ceremonial force of the Marine Corps had successfully cut corps strength back to six battalions. This was in spite of the fact that Congress had appropriated sufficient funds to support a measurably larger force.

With the chips down, the Marine Corps by a massive effort was able to provide a brigade that turned the Communist tide at Pusan. This is but one example of how the Nation's traditional force-in-readiness has fulfilled its mission with distinction.

Suez. Lebanon, and the Formosa Strait crises have followed each other in lightning swiftness. In each case this Nation's swift and telling counters to Red aggression demonstrated the way in which the Marine Corps fulfills its precise and effective role.

The philosopher, George Santayana, once made a comment that fits today perfectly: "Those who cannot remember the past are condemned to repeat it." The House leadership proved this.

Time after time the Congress has spelled out in detail the roles and missions of the Marine Corps. Only last year Congress stated unequivocally that "a strong Marine Corps is essential to our National Defense Establishment." That strength is translated into a striking force immediately available and prepared to fight a general war, a small war, or a limited war.

The Senate shows no sign of abandoning the position taken in 1958 by its Appropriations Committee: "In the considered judgment of the committee, the security of our nation demands that the Marine Corps be maintained at a minimum strength of

Certainly, history and a volatile world offer no rebuttal.

Our No. 1 Soldier Steps Down

EXTENSION OF REMARKS

## HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 24, 1959

Mr. JARMAN. Mr. Speaker, Okla-homa is extremely proud of one of its famous adopted sons, Gen. Maxwell D. Taylor, who on June 30 is stepping down from the post of Chief of Staff of the U.S. Army and retiring after a long and distinguished career.

Although the general has never lived in Oklahoma, his parents, Mr. and Mrs. John E. M. Taylor, live at 1204 Northwest 48th Street in Oklahoma City, and General Taylor frequently has visited his parents in Oklahoma since they moved from Kansas City, Mo., to Muskogee, Okla., in 1922, and several years later to Oklahoma City.

Mr. Speaker, we in Oklahoma would like to join in paying tribute to General Taylor for his outstanding record of service to the Army and to our Nation, and at this point I should like to insert in the RECORD an article appearing in Orbit, the magazine of the Sunday Oklahoma, on June 21, 1959, written by Mr. Allan Cromley and entitled "Our No. 1 Soldier Steps Down."

OUR NO. 1 SOLDIER STEPS DOWN

(By Alan Cromley)

Washington.-Gen. Mexwell Davenport Taylor, who was honored Tuesday by the Oklahoma Legislature, will retire from service June 30. Those around him are certain he won't be comfortable in a rocking chair.

He delivered a speech before a joint session prior to presentation to him of resolutions passed by both houses. They commended him on his service to his country.

They say he hasn't made up his mind what he'll do when leisure time is suddenly thrust upon him after 40 years of Army selfimposed discipline.

It's not believed that he'll make a hasty decision, although corporations are re-portedly bidding for his services as a high-

powered administrator.

At 57 years of age he is a trim, 172-pound 6-footer. He's a nonsmoker. He drinks Scotch whisky—moderately. He's a strong believer in physical fitness and practices it.

He speaks German, French, Spanish, Japanese, Korean, and some Chinese, He prefers philosophy to whodunits. He reads classical literature and likes classical music.

The beautiful wooden desk in the general's big office in room 3-D-668 of the Pentagon is always clean when he leaves it. He wades through a staggering amount of work, much of which he takes home to Quarters One at nearby Fort Meyer on weekends.

He never cusses, out loud at least. He displays anger only by a voice inflection which

his associates say is highly effective. He smiles, but not to excess.

Even so, he has a sense of humor that is fatal to an heroic pose. He tell this story on himself. It was during the war when he became a paratroop general.

He asked a group of troopers what they thought of their job. Several maintained

they liked the danger.

"Then I asked another soldier. He said I don't like jumping out of airplanes but I like to be around people who like jumping out of airplanes."

"Those are my sentiments entirely."

And even more cogently, Taylor's aversion to the Homeric phrase (except when uttered by Homer) is illustrated by two inscriptions at West Point.

On the walls of a gymnasium are these words: "Upon the field of friendly strife are sown the seeds that, upon other fields, on other days, will bear the fruits of victory.

Taylor's words? No. sir. Those were put there by Gen. Douglas MacArthur when was Superintendent of the Academy.

Along came Taylor, years later, as superintendent. His comment on physical fitness was inscribed on a locker room scale. says, "This scale is to remind the officers of West Point that a potbelly cannot lead the corps of cadets."

On this subject, physical training, Taylor leads as well as directs. "I've often told my officers that a man's on duty if he's exercis-

ing." he says.

He's probably the best 57-year-old squash and tennis player in the country—certainly in the Pentagon. He plays every day. If the weather permits, he plays tennis of sold collegiate caliber, and his partner is likely to be Lt. Col. Charles Daniel one of his three be Lt. Col. Charles Daniel, one of his three aides, all-Army doubles champ of 1948.

If the weather is bad the general play squash at the Pentagon with Lt. Col. Bernard

Rogers, another aide,

Rogers is 37 and appears to be in good condition but he admits to being "glad when the general takes time out for a breather. To the comment that this seems rather strep uous for a 57-year-old, even it is Taylor, aide replies that the general does not overed it, does not prolong the game beyond 30 of 40 fast minutes. 40 fast minutes.

In fact, he seems to be a man of moders tion in everything but self-control. If all this adds up to a robot, which it certainly seems to, it's a wrong impression, declare the

general's intimates.

They say he's so well organized in his personal habits that he has been able to learn his languages, attend about every school the Army has to offer, keep in tip-top physical trim, maintain a clean desk—and still have time to prake and seed and still have time to make and keep friends.

The general is said to be a gracious hos He's married and the father of two sons.

John, the older, is an employee of "a Government agency". ment agency." (This is a Washington et phemism for the supersecret Central Intelligence Agency.) The other son, Thomas is in his second vector. is in his second year at the U.S. Militan Academy, where the general ranked fourth the class of 1922.

Why he wasn't first is hard to understand He does not like to sit still. He's alway on the go. He's the nearest thing to per petual motion yet developed by the Pents

All this brilliantly directed energy will be lost to national defense next month when the general complete. the general completes 4 years as the Army of top military officer. (Civilian Secretary the Army Wilber Brucker is his boss.)

Were it not for fate and his basic disagre ment with certain administration defend policies, Taylor might be headed for the only higher military lob received higher military job possible—Chairman the Joint Chiefs of Staff.

This is technically impossible. Air Force Gen. Nathan Twining was recently appointed to another 2-year term as Joint Chiefs of Staff Chairman. He's expected to be able to return from a lung cancer operation to his lob by the end of June.

But even if Twining's health should fail, Taylor probably would not be his successor, in the opinion of everyday Pentagon re-

Well known is his view that the administration has neglected the Army and slighted preparations for limited wars. He does not believe that future ware will be won solely or

even largely by airpower or nuclear weapons.

In July 1955 he pulled no punches in telling. ing Congress that to run the new Reserve program he had to have 13,000 more men than provided by administration cutbacks.

His speeches reflect an intense belief that the runtil he nithiled to death

the United States could be nibbled to death in plecemeal encroachments—as well as blass. blasted to bits in one big nuclear holocaust. Standing behind him in this view, despite

the frowns of administration massive taliators has been Army Secretary Brucker. Only a door separates their offices. Each day at 2:45 p.m. Taylor strides through the door for a 30-minute conference with his civilian counterpart. On Mondays they have lunch lunch together.

It would have been interesting to have eavesdropped during recent Pentagon shifts caused by the unexpected death of Donald A Quarles, Deputy Secretary of Defense, and

the serious illness of Twining. Brucker would have been a logical choice as Quarles' successor, but the President chose outgoing Navy Secretary Thomas S. Gates, Jr., who in a recent speech urged the elimination of the successor of the elimination of the second seco the elimination of very expensive mass destruction, single-purpose weapons systems

to provide additional funds for limited war

preparations.

However, his words did not win Army supto meet limited and cold war threats was greater reliance on the Marine Corps and aircraft carrier task forces—not a big Army and more airlift.

It remains to be seen how outspoken Taylor will be once he leaves the service and the accompanying mandatory allegiance to the Commander in Chief.

Rumor, of questionable accuracy, had it at one time that he would write critical memoirs. However, he reportedly was very pleased. bleased when the President gave him perma-nent four-star status for retirement.

This would not necessarily deter a man or Taylor's demonstrated integrity, but he's not likely to follow the path of his predeces-sor as Chief of Staff, Gen. Matthew Ridge-way. way, who said, "The pressure that was brought on me to make my military judgment conform to the views of higher authority was sometimes subtly, sometimes crudely applied."

Taylor has the admiration of Eisenhower for his the admiration of as a peace-

for his brilliance in combat and as a peacetime administrator. His biography crowded with achievement.

For instance, on September 7, 1943, Taylor was sent by British PT boat and Italian corvette the vette through enemy lines to Rome 24 hours ahead of the planned airborne operation and scheduled invasion of Italy.

In uniform, but disguised as a prisoner of war, he sneaked through enemy territory to an all-night conference with Marshal Pietro doglio, who had secretly surrendered his Italian troops to allied forces.

He finally convinced Taylor an airdrop would be suicidal. "Calling it off was the toughest decision I ever had to make." says Taylor, who was anxious to demonstrate the val. the value of paratroops in such a situation.

Elsenhower later said that Taylor took risks on that mission which were "greater than I asked any other agent \* \* \* to undertake during the war,"

Taylor was awarded the Silver Star, which was followed by the Distinguished Service Cross for his participation in a predawn D-Day jump with elements of the 101st Airborne Division into Normandy.

That was when he was put in a very un-

general position. He got separated from his troops. He was crawling along a hedgerow.

He heard someone on the other side. Was it friend or foe? Then came a chirping noise, somewhat like a cricket, and the general knew all was well.

He fell into the arms of an American GI, and they greeted one another like long-lost brothers. The chirping noise had been produced by a device given to paratroopers for mutual recognition in the dark.

And then there was Bastogne, where the 101st Airborne Division, then commanded by Taylor, was surrounded in the Battle of the Bulge. It caught Taylor in the United States, he having been summoned to the Pentagon for briefing.

He flew back and made his way through enemy lines to the besieged unit, where Brig. Gen. Anthony McAuliffe, assistant division commander, had just uttered his famous "Nuts" reply to a German demand for sur-

It isn't likely that Taylor would have ever considered, or at most uttered, such a dramatic and headline-catching rejoinder.

But he appreciates it just the same. He says it was "the greatest monosyllable of the

It's hard to predict where the general goes from here. If his predecessors are a criterion, it will be to a good job in business or in-

Ridgway is chairman of the Mellon Institute for Industrial Research at Pittsburgh, Pa.

Gen. Omar N. Bradley, who preceded Ridgeway in the Chief of Staff job, is chairman of the board, Bulova research and development laboratories.

But come what may, General and Mrs. Taylor won't lack for groceries. His retirement pay will be \$15,300 a year.

And even if he has to occupy that rocking chair for a while, he can read that stack of German and Japanese newspapers that he subscribes to.

#### Veterans' Pensions

EXTENSION OF REMARKS OF

#### HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. AYRES. Mr. Speaker, on June 22, 1959, there was an article in the Wall Street Journal regarding the pension bill, H.R. 7650, which passed the House

last week. This is a good article and I think all Members will find it helpful. THE VETERANS' PENSION BILLS

Some dispute and confusion has arisen over a provision of the major veterans' pension bill passed by the House. It is really two bills not one. The first by basing veterans' pensions on need and by other changes would result in savings estimated at \$12 billion over the next 40 years. But the second by qualifying a large group of present and future widows of World War II and Korean war veterans for pensions, would add some \$22 billion over the same period above the cost of the present program for widows.

This results from so-called widows' equalization. Under present law the widow of any World War I veteran qualifies for a pension if she meets the test of need. But widows of veterans of the later wars do not qualify unless the veteran at time of death had established some degree of disability incurred during his wartime service. The bill would remove this requirement.

Regardless of the basic merits of granting pensions to veterans' widows, it seems only fair that widows of veterans of all wars should be treated alike. To the extent that a widow without other means is enabled to get along because of a pension, she will not be a charge on other publicly financed relief. The Eisenhower administration has backed the concept of widows' equalization in the past, though it made no formal recommendation this year.

Thus the addition of this provision is an Improvement over the present system. The additional costs of widows' equalization, however, provide an additional reason for the Senate to tighten further the tests of income for both pensioners and widows,

Remarks of Congressman Lane at Annual Banquet of Veterans of World War I in Boston, Mass.

EXTENSION OF REMARKS

## HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a portion of my remarks at the annual banquet of the Veterans of World War I of the United States of America at the Hotel Bradford, Boston, Mass., on June 20, 1959.

REMARKS OF CONGRESSMAN LANE AT ANNUAL BANQUET OF VETERANS OF WORLD WAR I IN BOSTON, MASS.

Greetings: You saw what happened in the U.S. House of Representatives last Monday. A pension reform bill was passed. Its purpose, on the face of it, was to scrap flat pension payments and substitute slidingscale benefits, based on need.

There is not a man or woman here who opposes higher pensions for veterans with non-service-connected disabilities who are in need. Or to provide for their widows and their orphans.

This is nothing new. We have been for

this all the way.
What we do object to is the manner in which this worthy cause is being used to block progress toward a pure service pension for the veterans of World War I.

Representative Van Zandr, myself, and 32 others, opposed the bill for this reason alone.

Although the bill was sweetened up with temporary increases to beguile the innocent, we saw its real though hidden motive.

The needs test is the trap.

They don't intend to hit you all of a That would be too obvious. Slowly but surely, through the application of the needs test which will not only take into account your outside income but that of your wife's as well, they propose to choke off most pensions for non-service-connected disabilities.

This is a challenge that must be met by a strong and sustained reaction in favor of a service pension for all World War I veterans based on age, and without the slippery sliding scale that makes a mockery of the pension reform bill that was passed by the

House last Monday.

The report on that bill came out last Friday. We were given no opportunity to consider the testimony of those who were for, or against it. Amendments to the bill were prohibited. It was rammed through under a gag rule.

I know many Members who voted for this bill with great reluctance. They did not want to be recorded in opposition to a veterans' bill, even though that so-called veterans' bill was a betrayal of the veterans of World War I.

The sponsors of the bill knew this and took advantage of it, forcing Members to vote for it against their will. The House was placed in the awkward position of supporting it, or, being cornered like the man who was asked: "When did you stop beating your wife?"

There were not many with the courage to vote against this bill that, in the long run, and in fact, will be detrimental to the best interests of all veterans.

The terminology of this bill with its needs tests, places veterans in the same category as recipients of old-age assistance, depriving them of the right to receive a pension based on age and honorable service.

In response to this veiled insult we should redouble our efforts to win a genuine pension for World War I veterans, consistent with similar pensions that were provided to the veterans of previous wars.

This is the purpose of our organization, but not the only purpose.

As veterans, we insist that our Nation shall be fair in its treatment of the men and women who served it so well in time of national peril irrespective of the wars in which they served. As we look at the record, we feel that the veterans of World War I have been the victims of neglect. And we are determined to correct that oversight.

As veterans who know firsthand, the cost unpreparedness, we are also concerned with the state of our Nation and its leader-

In the pleasant month of June, that is set aside for beautiful brides and starry-eyed graduates, we live again through our children and grandchildren, the beginnings of a brave, new world.

In the role of senior veterans, we are like the elder statemen who, out of the accumulated wisdom of their experience, do not rest on memories, but lead our people toward tomorrow.

Ours is a great and fruitful land where there are hurdles on the road of progress but no walls.

The only factors that slow our development are lack of vision and lack of will.

As we look around our Nation, we see most of our people busy at their work, providing for their families, improving their standard of living.

As individuals, most people are doing well. But what about our national goals?

Is there confident direction and purpose, able and willing to do those things which can, and must be done?

In Washington, one senses a cautious mood, basing policy on things as they are, watching and waiting.

As if afraid to go ahead. Negative. Not positive.

In spite of so much that needs to be done, and can be done if the tremendous resources of our Nation are fully employed.

This constructive force, once liberated, could finance many more development programs and balance the budget at the same

This supercaution at Washington, this lack of faith in the capacities of our people, is doing our Nation and the cause of freedom a great disservice. If our Nation is realizing only three-quarters of its present potential, the reason for this is lack of leadership that can be traced to the hesitation at Washington.

In urban redevelopment, airport con-struction, medical research, education, aid to underdeveloped countries, foreign policy, and other problems, there is lack of imagination, planning, and initiative.

Meanwhile, deterioration does not stand

The other day, I happened to see a survey of a Massachusetts industrial city.

More than 70 percent of the housing

units were built in 1919 or earlier.

Almost 30 percent had limited plumbing facilities, or were in need of substantial repairs.

Only 40 percent had central heating. The oldest school, still in use, was built

in 1876. Most of the industrial buildings date

back more than half a century.

This is not an isolated case. York City to the smallest village, there is a huge backlog of essential building; public, residential, commercial, industrial, the community services that go with them, that would provide work for hundreds of thousands of people in manufacturing, construction, and related industries, and would open up new economic opportunities for many more.

The airplane manufacturing, electronic, and nuclear energy industries are devoting most of their research and their production to meet the needs of national defense. But there is no reason why they cannot be enlarged to provide for the needs of people, and the needs of other industries, thus serving as a spur to our economy, thereby increasing our national wealth.

From the neighborhood variety store to General Motors, there is not one enterprise in the United States, outside of agriculture, that could not produce more, or sell more, given the encouragement and the leadership that must come from Washington. Economic expansion will not be stimulated by timid policies. Trying to balance the Federal budget in line with present revenues, is putting a brake on America's progress. No wonder that so many Americans feel frustrated. Instinctively, they know that the vast possibilities of our Nation, its brainpower as well as its horsepower are not being given the fullest opportunity to show what they can do.

It is rare for a nation to distrust its own power for good.

Yet, in the field of foreign affairs, we hang back like a nation that has run out of original ideas. We wait, for the Com-munists to make their next move, and then try to repair the damage instead of preventing it.

We have a surplus of farm products that cost us hundreds of millions of dollars just to pay for the storage. We can't dispose of it in the United States without wrecking the farm economy. At the same time, we don't know how to give it to the millions of starving people of India, who desperately need it but cannot pay for it.

Has it ever dawned upon our Government to offer some of it to the millions in undeveloped countries who do not have enough These people have been reached to eat? by us with this generous offer which is proof of our good will toward them. But this takes imagination, and bold leadership, and a knowledge of the way that freedom can appeal to human beings the world over.

A Lincoln-or a Wilson-would touch the heart of mankind with such a pronouncement—and then would follow through with prompt and effective relief. It would take only part of the present wasteful storage costs to ship this agricultural surplus have-not nations. Before this inspiring example of humane leadership, Communist

propaganda would beat in vain. We would have taken a positive step forward in winning the trust and the faith of mankind. But, Washington does not move.

This is but one example of the poverty of ideas.

To hold the line, resting upon past achievements, is not enough.

We are not looking forward to the dawn of a new age. We are in it, and events are racing ahead of our leadership.

The carefully worded statements out of Geneva reveal how much we are on the defensive.

The Communists have been pushing, and confusing, and blackmailing us to get out of West Berlin, where the allies maintain small forces under an agreement signed by World us and the Russians, at the end of War II.

But no demand was made by the Western Powers that Russian forces should get out of Lithuania, Latvia, Estonia, Poland, and other countries which they occupy in violation of the sovereign rights of those captive people

Another illustration of our lack of initia tive.

What distresses me, and many Americans is that we have a wealth of human as well as material resources that we are not using

To expand our own economy so that we may also help other people, and thus defeat the fraud and the danger that is communication.

To achieve this mobilization of strength for peace and progress we must look to American people to provide the leadership that we are not getting today.

I realize that this is a serious charge. but the times plead for creative ideas and vigor ous action

When will the United States wake up? I believe that the veterans of World Walf

can help to provide that missing leadership.
In concert with other groups we must rouse the sleeping glant of public opinion. Sparked by their great and generous idealism, and powered by their magnificent abilities, there is nothing that ties, there is nothing that the American people cannot accomplish.

This, then, is our patriotic duty to the United States and to the cause of human freedom. freedom.

Uncle Dan Chase Preaches Brotherhood Through Medium of Competitive Sports

EXTENSION OF REMARKS

## HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. DOOLEY. Mr. Speaker, one of the outstanding gentlemen that it has been my privilege to know is Dan Chase University of Maine Phi Beta Kappe who has devoted a great part of his to teaching men the spiritual value

Dan Chase, chief motivator of the Sportsmanship Brotherhood, an organization dedicated zation dedicated to spreading the dot trine of fair play and human decency an international scale, has been a friend of some of the greatest athletes of time. Devereux Milburn of polo fame Bobby Jones of golfing memory. Ruth, Jim Thorp, and a host of others knew him well and respected him for his vitalism, sincerity vitalism, sincerity and dynamic person

ality. Dan Chase carried their deeds to young men all over the country, preachthe dictrine of sportsmanship. Truly he has enriched the lives of many with selfless purposefulness and inherent dignity.

Following is a tribute to him which arst appeared in the Long Island Sun-

day Press:

[From the Long Island Sunday Press, Dec. 20, 1953]

UNCLE DAN CHASE PREACHES BROTHERHOOD THROUGH MEDIUM OF COMPETITIVE SPORTS

(By Johnny Dunne)

"We need more sports, not less. But sports for the purpose of developing sportsmanship, for developing friendship, understanding and good will; not sports just gate receipts, nor sports mainly for public entertainment.

The speaker was white-haired Dan Chase, the 68-year-old sports missionary from Jackson Heights—and points throughout the world—who has devoted his life to developing American youth through sports to build character and ideals for successful living.

To meet "Uncle Dan," as the gentleman

is known by his endless army of admirers, is a wholesome pleasure. To hear his vibrant voice with a dynamic personality expound the virtues of sportsmanship, pure amateurism and clean professionalism, is a hever-to-be-forgotten experience already enloyed by many thousands for almost two generations.

What a full life, Uncle Dan has lived through "and I will continue to live through. with the grace of God." From his humble start on Thanksgiving Day (Nov. 26) of 1885 or the small town of Baring, Maine (total population of 350), he has carved a career that makes a "Who's Who" look puny in print.

From Baring High, Dan went to Hebron Academy, then the University of Maine, where he played varsity baseball and football 4 Years, captained the hockey team, starred on the chess team; was class president, and carred the right to wear a coveted dent, and earned the right to wear a coveted Phi Beta Kappa key, to name a few of his

The honorable gentleman, too, has been director of athletics at Hamilton College and Company of athletics at Company of athletics at Hamilton College and College at Hamilton College at Hamilt and Connecticut State College; specialist in physical training for the New York State Military Training Commission, chief of the Bureau of Physical Education of the State of New York State Of New York State Of Many Boys' dreau of Physical Education of the State of New York and director of many Boys' Clubs and 4-H Club camps. He has devoted time to a physical time to summer lecture courses on physical education and recreation at Cornell, Columbia bla. Springfield, Cortland State Teachers, Battle Creek, etc.

And for organizational work, he started the first Statewide physical ability test in this Statewide physical ability test in State, the first State tournaments in baseball, track, tennis and skating; was the arst President of the New York State High Schools Schools' Athletic Association, organized the New York City Baseball Federation (sandlot) and launched the Cambridge University (England) rugby football tour. He has been, since it. since its founding in 1926, the executive director tector of Sportsmanship Brotherhood, and execution executive director of the New York City Park Association since 1950.

The above is just a brief idea of how dynamic Uncle Dan Chase has been. Lots more to the let's get more to his glowing record but then let's get onto the slowing record but then leven-onto the business beforehand, the even-tempered gentleman declared. The writer, tempered gentleman declared. however gentleman declared. The within 1937, wanted to get across the point that for outstanding work with boys, did he not?

The tending work with boys, did he not?

The Jackson Heights luminary conceded this point. He also conceded that he has given thousand and old siven thousands of talks to young and old alike alike, on the one theme, "Sportsmanship." which field he has been associated since his college days at Maine. We know Dan, too, could have made the grade in professional baseball, but had preferred to "devote my life to developing American youth." This job he has done most effectively and "I will continue to do 'til 'twilight and evening star and one clear call for me, and may there be no mourning at the bar when I put out to sea.

Dan long has been known to have the ability to take it. The experience he went through when "I wrestled with an electric train on my way to make a speech at the Norfolk, Conn. YMCA on February 14, 1937," the writer will never forget. Dan had gotten off a station before his scheduled stop. When he realized he was at Darien, he attempted to catch up with the train. He managed to latch onto the rear car and fell. The dreadful experience resulted in his having both shin bones shattered and a shoulder collar bone and 12 ribs broken, as well as two vertebra pushed together.

"You will remember that several germs and diseases tried to put me out of the game then, but did not succeed. Though I spent a year more in a cast and brace, I came back, good as ever, and took the same train and gave the same speech on sportsmanship, indominable courage in the face, 1 later to a day." We nodded assent. It was an example of almost insurmountable odds.

In 1926, Dan had done a grand job promoting sportsmanship in the New York schools and developing chapters of the Sportsmanship Brotherhood. He was persuaded to become executive director of the Sportsmanship Brotherhood. He's had that

The purpose of the Brotherhood is "To foster and spread the spirit of sportsmanship throughout the world." Through the agency of sports and games, the Brotherhood has been able to bring about a better understanding and fellowship between the peoples of the different countries of the world and to build up a basis of real brotherhood based on understanding and good will.

Remember what Galesworthy once said: "When the spirit of sportsmanship reigns in international affairs, the cat force which now rules will retreat to the jungle." The spirit of sportsmanship is "the spirit of the Sermon on the Mount, the Golden Rule, and the Ten Commandments, applied to the field of physical activity," the 68-year-old gentleman stressed.

"Bishop Manning once said, 'A well played game in which the rules are kept is as pleasing to God as a prayer in a great Cathedral.'

Dr. Fosdick said, in addressing a group of coaches and athletic leaders, "You men have the approach to the heart of youth in a way we ministers do not have because you speak the language of youth. When you say, 'play fair and give your opponent a square deal,' you have more effect than when we say 'Love they neighbor, etc.'" added the sports mis-

sionary.
At this time, the patriarch of sportsmanship, lapsed into poetry, his own, which ex-emplifies the spirit of being a winner, even

"Did you miss the spare, did you get a split, Though you looked for a strike on a per-

fect hit? Did you let your team down when it count-

ed on you? Did you feel like a hound caught chewing a shoe?

Did you do your best, and not cuss a bit, When the pins stood up, that belonged in the pit?

Then you won just the same, and in life's bowling game

You're sure to go far and earn lasting fame. To keep your temper is not easy to do. When all the bad breaks seem coming to you.

Remember one lesson, keep throwing the

The best you know how, and the pins will soon fall.

For you make your own breaks if you hit

the wood right,
And the only defeat is, to give up the fight. The breaks come and go, in life as in play, So keep playing the game and you'll win anyway.

### The Liberty League of Santa Ana. Calif.

EXTENSION OF REMARKS

### HON, JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I would like to include the preamble to the constitution of the Liberty League, Inc., of Santa Ana, Calif.

It is very apparent to me that there is an awakening over all the country to the realization that this Republic must return to the basic principles set forth by the framers of the Declaration of Independence and Constitution. The Liberty League, Inc., is only one of many such organizations which have sprung to life throughout my district as well as the whole Nation. It is my belief that these organizations will prove as valuable to this Nation as did the minutemen of 1776.

The preamble follows:

The principles upon which this organization is founded are set forth in the following preamble to the constitution of the Liberty League Inc :

"Having recognized that our rights to life, liberty and the pursuit of happiness are given to, us by God, and that we are dependent upon the U.S. Constitution to protect these God-given rights, we shall actively oppose all attempts to substitute atheism, alien ideologies, or anti-Christian traditions in place of our Christian concepts.

The authors of our Constitution had unusually shrewd comprehension of the dangers of concentration of governmental authority. They sought to insure, for all time, that the Federal Government could not attain a position of dominance over American citizens, but that it would ever remain an instrument for the preservation of law and order, and that it would be subservient to the people.
"Under this Constitution, unique in all

history, the United States developed from a weak nation into a leader among nations.

"For 150 years the Constitution was upheld by our representatives in Government. But during the past 30 years we have witnessed evasion, selective enforcement and total revision of our Constitution via the back door of court interpretation, treaties, and executive agreements. As a result, government by men is being craftily substituted for government by law; powers not dele-gated to the Federal Government are being grossly usurped; countless unauthorized functions are being undertaken by the Federal bureaucracy, and we are rapidly trending toward the very dictatorship which our Constitution was specifically designed to

"The world is now heavily engaged in a cold war between the principles of dominant government under which people are pawns in the control of their leaders and the principles of restrained, limited government under which peoples are sovereign citizens, as conceived by our Founding Fathers and exemplified in the U.S. Constitution.

'The United States is currently abdicating its position as a champion of its own constitutional principle of limited government, and is increasingly adopting the concept of omnipotent government.

'Therefore it is necessary that we now take action to regain the rights usurped by the Federal bureaucracy and demand that they be returned to the States and to the people as provided in our Bill of Rights."

The Liberty League appeals to all citizens who wish to be currently informed regarding legislation, and who wish to take action through this organization in the submission of petitions requesting investigation and/or other remedial action against subversive activities, Communist infiltration, and viola-tions of the Constitution of the United States.

#### Twenty-fifth Anniversary of FHA

EXTENSION OF REMARKS OF

## HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. DERWINSKI. Mr. Speaker, rarely has a Government agency served as practical a purpose compatible with the traditional American private enterprise system as has the Federal Housing Administration. This week on June 27 we are commemorating the 25th anniversary of the existence of the FHA, and I should like to call to the attention of the Members of Congress some pertinent facts in its history and its future.

The fundamental concept of the FHA is that it strengthens private institutions through enlightened Government co-operation rather than through the approach to direct Government lending as advocated by many who lack faith in American private financial institutions. In its 25 years, the FHA has been instrumental in the expansion of American home ownership and has materially contributed to all facets of home construction and home financing.

Another important point is that it is a fully self-sustaining institution with sufficient reserves at this time to weather any anticipated economic storm. stands today without debt to the taxpayer—a rare thing in this day and age of excessive squandering of public funds.

The FHA has been one of the few governmental institutions that has maintained its original objective over the years and has rarely deviated from its policy of financial soundness.

Obviously, an operation as large as FHA cannot claim perfect administration, but I can say truthfully it has fewer critics in proportion to its activities than any other governmental agency of which I can think.

I, personally, object to the increasing paternalism in the operation of the FHA and its assumption of many responsibilities which should be left to lending institutions, builders, or borrowers themselves. Over the years, existing for the most part under the socialistic New Deal regimentation, it is not surprising that the FHA has acquired a degree of bureaucratic redtape that should be removed as soon as possible.

The future indicates that the FHA will continue to serve a constant area in the field of home financing. While repeating my conviction and faith in its principles and in the sincerity of its administrators, I feel it must undergo drastic modification since its present complex structure and cumbersome procedures may be poorly adapted to the challenges of the future.

Numerous private organizations and institutions, which over the years have had close association with the FHA, have made recommendations as to the improvement of its operation to produce simplicity, flexibility, and improved operation.

As a member of the House Banking and Currency Committee, I will certainly devote my time and energy to cooperating with the agency and American private enterprise in an effort to provide maximum possible utility of the FHA with a minimum of redtape and bureaucratic impediments.

There is no reason for lack of confidence in the future if we continue to expand the investment of American families in their own homes, since an obvious irrefutable fact is that home ownership is one of the basic safeguards of American liberties.

## Views of an Editor on Minimum Wages

EXTENSION OF REMARKS

## HON. LEONARD G. WOLF

OF TOWA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks I wish to insert into the Appendix of the RECORD a letter I received from Mr. Roland White, the editor of the Dubuque Leader. The Leader is a labor newspaper and Mr. White is a citizen first and a unionist second. As a matter of fact, his brand of unionism is the highest form of citizenship. Mr. White outlines the problem of the minimum wage in a sensitive and incisive way. I hope that my colleagues will read his statement with care:

Congressman LEONARD G. WOLF, House Office Building, Washington, D.C.

DEAR LEN: Your letter of May 6, and a subsequent press release from Secretary of Labor Mitchell which I perused just today prompt me to put a portion of my views about wagehour law amendment on paper.

Secretary Mitchell's statement accompanying a report by his Department on the \$1 Federal minimum which went into effect March 1, 1956, included these remarks:

"I am recommending that the Congress give the protection of the Federal minimum wage law to several million workers not now covered by the act. These unprotected workers very much need a Federal minimum wage. Their chances of receiving this protection would be jeopardized by an effort at the same time to raise the minimum wage for workers already covered by the act. sequently, I am not recommending an increase in the minimum wage at this time

It seems to me that there are a number of parties whose interests deserve to be considered:

1. A substantial portion of employees not now receiving \$1 an hour or the benefit of a 40-hour week should get both.

2. Employers now paying less than \$1 an hour—in many cases substantially less should be given a transition period of temporary duration in which they will first move up to \$1 and then gradually to the \$1.25 level of other employers who are not their competitors.

3. Employees now receiving \$1 to \$1.25 on hour, covered by the act, constitute an important segment of buying powers. Secretary Mitchell's supporting statement that many workers are now being paid the bare minimum" means that they have not had a raise since March 1, 1956. injustice to them.

4. Employers who are now paying in excess of \$1 an hour either voluntarily or by agree ment with a union, in some cases substantially tially in excess of \$1, deserve to be spared the unfair competition of others, located mostly in the South.

5. Family-type small businesses which may not be put under the coverage of the act can nevertheless have the living stand ards under which they operate given protection by placing chain stores and larger units which compete with them under the act. In the past some of these larger businesses have been averaged and act. nesses have been exempted on the ground that they compete with the home-owned small stores. To my mind it is the small stores which need protection—not from competition but and competition, but from competition based on a standard of living too low for a mer The large bush chant and his employees. scales in their favor in competition with the little family merchant.

When a merchant does a substantial portion of his own work, it is unfair to have that same work when done in another business prices at hour. In the long run I believe he would be stronger competitively even if he well placed under the act himself. The same true in application of the 40-hour week. Large stores which are permitted to operate longer hours without premium pay are in effect undermining the self-amployed comeffect undermining the self-employed com petitor.

I hope I have made myself clear. time when the effects of automation giving added strength to demands for work giving added strength to demands for work weeks shorter than 40 hours where work have strong unions, I believe every effort is need to make the 40-hour week available to the millions who do not yet have it we do not, the march of events will crest elesses of the special privileged and the classes of the special privileged and underprivileged in the ranks of labor, widen ing the gap which already exists.

Having had 18 years of grassroots experience with this problem—the entire period ence with this problem—the entire profit of the wage-hour law except for my 3 year of military service during the "freeze wages otherwise—I believe I am in a power of the wages of the military service wages of the a problem which is not simple, one in which tion to comment with some authority the interests of divergent groups need be taken into consideration. I do not class to know the complete area. to know the complete answer, but I am co fident that my general line of thinking sound for the Second Congressional Distant and for the Nation as a whole. Any leader or employer the second Congressional Distant and for the Nation as a whole. leader or employer representative who you otherwise may be viewing the proble arrowly.

Sincerely and fraternally.

ROLAND A. WHITE.

Edito's. too narrowly.

### Depressed Area Legislation

EXTENSION OF REMARKS

### HON, JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. SAYLOR. Mr. Speaker, I com-mend to the consideration of Congress, R.R. 5440, a bill which I have introduced for the purpose of amending the Interhal Revenue Code of 1954 to stimulate the economy of depressed areas. My bill would exempt a company from the corporate income tax for a specified period where its operations are carried on in surplus labor districts and provide employment for at least 200 persons throughout the taxable year.

This measure is designed to provide for quick results. With proper encouragement of this type, a corporation could indertake operations having an immedate beneficial impact upon the negected community involved. I use the word neglected advisedly, for the plight of America's surplus labor areas has been disregarded entirely too long.

Year after year, the Secretary of Labor diligently provides an accumulation of statistics categorizing the degree of distress of the affected areas, and year after year the people of those areas wait in vain for the action necessary to restore to them the opportunities for employment of which they have long been deprived. Promises of remedial legislation have not been forthcoming. Instead of getting something into the books that will answer the prayers of these impoverished citizens, Congress fumes, fusses, and fumbles as the days, weeks, months, and years move on.

I resent the shabby treatment to which our unemployed working forces have been subjected. Six months of the current Congress have gone into the records without enactment of a measure to open new job opportunities for those who are in greatest need of work. The situation is particularly deplorable in view of the fact that U.S. Treasury subventions are so easily obtainable by foreign nations seeking means to elevate their economic

What can our people anticipate with regard to distressed area legislation, Mr. Speaker? The workable bills which I and other Members of Congress introduced for the purpose of invigorating business and industrial activity in surblus labor districts are apparently giving way to omnibus proposals that will include a complexity of stipulations entrely divorced from the original intent of the authors.

The Secretary of Labor has time and again established the validity of appeals from chronically distressed areas, and any at any attempt to saddle these regions with the attempt to saddle these regions of the temporary economic problems of the temporary economic presents denetropolitan constituencies presents delaying tactics that extend and intensify the hardship and poverty of a wide segment of the populace.

Despite the obstacles that confront the distressed area bill, I am hopeful that my colleagues will come to recognize the urgency of the need for this legislation. Meanwhile, I am confident that H.R. 5440 will serve to initiate resuscitation of the economy of communities in my district, and in other areas where depressed conditions have persisted over a long period of time.

As part of my remarks, I would like to insert an article written by Mr. William Black, a newspaper reporter for the Johnstown Tribune-Democrat, and an editorial from that newspaper dated June 17, 1959:

[From the Johnstown (Pa.) Tribune-Democrat]

JOBLESS RATE HERE ABOVE UNITED STATES (By William Black)

The Johnstown district is not making employment hay while the job sun shines brightly on the Nation as a whole.

The return of boom times elsewhere finds Cambria and Somerset Counties in the shadows—still 1 of 27 sections across the Nation having 1 of 8 breadwinners (12 percent or more) out of work.

As a matter of fact, this region does slightly worse than most of the other 26 hard-hit areas. It has about 13 percent on the idle rolls.

In addition, some of those still on payrolls are working less than a normal 5-day week.

Two economic tragedles accentuate the local situation.

First, the district has been in the job doldrums for 10 years.

Second, the Johnstown office of the Pennsylvania State Employment Service (covering Cambria and Somerset Counties) reports that there are no indications of any appreciable improvement in the foreseeable future."

When Gov. George M. Leader visited Johnstown in March 1958, to discuss his crash program to "get men back to work as quickly as possible," the Pennsylvania State Employment Service office here counted 12,400 unemployed in Cambria and Somerset

Today the figure is 12,200. Month-bymonth jobless figures show:

Month	1958	1959
January February March April May June July August	11, 200 12, 100 12, 400 13, 600 15, 400 16, 900 18, 100 17, 900	16, 500 15, 700 14, 800 13, 400 12, 200
September October November December	17, 300 16, 800 16, 700 16, 300	

May's 12,200 jobless figure contrasts markedly with the national trend. Across the country, employment rose by a million in May to a record 66,016,000 for the month.

Unemployment fell by 238,000 to 3,389,000. Nationally, the May total represented the largest number of Americans with jobs for any month of May. It compares with an alltime peak of 67,221,000 in July 1957.

Percentagewise, the national ratio of unemployment to the labor force is 4.9. In Cambria and Somerset Counties, the comparable figure is 13 percent.

The reason for the job erosion? Long ago the district put its eggs in two baskets-

Coal is the chief villain. In the postwar era the bituminous industry in the Central Pennsylvania fields has been a dying dynasty. But its demise has been so gradual as to go almost unlamented.

Here's a startling fact: During some of the darkest years of the depression of the 1930's, three times as many coal miners were em-ployed in Cambria County as are at work

For example, in 1936-a mighty black year-20,569 men boarded mantrips. As of last December 31, the total had dwindled to 7.360.

Worse yet, the number has fallen off at least another 1,500 since January 1, according to the PSES. As a matter of fact, mine employment in Cambria County is at the lowest level since the Pennsylvania Department of Mines began keeping the boxscore

Somerset County is not any better off. employed 8,080 miners in 1936 and only 2,417 at the end of last year

Indiana County had 7.916 miners in 1936 as against 3,283 when 1958 bowed out.

The comparable figures for Bedford County, which never was any great shucks as a coal producer, are 811 and 251.

Coal, of course, has taken giant strides down the road to produce the course.

down the road to mechanization. The other factors which have militated against a continued high employment level-such as a tide of residual oil imports, competition from other fuels, soaring transportation rates, unenlightened legislation—have been expounded repeatedly by the operatiors.

Increasingly, a competent corps of industrial and business leaders is bending to the

task of revitalizing the coal industry.
Pennsylvania Electric Co. and the Curtiss-Wright Corp. are prominent in the move-

Penelec currently is conducting a "coaltricity" campaign-a plan for greater use of electricity and thereby greater consumption of district-produced coal.

"Coal and electricity are inseparably tied together with the economy of the area, and we in Penelec sincerely believe that to-gether they may well become the 'Prosperity Twins,' " said Louis H. Roddis, Jr., Penelec president.

Mr. Roddis expressed the opinion that the "twins" will revive the bustling commercial and industrial activity which many communities have lost through the decline in coal production.

'Current research at Curtiss-Wright is going to mean a lot to the bituminous industry in Pennsylvania," said John W. Dickey. general manager of the company's research division at Quehanna, Clearfield County.

The firm has developed a roadbuilding material which uses coal as a major component. Mr. Dickey pointed out that be-tween 2,000 and 2,200 tons of coal would be used for every mile of highway.

Both the State and Federal Governments have expressed an interest in pushing "coal roads" if they are proven feasible.

Mr. Dickey also disclosed that Curtiss-Wright is hoping to find other uses for coal.

"Our researchers are currently working on the use of coal as a means of soil stabilization and on its application to nuclear energy," he said.

The steel industry, like coal, is perfecting ways and means of producing more goods with fewer men. Automation is on the march in the mills.

Johnstown plant of Bethlehem Steel Co. now is turning out steel at or near its capacity rate of 200,000 ingot tons per month. Yet the plant has no more than 14,500 men at work.

In general, people in the community regard 16,000 as the normal force for Bethlehem's Johnstown plant. The total has gone as high as 17,000.

Of course, the current slow pace of the car shops contributes much to the number of men still on layoffs. The railroads—which have had rocky going in recent months—are doing only a minimum of buying.

Aside from the car shop situation, however, there are few who are optimistic that the company will ever again need as many men here as it has in the past.

Astute union leaders are particularly apprehensive over the prospective job trend. One of them said:

"I think the day will come—perhaps within the next 15 years—when as few as 8,000 men will be considered a normal force at Johnstown plant."

Of course, community leaders know that industrial diversification would be a solution—a means of taking up the job slack. But the road to realization is a long, steep haul.

[From the Johnstown (Pa.) Tribune-Democrat, June 17, 1959]

JOB EROSION HERE IS CERTAIN SIGN OF DANGER AHEAD

Every town has its Pollyannas, the folks who insist on viewing the past, the present and the future through rose-colored glasses, the people who prefer not to face unpleasant things, the innocents who believe that present economic difficulties will take care of themselves and that it is a mistake to call attention to current problems because it will hurt business.

Johnstown—Greater Johnstown, that is has more than its share of these don't-rockthe boat, things-could-be-worse, everythingwill-work-out-in-the-end people.

To any of them who are willing to read, yesterday's article by William Black must have been at least disquisting. Mr. Black, a member of the staff of this newspaper, pointed out that the Johnstown area is one of the 27 soft spots in the Nation's economy.

While the recession is over in most of the Nation, and employment and production are zooming to new highs, one out of eight workers in Cambria and Somerset Counties is out of a job. In the Nation as a whole, unemployment is down to 4.9 percent of the available labor force. Here, the unemployment figure is 13 percent.

#### COAL INDUSTRY TROUBLES

Coal, of course, is largely to blame. Three times as many miners were employed hereabouts at the depth of the depression as are on the job today.

The steel industry, too, is finding ways of achieving greater production with fewer men. In years gone by, 16,000 was considered a normal employment level at Johnstown Plant, Bethlehem Steel Co. There are those who fear this level may never be achieved again, without major plant enlargement, beyond anything now blue-printed.

The answer, of course, is diversification of industry. That means enticing new industries into the area to take up the slack. But every town in America is bidding for new industry. And some towns have more to offer than we have.

In this competitive fight for new industry, Greater Johnstown is particularly handicapped in that we refuse to present a solid front. Instead of one municipality of well over 100,000, we are a town of 63,232 (1950 census), plus 18 splinter boroughs and townships, each riding off in its own direction. (Unless we do something about it, the 1960 census is likely to show that Johnstown has dipped under the 60,000 mark.)

#### COMMUNITY PLANNING

Pennsylvania Electric Co. is showing an excellent film on industrial development. It points out graphically that areas either unable or unwilling to plan for the future

dramatically on a communitywide basis are avoided by industries looking for new homes.

Such planning is impossible here because of the present bull-headed determination in each of the 19 municipalities to go it alone. It will continue to be impossible until and unless all of us recognize that this area is headed downhill and that the most effective thing we can do to halt the trend and to turn it upward is to consolidate into one progressive, forward-looking community.

Tax money is being wasted by the bushel basketful here because we insist on preserving costly, inefficient duplication of services on both the municipal and educational levels. The economies that could be achieved through unification would provide enough for an industrial development program that could not help but bring results.

And yet we stubbornly go our separate ways, ignoring the danger signals of the present and refusing to face the potential disaster that lies in the future if we continue to drift.

#### JOB EROSION NOT OVER

Consider this: Johnstown plant, Bethlehem Steel Co., today employs approximately 14,500 men. Mr. Black reports:

"There are few who are optimistic that the company will ever again need as many men here as it has in the past.

"Astute union leaders are particularly apprehensive over the prospective job trend. One of them said:

"'I think the day will come—perhaps within the next 15 years—when as few as 8,000 men will be considered a normal force at Johnstown plant.'"

Fifteen years is not a long time in terms of Johnstown's 160-year history. Now is the time for us to be acting aggressively to offset the expected continuing erosion of jobs here and to provide new employment opportunities for our young people.

Today's Johnstown is not attractive industrially to companies looking for new homes or for locations for branches. One recent survey called this city a sleeping giant. And, indeed, we are asleep. While we slumber, the wide-awake cities which are showing vision and a progressive spirit are getting the new plants—and the new jobs.

It can't happen here, you say? Friend, it is happening here. And we haven't seen the worst of it—unless we move forward, hand in hand, toward the secure future we can build only if we read the handwriting on the wall and unshackle the sleeping glant through dynamic, visionary, forward-looking action.

#### Monsignor Lawlor

EXTENSION OF REMARKS

#### HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 24, 1959

Mr. GALLAGHER. Mr. Speaker, as a former parishioner of St. Mary's Parish, Bayonhe, N.J., it is with deep regret that I note the passing of Monsignor Lawlor. Monsignor Lawlor possessed great faith, great kindness, and great understanding. It was with these qualities as well as the wonderful spirit of the man himself that will be greatly missed by all who came in contact with him. His contributions for better understanding between people of all religions was only surpassed by the outstanding contributions he made as a priest. He was devoted to God and to his fellow man.

I can think of no more fitting tribute than the one paid on the editorial page of the Bayonne Times, on Tuesday, June 23, 1959, which read as follows:

#### MONSIGNOR LAWLOR

Some years ago there was a slogan current. "One in eight will die of cancer," pointed at persuading people to give generously to cancer fund. Monsignor Lawlor's remark was, "They ought to remember that all eight will die." He said it with that curious combination of seriousness and humor, sternness and kindness that made him memorable to all who had contact with him, and it illustrated his life-iong determination to keep his attention concentrated on the big facts that made the difference. It was his way to cut through the verbiage to the resity, and it was his practice to express his convictions forthrightly and unmistakably.

Monsignor Lawlor became the senior Catholic school superintendent in the United States, and he guided the parochial schools of one of the world's great arch-dioceses through the years of their greates growth. He discharged, with skill and devotion, his pastoral duties at St. Mary's during a long period of challenging and dramatic social change. His presence in the community was felt throughout his long tenur here by his participation for many divicauses, including the Community Chest. He won many honors as an educator, as a civil leader, as a writer and scholar, and a priest he was cited by two popes. A few years ago when Monsignor Lawlor was receiving a new honor, Father Baker said of his knowledge he gained as a curate si St. Mary's: "He is a great priest, a grant friend, and an exemplary citizen whom sknow is to love and to honor is to honored."

It is a sentiment to which all who kneshim will respond "Amen." He was a middevoted to humanity and to God, and by death finds all of us in his debt.

Essay on America Wins Girl Honors

EXTENSION OF REMARKS

## HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. GEORGE P. MILLER. Man. Speaker, I want to congratulate Anne Nahm of 960 Arbor Drive, Sa. Leandro, Calif., and her teachers at S. Louis Bertrand School for her accomplishment in winning the essay away sponsored by the California Disable. American Veterans Auxiliary. She wis sponsored by Oakland Unit 7, Oakland Calif.

This annual award was established be encourage Americanism and the love country.

Mary Anne is a very wholesome and comely young lady of 11 years. She was a member of the sixth grade at St. Low Bertrand School when she won contest.

I think that her essay is well worth preserving and I include it as part these remarks.

ESSAY ON AMERICA WINS GIRL HONORS
SAN LEANDRO, June 1.—A simple but moving essay on the spirit and beauty of America

Dr

has won statewide honors for 11-year-old Mary Anne Nahm of 960 Arbor Drive.

Mary Anne, a sixth grader at St. Louis Bertrand School, competed against 3,400 other students in the contest sponsored by the California Disabled American Veterans Auxiliary. She was sponsored by Oakland Unit 7 and was presented a plaque at special school ceremonies.

Here is the winning essay:

"America is a country of richness and beauty. Nature has given us magnificent mountain ranges, great stretches of green forests and gentle rolling green plains. Hundreds of lakes, blue and sparkling, add to the beauty of our land. Rivers plunge through the rocky gorges or flow slowly through the valleys to the sea. We are more fortunate than other countries because within our boundaries are most of the materials we need to support our great Nation.

"Liberty is and has always been the very spirit of America. Indeed liberty is part of our way of life. It means our right to vote and has a process of the control of the c and hold office and our rights to free speech and religion. It means our rights to take sides on any question and to stand up for what we believe. Liberty is our birthright and the most precious possession of every American.

"In the United States we believe that every citizen is important, no matter who he is. We all have an opportunity to have an edu-Cation. All our fathers have the opportualty to get a job to make a decent life for themselves and for their families.

'In God We Trust' on all our coins reminds us that we are a religious Nation. Many of our important political meetings are opened with prayer. This does not mean we have a national church or national re-"Gion. We all know the Constitution Suarantees to each person the right to Worship as he pleases.

These are some of the reasons why I love America, but most of all I love my country because it is a gift from God to me."

## Free Criticism and Court Decisions

EXTENSION OF REMARKS

OF

## HON. PHILIP. J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. PHILBIN. Mr. Speaker, there has been great interest in proposals pending in Congress to change certain decisions of the Supreme Court. Opponents of any congressional action designed to offset congressional action designed the the legal effect of the decisions in question have indicated that criticism of members of the Supreme Court is subversive of the processes of justice. I think that it is most unfortunate that anyone should suggest that honest criticism of the Court, the Congress, the Executive, or anyone else in this great Government is in any way subversive or imbroper. Congress is continually under criticism and it can be said honestly that much of this criticism is unfair, unwarranted, unjust, and some of it is even slanderous and libelous.

Members of the Supreme Court itself have not always felt that criticism of the Court was improper. A very distin-suished Justice of the Court, Mr. Justice Brews. Brewer, as long ago as 1898 in a Lincoln bay address spoke as follows:

It is a mistake to suppose that the Subreme Court is either honored or helped by

being spoken of as beyond criticism. On the contrary, the life and character of its Justices should be the objects of constant watchfulness by all, and its judgments subfect to the freest criticism.

Mr. Justice Brewer was not the only Justice to expound this view. Mr. Justice Stone, one of our eminently great Justices and teachers of law, was quoted in the book "The Supreme Court From Taft to Warren" as saying:

The Justices themselves have been less anxious to black out knowledge of the Court's activity than are certain of its self-appointed protectors. \* \* \* In 1930 Justice Stone was quite undisturbed by the close scrutiny the Senate gave Mr. Hughes' nomination. Stone regarded it as evidence of wholesome interest in what the Court was doing. "I have no patience," the Justice commented, "with the complaint that criticism of judicial action involves any lack of respect for the courts. Where the courts deal, as ours do, with great public questions, the only protection against unwise decisions, and even judicial usurpation, is careful scrutiny of their action and fearless comment on it."

Other Justices in more recent times have expressed similar views. Mr. Justice Black, for example, in the case of Bridges v. California (314 U.S. 252, 1941) spoke as follows:

The assumption that respect for the judiciary can be won by shielding judges from published criticism wrongly appraised the character of American public opinion.

And Mr. Frankfurter, on the same occasion:

Just because the holders of judicial office are identified with the interests of justice they may not forget their common human frailities and fallibilities. \* \* \* Therefore judges must be kept mindful of their limitations and of their ultimate public responsibility by a vigorous stream of criticism expressed with candor however blunt.

Whenever honest criticism of any Government body or official is prohibited or inhibited we will be in serious danger of losing one of the most precious attributes of our democracy and a truly necessary incident of free governmentthe right to criticize.

Congress most assuredly has the right to criticize the Supreme Court or any other agency of Government. But it has a great obligation in this case which it must fearlessly accept and honestly discharge and that is to correct some of the legal decisions which it deems inconsonant with the Constitution. This duty must not be assumed lightly nor can it be shirked. When there is sound reason for changing a Supreme Court decision the Congress should not hesitate to do so.

#### **Ned Smith**

EXTENSION OF REMARKS

## HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. MOORE. Mr. Speaker, C. E. Ned Smith, noted editor of the Fairmont Times, Fairmont, W. Va., passed away in the Fairmont General Hospital on Friday, June 19, 1959. Mr. Smith was a noted West Virginia newspaperman, a stanch supporter of the Democratic Party, a believer in the late Senator M. M. Neely of our State and certainly, for my party, a well respected adversary.

For years his widely read "Good Morning" column had perhaps the largest following of any newspaper feature in West Virginia. Long active in the affairs of his community Ned Smith will be missed by the people of Fairmont and the people of my State.

I should like to include in my remarks an editorial which appeared in the Fairmont Times, the newspaper Ned Smith headed since 1917.

#### NED SMITH

Ned Smith-no one ever called him anything else-and the Fairmont Times were one and inseparable. He molded this newspaper, of which he was editor for 42 years, in his own image and one didn't think of one without the other.

Death brought an end yesterday to a long illness, which had prevented him from doing the things he liked best and stilled his once-facile fingers. His devotion to the newspaper to which he had devoted more than two score years of his life was exemplified in his insistence that he come to the office for a brief period each day, sometimes when he was scarcely able to be out.

He was a man of varied interests, and he had careers in many fields. He was a politician of distinction and so recognized by the leaders of the Democratic Party to which he gave long and faithful service. He was a public servant and held positions of responsibility for many years at every level from town council to membership on an important Federal commission.

Ned Smith would have done well in show business, to which he was always attracted. He was a gifted director of amateur theatricals, something of an actor and talented as a producer.

Above all, he was a master of the English language. In yellowing scrapbooks today there are scores of his "Good Morning" columns which have been preserved and cherished by those who followed this feature in the Times for more than 30 years. He had a style that was distinctively his own though sometimes others on his staff and

It could be that his love of the language came from his mother, for it was she who first introduced him to the classics that were to become an integral part of his life. If he had a favorite, it was Shakespeare, and there were few of the immortal passages from the Bard that he could not quote in full.

elsewhere tried to emulate it.

He also was devoted to history, especially that dealing with the wars in which this Nation engaged. When talk turned to the Civil War, for example, he seemed to be describing a battle at which he had been present instead of repeating what he had read in books.

For those who had heard him tell in intimate detail of an anonymous soldier in the ranks and his struggle at Gettysburg, it was not difficult to imagine how he rode in the turret of a Sherman tank with his only son, who went to the wars straight out of school.

From the day the telegram starting "We regret to inform you \* \* \*" came from the War Department, Ned Smith was a changed man. It could not be said that he lost at that time any of his physical strength, which was to carry him through illnesses that even his doctors thought would be his last, but something went out of his life that March day in 1945 that never returned.

Ned Smith was a widely traveled man, but he always returned to the community he

loved and to the family to which he was devoted. In the years when he no longer was able to continue his former routine, his wife, his daughters, his sons-in-law, and his grandchildren were equally devoted to him. Deep sympathy goes to them in their hour

Of Ned Smith, it can be truly said that his passing will cause sorrow in the community on which he left such an indelible imprint and throughout the State in which for so many years he had been a prominent figure in so many fields of endeavor.

He liked to call himself, in the circles of the great where he mingled, a small-town editor. He was all of that, with his finger on every pulsebeat of the community, but he was also a master of his profession whose like we may never see again.

#### Air Cargo

EXTENSION OF REMARKS OF

## HON, ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 24, 1959

Mr. DOLLINGER. Mr. Speaker, there is growing concern for the plight of our international air carriers in the face of growing and expanding competition from foreign lines.

Several years ago, TWA and Pan American were comfortably ahead of their foreign contemporaries in the battle for transatlantic passenger business. Today the picture is alarmingly changed and the Government-owned carriers representing various European countries have forged strongly to the front of both TWA and PAA in volume of business and indications are that they are certain to hold and add to this advan-

There are limited methods by which the U.S. Government can help our international airlines, in the Atlantic, in the Pacific, around South America. One, of course, is to keep our Government out of competition with our own airlines. Another is for our Government bargainers to be a little less generous when negotiating bilateral air agreements. Uncle Sam cannot continue forever as "the last of the big spenders."

On the other hand, the carriers can help themselves. They can look for new fields of endeavor to merchandise their excellent product. An example of what can be done to increase airline business is illustrated by a recent pronouncement from Mr. Juan T. Trippe, president of Pan American, that he is working with manufacturers toward the development of a 35-ton jet air freighter, capable of doing five times the job of piston planes at half the cost.

Air cargo has never developed to anything close to its potential. Obviously positive steps must be taken to make the carriage of air cargo not only desirable but profitable. There are good reasons for belief that air cargo offers a market with a greater profit potential than does the carriage of passengers.

I am happy, Mr. Speaker, that this initiative in the direction of air cargo

has developed with an American-flag carrier. Under leave to revise and extend my remarks. I include in the Appendix of the Record an article from the June 15 issue of Forbes' magazine, entitled "Strange Cargo":

#### STRANGE CARGO

No will-o'-the-wisp darting before an airline pilot's gaze has ever been more beguiling than that of the air cargo business. A big dream of the early postwar years, air freight never really got very far off the ground. Although the business has shown some growth, it has never matched the optimists' projections. For many fledgling operators, it has been a tombstone. For the stronger passenger carriers, it has been little more than a sideline.

#### THE PLANE AND THE MISSION

But last month the industry was humming with serious talk about the future of air cargo that would not be lightly dismissed. The man who started it was pioneering President Juan Terry Trippe of Manhattanbased Pan American World Airways, Inc., the United States largest international airline. At his annual meeting Trippe announced that he had been working with aircraft manufacturers to develop a 35-toncapacity jet air freighter which would do five times the job of present piston planes for about half the cost.

"We are now confident," said Trippe, "that American manufacturers can undertake a contract for such a craft. \* \* \* During the course of the current year, we will be able to make a substantial order for modern turbine-powered cargo planes." With such aircraft, Trippe predicted, Pan Am's freight operations will become as important as its passenger business

Considering the amount of air cargo Pan Am now handles, it was quite a prediction indeed. Last year, of his \$313.2 million total revenues, Trippe brought in only \$33.4 million, or 10.7 percent from air freight and express. Moreover, as airlines go, that was a rather large percentage. Mighty American Airlines, which leads the domestic trunklines in cargo business, got only 7.6 percent of its revenues from that source. Trans World Airlines, both a domestic and an international operator, reported just 4 percent from freight and express volume.

#### WATCHING WASHINGTON

Most airline men agree with Trippe that the right kind of jet could revolutionize the air-freight business, and some point out that the international carriers, and Pan Am in particular, hold an edge over the domes-tic carriers in capitalizing on it. The reason: Long-range international airlines have the advantage of competing with waterborne forms of transportation, which are not only slow but also require multiple handling of

Twenty-five Years in Priesthood Observed by Very Rev. Vincent A. McQuade

EXTENSION OF REMARKS

## HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the sermon by Cardinal Cushing on the occasion of the observance of 25 years of priesthood by

Very Rev. Vincent A. McQuade, President of the Merrimack College in North Andover, Mass.:

[From the Lawrence (Mass.) Evening Tribune, June 22, 19591

#### TWENTY-FIVE YEARS IN PRIESTHOOD

Twenty-five years of Roman Catholic priesthood was observed by Very Rev. Vincent A. McQuade, O. S. A., Ph.D., president of Merrimack College, Sunday at 10:30 a.m., when he celebrated a solemn Mass of Thanksgiving in the Collegiate Church of Christ the Teacher.

The mass presided over by Richard Cardinal Cushing, and who delivered the sermon, was attended by members of the clergy. members of the celebrant's family, and visiting friends from near and far. The capacity congregation that filled the church was tribute to the esteem in which the president of the college is held by all and a mark of recognition for what he had been able to accomplish in directing the establishment of an outstanding institution of learning under the Augustinian Fathers.

Cardinal Cushing, in his sermon, remarked that "This is a sort of family day and I pro pose to confine my remarks to the spirit of the day. Therefore, in simple language, we will speak briefly of the occasion we commemorate. I take this occasion to thank God for all the blessings and favors of 25 years of priestly service, and to bring to the attention of the faithful the need of vocations for the priesthood.

"I thank the faithful for their cooperation in making the accomplishments of the priest hood productive and possible. It was the night before He died that Christ instituted the priesthood, and one would almost get the impression that it was an afterthought Christ could have selected angels for his priests, but Christ chose men, human beings

to entrust that responsibility.
"These responsibilities are in a general way twofold: The priest was to be the custodian of the Eucharistic Body of Christ and the custodian of the Mystical Body of Christ The priest is the custodian of the Eucharistic Body of Christ 'Do ye this in commemoration of Me. Do ye what? Change the bread and wine into My own body and blood. The supreme act takes place at the holy sacrifice of the mass.

"As the custodian, the priest at the cs thedral, church of lowly mission, anywhere on land or on sea, can offer Mass at an es tablished or portable altar and call down of the altar table the Christ in the swaddling clothes. This takes place day by day. The priest brings the Host to the sick and the priest brings the Host to the sick and the priest brings the Host to the sick and the priest brings the priest brings the host to the sick and the priest brings dying, and exposed It in the monstranes, "So it is that the only successful priest the holy priest."

the holy priest.

"The priest is also the custodian of the mystical body of Christ—the church. In church is a society of men who believe the same doctrine and trying to live the lives in the image of Christ and aiming a live in the live the lives in the lives of the same doctrine and trying to live the lives in the lives with God in exercity. the union with God in eternity. As custodian of the mystical body of charge the priest must be equipped through studies, through gifts of nature and grace protect the church against enemies.

"So it is that you find in the priesthod men of various talents. You find in the priesthod men of all kinds of character personalities and after the priesthod men of all kinds of character personalities and after the personali personalities, and gifts, all using their God given talents for the welfare of the church Some are identified with seemingly jost tasks, others are identified with tremendor

projects of one type or another.

"We honor this morning a priest who, so the custodian of the mystical body of Christ the custodian of the mystical body of christ with has been identified from the beginning with Merrimack College. He is the first preside and we might say, in effect, the founder this great educational institution. When stood a few years ago on this site glanced from one end to the other, I say

that the man who inaugurates the project must be a priest of vision, of courage, and educational know-how.

"The tools that God uses are in a particular sense his creatures. Some priest must be assigned here under the grace of God with vision. That priest was appointed in due time and we are saluting him today on the occasion of his silver jubilee in the Priesthood. He had the vision, he had the courage to go ahead and bring it to reality. Since buildings alone do not make a college, he was gifted with the know-how on the inaugurating of tradition, spirit. Under God, we are grateful today to Father McQuade for what he has done in the past 10 years. Look about and you can see for yourselves.

"Although we join this morning on the occasion of the 25th anniversary, we thank God for what he has been able to accomplish as a priest and in a particular way of what he has accomplished since most of us have known him and loved him and re-

spected him.

Secondly, a jubilee of this kind is not for vain glory on the part of the jubiliarian. We are the tools of Christ. A tool cannot do anything unless it is put into the hands of one who can use it. The hands of the priest are the hands of Christ in a sense and ever is accomplished by a priest is accomplished by Christ. It is Christ who offers the Mass, forgives the sins, and enters the taherman tabernacle of our souls.

The humbler and meeker the priest is. then the more confidence and trust he has in God, and the more it seems that he performs. It is not for vain glory or worthss praise that a priest commemorates his Jubilee. People see in the priest the double of Christ, even though the priest is a man who may be unworthy of the title. The need for a priest is something that the faithful in our day have not fully comprehended.

"There is hardly a place on earth that has a surplus of priests. We have a minimum of 60,000 priests needed in Latin America, and in practice." in practically every diocese of the United States there is a great need of priests.

"The vocation constitutes the greatest need and the greatest challenge in the church of our day. It has always been my belief that there is an abundance of vocations in the the service of God. If the priest is to serve as the custodian there must be an ample supply of custodians.

The time was when parents would pray daily that God would call all or one of their children to His service. Today, we meet countless objections on the part of parents, Children of God and Children are born to the service of God and we must never forget that a vocation comes from God. I really believe children get their call to be priests or sisters around their confirmation time and they should be encouraged to reach their goal.

We commemorate the silver jubilee of Pather McQuade and he is privileged to celebrate this holy Mass to thank you for all the help you have given. You are the conse-crated priesthood of the laity, you are lay apostles, you are the Catholic Church, memers of the mystical body of Christ. No briest could ever build without the help of others, whether it be a church or institution. These things cost money and costing more and more with the advance of time.

Whatever we have here at Merrimack College under God and through Father Mc-Quade, his conferes, the credit belongs to You and all the benefactors of Merrimack College. I become the articulate voice of all the friends of Father McQuade gathered here this morning when I say to him "We congratulate you for your silver jubilee. Most of us have known you only since you came to this sector of the Augustinian portion of the Vineyand of the Augustinian all that time. vineyard of the Lord. During all that time, even though it is less than one-half of your priestle. priesthood, we have seen in you a double Christ, seen in you a spiritual man of God,

a worthy custodian of a Eucharistic Body. We have seen in you a priest of vision, courage, know-how, for the establishment of this higher institution of learning. We think you for your priestly examples and commend you for your zeal. It has been our privilege to work with you and stand behind you."

#### Operation Bootstrap-Reservation Style

EXTENSION OF REMARKS OF

## HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. BERRY. Mr. Speaker, I have asked consent to insert in the RECORD two editorials from South Dakota papers on the Indian self-help bill which is becoming known as "Operation Bootstrap-Reservation Style." These editorials indicate the interest of South Dakota people in an industrial program on reservations.

The two editorials-one from the Pierre (S. Dak.) Capital Journal, Pierre, and the other from the Mobridge (S. Dak.) Tribune, Mobridge, are as fol-

[From the Pierre Capital Journal, June 17, 19531

BERRY WOULD PUT FACTORIES ON RESERVATIONS

Representative E. Y. BERRY has announced his intention to introduce a bill in Congress which would offer important inducements to industrial corporations to locate factories on Indian reservations. These inducements would include such things as tax exemptions or credits and assistance in financing construction of the plants.
"The bill," BERRY declares, "if approved by

Congress, will do for the Indian reservations exactly what the industrial program in Puerto Rico has done for the people of that Commonwealth."

In Puerto Rico industry has been offered a 10-year tax exemption, plant construction assistance, and Commonwealth cooperation with firms interested in expanding or establishing new plants. The program has re-sulted in important improvement in living standards in the country.

"Everyone agrees that the only solution to the Indian problem is through industrial development providing income and employment opportunity for the Indian people," BERRY asserts. "The law that I succeeded in getting through Congress providing trades training and on-the-job training for Indians, has been helpful, but the appropriations for this program have been too limited."

The Daily Capital Journal agrees that the sclution to the problem of depressed standards of living among Indian families must be found in providing opportunities for employment. The Indian with a steady income is no problem to anybody.

Unfortunately, South Dakota ranks at the bottom of the list of States in the number of people employed in manufacturing industries. If this situation can be changed by inducing the establishment of new plants on the Indian reservations in this State it will certainly be something of great benefit, not only to the Indian people, but to everybody else.

It is, of course, a long road from the mere introduction of a bill in Congress to its enactment and approval. BERRY may or may not succeed in getting the bill passed. We hope that he succeeds.

[From the Mobridge Tribune, June 18, 1959] NEW SOUTH DAKOTA INDUSTRY WOULD AID INDIANS

What is probably the most logical approach to the perennial Indian problem that has been offered is proposed in a bill West River Representative E. Y. BERRY is introducing in Congress to encourage industry in or adjoining Indian reservations and authorizing the tribes to cooperate with industrial concerns in establishing plants that will employ Indians.

Tax exemptions and fast writeoffs are provided for concerns that establish industries designed to employ Indians and train them industrial production. Tribal funds could be made available to finance construction of plant facilities which could then be leased or sold to the industry on a long-time basis. Such partnership between the tribe and the manufacturer designed to provide steady employment for the Indians would be an incentive on the part of both to make the operation of the plant successful and continuing. In several instances Indians have rapidly provided skilled labor for plants near reservations, while relocating programs have met with good success in training them to work in numerous industries in cities over the Nation.

This section of the State is especially interested in Representative BERRY's bill, since it would offer a means by which tribal councils on Cheyenne River and Standing Rock Indian Agencies could take a leading part by working with industrial concerns solving many of the problems facing the

Indians.

Reducing the Gold Supply

EXTENSION OF REMARKS

## HON. PHILIP. J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. PHILBIN. Mr. Speaker, many Members of Congress, as well as economists, businessmen, and interested citizens are greatly concerned by the con-tinuing heavy outflow of gold from the

United States. During recent periods of time many American and international financial officials have been concerned by these heavy gold movements.

Last year the United States suffered its biggest gold outflow in the amount of \$2,500 million. During the last 2 weeks of April the United States lost \$179 million in gold, or more than in the entire first quarter of the year.

Many reasons and excuses have been given for this outflow of gold but none of them are very convincing to the ordinary American citizen who looks upon the dissipation of our gold reserves with alarm.

Technical reasons indicate that the United States is running a deficit in its overall transactions with the rest of the world. The principal reason for the deficit is that American exports have not kept pace at a time when imports have greatly increased.

Congress should begin to ask itself the question, "How long can we afford to stand these huge drains on our gold supply?" To some, sluggishness of U.S. imports indicates that American goods have been priced out of world markets. How are these gold shipments tied in with the fact that the British budget has been balanced and British taxes have been reduced, while our budget is not balanced and taxes are increasing?

The British have been gaining reserves in ordinary international transactions during the year. They are also leaving their gains in dollar form rather than converting them into gold in order to build up the necessary balance to repay \$200 million to the International Monetary Fund. That payment was made and it is, therefore, likely that future gains in trade balances will be converted into gold in keeping with past British practice and custom.

Does this account in large part for the outflow of gold during April? The interest rate differential indicates high rates in New York and low rates in London, Amsterdam, and Frankfort. Since this is expected to result in foreign investments in the United States, it should normally step up the export account in whatever amount is invested by other nations here.

However, as many economists and businessmen know, only steady and marked increases in exports can permanently affect trade balances and effectually stop the flow of gold from the United States.

When is this Congress going to realize that the reciprocal trade treaties are causing a flow of cheaply produced foreign goods into the United States and other nations that is undermining most of our markets overseas and causing widespread unemployment and depression in many industires in this country. It is high time that something was done to bring order out of chaos that exists in our international and domestic economic, financial, and monetary affairs. Congress should act and I urge this course now without delay.

#### Strauss Rejection Politics at Its Worst

EXTENSION OF REMARKS

#### HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. DAGUE. Mr. Speaker, no Member of the House can experience anything other than shame at the miscarriage of legislative prerogative that was displayed in the rejection of Lewis L. Strauss as Secretary of Commerce.

Mr. William S. White, an able columnist writing in Monday's Evening Star, underscores the indefensible position of those who voted against Mr. Strauss' confirmation in these words:

They have refused Mr. Elsenhower the privelege of any President to have a man of his own choice in the Cabinet so long as that man is not morally or mentally unfit. And they have made this great demonstration over what usually is politically the least significant post in all the Cabinet, that of Commerce.

That the denial of confirmation—not to Admiral Strauss but rather to President Eisenhower—was motivated solely by political reasons is also underscored by Mr. White further along in his article:

They disliked him as an Old Guard Republican, a Herbert Hoover Republican, an anti-public-power man, as indeed he was and is. \* \* For the first personal defeat of President Eisenhower they have attempted in his 6 years in office, they have chosen the worst possible vehicle.

Mr. White then proceeded to further emphasize the fact that the attack on Mr. Strauss was in reality an attack on the President in this observation:

Why, then, did it all happen? It happened most of all because of the long frustrations of many Democrats, mostly liberal Democrats. For years they have been clamoring that the party must fight Eisenhower. Now, at last, they have prevailed on calmer colleagues to fight. Their motive was understandable " " but the trouble was that the Democrats oversimplified. To fight is one thing. But to fight at the wrong time in the wrong place and for the wrong reason is quite another thing.

In his final summation Mr. White comes to this conclusion:

There were only two simple and related issues: Did the President have a right to Strauss if he wanted him? And was there against Strauss' fitness to serve (not his ideas or his personality) a case so overpowering as to justify turning him down? The answer to the first question was plainly yes. The answer to the second question was plainly no. And when the passions have died, some of the men who voted against Strauss will regret it, for simple human reasons if not also for political reasons.

Mr. Speaker, I am greatly pleased that this House had no part in this infamous treatment of a thoroughly dedicated public servant. And I am equally pleased that our party, with but insignificant defections, stood squarely in back of the President's nomination. In my opinion political repercussions over this incident are in the making and on the record they can only affect the opposition who went so far out of their way to display their personal dislikes and frustrations.

## Bills To Rebate Taxes to States Must Be Equitable

EXTENSION OF REMARKS

### HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. DIXON. Mr. Speaker, a proposal which is given consideration frequently by many Congressmen is that a portion of the taxes collected by the Federal Government should be rebated to the States.

Without arguing the merits of this idea, I believe it is important to draw attention to a serious and probably unintentional inequity in most of the bills

which have been introduced to carry out this idea.

These bills typically rebate to the State 1 percent or 5 percent of the Federal income tax collected within that State. The inequity arises from the fact that the amount of Federal taxes collected in any particular State is largely a geographical or business practice coincidence and is largely unrelated to the amount of taxes paid by the people of the State in question. For example, in a State such as Utah, even the personal income withheld by a number of our large employers with out-of-State headquarters is remitted to the Collector of Internal Revenue in States other than Utah where the income was earned and where the payroll deductions were made. Practically all of the Federal excise taxes such as those on new cars, appliances, machines, and so forth. are remitted by the manufacturer in the State of the parent manufacturer, even though the amount of the tax is expressly paid by the final consumer in Utah. These are but obvious examples of the irrelevance of the amount of Federal tax collections within a State as a measure of the Federal taxes paid by the people of that State.

It would therefore be manifestly unfair to use the amount of Federal tax collections within the respective States as the base for distributing Federal grants. As an example, for the fiscal year 1958 the Internal Revenue Bureau reported Federal tax collections in Utah amounting to \$200,022,000, whereas a fair estimate of the actual taxes paid by the people of Utah for the same year would be \$278,300,000.

These figures were carefully estimated by the Utah Foundation, and Mr. Henry R. Pearson, executive director of the Utah Foundation, and his staff deserve to be commended for bringing to light these significant discrepancies which show that Utahans pay almost 40 percent more in Federal taxes than is attributed to the State through collections.

I am placing in the Record the method used by the Utah Foundation to compute Utah's share of Federal taxes which further elaborates reasons for the disparity between collections and the actual taxes paid by the people of Utah.

METHOD OF COMPUTING UTAH'S SHARE
FEDERAL TAXES

Federal tax collections are reported by the Collector of Internal Revenue in his annual report. Collections for each tax are shown by the district office that collects the tax District offices are located in each State with several States having more than one district office.

However, there is a great difference per tween the location of the office of the ternal Revenue Service and the actual residence of the taxpayer who finally bears per burden of the tax. The U.S. Treasury partment has recognized this fact, and pointed out that the Federal tax collections in a State do not necessarily reflect State's true share of the Federal tax burdes since they fail to show the amount of taxes paid in directly.

Even the direct individual income taxes withheld by employees may not be accurately reported for a State, since many employees whose headquarters are in other States pay these withheld taxes to the Collector of ternal Revenue at the main office location.

Thus, the State where the withheld income tax is reported may not be the residence of the taxpayer who actually paid the tax.

The manufacturers excise tax on a new automobile is actually paid by the purchaser in Utah, although the tax itself is remitted to the Collector by the manufacturer in Detroit and shows as a collection of the Internal Revenue Collector in Michigan. In a similar manner taxes paid by Utahans on ap-pliances, tires, and other products may be remitted to collectors in other States. Corporation taxes paid by a railroad or steel mill are usually remitted to the Collector of the State in which the corporation has its headquarters, although the tax is actually borne by consumers in many States who use the service or product.

Because of these facts, the amount of Federal taxes paid by the residents of any particular State cannot be determined except by calculation. During the past few years, much work has been done by national and State research organizations throughout the country to find a formula that will accurately estimate a State's share of the Federal tax

Utah Foundation from the beginning of its research program has used a calculated figure to estimate the Federal taxes paid by Utah residents. In the past, the Foundation applied Utah's percentage of the total U.S. individual income payments to the total U.S. tax collections in order to obtain an estimate of Utah's share of the total Federal tax burden. While this method did result in a reasonably reliable estimate for Utah, additional research on the subject by Utah Poundation and other national and State tax research agencies in recent years has suggested that further refinements could be made which would insure a more accurate result.

The following is a formula which Utah Poundation believes will give a more reliable estimate of the Federal taxes borne by

the people of Utah.

Utah Foundation's formula involves three (1) individual income taxes not withheld, (2) individual income taxes withheld, and (3) all non-individual income tax revenues (includes corporation, excise, gift, estate, and miscellaneous taxes).

Each of the three factors comprising this formula is apportioned among the States in a manner which it is believed will reflect most accurately the incidence of Federal taxation in each State.

Following is the way the three factors are used in the apportionment of taxes:

(1) Individual income taxes not with-held: Actual collections in each State are presumed to reflect the actual tax burden for the State. Income taxes not withheld (i.e., those on dividends, rents, royalties, professional income, etc.) must be estimated and paid by the taxpayer himself, and ordinarily paid to the collector in the State of the tax payer's residence.

(2) Individual income taxes withheld: Apportioned to each State in the ratio that the State's total individual income bears to the total national individual income using latest U.S. Department of Commerce data. reports on individual income taxes withheld by employers do not necessarily reflect the residence of the taxpayers, since most large firms make payments of these withheld taxes to the collection district in which their main office is located. Alloca-tion among States on the basis of income payments is thought to be the best method for distributing these withheld individual income taxes.

(3) All nonindividual income tax revenues: Apportioned to each State in the ratio that the State's total individual income bears to the total national individual income. (Same method as for withheld individual income taxes.) Norz.—The Tax Foundation (a national tax research organization) further refines allocation of these non-income-tax revenues by distributing the burden for many of the excise taxes on the basis of known consumption patterns for each State.

However, Utah Foundation discovered that the use of these additional refinements did not materially alter the figure obtained for Utah by using the income-allocation method. For example, the May 1954 issue of Tax Outlook published by the Tax Foundation, shows Utah's portion of the Federal tax receipts to be 0.40 percent. The method employed by Utah Foundation shows Utah's portion of Federal taxes for 1953 to be 0.39694 percent. For this reason, it is thought that the income-allocation method is nearly as accurate for Utah and certainly is much more practical in making these computations over a long period of time, since many of the consumption figures by States are not available for earlier years.

To illustrate the procedure used, following is a point-by-point description of the calculation of Utah's share of the Federal taxes for the fiscal year ended June 30, 1953. See accompanying table. Reports used to make these calculations include the Annual Report of the Commissioner of Internal Revenue, fiscal year ended June 30, 1953, and the August 1954 edition of the Survey of Current Business (published by the U.S. Department of Commerce).

1. Total income payments to individuals for continental United States. During calendar year 1952 (calendar year immediately preceding end of 1953 fiscal year)—\$256,091 million. (From p. 15, Aug. 1954, Survey of Current Business.)

2. Total income payments to individuals for Utah during calendar 1952-\$1,075 million. (From p. 15, Aug. 1954, Survey of Current Business.)

3. Percentage that Utah's individual income is of U.S. total-.41977 percent. (Divide figure from step 2 (\$1,075 million) by figure from step 1 (\$256,091 million).)

4. Total Federal internal revenue collections in continental United States-\$69,-492,505,000. (Total, less amounts for Territories and possessions from pp. 92-93, Annual Report of the Commissioner of Internal Revenue-1953.)

5. Federal individual income tax—\$36,-208.218,000. (Total of income tax not withheld and income and old-age insurance withheld taxes less amounts for Territories and possessions from pp. 60-61, Annual Report of the Commissioner of Internal Revenue-1953.)

6. Total non-income-tax Total non-income-tax revenues in United States—\$33,284,287,000. (Subtract figure obtained in step 5 (\$36,208,218,000) from figure obtained in step 4 (\$69,492,505,000).)

7. Utah's share of non-income-tax revenues—\$139,717,000. (Multiply figure from step 6 (\$33,284,287,000) by figure from step 3 (.0041977).)

8. Total income and old-age insurance withheld tax in continental United States-\$24,645,618,000. (Total less amounts for Territorics and possessions from pp. 60-61, Annual Report of the Commissioner of Internal Revenue-1953.)

9. Utah's share of withheld income and old-age insurance taxes-\$103,455,000. (Multiply figure from step 8 (\$24,645,618,000) by figure from step 3 (.0041977).)

10. Income tax not withheld collected in Utah-\$33,443,000. (Actual collections in Utah from p. 61, Annual Report of the Commissioner of Internal Revenue-1953.)

11. Utah's share of individual income tax and old-age insurance taxes-\$136,898,000. (Add figure from step 9 (\$103,455,000) to figure from step 10 (\$33,443,000).)

12. Utah's share of Federal taxes-\$276,-615,000. (Add figure from step 7 (\$139,717,-000) to figure from step 11 (\$136,898,000).)

13. Total Federal Internal Revenue collections in United States, including Territories and possessions-\$69.686.535.000. (From p. 93, Annual Report of the Commissioner of

Internal Revenue—1953.)
14. Percent that Utah's taxes are of U.S. total in continental United States (excluding

Territories)—39805 percent. (Divide figure from step 12 (\$276,615,000) by figure from step 4 (\$69,492,505).)

15. Percent that Utah's taxes are of U.S.

total (including Territories) — 39694 percent. (Divide figure from step 12 (\$276,615,000) by figure from step 13 (\$69,686,535).)

### The Trinity River Project

EXTENSION OF REMARKS

## HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. WILSON. Mr. Speaker, representing the southernmost district of California, and as a newly assigned member of the House Interior and Insular Affairs Committee, I am intensely interested in all phases of California's water problems, and their possible solutions.

But, at the same time, I am also cognizant of the need to spend Federal money only where it provides the soundest means of accomplishing the purpose. In the matter of the Trinity project power facilities, we have been afforded the opportunity to develop the plants at private expense and at an immediate saving of \$60 million to the Federal Government.

Although my district is located farthest from the Trinity area, there will certainly be a beneficial impact in my district from this great project, as well as in all parts of California, from the standpoints of water and of the tax dollars involved.

The bills which have been introduced in this Congress in support of joint development of the Trinity project appear to be very favorable in their terms to the Federal Government, by providing a recapture clause should the Government desire to take over the facilities on 2 years' notice, at any time prior to the expiration of the 50-year contract.

I am very much interested in this proposal and its effects on the unsolved water problems of my district and State. I am looking forward to full and complete hearings by the House Committee on Interior and Insular Affairs, with confidence that the issue will finally be acted upon by Congress, and the power facilities' construction may commence. The interest which the project has evoked in my district, over 750 miles from the Trinity site, is exemplified by the following editorial from the San Diego Union, dated March 25, 1959:

#### A DOOR OPENS

A compromise has been suggested to end the long and sometimes bitter argument over power development in connection with the Federal Trinity River project in northern California.

A Federal recapture clause has been included in a new Trinity River project bill introduced by Representative James B. Utt, Republican, of California, and Representative CHARLES GUBSER, Republican, of California, and immediately accepted by the Pacific Gas & Electric Co.

The Federal Government has favored a partnership by which private capital devel-ops power features of Federal water projbut in this case opposition has developed from public power advocates and in particular from those who contend the power will be needed for the pumps of the San Luis project. This the Pacific Gas & Electric Co. denies.

But to meet this objection the new bill provides that the Federal Government may take over the Trinity power facilities constructed by the company, at their depreclated cost, at any time after the proposed San Luis project begins operation or after

July 1, 1967.

Robert H. Gerdes, executive president of Pacific Gas & Electric Co., said the joint private-Federal program recommended by Interior Secretary Fred Seaton will save the U.S. Treasury \$60 million in construction costs. In addition it will provide \$75 million more net revenue to the Central Valleys project, from the rental of falling water and \$145 million in additional Federal, State, and local taxes, based on a 50-year contract.

A door to settlement of this dispute has been opened. It has dragged on long enough.

#### Lectures on Lincoln in West Indies

EXTENSION OF REMARKS OF

## HON, PHILIP, J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. PHILBIN. Mr. Speaker, the Abraham Lincoln Sesquicentennial Commission, has, during the past 18 months. received from numerous governments and peoples abroad invitations to the Commission to participate in the Abraham Lincoln sesquicentennial year observances being held in these distant lands.

The members and friends of the Lincoln Sesquicentennial Commission have been impressed and very pleased with this evidence of respect for the Great Emancipator among men and women of good will in lands hundreds and thousands of miles distant from the United

In response to such a communication from the new Federation of the West Indies, Mr. John B. Fisher, an able and distinguished young man, who is well known both in Massachusetts and in Washington, and who is one of President Eisenhower's appointees to the Lincoln Sesquicentennial Commission, was designated as representative and spokesman for the Commission in a lecture tour of the Caribbean area.

Mr. Fisher accepted this assignment and spent the 2-week period from March 10 to March 24 in that area speaking in many of the schools and colleges there, delivering public lectures each evening and visiting public officials and private leaders in the interest of the Abraham Lincoln essay contest, in which over 2,000 boys and girls of the West Indies are now participating with greatest enthusiasm.

The results of Mr. Fisher's tour have proved so gratifying in terms of their good-neighbor impact that I am placing in the Appendix of the RECORD at this point certain press reports and items of correspondence testifying to the effectiveness and the value of this endeavor. I cannot help but feel, as I read these press reports particularly, that our best foreign relations are perhaps those achieved through personal contacts of a cultural nature rather than those of a strictly political and diplomatic type:

[From the Antigua Workers' Voice, Mar. 13, 1959]

MR. FISHER HOLDS SUCCESSFUL PUBLIC LEC-TURE; LARGE CROWD PACKED THE LIBRARY TO HEAR ABOUT ABRAHAM LINCOLN

Abraham Lincoln, a man of tremendous faith, great courage and determination but above all a champion of freedom was the theme of a lecture delivered by Mr. John B. Fisher of the United States at the Public

Library on Wednesday evening.

Beginning the evening's program Mr. C. M. O'Mard, B.A. Headmaster of the Princess Margaret School and the local representative for the UCWI, welcomed Mr. Fisher to Antigua and, on behalf of those present and the extra mural department of the U.C.W.I. thanked him for his coming to Antigua and for gracing us with his presence.

The public library which has been the lecture hall of such eminent persons as the American poet, Mr. McNeish and recently Professor Sparrow, proved too small to accommodate the enthusiastic audience. fears of those individuals who were jampacked on the veranda outside were relieved soon after Mr. J. F. Foote, M.A., chairman of the evenings engagement, had introduced Mr. Pisher as a man of "general distinctions too numerous to mention."

Mr. Fisher lived up to expectations-he proved to be a great orator; his charm and manner quickly set every one at ease and those who were privileged to have heard him could not fail to be impressed by his deep knowledge of his subject, his diction and delivery of speech which was distinctly audi-

ble throughout.

Beginning the biography of Lincoln in the humble log hut in Haggenville, in 1809, Mr. Fisher "toured" Lincoln's career through Indianapolis to Illinois and then to Washington. Mr. Fisher noted first of all, Abraham's thirst after knowledge, then he went on to speak of Lincoln's faith in himself, his faith in his country and in his men whom he chose and lastly, of his great spiritual faith and convictions which no doubt aided and inspired him in his great alm of making all men, 'regardless of color, creed, or race free. Mr. Fisher told of Lincoln's pristine disappointments and failures. Defeated in several public elections, Lincoln persevered and hardships, overcame them all, and produced the famous Douglas-Lincoln debates which won him the Presidency of the United States. Lincoln's greatest achievement was not, however, this nor his victory over the South in the Civil War, but his famous and historical "Emancipation Proclamation" of November 1863.

Having accomplished all that his great life demanded and having attained all that he set out to achieve. Lincoln could have ut-tered the words of that most famous Martyr, "It is finished" in all earnestness and satisfaction as he lay in Peterson's house shot through the head by an assassin.

To conclude the entertainment, Mr. R. S. Byron moved a very fitting vote of thanks during which he indicated that the large gathering not only showed interest in the subject of Abraham Lincoln but was also in

recognition of the magnanimity and stature of the lecturer himself.

[From the Barbados Advocate, March 18, 19591

FISHER HERE TO LECTURE ON LINCOLN

SEAWELL, March 17 .- Mr. John B. Fisher, & member of the Abraham Lincoln Sesquicentennial Commission, at present on a tour of the West Indies lecturing at public meetings on the life of Lincoln, arrived here this after noon by BWIA from Trinidad to lecture at Harrison College tonight.

Mr. Fisher, who is traveling with his wife. is due to leave for Jamaica tomorrow. He was met at the airport by Mr. Douglas Mc-

Lane, Jr., U.S. vice consul.

He said that he was appointed to the Commission by President Eisenhower and the purpose of the Commission was to plan a year long term of celebration in the United States and with their friends abroad to celebrate the 150th anniversary of Lincoln's birth.

In addition to giving public lectures on the life of Lincoln Mr. Fisher is visiting schools to stimulate interest in the essay contest on the life of Lincoln, the grand prize for which in the West Indies will be a 30day all expenses paid visit to the United States.

Mr. Fisher is a businessman in the United States of America, but was formerly chief secretary to U.S. Senator Saltonstall, of Massachusetts. He has been a teacher of American history and English and is at the present time interested in education as a trustee of Mount Holyoke College, one of the largest women's colleges in the United States.

[From the Jamaica Daily Gleaner of Mar. 19. 1959]

LECTURES ON ABRAHAM LINCOLN TONIGHT

Mr. John B. Fisher, member of the Lincoln Sesquicentennial Commission, which is set up as part of the U.S. Government plan for celebrating the 150th year of Abraham Lincoln's birth, arrived in the island last night by BWIA Viscount flight from Bar-

Accompanied by his wife, he will remain for 5 days and is staying at the Courtleigh Manor Hotel.

Mr. Fisher has just visited Antigua, Bar bados, and Trinidad, lecturing on Abraham Lincoln and also in connection with a federalwide Lincoln essay competition for children of secondary schools in the unit territories—the first prize of which is a paid visit to the United States.

Mr. Fisher, who was appointed to the Lincoln Sesquicentennial Commission by President Eisenhower, will give a talk of Abraham Lincoln Abraham Lincoln tonight at the Parish Library, commencing at 8 o'clock.

He will be welcomed by the Honorable Florizel Glasspole, Minister of Education, and chairman will be the Honorable Dr. Ivan Lloyd Minister of Honorable Dr. Ivan Lloyd, Minister of Home Affairs.

The lecture is being sponsored by the U.S. Government and the Jamaica Historical

[From the Jamaica Daily Gleaner, Mar. 24. 1959]

SESQUICENTENNIAL COMMISSIONER SAYS LIN-COLN PLACED PREMIUM ON UNION'S PRES

A vivid and informative sketch of Abraham Lincoln as a Commander in Chief who was dedicated above all else to the preservation of the Federal Union and the freeing of the enslaved, was given in a public lecture on Thursday night last by Mr. John B. Fisher at the Kingston and St. Andrew Library Tem Policy Library, Tom Redcam Avenue.

Mr. Fisher who a year ago was appointed to the Abraham Lincoln Sesquicentennial Commission by President Eisenhower, is currently touring the West Indies in aid of the federationwide essay contest being sponsored by the U.S. Information Service, Portof-Spain, Trinidad. Accompanied by his wife, Mr. Fisher arrived from Barbados on Tuesday last.

Mr. Adolphe Roberts, historian presided over the lecture in the absence of the Hon-Orable Dr. Ivan Lloyd, Minister of Home Affairs. The Honorable Florizel Glasspole, Minister of Education, welcomed the lec-

After his introductory remarks Mr. Fisher traced briefly the history of Abraham Lincoln's life from his birth in a Kentucky log cabin to his death at the hands of assassin John Wilkes Booth in 1865.

Mr. Pisher said that the success of the 16th President of the United States through life had its basis in his personal faith, his faith in himself, his political faith his faith in his country, his spiritual faith, faith in the divine being.

#### BASES IN PAITH

These bases in faith were what made possible his rise from the humblest of beginnings in a tiny log cabin in the American wilderness to the White House, the home of the Presidents, in Washington, D.C.

Mr. Fisher said the late President was a man of many strengths and of human weaknesses. He was, for example, Lincoln the Politician, who realised with the approach of the Civil War that above all else the Fed-

eral Union must be preserved.

He was Lincoln the husband and father who, despite home life and the tragic death of two of his children, never faltered in family love and loyalty. He was Lincoln, the President and Commander in Chief, dedicated cated above all else to the preservation of the Federal Union and the freeing of the enslaved and most important he knew that the preservation of the Union must come first and then the freeing of the slaves, since only if the Union were preserved could the slaves then be freed.

Lincoln, continued Mr. Fisher, martyr, a martyr to the Federal Union, to freedom, and to peace, who died at the hands of a "crazed assassin just as the Civil War ended victoriously" and after the slaves had have

had been freed.

Finally, Mr. Fisher said: "Lincoln today is not just a great American, not just a great President of the United States. He is a worker president of the United States. He is a world figure because he has become increasingly a symbol of freedom to all men everywhere; and a symbol of what can be achieved through faith in one-self, faith in the future of one's country and faith in the divine being." today for New York. Mr. Fisher and his wife leave

> U.S. INFORMATION SERVICE, U.S. INFORMATION AGENCY,

Subject: Visit of John B. Fisher, representative of the Lincoln Sesquicentennial Commission to Jamaica.

Mr. John B. Fisher's lecture on Abraham Lincoln drew the largest crowd ever to be accommodated inside the new Kingston and St. Andrew Parish Library. Both the lobby and the adjoining periodicals room were pressed into service. The audience of over 200 was about evenly divided between upper grade high. grade high school students participating in the federationwide Lincoln essay contest and adults. Among the adults were educators, profess. professional people, and trade unionists. The meeting was chaired by Mr. Adolphe Roberts, Jamaica's leading historian and vice president of the Jamaica Historical Society Society. The address of welcome was de-livered by the honorable Florizel Glasspole, Minister of the Jamaica Historica. Minister of Education, and the vote of thanks

was extended on behalf of the audience by Mr. Mortimer Geddes, president of the Association of Assistant Masters and Mistresses and a member of the executive committee of the American University Graduates Associa-

In his speech of welcome, the minister of education stressed the long historical asso-ciation between the United States and the West Indies, and appreciatively alluded to the numerous projects being undertaken by the U.S. Government to build understanding and friendship with the West Indies. He mentioned the federationwide Lincoln essay contest currently being conducted by USIS, the many scholarship opportunities extended to Jamaicans by American schools and the study grants given under the ICA program. He said that Jamaica and the West Indies in their drive for federation and self-government were encountering many birth pangs experienced years ago by the United States and stated that the firm example of the United States was of real service to the West

Mr. Fisher's excellent address was most attentively received by the students in the audience most of whom took copious notes throughout the program. Several American graduates told the PAO after the lecture that they were deeply satisfied that so many Jamaican teachers and Ministry officials were in the audience. Their senti-ments were summed up by Dr. Evans and Mr. Wesley Powell, headmaster of Excelsior High School, who said, "This should help show what American scholarship is capable of. After tonight it will be more difficult for many of our friends at the Ministry to disparage American university

Mr. Fisher spent 20 minutes after the lecture signing autographs for students.

The lecture was followed by a reception at the home of the PAO. The principal Jamaican guests at the reception were Mrs. Edna Manley, wife of the Chief Minister, and Mr. Glasspole; other guests included executive committee members of both the Jamaica Historical Society and the American University Graduates Association, whose organizations had cosponsored Mr. Fisher's program in Jamaica. Soveral representatives of the press and two of the faculty from St. George's College (who had studied at the Jesuit Seminary in Weston, Mass., near where Mr. and Mrs. Fisher had lived for a number of years) were also present.

The success of Mr. Fisher's lecture was gratifying to the USIS staff for a rather special local reason. Months before Mr. Fisher's lecture was announced, Thursday, March 19, had been designated by the secondary schools drama festival committee as the final night for the yearly drama festival and the islandwide schools sports committee had chosen the day for the opening of the annual secondary school sports championship. This meant that any other activity involving students or teachers would be in strong competition for its audience. The good turnout to Mr. Fisher's lecture is strong proof of the attractiveness of his subject and the good will and support of the two cosponsoring organizations. Several teachers were so enthusiastic about the lecture that they urged USIS to arrange for a second lecture on the following Monday (March 23) stating that they were sure at least twice the number of people would attend.

Teachers and students who met or heard Mr. Fisher were forthright in their praise of his ability as a speaker and his knowledge of his subject. The highest praise proba-bly came from the Minister of Education, who, in describing the public meeting to the permanent secretary of his Ministry, said he got the feeling in listening to Mr. Fisher speak of Lincoln that he was not talking about a historical figure but a man who he had known all of his life. The Minister

paid a further compliment by using Lincoln as the theme for his speech at the Mico Training College graduation the next day. He is reported to have stressed Lincoln's firmness of character, devotion to learning, and insistence on every man's rights.

> U.S. INFORMATION SERVICE. April 3, 1959.

Mr. JOHN B. FISHER, Lincoln Sesquicentennial Commission, National Archives Building, Washington, D.C.

Dear John: I hope that you and Mrs. Fisher found the West Indian Lincoln lecture tour both pleasant and worthwhile. On the Monday morning following your de-parture we received a copy of the taped interviews you did in Barbados. They were

I find that all in all with your good assistance we have already generated more attention to Lincoln in the West Indies than

at first seemed possible.

Since the first part of this letter was written we have received most excellent reports on your visits to Barbados and Jamaica in addition to that already received from Antigua. The Minister of Education in Jamaica in a recent letter is eloquent in his praise of your good works in his island. Our American consul in Barbados was also very pleased with your visit there. Tom Noonan in Kingston boasts that he has already drafted a glowing report of your activities in and around Kingston.

From our point of view your West Indian tour for the Abraham Lincoln Sesquicentennial Commission has been a series of outstanding successes in every department. We are especially happy that Mrs. Fisher could be with you. She made the picture complete and supplemented your good work in a most charming and gracious manner.

Our very best wishes to both of you.

Sincerely yours,

GARLAND C. ROUTT. Director, U.S. Information Service.
P.S.—Your kind letter of March 30 came this morning. Thanks for your thoughtful-ness and kind words.

#### Raymond V. McNamara

EXTENSION OF REMARKS OF

## HON. WILLIAM H. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 24, 1959

Mr. BATES. Mr. Speaker, I wish to call to the attention of the House, the retirement of a very distinguished and able postmaster in Haverhill, Mass., Mr. Raymond V. McNamara. He is known and highly respected throughout the Nation as the past president of the National Association of Postmasters. In fact, he was, on three separate occasions, elected and reelected to the position of president of that organization, an honor accorded to few men and exceeded by none. He is held in the highest esteem by the Postmaster General and, indeed, throughout the postal service.

The high honors he has received and the great contributions he has made to our country in his chosen field have merited the admiration and respect of those whose pleasure it was to know him. I know his many friends join with me in offering our best wishes as he undertakes his well deserved retirement.

I include herewith an exchange of correspondence on the occasion of his retirement:

APRIL 10, 1959.

Hon. RAYMOND V. McNamara, Postmaster, Haverhill, Mass.

DEAR RAY: It is with a deep sense of personal disappointment that Mrs. Summerfield and I find that we cannot be present for the testimonial dinner in Boston which will mark your retirement as postmaster of Haverhill. A long-standing commitment to deliver an address in Los Angeles makes it impossible for me to join your colleagues in paying to you a tribute so well earned.

For my own part, I hope this letter will express in some measure the Department's appreciation for the contribution which you have made to the postal service, as well as my warm personal affection for you as a

friend.
Your enthusiastic support during your tenure as President of the National Association of Postmasters made the task of modernizing the postal system easier and earned for you the gratitude of the Department and your fellow postmasters.

The high integrity and devotion to duty which mark your career as a public servant and as a leader of postmasters reflect the religious principles which have guided your life. Mrs. Summerfield and I wish you many more useful and happy years, because we are sure you can never really retire from the postal service, nor from the National Association of Postmasters.

Sincerely.

ARTHUR E. SUMMERFIELD,

Postmaster General.

(Letter forwarded to Francis R. Sinervo, postmaster, Palmer, Mass., for presentation to Mr. McNamara at retirement banquet, April 18.)

NATIONAL ASSOCIATION OF POSTMASTERS
OF THE UNITED STATES,
Haverhill, Mass., April 30, 1959.

Hon. ARTHUR E. SUMMERFIELD, Postmaster General, Washington, D.C.

Dear Mr. Summerfield: Among all the communications which I received upon the occasion of my retirement as a member of your official family, none brought me greater joy or consolation than your intimate and highly complimentary letter commenting on my services as postmaster at Haverhill, Mass.

As God gave me the talents and the opportunity, I have tried to give to my beloved Postmaster General and the Service I had the honor of representing a loyalty and a dedication that has never waned.

As one who abhors expediency and compromise, I glory in the knowledge that I have remained faithful and loyal to the high ideas and ideals set forth by a courageous leader in whose path I was privileged to follow.

On this day, when tears are near the surface, I cannot refrain from making my last official act one of thanksgiving and appreciation to you for all the many generous acts of kindness and consideration shown to me throughout your years of service as Postmaster General of the United States.

You must find a personal satisfaction in the knowledge that out of a quarter of a century of antiquity you have brought the Postal Service of our Government to its highest peak of efficiency. That I have had a small part to play in this tremendous drama brings to me a sense of pride and happiness, born of affection for a courageous leader and a complete devotion to the service of this great arm of our Government in the service of its people.

That our country may continue to be blessed with your unselfish and outstanding leadership is my fervent hope and prayer. May God bring to Mrs. Summerfield and jourself health and contentment, length of

days and the happiness one finds in the knowledge of a job well done, is the sincere and heartfelt wish of one of your most devoted followers.

Again, with an expression of high esteem and affection, I shall ever remain,

Sincerely yours,

RAYMOND V. MCNAMARA.

MAY 5, 1959.

Mr. RAYMOND McNamara, Postmaster, Haverhill, Mass.

DEAR RAY: I have learned with mixed feelings of your retirement as postmaster at Haverhill. I am disappointed that you are leaving the postal service, because I think it is a loss to that service. On the other hand, I am very pleased that you will receive the benefit of a richly deserved retirement.

You have served long and honorably in the postal service, and indeed you have done a great deal not only for your own post office but for your associates throughout the Nation. You leave with the good will and friendship of many of us who have had the pleasure of knowing you and of working with you during the years. I know you can look back with justifiable pride on your years of service. I only hope the years ahead will hold for you every reward and happiness.

Best personal regards.

Sincerely,

LEVERETT SALTONSTALL, U.S. Senator.

## Democratic Party Should Renounce Democratic Advisory Council

EXTENSION OF REMARKS

## HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following of Battle Line from the Republican National Committee, June 17, 1959:

DEMOCRATIC PARTY SHOULD RENOUNCE DEMO-CRATIC ADVISORY COUNCIL

While a united America was handling the Communist challenges of Lebanon, Quemoy, and Formosa in 1958, the Democratic Advisory Council kept up a steady drumfire of divisive criticism designed to create a false illusion that America was divided in her resolution and abilities to oppose aggression. It was the first time political stump-speakers had shortchanged U.S. objectives when Americans were in the gunsights of the enemy.

In April of 1959, representatives of the NATO countries came to Washington for a 10th anniversary meeting at which unity over the Berlin challenge was affirmed. The Democratic Council, however, lived up to its reputation for irresponsibility. It issued a statement designed to make America look ridiculous, weak and without allies. The final NATO communique, a ringing declaration of Western unity, demolished the council's theme but the council pamphlet already had done its damage in the headlines.

Now at the tense climax of the Geneva Conference, which could involve the peace of the entire world, the irresponsible Democratic Council has again published an hysterically false pamphlet attempting to depict the United States as militarily weak and headed for disaster.

At a crucial hour, the Democratic Council may have undermined the position of our

Geneva negotiators and could have strengthened Communist intention to remain tough over Berlin.

It is time for the Democratic Party, as a whole major political party, to repudiate this council of 24 Democrats who are without office, power, or responsibility to speak for anyone but themselves.

Democrats in Congress, Democratic officials across the Nation and rank and file Democrats should join in denouncing the permicious charges published by the Council so the world will know the truth—that Americans are militarily strong, are morally united and are determined and able to resist aggression and appeasement regardless of political affiliation.

The United States is militarily weak only in the delirious pages of Democratic Council pamphlets and Democrats everywhere should join Republicans in making this fact clear to the Communists.

#### STEVENSON VERSUS STEVENSON, AGAIN

On June 13, reporters asked Adiai Stevenson—in Washington for the Democratic Advisory Council meeting—what he thought about the administration proposal to lift the ceiling from the interest rates on Government bonds. Stevenson indicated approval, saying: "To compete for money in this kind of market, you have to make bonds more attractive."

On June 14, however, Stevenson approved a Council statement attacking the bond interest proposal as "indefensible."

Thus Stevenson, typically confused and indecisive, managed in 2 days to get on both sides of the issue.

The incident recalled another typical Stevenson performance in April of 1958. On April 29, Stevenson joined in an Advisory Council statement calling for a tax cut and terming the recession "a seriously mounting crisis."

On the following day in Chicago, Stevenson made a speech in which he came out against a tax cut and declared, "I believe the recession will level off soon."

The latest example shows once again that no one can be sure of what Stevenson believes on a specific issue and, apparently, this confusion includes Stevenson himself.

## Now Let's Have a National Children's Day

EXTENSION OF REMARKS

# HON. MARGUERITE STITT CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 24, 1959

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the Record or an interest of the remarks in the Record or an interest of the remarks in the Record of the remarks in the Record of the remarks in the Record of the remarks of the remar

Now Let's Have a National Children's Day Mother has had her day, Sunday will be Father's Day, and this week the loving thought of all is to get Dad something his he will like and remember. A box of favorite cigars, nice haberdashery, a snapp hat, or even something in a hobby line.

Now, when do we get our third big day to complete the cycle of family affection

Children's Day? This is something for the parents to think about, while the young folks concentrate on making Father's Day as happy and successful as was Mother's

Congresswoman MARGUERITE STITT CHURCH has in Congress a joint resolution, introduced at suggestion of the Peacock newspapers, calling for President Eisenhower to proclaim a National Children's Day. We are looking forward to favorable action on it.

In fact, we so firmly believe there should be an official Children's Day that we are including it, as of now, in the Peacock newspaper's platform.

Above all, let's insist there be a Children's

What are your suggestions?

#### Surplus Eggs

EXTENSION OF REMARKS

## HON, ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 24, 1959

Mr. MICHEL. Mr. Speaker, on the successive dates of June 16 and June 17 there appeared in the evening and morning editions of the Peoria Journal Star similar editorials stemming from scheduled hearings of the House Agriculture Poultry Subcommittee on the subject of surplus eggs, and I should like to have reprinted in the Record at this point both both editorials for they give us much protein—eggs, that is—for thought.

#### AND NOW IT'S EGGS

A subcommittee of the House Agriculture Committee of the nouse on proposals to give emergency relief to producers of poultry and eggs. Whatever Congress does, if anything, will only further complicate the agricultural economy. Every new farm farm price prop puts new stresses strains in the patched-up structure of prices.

In mid-April the average price received by the farmer for eggs was 28.1 cents a dozen.
That was 10.4 cents below the price of 12 months before. The price has been dropping

New Jersey farmers are now selling for 30 cents a dozen eggs that cost 39 cents to pro-One farmer offered to give 500 dozen to first comers, just as a protest against the low prices. People who took the free eggs bought and prices. bought another 750 dozen to help him.

What happened to egg prices? One answer is that too many eggs have been produced. Production is up 7 percent this year. "Egg factories" sprang up during World in World War II, in response to the demand for

more food, and the output virtually ex-ploded. Plocks increased. Scientific feed-ing and the use of antibiotics stimulated

At the same time, chicken farmers have een surering from the artificial prices created by the Government for grain farmers. The high price of grain feed, due to Federal Government price of grain feed, due to Federal Government grain price supports, makes the production production of poultry and eggs more costly, and the poultry farmers, like all taxpayers. The Government bas been buying dried

The Government has been buying dried eggs to Sovernment has been buying to stabilize prices and announced on June 2 that it would begin a program of weekly buying of frozen whole eggs.

bgg production controls and price suports have been suggested. But 1.7 million farmers produce eggs and they are marketed in 25,000 outlets. Just to police production and price sure the production and price sure the more sure than the production and price sure that the production that the production is the production that the production and price controls would require more supervisors than there are egg farmers. Price supports will also encourage continued overproduction.

Some administration or some party in Washington some time will have to show enough backbone to get us out of the vicious circle of subsidies and unwanted surpluses.

#### SAME PROBLEM EVERYWHERE

The Poultry Subcommittee of the House Agriculture Committee is going to begin hearing testimony tomorrow on proposals for emergency action to offset a recession in egg and poultry prices.

Poultry farmers have the same problem as a great many other farmers. They're too effi-cient for their own good. They have improved production methods so much that they're raising more chickens and producing more eggs than the country can consume.

The result is that prices go spiraling down unless the Government steps in with some artificial support to provide relief, either through price supports which are a drain on the country, or direct subsidy, which also is costly.

Lobbyists for the farmers are suggesting Federal production controls, price supports, and other emergency measures. Help for the poultry industry presents special problems, however. Herman I. Miller, poultry specialist for the U.S. Agricultural Marketing Service, points out that 1,700,000 farms are producing the Nation's eggs which are marketed in 25,000 outlets. The policing of production and sale would require more supervisors than there are egg farmers.

The Department of Agriculture on June 2 announced that it would begin a program of weekly purchase of frozen whole eggs. And since April 16, when purchase of dried eggs for the school lunch program was stopped, the Department has been buying dried eggs to stabilize prices. Cost of the school lunch and price stabilization programs already has topped \$15 million.

Part of the trouble in the egg and poultry business stems from the Government's effort to help other segments of the farm popula-Government support of wheat and corn has increased the cost of raising chickens. Feed prices have increased 400 percent since 1939 and they represent more than 60 percent of the poultry farmer's total outlay. Just to bring a day-old chick into its laying period costs about \$2. Already many small farmers have given up the raising of

Thus the problem of farm surpluses continues. Price supports and production controls have never provided a solution and there's little indication they will here, either.

#### Lewis L. Strauss

EXTENSION OF REMARKS OF

## HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. DEROUNIAN. Mr. Speaker, the Press has expressed its reaction, shared by many, to the Senate's assassination of the character of Lewis L. Strauss. Pursuant to permission granted me, I insert in the Appendix of the RECORD the following editorials and articles of the past few days:

[From the New York World-Telegram and Sun, June 20, 1959]

STRAUSS REJECTED

We hope the politicians who dangle Lewis Strauss' bald scalp are happy in their achievement. Their happiness is certainly

the only discernible gain in this sorry mess.

Mr. Strauss served our country in many capacities over the last four decades-always with distinction.

He failed of confirmation by the Senate in his appointment as Secretary of Com-merce, a position for which he was eminently qualified.

Over the many long months of debate where objections have been raised to Mr. Strauss' confirmation, we have read carefully the evidence presented and have gathered that the principal argument against Mr. Strauss has been that some Senators do not like him.

In our opinion, that is an insufficient cause for rejecting him. He was defeated by politics. Bad politics, at that.

[From the New York Mirror, June 20, 1959] THE TRICK ON STRAUSS

The friends and admirers of Admiral Lewis L. Strauss must regard Lyndon Johnson's parliamentary trick, which resulted in the Senate's failure to confirm Strauss by a vote of 49-46, as disgraceful.

And a trick it was.

Although the admirers of Lyndon Johnson will always be able to point to this as an example of his astuteness, they will have much explaining to do to those who cannot understand why Johnson, the conservative Democratic leader, should uphold the position of Strauss' left wing opponents.

And that is what defeated Strauss-left. wing opposition—because he was effective in bringing about the dismissal of J. Robert Oppenheimer, the scientist who once paid dues to the Communist party, as his testimony shows.

[From the New York Times, June 20 1959] POLITICS DEFEATS MR. STRAUSS

The President, under the Constitution, has the right to appoint the members of his Cabinet subject to the approval of the Senate. This approval is not usually withheld and should not be, for the Chief Executive must be free to choose the members of his official family.

In the case of Lewis L. Strauss, however, 49 Members of the Senate saw fit to refuse the President's request and voted against the nominee. It seems fitting to inquire into their reasons. Some did it for personal pique, some—and very few, we should judge—because they thought he was unfit, a number to support the pique of their fellow Democrats, the vast majority to go along with their party plan and reduce the prestige of their President.

Thus for an assortment of causes a splendid public figure was cast aside and the Democratic majority satisfied with this blow it has delivered to the Republican occupant of the White House, wears a grin of satisfaction.

Tribute should be paid to those Democrats who did not follow the party line and voted to confirm. The real tribute, however, should go to Mr. Strauss himself for his services during the war and as head of the Atomic Energy Commission when the hydrogen bomb, our greatest source of security, was developed under his leadership.

[From the New York Times, June 21, 1959] STRAUSS CASE RAISES ISSUES FOR ELECTION-BITTER PERSONAL ANIMOSITIES SEEN AS AM-MUNITION FOR THE 1960 PRESIDENTIAL CAM-PAIGN-VINDICTIVE PRESSURES USED

#### (By Arthur Krock)

Washington, June 20.—The Senate's rejection of the President's appointment of Lewis L. Strauss to be Secretary of Commerce had its roots in personal and atomic policy differences between Strauss and a few Senate Democrats. But certain aspects of the events leading up to the rejection assure that the action will be nourished by the Republican

leadership of the 1960 Presidential campaign for development into an interparty issue, Because, however, two Republican Senators could have effected the Secretary's confirmation by voting for instead of against it, and 15 of the 64 Senate Democrats supported the President's appointment, the party versus party issue will not be as clearcut by the process of arithmetic as it was made by the following circumstances:

- (1) Whether or not it can ever be proved that, as Vice President NIXON put it, LYNDON B. Johnson, the Democratic leader, engineered the Senate action in a way to justify criticism, at any rate Johnson and the other Democractic Senators viewed as Presidential aspirants were solidly aligned against the nominee. These were HUMPHREY, of Minnesota; Kennedy, of Massachusetts; and Sym-INGTON, of Missouri.
- (2) Democratic Senators whom Johnson has found dependable on tests of his leadership, but a number of whom would have surprised no qualified observer by voting for Strauss, all opposed the appointment. this group are BIBLE, Nevada; CHURCH, Idaho; ERVIN, North Carolina; FREAR, Delaware; GREEN, Rhode Island; HAYDEN, Arizona; HILL, Alabama; Jordan, North Carolina; Long, Louisiana; Neuberger, Oregon; Smathers, Florida; Sparkman, Alabama; and Talmadge, Georgia.
- (3) Five or six Republican Senators had Washington for outside engagements after the majority leader made this statement to the Senate Wednesday: "If I can, I should like to assure any members \* who desire to be away on Thursday, Friday and Saturday-so far as I know, I will say, they are not members of my own party—that we shall have a definite agreement as to when to vote, so that no one will be taken advantage of." But this was conditioned before and afterward by re-peated notice from Johnson that Republicans were leaving at their own risk, so that it is only an argument that they had good reason to be surprised by Johnson's decision to hold the Senate in session until a ballot was taken.

#### GOP FILIBUSTER

By filibustering, the Republican leaders were able to stave off a vote until all their absentees but MILTON R. Young had been brought back to the Capitol. But the filibuster was determined enough to force the Democratic leadership to agree at that point to a "pair" of Young who was pro-Strauss and the assistant majority leader MANSFIELD, of Montana, who was present, and anti-Strauss. This prevented the Democrats from taking advantage of that situation. But bad feeling was engendered on both sides of the party aisle by charges and counter charges of leadership sharp practice. And the Republican campaign orators are sure to represent this part of the espisode as further evidence of official Democratic strategy to reject the Strauss nomination.

(4) The real leader of the fight against confirmation, Anderson, of New Mexico, was a very influential Senate Democrat to whom many of his party colleagues are indebted for help in both personal and legislative situations. His individual war against Strauss, beginning over differences between them with respect to the latter's activities as Chairman of the Atomic Energy Commission, grew on his side into one of the most implacable vendettas ever waged on Capitol Hill. In pursuance of this, Anderson made every possible type of appeal to his fellow Democrats for support in the controversy. "All my chips are on this one," he would say, and remind his auditors of past favors. He also argued that in a personal contest between a loyal Democrat (himself) and a "reactionary Republican" (Strauss) there was a party obligation to be considered. SUCCESSFUL ARGUMENTS

The success of these arguments, which the final lineup suggests, was much more effective than Anderson's attack on Strauss' personal and official integrity, offers further material for a Republican 1960 campaign charge that Democrats were basically responsible for the rejection of the Secretary of Commerce.

But whether the opposition of the two Republican Senators to Strauss will impel the public to assign to both parties the responsibility or credit for the action (according to their approval or disapproval of it), bitter consequences are sure to emerge from all this background of intrigue, of personal and leadership pressures, of attacks on character, of suspicion or proof of unworthy motives, of accusations of broken promises.

The prestige of the Presidency has been challenged, and/or General Eisenhower's official and personal moral standards have been aspersed, by the Senators who voted to reject the eminent public servant he chose to associate with himself in the inti-mate relations of the Cabinet. And the President, who backed Strauss to the limit against every attack made on him as an administrator and as a man, is not likely to treat the rejection as a closed incident in the many communications to the people he can

1960 campaign.

## be expected to make before the end of the ONLY EIGHTH TIME

Not only is this the eighth rejection of a Cabinet appointment in the history of the Republic. It marks a Senate repudiation of the type of highly talented, self-sacrificing citizen that it has become increasingly difficult for Presidents to recruit for Government service except in time of war. Furthermore, this particular citizen who became the eighth of his species had served and been commended by four Presidents, awarded five of the highest national decorations, was an officer in the Naval Reserve who rose to rear admiral, and who, as he vastly understated it in his comment on his rejection, had "done the best I knew how to do to protect and defend the national security when that was not the recognized, nor easy, nor popular course of action at the time" (the decision to produce the H-bomb).

And, since many of the reasons given by Senators as outweighing these extraordinary achievements were captious, plainly contrived, palpably the result of political or per-sonal pressure or vindictive, it is not inconceivable the American people will produce a much larger majority for Strauss than the

Senate produced against him.

#### History and Moral Responsibility

EXTENSION OF REMARKS OF

#### HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Monday, June 15, 1959

Mr. CURTIS of Missouri. Mr. Speaker, on Saturday, June 13, 1959, at Dart-mouth College, Mr. Charles H. Malik, President of the United Nations General Assembly, addressed the graduating class of 1959. His talk was such an excellent one I am asking that it be placed in the RECORD so that my colleagues and others may read it:

HISTORY AND MORAL RESPONSIBILITY (By Charles Habib Malik)

The rising generation looks up to the reigning generation for wisdom and guidance. It has sat at its feet for 20 years both at home and in school, and when the moment comes to leave the halls of learning it is subjected to the last and most concentrated bolt of advice that the reigning generation can muster. The world and its problems are analyzed and eager youth are adjured to face and conquer them. New analysis is excellent and advice is wonderful, but the rising generation has every right to address its elders in the following terms:

"We are grateful to you, our elders, for bequeathing to us a flourishing civilization The economy is prosperous, there is peace in the world, there are wonderful opportunities ahead, and we are blessed with vigorous free institutions. But you are also bequeath ing to us tremendous problems. Are you old elders, who are reigning just before us altogether innocent of the problems we re-ceive? And if our difficulties are in part your own creation, must you not therefore refer us to a wisdom even above yourselves wherewith to illumine our mind and guide our footsteps?"

#### A FALSE EXUBERANCE

The note of humility and confession of guilt is somewhat lacking in the profusion of analysis and advice to which youth is treated at this season of the year. There is a false exuberance, a somewhat unjustified opti-mism. There is to an analysis and as mism. There is too much self-sufficiency, as though man can lift himself by his b straps. There is too little awareness that we straps. There is too little awareness that are in the palm of powers much greater than ourselves, powers we have consciously The unconsciously wronged and offended. sense of just retribution is weak.

How to Tace the truth without flinching how to own one's moral responsibility with respect to it, how to pass on both the truth and one's responsibility to the coming gen-eration, fairly and with creative grace, and how to do all this without affectation high with despair—this is something for which much prayer and much purity is needed.
And yet nothing short of this is the duty
of those who are of those who are called upon to address the graduating classes this year.

#### INPUITABILITYS

Consider closely, then, a few matters. West win in China after the Second World War Was that an inevitable result? Are we dealing here with a market result? ing here with a predetermined social, political, bistories cal, historical process that could not have been helped? Those who say we are with there are some who do—are thereby saying cal movement which irresistibly culminates in hostility to the West in hostility to the West. Are they then prepared to accept the theory that the very universe, the team that the very universe. verse, the very laws of history, the very nature of things, is against them and walues? This is always them and the very nature of the very nature of the very nature. values? This is always what happens those who brush aside moral responsibility and blame impersonal cosmological factor for their state. It would seem, therefore that it were better for them to say: it partly our fault, it was the fault of this of that decision or this or that decision or this or that decision or this or the fault of this or that decision or this or that policy or this or that weakness in our human nature.

Why has the Middle Eastern situation deteriorated so much? Was that inevitable In the early days of the United Nations literally could not get a Middle Eastern no resentative to shake hands with a Commitnist delegate. Ten years ago the Soviet fer tor in Middle Eastern events was negligible. Today nothing in the Middle East or about the Middle East the Middle East is considered or decided to cept as a function of the Communist factor. Can people therefore comfort themselves the thought that the cosmos is such this result had to come about? Is not truth rather that we are here dealing with sibility? It would seem therefore that were better for people to say: It was part our fault, it was the faulty of this or the

decision or this or that policy or this or that Weakness in our human nature.

#### DISTNO CHILTINES

Old cultures and peoples are emerging into independent nationhood throughout Asia and Africa. There is an admixture of antiwesternism in varying degree in all this rising nationalism. Again the question arises, was this a fated phenomenon? Is Asian and African nationalism necessarily and by nature incompatible with friendship and cooperation with the West? Those who blame it on European colonialsm are only saying that the association of European and non-European cultures has been such that When the non-Europeans asserted their inde-Dendence of the Europeans they had to be anti-Western. But this involves a tremendous moral judgment. Nor can the Western cosmologists prove that the international Communist movement was not itself largely responsible for this anti-Western virus. Again the final truth appears to be a thoroughly human situation in which the West exhibits a certain inadequacy both in dealing with non-Western cultures and in competing with communism for their soul. And so it would seem that it were better for people to say: It was partly our fault, it was the fault of this or that policy or attitude or weakness in our human nature.

The fashion now is to blame everything on the atom. You cannot do this here, you cannot be firm there, you cannot press for a decision elsewhere, because you then run the risk of nuclear war. Ergo, compromise, coexist, be flexible, withdraw with a face-saving saying formula. The atom is a godsend to the pacinsts, the defeatists, the appeasers, the fellow-travelers, the decadent, and the plans plans tired. In its shadow they are enjoying a most wonderful field day. But assuming that the atomic stalemate is already upon us an assumption that requires much proof still three questions arise:

(1) If the same is true of the other fellow, Why must one be more scared than he?

(2) Why did the West not press for a peaceful settlement of the issues now confronting the world before the atomic stalemate came

(3) Why was the atomic stalemate allowed to develop in the first place when only a decade ago the West had (and almost certainly it still has) the greatest concentration of science and technology in history? These questions raise fundamental issues. It would seem to the form seem in their light that it were better for people to assume moral responsibility for what happened.

# TREMENDOUS CIVILIZATION

One aspect of Western life is this tremendous material civilization. It is a great achievement and without a certain spiritual attitude, a certain view of man, mind, matter, and the nature of things, it would have been impossible. But the spiritual significance is hidden and people in their human weakness are apt to dedicate their lives to the quantum and abunthe quest of security, comfort, and abundance as ends in themselves. In fact this aspect of Western existence is unfortunately what what impresses non-Western peoples most, with the result that the most serious tensions and misunderstanding—psychological, economic, and political—build up between

the West and the underdeveloped peoples. Is this fair to these people? Is it fair to the West itself with its infinite intellectual and spiritual resources? Is it right to blame this misunderstanding of the West on the inherent limitations of the East, namely, to say that because the East is sensuous and materialistic it sees only sensuality and materialism in the West? I think this is too easy a disclaimer of moral responsibility. Again it would seem that it were better for people to say: It is partly our fault, it is the fault of this or that policy or tendency in our culture or weakness in our human nature.

Consider finally the dynamic character of communism. It appears to be winning on every front. However you explain them and whatever be the counterbalancing sources of comfort, the following are stark facts: Communism controls directly one-third of the world, and it has infiltrated and softened up in varying degrees the remaining twothirds: it commands a most formidable international organization, superbly active every minute everywhere; it has a great appeal, especially to some intellectuals and to those who are seeking an absolute; it appears to command great atomic capabilities; the West appears to be on the whole on the defensive, waiting for a Communist initiative to react to it; and the visible struggle is all on this side of the Iron Curtain. In the face of all this the West cannot say: They are winning because they use methods to which we will not stoop. Can they not be beaten by other and better methods? It would seem therefore that there is room for a more anxious beating on the breast to find out what is really happening in the world

#### A LESSON IN HUMILITY

From what happened in the Far East, from what happened in the Middle East, from the phenomenon of anti-Westernism, from the atomic stalemate, from the materialism through which the West is understood or misunderstood, and from the defensivism of the West in face of Communist dynamism-from these things a lesson of humility can be properly drawn. The rising genera-tion is receiving wonderful things at the hands of the reigning generation, but it is also inheriting these serious situations for which, in the universe—whatever that may mean-not the cosmos, not dark impersonal forces, not the laws of nature or of history, but the human culture of a whole epoch must assume the responsibility. The confession of one's limitations rooted in the knowledge of the limitless sources of one's being is the ground of all truth, all hope, and all progress.

This is a world through and through subject to moral judgment. History is a field of real moral responsibility. Man, in the free-dom of his conscious decision, makes or unmakes history. The reason why the rising generation can look forward to a future of positive achievement is precisely because the last word has not been uttered. It is grateful to the reigning generation on two counts: because it is bequeathing to it so much solid achievement and because it is leaving for it so much still to be done. The issue is not closed; he alone laughs who shall laugh last. In this way the commissions and omissions of the past shall keep the future busy until the end of time.

#### MORAL LAW GOVERNS

If then historical fatalism is nonsense, if man alone is the captain of his fate, it follows that history is governed by moral law. Moral law is the exact opposite of dark forces acting blindly. In the creation of history there is the most lucid revelation of norms and patterns which we know we should obey; and when we disobey them, the unrebellious among us will confess their guilt. And, in addition to the knowledge of the facts, the whole problem of education for historical leadership is to sharpen the conscience so as to see, recognize, and obey these patterns and precepts, and to impart to the soul the moral courage to witness to the truth once it has known it, and the humility to confess its guilt when it falls short of the best it knows. Vision, obedience, witness, and confession—these are the four pillars of all moral education for the responsibilities

of history.

The industrial and technological capabilities of the free world are still vastly preponderant. Scientific research is passing through an astoundingly creative phase, and

there appears to be nothing foreclosed so far as any conceivable material instrumentality is concerned. Economic productivity is so abundant that many, if not all, of the eco-nomic problems of the underdeveloped countries can be solved, given of course adequate foresight and wisdom on the part of political leaders. There is a vigorous political awareness in the free world, and one should never underestimate the power of free men once they are aroused and once they appreciate what is really at stake. The possibilities of educating and guiding public opinion through television, the radio, and the press are simply fantastic. In the free universities with their wonderful cumulative traditions the mind can seek and discuss the truth in all fields in perfect freedom. And God, the living God, the creator and re-deemer of mankind, of you and me in per-son, is worshiped, loved and obeyed in countless homes and churches.

#### IMMENSE RESOURCES

These are the immense resources of the free world. In their totality there is nothing even comparable to them anywhere else. If history rests on the shoulders of those who make it, and on nothing else, the leadership of the free world has an unparalleled opportunity to make history today. There is nothing that happened in any of the areas to which I referred that cannot be retrieved, and while things never go back to what they were, they can always be lifted onto a new and higher plane. Everything depends on the

depth of personal existence.

Let there be therefore full understanding of what is historically at stake today; let the international Communist movement be understood exactly for what it is—a radical rebellion against the tested values of the positive tradition, including objective truth and God; let the peoples of Asia and Africa and Latin America be respected and helped, in their exertions to develop themselves and to stand on their feet, on the basis of juridical and moral equality; let there be a solid grounding in the wonderful virtues of the liberal arts, such as Dartmouth teaches and promotes, with all their freedom and joy and depth and universality; let there be joy and depth and universality; let there be real faith in a hidden, living, just, merciful and loving Judge; and let there be a firm determination never to compromise with falsehood, never to yield to tyranny, never to bow the knee to darkness, and always to respond to genulineness and truth—let those things determine the personal existence of those who carry the responsibilities of his-tory today, and I am certain all will be well in the end.

#### TO TODAY'S GRADUATES

And so to the young men who are graduating today from this great institution of learning I say this:

You can never be grateful enough to your elders for the great material and spiritual world which they are bequeathing to you. You are privileged to receive established working institutions with boundless possibilities which hardly any generation before you received.

If part of your inheritance consists of great problems which rock the world today, remember that it is the world stature recently attained by America that is thrusting these issues upon your mind. Many of these problems existed 50 years ago, but you feel them keenly today because world historical responsibility has suddenly fallen upon you.

You will be tempted by the cosmological fallacy to blame things, conditions, blind forces, impersonal factors, for what should be your own responsibility. The distinctive glory of man is that he alone is responsible for his fate, and I beg you never to abdicate

Be merciful and understanding in your judgment of the reigning generation, because

who knows that one day you will not require mercy and understanding yourselves.

#### LIBERAL EDUCATION

Through the liberal education you received in these halls you will be able, better than through anything else, to confront, comprehend and cope with the complex issues of the modern world. Indeed you will find that this education is one of America's greatest spiritual achievements, and that it holds untold possibilities precisely for the emergent Asia and the emergent Africa, if only people thought enough and cared enough.

Be worthy of the infinite material and spiritual riches that the toils and tears and sufferings and cumulative vision of 4,000 years have built up for you. You have means and ends at your behest that no generation ever had. Live up therefore to the expectations of this wonderful trust, and be thank-

When the cup of historical responsibility is offered you, drink it to the full. And when you have honorably acquitted your-

selves before your conscience and before your God, fear nothing. If you have known a real man he will haunt you the rest of your life. And because personal existence is the key to everything, seek the knowledge of the most real man, so that you will ever change in the image of the pattern of his person while you live.

#### INNER RENEWAL

There is nothing new under the sun except the renewal of your inner person every day. All ideas, all ambitions, all pence plans, are as old as the heavens, but when you open your being, in humility and in humor, to be transformed in the image of the highest-that is new under the sun. Only the new creature is new.

Your day is going to be momentous. Come unto it, therefore, slowly, patiently, gracefully, in the full maturity of your powers. Seek greatness in your day, seek excel-

lence, seek depth.

You belong to the choicest cream of Western society. Much more depends on you than you now think. May it therefore never be said of you, never, "\* \* \* but if the salt have lost his savor, wherewith shall it be salted?" (Matthew 5:13.)

I assure you this will never be said of you if in every gladness and in every adversity you "wait upon the Lord." For it is written: "Even the youths shall faint and be weary, and the young men shall utterly fall: But they that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary; and they shall walk, and not faint." (Isaiah 40:30-31.)

#### Repeal 10-Percent Travel Tax

EXTENSION OF REMARKS OF

# HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. HUDDLESTON. Mr. Speaker. under unanimous consent, I insert in the RECORD an article from the Southern Railway System magazine Ties, the June 1959 issue. The article deals with the 10-percent travel tax on persons and the need for its repeal.

Mr. Speaker, as you know, on June 1, 1959, I introduced a bill, H.R. 7470, which would repeal the transportation tax on persons. The bill has been referred to the Committee on Ways and Means. As my colleagues are well aware, this is a tax which was passed as an emergency wartime measure. Its intent was to discourage unnecessary use of the transportation facilities of our Nation so that they could be used to the fullest possible degree for the war

Although passed as an emergency measure, a wartime measure, the tax continues to be levied today, long after the emergency ceased to exist. The tax continues, and so does its burden continue, for every public carrier engaged in the transportation of persons and, further, for every person who travels by means of public transportation-meaning, of course, almost every American taxpaver.

This article well points out the reasons, indeed the necessity, for repealing this unjust and severe wartime tax. I am pleased to commend it to the attention of my colleagues in Congress, with the hope that they will give this vital matter their careful study and earnest consideration:

REPEAL THE 10-PERCENT TRAVEL TAX

World War II has been over for almost 14 years. Some fighting men of Saipan, Omaha Beach, and the Ardennes are grandfathers by

Yet the 10-percent wartime tax on passenger travel still lingers-seriously injuring the very carriers that it was intended to help. Congress can and should repeal it now.

The tax was an emergency wartime measure, imposed principally to discourage nonessential civilian use of the hard-pressed railroads when they were jammed with milltary movements.

The same considerations that led to the adoption of the tax during World War II now call just as strongly for its immediate

At the time, railroads were carrying approximately 97 percent of all organized military travel. If war should come again, much the same kind of performance will be expected of railroads.

But this wartime tax that has long outlived its usefulness is hurting railroads seriously in their efforts to be ready for any such

emergency.

Railroad passenger service today is threatened by annual operating deficits of almost \$700 million.

If there is anything railroads do not need it is to have prospective passengers discour-

aged from taking the train.

As railroaders, we are most keenly concerned with the damage this tax does to railroads. But we know, too, that we are not alone in feeling the pinch. The tax hurts airlines, buslines—in fact, all common carriers in the passenger business.

Essentially, what the tax does is drive travelers away from the public carriers (like railroads) to the principal private carrier-

the family automobile.

Three out of 10 familles in this country, however, do not own an automobile. They have no choice. If they want to travel, they must use the public transportation services subject to this tax.

So the tax is unfair-in that it discriminates against one part of our population, against the people least able to afford the extra cost the tax adds to the price of a

This is not a tax on the carrier, but the passenger. The railroad, airline or bus line simply collects it for the Government.

More than that, the tax is dangerous. In weakening our essential public carriers, it undermines our national strength and preparedness. By adding some \$200 million a year to transportation costs, it gives one more boost to the inflationary spiral.

It might be noted, too, that the tax discriminates against persons traveling within the United States. To certain foreign des-tinations the travel tax does not apply. In this way it tends to discourage the traveler from seeing America first-and to promote foreign resorts at the expense of our own resort and recreation industry.

Even if you liked this travel tax, it would be hard to find something good to say about

The only possible excuse for retaining it at this point is the revenue it brings into the Federal Treasury.

But how much of the \$200 million a year is real, and how much of it is an illusion?

For example, the tax paid on business travel can be and is being deducted as a business expense by various companies in computing their corporate income tax. that extent, the so-called revenues from the travel tax are simply being taken out of one Government pocket to be placed in another.

Looking at it another way, it is almost impossible to estimate how much income tax revenue from public passenger carriers the Government is losing as a result of the travel tax and its effect on passenger business.

Repeal of the tax would probably stimulate the passenger business generally, resulting in increased tax revenues.

When these factors are taken into consideration, considerable doubt exists that the Federal Treasury would really lose all that revenue—or even the major part of it if the tax were repealed.

In its recent report on the railroad passenger train deficit, the Interstate Commerce Commission recommended nine specific steps that could be taken to remedy the situation.

First on the list was the repeal of the 10 percent Federal excise tax on passenger

Last year Congress recognized that World War II had ended-for shippers of freight, at least-when the legislators repealed the percent wartime tax on freight shipments. Isn't it about time a similar peace treaty

was signed with America's travelers?

# Bills To Rebate Taxes to States Must Be Equitable

EXTENSION OF REMARKS

# HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 18, 1959

Mr. DIXON. Mr. Speaker, a proposal which is given consideration frequently by many Congressmen is that a portion of the taxes collected by the Federal Government should be rebated to the

Without arguing the merits of this idea, I believe it is important to draw attention to a serious and probably un intentional inequity in most of the bills which have been introduced to carry out this idea.

These bills typically rebate to the State 1 percent or 5 percent of the Federal income tax collected within that State The inequity arises from the fact that the amount of Federal taxes collected in any particular State is largely a geo graphical or business practice coinci-

D

by R

th

8h

Th

1

PER ME ACT WE CON CONTROL OF THE STATE OF TH

dence and is to a considerable extent Wholly unrelated to the amount of taxes paid by the people of the State in question. For example, in a State such as Utah, even the personal income withheld by a number of our large employers with out-of-State headquarters is remitted to the Collector of Internal Revenue in States other than Utah where the income was earned and where the payroll deductions were made. Practically all of the Federal excise taxes such as those on new cars, appliances, machines, and so forth, are remitted by the manufacturer in the State of the parent manufacturer, even though the amount of the tax is expressly paid by the final consumer in Utah. These are but obvious exam-ples of the irrelevance of the amount of Pederal tax collections within a State as measure of the Federal taxes paid by the people of that State.

It would therefore be manifestly unfair to use the amount of Federal tax collections within the respectives States as the base for distributing Federal grants. As an example, for the fiscal Year of 1958 the Internal Revenue Bureau reported Federal tax collections in Otah amounting to \$200,022,000 whereas a fair estimate of the actual taxes paid by the people of Utah for the same year

Would be \$278,300,000.

These figures were carefully estimated by the Utah Foundation, and Mr. Henry R. Pearson, executive director of the Otah Foundation and his staff deserve be commended for bringing to light these significant discrepancies which how that Utahans pay almost 40 percent more in Federal taxes than is atbibuted to the State through collections.

I am placing in the RECORD the method used by the Utah Foundation to com-Dute Utah's share of Federal taxes which further elaborates reasons for the disbarity between collections and the actual taxes paid by the people of Utah.

The Remarkable Achievements of the Credit Union Movement

> EXTENSION OF REMARKS OF

# HON, JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. DENT. Mr. Speaker, I cannot let this opportunity pass without rising to opportunity pass without press the gratitude and appreciation of Peness the gratitude and approximation of the peness the gratitude and approximation of the peness o members, for the benefits derived from the passage of the Federal Credit Union Act Passage of the Federal Cross of 1934, and the continued interest and support of the Members of Congress the support of the Members 25 years of credit union history which are culminating in this quarterentury celebration, reflect the confidence of millions of families in a truly democratic institution. The history of the growth of credit unions in the United States clates and the rest of the world is worthy of note.

In the United States today there are nore than 19,000 credit unions serving

the credit needs of American families and teaching them the advantages of systematic savings. In 1947 there were only 7 credit unions organized outside of the United States and Canada: in 1957 there were more than 5,000 in countries located throughout the world.

There are more than 1.000-1.116credit unions in my State of Pensylvania. serving over half a million members and their families. Nine hundred and fortynine of these organizations are chartered under the Federal Credit Union Act, the remainder are chartered by the State. These small financal organizations, State and federally chartered, have been serving the financial needs of an estimated 23 percent of the population of Pennsylvania. Any institution which serves one-fourth of the population of a State through the cooperative efforts of its membership must indeed have much to offer. It must also enjoy the full trust that only an efficiently organized and managed institution can command.

Credit unions do have much to offer: They help millions of individuals to establish regular saving habits.

They are available to, and operated by, people from every walk of lifegovernments, communities, churches, schools, manufacturing, retailing-and numerous other occupations.

They provide small loans for provident and productive purposes such as family emergencies, home repairs, purchases of consumer goods, at a cost of 1 percent or less.

They pay dividends on savings invested, that is a member's share balance, at a rate of 3 to 4 percent annually.

Their assets can be used only to make loans to members or to invest in Government securities, they are operated by the members for the members.

The following record of achievement will attest to the fact that credit unions enjoy membership confidence in the efficiency of their management:

In 1957, they held more than 17 percent of all personal loans outstanding.

They currently have assets in excess of \$4 billion—almost 7 times larger than a decade ago-Pennsylvania alone has \$192 million in credit union assets.

They have a total membership in the United States of more than 10 million, 3 times the 1947 membership.

Members' shares totaled \$3.6 billion in 1957—Pennsylvania credit union members have deposited shares of \$168.1 million.

There are 19,166 individual credit unions located throughout the United States. There were only 2,000 prior to the passage of the Federal Credit Union Act of 1934.

They are among the most numerous consumer-lenders in the United States.

Few organizations can point to a more impressive list of accomplishments.

I have a very deep conviction that freedom of economic opportunity can best be achieved if all available safeguards are made available to the workingman-the little man. The history of the credit union movement more than convinces me that my conviction is a valid one. Since the first credit union law was passed in Massachusetts, 50

years ago, credit unions have been growing in financial and numerical strength. Credit union members have been able to turn their backs on the loan sharks in times of adversity. Funds have been forthcoming from their own coopera-tive—the credit union. The only guarantees needed to receive a loan are personal integrity and approved member-

Similarly, credit union members have not had to turn to unscrupulous installment finance companies to secure funds with which to acquire goods and services to assist in achieving an ever-rising higher standard of living. A recent article in Fortune magazine—May 1959—notes that the traditional class concepts which use "a neatly layered social pyramid" are today no more than a source of confusion:

The basic reason for the increased confusion about class in the United States is the steady growth in the number of Americans who can afford at least some of the amenities once associated with the highest positions in our society.

Credit unions have contributed a fair share to the rising standard of living for millions of American families. We have always been a nation rich in credit resources. However, we have never been rich in credit resources for the little fellow. Credit unions have filled the gap between the readily available credit for the wealthy, well established, and the loan shark's high-cost credit. These self-help organizations have solved both savings and credit problems for bluecollar and white-collar workers and many others who otherwise would have been unable to purchase consumer durable goods, or who would have had to pay double the cost through those lenders who profit from high-risk, high-interest, credit transactions.

The impact of these self-help institutions on both the social and economic well-being of this country, and the general welfare of American families cannot be too highly praised. They are the exemplification of the American ideals of equality of man, freedom of opportunity, and unselfish cooperation.

I join the Credit Union National Association in its confidence in the futurequoted from an anniversary brochure:

A better way of life is promised for more people around the earth, as the credit union movement continues to grow. Credit unions are more needed today than ever before.

More Poison in Colorado Water

EXTENSION OF REMARKS OF

## HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

JOHNSON of Colorado. Mr. Mr. Speaker, in the second of its series on water pollution, the Rocky Mountain News in its June 22 issue calls attention to a new Colorado law.

The new law, introduced in Colorado's last legislative assembly by Dr. (Senator)

Wells, of Brighton, strengthen the hand of the State health department, but money will be needed to get sewage treatment plants constructed.

Present Federal aid discourages joint action by adjacent sewer districts. However, Senate approval of H.R. 3610, introduced by our colleague the gentleman from Minnesota [Mr. BLATNIK] will provide larger Federal grants and henceforth encourage joint and more economical action among metropolitan area sewer districts.

The public health and safety, as well as its convenience and pleasure, demand greater public attention at every level of government.

The article follows:

NEW LAW STRENTHENS STATE BOARD OF HEALTH

(By Bill Miller)

A new law puts teeth into the heretofore toothless enforcement jaws of the Colorado Department of Public Health.

It is Senate bill 274, introduced by Dr. (Senator) William Wells of Brighton, and adopted by the last legislature. It was signed into law by Governor McNichols.

According to Dr. Roy L. Cleere, department executive director, the bill "strengthment".

ens our hand considerably." For many years, the department has had the duty of enforcing State sanitation laws.

#### LAW DECLARES

One of these laws declares that "the health, safety and welfare of the inhabitants of the State of Colorado require that the streams, lakes and other waters of the State

be kept free of pollution by human wastes."
Further, it stipulates that it is "public policy of this State that no discharge which contains human excreta shall be permitted to flow in the streams, lakes or other waters of this State unless such discharge shall comply with all standards of the State board of health adopted pursuant to law." In addition, the law states, the number

of coliform count in such discharge shall not average more than 1,000 per milliliter.

In the metric system, a liter is a little more than 1 quart. A milliliter is the 1,000th part of a liter.

The coliform count is an index of bacteria. The coliform is a normal inhabitant of the human bowel.

#### PURPOSE OBVIOUS

Purpose of this law is obvious. The State wishes to keep the amount of bacteria entering streams and rivers at a level consistent with good health.

But what happens?

State tests show that the average coliform count ranges as high as 240,000 parts per milliliter-a far cry from the 1,000 parts

per milliliter legal limit.
The department, on January 14, 1957, adopted a regulation which gave it another

testing device.

This required that effluents have a BOD (biochemical oxygen demand) not exceeding 50 parts per million, unless the receiving watercourse is used downstream as a surface source of domestic water supply.

#### THIRTY PARTS LIMIT

In that event, the allowable maximum BOD shall be 30 parts per million.

Simplified, this means sewage must not exceed 30 to 50 pounds per million pounds in the BOD test. BOD measures the quantity of oxygen utilized in the biochemical oxidation of organic matter in a specified time and temperature.

The BOD count, at various measuring points in the area, has ranged as high as 680 pounds per million pounds-again a far cry from the legal limit. When water is low sewage per pound is high.

Denver keeps its coliform count in good shape by means of heavy chlorination be-fore the effluent is dumped into the Platte River. But the city runs into trouble with the health department on its BOD count.

This lead to a series of hearings, court action, and eventually, Dr. Wells' new law. In September 1958, following a series of hearings, the State ordered Denver to follow

#### certain procedures in treating its sewage. DENVER RESISTS

It gave Denver 36 months to build a sec-

ondary treatment plant costing \$10 million.

Denver resisted and obtained a court order restraining the State from enforcing its demands on the grounds that the State health department was attempting to enforce a reg-

ulation, not a law.

That's where the matter stands today. Denver has not started to build a secondary treatment plant. The State has taken no further action.

The new law includes the standards of treatment set up by the health department in its previous regulations and adds other standards that must be met.

This is what Dr. Cleere means when he says the law "has strengthened our hand."

It keeps the coliform count at 1,000 per milliliter.

The law also requires:

1. Minimum standards for effluent from sewage systems shall be not more than fivetenths milliliter per liter for settleable organic matter; not more than 75 parts per million for suspended organic matter; not more than 50 parts per million for the combined suspended and dissolved organic matter when measured in terms of 5-day 20° C. blochemical oxygen demand.

2. Plans for construction of any publicly financed water or sewage treatment facilities shall be submitted to the Department for review of sanitary engineering features before

construction.

3. The Department must maintain a quality testing program on the waters of the State.

4. Examination for water quality shall include such tests as may be necessary to determine the effects upon water quality em-ployed for recreational, industrial, agricultural, fish and wildlife, and municipal uses.

#### M'GLONE AGREES

William McGlone, Denver lawyer and president of the policymaking State health board, agrees with Dr. Cleere that these standards best can be met through the consolidation of two or more districts.

"Consolidation," McGlone said, "unquestionably is the answer in this area. The problems can be solved more completely and more economically for the average citizen by consolidation.

"We hope this can be accomplished. But these standards must be met one way or the other. If they are not met by consolidation then each district will have to accomplish it

Armed with the new law, the Department feels that it can now enforce its demands.

But it prefers to have cities and districts solve these problems voluntarily.

Denver has its problems as do all other sanitation districts in the area, including those serving the Clear Creek Basin.

Books as an Instrument for Winning the Minds of People for the Cause of Democracy

EXTENSION OF REMARKS

## HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. FEIGHAN. Mr. Speaker, on June 15, Mr. Justice Douglas delivered a very significant and timely address before the American Booksellers Association. In his address Justice Douglas made a penetrating analysis of the power of books as an instrument for winning the minds of people for the cause of democracy; He pointed up the very thorough and skillful use of books made by the Russian and Chinese Communists in their worldwide ideological campaign. Using every known language and major dialect, the Communists have flooded the bookstalls and marketplaces of the world with books which advance the cause of communism and discredit Western democracy. These books are offered at prices which the working people in all countries can afford to pay-and this means nothing more than token payments which bear no relation to the cost of production. Having visited many of the bookshops in Europe and south and southeast Asia, I recognized the importance of providing books at a price that people could afford to pay or, if necessary, practically giving away the books. I urged in 1955, the Appropriations Subcommittee and Members of the House to provide a more effective program for distribution of books throughout the world.

Justice Douglas points out how we, who have so much to offer the politically awakened minds of Asia and Africa, have not responded to this opportunity until the past few years. He makes the point that while we lag far behind the Rus sians and Red Chinese and this critical area, there is still time for us to act and that the action we have taken to date offers great promise for the future. well-deserved tribute is paid by Justice Douglas to the work of the U.S. Informa tion Agency in producing the kind of books needed in foreign language editions and at a price the people of Asia and Africa can afford to pay for them.

After taking the initiative to get the facts on the use of books in our worldwide information service, I was assisted by the determined efforts and persuasive leadership of our esteemed colleague from Illinois, BARRATT O'HARA. O'HARA campaigned in and out of Congress for a new program which he called classics of democracy. In this task he had the help of a group of straight thinking American citizens and the Chi cago Daily News. From my personal knowledge I know the many obstacles and the inertia which the U.S. Information Agency had to overcome before this program could be launched. The record of accomplishment to date is a testament to what can be done when the executive branch and the Congress see clearly and together what must be done.

We still have a long way to go in making full use of American literature, including the classics of American democracy, as a means to turning back the tide of communism. This is the conclusion reached by Mr. Justice Douglas.

Under leave previously granted, I insert in the Record the address delivered by Mr. Justice Douglas on "Books as an Instrument for Winning the Minds of People for the Cause of Democracy," as follows:

The bookstalis of Asia are busy places these days. The regimes of illiteracy are being replaced by more enlightened ones. It's a slow process but progress is evident. The generation that is learning to read and write has been virtually starved and is now developing great appetites for literature. One of the great tasks of printers and publishers is to fill this need by supplying books and tracts that cover the spectrum of human interests.

Those of you who go to Asia and browse in the bookstalls will make some astounding discoveries. I remember finding in a little bookshop in the old city of Delhi an edition of the story of "The Three Bears" in the English language. It was passably fair as a printing job. Its sold for an anna or two—I anna being about 1.3 cents. But the most interesting fact was that this book was Printed in Moscow.

Printed in Moscow.

Both Russia and Red China have vast publishing ventures to take care of some of their International interests. I do not have the figures for Red China. But the Russian agures are somewhat startling. She has a state agency known as International Book Which has translated some 16,000 books into hearly all the languages of the world and is selling those books in over 60 nations. Those books would not, of course, include the writings of Thomas Jefferson, Thomas Paine, John Stuart Mill, John Locke, David Hume, or Emerson. They would not include the life of Abraham Lincoln. Books that showed the frailties of communism—such as The God That Falled," by Crossman, "The Fall of a Titan," by Gouzenko, "Nineteen Eighty-Four," by Orwell—would never be cleared by the Soviet censors. But the books of Charles Dickens, Jack London, and John Steinbeck that reveal the seamy side of Western life are used by the Soviets for their own purposes. When I traveled Russia and Visited the libraries there, I always found on Russian library shelves that kind of book from pens of western authors. But there were none there that even attempted to give balanced view of American life. Even books like "The Red Pony," by Steinbeck, would never get clearance at the acquisition desk of any Soviet library.

The standards Russia uses for selecting books for her own people are largely followed in selecting literature for sale abroad. But there are exceptions. She caters to local tastes by publishing books of national or area interest. All told, Soviet Russia caters to all tastes except those that are anticommunist. Books on mathematics, philosophy, history, and even religion to a degree are all included. The Soviet list of 18,000 book titles is impressive. There are of course political and propaganda works in the list. But they do not dominate it. There does indeed seem almost a division of labor between Soviet Russia and Red China when it comes to saturating the book

markets of Asia with literature. Soviet Russia seems to deal largely in tracts that will interest and excite the new intelligentsia of Asia. Red China turns out most of the Communist propaganda pamphlets and tracts that flood the area.

These Communist printing Russia and Red China have several advantages over our printers and publishers. the first place the Communist press, being state owned and controlled, is as much an arm of government as the navy or air force. It enjoys an enormous subsidy. It is designed to operate as an instrument to help fulfill national ambitions. There is no profit and loss account to watch-no fear being in the red. The literary or educational tract like the political pamphlet is in the same category as the jet fighter plane or the missile. They are all on earnest missions to help proselytize the world. Moreover, Communist parties in other lands provide the agencies through which book distribution can be made quickly and Through the local Communist promptly. Party the local needs of Asia or Africa can be assessed and changes in tastes can be relayed on to headquarters in Moscow or

This is severe competition for the West. The two Communist countries I have mentioned have a long head start over us. They have mastered the languages of the world as part of their evangelistic program; and their tracts pour into these countries in all the languages that the people speak and write. Dealers can get these books on consignment from the Communist Parties. They sell hard back books for 20 cents and paperback books for an anna.

We are not offering competition at the level of the anna. At the level of 10 cents and upward the USIA is now offering competition. It is effective competition and the first the Communists have know in this field.

The problem is a complicated one. The books must be kept at a low price, for a day laborer in India does not make more than \$3 or \$4 a week. A lecturer joining the faculty of an Indian university will not make more than \$40 or \$50 a month. A man or woman who wants to build a personal library has difficulty budgeting for books on such a low income. A dollar book is out of reach of most. Even a 10-cent book may represent a large outlay for some families.

.If the books are published in English, they must be reduced to a vocabulary ranging from 1,000 to 5,000 words. The simplification is necessary because many thousands of Asians are only semiliterate in English.

Publication of books in the language of the various areas complicates the task. In India there are 17 distinct languages. There are about 40 Asian languages in which our skills are greatly limited or nonexistent. Some of our scholars may speak Punjabi, Tamii, or Telegu. But we are not well versed in most of the languages of Asia, not to mention Africa.

India has a modest low-cost book program started in 1955 under the Southern Languages Trust Fund. It aims to familiarize the people of each language group with the literature in the other Indian language groups. It also includes great works from the field of foreign literature. It has brought out about 100 titles so far.

The USIA program is much more ambitious. USIA, working with American publishers, has placed 6 million paperback books in the bookstalls of Asia and Africa since 1956. These have been in the price range of 10 to 15 cents. USIA pays the entire cost of financing the manufacture, promotion, and shipping. The publishers participate in effect without profit, their payment being 5 cents a copy which USIA pays as a service fee to cover overhead and indirect costs. A

book retailing for 10 cents is sold to the distributor for 2 cents who in turn sells it to his retailers at 6 cents. The USIA list of low-priced books is growing. About 130 titles are available in English and 175 titles in translations. These translations cover 16 languages.

"Selected Writings of Thomas Paine" have been put into Tamil and 25,000 copies have been distributed in a 10-cent edition. De-Tocqueville's "Democracy in America" is in Hindi in a 25,000-volume-16-cent edition. Five thousand copies of Thoreau's "Walden" is in Telegu in a 63-cent edition. Lisitsky's "Thomas Jefferson" is in Punjabi in a 32-cent edition of 3,000 copies. There have been 2,500 copies of Ludwig's "Abraham Lincoln" published in Marathi in a 42-cent addition. And Van Doren's "The Portable Emerson" has been translated into Guyerati in a 5,000 edition selling at 32 cents.

A real penetration has been made into the low-price book markets of Asia, particularly in India. The Communists no longer have the monopoly they once enjoyed. Yet it is still true that the Communists largely dominate the market of books that sell for under 10 cents. And that market is an important one in that part of the world. The average annual income of the Indian is only \$60 a year. That averages out at about 15 cents a day. That amount goes further in India than it does in America. But it still excludes most of the luxuries. It means in effect one meal a day with precious little left over for such things as books. As literacy spreads, the demand for books will in-Those who command the market of crease. Those who command the market of books that sell for less than 10 cents will assert great leverage over the minds of those just learning to read.

This weapon may be a decisive one in the battle for the hearts and minds of the people of Asia

I have mentioned only a few of the difficulties and perplexities of this low-price book program for Asia and Africa. One of the greatest is presented when our books are to be put into areas where there is a dollar shortage. Such a country is India. If payment is to be made, it must be made in rupees. In Africa some of the countries are in the sterling bloc and there is no way of readily converting pounds sterling into dollars.

It will take ingenuity to solve all of these problems. Where America sells its surplus food abroad, accepting payment in blocked currencies, perhaps ways can be found to use those currencies either to establish plants abroad to do the printing job or to finance contracts with local printers in India and other countries to do the publishing. The possibilities are great. We have barely started to exploit them. If we can turn our excess cereals and other foodstuffs into currencies that can be used to tell the thrilling story of American democracy to the peoples of the world we will be well on our way to win this cold war. Our task is to use our surplus food that feeds a starving world to produce literature that will enlighten them as well.

I have spoken so far of only the low-price book program. If all other books in the USIA program are included, the number distributed abroad jumps to nearly 10 million a year and the titles covered amount to about 1,000. These are printed in 50 different languages. The total program for all books—low price and others too—costs about \$3 million a year. It is the one way we have of entering the mud huts of Asia and Africa and letting the people discover for themselves the warm heart, bright conscience, and broad tolerance of our people. They can get this new insight through our literature. "This I Remember," by Eleanor Roosevelt, published in 18 languages, "Capitalism in America," by Frederick Stern,

published in 22 languages, "This I Believe," by Edward R. Murrow, and many of the works of Thornton Wilder, Stephen Crane, Walt Whitman, Carl Sandburg, and American authors of like standing are our best salesmen. The Communists can build steel mills, cement plants, DDT factories, and assembly lines as good as ours. But they de not have the cause of freedom, equality, and justice to exploit. Our great advantage over them is found in the ideals of our Declaration of Independence and in the respect for minorities which shines through our Bill of Rights. If we exploit them, the Communists will run second in the ideological race that has now spread to all the continents. There are many sectors where the contest is going on including the student exchange program, the various cultural exchange projects, and even some of our economic aid. One important distinctive area where we can exploit this great advantage which we have over all Communist regimes is in our lowprice book program. The poten greater than we have as yet realized. The potential is

Only the other day I read two disturbing accounts. Ethiopia, I learned, has at long last obtained jet fighter planes from the Pentagon. So has a South American country whose budget to maintain and operate those jet fighters is greater than its budget for education. Ethiopia is about 98 percent illiterate and this South American country is about 56 percent illiterate.

Jet fighter planes are no answer to the problems of illiteracy, disease, and poverty. Yet those are the forces that shape the issues which we face in the global struggle for the hearts and minds of people. Jet planes may help the powers-that-be keep the multitudes who have barely enough to eat temporarily quiet and subdued. But they only complicate the long-range prob-The tragedy is that the great decline lem. in American prestige abroad has been largely due to the fact that we think and act in military terms. Generals who have a vast command over billions in our budget represent us abroad as the rich, arrogant, powerful Nation that has little concern for the human beings who live in squalid mud huts next door to the runways where our million-dollar planes land and take off. America is coming to mean the bomb, not the fulfillment of dreams of independence and education.

Much of the evil which came out of World War II stemmed from the paramount influence of the military in setting our war objectives. War these days is political. The American military mind does not seem to understand that the enemy of today can perfectly well be the ally of tomorrow and that the converse is even true. The great tragedy is that we think of the world crises in military terms. We will solve our international difficulties with ingenuity, not with missiles. Of course we need to act from a position of military strength. But our military might should not control our political strategy. We need in America a ferment of ideas. A ferment of ideas and complete reorientation to the world will be our only salvation.

We are not identified with the peoples of the earth in their struggles to get on with their own revolutions. We have largely forgotten our own revolutionary inheritance. We must return to it if we expect to keep the political balance in the world from shifting to the Communist side. That is why those who translate the American classics into the languages of the world, print them, and distribute them among the villages of Asia and Africa are doing as important work as those who design our missiles.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the Congressional Record, and while providing that it shall be substantially a verbatim report of proceedings shall take .11 needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional Record semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the Record without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record.—The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the Record with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.
- 2. Type and style.—The Public Printer shall print the report of the proceedings and de-bates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 71/2-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These re-strictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
- 3. Return of manuscript.—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the Record issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the Record for 1 day. In no case will a speech be printed in the Record of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. Tabular matter.—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. Proof furnished.—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the Record style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr.—addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the Recogn.

7. Thirty-day limit.—The Public Printer shall not publish in the Congressional Record any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections.—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the Congressional Record.

11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Recogn by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, tele-grams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legis latures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

Commencement Address by Hon. Henry Fountain Ashurst at Arizona State

> EXTENSION OF REMARKS OF

#### HON, BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. GOLDWATER. Mr. President, on May 18 of this year Hon. Henry Fountain Ashurst, who was one of Ari-Zona's first two Senators, delivered the commencement address at Arizona State College, Flagstaff, Ariz.

By a coincidence, Senator Ashurst was speaker of the House of Representatives in the Territory of Arizona when my uncle was President of the Senate, at the time the legislation was passed establishing this college. I ask unanimous consent that the remarks of Senator Ashurst be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COMMENCEMENT ADDRESS BY THE HONORABLE HENRY FOUNTAIN ASHURST, AT ARIZONA STATE COLLEGE, FLAGSTAFF, ARIZ., MAY 18,

My first duty is to thank the faculty and the administrative staff for the honor of the invitation to deliver this address and I am making no attempt to conceal—probably I should say dissemble—my emotion upon this occasion. Pannin, to Dr. Walkup, president of this col-I am deeply grateful to Governor lege, and to Regent Hon. Lynn M. Laney, severally, for their beautiful and generous

This institution of learning, for the past three score years, has been an object of my pride and affectionate solicitude and I may be Pardoned an effusion of sentiment when Perceive how, from meager but worthy be-sinnings, this college has grown in grace, strength, and dignity.

In stately ceremony with the buoyancy and the confidence of youth many young ladies and young gentlemen, educated and equipped with social and cultural resources and skills have passed from these doors into a busy and thank heaven—a competitive and commercial world.

I am of the opinion that persons of chararm of the opinion that persons of care and habits of industry will triumph over any difficulty or adverse circumstance and will succeed without the adventitious ald of great family ald of wealth or the prestige of great family

Mark how I emphasize "habits of indus-Indeed, I commend to you the goddess of hard work. She loves her votaries and lew be they who following her precepts ever come away from her altars empty handed or visit her shrines in vain.

"Consider how time's vastly corridors Ring with words of famous orators. Are their epigrams spontaneous, Off the cuff, extemporaneous?
Or do they while in the shower or while Think up some brilliant phrase worth saving,

Then roll it on the tongue and smile, And store it away for future file?

Not even the great Churchill, without notes, Could stand and deliver such golden quotes, Had he not learned from his earliest boy-

hood days To store away many a brilliant phrase, And then when he stood up before the throng

He could draw upon a treasury of phrases

all day long. Eloquence, like any success, tolls, works, bleeds and sweats,

Eloquence never forgets."

Nowadays, it is frequently said that the glamour, romance, and high emprise of longago days have departed from our times; that only humdrum, routine, prosaic duties are presented, and that in this highly mechanized 20th century there is nothing that savors of the glamorous, romantic, or fabu-

Many world-weary and satiated persons must needs seek the pages of history to find exhilaration. They read of the Golden Age of Athens; they read of the men and women who wrought "the glory that was Greece and the grandeur that was Rome;" they dwell upon the history of the 13th century which saw the erection of many of the great cathedrals and the founding of many of the universities of Europe.

They thrill with the story of the rise and progress of liberty and her achievements in America; they wish that they might have lived in the midst of those stirring events, and it is but natural, in the rhythm of life, to revere bygone days and try to reconstruct their scenes.

When, however, we take a close view and make a careful survey, we perceive that high emprise and romantic exploits are occurring all about us and that opportunities for achievement are ever present; are regnant in our world of today and are at the beck and call of all those persons who will woo them well and tirelessly. The lovely enchantments of bygone days are with us here and now and there is much in everyday life that inspires and gives a mighty upsurge to the human spirit, and as for my single self, I should prefer to live in this present epoch rather than in any other epoch this world has known.

During the past 14 years there has appeared a vast literature prophesying the end of what we are wont to call our civilization. Opulent with irony as are all human affairs there is no irony sharper than the fact that the stronger and more powerful a nation becomes the more poignant is the fear and terror that descend upon it.

Doubt as to his survival has come to mankind at regular intervals-not only in our modern world but also in medieval and in antique times. Everything that mankind has invented has brought terror and fear because every invention is susceptible of two uses—good or evil—but happily mankind possesses the wisdom, judgment, and discretion enabling him to decide to what usegood or evil-such an invention shall be put.

The midwives of nuclear science and nuclear physics have recently delivered some lusty infants-the atom bomb and its synthetic half brother the hydrogen bomb-and these infants could become troublesome creatures since by them mankind presumes to take into his own hands the fire and the

force of Old Sol himself. The birth of these infants reminds one of the speech addressed by the Duchess of York to her unscrupulous son, King Richard the Third: grievous burthen was thy birth to me and tetchy and wayward was thy infancy."

I take no stock in the gloomy jeremiads so constantly chanted that the human race will destroy itself; I do not subscribe to the defeatist attitude which declares that human beings are nothing but the helpless zanies of a witless fate and thoughtless chance which will overthrow the wisdom of the wise, overthrow the valor of the brave and the trophies of the truth. I utterly reject such philosophy and assert that mankind is endued with conscience, reason, judgment, and ample power of self-direction and has his fate in his own hands. We make our

world quite as much as we are made by it.

Those explosive forces that have brought such specters of dreadful terror to so many persons will, before the silver of the years shall have crowned the temples of the young persons here, be the selfsame forces that will heat and illuminate mankind's habitation, drive his machinery, transport him and his commerce, and heal and cure many of mankind's physical ails and agonies.

To paraphrase Kipling:

"When he formed his shining systems whirling on celestial rods

Lord Creator said to his children you may someday be as gods

Someday with beaming faces you may create as I have done

Know the splendor I am knowing as I fashion star and sun."

I said a moment ago that we thrill to read

of the birth, rise, and progress of liberty in America—and is it any wonder?

Until the birth of the U.S. Govern-ment, nations generally had an unregistered birth date. Their beginnings were legendary or obscure. They had no birthday celebrations because through the many centuries they had at some unknown date severally emerged from some dim, mysterious region supposed to be peopled with giants or heroes. Romance, tradition, and folklore, false in fact but beautiful in fiction handed down the myth that nations were sired or mothered some by lions, some by wolves, eagles, swans, or unicorns. But the beginnings of our Nation are well known-if one were flippant of speech one might say that the United States was a self-starter. We know the hames of the founders, where they were born, and where they were educated. We that the founders were not chasing any will-o'-the-wisp. They were not idle dreamers out on a holiday excursion; they knew that mankind cannot construct a society where all persons shall be equal as to intellect, ingenuity, adaptability, tempera-ment, or ambition. They knew that a gov-ernment cannot cure the ruined spendthrift by filling his pockets with money. They knew that a manmade law cannot give to the nightingale the wings of an eagle nor give to the eagle the art of trilling the beautiful midnight minstrel of the nightingale; that freedom, liberty and livable conditions of life do not come from the graceful wavings of a magician's wand but that these things—like our daily bread—must be earned.

It would be a fascinating drama in the realm of the imagination to see pass before us in review all the men who wrote the Declaration of Independence and also all the men who wrote the Constitution of

the United States-documents of grandeur in world annals. All the characters of men known to history, biography and fiction,

would appear.

Some men wearing brocaded waistcoats; some wearing silk breeches, silver buckles at the knee and instep; the stock, the gaiters, the cork-soled boots, the powdered wig, lace cuffs, the ivory snuffbox. quick, razor-edged tempers, the punctilious pride, the authentic scholarship, the statesmanship; some of them could have outshone Lord Chesterfield in an exhibit of graceful manner. Brilliant rhetoricians shaping sentences like daggers of jade; word stylists; some of them spoke like a sweet-singing wash

Many of these men comprehended the garnered wisdom of the ages and were familiar with the history of the Republics of the antique world. Not a few had been graduated from colleges in the Colonies; Harvard, King Williams School (now St. Johns College), Yale, William and Mary, Princeton, Kings (now Columbia), and the Pennsylvania College; some had been graduated from English, Irish, and Scottish universities, and one need not be acutely imaginative to seem to hear the eager and eloquent oratory, the vibrant words and gorgeous rhetoric of that romantic long ago. Some of them ascended the steep acclivity from obscurity to far-shining fame— some few descended the declivity from fame to oblivion. Some of them with steady hand at sunrise, held dueling pistol and with same steady hand, at sunset, held mint julep or hot-buttered rum. Nearly all were devoted equestrians-good riders who daily printed their horses' hooves into the receiving earth. They were men of courage and fortitude, of self-esteem and self-respect, of energy and action with bold, penetrating eyes, projecting noses and convex, sunburned faces. They were drawn from the various trades, professions and occupations, and were shrewd to a remarkable degree. They each and all were fiercely determined to set up a government assuring civil liberty, and they launched mankind's first major Republic since the days of ancient Rome. They bravely raised the banner of a Republic at a time when the entire world seemed fixed in autocratic systems of govment. Eight of the men who signed the Constitution had 11 years before also signed the Declaration of Independence. principles of the Declaration and the guaranties of the Constitution have withstood the mutations and vicissitudes of time, and have beaten back the wildest storms that ever blew because they embody the inborn, invicible sentiments of those who know the value of freedom, and who respect the dignity and sacredness of human life.

The founders attempted to guarantee freedom of opportunity only, and thus they guaranteed the right and the privilege of every citizen to employ that opportunity and to earn or win as many of the prizes of life as his character, intelligence, zeal, skills, creative imagination, courage, and luck

would bring him.

Among the civil liberties protected by the Constitution and the Bill of Rights is the right of every citizen to try to acquire a home, a shop, a farm; to acquire property, large or small; to earn wages; make investments, and increase his fortune, so long as he does not interfere with that same right belonging to everyone else.

These civil libertles Karl Marx communism would destroy. The Government should be the servant—Not the master of the citizen, but communism would make the government the master of the citizen. Human beings are not the property of the state but are free souls to be governed by the laws made by their representatives instead of the whims of some totalitarian dictator.

Communism is a fatal delusion that has no regard for the sacredness of human—no regard for the value of human liberty; it would deprive labor of its wage, ambition of its stimulus, excellence of its supremacy and charter of its respect.

Lack of monetary wealth does not necessarily indicate lack of success in life. Many persons who have not accumulated riches, live happy, noble, useful lives and are truly good and truly great. Multitudes of American men with the purse of a peasant carry themselves with all the politeness, pride, and

bearing of a prince.

Multitudes of American women with meager financial resources walk with courage and spread sunlight, mercy, and kindness with a charm and grace that any queen might well emulate. Conversely, now and then, some indifferent person by the legerdemain of chance of the impishness of the dice of destiny is awarded a fortune.

Frequently some worthy person by industry, integrity, and business judgment earns a fortune and believe me when I say that if the refreshment of adventure, risk, and hazard were eliminated, life would become flat, insipid, and almost unbearable and it is also quite true that success in all departments of life generally gravitates toward those who are competent, industrious, and patient.

The world at times may seem to be a runaway orb and many thoughtful persons wonder just what sort of civilization is being gestated but we should be much comforted to remember that America possesses many durable values: The kindness of providence; the justness of nature; a vast, beautiful and bountiful land with its rivers, minerals, forests, rich soils; harbors of amplitude; American enterprise; American love of fair play; American respect for the individual without regard to his station in life; the heritage of the invention and skills of the past; body-that is-the corpus of the combined wisdom and experience of the preceding generations. These things may not be taken away. Every American may exclaim: "Mine is the majestic past; mine is the shining future. 'All things for America, she is the vital axle of the restless wheels that bear me onward; beyond the map of America my heart can travel not but fulls that limit to its utmost verge'.

The first settlements were made on our eastern coast at Jamestown 352 years ago and at Plymouth Rock 339 years ago; and these intervening years of progressive de-velopment have a history brilliant and varied in its coloring. Like a gorgeous tapestry, some of its threads are golden, some are silver, and some crimson with the life blood of the pioneer freely shed in his contests with savage men and savage beasts but these threads are interwoven into one picture of civil freedom such as mankind has never before in all the ages looked upon.

Our frontier line like the shadow line of the sun dial receded under the advancing sun of civilization and from the date of the earliest settlements the American experiment of free government has been filled with sacrifice, tragedy, color, romance, and high endeavor.

Of this, at least, we may be certain: Arrogance and injustice always lead to a national downfall and we find comfort in the assurance that our own opulent and powerful America-while she has never chosen the violet, emblem of modesty and selfeffacement, as her national flower-she has not stood in stiff Lucifer-pride and haughtiness; she has walked becomingly before the world; has given bounteously to the world, and, in troublous times, she has been the world's constant and competent nurse. Efficient in war, she has always been generous and element in victory.

There are persons respectable in number

and respectable in character who fear that

evil may be gaining perponderance in this world and that mankind may fumble in his attempts to solve and master the mighty secrets of nature—they fear that such fumbling might be mankind's extermination but such a view is lacking in the comprehension of the tenacity of mankind and the scope of the divine purpose.

Mankind is inexterminable and there is everywhere a conservation of spiritual energy that preserves the core of every noble resolve and worthy action and molds them into a beneficent achievement aiding the human race in its arduous struggle upward

and onward.

June Is Dairy Month in New York State

EXTENSION OF REMARKS OF

# HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. KEATING. Mr. President, June is Dairy Month in New York State, and I have prepared a statement regarding the celebration in our State, which I ask unanimous consent to have printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

JUNE IS DAIRY MONTH IN NEW YORK STATE

The month of June is being celebrated as Dairy Month in the State of New York. is appropriate that this potent and essential force in the economy of the Empire State should be so honored, particularly because it is often away. it is often overshadowed in the public mind by our commercial and industrial attributes

New York has for many years been a leading State in the production of dairy products. It currently ucts. It currently ranks second in the entire Nation.

I am pleased on this occasion to pay tribute to the dairy industry which has contributed so much to the health and diets of people throughout the world. Indeed, the story of milk is probably as old as the story of man. story of man. In its production, its nutritional value its tional value, its importance to the economy

may be read the progress of the human race Each year research uncovers more facts which reemphasize the importance of milk and the numerous products of milk as vital foods for infants, children, and adults. the present time no entirely satisfactors substitute has been found for milk, the item solely designed by nature to serve as food. Milk has been found for milk, the or Milk has been called one of nature's "wholes" by noted authorities on nutrition Milk contains some of all the known essential food partial tial food nutriments. Some of these are pre-ent in greater amount than others but an are present in significant amounts. thus be called nature's most perfect food.

production of other industries tends to scure the production of dairy products agriculture is still the oldest and most wide spread of them. spread of them all. The cash receipts from the farm sales of dairy products in the pire State in 1958 amounted to nearly that million and accounted for slightly more than 50 percent of the total 50 percent of the total cash receipts from

As of January 1, 1959, the number of mike cows in the State 2 years old and over total 1,409,000. The care of these dairy cows and the farm production of feed for the dairy herds provide jobs and the same of th herds provide jobs and income for thousand of rural residents on some 100,000 farms in

te

ory

New York. During 1954, the latest year for which official data are available, more than 28,000 persons were employed on dairy farms in the State of New York. Wages paid to these farmworkers totaled more than \$35 million in 1954.

The distribution of milk and its products in the State requires the operation of hundreds of pasteurization and bottling plants as well as over a thousand plants to produce butter, cheese, ice cream, dried milk, con-densed and evaporated milk and a number of other products. It has been estimated that about 3,000 licensed milk dealers serve consumers throughout the State.

Out of every dollar the average consumer spends for food for home use in this country about 17 cents goes for dairy products. Dairy products in one form or another are

used in nearly every meal we eat every day.
We have been blessed in the United States with abundant supplies of milk and the products of milk for as long as we can remember, thanks to the dairy farmers of New York and the entire Nation. Let us hope that the dairy industry of the State of New York York and of the country as a whole will remain strong and that we will always be assured of an adequate supply of good wholesome milk and its products.

#### Banditry in the Sky

EXTENSION OF REMARKS OF

## HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. BRIDGES. Mr. President, on June 18 I declared that from now on all American planes in the air should make certain their guns are in working order and loaded.

I made that declaration after a defenseless Navy aircraft was strafed by Communist Mig fighters over the Sea of

Japan on June 16.

Since that time I have learned many other Americans express the same reaction to this and other attacks made upon our planes by Communist air bandits.

On June 19 the Washington Star carried an editorial entitled "Banditry in the Sky." timents of other outraged Americans as well as my own sentiments in this matter, I ask unanimous consent to have it printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BANDITEY IN THE SKY

Since early 1950 more than 30 of our milltary aircraft have been subjected to unprovoked attacks on the fringes of the Communist empire, east and west. As a result of these outrages, nearly all of which have occurred occurred in international airspace, 112 young Americans have been reported dead or missing. As a result of them, too, the Red totality of the result of them are totality of the result of them. totalitarians have long since made clear that they take an outlaw's view of legitimate acrial missions and that they are inclined to be trigger-happy against our patrol planes even in regions where those planes have a even in regions where those planes have a right to be.

So it seems astonishing that in the latest So it seems astonishing that in the latest of these incidents (over the Sea of Japan, 38 miles of the coast of Communist North

Korea) the American naval plane involved was so poorly armed that it was incapable of answering the fire of the Soviet-built MIG's that wantonly attacked it. The Defense Department's explanation of this is that the patrol craft had been stripped of most of its guns to make room for special reconnaissance equipment. In addition, there was a snafu of sorts in operating the intercommunications system between the pilot and the tail gunner, who was wounded.

Happily, this particular plane and its crew escaped destruction, but the story could easily have had a tragic ending, and it leaves a number of questions unanswered. How often, for example, do the Navy and Air Force send out underarmed aircraft on patrol missions in sensitive areas like the Sea of Japan? Is such risk-taking the exception or the rule, and why should there be even the exception? After all, in view of the Communist attack record since 1950, these necessary missions, though peaceful and warranted as a matter of international law, are potentially dangerous, and the men who undertake them should certainly be adequately equipped to defend themselves against what might be called banditry in the sky.

This is a point that seems self-evident. In our dangerous world, patrol operations are essential to security, and the risks they entail must be accepted, but not on an unarmed basis. As to that, we think Senator Beings of Congress and the American people as a whole in declaring that "Our planes as a whole in declaring that Our planes should be fully armed and have their guns ready to fire if they are attacked" so that "our men can fire back immediately if they are fired on." It does no good to turn the

other cheek to a murderous Mig.

## Appraisal of Current Trends in Business and Finance

EXTENSION OF REMARKS

### HON. WALLACE F. BENNETT

OF TTAH

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Appraisal of Current Trends in Business and Finance," published in the Wall Street Journal of June 22, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Appraisal of Current Trends in Business and Finance

In a letter published in this newspaper a few days ago, Senator PROXMIRE, of Wisconsin, one of the younger Democrats in the upper Chamber, explained his opposition to the administration's plan to eliminate the interest-rate ceiling on new issues of Government bonds due in 5 or more years. One reason he gave was that "the Government will borrow far more cheaply at short-term rates than at long-term rates."

This assumption of the Senator's is not necessarily correct, although it reflects a commonly held belief. It is true that short-term rates today are lower than long-term The Treasury's 90-day bills yield less than 3.5 percent, while its bonds due after 1960 yield more than 4 percent. Short-term rates have been lower than long-term rates for more than 20 years.

However, in earlier periods the contrary situation has existed. For instance, through much of the 1920's short-term open-market yields on the Government's securities exyields on the Government's securities ca-ceded the yields on its longer term obliga-tions. In 1920, the highest yield for 10-year Government bonds was only about 5 percent, while for 6- to 9-year bonds it was slightly above 6 percent, and for 3year issues over 6.5 percent. And in the late 1920's, when long-term U.S. bonds yielded less than 4 percent, 3- to 6-month obligations of the Government got as high as 5 percent.

Thus it is quite possible that if the Government is forced, by a refusal of Congress to remove the ceiling, into nothing but short-term financing, its interest-rate expense will become high rather than low. Indeed, such an outcome seems fairly likely, because the Government's increasingly concentrated call for short-term funds would surely raise their price.

The Government's demand for short-term funds would become increasingly concentrated because outstanding long-term bonds tend inevitably to become short-term ones through the mere passage of time, as their due dates get closer and closer. Under the Senator's system the whole debt would in time become a short-term one, since longterm issues would be replaced by new short-

term obligations as they matured.

Furthermore, this system could raise the cost of money to the Government extremely sharply, because short-term rates tend his-torically to fluctuate more widely than long-term rates. For instance, since a year ago, when the supply of funds exceeded the borrowing demand, open-market yields on 3-month Treasury bills have quadrupled, from less than 0.9 percent to almost 3.5 percent. In contrast, the yields on 3- to 5-year issues have not quite doubled, from 2.25 percent to around 4.3 percent. And the yields on 10-year issues have only gone up about one-third, from 3.2 percent to about 4.2 percent, or a level under that of the three-to-fives.

If the present general tendency of money rates to rise continues long enough, short-term rates will almost inevitably get above long-term rates, regardless of whether the Government is forced into exclusively shortterm financing.

#### Study of Transportation Policy

EXTENSION OF REMARKS

#### HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks made by Dr. Ernest Williams before the so-called transportation council at White Sulphur Springs, W. Va., on Friday, June 5, 1959. Dr. Williams has been working for the Department of Commerce on a study of transportation policies—a study undertaken pur-suant to the wishes of the President as expressed in his budget message.

Dr. Williams' statement was transmitted to me and certain other Members of the Congress by the Under Secretary of Commerce for Transportation, Mr. John J. Allen, Jr. In transmitting the statement, the Under Secretary asserts that Dr. Williams has been working on the study since February, has been giving it professional direction, and, in consequence, reports that the remarks of the doctor reflect quite accurately the thinking of the Department of Commerce and the administration in regard to the direction their study will take, including the questions of public policy in the field of transportation which must be studied and resolved.

Anyone interested in the views of the Department would be well advised to read these remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY DR. ERNEST J. WILLIAMS BEFORE THE TRANSPORTATION COUNCIL, WHITE SUL-PHUR SPRINGS, W. VA., JUNE 5, 1959

As you know, the President called upon the Department in his budget message to make a comprehensive study of transportation policy. Moreover, he made available funds for the purpose of getting the study underway. Certain special emphasis was placed in the budget message on a review of merchant marine policy with particular reference to the Merchant Marine Act of 1936. Such a review is to be an inherent part of the entire study, but as arrangements are only in a very early stage for this portion of the study and as this council is concerned more largely with domestic matters I shall make little reference here to the merchant marine aspects of the study. Suffice it to say that I have been asked to lay out the product, bring together people capable of carrying it out, and accept the responsibility of bringing together at the end recommendations for the consideration of the Department.

Under the terms of the President's directive, we are attempting to organize to make the most comprehensive study of transportation policy which has been attempted since the National Resources Planning Board study of 1939 to 1942. In the interim, as you will know, there have been a great many other studies of various aspects of transportation policy, such as those made by the Board of Investigation and Research, those under Senate Resolution 50, the Sawyer report, the report of the President's Advisory Committee on Transportation Policy and Organization, commonly known as Weeks' Committee, among others. Moreover, certain transportation matters were touched upon heavily by the two Hoover Commissions, and particular areas of transportation policy have been dealt with separately as by the Curtis and Clay Committees in their respective fields, and by the Attorney General's Committee on Administrative Procedures, among others. Also this Council has undertaken studies upon various questions referred to it by the Department, some of quite far-reaching implications.

One consequence of all this recent history is that transportation is presumed by many to be a well studied and well understood field-one in which little further study is needful but where instead decisions ought to be reached in the light of present knowledge. This tends to be coupled with a feeling that all is not well in the transportation industries and that, at least in part, deficiencies are a result of Government policies. There is much to be said for this point of view, but I am not wholly in accord with it. I need not point out to this group that almost any major changes in transportaion policy which might be recommended from any quarter are likely to be intensely controversial, nor need I point out that the facts brought to bear in support of different attitudes toward any such proposals would not always prove to be consistent. In fact,

some of the most necessary knowledge for working toward a program which might lead to a balanced devlopment of our transportation systems as called for by the President is missing. Some of that knowledge will not be supplied except by a long-term program which seeks to fill gaps in the present program of data collection and which seeks also to provide further qualitative information.

An example will suggest what I have in mind and, at the same time, will suggest something about the nature of our approach to one phase of the present study. The Weeks' Committee devoted a large amount of its attention to the question of the regulation of competition among the several forms of transportation. It regarded this as one of the central issues of transportation policy which required solution if the Nation were to have an optimum development of transportation services. Precisely these recommendations of the committee generated the greater part of the controversy which surrounded its report.

Its recommendations presumed certain conditions in the transportation markets described in its report as constituting active and pervasive competition. The belief that competition among types of transportation was of far-reaching scope was shared by all members of the task force. That belief was based, however, upon their experience and general knowledge and not upon any factual analyses of transportation markets after the pattern that would be followed by economists attempting to measure the nature and strength of competitive forces and to forecast the results which might be expected to follow their exercise. Neither time nor re-sources were available for such study, and the task force was expected to rely on its judgment fortified by what could be learned from others within and without the industry.

You will recall that sharp exception was taken, both to the existence of effective or workable competition in the transportation industries and to the committee's expectations of the results that would flow from such competition when certain regulatory restraints were removed or modified. When it became necessary to attempt to document these major assumptions of the Cabinet committee report, the lack of knowledge about total traffic flow, the distribution of traffic among competing agencies, the commodity composition of traffic handled by some of the more important means, the effects of rate and service competition, and the possible propensities toward destructive competition within and between forms of transportation became painfully apparent. The relaxation of regulation to the degree recommended by the Cabinet committee depends for its success in the public interest upon the existence of workable competition on the one hand and upon the ability to set appropriate cost standards for minimum rates in the day-to-day practice of regula-tion on the other hand. No reasonable assurance of either could be derived from the available data.

In consequence, in this particular area of our study, we will endeavor to explore as thoroughly as it can be done the nature of the transport markets and the competitive forces present in them as well as the economic and cost characteristics of the several forms of transportation and the usefulness of the available cost-finding procedures. We do not start with a conviction that regulation requires far-reaching change through statutory revision. Instead we seek to analyze the conditions which regulation must meet in the present and predictable scenes and then to consider whether any changes would be constructive.

Indeed we propose to delve as deeply as time and resources permit into the underlying presumptions on which policy recommendations have hitherto been based. On

the whole the objective which the Cabinet committee had in mind is not altered but indeed reinforced by the language chosen by the President. In our present frame of mind, balance is to be equated with the securing of an optimum development of the several forms of transportation. It is not something to be planned out and forced upon the industries but something to be approximated through the working of competitive forces within an appropriate climate produced by Government policy, both regulaset of policies which will produce such a competitive neutrality among the forms of transportation as will enable each separately or in conjunction with others to make manifest to the users of its services both its service capabilities and its cost characteristics. This is, of course, an intensely difficult problem and one which gathers in many strands of Government policy, including issues which lie in the realm not only of regulatory policy but also of Government provision of transportation facilities, Government sub-sidies where they exist, tax policies of various kinds and the whole set of issues that is associated with alleged indirect subsides.
We do not propose, in our present work, to treat of only a part of these issues, but in stead to try to spell out their interrelationships in search of a set of consistent recommendations.

It may well be, of course, that implements tion will have to follow the route of comparatively slow progress in detail toward objectives that are as nearly consistent with the Nation's interest as a whole as it is possible to devise. Moreover, certain measure theoretically required to conduce toward balanced development may prove, upon amination, to be refinements of small practical importance. In a sense, our first objective in the tive in the study is to try to spell out a desirable direction for policy to assume over the years and to identify the relationship of separate Government separate Government programs to that direction tion. It will doubtless prove to be the cast that many ways of moving will present them selves, some of which may be more feasible or acceptable than others. It will also probably prove to be the case that the effective ness of the Deraylescent of the De ness of the Department in connection with the implementation of any proposals which the study may generate and which may find acceptance in the administration will depend in considerable part on the extent to which the permanent steff of the state of the the permanent staff of the Under Secretary Office can be strengthened. For the completion tion of a study and the presentation of recommendations is only the beginning of the process by which change may be brought about if it should be found desirable.

The present date is far too early to permit even a suggestion of the character of results which may be brought forward. Our start upon the study has been been study has been start the upon the study has been slow, and to present we have present we have been engaged largely blocking out the areas to be studied, search ing out the ways by which the studies might appropriately be undertaken, and negotiatil with people whom we desire to associate w us in the enterprise. We do not expect fully launched upon most phases of study until later this month. Particularly in the area of promotional policy we will struggling with the struggling with issues in which very progress has been made to date in the deret opment of appropriate theory for the order mum use of Government shall have to plow considerable new ground. In consequence, we are not anticipating that the underlying studies will approach of the pletion much before October 1 nor that results of the separate phases of the study can be brought into some degree of coordination which may enable us to produce a tents tive body of recommendations. tive body of recommendations before

The present arrangement of the work will tend to produce underlying reports on [1]

rate regulation of surface transportation, (2) controls of entry into surface transportation, (3) economic regulation of air transport, (4) Government investment in transportation facilities, (5) differential effects of taxation and social security programs, (6) labor, (7) Government procurement of and provision of transport services, and (8) merchant marine policy.

We propose throughout the conduct of the individual phases of the study to seek the advice of the several transportation industries, through their trade associations and otherwise, to consult with shippers and shipgroups, and to take advantage of the thinking and information available in the Several agencies of Government concerned in one way or another with transportation problems. We are, however, endeavoring to insure that the persons associated with us as consultants or otherwise in the direct conduct of any phase of the study shall be drawn from outside the industries or Governmen agencies affected. When we have produced some results in shape to be considered, we may very probably employ a small advisory committee with whom we can dis-cuss possible lines of policy in detail in order to test our conclusions both as to their probable effects and as to their appropriateness. Such a committee may lend valuable assistance in insuring that we do not commit egreglous errors of either interpretation or judgment. At some stage it is my hope that it will prove possible to present at least certain phases of the work to this council for the purpose of securing representative reactions before recommendations have reached a final form. We already have the benefit of the comments of most members of your executive committee, and they are highly instructive. tre Naturally, they show considerable diversity of opinion, but there runs through most of them evidence of a feeling that change is the change of the chang change in Government policy is needed, and there is a fair amount of agreement about some areas where change is called for. Taken as a whole, these materials provide an excellent checklist of matters to be given consideration. Whatever use may be made of an advistory group or of this council, however, responsibility for final resommendations to the Department through Under Secretary Allen will be study staff, and no Allen will rest upon the study staff, and no effort will be made, as we now see it, to get an agreed committee report.

U.S. Junior Chamber of Commerce Urges Adoption of Wilderness Bill

> EXTENSION OF REMARKS OF

日報在前四日

HON. RICHARD L. NEUBERGER

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. NEUBERGER. Mr. President, as a cosponsor, both in the 85th and the current Congress, of legislation to establish a national wilderness preservation system, I was particularly pleased to observe the action of the national convention of the U.S. Junior Chamber of Commerce last week in approving unanimously a resolution expressing the orsanization's endorsement of the wilderness bill. Yesterday, Fred Sturgis, of Florida, the able national chairman of the January of the the Jaycee conservation committee, made available to me the text of the resolution passed by the convention at Buffalo, N.Y. It urges Congress to adopt legislation. legislation to preserve wilderness areas

and to give appropriate recognition, place and stature to wilderness and associated resources in the total Federal natural resources program.

Mr. President, I ask unanimous consent that the resolution approved by Jaycee convention delegates, representing 180,000 members in 3,700 local units, be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ON PRESERVATION OF WILDERNESS AREAS

Whereas the needs of the expanding U.S. population include recreational and educational opportunities of the type to be found only in wilderness areas; and

Whereas certain important wildlife species and ecological relationships can be preserved and used for recreational and scientific purposes only in wilderness-type habitat; and

Whereas properties already under Federal ownership and/or management contain appropriate areas in numbers adequate to satisfy anticipated public needs for wilderness resources in the foreseable future: Now, therefore, be it

Resolved, That the U.S. Junior Chamber Commerce, in convention assembled at Buffalo, N.Y., on June 17, 1959, does hereby endorse the basic provisions of S. 4028, as introduced in the 85th Congress and known as the wilderness bill, and petition the 86th Congress to adopt legislation to preserve wilderness areas and to give appropriate recognition, place, and stature to wilderness and associated resources in the total Federal natural resources program; and be it further

Resolved, That the U.S. Junior Chamber of Commerce direct copies of this resolution to the Presdent of the United States, all Members of Congress, and the Secretaries of the Departments of Interior and Agriculture.

The Relationship Between State and Federal Laws

EXTENSION OF REMARKS OF

# HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. THURMOND. Mr. President, it is with particular satisfaction and delight that I view the passage of the antipreemption bill, H.R. 3, by the House of Representatives. I am convinced that the overwhelming majority of American citizens have long favored the enactment of legislation such as this, and its passage by the Congress is long overdue. It is my sincere hope that the Senate will not falter on this legislation again this year.

In this connection, I ask unanimous consent that there be printed in the Appendix to the RECORD an editorial entitled Antipreemption Bill Would Fix State Status," from the State, a newspaper published in Columbia, S.C. This editorial most ably points up the need for this legislation, and also lists some of the outstanding organizations that sup-

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

ANTIPREEMPTION BILL WOULD FIX STATE STATUS

An antipreemption bill, now before Congress as H.R. 3, deserves strong support from all sections of the country. It would do much to clear up confusion created by recent court decisions tending to hamstring State

The antipreemption bill, favorably reported by the House Judiciary Committee, would make no changes in any existing laws. but it would reverse some recent decisions by the Supreme Court. It would force the Court to revert to a traditional interpreta-tion of the relationship between Federal and State laws.

Basic purpose of the bill is to prevent the Supreme Court from presuming, as it did in the Steve Nelson and Cloverleaf cases, that passage of a Federal law excludes the States from legislating in that field. In the Nelson case, the Supreme Court voided the sedition laws of 44 States, and in the Cloverleaf case, States were prohibited from enforcing their own agricultural sanitary laws because there were Federal laws on the same subject.

Under traditional judicial interpretation, it has been held that the Congress had not preempted the field unless the law itself spe-cifically so stated, or the Federal and State laws were irreconciliable. Of late, the Su-preme Court has been throwing out State laws on the basis of presumed congressional

intent to preempt a legislative area.

A second part H.R. 3, though also an antipreemption clause, deals specifically with
subversion and sedition laws. This section would restore the antisubversion statutes of the 44 States that were voided by the Su-preme Court in the Nelson case. It would clarify the manifest intent of Congress not to prohibit State enforcement of criminal penalties for advocating the overthrow of the State and Federal Government.

Organizations supporting this legislation include the American Bar Association, the National Association of Attorneys General, the Conference of Governors, the American Medical Association, the American Farm Bu-reau Federation, and the President's Commission on Intergovernmental Relations. The Attorneys General of the United States, while supporting the principle of the bill, wants the antipreemption injunction to apply only to sedition laws.

The State wholeheartedly endorses the provisions and intent of the proposed legislation. As Governor Byrnes pointed out last night in an address before the Georgia Bar Association, the Court must be curbed. If allowed to continue its invasion of the legislative field, he said, State and local governments will be destroyed.

This bill would do much to prevent the Supreme Court from simply preempting the State governments out of existence—from moving all authority, from the Pacific to the Atlantic to the Potomac. The fact that 44 States were affected by one decision alone makes it far more than a sectional issue.

The Court has issued a challenged to legislative and State authority. This is a fine opportunity to meet the challenge directly, and to clarify a very muddled situation.

Strauss Ouster a Costly Victory

EXTENSION OF REMARKS

# HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by William S. White entitled "Strauss Ouster a Costly Victory," published in the Washington Evening Star of June 22, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STRAUSS OUSTER A COSTLY VICTORY-DEMO-CRATS SEEN AS LOSING KEY 1960 ISSUE IN FAILURE TO CONFIRM SECRETARY

(By William S. White)

The Democrats have won a costly victory in an unnecessary war in the Senate's rejection of Lewis L. Strauss to be Secretary of Commerce.

They have refused Mr. Elsenhower the privilege of any President to have a man of his own choice in the Cabinet so long as that man is not morally or mentally unfit. And they have made this great demonstra-tion over what usually is politically the least significant post in all the Cabinet, that of Commerce.

A Strauss confirmed would have created for them a far more useful issue for 1960 than a Strauss repudiated-and repudiated, moreover, on grounds so thin as to have no example in our history.

For the very qualities the Democrats attributed to the nominee would have been endless bad news for the Republicans had the Democrats allowed him to be confirmed in office. They found him arrogant toward Congress. They found him deceitful (though to an onlooker his deceit seemed to lie most of all in his refusal to cooperate

with his Senate prosecutors.)
They disliked him as an Old Guard Republican, a Herbert Hoover Republican, an antipublic power man, as indeed he was and is. Every shortcoming they attributed to him would inevitably have weakened the administration politically had he remained in it. For his basic political philosophy has been a handicap at the national polis for at least 20 years.

In plain words, the Democrats have rescued Mr. Elsenhower from the consequences of what was, politically, a poor appointment in the first place. For the first personal defeat of President Eisenhower they have

attempted in his 6 years in office, they have chosen the worst possible vehicle.

For wherever else it may lie, the true vulnerability of the administration surely cannot be said to lie in the less than burning question as to who is to run the Department of Commerce. Mr. Strauss is incomparably more important politically as a symbol of harsh Senate veto than he ever would have been as a recipient of Senate approval.

In fact, in looking back, the whole af-fair was a series of blunders—first by the President, then by Strauss himself in his human but unwisely belligerent conduct before the Senate, and then by the Democrats. The Republicans would have been the losers had the Democrats allowed him to be confirmed. But the Democrats are the net losers now.

Why, then, did it all happen? It happened most of all because of the long frustrations of many Democrats, mostly liberal Democrats. For years they have been clam-oring that the party must fight Elsenhower. Now, at last, they have prevalled on calmer colleagues to fight. Their motive was understandable, for politics cannot and should not be simply an unending polite

But the trouble was that the Democrats oversimplified. To fight is one thing. But to fight at the wrong time in the wrong place and for the wrong reason is quite an-

other thing.
They got the whole question confused. The point never was whether Strauss would he a good Secretary of Commerce. The point never was whether he had the truly sound political ideas of the present. were only two simple and related issues: Did the President have a right to Strauss if he wanted him? And was there against Strauss' fitness to serve (not his ideas or his personality) a case so overpowering as to justify turning him down?

The answer to the first question was plainly "Yes." The answer to the second question was plainly "No." And when the passions have died, some of the men who voted against Strauss will regret it, for simple human reasons if not also for political reasons.

For, politics aside, the Senate simply did not live up to its best traditions; the Senate simply was not fair.

## Move To Counter Smear Attacks on National Leaders

EXTENSION OF REMARKS OF

## HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter to the editor, published in the New York Times of Wednesday, June 17, 1959, and authored by Mr. Robert H. Austin, of Johnson City, N.Y.

In his letter Mr. Austin not only pays tribute to Members of the Congress but also suggests a nonpartisan organization of public-spirited citizens to help insure that the public is accurately informed with regard to Members of Congress. Mr. Austin's letter should be of interest to all Senate and House Members, as well as to the general public.

Mr. Austin is an outstandingly public-spirited citizen well known in New York State, who has devoted many of the best years of his life to civic causes. He is a long-time executive of the International Business Machines Corp. but has found time to take leading parts in many highly useful civic projects, especially those connected with public health and traffic safety.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BACKING PUBLIC OFFICIALS-MOVE TO COUNTER SMEAR ATTACKS ON NATIONAL LEADERS PRO-POSED

To the EDITOR OF THE NEW YORK TIMES:

The tragedy of John Foster Dulles had a profound effect on me. It must have also affected millions of other thinking citizens. Here was a devoted national public servant who literally fought his life away with unyielding courage and persistence for what he felt was best for America. Yet he was subjected to cruel and unreasonable abuse and criticism, with few defenders, until he was close to death.

Then, and only then, was there a public awakening and appreciation of his unselfish public devotion and sacrifice. The same was true with the late Senator Robert Taft, former Secretary of Defense James Porrestal, and other national figures.

Why should there not be an organized nationwide group of public-spirited citizens, nonpartisan, who would make it their bush ness to see that the public has all the facts, is accurately informed about our Senators, Congressmen, and national leaders who are subjected to unfair and unjustified abuse from selfish or ignorant sources because they stand firmly for courageous and faithful representation?

Under our form of government, for instance, a U.S. Senator can look only to his political party—whichever it may be for organized help in defending his public record, no matter how fine. no matter how fine.

Surely there must be many thoughtful Americans who would join a nonpartisan movement to show public appreciation for integrity in office and faithfulness to the public trust. In this way false propagands and smear attacks against a truly honest Senator, Congressman, or Cabinet officer could be dispelled by the light of fact and truth, rather than he have been senated. truth, rather than be permitted to poison the minds of unthinking voters.

I have untilitied to poison the minds of the mi

I have unstintedly given many years of my life to local and State civic activities. But to survive the present struggle with communism our form of government must function at its best.

In my opinion it cannot do this unless and until our citizens, in a nonpartisan spirit show greater appreciation and give some form of strong public backing to our national public servants, who through courage, honest de votion, and unselfish fighting spirit prove their worth beyond question.

ROBERT H. AUSTIN. JOHNSON CITY, N.Y., June 15, 1959.

# The Problem of Putting the Federal Fiscal House in Order

EXTENSION OF REMARKS OF

# HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed the Appendix of the Record an article entitled "Putting Federal Fiscal House in Order," published in the Salt Late City (Utah) Tribune of June 10, 1950.

There being no objection, the editorial as ordered to be provided in the control of the control was ordered to be printed in the RECORD as follows:

PUTTING FEDERAL FISCAL HOUSE IN ORDER

In recent years the problem of managing the enormous national debt-now in neighborhood of \$285 billion—has become more and more difficult.

Government bonds are selling below participated in the public is buying fewer U.S. savings bonds and cashing to the same selling below participated in the same selling below and cashing in those bonds at a continual increasing rate. The Treasury has had we shift to the sale of shift to the sale of short-term securities (In 1946 only 44 percent of the interest bearing marketable debt was set to fall diswithin 5 years; today 74 within 5 years; today, 74 percent falls due

in

This situation arises from the fact that Covernment bonds, though called the world tensor safest investment. safest investment, can't compete with preterest rates offered elsewhere. Savings topped pay 3.26 percent if held to maturity rate on long-term Government bonds is fixed at 4.25 percent by a 40.

at 4.25 percent by a 40-year-old law.

President Eisenhower has now asked gress to remedy the situation.

He wants the interest rate on savings bonds used to 3.75 percent raised to 3.75 percent.

He wants the interest ceiling eliminated or long-term Governor. for long-term Government bonds.

And he wants the debt limit raised to \$288 billion on a permanent basis and \$295 billion on a temporary one. (The present ngures \$283 and \$288 billion, respectively.)

Mr. Elsenhower makes the point that when the Government borrows, it can do so successfully only at realistic rates of interest that are determined by the supply and demand for securities." He also emphasizes that "an artificial ceiling \* \* \* under today's conditions makes it virtually impossible to sell bonds in the competitive

The Government's financial house obviously needs to be put in order.

how effective will a raise in interest rates be? In other words, would an increase in the yield on Government bonds bring a corresponding increase in the interest rates on competitive securities?

These are questions which Congress must consider carefully.

The interest on the public debt will cost 88.5 billion dollars in the next fiscal year according to revised Treasury estimates. (In 1945 the figure was 3.6 billion; in 1954, just after the Korean war ended, it had increased to 6.4 billion.)

Higher interest rates raise the cost of government and mean an added strain on

the budget.

Mr. Eisenhower and his financial advisers Mr. Eisenhower and his financial auvisce believe that the proposed changes are a necessity. The Treasury is in a difficult position and cannot manage the debt under present present conditions.

However, it will do little good for Congress of to provide for more realistic management of the national debt if Congress does not adopt truly realistic attitude toward the debt itself.

President Eisenhower is fighting for a balanced budget.

But that merely means breaking evenand the national debt is not reduced. Indeed, the request for a new debt ceiling

went to Congress in the same package with the proposed interest rate revisions.

president Eisenhower says that "achieve-ment of a fiscal position that allows our revenues a fiscal position that allows our revenues to cover our expenditures—as well as to produce some surplus for debt retirewill improve substantially the environment in which debt management

We agree wholeheartedly.

But when will that position be achieved? The administration's requests apply to an impact immediate problem. The fundamental problem of excessive spending will not be touched.

Awards Presented to Strasburg (Va.) Chapter of Jaycees

EXTENSION OF REMARKS

# HON. HARRY FLOOD BYRD

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the in the Appendix of the Record a news release in regard to the awards that were presented to the Strasburg (Va.) chapter of the Jaycees at the U.S. Jaycee convention held in Buffalo, N.Y.

I am deeply gratified that the liberty tree project of this chapter was the top

Recently I had the pleasure of presenting one of these liberty trees to each

of my colleagues in the Senate on behalf of the Strasburg chapter.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

As the U.S. Jaycee convention came to a dramatic close Friday after a whirlwind week in Buffalo, N.Y., delegates were still shaking their heads in amazement at the sweep of national project awards by one of the smallest chapters in the Nation. Strasburg, Va., with 30 active and 12 associate members, hailing from the Shenandoah Valley of Virginia, walked off with 4 first-place awards, including a national sweepstakes winner in public affairs and the coveted grand project of the year given annually for the most outstanding Jaycee project conducted in the United States.

Jaycee observers were hard pressed to recall when a chapter had made a similar sweep, and all agreed it had never been done by such a small chapter. Having taken its opulation division first-place award in two different fields, tiny Strasburg went into the national sweepstakes in the public affairs category against first-place winners from Vero Beach, Fla., Spartanburg, S.C., Win-ston-Salem, N.C., and St. Paul, Minn., and took the national. Then in the judging in the all inclusive project of the year finals which pitted together five first-place winners who had themselves been selected from thousands of projects, and included Jesup, Ga., Paducah, Ky., Canton, Ohio, and Dayton, Ohio, Strasburg captured the No. 1 project award in the Nation.

The top award winner is a program called liberty trees, and Jack Marsh, project chairman, who was on hand to receive the awards for the chapter, explained that liberty trees were small white pine seedlings planted in red, white, and blue pots, containing soil from historic spots as the Shenandoah Valley, Jamestown, Yorktown, Bunker Hill, Valley Forge, and the Alamo.

It is designed, the chairman added, as a countermeasure to the Communist celebration of May Day and is a program to encourage Americans to learn about America. Besides being sold locally, where proceeds went into a scholarship fund, every Senator and Congressman were presented with a liberty tree as well as other high officials including President Eisenhower, Secretary Herter, FBI Director Hoover, and Governor Almond.

Learn and Live: Presentation by Harold E. Fellows

EXTENSION OF REMARKS OF

## HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. WILEY. Mr. President, in these challenging complex times, our progress, security-indeed, our survival-depend more and more upon intellectual achievements, upon the capability of men to accumulate knowledge and understanding and to create accomplishments for the benefit of mankind.

The era of the "muscle man"-of achievement through man's individual strength-is rapidly fading away.

True, there is force in the world. For the most part, however, this can be assigned, not to man's muscle, but to his control over the forces and powers of nature. Today, these include water power, nuclear energy, atomic-hydrogen bombs, electricity, gasoline, and other types of fuel, such as steam and othersthese are the powers which, for good or evil, are "moving forces" in the world today.

To fulfill his obligation to humanity, and posterity, man must develop the vision, wisdom, humility-the kind of right thinking, based on spiritual principles-that will enable him to utilize these forces for constructive, not destructive, goals.

From the past, the world of today inherited a rich accumulation of knowledge and achievement. In our time, a commendable contribution is being made to this storehouse-particularly in the fields of science and technology.

However, without a thirst for knowledge, a desire to learn, to grow, to understand, to create intelligently-man will stagnate and the wheels of progress will cease turning.

However, imbued with a dedication to translate the new power—of control over natural forces—to the betterment of humanity, man can achieve new proportions of greatness, of human accomplishment.

The horizons of each human being need be limited only by the resources of his energies and inclination for, with a love of learning, the whole world is an open book; the realms of knowledge and understanding to be obtained are limit-

If it were possible to inoculate the youth of today, I would humbly suggest that one of the most important attitudes to instill in their eager, energetic, resourceful, fertile, imaginative minds would be the love of learning-the realization that, through the miracles of knowledge, guided by the right kind of spiritual principles-man can extend himself far beyond the limits of the flesh; that he can live, create, and achieve in realms that may far exceed his dreams.

Currently, the National Association of Broadcasters is engaged in a special project of the Nation's radio and television broadcasters and it is based on the theme "Learn and live." The objectives are:

To develop among all Americans a respect for learning and knowledge, making ignorance unfashionable.

To stimulate among young people a sense of the exciting adventure of growing to their full intellectual capacities,

To impress upon their elders, especially parents, their duty to guide and support youth in obtaining knowledge and train-

To instill pride among all Americans in doing a job well no matter what that job may be.

Wisely, the project is not just concerned with mechanics and methods of imparting knowledge, nor the problems building more schools-although these, in their own way, are significant. The learn-and-live campaign, however, seeks to stimulate intellectual curiosity and inspire young people to apply themselves to the business of learning and their parents to give them encouragement.

Recently, I received from Harold E. Fellows, president and chairman of the board of National Association of Broadcasters, comprising more than 2,000 individual stations, a thoughtful presentation on their program for emphasizing the theme "Live and Learn."

Recognizing that this philosophy contains the ingredients of a sound foundation upon which learning and education can be improved and strengthened, I request unanimous consent to have the thoughtful comments of President Fellows printed in the Appendix of the Record.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

#### LEARN AND LIVE (By Harold E. Fellows)

Overwhelming concern has been expressed by our people and our leaders since the first manmade moon was launched, concern that we, as a people, make more and better use of our national brain power to meet the change and challenge of the space age. The need for developing and using—now and for the long pull—the full intellectual and technical capacities of the people has been stated with repeated urgency by responsible Americans of all shades of opinion.

Dr. James Killian, Jr., questioned "whether we Americans, in our drive to make and acquire things \* \* \* have not been giving too little attention to men and ideas." The President's science adviser said, "At all levels in our society we should cultivate a taste for learning, for scholarship, and all that is excellent in mind and spirit."

President Eisenhower himself put it this way in his state of the Union message: "redoubled exertions will be necessary on the part of all Americans if we are to rise to the demands of our times. This means hard work on the part of State and local governments, private industries, schools and colleges, private organizations and foundations, teachers, parents, and perhaps most important of all, the student himself with his bag of books and his homework.

"With this kind of all-inclusive campaign, we can create the intellectual capital we need for the years ahead, and do this, not as regimented pawns, but as free men and women."

The broadcasting industry has embarked upon a special public service campaign to accomplish just that. Traditionally, broadcasting quickly has responded in times of national crises. It has been observed that what Pearl Harbor did to our military complacency, the sputniks did to our intellectual complacency. Radio and television, providing direct and immediate communication with the people, can help to awaken the public consciousness to the necessity for placing greater emphasis upon attainments of intellect and skill, and pride in doing a Job well. Broadcasting contributes significantly in the drive to unleash the imagination of the people, especially young people. There can be no "slowpokeism" today, not if we wish to survive agreeably.

We are on the threshold of the space age, an era that may be filled with wonder or teeming with terror. In either situation, to morrow is bound to demand more of us as a nation and as individuals than anything we have ever known. Imagination, originality, knowledge, and skills, the use of the mind, must be nurtured in our young people. If America is to face up to the challenge, the Nation must be imbued with a respect for learning and fired with the excitement of grappling with ideas. The pursuit of happiness, let alone the pursuit of survival, cannot long be sustained by the easy answer, slickness that substitutes for depth, the soft job, the rationed effort that just gets by.

The individual must be encouraged to discover both his mind and himself.

By unanimous approval of the board of directors, the National Association of Broadcasters is taking the leadership in a special public service project, with this theme: "Learn and Live."

These are the objectives:

To develop among all Americans a respect for learning and knowledge, making ignorance unfashionable.

To stimulate among young people a sense of the exciting adventure of growing to their full intellectual capacities.

To impress upon their elders, especially parents, their duty to guide and support youth in obtaining more knowledge and training.

This project is not concerned with methods of imparting knowledge nor the problems of building more schools. The "learn and live" campaign will, however, seek to stimulate intellectual curiosity and inspire young people to apply themselves to the business of learning and their parents to give them encouragement.

Announcements and other materials are being provided by the association for broadcast on local radio and television stations. Many broadcasters are developing the "learn and live" idea to suit the needs of their communities. They are working with other community leaders and interested groups.

There is a growing awareness of the unexplored advance regions in the area of human improvement. Man never will know all that may be known, never will be all that he might be. The frontier that lures us now is the endless, always rewarding frontier of human progress, which can be approached only through and by individual progress in human relations, the humanities, the arts, science, technology, crafts, and skills. As individuals and as a nation we must prove ourselves capable of handling, for the common good, the potentialities of the space age, with emphasis on the space we already occupy, right here on earth.

This is the challenge: Learn and live.

#### Wanted: Some Brinksmanship

EXTENSION OF REMARKS

### HON. THOMAS J. DODD

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. DODD. Mr. President, on Tuesday, June 23, the Hartford Courant carried a lead editorial on the Berlin crisis which desirves the widest possible circulation.

Some of us in this body have been urging for months an immediate build-up of our Armed Forces to impress upon the Communist world our determination to hold firm in Berlin.

The results of the Foreign Ministers' Conference offer clear evidence that the Communist rulers refuse to take our words at face value unless those words are backed up by action.

Mr. President, I ask unanimous consent to have the editorial printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WANTED: SOME BRINKSMANSHIP

Secretary Dulles shocked the world when, a little more than 3 years ago, he advocated

what soon became known as brinksmanship. "Of course we were brought to the verge of war," he said. "The ability to get to the verge without getting into war is the necessary art." To be sure, putting it this way did make us sound like atom-rattling militarists. We may be suffering still from the unhappy interpretation put on those words. But surely the world knows by now that what Mr. Dulles meant was something far different.

Actually, Mr. Dulles was desperately concerned lest we repeat the tragic mistake that had let loose both World Wars: allowing the aggressor to underestimate the democracles. Kaiser Wilhelm gambled that he could get away with a quick war against France and Russia because, under Britain's constitutional system, Sir Edward Grey could not certify in advance that Britain would fight if Belgian neutrality were violated. In the same way Adolf Hitler, emboldened by the sickening retreat of the Allies from Rhineland arming to Munich, thought the democracles were too pacifist to fight. As for the United States, that he saw as too corrupt and contented, too fat and flabby, to do again after 1939 what it has done after 1915.

Today there is a risk that Mr. Khrushchev will make an identical miscalculation. We are wasting our time getting the shivers over the irrelevant question of whether there ought to be a summit meeting or not. The real question before us is how to let the real question before us is how to let say about fighting rather than being pushed out of Berlin.

It became clear, in those 6 weeks of talk at Geneva, that Mr. Khrushchev doesn't really want to negotiate. He is sweetly reasonable about negotiating when the West gets out of Berlin. But there is just no question whatever in his mind whether we will get out. Secretary of State Herter—to whom every alert citizen should listen tonight, as he reports on Geneva—put it this way when be got off the plane in Washington:

"The Soviet Union \* \* \* revealed clearly that its true desire is to absorb West Berlin into East Germany, and to keep Germany divided until it can be brought under Soviet influence."

If this seems just talk, consider what Mr. Gromyko himself said. Take for example that June 10 statement, in which he set 1-year deadline for getting us out of Berling.

"Considering the position of the Western Powers, the Soviet Union is ready to refrain from insisting on the immediate abolition of the occupation regime in West Berlin. The Soviet Union could agree to accept a temporary prolongation of certain occupation rights of the Western Powers in West Berlin—on the condition, however, that this situation would last for a strictly limited period, namely, I year."

Despite some softness among West German Socialists and Britain's Labor Party, despite a brooding aloofness in President gaule, the West seems agreed that it would be fatal if we let Berlin go. Giving in before either a sudden Soviet blow, or the farmore likely steady pressure of attrition, more likely steady pressure of attrition, have survived a dozen years of cold There would be no telling where we would or could, regroup for a last stand.

or could, regroup for a last stand.

This is a deadly serious threat. Yet while we talk about being firm, we act as though the next ball game were our most serious concern. There are two needs, immediate needs, in this interlude in the Geneva talks needs, in this interlude in the Geneva talks are that all are clear in their own minds as sure that all are clear in their own minds to the gravity of the Western positions second, and still greater need, is to take some overt action that will get into Mr. Shechev's head that we mean what we say for

The Pentagon, apparently, has begged for some strengthening of the Western many and in a debilitated NATO

Maybe partial mobilization is too risky in this tense world, though that hardly seems likely. Certainly there should be some visible action, to leave no doubt that we will use force if need be. We have said this over and over again. But we have done nothing to make it unmistakable that we shall keep open the road to Berlin by land, water, and air, and that we shall keep West Berlin free,

In view of what Mr. K. has been saying in his outwardly conciliatory but actually ruthlessly inflexible speeches, it seems certain that unless the West backs down Russia will sign that separate treaty with East Germany. That will do more than harden the split of the two Germanys, and establish the technical sovereignty of the East Germans. It will make it possible for the East Germans to use little harassments like delays in signing papers, in repairing roads or canal locks, in passing trains at control boints, in buzzing Western air traffic through the flight corridors. Such a slow strangulation of West Berlin, because it is less brusque and shocking than a sudden blockade, can be even more dangerous.

Thus we are right back to where we started Thus we are right back to where we shall last November 27, when Mr. Khrushchev first told us to get out of Berlin, or else. Surely he doesn't relish the thought of atomic destruction any more than we. But he does he does seem to feel that time, and strength

are on his side.

12

In that classic statement at the Minnesota state fair 58 years ago, Theodore Roosevelt said: "There is a homely adage which runs: speak softly and carry a big stick; you will so far." That should be the policy of the United States and its allies today. Instead we are talking loudly and carrying a little stick.

#### Decade of Deficits

EXTENSION OF REMARKS OF

# HON, JOHN SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. SPARKMAN. Mr. President, in today's Washington Evening Star there is a very interesting column by Sylvia Porter entitled "Decade of Deficits." In a very readable manner she handles this very complex situation. The article is quite provocative. I commend it to the careful reading of all and ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Appendix of the Record, as follows:

DECADE OF DEFICITS

(By Sylvia Porter)

On Tuesday, June 30, the Treasury will close its books on the decade of the fifties.
While to us 1959 still has 6 more months of life, to the still has 6 more months of the

while to us 1959 still has 6 more monus.

life, to the Treasury this is the end of the fiscal year, the end of the decade.

During this decade a Republican has occupled the White House most of the time, and such proud a such p such proud financial conservatives as George Humphrey and Robert Anderson have run

During this decade the economy has been

in the greatest prosperity ever known. Yet, in the 12-month period to end Tuesday the Government has chalked up the biggest peacetime budget deficit in all history—a deficit estimated at close to \$12.5 in the control of the control of

In this decade, the Government has achieved only 3 years of budget surpluses—

one under former President Truman and two under President Eisenhower in 1956 and 1957.

In these 10 years the Government's new borrowing has raised the national debt to a record of near \$286 billion, and the annual bill just for debt interest has increased from \$5.7 billion to \$8.6 billion.

In these deficit-dotted fifties we've carried the heaviest taxload in the Nation's lifetime, and we now pay in annual taxes twice as much as we put aside in personal savings. This turns upside down the relationship between taxes and savings prior to World WarII

And even these facts don't tell the full story about the fifties, for this decade marks the third in a row of huge deficits.

In the past 3 decades the Government has had only 6 years of surpluses; the other 24 years have been soaked in red ink. Since 1930 our national debt has skyrocketed 1,800

Going back to 1789, you'll find no record comparable to this. From 1789 to 1930 our Government had 93 years of budget sur-pluses, 46 years of deficits. But since 1930, I repeat, the story has been only 6 surpluses, 24 deficits.

No matter how smug you may feel about deficits (particularly when they're the Federal Government's), this performance of the fifties must compel you to a bit of sober

In the thirties the deficits were understandable. We were trying to spend our way out of the worst depression of all times.

In the forties the deficits were even more understandable. We were trying to win the biggest war of all time, and although 7e might have financed more of it by higher taxes, that's a "20-20 hindsight" comment.

But in the fifties? We've had two recessions, but short, relatively mild ones. The Korean war ended long ago. The cold war has remained, but this has almost faded into an accepted part of our economy.

Obviously, a key explanation is that we have chosen to fight the postwar recessions by big increases in Government spending instead of quick, big cuts in taxes. The giant deficits of the fifties have coincided with the recessions of the fifties. At the end of the recessions the spending programs remain, the budgets get larger and larger.

Obviously, we have chosen to rely on business booms to balance our budgets. If the budget in the year to start next Wednesday is balanced, the reason will be not a cut in spending, but a spectacular rise in the Treasury's tax take out of our fatter paychecks and

And, also obviously, red ink is likely to continue to color our budgets in the sixties unless we seize this moment of boom to figure out sounder financial ways to fight the recessions of the future than we have the recessions of the past.

British Association for American Studies

EXTENSION OF REMARKS OF

# HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief account of the conference of the British Association for American Studies, held in April of this year.

This account, prepared by Dr. Bernard Crick, is further evidence of the fruitfulness of the exchange program between the United Kingdom and this country. More than 100 teachers gathered for the conference and, in a very intensive program, renewed and expanded their interest in and knowledge of American studies. The account of this conference is reassuring to all those who are interested in the exchange program with other peoples of the world.

There being no objection, the account was ordered to be printed in the RECORD. as follows:

BRITISH ASSOCIATION FOR AMERICAN STUDIES-1959 CONFERENCE

> (By B. R. Crick) BACKGROUND

The British Association for American Studies itself arose, it will be remembered, out of the series of four conferences, held from 1952 to 1955 in Cambridge and Oxford, which were sponsored by the U.S. Educational Commission in the United Kingdom (under the Fulbright Act) and the Rockefeller Foundation, and which were intended to encourage the growth of American subjects, particularly history, politics, and literature, in British universities and schools. These conferences lasted between 10 days and (a gruelling) 3 weeks; they were concerned with the teaching of dons or schoolmasters coming to American history and literature mostly for the first time.

After the last of these meetings, the British Association for American Studies was founded and has since held its own 3day conferences, which have proved extremely lively and well attended gatherings, composed mostly of university teachers, though some school teachers have attended and also a good few adult education lecturers. In 1958 the B.A.A.S. received from the Rockefeller Foundation a large and wellconceived grant intended to aid American studies in Great Britain over a 5-year period by providing funds for, first, scholarships and research in the United States and Britain; second, the purchase of American documentation on microfilm; and third, the holding of special conferences. In the same year the committee of the B.A.A.S. decided that the time was ripe for another full-scale conference. A 10-day affair was planned and was intended, in part, to bring school teachers more fully into the picture than the smaller and shorter annual conferences had allowed, though by now-in contrast to the earlier Fulbright conferences-it was a much more developed picture of academic teaching and research activity. And 1959, it was noted, marked the tenth anniversary of the activities of the U.S. Educational Commission in the United Kingdom.

Such a conference was made possible by the ability to pay for the accommodation of participants and the administrative expenses out of the above-mentioned Rockefeller grant, and by the U.S. Educational Commisssion generously paying the fares and other costs for American scholars under Fulbright auspices in western Europe (not merely Great Britain alone) who were invited to lecture at the conference. It should be said here that the flexibility of these arrangements and the entire initiative and control left to the B.A.A.S. itself was appreciatively commented upon by participants almost as much as the fact of the grants themselves. Nothing would have been possible without the warm and active support of Dr. W. L. Gaines of the U.S. Educational Commission in London, and the cultural attaché of the American Embassy, Dr. Carl Bode, also gave— as ever—invaluable help, as did the librarian of the American Library in London, Miss M. Haferd, who, in particular, provided an excellent working library and a library exhibition for the conference.

#### ORGANIZATION

The enclosed program in its ingenious complexity scarcely speaks for itself, but it does provide a guide to the ambitious scale and range of what went on. Basically the scheme was quite simple. There was to be no pedagogic distinction between old hands and beginners, no separation of university from school teachers, or, indeeed, of school teachers actually teaching American subjects from those only hoping to do so in the future. Instead there was to be a wide variety of fare intended to broaden everyone's knowledge outside their specialization. The assumption was largely correct that the great majority of the school teachers present would in fact already have some teaching knowledge of American history and literature-in contrast to the situation in the first Fulbright conference in 1952. The emphasis seemed very much on broadening and deepening existing interest and knowledge, and thus on demonstrating to those present who were talking up such themes at all for the first time that there are now serious and established-if still small-disciplines of American history and literature in the universities. The alone was obviously an important thing for many sixth form teachers to realize since they are, by and large, very reluctant to teach their senior pupils subjects which are not likely to occur in the university examination syllabuses schools.

So the organizing principle was one of intellectual rigour mitigated by variety of subject and form. The conference was built on three main columns and a subsidiary one (as shown in the first three pages of the enclosed program). There were general lectures first thing each morning followed by syndicate discussions and questions; there were special lectures, usually two a day, under the three broad heads of history, literature, and government; there were 11 specialized seminars meeting concurrently for sessions of 2 hours four times during the conference; and, lastly, some evening programs of educational or historical films. But before describing the operation of this scheme, it might be best to say something about the clientele of the conference.

#### ATTENDANCE

The conference was advertised by sending out about 3,000 individual announcements, including the circularizing of their members by the Headmasters' and Headmistresses' Associations. Advertisements were also put in the Times Educational Supplement, the Times Literary Supplement, and the W.E.A. Journal, Highway. Some 500 inquiries were received, which led to 283 application forms being completed and returned, apart from those of members of the association (which were accepted as of right). Of these 283 applicants, 164 applied for the history sessions, 76 for the literature, and 43 for the Government (as will be seen, 114 people attended). The following table shows the subject and occupation composition of the actual attendance of the conference. (Graduate students. it should be noted, were not invited to apply and are not normally members of the association, although in fact perhaps some half dozen graduate students attended the conference, and are included in the category of "miscellaneous.")

It will be seen that there was a total attendance of 114, which included 40 existing members of the association. It should be pointed out that the categories history, literature, and government defined the seminars which people applied to attend. These are not necessarily the usual special subject of the people concerned, since a few studied another discipline for the purpose

of the conference; i.e., there were a few people who normally teach Government, who studied history, and vice versa, and three university geographers, who were not otherwise provided for studied history.

wise provided for, studied history.

In addition to the figures shown in the above table, there were in attendance the 11 British tutors; the 16 American lecturers (none of whom stayed for the whole time, of course, though they were encouraged to stay longer than required by their individual lectures); and also some half dozen special guests for the whole or part of the conference, and an equal number of people who attended occasional lectures—these were mainly American scholars resident in Oxford at the time.

On the application forms the question was asked: "Have you taught or made any serious study of your specialization chosen above (i.e., American history, literature, or government)?" Of those who were finally accepted for the conference (although it will be noted that this number is larger than those actually attending as stated above), 101 answered "Yes" to this question and 25 "No." Thus it can be stated that about one-quarter of the participants in the conference had not, by their own valuation, made any serious study of the subject before. As has already been said, the conference in its whole conception was intended to assume-in contrast to the earlier conferences—an existing body of study and knowledge, but answering to the above question was not made the basis of refusing applicants: applicants were chosen according to their academic degrees, the character and importance of their teaching post, and their age—i.e. the people were chosen according to their present or future potential to benefit American studies.

Of the numbers originally accepted, 35 withdrew, of whom only a few were last minute illnesses, etc. Most of these places were filled from a reserve list of applications, but the degree of changeabout and the wastage of perhaps 11 places argues that in any future conferences a fee should be asked from the participants payable at the time of application.

It will be seen from the above table that there was a highly satisfactory proportion of nonmembers to members; that is, about two-thirds of the participants were nonmembers, i.e., attended such a conference for the first time. It can be surmised from the table that while American literature has made considerable, indeed remarkable progress within the universities, its situation is less good relative to history in the schools. Literature constituted two-fifths of the total attendance at the conference.

An interesting figure, the significance of which may not have been appreciated before in the affairs of the association, is the attendance of 22 under the category of "adult education." It seems clear, both from these figures and from informal discussions at the conference, that there is even at the moment a considerable interest in topics American in English adult education, and that this is capable of considerable expansion. Most of these adult education participants are of course university extra-mural lecturers, so the courses can be assumed to be of some academic standing.

In view of the increasing importance of the teacher training colleges in English education, since the courses are, within the next few years, to be extended from 2 to 3 years, a special effort was made to attract teachers from these places; but very few applicants from training colleges were received.

# \* AFTERTHOUGHTS

There can be little doubt that people coming to such a conference for the first time felt, with a very few exceptions, richly rewarded and benefitted by the experience. A

very few had obviously hoped for something closer to elementary instruction in American history, though it had been made quite plain from the first announcements that this was not the function of the conference. But the clear majority of schoolmasters would plainly have been put off by such a different type of—not conference, but school; the few disgruntled seemed those who had not prepared themselves at all beforehand.

This is not the place for an appraisal of the state of American studies in Great Britain, but the conference did bring certain issues into focus. It was very interesting, for instance, to hear the amount of talk between schoolmasters about to start American courses and those already embarked. Some of these participants would obviously have welcomed some official discussions or seminars on such teaching problems, but then again, clearly not the majority who preferred to discuss educational techniques informally and to use the sessions to try out and extend their knowledge. One thing did clearly emerge from the cellar and common-room talk among and with the school teachers; their general concern with the supply of American books because of their cost, and also their difficulty in adapting American style textbooks to English school use.

University teachers of American history and literature seemed more established than can have been the case in the earlier Fulbright conferences, but again, except at a few fortunate places, they had a feeling of realization in common that their subjects are still underrepresented on their departmental syllabuses. But the attendance of 12 university teachers who were not them members of the association was very encouraging.

The political scientists seemed to furnish a different case; some fairly substantial knowledge of American politics is always demanded in Government courses. Their case for expansion is bound up with the under development of political science as a whole in most British universities, not with balance of teaching withing existing departments. It is noticeable how many articles for instance, on American topics appear in Political Studies compared to the historical and literary journals. This perhaps makes the political scientists, by and large, feel less need of the association than do the historians and literature teachers.

Social sciences, meaning sociology or psychology, were almost unrepresented, both in participants and program. The absence of sociologists from the association is explained by similar reasons to those that make the membership of political scientists relatively small compared to their involvement ology is American or uses American methods that English sociologists—where they gist at all—are already closely in touch with at all—are already closely in touch with a probably the newest and most marginal of all serious disciplines in British universities. But this is not to say that some voices some lectures on modern American social some lectures on modern American shought. But perhaps the timetable was full enough already.

One other factor worthy of note was, as seen above, the large attendance of teachers in adult education, who constituted just under one-fifth of the whole conference, under one-fifth of the whole conference. These teachers were mostly in university and extra-mural courses, and seemed as a group exceptionally lively and optimistic in the valuations of the demand for more American subjects among their audiences. It is to be subjects among their audiences. It is to be hoped that more will be done in the future than has been done in the past the stimulate or help the teaching of American subjects in adult education.

adult education.

If any summary is called for, it is simply that there seemed overwhelming agreement

Among the participants of the conference that it had been very successful, that much had been learned, and that further meetings Would be worthwhile, although it should be pointed out that the normal conferences of the association promise (or threaten) to become much larger in any event due to the increase in the number of members. Certainly the assumption of the conference that elementary teaching was no longer needed, seemed to have been justified, although it is nevertheless true that the systematic, although fairly advanced, discussions of the seminars, seemed to be more appreciated than the necessarily rather scattered nature of the topics covered by the lecturers. There was, in other words, a strong back bench feeling that the center of future conferences should be the seminar rather than the genalso suggested in some quarters, that something might be done specifically to encourage graduate students either to attend fuconferences or to meet together on some occasion themselves.

A final comment on something which is how almost taken for granted. On the one hand, the great success and enjoyment of the conference was undoubtedly due to its Interdisciplinary character in the syndicates and in the whole range of the lively extracurricular discussions and contacts. But, on the other hand, there was literally no observable sentiment in favor of the interdisciplinary teaching of the American studies. studies movement type at either school or university level in this country. This issue was, indeed, raised by Professor Spiller's excellent lecture on "American Studies and the Study of America" and was extensively discussed. Everyone seemed to agree that progress in the study of America should and could only be made within the existing academic disciplines in Great Britain; but that interdisciplines in Great Britain, interdisciplinary conferences themselves create an eagerly welcomed broadening of the an eagerly welcomed broadening of the conference of t perspectives within the established disci-plines. The proof of this latter proposition eems to be that hardened conference goers within the normal professional associations of history, literature, and political science, all appeared to agree that the conferences of appeared to agree that the conference of appeared to agree that the conference of the confere the British Association for American Studies are the most stimulating and origihal which they have ever attended.

Views of NATO Conference by Palmer Hoyt, Editor of Denver Post

EXTENSION OF REMARKS

少田方面 四次田小田市田

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, June 25, 1959

Mr. NEUBERGER. Mr. President, 1 of the 130 American delegates to the recent Atlantic Congress of the North Atlantic Treaty nations in London was Palmer Hoyt, the distinguished publisher and editor of the Denver Post. Mr. Hoyt, a native of my own State of Oregon, served as chariman of the education and public information committee of the Atiantic Congress. I am happy to report that my wife, Maurine, a delegate to the MATO meeting, was likewise a member of this of this important committee.

Mr. Hoyt has returned from the Atlantic Congress full of enthusiasm and optimism over the wider and more diversified contracts established among the 14

free nations unified in NATO. Because NATO is more important than ever as the shield and defense of Western Europe since the Geneva conferences bogged down, I believe that Senators will be interested in reading these thoughtful and illuminating observations published by Mr. Hoyt in the Denver Post upon his return to that community.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the article entitled "Practical Ideas Born in NATO Town Meeting," written by Palmer Hoyt, and published in the Denver Post of June 14, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRACTICAL IDEAS BORN IN NATO TOWN MEETING

(By Palmer Hoyt)

Last week I returned from an unusual meeting, the Atlantic Congress. It was called in London. Six hundred and fifty men and women from 14 nations were there. represented nations which had pledged themselves-"their lives and sacred honor"-to defend each other against aggression. They had signed the North Atlantic Treaty.

The assembly was without precedent. people there carried no official credentials. They were just people. Like me. What they were to do, what they were to say would move no armies, or start no wars.

Some called the Congress a "super-plan-

ning body for NATO." Others defined it as an advisory council. Others accepted it as a multi-nation town meeting of private citizens to articulate a profound hope for sustained peace. I liked the last. That is what it seemed to me.

The most important thing about the Atlantic Congress was that it came off at all. Such things have not happened under the

threat of an aggressor.

The hopeful fact that citizens of 14 free and sovereign nations could sit down to-gether and talk about the broadening of a military system into an Atlantic community on common cultural and ideological interests embellished in my mind an ageless dream:

The dream of uninterrupted peace.

To that exent, the fact that the Congress was held—amid the fretful developments of the Cold War—is more important than what was said or what was done.

However, a lot was said and a lot was done. Those things were important, too.

The results of the Congress' recommendations and conclusions have been reported in the world's press.

The proposals for freer trade were rooted in reality. So were the pleas for greater economic cooperation among members. Who could dissent against joint aid programs for undeveloped countries? And no voices were heard in opposition to demands for more extensive educational and intellectual exchange among members.

Not all the results of this extraordinary gathering were general. The Congress rec-ommended specific action, too. For example, it decided to establish a "studies center for the Atlantic community," which would "serve as a clearing house and intellectual focus" for the alliance. How better could the Western Alliance counter Soviet ideological warfare than by beefing up an un-official organization within NATO to tell the truth? And that, too, was demanded by the Congress.

Many of the delegates took with them to London great skepticism. They were prepared for a meeting characterized largely by forensic demonstrations. The assembly was made up of people commonly regarded as practical—businessmen—legislators, success-

ful intellectual leaders and so-called molders of opinion.

There were many reasons to predict that the Atlantic Congress would prove to be little more than an intellectual children's crusade, or another Ford peace ship. But the Congress did not turn out to be a witless exercise.

The recommendations hammered into final form by the Congress, as suggested above, were broad and general. If the constructive and forward-looking proposals made by the five major committees of the Congress were occasionally idealistic, they were more often extremely practical.

For example, in the committee I was assigned to head-that on information and education-recommendations were specific for governments to strengthen their NATO information programs. Why? Obviously, unless and until the nationals of participant nations understand the obligations and opportunities imposed upon them by the treaty, it will be a dead letter. And the people, in such a result, could be dead pigeons, too.

The Congress accepted without reservation that "education of the young in the ways of collective world order" is the secret to NATO's success. To that end, therefore, the students of the educational systems of all signatory nations must understand the charge of article 5 in the treaty, whereby "the allied peoples promise to fight, and, if need be, give their lives for one another if any one of them is attacked."

One mission, therefore, of NATO-as interpreted by the Atlantic Congress duly assembled in England's ancient capital—is to focus the attention of free peoples upon such obli-

gations. No more. No less.

The conference was not all beer and skittles. It met under some strain. The Icelanders stayed away, still peeved by their conflict with the British over fishing rights covering the offshore waters of their island.

De Gaulle jolted the Congress and embarrassed the French delegation by his insistence upon a more equal sharing of atomic

Offsetting the family disputes, however, was the encouraging news that the Russians were highly displeased. They were outspoken in their annoyance.

Quotations from Pravada and Izvestia were widely distributed among the delegates, giving support to the view that perhaps the Congress was more meaningful than they had dreamed it would be.

There were two official languages for the Congress, English and French. Instantaneous translations were available. Because all delegates understood one language or the other, communication was established.

It became clear at once that if communication between like-minded people can be established, understanding results; and when understanding is present, conclusions may be drawn: ergo, from conclusions, commonly comprehended, agreements are possible.

I drew one disquieting conclusion from all this—disquieting to Americans: The Europeans present enjoyed practical familiarity with two or more languages, the Americans (with pitifully few exceptions) understood but one tongue-their own.

Thus one of the great problems of American education must be the proper teaching of foreign languages.

The congress was opened on Friday, June 5, with the full panoply of the crown.

To a westerner with no background in court affairs, the march of the regally uniformed Weish trumpeters and the gally-bedecked Queen's Guard were reminiscent of Gilbert and Sullivan so recently displayed

at Central City.
But the Queen, Her Majesty, was one all could demand of royalty. Her speech of welcome was a classic in simplicity and logic. To me a line from the speech set the tone for the congress.

"The success of this congress," Queen Elizabeth said, "will depend on the simplicity of its recommendations and the clarity of its ideas."

Now, one final and personal observation: If the delegates to the Atlantic Congress, the first such congress, fell short of charge, they at least tried. And their failure or success could, one day, be measured in the toll of war or in the blessings of peace.

Address by Basil Dean to Western Airlines Inaugural Banquet, Calgary, Alberta, Canada

EXTENSION OF REMARKS.

OP

## HON. ALAN BIBLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. BIBLE. Mr. President, the close ties of warm friendship which have bound the United States and Canada over the years dramatically illustrate how nations can enjoy peaceful coexistence if it is based upon mutual trust and understanding.

I am in receipt of an address delivered before the Western Airlines inaugural banquet at Calgary, Alberta, on June 2, by Basil Dean, publisher of the Calgary Herald and president of the Calgary Chamber of Commerce. I am indebted to my good friend, A. E. Cahlan, an outstanding newspaper publisher in Las Vegas, Nevada, who forwarded me Mr. Dean's comments. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS TO WESTERN AIRLINES INAUGURAL BANQUET, CALGARY, ALBERTA, JUNE 2, 1959, BY BASIL DEAN, PUBLISHER OF THE CALGARY HERALD, AND PRESIDENT, CALGARY CHAMDER OF COMMERCE

I hope my fellow citizens of Calgary will not object if I address my remarks tonight principally to our very distinguished visitors from across the border. I would like, if I may, to tell them something about the country which is today proud to have them as its guests.

Sometime yesterday afternoon, our visitors flew over one of the most remarkable phenomena in the history of Western civilization. I refer, of course, to the 49th parallel, the western boundary between Canada and the United States. It is remarkable because we pay so little attention to it. In many places, it would be almost impossible to find it without a careful survey. At those points where it is marked, it is marked chiefly by the presence of those very friendly officials performing duties on both sides of it, who, it seems to me, spend most of their time making sure that visitors feel welcome when they move from one side of the border to the other. Neither of us has found it necessary to defend this border for almost 150 years. In fact, I am told that it was necessary for the governments of the two countries to agree to waive the provisions of a treaty well over 100 years old in order to permit the warships of our respective nations to move up the St. Lawrence Seaway as part of the opening celebrations this summer. These warships are, of course, armed, and our two

countries agreed long since that we would not maintain armed vessels on the Great

But although by common consent we minimize, as far as possible, the inconveniences which this boundary line might otherwise create, nevertheless, it is there. When our visitors crossed it, they moved into another country—technically a foreign country, al-though the words "foreign" and "alien" seem quite inappropriate when you are discussing the relationship between Canada and the United States. This is a different and the United States. This is a different country-different in spite of all the manifold similarities-from the one which lies on the other side of the 49th parallel. We are, of course, very much alike. We are probably more alike than any other two nations on earth, and certainly we can boast with some pride that we get along better to-gether than any other two national neighbors. We share the heritage of the Englishspeaking peoples. Many of the things which are done differently in Canada from the way they are done in England or Australia or New Zealand, can be traced to the influences of the North American environment. We have both contrived to become independent of the British Government, though by rather different means. You dispensed with them in 1776; we, being either less impatient or more slow-witted, waited until 1867, and even then did not go quite as far. That is why the personal representative of Her Majesty the Queen, in the person of His Honor the Lieutenant-Governor of Alberta, is sitting in an honored place at this gathering tonight; and that is why he was saluted with the national anthem when he entered this room. You sec, by 1867 King George III had long since gone to his reward, and by that time it was not necessary for us to take quite such drastic steps as you did.

We are thus in our usual situation of be-

ing a half-way house between the United Kingdom and the United States. In a recent satirical revue called My Fair Lady produced by the students of McGlil University in Montreal, one of the characters was made to observe that Canadians spend half their time explaining to the Americans that they are not British, and the other half explaining to the British that they are not Americans, and consequently have

no time left to be Canadians.

One thing that should be said about Canada is that there is a good deal of it. There is in fact, over 3,800,000 square miles of it. The province you are now visiting, Alberta, is in itself quite substantial. I hesitate to say this, considering the origins of some of our visitors, but it is necessary for me to point out that Alberta has 366,000 square miles—or almost, and I say this with trepi-dation, almost 100,000 square miles more than Texas. Later on this week, you will be visiting Edmonton. Down here, in what we in Calgary like to regard as the balmy south, we always think of Edmonton as a northerly city. But there is a great deal more of Alberta lying north of Edmonton than there is lying south of it. And there is a very great deal of Canada, which few of us I am ashamed to say have ever seen, lying north of the Alberta boundary. And when you place alongside these enormous areas our relatively very small populationonly about 17 million-you have one of the clues to the national character of Canada. There are only about four of us to every square mile of territory we have. But of course we aren't scattered evenly over our territory. Most of us live in a narrow ribbon running about 200 miles north of the United States boundary; in fact, it was once remarked by a cynical observer that Canada is a nation 3,000 miles long and two railway tracks wide, because naturally most of the established settlements lie along the routes of the two main transcontinental rail-

You have about 10 times as many people as we have, and your annual production is about 15 times as great as ours. It is only natural, then, that we sometimes feel dwarfed by our great, and wealthy, and thank God friendly neighbor. And here is another clue to the national character of Canada. We are the next-door neighbors not only of the most powerful nation on earth but of the most powerful nation in the history of mankind. Because of our prox-imity, and because of the wealth of social and personal and political and commercial and economic contacts that we have, we think we know a good deal about you; at least we think we know a good deal more about you than anybody else does. our hearts, we know that the fact that we are still here, still masters of our own destiny, still politically independent, still a sep arate nation, with our own institutions, our own culture and our own society, is perhaps the most striking single example of the sin cerity of the American belief in freedom and in friendship.

I would like to remind you of some obset vations made in India a few years ago by our then Prime Minister, Mr. St. Laurent, was on a world tour. Some Indians were quizzing him about what they described as American imperialism. He said to them quite simply, "You must remember that I come from Canada. And the existence of Canada, in Italia is a said to them the said to them the said to the Canada in itself is a sufficient denial that the United States is imperialist in the sense that you are trying to make out" I believe it was generally felt in Washington that these observations had been of considerable assist ance to U.S. policy in Southeast Asia at the

time.

I said a few moments earlier that one of the clues to the Canadian national character could be found in our consciousness of our proximity to such a powerful neighbor. The effects of this proximity are exceedingly complex; they have been the subject of much learned study, and I do not propose to be labor you with any close examination night. However, one of the most obvious of However, one of the most obvious of them is the influence of the United States upon the way we live. Our standards of living are for all practical purposes controlled by your standards. In the first place, the state of the American economy has a direct and immediate effect on the state of the Canadian the Canadian economy. In the second place, we tend to take it for granted that whatever in the way of the granted that whatever in the way of physical, material benefits and the creature comforts you enjoy, we should enjoy too. A worker in the Chrysler plant at Windsor, Ontario, sees no reason why he should some contents of the contents of reason why he should not enjoy precisely the same living standards as his exact counter part in the Chrysler plant just a mile across the river in Detroit.

Now, obviously, any standard of living the product of a combination of people skills, and resources. We have far fewer people. And this yearning of Canadians accentuated by the fact that we are exposed constantly to all the reflections of your way of life as a processed to the product of the second people of the second of life as expressed in television, movie magazines, and so on, to enjoy the same kind of material compared of material comforts that you do. exerts constant pressure upon us. It always seems to me extraordinary that we come as closs as we do to matching the kind of life that citizens of the United citizens of the United States are able to enjoy. As you probably know, our living standards are second only to yours in the whole world. world.

But this is not so easily achieved as if might appear. We depend, far more than you, on trade with the rest of the world for the living standards which the living standards which we enjoy. He haps a very few figures will illustrate

Last year, the gross national product of the United States was \$437 billion. Of this you sold abroad by way of goods and services just over \$22 billions. Of this just over \$22 billion, or near enough 5 per

cent. You imported under \$21 billion worth of goods and services, or again, roughly, 5 percent.

But contrast this picture with ours. Our gross national product in 1958 was \$32 billion. Our exports of goods and services were slightly under \$5 billion, or about 15 percent; our imports were slightly over \$5 billion, or again about 15 percent. In other words, exports are three times as important to us as they are to you.

To put it another way, you had to export only \$131 worth of goods for every American. We had to export nearly \$300 worth of goods for every Canadian. To sustain our standard of living, we had to find the foreign currency, most of it U.S. dollars, to buy \$300 worth of imports for every Canadian; you found it necessary to import only \$123 worth of goods for every American.

Our trade with the United States alone works out this way: The average American bought \$17 worth of Canadian goods last year; the average Canadian bought \$210 worth of American goods last year.

The most important consequence of this contrast is that while, to a considerable degree, the economy of the United States can afford to live on the domestic market, ignoring markets in other parts of the world, Canada cannot do any such thing without running the risk of an unprecedented economic disaster; and since our price structure is very closely geared to yours, of necessity, we must always face the problem that while you might price yourselves out of many your might price yourselves out of many world markets with only minor economic consequences, the same results imposed on the Canadian economy would spell for us something not far short of ruin. is the chief reason why economic policies pursued in Washington are invariably viewed from this side of the border with great apprehension. What may often seem to the U.S. Government to be a minor trade measure designed to sustain an American industry from temporary dislocation by surpluses in the market may quite often result in the market may quite of the severest possible consequences to a similar Canadian industry which has been relying for its welfare on exports to the United States. This has happened in the recent past in quite a number of instances, and I, therefore, hope that you will endeavor to be as patient with us as you can when we sometimes seem to you to be making a lot of fuss about nothing.

I think, in all fairness, I should add that many of these problems would be a great deal worse were it not for the unfailing sympathy and understanding with which representations from the Government of Canada on such matters are received by your Government in Washington. Whatever happens, we can always rest assured of one thing—that the United States is not really trying to hurt us, and if we sometimes do get hurt, as we do, it is because that aspect of the matter had never occurred to anyone involved in making a particular decision.

From the beginnings of our history in this Country, we have had to face the problems of a curious and inconvenient geography. Many of these problems would disappear if we had more people, but with the number of people we have, they continue to be severe. From the beginnings of Canada's existence as an independent member of the Commonwealth, we have had to make sacrifices in the interests of the political and economic coherence of our country. have had to endeaver to force our trade into East-West patterns within Canada, because for a variety of reasons, some of them in-volved with American economic policy, and others involved with our own sense of nationhood, it has not been possible for trade to follow the natural pattern of movement north to south and vice versa. In this sense, it is a pared or the following the south and the south it is a paradox that Canada exists at all, and it is probably true to say that it exists only because a succession of Canadian statesmen, from our first prime minister Sir John A. MacDonald on down, have been determined to make it work, and have been supported in this resolve by the Canadian people.

And although, as I said earlier, in many respects we live very much the way that you do, as you have seen for yourselves, there are some subtle differences in the way we go about things which are important to an understanding of the relationships between us. While, in a very general sense, your political institutions and ours develop from a common root, the British parliamentary system, the course of history has caused them to develop on somewhat different lines. You have a written Constitution, in which the divisions of authority among the three main branches of government are very carefully defined, and you have a Supreme Court whose primary function is to make sure that dividing lines between the three branches are kept clearly defined. We are not quite so precise in these matters. We have a written Constitution of a sort called the British North America Act. But all it really does is to define the areas in which the Federal parliament may legislate on the one hand, and the areas in which the provincial legislatures may legislate on the other hand. Within these areas, each legislature is supreme and sovereign, and may enact any laws it chooses without interference by the courts. We have nothing, so far, remotely resembling your Bill of Rights, although the present government of Canada is endeavoring to enact something of the kind. We think we enjoy pretty much the same degree of freedom that you do, but the difference is that our freedoms aren't spelled out in statutory form as yours are. We enjoy them, in the main, by virtue of precedent and tradition going back into the roots of the Anglo-Saxon heritage which both our coun-

One of the aspects of this heritage which I am quite sure we have inherited from Great Britain is the talent for muddling through. For example, this British North America act to which I have just referred, was originally a statute of the parliament in Westminster establishing the Dominion of Canada. Until a few years ago, if we wanted to amend it, the procedure was for the Canadian Parliament to pass a resolution and then ask the Houses of Parliament in London if they would be good enough to make the necessary amendments. This they invariably did with a good deal of courtly ceremony. Ten years ago, we decided that it did not befit our style and dignity as a sovereign nation to have to go to some other country to get our constitu-tion amended, so the Canadian Parliament made a declaration that henceforth we intended to amend the constituiton ourselves. What we had unfortunately forgotten was that the British North American act affects both Federal and Provincial rights, and obviously, therefore, the provincial legislatures must have something to say about amend-ments. For the last 10 years we have never succeeded in working out any machinery for amending our constitution, and what we would do if it became essential to amend any part of it, nobody knows.

Pretty much the same set of circumstances surrounds the question of a Canadian national flag. For some years after we became a sovereign dominion, we simply used the Union Jack, which, of course, is also the flag of the United Kingdom. Over the succeeding decades, however, a practice grew up of flying the Red Ensign—that is, the red flag with the Union Jack in one corner and the Canadian coat of arms in another corner—as the flag of Canada. A few years ago, our government announced that it would be appropriate to fly this as the Canadian flag until such time as we had designed a proper flag of our own. Ever since that time, we have been arguing about what sort of flag we ought to have and we haven't come any-

where near to settling the argument yet. However, nowadays we all fly the Red Ensign, at least in English-speaking Canada, and no great harm seems to have come of it.

Then, too, we have had a little trouble deciding upon a national anthem. Whatever else Canadians may disagree about, they are all agreed on their loyalty to the Crown, so we sing or play "God Save the Queen" on all ceremonial occasions. We also have another anthem, a sort of semiofficial national anthem, "O Canada," which you have already heard sung. The one drawback to the content of heard sung. The one drawback to this one is that at the moment it has at least three different sets of words, and we cannot really agree on which set of words is the proper set. However, we don't feel too badly about this, since we understand that it took you until 1931 to declare that the "Star-Spangled Banner" was your official national anthem, and since you had presumably been thinking about this ever since 1776, or at least since 1812 when Francis Scott Key wrote it, we feel we have plenty of time to spare, since we could scarcely have been expected to get started on the problem until 1867; and, on the same basis as yours, this would take us until the year 2040 before it could be argued that there was any real urgency about it.

Now, as you will have observed, this has been a very disjointed and superficial study of just one or two aspects of the country you are visiting, and of its relationships with your own country. I have not, for example, even touched on the large and sometimes difficult problem of continental defense, and I have not touched on it for one reason which seems good to me: and that is that in defense, there is no doubt in my mind whatever that we stand or fall together, and in the light of the job which the defense forces of our two countries are required to do, any private discussions we may get into about the best way of doing it, or who is to be in charge, are exceedingly insignificant.

### Here's Why Farmers Are Leaving Farms

EXTENSION OF REMARKS

## HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 24, 1959

Mr. QUIE. Mr. Speaker, in recent years there have been many statements uttered—some in the nature of partisan attacks—on the subject of farmers leaving the farms. It has been said by some that Government policies have been responsible for an exodus; and others, just as firmly, deny that farm policies or programs have been the reason.

Regardless of what causes the movement of farmers from the farms, no one can contradict the fact that there has been movement away from agriculture.

In the future, Mr. Speaker, I will dwell at length on this subject and will present to the House some statistics on movement of farmers from the farms. For the present, I would like to call to the attention of every Member of this House—and the other body—a pertinent article on the subject which appeared in Successful Farming magazine for July.

At this time I would like to quote from the article:

HERE'S WHY FARMERS ARE LEAVING FARMS

(By R. K. Bliss, former director, Extension Service, Iowa State College)

We often hear the statement that Government policies concerning agriculture are driving farmers from their farms.

The facts are: Government political policles of either party have had little to do with farmers shifting to other occupations, to towns and citles. But changes in farming methods, machinery, power, and technical know-how have had a great deal to do

with it. Here's why:
Output per man—up: Principal cause of farmers leaving agriculture has been greater farm power and bigger and more efficient farm machinery. Farming today is a far cry from the day when 2 horses pulled a 14-inch walking plow. I recall plowing 90 acres one spring with 3 horses pulling an 18-inch walking plow. I believe that the largest plow in our neighborhood at that

You know what a modern tractor hitched to a four-plow gang can do today.

Electricity enables farmers to do chores more quickly. Nowadays electricity lights buildings, pumps water, milks cows, grinds feed, keeps little pigs warm, and does many other things to make farmwork more efficient. Pushbutton methods of feeding livestock are reducing the time of getting the job done still further.

These are the real reasons why 11 million people have left farms during the past quarter of a century. With more power and better machinery, they were not needed in food production. Anyone who argues that Government policies are principally responsible for the farmer exodus simply lacks understanding of the fundamental reasons why more food is being produced by fewer

The farm family has not grown larger— but the family farm has to be much larger in order to keep the farm family busy.

Production per acre-up: Increased technical know-how has sharply increased peracre vields.

Example: In 1933-the year before the crop adjustment program was started-U.S. farmers harvested almost 2.4 billion bushels of corn from almost 106 million acres. In 1958 U.S. farmers harvested almost 3.8 billion bushels of corn from a little over 73 million acres—almost 33 million acres less than in 1933.

Production per animal-up: Great progress has been made in the economical production of livestock products. Fewer animals are now lost by disease. Hog cholera and tuberculosis can be controlled. Animal parasites and files are under better control.

Better combinations of balanced supplements, including stilbestrol, are producing more beef on less feed at less cost. The advances in beef production have been almost as remarkable as the advances in crop production.

Costs of hog production are being reduced through better feeding, disease control, and increased number of pigs produced per sow.

Herd improvement associations, progeny testing, proved sires, artificial insemination associations, and better feeding methods have resulted in sharply increasing milk production per cow.

Fewer hens are producing more eggs on less feed. With modern equipment hens are laying eggs the year around.

Adding the ups: The foregoing developments have made it possible for fewer people to produce more food-thus displacing millions of farm workers. The United States is going through a genuine agricultural revolution and the end is not yet. More adjustments will have to be made which will inevitably make some people unhappy—but this appears to be the way of progress.

At the present time about 45 percent of the United States farms are producing about 91 percent of the national agricultural products that are marketed. The 55 percent of the farmers who produce the other 9 percent must get part-time work or move entirely to other employment in order to better their financial situation. They have not been helped much, if at all, by past price support programs—because they have little to sell. The more grain, wheat, or cotton a farmer has to sell, the more he has been helped by price support.

The rural development program began a few years ago by the Government is designed to help the low-income farmer. But the lowincome farmer is more of a community and social problem than a farm problem. fact is that a large number of these lowincome farmers get more income from work off the farm than they earn from their farms. What they need is an opportunity to earn a better living.

The foregoing are some of the things that should be kept in mind in the continuing farm debate.

Let us get away from the old shopworn cliche that political policies—either Demo-crat or Republican policies—have been prin-cipally responsible for driving farmers from farms.

## Foreign Aid

EXTENSION OF REMARKS

#### HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. BRIDGES. Mr. President, I have stood before this body on many occasions to voice my disapproval of certain facets of our foreign aid program. Although favoring aid to our real allies I have called for a reevaluation of our approach to foreign aid to avoid scattering misdirected dollars to the four winds at the expense of American taxpayers.

In a candid editorial entitled "Yes, We Do Favor Foreign Aid," the Manchester (N.H.) Union Leader cites the need for foreign aid which is dictated by commonsense. This is a very informative and revealing editorial.

Mr. President, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### YES, WE DO FAVOR FOREIGN AM

It is indeed encouraging news that the Senate Foreign Relations Committee has approved a requirement that the President formulate a plan for reducing and eventually eliminating outright gifts of economic aid to foreign nations. This, and another amendment requiring the administration to remove some of the air of secrecy from foreign aid spending, is at least in part a tribute to the hard work of "opponents" of foreign aid.

So much has been written in these col-umns about inefficiency, corruption, and misuse of funds in the foreign aid program that the impression may have been created that we oppose all foreign aid in principle. This is not at all true, and this might be a good time to try to clarify this newspaper's posi-

When this newspaper condemns foreign aid, we refer specifically to the program as currently constituted. While we sincerely as currently constituted. While we sincerely believe that the present foreign aid program is largely illogical and has created as many problems as it has solved, we just as firmly believe that there are circumstances in which foreign ald can be used to promote the best interests of this country.

We emphasized the latter, for it is obvious that foreign aid has ceased to be s tool of our foreign policy and has become instead, what Eugene Castle describes as "The Great Giveaway." Foreign aid is not Foreign aid is not at all a new concept. It has been used and used profitably-by nations throughout the entire course of history.

This newspaper has asked only that the foreign aid program be of manageable size and reasonable concept. We believe foreign aid should be just that—aid. We do not believe we should require a readjustment of the whole economy of the recipient nation, but rather, we favor a program whereby aid would be given for carefully-scrutinized programs which have a good chance of suc-

ceeding.

It is the height of the ridiculous to as sume that the United States can forever support the economies of 70-odd nations without suffering irreparable harm to its own economy. There probably will always be some poverty in this world, and foreign aid distributed in helter-skelter fashion will not change that fact. We can help under-developed countries attain higher standards of living, but we cannot do the job for them.

This newspaper also insists that foreign aid be dictated by common sense. For example, we oppose military aid to most Latin American countries, but favor substantial military aid for Korea, Nationalist China and Turkey.

As has been pointed out in these columns repeatedly, the vast foreign aid bureaucracy is entirely unnecessary—or at least will be when we shift from outright gifts to care fully calculated loans. Such loans should be requested by the recipient nation not forced upon it—for projects which, although carefully considered in advance by the United States, are nevertheless indigenous projects.

One result of what we propose, of course, would be the abolishment of the ICA, that vast self-perpetuating bureaucracy which has become a law unto itself, and whose sole purpose for existing seems to be to formulate new plans for giving away the tax payers' money. Foreign aid should and directly handled by the State Department and the Defense Department and controlled closely by Congress.

Thus, it is possible to favor foreign aid in principle, without regarding as acceptable the monstrosity we have created through past blunders.

## Grants Without Strings

EXTENSION OF REMARKS OF

# Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an extended cellent article entitled "Grants Without Strings," written by Roger A. Freeman. The article suggests that a change from our present system of over 100 programs of Federal aid to the States to a system of nonearmarked grants or tax sharing—similar to ing—similar to the recent change in Great Britain—could serve to preserve State and local autonomy while main taining Federal-State financial cooperation tion.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GRANTS WITHOUT STRINGS-SHOULD UNITED STATES, LIKE BRITAIN, GIVE STATES, CITTES NONEARMARKED FUNDS, THUS PRESERVING AUTONOMY?

(By Roger A. Freeman 1)

The British Government, on April 1, 1959, Combined a dozen Exchequer grants to local authorities—for education, health, child care, are protection, etc.—into a general, non-earmarked grant totaling £393 million (\$1.1 billion) in the fiscal year 1959-60. Government funds, together with locally raised moneys, are now being allocated among the various local services at the discretion of 147 county and county borough ough councils.

This shift from programmatic to fiscal srants, adopted after long and lively debates in and out of Parliament, is a significant change in central-local government relations with far-reaching implications. Nonear-marked payments to local authorities are not a new invention and have been used in a small way before. The British Government employed them in 1929 to compensate sate counties for certain property exemptions.

Australia and Canada have paid subsidies to state and provincial government for several decades. Many American States channel a percentage of State-collected taxes to counties, cities, and towns. New York, in 1946, adopted the Moore plan which allo-cates graduated per capita grants to cities and and towns. The U.S. Government used Beneral Brants in 1836-37 to distribute an accumulated Treasury surplus among the

The relative advantages of programmatic grants on the one hand and fiscal (nonearmarked or general) grants on the other have been discussed from time to time in the United States, as the number and amounts of programmatic grants kept in creasing. From insignificant sums prior to 1930 From insignificant sums prior to 1930. Federal payments to States and localities grew to \$2.6 billion in 1952 and are shown at \$7.1 billion in the U.S. budget for 1960. The number of programs exceeded 60

in 1952 and now runs well over a hundred. This rapid expansion of programmatic grants has resulted in increasing Federal direction of State and local activities. Un-conditional, fiscal grants have been sug-gested as ested as an alternative to this growing centralization. Because the arguments for and against fiscal grants in Great Britain and the United States are quite similar, it may be interesting to compare the highlights of the parliamentary debates with parallel controversies in the United States.

The Government white paper, published on July 10, 1957, declared it "a purpose of the control of the changes to give local authorities greater freedom. freedom in the spending of their money.

The Ministers of Housing and Local Government and of Education (Henry Brooke and Geoffrey Lloyd) and their parliamentary secretaries presented the case in the House of Commons as follows:

There is a fairly widespread agreement that there is too much interference by whitehall in local affairs and that local government is declining in status and effectiveness. The Government believes that an important cause of that decline is the growing reliance of local authorities on special exchequer grants. The main trouble with specific grants is that they must inevitably undermine the responsibility of local authorities for allocating their total resources in accordance with their own judgment of the needs of their area. pose of the proposals is to strengthen the character of local government in the hope that the general grant will bring greater cohesion of purpose. The programmatic grants encouraged disintegration of the (county) councils into functional committees while now decisions will have to be made by the council as a whole.

The Ministers emphasized that there was no intention of reducing the total amount of grants or even to freeze them at their present level, that this was not an economy measure but one of transferring decisions on relative urgency of local needs to local au-

thorities.

This recalls the statement which the Chancellor of the Exchequer, Winston Churchill, made in proposing unconditional grants in 1929: "It is the considered policy of his majesty's government to convert the system of percentage grants into a system of block [general] grants, that is to say, to pay definite sums instead of percentages to the local authorities, to give those authorities increased discretionary powers, to make them responsible for any extravagance or any unduly bold enterprise to which they may commit themselves, and to give them 100 percent of any economies they may themselves be able to effect."

The labor party strongly opposed the change to general grants in 1957 and 1958. Members charged that the block grant would mean that the battle was going to be transferred from one between the minister and the treasury or between the ministry and the local authority to a battle conducted on the floor of the council chamber. Those interested in education, health services, child care or fire protection were going to have to battle for what they could get out of the general grant. It was held that decisions affecting the national welfare could not be left to the discretion of local officials.

Their main complaint was, however, that general grants would, in the long run, mean less spending on these services. Under the percentage system, which was in effect for 40 years, local authorities received from the Exchequer £60 for every £40 they raised from local sources, with a slight adjustment for local property taxes. This system of open-end grants acted as a powerful incentive to boost local taxes which in turn increased Exchequer grants. Closed-end grants computed by general and school-age population and other objective factors would offer no such premium for greater spending because all amounts beyond the government funds would have to come from local taxes.

This argument has validity. It is easier to convince a taxpayer or local official of the need for spending \$1 of local money if this means getting \$2.50 in local benefits. Britain, as in the United States, spending from local taxes is closely scrutinized but central government funds are widely regarded as "free." They come from the inexhaustible national treasury, are paid by somebody else and cost the local taxpayer nothing. Thus public spending is likely to rise more rapidly under an incentive system than with closed-end formula grants.

The percentage system has led to the strange situation whereby areas with greater economic capacity and higher levels of taxing and spending received relatively larger government aid than low-income sections. This is equalization in reverse. Fiscal grants based on population will cut down the amounts going to wealthier counties and give the poorer counties relatively more. It might appear paradoxical that this change was proposed by the Conservatives and opposed by the Labor party.<sup>3</sup>
The fiercest resistance to the general grants

proposal came from the educational associa-tions, which called it "an economy measure directed against education," and expressed fear that the new system would spell dis-aster for the education service. They stated they would be opposed even if sufficient money were provided in the grant because they could not be sure of getting it for edu-

Education has been receiving more than four-fifths of the combined grants-not including grants for housing, police, etc., which will be continued. Some local authorities, the teachers felt, might now allocate a larger share of the funds to other services. Teachers naturally exert some influence over education committees but harbor a profound distrust of county councils. There is no evidence whether this feeling is mutual.

The percentage system provided a reward for the good authorities, that is, those which spend more. Under the new system all expenditures in excess of the grants have to be raised locally without an incentive.

'The teachers' concern was in no way assuaged when the Minister of Housing and Local Government denied that the quality of education depended on how much one spent on it.

The parliamentary secretary to the Ministry of Education illustrated the undesirable effects of programmatic grants in the House of Commons on July 29, 1957, by saying that "local education committes in general are showing an increasing capacity to forge rather closer links with the Ministry than with their respective county councils or

county boroughs."

This trend toward a "vertical functional autocracy" has also been observed in the United States. Joseph E. McLean, in an article "Threat to Responsible Rule," described how "the loyalty of the specialist is primarily to the function rather than to a general responsible authority" and runs "from the specialist in Washington to his counterpart in Squeedunk and back." This cooperation weakens the position of the governor, mayor, legislature, city council or county commissioners, and may have divisive, not to say disintegrating, effect on government as a whole and society." As other writers, Mr. McLean saw one of the reasons for this tendency in the growth of programmatic grants.

Wallace S. Sayre recently pointed out that, "The educational bureaucracy seeks to isolate the school district and itself from the other institutions of local government (mayors, councils, boards of supervisors, other administrative agencies such as police, welfare, local courts) as a way of achieving optimum autonomy." 4

The separation of education from the rest of local government is almost universal in the United States with the exception of some parts on the eastern seaboard. Political scientists generally hold this to be detrimental to responsible government. But Ernest A. Engelbert found that, "The educators feel that the proposals of the political scientist to bring the function of education into the framework of general government would put education at the distadvantage and mercy of

Mr. Freeman, vice president of the Institute for Social Science Research in Washington, D.C., has served on the research staff of President Eisenhower's Commission on Intergovernmental Relations, of the White House Conference on Education, and in the Executive Office of the President. He was assistant to the Governor of Washington

<sup>\*</sup>However, a parallel exists in the United States: The Eisenhower administration has proposed equalization grants for education while the Democratic proposals generally favor per capita grants.

National Municipal Review, September

<sup>1951,</sup> p. 411.

<sup>&</sup>quot;Additional Observations on the Study of Administration," Teachers College Record, November 1958.

political elements, who would show neither understanding nor sympathy for the goals and needs of the schools." 5

Educators can point out that the schools under an independent organization and with specific State grants in aid have done better financially than the other services of State and local government. Rowland Egger demonstrated that "there is no sector of American social organization in which, for all practical purposes, the separation of powers has so completely disappeared [as in the public schools]," and that the substance of authority has passed into the hands of the educational bureaucracy. "The means by which this end has been achieved is the grant-in-aid." <sup>6</sup>

The Economists summarized the British debate over the general grants proposal: "On balance, the arguments in favor of the change prevail—that it will make the local council a more important body than the local council committee, that it will put more responsibility for getting value for money on those who make the decision to spend it, and that it should eventually provide more taxpayers' money for school children with below-average facilities than for those with above-average facilities."

However, there is little doubt but that the Labor Party, if returned to power, would lose no time in reestablishing a system of programatic incentive grants.

In the U.S. proposals for general or fiscal grants have not been seriously considered by Congress. Walter Heller, on June 5, 1957, suggested to the Joint Economic Committee "a direct feedback of Federal tax collections" to State and local governments.

"Congress should give careful consideration to methods of sharing its relative revenue abundance with the States and their subdivisions without at the same time impairing their autonomy \* \* \* A straight per capita sharing system \* \* \* might be the easiest and least controversial method of putting a goodly share of Federal budgetary leeway, if any develops, at the disposal of the States." \*

A few months later I developed the idea further for the same committee: \*\* the number of Federal grant-in-aid programs has been multiplying rapidly with new ones added each year. With many more being proposed, a continuation of current trends could easily, within a few years, bring the number up to 150 or 200—each with its own statute, regulations, bureaucracy, chain of command and pressure group. Such detailed control of State and local activities would, in effect, mean the end of the Federal system as we have known it, a system that rests on the dispersal of decision-making power among several levels of government. The advantages of fiscal, nonearmarked grants appear to be:

1. The President and Congress could devote their time and energy to questions of national security and international affairs with which only they can deal. They would not have to concern themselves with the adequacy of many local services and facilities in every city and county.

5"Education—A Thing Apart?" National Municipal Review, February 1953, p. 78. 2. It would reverse the trend of increasing national control of State and local activities and permit States and communities to run their own affairs.

It would eliminate the need for maintaining a vast Federal bureaucracy to control and supervise the spending of the Federal funds in over a hundred programs.

4. It would inject greater flexibility for counter-cyclical action into Federal-State-local fiscal cooperation.

Their main disadvantage is that, if left to local discretion, the range and level of public services may vary widely from State to State and from place to place.

To summarize: If the justification for Federal grants is held to be inadequate fiscal capacity of some or all States, unconditional grants offer a method of Federal aid while preserving State and local autonomy. Such grants could be allocated to States, or also to cities, in the form of tax sharing, on a per capita basis or with some built-in equalization, or by a formula combining these factors. If, on the other hand, the establishment and maintenance of definite levels of public service throughout the country—regardless of local judgment—are deemed to be of overriding importance and essential to the national welfare, programmatic grants for these services are the logical answer.

# Shhhh—Let's Not Talk About It (the Farm Mess)

EXTENSION OF REMARKS

## HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mr. HOSMER. Mr. Speaker, I want to abolish the farm subsidies programs that are costing this Nation such a tremendous amount of money. We have in storage \$9 billion in surplus products costing \$1 billion a year just for the storage. I would like to see this disposed of on a fire sale basis and the proceeds used to relocate the small farmers who cannot operate without subsidies, to reduce the national debt and to help reduce taxes. This is the 4-point program called for in H.R. 7848 which I have introduced. Notwithstanding the provision of the story on this program to Washington reporters on more than one occasion, these good gentlemen of the press do not seem to think there is any interest amongst their readers in this subject. Or if they do, their editors must not think so, because so far as I can find out, only one daily newspaper, in Illinois, and one weekly newspaper, in California, ever printed anything about it. Yet the response from readers of those two papers has really been amazing. A few days ago I included extracts from many letters I have received, each and every one of which was strongly in favor of the 4-point program. This mail keeps coming in and I include herewith extracts from more letters. I hope by this means to indicate to my colleagues that the people of this country overwhelmingly want to get rid of this farm subsidy mess: that it is something we can and should be talking about and acting upon; not something we will not talk

about and do nothing. Each of the following is extracted from a different letter:

I want to congratulate you on your 4-point program to end the farm mess \* \* \* I hope that you will not relax in your campaign and that the American people will finally be able to rid themselves of the greatest economic folly of the 20th century,

I own 190 acres of farmland in Walworth County, Wis., and have seeded 153 acres of it in corn and 25 in oats this spring. I have farmer neighbors whose acreage runs between 70 and 200 acres. I have spoken to them and to a man they are against subsidy programs of any kind. Again thanking you for the first sensible plan of getting the Government out of the farm business.

I wish to compliment you for your fourpoint program to end Government subsides and return agriculture to a free enterprise basis. The situation as it now stands is a disgrace to our democratic form of Government. It is merely socialism in its worst form.

This taxpayers revolt against the farm subsidies is the best way to an end of colorsal spending. Hope sincerely that your fellow Congressmen will get behind this program and end this terrible and costly mess.

I again do wish to express my admiration for the seemingly unpopular stand you are taking. Be assured that most of the people are with you.

I would like to add my personal opinion that you should be congratulated for taking such a firm stand on the farm surplus mess. It is gratifying to know that we have men in Washington like yourself who are trying to clear up this farm surplus situation for the betterment of the whole country.

Congratulations on your bill to rid the average citizens of the practice of dippins into our pockets to benefit the minority group of farmers. I have noted an increased interest and protest among nonfarmers on this issue.

After 20 years of emergency legislation to help the farmers, I think it is about time for the American taxpayer to get some help an emergency. You are to be commended for your efforts for the American people.

After having read all the trash put out by the self-styled friends of the farmer, it refreshing to read your four-point program. You, of course, recognize the basic problem the return to a free market—and attack directly and effectively. Good luck in your crusade for sanity in agricultural legislation.

This is to inform you that you, in my opinion, have made the smartest and best suggestion to end the farm mess of anyone in Government and I heartly endorse your four-point program.

While at first glance the cure seems almost as bad as the disease, I know a lot of people would be relieved to see your so-called four point program put into effect to end the farm mess once and for all. The makeshift rended is so far have only aggravated the student of the ridiculous programs that encourage off of the ridiculous programs that encourage ever-increasing accumulations of unneeded unwanted, unsaleable, and unusable gramungulates. More power to you in accomplishing this herculean task.

I can almost hear the screams of wounded bureaucrats opposing your plan to get rid the huge grain stocks accumulated by the

<sup>&</sup>quot;Nature Over Art: No More Local Finance," American Political Science Review, June 1953, p. 461.

ve to

Government, and currently being stored at back-breaking costs to the public as a result of the unsound, uneconomic, and unworkable farm policies in effect the past years. If this miracle can be brought about, let's alert everyone to the dangers inherent in any attempt by the Government to maneuver artificial stimulus into any field of a free

The plan certainly makes sense to the I bet you will be surprised to see the number of citizens who will back this type of legislation, be they farmers, city-dwellers, or as we all are, taxpayers.

Let me be one of those to congratulate you on your opposition to the farm swindle.

Your proposed fire sale of the gigantic farm surpluses accumulated by the Frankenstein monster known as Commodity Credit Corporation appears almost frightening at first glance, but what more dramatic way could be found to end this senseless dissipation of our national economy?

It is good to know that someone finally has the courage to attack the staggering farm problem at the very roots, as proposed in your stagers. in your so-called four point program. \* \* It is a drastic step that would have serious temporary repercussions, but would ulti-mately be less costly than endless continua-tion of the present ineffective policies. I wish you success in your effort.

You are certainly on the right track with your campaign to get the Government out of the farmers. the farm price support program. The American taxpayer is cheated when his tax dollars are lars are used for such purposes.

## Dismantled Plane Guns

EXTENSION OF REMARKS OF

# HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, June 25, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Dismantled Plane Guns," from the June 22, 1959, edition of the Concord (N.H.) Daily Monitor.

The editorial speaks for itself, and deserves the attention of the Members of this body.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

# DISMANTLED PLANE GUNS

An incredible decision that led to dismantling of two of three guns on a Navy patrol plane attacked by Communists off the Korean coast coast has brought demands for a searching investigation from Senator Banders.

In the last 9 years of a cold war with Communists there have been 32 other officially reported reported air incidents that have led to the death or disappearance of 112 Americans.

Looking at this record, Bringes finds it difacult to understand why any American military plane should be sent out on any mission without a chance to defend itself.

Neil McElroy, secretary of defense, says the attack probably was made by North Koreans. Identification of the two attacking planes seems far less important to determine than the reason why the Navy plane was not ade-quately armed.

The Pentagon says two gun turrets in the Navy plane had been removed to make room for special equipment. The only other op-erating gun, in the tail turret, was knocked out in the first enemy pass and the gunner

This raises a question of how many other inadequately armed American planes now are flying training or routine missions. In an area in which there is potential danger at all times, it would seem commonsense that no plane is sent out which is ill prepared in terms of defense.

Patrolling of a zone about 38 miles off the North Korean coast is full of peril although the area is supposed to be in international waters. The Communists have shown too many times that they take a dim view of what they consider activity near their terri-

Results of a full investigation called for by Senator Bamces may clear up responsibility for a distressing lack of functioning plane armament.

This investigation should also clear up claims the Navy is being denied needed plane parts to keep within its budget. For a nation that is shoveling out billions to other countries, not to count a golden harvest going to farmers, this is a situation if true, that borders on the fantastic.

The attack underlines the need for eternal vigilance by all segments of the Nation's defense forces against sneak attacks by Communists. It should result in no American military plane taking off on any mission in a state of unreadiness.

## Cross Country With the On-to-Oregon Cavalcade-VII

EXTENSION OF REMARKS

## HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Thursday, June 18, 1959

Mr. PORTER. Mr. Speaker, the Onto-Oregon Cavalcade rolls on to Independence, Oreg., where a big welcome for the travelers is planned for mid-August. The latest account of the journey, June 1 through June 6, appeared in the June 18 issue of the Drain (Oreg.) Enterprise. It was written by the Robert (Rudy) Roudebaugh family:

ANTELOPES, OIL WELLS SEEN BY WAGON TRAIN VOYAGERS

(Written by the Robert R. Roudebaugh family as they travel to Oregon by covered wagon from Independence, Mo.)

Monday, June 1: All hooked up and ready to roll from Redstone Cliff camp. Doc got new shoes all around over the weekend. Janell hated to leave this place as it was good fishing. The mules ate good over the weekend; they should pull good today. We're traveling right along the trail. The rock cliffs stay a quarter of a mile south of us. Nice day. Everybody has their canvas tops back to the second bow. We just went by the grave of the first white woman that died on the Oregon Trail. Had to stop, the water barrel fell off. 7:45: Out on the highway. I have really found out how tough it was on Rudy to write these notes and drive, 8:18: Leaving highway. 8:36: We are right on the Oregon Trail. 8:45: I can see a high peak. I suppose we will be able to see it for 4 or 5 days. It's called Laramie Peak. 8:22: Pulling up a long grade. ing up a long grade. Have stopped halfway

to let mules rest. They are really sweating and puffing.

An Oregon car from Cottage Grove stopped and gave Janell a card. They own the Fairy-side Roller Rink. 10:36: Stopped again to let the mules rest. We sure have been climbing. We are on the trail now—no cars, no telephone poles, no nothing but green grass. It's a beautiful sight. 11:23: Arrived at George Robert ranch where we will make camp for tonight. George left Lexington, Nebr., 40 years ago. His son-in-law, Homer Trimble—who runs the ranch for him nowand Rudy played football against Gothenburg 23 years ago when in Lexington High School. This is a beautiful place to camp. but it has ticks and rattlesnakes. We are sure looking out for them.

Dean Winegar, secretary-manager of the Cozad Chamber of Commerce, brought us all out pictures that were taken when we were there. He has been here all day and has taken more pictures and is going to send us some of those.

June 2: 6:53. All hooked up and ready to roll. Waiting for Roy Brabham to get hitched up. 6:58. Now we're rolling west on the old Oregon Trail. The sun is out and real warm, but we woke up this morning to find frost. But seem three enterloses on the find frost. Just seen three antelope on the ridge above us. Janell and Ki are scared of this trail. They think the wagon will tip over. We are now stopped to see a herd of antelope. We had about 15 people to visit us anterope. We had about 15 people to visit us last night at camp. They drove up in cars and trucks. I don't know how they made it. Most of them were newspapermen. 8:07. On the highway again. You can still see Laramie Peak from here. 8:45. Crossing Middle Bear Creek—just a small stream. Janell has been driving, and the mules are little scared of the big trucks, but Janell can really handle them. 10:19. Crossing Horse Shoe Creek. 10:54. Arrived in Glendo, Wyo. 11:17. Arrived at Glendo Lake camp, about a mile west of town—population 215. June 3: 6.54. And all hooked up and ready

to roll. We are having a short stall here, Tex is getting a shoe tightened on his horse. 7:06. And here we go. It is a real hot morning. If it keeps up will have to start earlier, because of the heat on the horses. Doc and Jan are eating good and right on the ball. They sure are a wonderful team to drive. Janell is riding with Roy Brabham today so she can take care of the little coon.

It's on the bottle. We were invited out; I
(Rudy) to the oldest bar in Wyoming by the
Denver Post Photo and News Reporter for an interview, 8:22. We're coming into the sheep country now. Still see Laramie Peak. 9:11. Leaving Platte County and entering Converse County. We have been moving parallel and half mile south of the North Platte River. It's sure a pretty little valley along here. 10:15. Crossing North Platte River. It's about 300 feet wide. 10:32. Left oil road, now on gravel. Entered Orin, an old railroad station not being used. Now we are on dirt-old Oregon Trail again. 11.15. We stopped to feed animals and eat lunch. Doc and Jan ate and drank good today. 12:07. We are heading west again. Arrived at camp. 1:21. I have my wagon greased and ready to go in the morning. Made camp at the Ben Kohrs ranch.

June 4: Last night the Chamber of Com-June 4: Last night the Chamber of Commerce invited us to showers and the children to a drive-in. Then the rest of us visited the Douglas Museum. The population of Douglas is 2,600. They sure were a lot of nice people. Left camp 7:11. Still on the old trail. Doe and Jan are walking right out this morning. 7:53 Starting through the bandlands of Wyoming. 8:57 Entering Douglas. We have a police escort. Entering Douglas. We have a police escort. Entering Douglas. We have a police escort. Talk about kids and dogs; there's plenty here to see us. 9:20 Leaving Douglas and crossing North Platte River again. Sugar beets and corn up and looking good. It's just a small valley. Douglas is site of Wyoming

June 25

State Fair. 11:04 Stopped for lunch. 11:59 Ready to take off. Doc and Jan never ate, but drank two buckets of water. 12:18 going over the LaPrele Creek and pulling long grade. We are on a two-way highway. We have stopped for the night at the Bill Dixon ranch. Chamber of Commerce of Douglas brought us out watermelon and ice cream this evening.

June 5: 6:54 Leaving camp. Ki is on cook shift today. We are waiting on Tex to start the wagons. We are 39 miles from Casper. 7:59 Crossing Little Box Elder Creek. 8:06 Janell has gone back to bed. We are still on six-lane freeway. 9:25 Now we are on a two-way highway. 9:38 Left highway and on gravel. Janell is just getting up. 9:58 She just saw her first oll well. 10:35 We are at Glen Rock city park for lunch and to take eare of our animals. Doe kicked we take care of our animals. Doc kicked me in the stomach as I was feeding him-that will be the last time he'll kick me. Doc and Jan ate and drank good today. 11:40 Leaving park to go through Glen Rock. I see a big sign that says "Wagon Train Welcome." Today the sun is out. It's about 87 degrees. 1:09 We are on the old highway in the heart of the oil fields of Wyoming, right on the trail. Janell has been driving for the last 3 hours. She is singing a song "Side by Side" and that's about all the words she knows. 1:30 Made camp on Con-tinental Oil Corp. land. We have been traveling alongside the North Platte river all day.

June 6: We are 21 miles from Fort Casper. 7:00 We left right on time. I just saw Geo Curr. He drove the stagecoach in the Plum Creek days. The cavalry was here from Cheyenne this morning. Ki is on cook shift today again. Janell, Ki and I were on television last night in Casper. Going over Muddy Creek. 9:50 Pulled out for lunch. 11:08 Pulling out from lunch stop. Doc ate, but Jan only drank water. 11:21 We were on the outskirts of town and had a Indian raid. They shot guns and whooped so much our mules went wild. The Indians were really in beautiful garments. 1:00 We stopped and met the Governor of Wyoming. Then on a reviewing stand and right over the mike our mules brayed. Boy, talk about people laughing, because it went over a radio station. 1:31 We left the reviewing stand and paraded through Casper. I want you to know it was hot. 2:01 Got to Fort Casper to make camp for the weekend. We had a wonderful place to stay with every-thing to eat, drink and dancing. Indian dances were put on for our benefit also. The cavalry from Cheyenne came to see us

Uncle Versus Uncle-Milk Fight in Perspective

EXTENSION OF REMARKS OF

# HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. QUIE. Mr. Speaker, in last Sunday's St. Paul Pioneer-Press Mr. Alfred D. Stedman, associate editor of the newspaper, wrote an excellent column which puts the Washington, D.C., milk fight into perspective.

Mr. Stedman is known as an authority on agriculture and one of the most perceptive farm columnists in the Nation. In this column he clearly shows the forces at work in the legal action which involves Washington, D.C.'s, milk monopoly:

UNCLE VERSUS UNCLE (By Alfred D. Stedman)

Not every embassy in Washington flies a foreign flag. For instance, Embassy is the name of a dairy that qualified as American. It took its American freedom literally. And thereby hangs a tale.

Seven years ago, Embassy Dairy was fighting for freedom. Milk monopoly was its foe. It fought in the courts to save money for the Government. It fought for American rights to buy milk outside the Washington wall and sell it to customers including the Nation's defense forces at economical prices. In its fight it circulated an "Open Letter to Uncle Sam."

"Dear Uncle Sam," it said, "in case you have forgotten, this land of the free reaches a long way from Washington. Far from the Potomac there extends a panorama of farms and pastures where cows graze. The cows give much good milk that's for sale at less than Washington prices." As to a monopoly wall barring such milk, it said:

"The dairy farms outside the legal wall are good enough to help man the Armed Forces clustered at Washington. Why should these farms be barred from supplying milk for those forces to drink? The Constitution savs commerce between States shall be free.'

Back in those days, this column wrote that open letter to Uncle Sam. Embassy Dairy

got permission to reprint it.

And still that old fight goes on. issues do not stay settled until they are settled rightly.

First, the battle centered on milk for Washington homes, Embassy Dairy lost that in court, Milk from outside the local supply area continued to be barred on socalled sanitary grounds even if OK'd by the U.S. Public Health Service.

Next, the fight shifted to center on milk for the Armed Forces. At a public saving to them, Embassy Dairy kept on bringing in good milk from outside the nearby area. But after years of struggle, Embassy gave up. In July 1954, Embassy sold out to the Maryland and Virginia Milk Producers Association and agreed not to do any milk business in Washington for 10 years.

Now the issue heads for the U.S. Supreme Court. And what will be Uncle Sam's role? That's just the point. On this issue, he is a split personality.

In one of his personalities, he is the U.S. Department of Justice. As such he will be fighting for freedom of commerce in good milk before the Nation's highest tribunal.

But in his alter ego, he is the U.S. Department of Agriculture. In this personality, he and his new Federal milk order for Washington are prime restrainers of such freedom of commerce into that whole defense area.

How does it happen? Absorption of the Embassy Dairy didn't settle the issue. In district court in 1956, one Uncle Sam (Justice) challenged the sale on antitrust grounds. In this personality, the Government charged the association with monopoly. It attacked the sale as aiming to lessen competition. The association claimed exemption as a cooperative from the antitrust provisions.

The district court dismissed the monopoly charges. But it held the Embassy sale un-lawful. It gave the association a year to dispose of Embassy Dairy. It canceled Embassy's agreement to quit the Washington milk business.

Now the association is appealing to the Supreme Court to uphold the sale. counter appeal, the Justice personality of Uncle Sam is renewing, with vigor Government charges of monopoly and elimination of competition.

Uncle Sam's other ego (Agriculture) doesn't appear in court. The background The background issue of freedom of competition on Government milk purchases isn't out in the open.

But on June 1, this ego of Uncle Sam did place in effect the new Washington milk order supported by the association. order very much restrains freedom of sales of good milk and milk products to the defense forces. Thus it achieves in other ways restraints on competition that the association had sought through buying out Embass Dairy. So this turns out on scrutiny to be a case of Uncle versus Uncle.

White House Conference on Youth

. EXTENSION OF REMARKS

#### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. WILEY. Mr. President, we recall that, in accordance with the direction of President Eisenhower, a White House Conference on Children and Youth scheduled for 1960.

For the sixth time in half a century the Nation will focus its attention on the needs and problems of its young people. According to plans, about 7,000 citizens will gather in Washington for the Golden Anniversary White House Conference, March 27 to April 2, 1960.

The purpose of the Conference is promote opportunities for children and youth to ealize their full potential for a creative alice their full potential for a creative life in freedom and dignity.

We recognize, of course, that the fur ture of our Nation depends upon our youth of today.

Recently, I received from Mrs. Rolling Brown, National Chairman of the Conference, a brief resume of the back ground, purposes, and objectives of the Conference.

I request unanimous consent to have the resume, followed by a listing of off cers and leaders helping to make Conference a success, printed in the Ap pendix of the RECORD.

There being no objection, the matters were ordered to be printed in RECORD, as follows:

THE CALL TO ACTION

"Every 10 years during this century there has been a White House conference outh cerned with the Nation's children and Youth These conference These conferences have contributed much to our present recognition of the importance of children and youth and their full velopment to our national future.

"A new decade will soon begin, and I and therefore, directing that a sixth White House conference on children and youth be in March 1960. The rapidly accounts in March 1960. The rapidly changing in which we live, and the increasingly pace of change, make the pace of change, make it incumbent upon to do everything to do everything we can to plan ahead set to see that we prepare to see that we prepare today's children for the life in tomorrow's world \* \* DWIGHT D. EISENHOWE.

The Golden Anniversary Conference, 40 the held in Washington, D.C., March 27 to 1988 2, 1960, has been called the greatest spain undertaking of our time in the lift of our undertaking of our time in behalf of our

Its purpose: To promote opportunities for children and youth to realize their full and dignity. dignity.

Its focus: On the effects of our rapidly changing world on the development of our young \* \* on appraising and reappraising the values and ideals we live by \* \* on students. studying the factors that influence individual fulfillment—family, religion, education, health, community life

Right now, a half million citizens, private and public agencies at local, State, and national levels, are at work preparing for the Conference. The pre-Conference materials they are developing during the year before the Washington meetings plus the plans for carrying out the recommendations in the decade that follows point up this significant

The Golden Anniversary White House Con-ference on Children and Youth is a process rather than 5 days of meetings—an 11-year process of earnest study and action that continues until the next Conference in 1970.

The 1930 Conference, bringing together some 7,000 delegates on invitation of the President, will provide the rallying pointthe springboard for a concerted attack on virtually every question that affects the wellbeing of the next generation and hope for a more rewarding tomorrow. For this reason, it is truly a total approach to the total concerns of young people.

#### HOW IT BEGAN

In 1908 Theodore Dreiser and James West called on President Theodore Roosevelt to discuss the plight of orphaned children. So impressed was the President that on Christmas Day he personally addressed 200 invitation. invitations requesting people from all over the Nation to attend a White House Con-ference in January of 1909.

## WHAT HAS HAPPENED

This first Conference gave impetus to the establishment of the U.S. Children's Bureau in 1912, the enactment of child labor laws. laws, and the organization of the first national voluntary agency concerned with the welfare of children. In each decade that followed, a White House Conference on Children and Youth called by the President left its week.

Established national responsibility in setting minimum health and welfare standards for mothers and children.

1930: Produced the most comprehensive collection of data on the health and welfare of children ever assembled, including the Children's Charter.

1940: Led to strengthening of personnel and training standards in equipping American children for the successful practice of democratics.

1950: Endorsed a platform for meeting the problems which prevent young people from achieving healthy personalities; developed machinery for continuing activity during the time between conferences.

## HOW IT IS ORGANIZED

The national committee of 93 distinguished citizens appointed by President Eisenham senhower has been organized into major committees on conference studies, interpretation tation, organization and arrangements, inance and followup.

## Joined for action

A National Council of State Committees, representing Governor-appointed commit-tees from 54 States and Territories and the District of Columbia.

A Council of National Organizations representing about 500 voluntary groups

An Interdepartmental Committee on Children and Youth representing 34 divi-sions of the Federal Government.

# It's a citizen's Conference

This Conference will be run by the people of the United States, acting through their local, State, and national organizations in constitutions. in cooperation with the national committee. \* \* \* This is the only way that such a Conference can truly reflect the desires and aspirations of the American people for the children and youth of this country. Arthur S. Flemming, Secretary of Health, Education, and Welfare.

#### WHO WILL ATTEND

Invitations to the White House Conference in Washington will be issued by the President on recommendation of the Committee on Invitations and Credentials. The Conference participants will include representatives of State committees, national organizations, 700 young people, national leaders, and 500 international guests.

#### HOW IT IS FINANCED

The financing will be derived in major part from the citizenry through grants from foundations and contributions by organizations, industry, and individuals, with the Federal Government providing funds for initial organization.

#### HOW YOU CAN PARTICIPATE

By indicating your interest to the chairman of your State committee or national officer of your organization.

By engaging in projects relating to children and youth that are under the sponsorship of your national organization.

By relating the program and projects of the local and State groups to which you belong to the planning of the State committee

By joining forces, as an individual, with the army of citizens participating in pre-Conference preparation.

Every citizen has a vital stake in the future well-being of our young people. That's why it's a citizens' Conference—why it's yours for a more rewarding tomorrow.

NATIONAL COMMITTEE FOR THE WHITE HOUSE CONFERENCE ON CHILDREN AND YOUTH

Honorary Chairman: President Dwight D. Eisenhower.

Honorary Vice Chairman: The Honorable Arthur S. Flemming.

Chairman: Mrs. Rollin Brown.

#### A Summit Meeting

EXTENSION OF REMARKS

#### HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. BRIDGES. Mr. President, in these days when Soviet Russia is attempting to make all roads lead to the summit, I think it is appropriate that we refresh our recollections of past conferences, and reaffirm our stand that we will not go to the summit for the sole purpose of discussing Russian demands. Dr. Eona R. Fluegel, chairman of the political science department at Trinity College, discusses summit meetings in an article entitled "Are We Ready for the Summit," which appears in the Free World Forum, a bimonthly journal on foreign affairs. Dr. Fluegel performs a distinct public service, in my opinion, by bringing her sound views to the attention of the Amercian people, and I ask

printed in the Appendix of the RECORD. There being no objection, the article was ordered to be printed in the RECORD, as follows:

unanimous consent that this article be

## ARE WE READY FOR THE SUMMIT?

(By Edna R. Fluegel)

Time was when the Madison Avenue version of "the tongues of men" (organization, of course) "and of angels" (Music Hall) at least included "sounding brass" as the free world was coerced to the summit. Nothing is left in 1959 but "a tinkling cymbal" as the West moves to accept its assigned position in a production initiated in, produced by, and held for the benefit of communism. How did it happen and what is to be done?

The origin of the summit idea and the history of the four meetings-three held during World War II, one held in the cold war of the postwar era-warrants scrutiny.

The first meeting was held in Teheran, November-December 1913. Prior to that date Roosevelt and Churchill had invited Soviet participation at such meetings as the Atlantic Charter conference and Casablanca, but had accepted Stalln's excuses and had kept him informed of developments. Russia was still a "junior partner" in the opinion of Roosevelt and Churchill throughout 1942 and the main anxiety had been to keep the Russians from surrendering. The situation changed dramatically after Stalingrad and in February 1943 with the German threat blunted, Russia began to shape her part of the postwar world by unilateral moves. The League of Polish Patriots, the nucleus of the first Polish Communist Government, and the Free German Committee, the core of which was to become the Communist Government of central Germany, were both launched by the Soviets without consultation and without notification. This writer, then an officer in the State Department, wrote a memorandum at the time noting that the Soviet Polish setup marked the first great break in allied unity, while the establishment of the German Committee was in the unilateral institution of the first postwar German Government. Having heard Secretary Hull remark that 1931 (Munchuria) marked the beginning of World War II—this writer concluded that this action by Russia in February 1943 was the possible beginning of world war III. Contrary to published statements, this was the feeling in government throughout the subsequent months which were marked by the fracas over Soviet failure to acknowledge lend-lease, the abolition of the Comintern, and growing acrimony over the deal in launching the second front.

In August 1943 a meeting at the White House reviewed a memorandum which advanced the thesis that Russia would be the dominant power in postwar Europe and must be appeased; and that the United Nations be established before war's end and must include Russia, that otherwise one war would merge into the next. The conclusion reached was that we must meet with the Russians and conclude binding agreements while the war in progress provided the "cement" for allied unity. This was our reason for the first foreign ministers meeting at Moscow followed by the summit meeting at Teheran.1

Even then, Russia utilized a tactic that was to be repeated again and again. Shortly before the American group left for Moscow, Stalin threatened to call off the meeting as useless unless the first item on the agenda was resolved and the date for the Normandy invasion was finally fixed. We agreed. This decision, which froze Western strategy by assuring our engagement on the Continent, meant that, from the late spring, 1944, on, Russia could concentrate on her postwar plans for Eastern Europe while still threatening to negotiate with Germany. In addition, Russia also insured her future as the dominant force in Asia by securing the total reversal of the Cairo decision to build up Nationalist China. The alibi of Yalta-that Russian power was dominant in Asia anyway-was true only because at Teheran it was decided to arm and equip Russian instead of Nationalist Chinese forces for the war on Japan. Is it any wonder the Russians like summit meetings?

The second meeting was held at Yalta, February 1945. It was the product of anxieties generated by the results of Teheran and was an attempt, through additional bribes, to firm up the "quid" received by the Western Powers at Teheran-Russian participation in the projected United Nations and agreement on postwar settlements. It is a much-reviewed and still not fully understood tragic episode.

The third and last wartime summit meeting was held at Potsdam, July-August 1945. It dealt with extensions of the same anxieties which were briefly relaxed by additional appeasements. It was supposed to be the last such meeting since a mechanism had been established at Yalta in the form of periodic foreign ministers' meetings, to carry

on after the end of the war.

It is significant to note that, while motivated by fear of allied disunity, the three wartime meetings were meetings of theoreti-cal allies. The "cement" was the need to resolve differences and to preserve unity in the face of at least one common enemy, Germany. The alarm had been sounded in February 1943, but the meetings were designed to prevent, not to cope with, a new war-hot or cold. The recognition by Churchill of the Iron Curtain in 1946 and the acceptance of the existence of a cold war in 1947 marked the fallure of the appeasements at the wartime summit meetings to attain any durable results, although the cost was very durable indeed.

A decade elapsed between Potsdam and Geneva before the device adopted to maintain Allied unity, a device that failed, was dusted off and used again to relax the tensions of the cold war, tensions augmented by the growing power of Russia resulting directly from the wartime summit appeasements. The Berlin crisis, fall of China, Soviet Abomb, Korea, and the successful transition of leadership in Russia had intervened. This

time it was the Allies (minus sizable chunks of territory and power) versus Russia (restored and swollen by its European satellites and backed by Communist China), with a sizable portion of the United Nations neutral The meeting, long demanded by Russia, was held largely in response to British pressure on the United States to try again to achieve coexistence. The meeting was a blunderpredictable and since widely so acknowledged.

Again the drive is on. This time the United States is being pushed to the summit rejuctantly, forebodingly, and almost hope-lessly. The consensus seems to be that the United States must go, not because there is any hope of success, but to prove good faith and to preserve unity (with the British). The position of France, Western Germany, and Italy introduces a new element of strength, but Britain's attempt to serve as middlement. middleman is a grave weakness.

Not if we proceed, as in the Should we go? past, to pay a price to achieve the facade of unity and to return having surrendered real power for promises and increased disunity and tension. Yes, if we first establish what we are defending and then take the offensive to achieve it. That knowledge as a prelude

What is the West? What is the free world? What is the source of tension? world? What is the source of tension? it geography? Economics? Lack of person-to-person contact? Some commentators appear to think in terms of Anglo-American relationships of part of NATO. of American relationships, of part of NATO, of the whole of NATO. Even the so-called global approach that would encompass an trouble areas shies from the question of This leaves a regional (however expanded or contracted) approach confront ing a world-encompassing drive. Unless the free world is defined as that portion of the world outside and inside the Iron Curtain which refuses to be absorbed by atheistic communism, it remains a world that cannot be rallied and that will be yielded piece meal at recurring summits. It is this concept of the free world that alone matches and could outmatch the Communist concept. It alone could preserve allied unity and mobilize peoples to counterattack. must, in short, take the offensive or perish fight ideas with ideas or succumb.

A recent newspaper report was to the effect that in the opening round at the Geneva Foreign Minister. Geneva Foreign Ministers' Conference Russians had failed to get the whole how but had received some nice, julcy pork chops. That was a homely recognition of the fact that, if we meet at the summit discuss only Russian demands, then the Russians inevitably get something, since

negotiate on their terms.

Let us approach the summit only when we are ready, when we are agreed on what we are defending and for what we stand and with our own demands. Let us approach, not as a "tinkling cymbal" or the as "sounding brass," not even "with the tongues of men and of angels," but having "charity," that is, an appreciation of God and of the basis on which our world must rest. This "charity," this belief in many creation by God and in his destiny, shared by all the world's religious. by all the world's religions, is the real unifying feature characters. fying feature shared by the non-Communist world. Unless the West, the free world etc., means this, it is not worth defending to the death and unless communism is confronted by this fronted by this determination it cannot be stopped. A summit meeting should not be held unless and until held unless and until we are ready for the confrontation—and then it must be or "they" because the fundamental issue is not negotiable.

The use of "summit" for Teheran is correct according to both usage and protocol. 'Foreign ministers" is used for the Moscow meeting as a matter of custom as according to strict protocol, the wartime meetings of foreign ministers should not be so desig-These meetings were not institutionalized until late summer 1945, in implementation of the Yalta decision, February

The Military Forces We Need and How To Get Them

EXTENSION OF REMARKS

# HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Thursday, June 25, 1959

Mr. JACKSON. Mr. President, I wish to bring to the attention of the Senate a report issued last week by the Demo-cratic Advisory Council. It is entitled, The Military Forces We Need and How To Get Them."

The report presents a persuasive case for the expenditures needed to close the missile gap and to strengthen our conventional forces. The report deserves wide reading and sober consideration.

As distinguished an analyst as Walter Lippmann recommends careful reading of this report by the American people. In his column "Debate on Defense" on June 25, 1959, Mr. Lippmann said:

There is a large literature already existing which is critical of our defense policy.

Having read a good deal of it, I would venture to say that this pamphlet is much the best in its field, evidently quite expertly informed, reasonable, and civillan in its temper, and lucidly written.

It ought not to be brushed aside as a partisan document. For, in fact, the argument it makes has the support of large numbers. numbers of Republicans, especially of those who have paid close attention to the problem of defense, and of many of the military men who by common consent are leaders in military thought.

The report is estimated by the Public Printer to require about 434 pages of the CONGRESSIONAL RECORD, at a cost of \$384.75. Notwithstanding the cost, I ask unanimous consent that the report be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD,

THE MILITARY FORCES WE NEED AND HOW TO GET THEM

OUR OBJECT WHICH LIES BEYOND WAR AND WEAPONS

Just 96 years ago, in its General Order 100, Just 96 years ago, in its General Order 100, the War Department stated the function of military force. "Modern wars are not internecine wars in which the killing of the enemy is the object," so the order read. "The destruction of the enemy, in modern war, and indeed modern war itself are war, and, indeed, modern war itself are means to attain that object of the belli-gerent which lies beyond war." In our new era of nuclear weapons it is all the more es-sential sential that in determining our military strategy, and the weapons with which to carry it out, we know clearly the objects of this Nation which lie beyond war and the weapons of war. Once we know that, it will be of war. it will become apparent that some weapons, under under certain circumstances, will be far better suited than others to further it.

What is this object? Is it self-preservation? Surely, in the last and most desperate eventuality. But there is much, and of the greatest importance, to be sought and de-fended short of that eventuality. What this is we may sum up as the maintenance of a world environment in which nations seeking, as we are seeking, to develop in their own way, free of dictation from others and without imposing our will on others, may

survive and flourish. Putting it another way, our object is a workable system of free states, with the military force necessary to protect them, with the arrangements necessary for their economic development, and with sufficient community of ideas and pur-poses to hold them together. For it is only in this sort of world environment, it is only as a member of such a group of free states, that we Americans, and others as well, can continue to live according to our most cherished values.

Why this is so we have discussed in our first two pamphlets. In our third pamphlet we discussed errors in policy which have made the way harder than it had to be. In the fifth we outline an economic foreign policy necessary to the end just stated. In this pamphlet we discuss the military forces we need in the world as it is today, and as it is likely to continue to be for some

In this present-day world, military power is an essential prerequisite both for the se-curity and survival of our free world environment and for any negotiated settle-ment of differences with the Sino-Soviet power. If the Communist powers are able to enforce their will, they have no need to adjust their interests to what they refer to as a condition of coexistence with what they dislike. Furthermore, be believe that the possession of power which cannot be coerced is the best hope of going beyond the settlement of specific differences to a broader agreement that would progressively relegate the reliance upon force to the background, Our long-range objective is the reliable and effective control and regulation of armaments. We do not see how this objective can be achieved if the Russians, in the absence of agreement, are to be conceded unchallengeable superiority in the instruments

The military forces and strategy we outline here are not an alternative to negotiation of differences and mutual reduction of armaments. They are the best means to those ends as well as to some measure of

A FURTHER ANALYSIS OF THE FREE WORLD ENVIRONMENT

In the free world environment we seek, many other states and peoples than our own play essential, though varying, parts. The very spaciousness of the environment is a significant quality. Furthermore, in the maintenance of it, the factors of military strength, economic vigor, and political unity are all necessary to support one another in accomplishing the end sought.

The indispensable center of the economic and military strength of this group of free states is the Western Hemisphere and Western Europe. The survival and development of free nations will rest upon the strength and unity of this central core. This, in turn, means that the freedom of Western Europe from Soviet domination is essential to preservation of this core. Without Western Europe as part of it, no strong and free group of nations will exist. On the contrary, should Western European production be available to the Soviet Union, it could extend its hegemony over Asia and Africa, perhaps even over South America. Under these circumstances this Nation could not be preserved in anything like its present form. This point is strongly brought out in the first two pamphlets.

This conclusion does not depreciate the importance of other areas outside the Western Hemisphere and Western Europe. viously the Middle East, with its oil and as the crossroads of east-west and north-south routes, south Asia, southeast Asia, the Far East, and Africa are all associated with vital interests of a free world system. It would be disastrous should any of these areas now free be detached from the free and open world and be added to the closed Soviet Communist system. But the prime disaster would be to have this happen to Western Europe, if for no other reason that that it would greatly enhance the likelihood of its occurring in the other areas as well.

In the discussion which follows we shall, for purposes of clarity, consider first what military forces we need to defend the central core of free world strength, and then ask whether these forces are also of the type and scale to meet emergencies elsewhere in the

WHAT MILITARY STRATEGY IS CALLED UPON TO DO

As the world situation clarified after the Second World War, it was plain that the only militarily aggressive power was the Soviet Union (to which we must now add Communist China). The Soviet Union maintained a vast ground army and rejected all attempts to obtain international control of atomic weapons and limitation of arms. Instead it proceeded vigorously to develop its own nu-clear armaments and submarine fleets. The Soviets also showed every intention of pushing their control westward into Europe and breaking the connection between North America and Western Europe by forcing

American troops and bases out of Europe. NATO was the response to this threat and pressure. The problem that NATO milihad to solve was that Western Europe needed security without being destroyed to get it. It needed not the promise of liberation after conquest, but security against conquest. The most likely form of conquest in 1949 was along the line of the takeover of Czechoslovakia, a Communist revolution supported by the presence or the threat of Russian troops, and Russian troops were present in large numbers in Eastern Germany and Poland.

At this time the United States had a monopoly of nuclear weapons. So the earliest NATO strategy rested on the sound belief that a small (compared to Russian forces) Anglo-American-European ground and air force would deter any surprise invasion of Western Europe aided by Communist uprisings, while the U.S. Strategic Air Command (SAC), with its nuclear weapons, promised to counterbalance the Russion superiority in ground forces in the event of a large-scale invasion.

Today, this belief is no longer valid. In the first place, British and French forces in Europe, since 1951, have been decreased, not increased. The German contingent, slow as it has been in developing, is now the numerical equal of the British, larger than the French, and soon will furnish more manpower than all the rest of the European nations in NATO's important center army. This primacy causes political concern among the European allies. So what we have is a NATO force too small, and politically un-

In the second place, there has been a radical shift in the balance of strategic nuclear power-involving both the weapon and the means of delivering it. Not only has Russia broken the American monopoly on the weapon, but it is dangerously ahead on long-and medium-range missile delivery. The Secretary of Defense concedes that on present expectations the next 3 years will give the U.S.S.R. a superiority over the United States of three to one in intercontinental ballistic missiles.

Even this gloomy statement may be optimistic. If present programs of production are maintained on both sides—and there have been no decisions to change the U.S. program—the U.S.S.R. may achieve a capacity to destroy U.S. retaliatory power at a risk which they might regard as worth running. To put the matter more graphically: Russian missiles, raining down on SAC aircraft and missile bases, could end our capacity to retaliate, much as a knight in

armor was rendered powerless when he was knocked off his horse and could not get to his feet again. Clearly, such a relative disadvantage in military strength would downgrade our capacity to deter war or prevent Soviet blackmail.

THE FIRST PRIORITY IS TO ASSURE NUCLEAR ADEQUACY

It should be obvious, therefore, what our first priority should be. It is to make certain with all possible speed that we have, and then to maintain, a position of adequate nuclear strategic strength vis-a-vis the U.S.S.R. By adequate nuclear strength wa mean the situation in which the other side, even with the great advantage of the first blow, cannot be confident of its ability so thoroughly to destroy our nuclear forces that it need not fear a retaliatory blow more damaging than it is willing to accept. If the U.S.S.R. also maintains such a posture, we can say that a situation of effective nuclear parity exists between the two countries.

Unless we maintain nuclear adequacy, it makes little difference what other weapons we produce. Either they would be knocked out before they could be used; or, better yet from a Russian point of view, the mere existence of her clear military supremacy could achieve diplomatic victories-i.e., changes in the conduct of peoples-without the use of that power. For without raising the statistics of the matter to the level of a universal law of history, there is overwhelming evidence to show that peoples and governments quickly adjust themselves to the reality of unopposable power.

Nowhere is this more likely to be true than in the case of nuclear weapons about whose catastrophic effects all peoples are vividly aware. If there were pratty solid evidence that the Russians could disarm or incapacitate the United States at a risk acceptable to them, then all Asians, most Europeans, and a pretty sizable number of Americans would be prepared to act on the evidence without inviting proof.

It is imperative to proceed with a program of dispersing, hardening, and adding mobility to our strategic deterrent systems. The surest deterrent to an all-out strike against us would be the conviction on the part of the Russians that their first strike could not destroy an overwhelming proportion of our retaliatory delivery systems.

In striving for nuclear adequacy, we must always set our goals high enough to permit a margin of insurance to cover faulty intelligence reports and possible rapid advances achieved by the U.S.S.R. without our knowl-

THE CONSEQUENCES OF NUCLEAR PARITY

Even if, by some great good fortune, the administration should throw off its lethargy and decrease the vulnerability of our strategic nuclear power, in view of the natural, technical, and industrial resources of the Soviet Union, we cannot count upon achieving more than nuclear parity with her. This situation has far-reaching consequences. The first of these is the impact upon the deterrent effect of strategic nuclear forces.

If one power has nuclear weapons in plenty, and the means to deliver them against another power's homeland, while the latter has none, it is pretty clear that the latter is not likely to attack the former. This is the situation, ideal from the point of view of the possessor of nuclear weapons, which is known as nuclear monopoly. Some aspects of this situation existed between the United States and the U.S.S.R. from 1945 to 1949. We did have a monopoly of nuclear weapons. But those we had were few in number and of small power by today's standards; nor did we have very effective means of delivering those we had at intercontinental ranges.

There is another possible situation: one power may have nuclear weapons in large numbers and may have perfected the means to deliver them, while another power also has nuclear weapons and delivery means but one or both in substantially inferior numbers and quality. Again, the latter country is not very likely to attack the former. This situation, which can be described as a state of "nuclear advantage" or "predominance," really did exist around 1953-1955. For after the development of the H-bomb, and the completion of our force of B-36 intercontinental bombers, and B-47 jet bomber force with overseas bases, the United States did achieve a position of overwhelming superiority in strategic nuclear force. Even though the Soviet Union was building up its weapons stocks, and was beginning to develop a long-range jet bomber force of its own, it was most unlikely that the Soviet Union would have considered attacking the United States, or any of our allies. She could have been punished severely with nuclear weap-ons without being able to strike back effec-

The deterrent effect which our superior nuclear forces had upon Soviet policy in this situation has been called "active deterrence." It reached beyond protecting us against direct attack and modified the conduct of the potential aggressor in other ways. It was this active deterrence which the administration was exploiting when it announced the national strategy described by the press as "massive retaliation." This laid upon the Strategic Air Command the task of defending our allies everywhere, as well as the United States, sgainst threat-ened Communist attack. Even then, how-ever, the Soviet Union, though still relatively weak in nuclear weapons and delivery means, had significant capacity for administering nuclear destruction, particularly against our allies in Western Europe, which she might have used if pushed to the wall. This capacity on her part set limits on the use we could make of our active deterrent. Its positive utility was limited. This possession of nuclear destructive capacity limited to last-resort use if threatened with attack or after actual attack has been called passive deterrence.

It was our active deterrent power which diminished as the Soviet Union grew in nuclear strength. There was, of course, nothing unforeseeable about this, particularly after the Russians mastered the H-bomb in 1953. It explains why massive retaliation turned out to be such a perishable strategy. For, in the state of nuclear parity, active deterrence is attenuated, if not lost altogether, and powers in the state of nuclear parity retain largely passive deterrence, deterrence against direct attack. This rests upon the aggressor's belief that a direct attack, which does not destroy his victim's power to retaliate, will bring back upon him unacceptable damage. At the same time, the active aspect of the deterrent weakens as the prospective user of strategic nuclear weapons contemplates the unacceptable damage to his own country which the use will surely bring down upon it.

Furthermore, as we permit the Russians to achieve a lead in strategic missiles, their deterrent power becomes increasingly active, while our strategic force continues to lose what active significance remains to it. we permit the Russians to achieve a decisive missile superiority, so that we cannot even be sure of our ability to administer a telling second strike, not only will our strategic power be stripped of its active significance, but also even its ultimate value as a passive deterrent will be placed in jeopardy. That is why it is of first importance that we have the poisition of parity in strategic power that seems quite possible if we make the effort.

Add to this weakening deterrent power of our strategic nuclear force the additional fact that the Russians, along with the development of formidable strategic nuclear force of their own, have maintained, mod-

ernized, and mechanized their vast land force, and have equipped it with tactical nuclear weapons, and the full extent of the Western dilemma appears. Because of the mortal danger of Russian nuclear retaliation against the United States, the strategic nuclear power of the United States no longer furnishes to Europe the protection it once offered against the Russian land forces. Yet it was precisely while this change was octhis country to increasing dependence upon the deterrent power of our strategic nuclear forces and, by some strange madness, set about reducing our own land forces to pre-Korean strength—an example which had cumulative effects when the British and French reduced their contribution to West ern Europe's local defenses.

The last defense program submitted by the Truman administration recognized the perishable quality of our active deterrent It called for total military strength of 35 millions, with an Army of 21 ready divisions, an Ale Porce of 142 an Air Force of 143 wings, a Navy of 409 major combat vessels in active fleets (including 16 carrier groups), and a Marine Corps of 3 divisions. This was the defense program at which the present administra tion took its new look during 1953 and 1954. The results of this jaundiced reassess ment will all be in by June 1959, by which time our forces will be almost precisely million weaker. The Army will by then have 14 divisions, many of them sadly un derstrength and all cursed with the obsolescence of their weapons and equipment The Air Force will have 102 wings, having taken reductions in all elements not di rectly related to the strategic deterrent. and Marines will have 389 warships which have also suffered from obsolescence and 3 divisions, now understrength.

With the dependence that can be placed upon our strategic forces declining because of growing Soviet nuclear strategic power, and those forces we might employ to fill the gap being reduced for budgetary reasons, the stage is being set for a major tragedy. In this situation, two antithetical and equally bad policies have found some supporters.

LIMITED NUCLEAR WARFARE OR WITHDRAWAL

Spelled out to its fullest stretch, limited nuclear warfare means that the Soviet Union and the United States, as the two superpowers, will come to an unspoken und derstanding that, since atomic weapons are far too dangerous to use against each other they would treat each other's territory as privileged, but would wage any atomic walls on European soil, amid European peoples and European cities. If the alm of American police is can policy is to preserve the people and civilization of Europe as essential to existence of existence of a free world, limited nuclear warfare is not the way to do it. Or again if the aim of American policy is to develop strategic conceptions which our allies will support support because those conceptions correspond to the transfer or the support to th spond to their own interest, then again limited nuclear warfare has little place in such conceptions.

Those who are tempted to believe that a strategy of limited nuclear war would some how bestow advantages upon our numerically interior formatten cally inferior forces, should reflect upon aufollowing considerations, All the best are thorities are convinced that limited nuclear war will require more, not fewer, military forces at any particular level of effort. in proportion to frontline troops, in order to make provider to make provision for the higher level supporting services in the rear of the combat casualties expected; it is also because zone must be more widely dispersed, which will inevitably require an increase in support strength.

It follows, of course, that limited nucles war is not and cannot be cheaper that limited conventional war at any particular

level of effort. More manpower and more Widely scattered and secure supply and communication facilities spell greater expense. It also follows, for both reasons, that NATO cannot overcome its relative weakness, vis-avis the forces on the other side, by the simple expedient of committing itself to the use of nuclear weapons. On the contrary, the com-mitment to nuclear weapons inevitably increases the relative advantage of the other side-provided Russian forces are also equipped with nuclear wespons, as we know that they are, and provided the Russians and their satellites continue to be willing to maintain larger forces under arms and to spend a greater amount upon arming them.

That is not to say, of course, that we can expose our forces to Communist nuclear attack while they are prepared to defend themselves only with conventional arms. It does mean that, as there is no military advantage for NATO forces in resorting to nuclear wea-Pons, and as there are decided political disadvantages in it, the nuclear weapons with which our forces in NATO are equipped should be regarded as serving the purpose of deterring the Russians from using their nuclear weapons in a limited attack. be their primary function; their employment in actual combat must be secondary, to be resorted to only if the Russians themselves initiate the use of nuclear weapons, or if the circumstances should, unhappliy, lead to a general war.

Some of those who see that a strategy of limited nuclear war in Europe will not strengthen or unify the trans-Atlantic coalition, suggest going to the opposite extreme. that military power-except possibly nuclear strategic power—can play a part in keeping Western Europe from being dominated by Soviet power, and so advocate withdrawing American forces from Europe. This they put forward, in what they consider a nearly hopeless situation, as a step toward, rather than the result of, a solution of the fundamental issues which exist between the Soviet Union and the Western Powers regarding Europe.

Now if, as we have pointed out above, the aggregated strength of Europe and North America is necessary to withstand Soviet purposes in Europe, then to withdraw American ican participation in the defense of Europe is to insure that there shall be no effective opposition to the Soviet will in Europe. But, one may ask, will not the threat of American nuclear retaliation be sufficient protection to Europe? We have already pointed out that in a condition of nuclear parity it will not provide this active deterrent. It is not sound strategy to rely on any nation's willingness to destroy itself in order to aid its allies—particularly when, at the same time, it would in all likelihood insure the destruction of its allies as well.

Withdrawal of American forces from Europe may well be possible—indeed we earnestly hope it will be—when a settlement of outstanding issues and a more stable Power relationship have been achieved in Europe. But to attempt it under present circumstances would be, as we point out below, to destroy the possibility of reaching those settlements, that relationship, and, indeed, of preserving a free Western Europe.

# THE NUB OF POLICY

The answer, then, to our dilemma is not to be found—if we want to maintain a coalition of free powers—by a plan of fighting amali nuclear wars in our allies' territory.

It is not to be found by withdrawing from our alliance, and leaving our friends, whose preservation. preservation is essential to ours, without a defense against Soviet domination. Where, then, is it to be found? It is to be found, we believe. In increasing the hazards to the Soviet Union to the land forces, until Soviet Union in using its land forces, until such use is as full of danger as using nuclear force in the first instance.

Only by such a strategy, if it can be devised, will Russia's vast lead in land forces be met and a real incentive be given to the Soviet Union to move toward the control and limitation of armaments. How might this be done?

If an increase in defense forces available in Europe were combined with a vigorous new flow of scientific and military invention, these smaller defensive forces could be made, for sometime at least, more nearly the military equal of a larger aggressive force. This has happened before and it can happen again. What is needed is a substantial strengthening of the European, British, Canadian, and American ground and tactical air forces assigned to NATO or in strategic reserve available to support NATO. These forces should be prepared to defend Western Europe with conventional weapons, but should also be equipped with sufficient nuclear firepower to deter the Russians from using their tactical nuclear weapons. Once these forces are in existence, then our strategic nuclear forces—if strongly pushed—will again take on some of the character of active deterrence. For if it were clear that any hostile military action against Western Europe could and would be contained for some time, the aggressor would face formidable problems.

Let us look for a moment at the risks which a prospective aggressor must face. We may assume that he has tried atomic blackmailthat is, he has sought and failed to achieve his political objective, whatever it may be, by intimidating his elected victims with the threat of nuclear destruction. If the political objective of his aggression is restricted to Western Europe, he will want to make certain that the military action planned when he launches his attack will be limited, and will appear to be limited, to Western Europe. Above all, he will desire to minimize the chance of the military action being so extended that it may involve the destruction of his own homeland. He has, then, two choices: he can attack either with conventional weapons alone, or with nuclear weapons as well. In either case he must be careful to make the limited character of his purpose evident. But he will want to get the action over with quickly, and, to do this, he must employ force decisively superior to the defense he expects to encounter. This is where he runs into difficulty; and it is by exploiting this difficulty that we may hope to deter him without matching his forces, man for man, tank for tank, and A-bomb for A-bomb.

The aggressor's problem is that if the defense is substantial it is extremely difficult to launch an attack against it that is both overwhelming and convincingly limited. Against a relatively weak defense, which the improvidence of its members during recent years has now given to NATO the aggressor may believe that a quite restricted attack would promise quick success. It is because they are inclined to agree with this that the NATO military authorities feel that NATO has no choice but to fall back immediately upon the stategic deterrent, hoping that the threat of strategic nuclear retaliation in case of attack will be sufficiently credible to deter the aggressor. But if his objective is a strictly limited one (and if it is not, he is not likely to bother with Europe, but will attack the United States directly), he may reason that the threat is a bluff. he knows, and knows that NATO knows, that what Western Europe stands to lose if his limited attack is a success, at least if it is a conventional attack, is incomparably less than what Western Europe stands to lose in a strategic nuclear war. If this is his reasoning, he may proceed with his attack, hoping to overwhelm the weak defense and obtain his objective while the NATO governments are trying to steel their souls to a nuclear holocaust.

Suppose however, that the defense is not weak. Suppose it is strong enough so that to be sure of winning he must undertake a major mobilization of his forces, must move millions of men around, disrupt his economy and the economies of his allies, and expose his vast forces to military counteraction by concentrating them in the forward areas behind the line of attack. A strong defense will force this action whether the aggressor is planning a purely conventional assault or is planning an assault with tactical nuclear weapons, so long, that is, as he does not throw aside all pretense of limited action and use his own strategic nuclear forces. Such a concentration would, indeed. be required to attack a NATO force of even 30 divisions, which is General Norstad's minimum objective for the central front (the Alps to the Baltic).

Would the aggressor take such a risk? He would know that a vigorous and sustained defense, which as a NATO force of this kind could put up, would raise tensions to the point where he would have to be prepared to use his strategic nuclear weapons in a preemptive strike against North America to forestall a first blow against him by the United States which, in circumstances of mounting tension must be fearing such a preemptive blow. In short, the minimum action required to achieve his objective would be so great that the chances of limiting the ensuing action would appear small.

In this situation, when the aggressor's calculated design is a limited operation to achieve a specific objective, and not the annihilation of the victim, it would be foolish for the aggressor to contemplate the use of nuclear weapons, assuming that both sides have them for tactical use. To be sure, an aggressor would be likely to threaten the use of nuclear weapons in the hope of intimidating his prospective victims into concessions or surrender. But if this should fail, as we have assumed, he would see that to use them would be disastrous for a very simple reason: Their employment would make any ensuing action all the harder to limit by making it vastly more destructive, more fluid, and consequently more unpredictable. In other words, even a conventional assault upon a strong NATO central-front defense would result in a war which of such dimensions that the aggressor must regard it as a poor risk. A nuclear assault would be a far poorer risk. In addition, assuming that the aggressor really had a limited objective he wanted to achieve, it seems rather unlikely (though it cannot be ruled out) that he would want to see the objective destroyed in

the process of conquest.

Why, then, cannot NATO rely upon a nuclear defense and thereby get along with fewer troops? The reason has already been indicated. The aggressor might still make a conventional attack and thus defy the Western powers to take the responsibility for submitting Europe to the destruction of nuclear war. If they failed to make this stoic decision, he would have a good chance both of limiting the conflict and of winning by throwing his overwhelming conventional forces against their weak defenses. If they did make the decision to use nuclear weapons, which he must of course follow, his force would still be overwhelming. But the deci-sion to initiate the use of nuclear weapons would be most difficult for the NATO governments since it would offer Western Europe no military advantage to compensate for the immensely increased destruction and loss of life that would have to be anticipated.

This is why it is vitally important that NATO's local defense forces be increased in strength. A defense dependent upon the willingness and ability of the NATO governments to employ nuclear weapons in a war of unlimited violence lacks credibility. aggressor may well believe, if this is NATO's only alternative to a limited setback, that NATO might yield him his limited objective rather than incur the risk of virtually unlimited destruction.

It seems clear, then, that a sound military policy for the Western alliance requires two efforts, each of considerable magnitude. We have already pointed out one, the essential and urgent tasks of restoring our strategic nuclear striking power. Hardly less important is it to rebuild and modernize-or rather "futurize"-our own forces available for service in Europe which the present administration has treated with even greater neglect.

Our allies, as we noted earlier, have done no better. For a variety of reasons, European governments have not raised and maintained in Europe the troop strength necessary to perform the deterrent function we

have just outlined.
In this situation, if ingenuity could find a way greatly to increase the effectiveness of Western forces relative to Soviet forces, this would both increase the effective strength of the troops which could be raised, and, at the same time, increase the will to

raise them. THE LINE FOR INVENTION AND INNOVATION

While one group of scientists, soldiers, and industrial establishments is working to restore our strategic nuclear striking power, we urgently need another group working in a wholly different direction. The latter should escape from the fascination of nuclear weapons and think of functions to be performed, of purposes to be served, before they think of weapons. They should not so much be seeking a lucky find, a wonder weapon, as a stream of inventions, together with the totally new military tactics and

strategy appropriate to it.

Let us illustrate a little more specifically how our NATO forces, which will still be inferior in numbers even after they have been strengthened as we suggest, could in-

crease their effectiveness.

The Confederate leader, Nathan Bedford Forrest, is reported (no doubt apocryphally) to have explained his tactics as "gittin' thar fustest with the mostest"-men and weight of firepower. Stonewall Jackson handled several times his own forces when he was running rings around Pope and Hooker. The Germans, in the blitzkrieg attack in 1940, sliced through far superior French forces because they had developed new tactics and an entirely new concept of mobility in ground warfare.

For NATO purposes mobility requires the ability to move rapidly on the ground without being tied down by a heavy logistic "tail" and without being confined to improved roads. It requires also the capacity to move men and supplies by air without the limitations and vulnerabilities that go with dependence upon prepared airfields. It should not be impossible to make both these capacities available. The technical devices are already available; what is required is the imagination and the determination to make use of them,

Increased firepower possibly lies in guided and self-guiding missiles. The technical problems may be great, but they are still not incapable of solution. With the need for these inventions by scientists and engineers goes the need for tactical innovation comparable to the blitzkrieg concept which, marrying armor, motorized infantry, and the dive bomber, gave Guderian his Ardennes victory over the French in 1940.

In the meantime, and for the foreseeable future, the need for greater close air support controlled by ground forces is clear. was demonstrated in the ground action in

Another tactic which has always aided an inferior force is the capacity to break up concentrations and the use of massed forces. This capacity is commonly attributed to the massing of firepower, but need not be the same. The Mongol herdsman, with the tree

saddle that enabled him to shoot the horn bow from horseback, retired the war chariot from the battlefield. The English longbowman made the knight and horse in armor obsolete. The little antitank missile, which two or three men can carry and fire, and is guided electrically through a fine copper wire it reels out as it seeks its target, may do the same for the armored monsters upon which the nations of the world have spent so many millions in recent years. There are means of preventing concentrations, which need not, like nuclear weapons, have consequences beyond the battle and the battlefield. By all these means, a proper marriage of invention and tactical innovation may greatly increase the effectiveness of the smaller force.

A word of caution is necessary. A modern regimental combat team could play havoc with Hannibal's army. But this would not be so if Hannibal's army were equipped with the same weapons as the regimental combat team. Weapons and tactics are, in time, likely to be equally available to powers that are substantially equal in other respects, as indeed they were between the two world wars. But the advantage to the more imaginative and energetic side is constant. It is the stream of invention and innovation that is needed to win battles—as the armies of Nazi Germany proved, first against France and Britain, and later against Soviet Russia as well, until they were finally overwhelmed by sheer numbers.

Our problem contains another difficulty. The success of many innovations depends on the secrecy of their development. They come as surprises to an unprepared enemy. But for our purposes, it is important that the potential enemy should know and respect the strength of the smaller force. We want to deter an attack, not invite one. The function of the still-to-be-discovered weapons is not so much to win a major test of strength in Europe, but to make the risk of starting one exceed any foreseeable gain. For this reason enough must be known about the strength of the new forces and weapons to evoke respect.

MILITARY NEEDS WHICH MIGHT ARISE IN THE NEAR EAST AND ASIA

The weapons which the United States needs for possible use by its own or friendly forces outside Europe are, we suggest, of the same character as those broadly described in the last two sections. The considera-tions which lead to this conclusion are closely related to those already mentioned.

Our purpose in the Near East and Asia is to support the development of independent and viable nations. Such nations are necessary to the environment of an open and free world. The greater part of our support to them must lie in political and economic action. This important aspect of our policy is discussed in pamphlet No. 5. But countries, along with others, exist in a world in which military power throws its shadow before it, and in which, as the unprovoked attack against the Republic of Korea demonstrated only too clearly, military force can be used for aggressive purposes. There can be used for aggressive purposes. is, therefore, a defense problem in the Near East and Asia which cannot be dealth with solely through political and economic measures. In this pamphlet, we deal only with the military aspect of our policy to the Near East and Asian countries.

Again the changing nature of the nuclear relationship between the United States and the Soviet Union is fundamental to present and prospective defense problems in Asia as it is in Europe. When our nuclear posi-tion was such as to support a policy of active deterrence, this placed limits on the extent to which the U.S.S.R. or Communist China could push with military force against our interests in Asia. If we were to fail to maintain a position of nuclear parity with the Soviet Union, the situation would be reversed. There would then be definite limits to the support we could give countries on the periphery of the Soviet bloc even in defense against overt military aggression across recognized boundaries. Therefore, from the standpoint of Asian defense, it is mandatory, as it is in the case of European defense, that we do whatever is necessary to assure ourselves of continuing nuclear

But even under the assumption of continuing nucelar parity, the defense problem of Asia is different from what it was in the days when we could rely heavily upon active nuclear deterrence. It is no longer credible that we would employ nuclear weapons in defense of the countries on the periphery of the Soviet-Chinese bloc in Asia except under the most extreme conditions, conditions indicating a Communist intention of making a general military assault against the West-Any such general assault initiated in Asia is, however, unlikely.

The more likely military threat to the Asian countries on the periphery of the Soviet-Chinese bloc is from military pressure in a limited area, and from forces employing nonnuclear weapons. The first defense against such pressure is from the military strength of the country directly involved. It is for this reason that military assistance to the countries directly threatened, such as the Republic of Korea, Formosa, nam, and Iran, is of continuing importance.

The second line of defense is U.S. air, sea, and ground forces quickly available, in adequate numbers and with appropriate weapons to give support primarily with nonnuclear weapons. Tactical nuclear weapons should also be available to our forces. but only for the purpose of deterring the aggressor from using nuclear weapons himself. Just as in Europe, it is hard to see how a war in Asia fought with nuclear weapons by both sides will give us any sub-stantial military advantage. With limited port facilities and few airfields, we have use of nuclear weapons on an Asian battle field. Not only is there no probable mill tary advantage to us in doing so, if such weapons are also used by our enemies, but also no political objective favorable to our side could be supported by the nuclear destruction of countries we are trying to defend. Many have deluded themselves with the escapist thought that we alone have the capability or will to introduce nuclear weapons into an Asian battlefield. It is hard to believe that the Russians would in fact give us such an easy out in a period of nuclear parity.

It should further be pointed out that de terrence of military attack, although it must rest primarily upon relative military capabilities, does not real ities, does not rest solely upon such equations. There would be exceedingly heavy political cost to the U.S.S.R. or to Communist, China to the nist China if they were to launch a large scale military attack upon any of the Asian countries. This does not apply to Quemoy and Matsu, where our support of Chiang's continued occupation of these islands is not believed to be supportable either on political or military grounds by much of Asian and of world and of world opinion. But any military attack against other areas in Asia or the Middle East would have such heavy political costs that U.S. military backup on the scale outlined in the next section should go far to assure the defense of the areas threatened.

#### NEEDED FORCES AND THEIR COST

It should be perfectly clear that while administration's new look has been disastrous, a return to some old look would be equally so. The national defense would have been further advanced today if it had evolved taking full account. evolved taking full account of the Korean war

experience. The aimless detour through massive retaliation resulted in ever-increasing dependence upon the strategic nuclear advantage, which passed almost as it was claimed. The task now is to retrieve the consequences of that folly. No longer can economizing be put above national security in the belief that nuclear weapons can accomplish all. We are forced to make intelligent accommodation to the two great changes that have occurred on the military scene since 1953.

These changes, which have already been recognized in earlier parts of this pamphlet, are, first, the technological revolution which mounted nuclear warheads upon ballistic rockets of intercontinental range, and, second, the strategic revolution implicit in Soviet maturity as a nuclear power. Taken together, these changes constitute a challenge to American effort and ingenuity which cannot be met in the spirit of busias usual. They require fundamental rethinking of our defense problem. They require executive leadership with the energy to grapple with the real issues and to make the necessary decisions. The confusion bickering and red tape which today beset the Defense Department and our armed services spring more from lack of decision, or from decisisons made arbitrarily with no sense of strategic purpose and direction at the top, than from interservice rivalry. Once the basic decisions consistent with a coherent strategic approach have been made, organizational changes can follow which will bring organization into closer alinement with the functions to be performed and thus greatly increase the efficiency of our defense effort.

In the long run large sums can be saved through more rational organization and a reduction of the present muddle and redape. Furthermore, the redirection of our effort suggested in this paper may well require the curtailment or even the abandonant of some current programs of defense sum, however, all the possible savings cannot be expected to offset the increased defense expenditure which is essential to make up for the

for the neglect and blindness of recent years.

Now for the specifics. As pointed out earlier, our first priority is to recover with all possible speed the position of parity in strategic nuclear force we are losing because of Soviet achievements in missile design and production. The present situation leaves us no sensible alternative but a crash effort to bridge the missile gap. To this end SAC's aircraft and missiles should be given greater protection against the blast and heat effects of atomic attack, should be further dispersed, and should be given greater protection against should be further dispersed, and should be given such active defense (primarily by antiaircraft missiles) as developing technology makes possible. Also, the capacity of SAC to support an airborne alert should be improved, with greater urgency than at present.

Three other immediate steps are also urgent: First, increase production of jet tankers required to reduce the dependence of our strategic bombers on oversea bases that are threatened by Russian intermediaterange missiles. (This would wring the last measure of benefit from our present manned-bomber forces before they finally become obsolete.) Second, double the combined Atlas-Titan missile production currently programed, and increase the rate of production of these missiles; also reduce their vulnerability by increasing the dispersal and hardening of their bases. Third, do not terminate, but continue, developmissiles (such as Enark and Regulus II). These weapons could be produced in large quantities, maintained at dispersed locations and made mobile, at relatively low cost. Though vulnerable to the enemy's AA mis-

sile defenses and manned interceptors, they would increase his defense program, particularly if they made their final approach to target at low altitudes at which the range of detection radars in short.

So much for the gap fillers. For the next phase, the production lines for all the solid-fuel missiles that are in advanced stage of development—Pershing, Polaris, and Minute-man—should be laid out so that production may proceed promptly once the prototypes have been proven. (This was done in the case of the B-47 bomber, in the case of Atlas, and in other instances. It has cut at least 2 years from the cycle, design to use.) Also, mobility of these missiles should be stressed. At the same time the construction rate of the Polaris submarine should be increased. The development of the Nike-Zeus antimissile missile should continue to be given high priority.

Added together, these new programs will call for an impressive additional expenditure of about \$4 billion more a year on our strategic forces. At the same time, however, savings of about \$1 billion could be made elsewhere in Air Force expenditures. For example, as the result of programs launched several years ago, when the Russian longrange bomber was believed to be the major threat to the United States, we are annually spending about \$6 billion on anti aircraft defense—for interceptor aircraft, for AA missiles, for early warning and target acquisition radars, and for the immensely complex defense coordination system known as Sage. Meantime, however, the Russians have cut the production of their long-range bombers in order to shift resources to the production of missiles.

Of course, the Russian long-range bomber force remains a threat, and this threat would increase in proportion to any weakening of our AA defense. We have already noted the continuing requirement for active defense of SAC bases. But these programs of AA defense have not been adjusted to the change in Soviet priorities. Take, for instance, the continued high expenditures on manned interceptors. The interceptor has become a platform for air-to-air missiles which are placed in position to fire, and are fired by electronic controls partly on the ground and partly in the interceptor, while the pilot monitors the operation. In most cases the job can be done better and more cheaply entirely from the ground with ground-to-air missiles. And in a few years the principal active defense requirement will surely be defense against missiles, not against manned bombers.

Similarly, bombers, like interceptors, are becoming platforms from which missiles are fired. Again, it seems reasonable to insist that the missile, in time, should go all the way. New planes for special purposes, including both supersonic bombers and longrange interceptors, may be justified. But neither should be built and maintained at vast expense if their principal justification (in competition with missiles) is to give airmen something to fly in. Years ago, Gen. "Billy" Mitchell pointed out a similar truth about the battleship.

At the moment an acute shortage of air crews limits SAC's ability to maintain an airborne alert. An early curtailment of interceptor forces, by permitting the release of interceptor pilots and support personnel for service in the bomb wings, would ameliorate this problem during the remaining useful life of the bomber forces. Since there is also a need for increased capacity to transport our ground troops and their supplies by air, this, too, might be facilitated by the release of interceptor pilots. The administration has already begun the reduction of fighter-bomber wings on the assumption that close support for our ground forces can be better provided by their own short-range

missiles. We do not propose that this substitution be carried further at this time; we do propose the application of the same principle, the substitution of missiles for manned aircraft, to air defense.

So much for Air Force programs, which, through SAC, contribute more than 90 percent of the strategic deterrent. The Navy will increase its contribution to the strategic deterrent when its Polaris missiles and submarines become available. The Navy also needs strengthening in capacity for antisubmarine warfare because of the vulnerability of the United States to missiles fired from hostile submarines.

The Army has suffered most grievously from the military policy in the provision of adequate tactical forces to deter local aggression aimed at limited objectives, and to defend our interests when this local deterrence fails. This is, in the nature of things, largely the province of the Army, but the Navy also has an essential role in it. To perform that role the Marine Corps should be restored to full strength and thoroughly futurized in arms, tactics, and transport. Carrier task forces for local, limited actions should be in constant readiness. The Navy also needs special-purpose shipping for the rapid movement of ground forces overseas.

Current programs to increase carrier task forces for their contribution to the strategic deterrent cannot be justified in competition with alternative weapons systems. Money can be saved here to pay for the modernization the Navy urgently needs to improve its readiness. Consequently, major increases in the Navy budget, other than those for Polaris missiles and submarines and for stepped-up antisubmarine warfare capability, are not necessary.

The Army has suffered most grieviously from the neglect and blindness of the administration. To modernize its currently authorized force of 14 active and 7 high-priority Reserve (mainly National Guard) divisions the Army needs an additional \$1.5 billion annually. This would provide no increase in personnel. But it is essential to make the most of the forces we now have: for example, by enabling the Army to reequip itself over a 5-year period with the new light rifle and machineguns, with the new and greatly improved armored personnel carrier, and with the advanced communications equipment that has been developed. It also would enable the Army to purchase aircraft of better types for those functions for which it is now authorized to operate aircraft. It would, in short, enable the Army to reverse the present trent by which it grows steadily weaker year by year. This is the minimum necessary.

It is not enough. We need a larger Army, both to uphold our interests around the world, and to relieve us from intolerable dependence upon the threat of strategic nuclear action for deterrent purposes. Without this evidence of our determination it is surely useless to expect our allies to make the effort required of them, particularly in Western Europe.

To achieve these ends, to reverse the cuts which the administration has made, and to provide the minimum force that the Army needs if it is to meet its responsibilities, will require an additional 225,000 men and an additional \$1.5 billion a year. This will provide an Army of 19 divisions (total strength about 1,100,000), with 8 divisions (instead of 3 as at present) in condition for immediate movement and employment overseas. Such an Army is essential if we are to adjust our military strength to the strategic revolution brought about by Russian maturity as a nuclear power.

To sum up these proposals in budgetary terms. In very general and approximate terms, the combined Air Force programs (the gep-fillers plus the accelerated ICBM programs plus additional air transports) would require a net annual increase in the budget of \$3 billion. For the Navy an additional \$1 billion would be needed annually. Army needs (\$1.5 billion for modernization plus \$1.5 billion for five more divisions) would total \$3 billion annual increase. The entire effort would add \$7 billion to the defense budget. If allowance is made, as it undoubtedly should be, for additional funds for research and development to meet the challenge of Soviet power with imagination, ingenuity, and innovation, then the forces we need would require additional defense expenditures for the next 4 or 5 years of approximately \$7.5 billion annually.

#### CAN WE AFFORD SUCH A COST?

There can be no question of the capacity of our economy to support this addition to defense expenditures. We are currently devoting less than 10 percent of our gross national product to major national security programs, including defense, the Atomic Energy Commission, and mutual security (foreign aid). During World War II we di-verted almost 45 percent of our then sub-stantially smaller total product to war purposes, and yet our economy continued to grow all during the war. Economists of both political parties now agree that the American economy can and should grow about 5 percent per year, after we have fully recovered from the recession, which is not yet the case. This growth would add to our total national production more than \$23 billion a year as a starter. The diversion of one-third of this productive increment to the great priorities of national security would more than cover a \$7.5 billion annual increase. The administration's insistence that a balanced budget at current, or reduced, tax levels must come before the provision of essential defense needs indicates that new thought on the national economy is as essential as is new thought on the national defense. This will be the subject of pamphlets in a series being prepared by our Advisory Committee on Economic Policy.

## Tribute to Hon. Joseph C. O'Mahoney, of Wyoming

EXTENSION OF REMARKS

#### HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES
Thursday, June 25, 1959

Mr. MANSFIELD. Mr. President, one of the great Senators of our generation, the distinguished senior Senator from Wyoming [Mr. O'MAHONEY], is at present in the Bethesda Naval Hospital, suffering from a stroke.

Not only is Senator O'MAHONEY a good Senator; he is also a good constitutional lawyer. He has been the champion in the Senate in the fight to maintain the constitutional separation of powers and to maintain the rights of the Senate, visa-vis those of the executive branch; and for many years he has worried over the exercise of power by the Executive at the expense of the legislative branch.

Mr. President, Mr. Ed Koterba, of the Washington Daily News, has written an excellent article about our distinguished colleague from Wyoming. I ask unanimous consent that Mr. Koterba's article be printed in the Appendix of the Record.

Mr. JOHNSON of Texas. Mr. President, I wish to associate myself with the very fine statement which has been made by the able Senator from Montana. I know that all Members of the Senate send their best wishes for an early recovery to our beloved friend, Joe O'Mahoney.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News, June 25, 1959]

#### HE DIDN'T TAKE IT EASY

(By Ed Koterba)

At 74, Joe O'Mahoney could have been taking it easy, but he didn't. So now he's in the Bethesda Naval Hospital suffering from a strcke.

The Senator from Wyoming proved one thing to himself. You can't keep pushing yourself against the strain of constant pressure—whether you're nearly 75 or half that old—and expect to escape some physical setback.

I'd been watching the Senator for several days leading up to the historic climax of the vote on Lewis Strauss' confirmation. On Tuesday, the man from Wyoming stood up in the Chamber to plead his cause against the man. Three hours later he was still on his fect. He was tired. His knees pained him, but he kept on.

This was just the beginning of Joe O'Mahoney's week. All the while, the emotion of the approaching Strauss vote drummed an increasing tenseness across the Senate Chamber

Senator O'MAHONEY (pronounced O'MAhunney) would barely get out of his committee hearings (he's on 12 subcommittees) in time for luncheon with constituents. Then he'd make his way to the Senate floor to introduce some bills.

On Thursday, he left his office at 6:30 p.m., his usual departing time, and was called back 5 hours later to cast his vote against Admiral Strauss.

At 12:45 a.m., Friday, he clasped hands in triumph with three other Senators for the cameramen, then made his weary way home to the Sheraton-Park Hotel.

A few hours later, he was on his way to the hospital on a stretcher, his left side paralyzed.

Sometimes our Senators get needled soundly, and often they deserve it. But then there's the side that rarely gets written about—the tremendous pressure these men endure behind the scenes.

JOE O'MAHONEY, the man with white tumbleweed brows, rarely missed a committee hearing and rarely avoided a caller.

Folks close to the Senator said he lost some of his zest a year ago when his wife, Agnes, suffered two strokes. But he insisted on keeping up his perilous pace. He worked weekends.

Now, in the Senator's private office, eight separate piles of correspondence and other papers have accumulated 12 inches high. "At least," I said to his staff, "the Senator's getting a rest."

They looked at me and smiled wryly. One of them said: "He's been on the phone every day giving us instructions on everything that's pending."

Some of our lawmakers, it seems, just can't resist making themselves targets of physical punishment. Joe O'Mahoney is one of them.

Commencement Day Address at Clemson College

EXTENSION OF REMARKS

## HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
. Thursday, June 25, 1959

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the very eloquent and able address which was delivered by Mr. Wayne Freeman, editor of the Greenville (S.C.) News, at the annual commencement exercises for Clemson College on June 7, 1959.

The points made by Mr. Freeman in this address attests to his wisdom, breadth of knowledge, and his outstanding ability as a newspaper editor. I hope his remarks will be read by everyone everywhere because they are of vital importance to the future well being of the entire Nation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Presidents Edwards, members of the board of trustees, members of the faculty, friends of Clemson and my fellow members of the class of 1959, it is customary for the speaker on an occasion such as this to acknowledge the introduction. And I seldom defy convention—unless it suits my purposes.

Therefore I approach to the convention of t

Therefore, I express to President Edwards my gratitude for his kind words. They were a bit lavish, perhaps, but, then, I've never believed in stopping a man from telling the truth.

I know that I speak for the other honores, as well as myself, when I say we are grateful for the honor Clemson is bestowing on us and when I offer to you a pledge to return honor for honor. We shall strive to deserve your confidence.

deserve your confidence.

However, I must notify the distinguished gentlemen behind me, as well as you who soon will receive your diplomas, that my usually reliable sources have informed me that Dr. Frank Howard is waiting backstage for all of us 1959 graduates. In one hand he has a sheaf of applications for membership in IPTAY and in the other assortment of blank checks. More power to him.

To turn to another and more serious phase of the life of Clemson, I am convinced that this school is entering upon a new era of expansion and enrichment. It began many years ago. Starting as an agricultural and mechanical college, Clemson is becoming what it should be: an institution offering a broad education in the basic arts and sciences.

I would oppose any attempt to duplicate here the entire program of any other state institution, just as I would oppose imitation of Clemson's program anywhere else. The scope of knowledge is so great and our sources presently so limited that we must for now at least, impose a measure of specialization on our institutions of higher learning.

However, I do insist that, in the drive scientific and industrial development, we must not neglect the liberal arts and the humanities. It is just as important for man to understand the world about him, and to be able to communicate with other men, as it is for him to be able to build and operate an atomic reactor.

I believe your board of trustees and the administrators they have chosen are working in that direction, striving for a proper balance.

I can't help noting that this is the first commencement since the death of the beloved Dr. Robert Franklin Poole, your late president. I was not among his intimates, but I stood in the front ranks of his admirers, and I think I understand what he was trying to do. The fruits of his labors in behalf of Clemson are all around us.

Circumstances and the passing of time, the necessity for adapting to new conditions, have compelled many changes in the last few years. All of us will watch with interest what happens in the next few years, but I, for one, am pleased with what has been done up to now.

On this campus there is being formed a strong partnership between education and industry.

Industry is providing the means of building, equipping, and manning a magnificent educational plant. I take special pride in it. I have long believed that one of the great hopes of South Carolina and the South is the development of more facilities for training young men and women in the arts and the sciences. Tied in with this as part of the educational process, is a program of research and development.

Under such a program, industry invests in education. It receives dividends in the form of trained personnel, new ideas, new products, and better processes for producing the old ones.

Your new president is a man of absolute integrity and tremendous zeal and energy. He has a rare sort of courage and great executive ability. His predecessors have bequeathed him a team of able administrators and gifted and dedicated educators; the board of trustees has helped him to augment that team with equally capable persons to fill new Positions or vacancies created by re-

Under these circumstances, I see no chance of failure. What is past is but prologue; the future is bright with promise.

And what we say and do about this relatively small part of South Carolina and the South has much to do with the future of the State, the region, and the Nation.

Against the background of achievement and hope provided by this South Carolina. school, let's discuss for a few minutes something of the philosophy and the practical considerations that should guide us as we work to secure for ourselves and our posterity more of the good things of life.

Lest I sound provincial, let me state this

I am an American first, a Southerner second, and a South Carolinian third; and I believe we all are.

But I believe with all the force of which I am capable that, by being better South Carolinians, we are better Southerners; and by being better Southerners, we become bet-

We of the South have been too long on the defensive. It is time we took the offenalve in the healthy competition in economics, politics, and sociology which has characterized our Nation from its beginnings. We have begun to do so.

We have a long way yet to go, but, statistically, our region is growing in business and industry. and industry at a more rapid rate than any other in the country, save the fabulous west coast. And we have advantages even over

No longer do our young people have to leave home to acquire an education and to sind jobs; they are available here in growing abundance. abundance. And our potential for generating ing our own industries, starting with the original idea and carrying through with the financing and the staffing of the plants, is far greater than we have yet realized.

Let me emphasize that point. I am in favor of importing industry from other regions, but there is a limit to how far we can go with such a program. In the long the denuding of other regions of their industry will diminish the value of our own. We must be concerned with the welfare of the Nation as a whole.

Let's look to our own resources of capital and leadership as well as raw material and labor. We have reached the point where we can stop exporting our most precious asset, our trained young people. We should be beginning to reach the point where we no longer have to go elsewhere and beg for the capital which is equally necessary to industrial development.

Furthermore, from now on we should proceed with greater caution in importing in-dustry, lest we bring in along with it some of the problems and disruptive forces which have caused many great corporations to migrate. For example, Henderson, N.C., a small and formerly friendly town, today is a sick city. Lifelong friendships have been broken and neighbor has stoned neighbor over issues that have nothing to do with the welfare of either individuals or the community as a whole. We must not allow the virus which caused this illness to spread.

The willingness, the eagerness, of industrial leaders to move to the South and, once established, to expand, indicates that our region must have something that even we southerners haven't fully recognized. Why else would industry be moving South?

And why else would so many of those who come here from other regions with new plants so quickly adapt themselves to the folkways and the mores of our own people?

The people who help make the decisions about industrial locations often are those who must move their families into those locations and learn to live there. And I have found no more ardent southerners than those of the naturalized variety.

They must like our institutions, and our philosophy of life. They must like our people and our sociological patterns.

Without deprecating any of the other factors which have contributed to the resurgence of the South, I think our greatest asset is our basic idealism. We have accepted change; indeed, some of our statesmen have been architects of many of the changes, but we have not abandoned our principles.

Because we have adhered to principle, we of the South have been tagged with labels which have lost most of their meaning through a subtle sort of perversion of the language. News dispatches out of Washington refer to southern conservatives. The radical left calls us reactionaries. Our critics call themselves liberals.

All of these are good words, or they used to be. But for the most part, they have suffered the same fate as the word "moderate." Formerly, a moderate was one who took a middle of the road point of view, one who avoided extremes on either side of an issue. Nowadays, however, a moderate has come to be one who favors surrender to the radical left; it may be gradual, but it is surrender nonetheless.

Those who call themselves liberals these days do so in almost total difiance of Mr. Webster who wrote that rather wordy book. Let's take an example. The American Civil Liberties Union has consistently defended known Communists on the grounds that the individual has an inviolable right to express his opinions and act on them. With that we can all agree, in principle. But the ACLU just the other day issued a sophisticated pronouncement to the effect that it is not a violation of the rights of the indi-vidual to force him to join a labor union against his will.

On the one hand, the ACLU would jeopardize the welfare of the whole of society for the sake of what it believes to be the rights of one person; on the other, it would sacrifice another person for what it believes to be the best interests of a special group.

And that, neatly tied up in a package, is doctrinaire liberalism. Its adherents judge issues not on their merits, but on the basis of what is the liberal point of view. And of what is the hoeral point of view. And their ultimate aim is not liberty, but the establishment of a society in which all the members will lose their indentity and will be forced to conform to the established level of mediocrity.

These are the people who call us "reaction-

aries," and many of us accept the label as an accolade. As for myself, I admit to being a sort of middle-of-the-road reactionary, for I find many things in our society to react against.

I react against the cult of mediocrity, the school of thought which holds not merely that one man is as good as another, but that one man doesn't dare to be better than another. This is evil because the desire and the will to excell are the catalytic agents of progress.

I react against the cult of conformity. There are those who would reduce all of us to the common denominator in the name of a much misused word, "democracy". There's nothing democratic in holding back one man lest he embarrass another with his

superiority of mind or body.

The brutal fact is that, if our civilization survives, it will be because we have produced uncommon men and because those who used to be called common men have been led to do uncommon things.

I react against the cult of panic. When the Soviets, so they said, placed a dog into orbit around the earth in a space vehicle, there were those who said our educational system was all wrong, that we should tear it up and start over again-with billions of Federal dollars, of course.

In a recent speech, that arch nonconformist, Adm. Hyman Rickover, made a pertinent comment. He said that if the Soviet Union announced plans to send the first man to hell, somebody would rise from his seat in Congress and demand that we appropriate a billion dollars to beat them to it

Too often that is the scope of our thinking. A Presidential commission has suggested that we should double our annual outlay for education. But who is so foolish as to believe that, if we appropriated twice as much money next year for schools, we would get twice as much education, even year after next?

We should increase our investment in education, but only as rapidly as our system can absorb it. And what is wrong with our system? It has produced some of the best citizens and some of the finest minds of our age. And what are we afraid of? After all, our country has prevented world war III by being prepared to win it, and it is obvious from their behavior that what our enemies fear most is the spread of our ideology.

If all of this is reactionism, then I am proud to be a reactionary.

But let's put this thing into proper perspective. We are, and I hope we ever shall be, conservatives. The true conservative is one who believes in progress, and works for it, but not in a destructive manner. The men who brought about the American Revolution were conservatives; they preserved the best in their English heritage while moving forward to insure the freedom of the individual.

Those who fomented the French Revolution in the name of "liberty, equality, and fraternity," were radical reactionaries in that they sought to destroy completely both the past and the present and build a society in which all would be equal. In the process, they produced generations of near anarchy.

In this sharp contrast, there should be a vivid lesson for us.

We here today share a rich, noble, and proud heritage of soldiers and statesmen.

of patriots and poets, of philosophers and teachers, of planners and producers, and even martyrs and prophets.

Those South Carolinians who went before us played a leading role in the foundation of the Republic. They helped to write much of their own wisdom and strength into the Constitution which has held the Union together to this day.

Our grandfathers and great grandfathers, driven to extremes, subjected the Union to trial by ordeal. They fought for the principles upon which the Republic was founded as they believed those principles to be, and there is no cause for shame in our day in what they did in theirs.

For in the testing, they strengthened the Union. When the history of the last hundred years is written in true perspective it may be realized that they sowed the idealistic seeds which, cultivated and brought to fruit in our day and that of our children and grandchildren, enabled it to endure.

We are assembled today on what is, in a very real sense, hallowed ground. It is hallowed because it once was the home of John C. Calhoun, one of the greatest statesmen in our history. He gave the last full measure of devotion to his ideas as to the best way to protect his beloved South and to preserve the Union.

This ground is hallowed, too, because it was here that Thomas G. Clemson provided for the founding of an institution dedicated to a great purpose; and that purpose was to help a war-ravaged land and an impoverished people, through education, research and development, to rise above ignorance and need to create opportunity and to keep an appointment with destiny.

Buried near this spot are great men who planned and worked ceaselessly to make Mr. Clemson's dream a reality. And in this audience are other men and women who were contemporaries of many of Clemson College's greats of the past and who labored no less zealously for the college and the State. And there are still others who, thank heaven, are carrying on in the same tradition and will do so for many years.

When we look to the past and speak of our heritage, we are not trying to turn back the clock, but merely seeing to it that the clock continues to keep the proper time and doesn't run wild.

Edmund Burke said: "People will not look forward to their posterity who never look backward to their ancestors."

We in South Carolina are making progress, but not by trying, as Omar Khayyam said, "to grasp this sorry scheme of things entire, tear it to bits and remold it nearer to the heart's desire." Instead, we are building the future, not by destroying the past, but by using its solid stones as a foundation and its best timbers as a framework.

We here have something of which we can be proud, and it is something that is worth preserving and developing for our children and our grandchildren.

There is much that needs to be changed. much that should be undone, in our Nation and the world. But I submit that the good among us is far greater than the evil, the wise decisions outweigh the mistakes and the main path we have taken is the right road and the best one.

What we should dread in our time is not difficulty, but rather the continuation of so much that is cheap and irresponsible in our way of life. What we should fear is not hardship, but failure, for, if we fall, the best society man has ever established will degenerate into either anarchy or dictatorship. What we should shun is not responsibility, but the general attitude of unwill-ingness to make a contribution to society beyond our own immediate needs and de-

If we want a future of material comfort and security, and nothing more, there is little to be said for our civilization. The vears ahead of us as southerners and Americans do not offer a life entirely of ease or contentment.

As we face them, we must regard adversity not as a deterrent, but as a challenge, and obstacles not as an excuse for surrendering, but as a stimulant for even greater efforts.

A great classical scholar once summed up the history of the Greeks and the Romans in these words:

"In the end, more than they wanted freedom, they wanted security, a comfortable life, and they lost all—security and comfort and freedom \* \* \* When the Athenians finally wanted, not to give to society, but the society to give to them, when the freedom they wished most for was freedom from responsibility, then Athens ceased to be free and was never free again."

We of the South today are called, as were our ancestors, to greatness. We have everything we need; the only thing in doubt is our will to dare to be nonconformists in the sense that Emerson meant when he said: "Whoso would be a man must be a nonconformist."

Oh yes, we may find it possible to enjoy a measure of security by ignoring the chance for individual achievement and joining the faceless mob. We can look to an all-powerful government for creature comforts and employ the pressure that the organized common herd can exert to obtain its ends.

Or, we can dare to stand apart from the common herd and above it. We can rely on our faith in our own ideals and work to the end that they shall prevail. We can employ our rapidly developing ability to solve our own problems. We can meet the needs of our people through hard work, through careful planning in the fields of business, industry, and sociology and through skillful execution of those plans.

Many wise men, both here and elsewhere in our country, have concluded that the South is the last bastlon of true conservative thought in America. It is the strongest bulwark of the Nation against the advance of a form of totalitarianism which, masquerading as liberalism, ultimately would destroy all liberty.

If we fail, neither the South nor America may have another chance.

#### PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

#### LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any execu-tive department, bureau, board, or independ-ent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports of documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee tives or the Committee on Rules and Admin istration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

## GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publica tions are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity pur chasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government of Gover ernment publications under such regulations as shall be agreed upon by the Superintend ent of Documents and the head of the respective department or establishment of Government (U. S. Code, title 44, sec. 724, Supp. 2).

#### RECORD OFFICE AT THE CAPITOL

N

CI

d

th

H B Tr.

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders subscriptions. subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in the printing of sp printing of speeches in pamphlet form.

#### CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a writer for sale, at a price sufficient to reimburse the expenses of such printing, the current congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p.

#### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their Printing Office, that their addresses may correctly given in the RECORD.

# Appendix

A Catholic in Politics

EXTENSION OF REMARKS

## HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following article from the New Republic of June 8, 1959: A CATHOLIC IN POLITICS—Conversation WITH

SENATOR EUGENE MCCARTHY

(Is there a Roman Catholic political line in there a Roman Catholic political living this country? Would a Catholic majority deprive non-Catholics of their freedoms? The editor of the New Republic questions the unior Senator from Minnesota about the religious issue as it affects 1960.)

Mr. HARRISON, I wonder if we could start off by agreeing that the Catholic issue in America is not, in 1959, what it was in 1928. I don't mean merely that JACK KENNEDY is not Al Smith, but that use of the religious issue in politics is less fashionable or prevalent than it was 30 years ago.

Senator McCarrhy. I agree that the ques-Senator McCarthy. I agree that the qua-tions being raised today regarding Senator Kennery's candidacy or the candidacy of other Cathelland agree that the quaother Catholics are somewhat different from those which were raised regarding Al Smith, and the manner in which they are being asked is clearly different. You may find an extremist now and then who goes back to the old allow and then who goes back to the old allegation of the domination of the country by the Pope, but the doubts usually heard today are not of that order.

Mr. Harrison. Of what order are they? No one suggests that Kennedy represents

Senator McCarthy. No, we passed the rebellion stage long ago and the rum stage, too. Those who feel there is a Catholic issue in politics are, I think, concerned about whether America, or rather what's called Americanism, is threatened by firm and established religious doctrine. There is an assumption that the doctrine of Catholiassumption that the degmatism of Catholiclam is incompatible with the philosophy of democracy. Paul Blanshard speaks of the struggle between American democracy and the Catholic hierarchy.

Mr. Harrison. And yet there have been a great many Presidents of the United States who have had dogmatic religious beliefs.

Senator McCarriy, Yes; of course, believ-Protestants have their own doctrines which they hold to just as strongly as Catholics hold to their beliefs. But in the case of the Casholic their beliefs. the Catholic, there seems to be a general and added concern over the doctrine of the infallibility of the Pope, and this, I believe, leads many people to the conclusion that a Catholic President would be bound in a special way to an outside authority. A great many non-Catholics think this doctrine extends much further than it actually does and applies in detail to decisions in the practical order in a very specific sort of way. Brooks Hays is a good friend of mine, you know. Brooks was president of the Southern Bap-tists, and I said to Brooks, "I don't know why you worry so much about the infallibility of the Pope." I said, "If he is infallible you've the Pope." I said, "If he is infallible you've nothing to lose, and if he isn't, why, we're no worse off than the Baptists are under you."

There are a number of distinctions both historical and doctrinal which we ought to make if we're going to discuss this doctrine intelligently. It applies primarily to religious and moral teachings beyond those dictated by a natural law or obtainable by human reason-questions of revealed truth and of supernatural perfection. The doctrine also applies, however, to certain actions and decisions which are a part of the temporal and political order which involve interpretation and application of ethical conclusions. Yet Protestants, too, pass judgment on the temporal scene. In a recent issue of Look magazine, for example, Geoffrey Fisher, the Angli-can Archbishop of Canterbury, was quoted as having said: "Everything which touches the life of the Nation is of concern to the Christian. It does not escape God's judgment by becoming in the party sense political. The difficulty is that when the issue has become in that sense political, people are less ready to hear what the Christian judgment may be, since for that, patience and a perceptive mind are required."

Mr. HARRISON. But isn't it true that non-Catholics are less likely to agree on what is a moral decision than are Catholics? Isn't one of the reasons for apprehension about Catholic political power the feeling that in this gray area where political choices are involved, Catholic politicians don't decide just as individuals? It may not often be admitted publicly, but there is, I'm sure, a widespread feeling that the Catholic Church, clergy and laymen, is ruled by a few at the top and that, therefore, no Catholic is really free in the sense that other Americans are

Senator McCarthy. The apprehension you refer to does exist. Whether there are adequate grounds to justify it or not is another question. Let's take divorce as a relatively clear case. Actually canon law does permit divorce or separation for certain reasons, but does not permit remarriage. Catholics who are judges in the courts of the United States preside in divorce cases and render decisions. It is reasonable to expect Catholics generallly to oppose easy divorce and to expect them to favor stricter laws regarding the conditions under which divorce might be granted and stricter laws to insure family stability. Here we have to distinguish between strict, rigid, religious sanctions applied within the church on her own members and the use of civil action to sustain the church position.

In the United States we have come to accept the fact of differences. Wherever you have diversity of religious beliefs and philosophical principles, some dissatisfaction is inevitable. Members of some religious groups think drinking is a sin and when their convictions are written into civil law, others are unhappy. Yet if the state permits the manufacture and sale of alcholic bever-ages, the prohibitionists are dissatisfied. Whenever moral issues-which are thought also to have a religious sanction-are raised, some crusading and antagonism are inevitable. The state's function here is to eliminate extreme forms of evil and those clearly destructive of civil order. It cannot-or ought not try to-force the conscience of a citizen or attempt to make every sin a crime. Catholics-politicians or citizens-in a democracy must take into account both what they believe in principle as well as the practical situation in which they are called upon to make decisions, and they have to consider, along with everyone else who has political responsibility, the consequence of the passage of legislation and the consequence of the failure to pass it.

In the case of divorce laws, the possible effects on children, on the separated spouses, or upon general social stability and order, among other things would have to be considered. A quotation from Pope Pius XII sustains this position: "Reality shows that error and sin are in the world in great measure. God reprobates them, but He permits them to exist. Hence the affirmation: Religious and moral error must always be impeded when it is possible, because toleration of them is in itself immoral, is not valid absolutely and unconditionally. \* \* \* duty of repressing moral and religious error cannot therefore be an ultimate norm of action. It must be subordinated to higher and more general norms, which in some circumstances permit, and even perhaps seem to indicate as the better policy toleration of to indicate as the better policy toleration of error in order to promote a greater good." In this area, it is a matter of prudence—that is, as to how far if at all, the church authorities might expect the state to provide civil sanctions. But in any case, the individual Catholic legislator or officeholder is the one who must make the final prudent judgment. He may acknowledge that his church authorities are strongly opposed to such and such a practice, but the legislator himself has to make the practical judgment whether it is conducive to the common good or not for the state to make a law in a specific

Mr. HARRISON. A further argument advanced by people who fear a rise in Catholic political power and particularly fear a Catholic President is that although Roman Catholics may differ on the practical applications of moral beliefs today, and may not try to write all their own moral attitudes into law. that is only because they live in a society which is not yet predominantly Roman Catholic. But what would happen to the rights of non-Catholics were Catholics a majority in this country? Take, for example, a statement published in Civilita Catolica, the world organ of the Jesuits, in April 1948. I want to quote it in full because I think this is the kind of thing that inspires a good deal of Protestant suspicion of ultimate Catholic motivés:

"The Roman Catholic Church, convinced through its divine prerogatives of being the only true church, must demand the right of freedom for herself alone, because such a right can only be possessed by truth, never by error. As to other religions, the church will never draw the sword but she will require that by legitimate means they shall not be allowed to propagate false doctrines. Consequently, in a state where the majority of the people are Catholic the church will require that legal existence shall be denied to error and if religious minorities actually exist they shall only have a de facto existence without opportunity to spread their beliefs. In some countries Catholics will be obliged to ask full religious freedom for all, resigned at being forced to cohabit where they alone should rightfully be allowed to live. But in doing this the church does not renounce her thesis, which remains the most imperative of her laws, but merely adapts herself to de facto conditions which must be taken into account as a practical matter."

Senator McCarthy. It is obvious from the statement you have read that there are some Catholics who hold that point of view. However this is not the viewpoint which is held by all Catholics. Let me offer another

quotation by the Catholic bishops of the United States made in the same year to set against this quotation from the Jesuit publication: "We feel with deep conviction that for the sake of both good citizenship and religion there should be a reaffirmation of our original American tradition of free cooperation between government and religious bodies-cooperation involving no special privilege to any group and no restriction on the religious liberty of any citizen. We solemnly disclaim any intent or desire to alter this prudent and fair American policy of government in dealing with the delicate problems that have their source in the divided religious allegiance of our citizens. We call upon our Catholic people to seek in their faith an inspiration and a guide in making an informed contribution to good

I cannot, of course, foretell what might happen if a majority of the citizens of the United States were to be Catholic. The Constitution would still be a strong defense of individual liberties. It is my opinion, however, that a majority of the Catholics in the United States today—a strong majority—would support the position of the bishops stated in 1948. Usually Spain is cited as an example of what might happen if this country were to become strongly Catholic. Actually, Spain is not controlled by a majority of the Catholics in Spain. Spain is a dictatorship. On the other hand, take France. I assume that if a census were taken, a majority of the people would de-clare themselves to be Catholic. Yet there is religious freedom in France. Ireland affords another encouraging example to those who fear the loss of religious freedom where Catholics are in a majority. In some of the South American countries, the situation is not comparable. I remind you also that there are still established churches in England and the Scandinavian countries. suspect that Americans of all faiths would be uneasy in any country which had an established church, no matter what religious body had the privilege.

Your question, of course, relates more to moral actions and pressures which might well be exercised without any significant change in the constitutional structure or without the establishment of a church. is a question which is open to much speculation. It seems to me well established in the United States that Government has a right to suppress certain moral teachings and practices which are contrary to the common good. The clearest example, of course, was Government action to forbid and suppress the Mormon practice of polygamy as destructive of the moral stability of soclety. A more pertinent example is that of the prohibition movement in which much of both the opposition and the support was based upon a moral position which had religious sanction.

Mr. Harrison. I take it then that you don't think that Catholics merely grant freedom to others when they are in a minority and thus in no position to do anything

Senator McCarthy. Such a position would, in my view, be indefensible. If such a policy were to be followed, it would not be a matter of Catholic doctrine. of Catholic doctrine. Let me give you a quotation on this point from Archbishop McNicholas, speaking as Chairman of the administrative board of the National Catholic Welfare Conference in 1948:

"We deny absolutely and without any qualification that the Catholic Bishops of the United States are seeking a union of church and State by any endeavors whatsoever, either proximate or remote. If tomorrow Catholics constituted a majority in our country, they would not seek a union of church and state. They would then, as now, uphold the Constitution and all its amendments, recognizing the moral obligation imposed on all Catholics to observe and defend the Constitution and its amendments.'

Mr. Harrison. Are your views and Archbishop McNicholas' on this subject shared by many other Catholics?

Senator McCarthy. Certainly, I would say, by most Catholics-at least in the United States—who have given any serious attention to this problem. I don't know how you could make an inquiry effectively on this subject, but it's my opinion that a poll on which the questions were properly worded would show that Catholics by a strong majority would be opposed to the use of political power to support Catholicism to the disadvantage of other religions.

Mr. HARRISON. Well, now, isn't it true that Catholic lay organizations have acted in ways which encourage us to think they want to deprive non-Catholics of their freedom of choice? Take the Legion of Decency, or campaigns to ban books offensive to the Catholic Church. Or what about regulations that prevent doctors in Catholic hospitals from performing certain types of operations? These are the things which create fear in the minds of the non-Catholic community that should the Catholics gain greater political power, the rights of others in terms of the books they read, the motion pictures they see, the kind of medical care they may receive, would be seriously limited.

Senator McCarthy. This is certainly a possibility. But in the cases you cite, the Catholic position is not one which is re-stricted to Catholics alone, nor is it one which is based solely upon faith and reli-gious doctrine, but rather upon interpretation of the law of nature.

Let us take first the question you have raised regarding censorship. We do have censorship in this country at the Federal level through the postal regulations. Yet a majority of the citizens of the country are not Catholic and as far as I can determine the imposition of censorship under these laws is generally supported by the people of the country. Whereas the Legion of Decency does receive a great deal of public attention, there are many other organized groups such as the Protestant Motion Picture Council, the American Jewish Committee, and the American Association of University Women who publish lists involving a moral judgment on motion pictures. There are, of course, many city and State censorship boards which act just as forcefully and sometimes with less careful judgment than the Legion of Decency itself.

Mr. Harrison. Let me press this point about how hospitable Catholics really are to the freest possible expression of differing ideas and tastes. We have heard of pressures that are put on the motion picture industry-whom they may hire or the subject matter of motion pictures. Such pressures seem to come largely from Catholic sources—in this instance, the Legion of Decency. The effect of the pressure is to curtail the American consumer's freedom of choice. Would you agree with that?

Senator McCarrhy. One may well question some of the methods used by supporters of the Legion of Decency and question their judgment of specific motion pictures; undoubtedly local groups of Catholics sometimes used rather arrogant means of expressing disapproval, and the extent to which such sanctions may be applied is, I grant, a matter of dispute. I must note, however, Ingrid Bergman's latest picture was highly recommended in the Catholic The concern over Catholic influence press. The concern over Catholic influence in the field of censorship may in part be a consequence of the fact that the Catholic Church perhaps lends itself somewhat more easily to organization. When Catholics speak, they are likely to speak through an organization which either is strong or gives the appearance of strength; whereas in many other religious groups there is less

organization and consequently a need to develop an organization for effective action Mr. Harrison. What about the matter of

birth control?

Senator McCarriy. The Catholic position in opposition to artificial birth control states well known to the control of the cont well known, but again it is a position which is not exclusvely Catholic. Many Protestant as well as people of other religions, including Hindus and Moslems, are opposed to birth control. The birth control laws of Connecticut and Massachusetts, for example, which have been a matter of great controversy, put on the statute books of those States no by Catholics, but by Protestants.

Mr. Harrison. Let's return to Mr. Kennell

since it's his candidacy which has stirred we much of the recent discussion about Catholics in politics. I was interested in the Gallup politically in May in which a cross-section of citizens were asked with the construction of citizens were asked. section of citizens were asked: "If your part nominated a generally well-qualified man nominated a generally well-qualified for President and he happened to be a Catholic, would you vote for him?" Sixty-eigh percent said they would, 24 percent said they wouldn't and a new sixty sixty wouldn't and a new sixty sixty sixty wouldn't and a new sixty wouldn't, and 8 percent said they did know. But the remarkable thing to me that when the same question was put to Cathelian to Catholics, the results were more Catholic: 53 percent, in other words 15 per cent less than the general population. they would vote for a Catholic candidate.
35 percent said "No," and 12 percent didn's know. If this now has been said to be the control of th know. If this poll has any accuracy, it raise the question of just how much Catholics stick together in politics.

Senator McCarrier, I am always reluctation to interpret polls. I assume that in the case of the Gallup poll to which you refer many people were you many people were not answering the que tion on an abstract basis, but undoubte had in mind a specific candidate. This one possible interpretation. It is general conceded that from 60 to 70 percent of the Catholics Catholics in the country are Democratical approximately 30 to 35 percent and are Republicant are Republicans. If all these Republicans were thinking of a possible Democra Catholic candidate for President—a post ity which seems much more likely than t they would have a candidate on the Repul can ticket—this would explain the 35 per cent who said "No." Assuming that the might be seen to be said to be might be some crossovers for personal religious reasons, it is possible, too, that some Democrats who Democrats who were polled were not favo able to any one of the numerous Catholicandidates who candidates who have been mentioned registered their protest in the poll.

I haven't made a thorough study of election returns in my State, but I did receive just recent ceive just recently an article which was not upon a study of the trends in one county Minnesota which is described as the Catholic county in the United States. election of last November, my vote there is 13,465 whereas the vote of my non-Catho opponent was 10,903. In 1954 in the so county, Senator Humphrey, a non-Catholle received 13,342 and his opponent, a Catholle 10,024 Catholic, 10,924. Insofar as I know, the were no significant variations or other is tors affecting the election of 1958 as distinguished from 1954.

Mr. Harrison. In 1958 Governor Freeman, who is not a Catholic, was also on the tickel How did his vote in that same county compare to yourself.

Senator McCarrhy. He ran a little behind me in 1958, but he ran about an equal tance behind Senator Humphrey in 1954 in the same county

the same county.

Mr. Harrison. During last years' campaign were you attacked on the basis of your

Senator McCarthy. I think the word chrack" is too strong. There were letters culated and postcards in which the religious though so far as I know they were in limited in number and I'd any even less. limited in number and I'd say even less in

20

Into it is the item

ないはないのはは、日下

tense or violent than attacks which were directed at me through the years in my own congressional district. There was no evidence of any kind of statewide planned attack.
There was also open criticism of me in at least one Catholic paper in Minnesota during the campaign.

Mr. HARRISON, On what grounds?

Senator McCarthy. Not on religious grounds. The principle emphasis was placed upon my liberalism, my association with the Americans for Democratic Action and their approval of my voting record, and the sup-port I received from organized labor.

Mr. HARRISON. Do you agree with Will Herberg's idea that "American Catholics still labor under the heavy weight of the bitter memory of nonacceptance in a society over-Whelmingly and self-consciously Protestant"?

Senator McCarthy. I can only speak with any degree of certainty about my own State. In Minnesota we are in a fortunate position in that when immigrants arrived, there was no established class or population. Most of the immigrants came as farmers and inde-pendent land owners. This is true of the Irish, Scandinavians, the German immi-grants and even the later immigrants from Central Central and Southeastern Europe. Each major group soon after it arrived established its colleges and schools along with churches. The feeling of being under-privileged is one which really has never been known in Minnesota and was not reflected in Minnesota politics. The first well-known Minnesota Catholic Archbishop, John Ireland, was an outspoken Republican.

Mr. Harrison. Do you attach any signifleance to the rise in recent years of the influence of Roman Catholic in the Democratic Party? The chairman of the party has been a Roman Catholic since, I think, the days of Roosevelt.

Senator McCarthy, At least as far back as

I remember.

Mr. Harrison, There's Mike Disalle,
Lausche, and Mike Kirwan in Ohio; Pastore Pennsylvania; Massachusetts with Kennedy, McCormack, and Furcolo; McNamara, and Phil Hart from Michigan; both Senators from Montana are Catholics; and there's Muskie in Maine. And Pat Brown in California.

Senator McCarriy. I think the increase in the number of Catholics who have been elected. elected as Governors of the various states is significant. The number of Catholics in the Senate today, however, is about the same as it was back in 1936 and about the same as it was back in 1936 and about the same as it was in total senate today. was in 1948 when the Democrats had relatively strong control of the House and of the

Remember that Catholics in the United States have always been Democrats in great number. Under the old political system, I am sure that it was argued that it was wise to elect a Catholic as chairman of the Democratic cratic party so as to keep Catholics in the party and keep them happy. This kind of reasoning no longer seems necessary. Politicians have been at fault in that they have come to believe in the necessity of such things as balanced tickets and National distribution. The old pattern of the balanced ticket and having nationalities properly represented, and religions properly represented, geographical areas properly represented—all of this seems to have passed on. I hope that it has seems to have passed on. of this seems to have passed on. I nope that it has and the signs are very strong. You cite a number of elections in which Catholics were about 10 cities of Conwere chosen. However in the State of Con-hecticut, which is strongly Catholic, Abe Ribicoff has been elected and reelected as Governor. Massachusetts and Rhode Island, both of which are strongly Catholic, and Con-necticut, each have any Separator, who is a necticut, each have one Senator who is a Catholic and one who is not a Catholic.

Mr. HARRISON, You've been in practical politics some and you're a Catholic. Have you been pressured by the church to vote for this or that have

Senator McCarthy. I have never had any pressure put upon me by any member of the Catholic hierarchy to vote for any legisla-tion that has come before the Congress in the 10 years during which I served in that body. Insofar as I can recall, I have never had even a legislative recommendation from any of the hierarchy in my own State. Of course, I have been familiar with the positions which have been taken by members of the Catholic hierarchy on a number of issues and also the position which has been ex-pressed to Congress by such groups as the National Catholic Welfare Conference which through the years has given active support to such things as the mutual security program, a liberalization of immigration laws, improvement of the migratory farm labor legislation, and a number of other proposals.

Mr. HARRISON. You're speaking of national affairs. But what about the intervention of the hierarchy in local affairs? You may re-call the fight in the State legislature of Connecticut in 1957 over a school bus bill by which the State would have provided cer-tain assistance to Roman Catholic parochial schools. The bill finally was passed after a tie vote by the vote of the Speaker, who was not himself a Catholic. During the debate a pastorial letter from Archbishop Henry J. O'Brien, of Hartford, was read at all masses in the State on the Sunday before the vote, counselling Catholics, Catholic parents, that "since more than 62 percent of the children born in 1956 are Catholic, you should carefully observe the action taken, especially that of your local representative."

Senator McCarthy. A number of cases exist in which similar action has been taken on other issues by members of the Catholic clergy as well as by clergymen of other de-nominations. The same sort of question was raised in California when the attempt was made to take away the tax exemption given to church property. Both Catholics and Protestants spoke out strongly against the proposed amendment in the course of this last campaign. The question here is one of proper methods and of balance and restraint.

Mr. Harrison. Any discriminating citizen would probably grant that Catholics should have the same right to influence people as anybody else. But we are led to the fear of some that should they become powerful enough, Catholics wouldn't tolerate open competition. Non-Catholics bring up the statement of Leo XIII in his Encyclical on the "Constitution of States," where he said: "It is not lawful for the State any more than for the individual either to disregard all religions or to hold in equal favor different kinds of religion." People aren't worried because Cardinal Spellman has influence, but of what might happen to dissenters should Catholics win control of the country.

Senator McCarthy. I refer again to the statement of the Catholic bishops and the statement of Archbishop McNicholas which I quoted earlier. I am sure you are familiar, too, with the statements of Father John Courtney Murray. I, myself, wrote in an article in Commonweal, in 1951, as follows: "The proposition that a Catholic majority could rightfully suppress Protestant or other religious minorities teaching nothing likely to subvert the temporal common good is tenable. In the same way the argument that a Protestant or other religious majority could rightfully proscribe or interfere with re-ligious freedom of Catholics is also unten-I have not been excommunicated.

Mr. HARRISON. You would describe yourself as a believing Catholic?

Senator McCarthy. Yes-and practicing. Mr. Harrison. What connection do you personally make between the doctrines and the moral principles put forward by the church and your day-to-day political de-

Senator McCarthy. It is hard to give a short answer. My thesis is that strictly

speaking there is no such thing as a Catholic or Christian politics, or a Catholic or Christian political system, or a Catholic or Christian form of government, any more than you can properly speak of a Catholic physics or a Catholic geometry. It's a mistake to label a political party a Catholic party, as they do in some of the European countries, or a Christian Democratic Party as they've done in Germany.

Mr. HARRISON. Why?

Senator McCarthy. Because it gives to what is properly political action a kind of religious overtone which is improper. There is a danger in it both to proper political procedures and a danger in it too to religion and religious institutions. The line should be kept clear. It doesn't follow from this that there is no such thing as a Catholic or a Christian approach to certain issues. If a Christian genuinely accepts the teachings of his church with regard to his obligations to his fellow man, it seems to me that this would be reflected in his approach to a prob-lem like immigration, or famine relief to India or Haiti. But this is not strictly speaking a Christian politics.
Mr. Harrison. You use Christian and Cath-

olic interchangeably.
Senator McCarthy, That's right, and in these areas the distinctions are rather hard to draw. I would include the humanists, too. I'm only saying that since the Christian does have certain beliefs those beliefs ought to be

reflected in his approach to politics.

Mr. Harrison, Apparently some Catholic editors felt that Senator Kennedy's article in Look magazine didn't acknowledge sufficiently the influence religious convictions should have on political behavior. The most controversial part of that article, at least to the Catholic press, appears to have been his remark that, "Whatever one's religion and his private life, nothing can take precedence over his oath."

Senator McCarthy, Senator Kennedy was both criticized and defended in the Catholic press. But before commenting, I would like to divide the statement and say first that there is no conflict between Catholicism and the oath of office which one is called upon to take as President of the United States, as a Member of the U.S. Congress, or for any other Government office. And, on the other hand, to say that one's religion does have bearing upon his political activities and upon his theory of politics. The United States has never demanded of its citizens absolute submission to political power. Dean Sayre, dean of the Episcopal Cathedral of Washington, summarized this admirably in a television program last June when he said that, "No Christian can grant to the State an absolute right over his conscience"; and went on to say that Catholics, as well as Protestants, owe "allegiance to the Lord which is over and above and beyond the allegiance that we owe to the State." In our own time, the Nazi war crimes which were committed in the name of the State were challenged and individuals were punished following the trials on the basis of the existence of a higher, although unwritten, law and responsibility.

Mr. HARRISON. We started by agreeing that a good deal of this current discussion has arisen again because of the prospect of a Catholic presidential candidate. And since the President is directly charged with responsibility for conducting our foreign af-fairs, it will certainly be asked whether a Catholic President wouldn't be heavily influenced by a Vatican foreign policy line.

Senator McCarrhy. I don't see any danger of that happening, really, because for one thing, the international political policy of the Catholic Church is hard to determine and insofar as it can be determined, it seems to coincide largely with U.S. foreign policy. The possibility that because the Catholic Church is aggressively anti-Communist, U.S. policy might be forced into a fixed mold which would not allow for any flexibility or adjustment seems remote.

Mr. Harrison. You say it would be very difficult to define the international "line" of the Roman Catholic Church. Yet isn't it true that the church in every country has been anti-Socialist and disposed to conservative rightwing parties?

Senator McCarthy. There is some truth in what you say. It should be noted, however, that European socialism, at least in the beginning, was usually doctrinaire rather than practical or pragmatic, and as a general rule included anticlericalism if not anti-religion as accompanying that objective. In more recent years, however, this hard line has been softened. Catholic political parties and the Socialists have been working closely together for the recovery of Western Europe. In the United States, the programs which generally have been labeled as socialistic have been supported by Catholics in the Congress. The British Labour Party too, I believe, has strong Catholic support. There is certainly in Catholic teaching and

writing a great body of thought supporting economic, social, and political change.

Mr. Harrison. Do you think that in our lifetime a Catholic, assuming he is qualified, could be elected President?

Senator McCarthy. It depends on the personality of the candidate and on the issues. Catholicism itself would not be an insuperable obstacle in my opinion.

Mr. Harrison. How do you explain the fact that Harry Truman, a Baptist, proposed to send a representative to the Vatican and JACK KENNEDY, a Catholic, says he thinks it's a bad idea?

Senator McCarthy. I will not undertake to explain Senator Kennedy's position, but I have heard President Truman discuss his attitude a number of times. It was his opinion that the Vatican would provide an excellent listening post and that it would have been helpful to American policy to have an Ambassador there. It is possible that Mr. Truman overemphasized and overvalued the Vatican as a listening post. It is my opinion that the desire of the President in power on an issue of this kind should be given a great deal of weight. The question raised by Senator Kennedy of the division which might result at home, however, is deserving of consideration also.

Mr. Harrison. Aren't you considerably more willing to let people follow their own inclinations in terms of what they read, what they hear, what kind of medical care they are going to have, than are the majority of your coreligionists? Isn't your brand of liberalism unusual for a Catholic?

Senator McCarthy. I assume you're using "liberalism" as synonymous with a respect for civil liberties and civil rights, an enlightened internationalism, a willingness to experiment and to use the power of government to promote economic justice and security. Well, in this sense, I doubt whether my liberalism is unusual for a Catholic. I could name two or three Senators who are, on the record, just as liberal as I am if not more so. I think that voting records will show that certainly on the average, Catholics in both the Senate and the House are more liberal than the average of the Congress taken altogether.

Mr. Harrison. Do you think we all ought to say in advance of the 1960 campaign that religious affiliations has no relevance and should be ruled out of the political debate?

Senator McCarthy. No. I wouldn't say that it has no relevance or that it should be ruled out of political debate altogether. But in my opinion, only proper questions should be asked and the political debate on the issues should be kept within bounds. It is quite improper to ask a man who offers himself as a candidate for the Presidency or who is proposed by a major political party with the full knowledge that he will have to take the oath of office whether or not he will hon-

estly fulfill that oath of office. To the extent that religious beliefs may influence political action, then inquiry into the stand of a candidate on those issues may have some justification. One might wish to question a Christian Scientist on the question of medical research; a Quaker on national defense policy, a Catholic on a possible national divorce law. But none should be prejudged Unfortunately the wrong questions are too often asked or the right questions asked improperly or directed to the wrong persons.

Mr. Harrison. Yet, no candidate for the Presidency has felt obligated in the past to discuss his relationship with the Baptist Church or the Episcopalian Church. This whole discussion seems to be exclusively relevant to Catholic candidates.

Senator McCarthy. In fairness, the questions which might be asked of one denomination I think should be asked of members of all others since on no one of these issues could one be absolutely certain of the position taken by members of the other denominations that might be involved.

Mr. Harrison. What about such charges as were circulated in California in 1958 against Pat Brown, that the election of a Catholic as governor would result in the abolition of the public school system. Isn't that an example of an out-of-bounds use of religious affiliation as a way of discrediting a candidate?

Senator McCarthy. Yes; since it involved a prejudgment of Pat Brown and I am sure a misrepresentation of his position. It would, of course, be in order if a person were not informed to inquire as to what stand Pat Brown took on a current issue relating to the public school system. I am sure that on the basis of his record as attorney general that this record would be clear to most people.

Mr. Harrison. What do you think is at the bottom of the continuing doubt and suspicion of Catholics in some liberal, egghead circles?

Senator McCarthy. I think that basically this doubt and suspicion arises from the liberals' position that everyone should have an open mind and make his decisions issue by issue and that since, according to the liberal's judgment, Catholics are doctrinaire, they cannot approach each issue with a fully open mind. The fact is that in many case the liberals are really doctrinaire in their way and issue by issue are inclined to be as doctrinaire as anyone else is. I think it would be helpful if the word liberal could somehow be copyrighted and used only under carefully circumscribed conditions. Perhaps its use as a noun should be outlawed so that henceforth no one would be simply a liberal, but would have to be a liberal something. In politics he would be a liberal Democrat or a liberal Republican or a liberal vegetarian. If religion were to be the substantive used to distinguish, he would be a liberal Catholic, a liberal Episcopalian, or a liberal Presbyterian or a liberal of some other denomination. This, it seems to me, would make things simpler for those who are called liberals as well as for the critics of liberals and liberalism.

American Library Association

EXTENSION OF REMARKS

## HON, RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. MADDEN. Mr. Speaker, the American Library Association held their annual convention in Washington this week. Several thousand delegates representing this great organization were present and outlined future plans, both legislative and otherwise, for expansion and progress in the great work and service which they are giving to the American public.

Millions throughout America, in all walks of life and in all areas, including rural, urban, and sections of the courtry, only a few years ago could not enjoy the fruits and benefits of our public library system.

At the request of Mrs. Ruth Berg, of Munster, Ind., who for years has been a devoted official and worker for expanded library service, I submit the following speech made on Thursday, June 25, 1959, at the Mayflower Hotel in Washington, D.C., by Mr. Emerson Greenaway, president of the American Library Association, for the information of the Members of the House of Representatives:

REMARKS OF ALA PRESIDENT EMERSON GREEN\*
AWAY AT A LUNCHEON HONORING MEMBERS
OF CONGRESS AT THE MAYFLOWER HOTELS
THURSDAY, JUNE 25, 1959

As president of the Américan Library Association, I wish to express to the Senators and Representatives our heartfelf thanks for your continued helpfulness in enabling librarians to fulfill better their duties and obligations to the adults, the young people and the children of this Nation. We are glad that you have been able to spare time from your very busy schedule at the Capitol to be with us today.

Librarians, of course for their constituents are associated.

ents, are especially grateful to you for have ing passed the Library Services Act of 1956 and for supporting increases in appropriations each year and our delight in the Sen ate's action yesterday in recommending the full appropriation of \$7½ million is most heartening to us. From the four corners of this Nation have of this Nation have come enthusiastic reports about educational and cultural benefits which this legislation has stimulated. County commissioners, housewives, businessmen, teachers, and persons from all walks of life praise it. Because of this act. 11 million fural Americans have public library scryles available for the public fundamental public for the public fundamental public fun library service available for the first time. and more than a hundred bookmobiles have been put into service to bring books to young and old in our small towns, villages and Large numbers of farming communities. potential readers, previously on short rations, are now beginning to be fed.

We are not unmindful of your wisdom in providing the money necessary to acquire and service the great collections needed at research in fields such as agriculture, medicine, science, cine, science, and education. The world-re-nowned Library of Congress is an outstand-ing grample of ing example of congressional action in making materials ing materials also available to scholars and research workers and the lay public with specialized problems. We value your recognition of the need for nition of the need for adequate library sources required to run efficiently the operations of the executive agencies and judicial branches judicial branches of the Federal Govern-The funds which Congress has proment. The funds which Congress has provided for American libraries abroad have been in those countries a source of true enlightenment about our accomplishments goals, and ideals.

Libraries are not merely buildings, but are collections of books and related materials serviced by trained librarians, to enable their users to understand the present or relation to the past and to build firmly (or as firmly as we can) for the future.

as firmly as we can) for the future.

It has been a privilege for us to work with you on significant educational and other you on significant educational and other you. For instance, the association interested in measures relating to juvenile

delinquency control, the problems of our aging population, the revision of depository library laws to make Government publica tions more widely available.

Our association represents librarians and trustees from all types and sizes of libraries, from metropolitan areas to sparsely populated regions, from mountains, plains, and deserts, just as you represent the several States which vary widely in many respects.

We are a relatively small group but our legislative concerns are many. The ALA appreciates the unfalling courtesy and helpfulness with which you, as representatives of the people, the able members of your staffs, and committee personnel support library programs which affect the lives of all cities of the lives of all citizens of this country. We feel that this country. We feel that this is a good investment which will pay sound dividends.

## Leap Into the Dark

EXTENSION OF REMARKS

## HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial appearing in the Washington Post yesterday, June 23, entitled "Leap Into the Dark."

I feel this editorial fully expresses the very definite position in the matter confronting the Congress at this time.

## LEAP INTO THE DARK

The legal Pandora's box concocted by Representative Howard Smith is once more before the House of Representatives. Its authors have represented it to be a simple measure of limited scope designed to cure a great evil—the unnecessary invalidation of Statea laws by the Supreme Court. Actually it is one of the most complicated measures ever to come before Congress, and, instead of mending any defect in Federal-State relations, it would unloose a veritable plague of confusion as to where Federal law ends and State law begins.

The bill is in the form of a mandate to the courts. It provides that

"No act of Congress shall be construed as ndicating an intent on the part of Con-gress to occupy the field in which such act operates, to the exclusion of all State laws on the same subject matter, unless such Act contains an express provision to that effect, or unless there is a direct and positive conflict has flict between such act and a State law so that the two cannot be reconciled or consistently stand together."

It would be one thing to tell the courts that hereafter Congress intends to specify whether the courts are the courts of the courts are the courts of the co whether its acts should be regarded as nullifying all State legislation in the same field. It would be quite another thing to say, as this bill does, that no legislation now on the books was intended to have exclusive sway even though the legislation was passed without considering that specific point. This would envelop in doubt many statutes in the flat. the field of drug control, immigration, fi-

nance, labor, transportation and so forth. Representative Kastenmeter has made the point that passage of this bill would give Congress "the very real obligation to re-evaluate and reform all existing Federal statutes in color of the congress whether of statutes and reform all existing retained in order to determine whether or not each statute shall expressly preempt State and local laws." That task he suggests would be considered in section until gests would keep Congress in session until Christmas. The Congressman is optimistic.

With Mr. SMITH'S muddler on the books, Congress would be fortunate if it straightened out the law in several years of continuous session.

Originally this bill was designed chiefly to upset the Supreme Court's decision in the Steve Nelson case. It was commonly assumed that the Court in that case had invalidated State laws dealing with subversion against the Federal Government. In the recent Uphaus case, however, a majority of the Court said that the enforceability of the Pennsylvania Sedition Act had merely been superseded by the Federal Smith Act. "All the [Nelson] opinion pro-scribed," the Court said, "was a race between Federal and State prosecutors to the court-house door." That seems to leave the States all the leeway that would be tolerable in fighting subversion, which is primarily a national concern.

Despite this clarification of the Court's intent, or shift in its position, the demand for a shotgun remedy is pressed in the House. Members will be reckless indeed if they vote for this leap into the dark without knowing what the outcome may be. Seldom has the House been in such grave danger of playing the role of wrecker under the pretense of straightening out the law.

#### Garrison Diversion Unit

EXTENSION OF REMARKS OF

## HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. BURDICK. Mr. Speaker, under unanimous consent I include in the Rec-ORD a resolution adopted by the North Dakota State Water Conservation Commission on June 19, 1959. As I pointed out to the Appropriations Committee and to the House, the full appropriation was necessary to prevent disruption and undue delay in this worthwhile and necessary project.

The resolution follows:

RESOLUTION OF THE NORTH DAKOTA STATE WA-TER CONSERVATION COMMISSION URGING RES-TORATION OF HOUSE REDUCTION IN THE 1960 BUDGET ESTIMATE FOR THE GARRISON DIVER-

Whereas the Congress of the United States, when authorizing the Missouri River Basin project in 1944, agreed to provide an adequate water supply for and to execute a comprehensive program of reclamation develop-ment in North Dakota as part compensation for the taking of more than half a million acres of good farmlands for the construction of the Garrison and Oahe Reservoirs; and

Whereas the Garrison diversion unit, in the central and eastern portions of the State, proposes the irrigation of 1,007,000 acres of lands, already under cultivation, in the vicinity of the Souris, Sheyenne, and upper James Rivers, the restoration of lakes and streams, and the providing for pollution abatement and supplying of municipal and industrial water along the three rivers and in the valley of the Red River of the North; and

Whereas North Dakota's stake in the basin project is the promised irrigation development, without which the State and her people will not be fully compensated, under the agreement, for the loss of valuable lands taken for reservoirs, the production, income, and tax revenue from which are forever lost;

Whereas the Bureau of Reclamation in 1957 completed a unit report presenting the general plan of development and its feasibility along with detailed data for those features proposed for initial construction, and has continued working on detailed topographic mapping and land classification. canal, lateral, and drainage layouts, cost estimates and economic studies in selected areas in order to complete and have available definite plan reports thereon; and

Whereas the House of Representatives reduced by \$250,000 the budget estimate of \$550,000 for the Garrison diversion unit, which reduction will badly disrupt the technical staff, seriously hamper and delay the work programed for fiscal year 1980, and ultimately increase the project cost by an

amount greater than any savings effected thereby: Now, therefore, be it

Resolved by the North Dakota State Water Conservation Commission, the State agency having jurisdiction, control, and supervision over the water resources and their development, meeting in the State capitol. Bismarck, N. Dak., June 19, 1959, That the Senate Committee on Appropriations and the conference committee on public works appropriations for 1960 be, and they are hereby, most respectfully petitioned and requested to approve and recommend the restoration of the \$250,000 House reduction in the budget estimate of \$550,000 for the Garrison diversion unit; and be it further

Resolved, That the commission secretary transmit copies hereof to Senators WILLIAM LANGER and MILTON R. YOUNG, and Senator CARL HAYDEN, chairman, Senate Committee on Appropriations, and to Representatives QUENTIN N. BURDICK and DON L. SHORT, and Bepresentative CLARENCE CANNON, chairman. House Committee on Appropriations.

## Indiana Calumet Region Now a Standard Metropolitan Area

EXTENSION OF REMARKS

## HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Friday, June 26; 1959

Mr. MADDEN. Mr. Speaker, the Calumet region of Indiana wishes to commend the Bureau of the Budget for establishing the Gary, Hammond, and East Chicago new standard metropolitan area. This great industrial area is northwest Indiana is now composed of over a half-million people and is the most rapidly growing area in the United

The action of the Bureau of the Budget reveals that it is cognizant of this great growth and in separating northwest Indiana from the Chicago metro-politan area, the department is in step with the march of progress.

The following editorial by Carl M. Davidson, managing editor of the Hammond (Ind.) Times sets out additional facts in regard to the new metropolitan

METROPOLITAN AREA A CAUSE FOR PRIDE

Although he may be somewhat puzzled about its precise meaning, every Lake County resident can take pride in the fact that the U.S. Budget Bureau has designated Gary. Hammond, and East Chicago as a new standard metropolitan area.

Reduced to its simplest terms, the designation means just this: The Government finally has recognized this area's tremendous growth in population and its development into one of the Nation's major industrial centers.

Previously, Lake County was included as a part of the Chicago metropolitan area. Government figures concerning population, labor force and industrial output in this area were lumped with those of Chicago and vicinity.

The result was confusion. For example, an industry considering the location of a plant in Lake County found it difficult, if not impossible, to segregate the figures pertaining to Gary, Hammond and East Chicago from the totals for the Chicago area.

The idea of considering Lake County as a part of the greater Chicago area was perhaps appropriate when it was set up in the 1919 Census of Manufacturers. But, as the years went by and Lake County's industries mushroomed, the plan became obsolete.

A handful of Lake County businessmen first asked for a separate designation from the Budget Bureau more than 3 years ago. Nothing was acomplished at that time.

This spring, however, the request was renewed with support from the chambers of commerce of Gary, Hammond, and East Chicago, and the Inter-Chamber Council of Lake County. U.S. Senators and Representatives from Indiana also supported the plea.

Together, these champions of Lake County pointed out that the old system was unfair to an area that had "come of age," so to speak. They contend, and rightly so, that the mighty Gary, Hammond, East Chicago industrial community deserved recognition as an entity entirely separate from Chicago.

Under the old plan, Lake County's light was being hidden under Chicago's bushel. For instance, Chicago had gained fame as the Nation's leading steel producing and petroleum refining center, while in fact the giant steel mills and refineries that made this reputation possible actually are in Lake County, Ind.

When the facts were in, the Budget Bureau announced the change creating a new Gary-Hammond-East Chicago metropolitan area, which includes Lake and Porter Countles. In turn, McHenry County, Ill., was added to the Chicago metropolitan area.

One of the important considerations that led to the change was the small number of Lake County people who commute to jobs in Chicago. The Budget Bureau stipulates that at least 15 percent of a county's resident working population must commute to the central city or county of a metropolitan area to be considered a part of it. Only 11.7 percent of Lake County's workers commute to Cook County for work, the Bureau reported.

McHenry County was added to the Chicago area, the Bureau said, because 28.3 percent of McHenry's labor force works in Cook County.

The change was made in sufficient time to be reflected when the Census Bureau makes its 1960 population count. The Gary-Hammond-East Chicago area will be listed separately in various kinds of statistics—population, births, deaths, labor force, and other business and industrial figures.

Some Chicagoans are understandably unhappy about the change in listings, for the effect on Chicago's rating will be marked. As an example, the new designation will drop the Chicago metropolitan area from second to 30th in industrial rank among the 192 standard metropolitan areas in the United States. Also, it is expected that the exclusion of the Gary-Hammond-East Chicago area will lower Chicago from second place to third among the Nation's most populous areas when the 1960 population count is made. Los Angeles is expected to move ahead of Chicago into second place behind New York.

What the Chicago objectors have failed to realize, however, is that "the boy next door" has grown up. On the basis of its rapid growth, the Gary-Hammond-East Chicago

area deserved greater recognition years ago.
Lake County's population grew from
159,957 in 1920 to 451,400 in 1958. Hammond went from 36,004 inhabitants to
108,800 in the same period, while Gary increased from 55,376 to 178,700. The area's

creased from 55,376 to 178,700. The area's industrial growth has been equally impressive.

Thus, in its designation as a metropolitan area the Gary-Hammond-East Chicago community has gained only what it justly deserved.

The change was a long time coming but, though belated, is a welcome recognition. Speaking for the entire community, we're pleased and proud.

Panama Canal: New Transit Record

EXTENSION OF REMARKS

## HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Friday, June 26, 1959

Mr. THOMPSON of Texas. Mr. Speaker, the May 1959 transit record of the Panama Canal of 897 oceangoing commercial vessels has established a new high and evoked a thoughtful editorial

in the June 3, 1959, issue of the Star and

Herald of Panama, Republic of Panama.

This increase in traffic again emphasizes the necessity for major operational improvement and increase of capacity of the Panama Canal now being studied by a special board of consultants under the direction of the Committee on Merchant

Marine and Fisheries.
The editorial follows:

CANAL SETS NEW TRANSIT RECORD

We congratulate the Panama Canal and all its loyal and efficient workers on its new record in the number and efficiency of the transits chalked up during the month of May of this year.

May of this year.

We quote from our Tuesday edition story captioned "Canal Transits Hit Record During May."

"For the second time in Panama Canal history, total traffic for 1 month exceeded 1,000 vessels as oceangoing commercial traffic in May reached a new high mark of 897 vessels.

"The previous record for commercial traffic was established only last March when 882 ships of over 300 tons or more went through the waterway."

That is a very great record of efficiency and safety.

The Panama Canal has meant greatly to world maritime traffic. It has meant virtually everything to Panama; a constant stream of world maritime traffic, visitors from all over the world, increased commercial prominence, many other benefits almost too many to mention, including sanitation.

We might say that our two communities on this isthmus, Panama and the Canal Zone, are giving the world a living example that two nations, one largely Latin, the other North American, with a smattering of foreigners who live here because they like it, can live together in peace and friendship.

There are neither barriers nor restrictions in crossing our borders. We celebrate jointly our respective national holidays, attend each other's fiestas, and are never challenged by the authorities of either jurisdiction as we move from one to the other.

The Panama Canal has brought our Americas together as probably no other achievement could have done. It has meant greatly

for Panama. Built primarily as a defense measure for the United States far flung coastlines, it, Panama, has become a tourist paradise and a healty, happy land in which

Incidentally let us note that the Panama Canal has been added to the official list as the eighth wonder of the world.

It Was a Mighty Good Wheat Bill

EXTENSION OF REMARKS

## HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES
Friday, June 26, 1959

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include a broadcast by the Farmers Union Grain Terminal Association of St. Paul, Minn., on June 24, 1959:

Now that Congress has passed a mighty good wheat bill, what is coming up next?
The Secretary of Agriculture, as you know, has denounced the bill as he was expected to do. The President is silent, but there is little doubt he'll veto the bill, just as he did his "golden promise" to agriculture years ago.

But this does not mean wheat farmers are right back where they started from. Far from it. This wheat bill is a big victory for the farmers in these States, because they did what the political experts said could not be done. The driving, pressuring, pounding did get a good wheat bill started in the House and through the Senate. It gave Republican Senators in our States, all except Case, of South Dakota, the courage to defy the White House because they knew what the farmers want. So whatever happens from now on in the wheat referendum on July 23 will be a lot more important in the eyes of the Nation.

This is a good bill because farmers put pressure on Congress. It was good politics because this wheat bill: Out the surplus, cuts the costs, protects wheat farmers income, and puts a top ceiling on big payments.

But you will soon hear loud wails from many of the big pressure outfits, complaining this is politics. Take Life magazine, for example. Once a week, regular as the mall-man makes his rounds, this big, thick picture magazine comes to the GTA office; it is full of pictures, and, lately, the pictures show big grain farmers knee deep in stored grain. Whatever the editors are trying to do, they leave the impression on the average city reader that farming, somehow, has become a racket and farmers are shady characters who get fat subsidies to grow grain for the Government and put it in big bins at the taxpayers' expense.

Now, the reason we mention Life magazine is that while the editors leave the impression that no farmer had a moral right to get any Government help, we ran smack-dab into an article which tells how hard it is for the corporation executive to live on \$850.000 a year.

\$50,000 a year,
We are not kidding. So help us, Hannah,
here is the gospel as it appears in Life magazine—and we are quoting word for word:
hes

"By the time a \$50,000-a-year man finishes paying his Federal income taxes (about \$14,000), State income taxes (about \$3,000 in New York), the taxes and mortgage payments on a \$75,000 house, \$5,000 for servants or run the place, the payments on a \$6,000 Cadillac, and a \$3,500 sports car for his wife, the \$2,500 that it costs to send the older daughter to college, and the \$1,500 for the

younger son to prep school, \$2,500 for insurance, \$2,000 for charity, and \$3,000 that it costs to belong to a golf club in the country and a luncheon club in town, and the \$3,000 or more that it costs him in pocket money fust to go to work every day-after these

necessities of the very successful executive life, he has very little left for anything else."
We have no idea how many readers of Life magazine, or the readers of this script, are now overcome by grief and unable to carry on because of their worries over how \$50,000 executives can make both ends meet.

The whole Life magazine article would be hilariously amusing if it were not so tragically true that millions of farmers and working people must live on \$4,000 or \$5,000 a year, or less,

It is this economic truth that turns the Life article into a ridiculous farce.

### Foreign Aid Program for Laos

EXTENSION OF REMARKS OF

## HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. CONTE. Mr. Speaker, under leave to extend my remarks, I include a perceptive editorial from a recent edition of the Boston Herald, discussing the controversy over foreign aid to the country of Laos:

## How STRONG A BASTION?

The House Government Operations Committee is having a running fight with the Eisenhower administration just now over our aid program in Laos. And superficially the administration is having the better of it.

The committee contends that our aid to the committee contends that outheast the tiny (91,000-square-mile) Southeast Asian country is wasteful and inefficient. It is getting more American aid per capita than any other nation, and most of the aid, says the committee, is going into the pockets of local warlords and corrupt businessmen.

The State Department and the International Cooperation Agency admit that there have been some irregularities in aid administration tration, which are now being corrected. But they point out that the program's main purwhich is to bolster Laos against Communist infiltration, is being handsomely achieved. With American help, the Laotlan Government has recently extended its authority into territory previously controlled by Pathet Lao (Communist) rebels, and it has just thrown the last Communist out of

This is an all but clinching proof that the ald program has been worthwhile.

There are still serious questions, however. The Laotian Government, under its vigorous Young leader, Phoui Sananikone, is indeed now strongly anti-Communist. But its re-cent activities have aroused Laos' Communist neighbors, China and North Vietnam, and have caused Soviet Foreign Minister Gromyko to propose reactivation of the International Control Commission which operated in Laos after the French withdrew in 1955.

Some observers fear that the Reds are planning an invasion of Laos as a diversion for Berlin and the failure of the Geneva conference. And that would produce a real test of Laos' effectiveness as an anti-Communist bastion.

The little kingdom is completely land-locked, which means that outside aid would have to come through neutral Burma or mountainous Thailand, Cambodia, or South Vietnam. Also the country has no paved roads or railroads so that supply and deployment would be difficult. And worst of all, its outsize (25,000-man) American-supported army is not considered battleworthy, particularly against Communist enemies.

Which brings us back again to the congressional criticisms. Should we not, the committee asks, have spent less money on building up an army that won't or can't fight, and more on the Laotian people and economy? In a real showdown with the Reds won't it be our massive retaliation that counts? Won't we, in the end, have to be the bastion?

The answers to these questions are not yet clear. But the issues are critical. Congress and the administration should be working together, not in opposition, to resolve them

#### Curbing Military Aid

EXTENSION OF REMARKS OF

#### HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Friday, June 26, 1959

Mr. KASTENMEIER. Mr. Speaker, one of our country's outstanding daily newspapers, the Milwaukee Journal, Milwaukee, Wis., in an editorial pub-lished June 19, 1959, has stressed a point that a number of us in Congress have made on many previous occasions. This newspaper pointed out that in our military and economic aid program, our principal purpose should be to help those underdeveloped countries that want to help themselves.

The editorial also quotes my distinguished colleague and friend, the Honorable CHESTER BOWLES, of Connecticut, as one of those who are speaking out in Congress that we must strive to set strict standards on our assistance.

This editorial, which deserves a thoughtful reading by all of us, follows: CURBING MILITARY AID

Policymakers in the State Department argue that military aid and defence support funds given many underdeveloped nations are vital for their economic and political stability.

If they don't get such aid, the argument goes, they will put themselves into economic and even moral debt for arms-and that debt might end up being owed to the Soviet Union. Even if these countries of Latin America, Asia, and Africa do not need arms, it is claimed, they demand them for prestige

As to defense support-aid given to help a nation keep its military forces going— Undersecretary of State Dillon contends that it is vital. If the underdeveloped nations didn't get it, they would reduce domestic spending for economic projects in order to keep from cutting military forces.

This is like saying that we are more interested in the development of these nations than they are themselves. If this is true, we're wasting more than money. We're wasting time, too. If wasteful and unnecessary arms and military establishments are necessary to prod a nation into economic development, then the main essential of development—desire—is lacking. Our main interest ought to be in helping people who want to help themselves.

Representative Bowles, Democrat of Connecticut, who favors economic aid but asks military aid cuts, wants us to set strict standards on aid. He wants it to go to nations which "demonstrate a willingness to sacrifice in their own behalf and whose governments are so organized that they can use our help with a minimum of waste." He would demand that nations getting aid have a definite development plan, curb luxuries imported from outside and institute tax and land reforms.

Such a program would automatically knock out much wasteful military aid. It. would help guarantee that our money was not being wasted and that we were helping people with a real desire to develop. Bowles' stand makes infinitely more sense than the official Government attitude.

The Senate Foreign Relations Committee seems to agree. It has voted to cut military aid to individual Latin American countrie and prohibit aid that helps keep dictator governments in power. That's marching in the right direction.

Department of Justice and ASCAP Reach Agreement on Amended De-

> EXTENSION OF REMARKS OF

## HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 26, 1959

Mr. ROOSEVELT. Mr. Speaker, last Friday, June 19, 1959, a proposed amended consent judgment was at long last presented to Judge Sylvester Ryan in the U.S. District Court for the Southern District of New York, in the Government's case against the American Society of Composers, Authors, and Publishers. I understand this proposal has not finally been accepted because, for the time being, the judge is holding it under advisement.

Early in 1958, subcommittee No. 5 of the House Small Business Committee received a multitude of complaints concerning the operations and policies of ASCAP. These complaints disclosed that a number of small business publishers and composers had been forced out of business and that others were facing a similar fate. As a result, public hearings were held during March and April 1958 at which time comprehensive and exhaustive data were developed respecting the policies and procedures applied by the society.

The witnesses that appeared before the subcommittee made it clear that changes in the operations of the society must be brought about if the smaller publishers and composers were to remain in business. This testimony seemed to establish that the larger publishers and composers had arranged to perpetuate themselves in power as controlling members of . the board of directors; that the royalties collected by the society were distributed inequitably and in such manner as to thwart the growth or expansion of the smaller and newer members. ASCAP's grievance machinery was attacked by witnesses who testified that members complaining to the society were deprived of the privilege of access to the society's records. Generally speaking. the hearings demonstrated the urgency for action by the Department of Justice in connection with the entire situation.

The subcommittee, by House Report the recent shooting down by the Reds of No. 1710, 85th Congress, concluded that remedies for the more important problems disclosed by its hearings may be available through appropriate action by the Department of Justice. The complete record of the testimony taken by the subcommittee, together with the subcommittee's recommendations, was promptly furnished to the Department of Justice. Almost immediately thereafter, the Department opened negotiations with attorneys for ASCAP with the view in mind of determining whether agreement could be reached respecting the provisions of an amended consent decree which would remedy those evils brought to light by the subcommittee's hearings. Negotiations continued for over a year and have culminated in the proposed judgment that was presented to Judge Ryan last Friday.

As of this date, the text of the proposed agreement has not been made available to the subcommittee, but promptly upon receipt it will be carefully and thoroughly reviewed by the com-

The Honorable Robert A. Bicks, Acting Assistant Attorney General in charge of the Antitrust Division, has requested Judge Ryan to permit all interested parties, including especially the smaller publisher and composer members of the society, to have the opportunity of analyzing the terms of the agreement and of expressing their views to the court prior to its acceptance. I believe that Mr. Bicks is to be commended for this procedure which should insure that the provisions of the decree will provide the remedy intended. If the judge grants this request of Mr. Bicks, certainly the smaller publishers and composers should take advantage of the opportunity afforded and I urge them to do so.

I have always felt that consent decrees in antitrust matters should be placed in abeyance for a reasonable length of time prior to final acceptance by the court and heretofore have introduced legislation calling for such pro-cedure. It seems to me that the public interest can be protected only when some

such policy is applied.

Certainly it is gratifying to know that the Antitrust Division has taken decisive action in this case. It is hoped that this action will lead to the acceptance by the court of a decree that will provide a climate in which the smaller composers and publishers may compete effectively and be placed in a position that will permit them to receive the full benefits and fruits of their membership in the society.

## Patrol Flights by American Planes

EXTENSION OF REMARKS OF

## HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Friday, June 26, 1959

Mr. MONAGAN. Mr. Speaker, the country has been deeply disturbed by a naval patrol plane off the coast of Korea.

Particularly disturbing has been the information that this plane was unescorted and that it had not been equipped with sufficient weapons to defend itself against enemy attack.

I have been particularly interested in this unwarranted incident of aggression because the pilot of the Navy plane, Lt. Comdr. Donald Mayer, comes from Litchfield, Conn., in my district and I have requested a report on the matter from the Secretary of Defense.

I was, therefore, very much interested in the comments on this subject by William Randolph Hearst, Jr., editor in chief of the Hearst newspapers, in the June 21, 1959 issue of those papers,

I insert Mr. Hearst's comments herewith.

All of us were shocked this week by the revelation that the unescorted naval patrol plane shot up by the Reds off Korea had practically no weapons with which to defend itself.

A second shock came when the Navy stated there are no orders to escort future patrol flights.

Representative FLOOD, Democrat, of Pennsylvania, advanced a novel idea when he suggested that, since admirals who wear wings are supposed to be able to fly planes, the next patrol flight should be manned by 14 admirals.

You can bet that a planeload of admirals would have an escort enough to fill the skies.

Everybody I've talked to is really mad about the unarmed plane, and the Navy brass must realize they can't just talk their way around the situation. It calls for follow through to make sure American boys aren't going to be sent on dangerous missions without weapons of defense.

## The Federal Government in the Oil Business

EXTENSION OF REMARKS OF

## HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Friday, June 26, 1959

Mr. CONTE. Mr. Speaker, the program of mandatory controls on imports of oils into this country marks an unprecedented peacetime move of our Government to control and regulate a domestic industry.

Under leave to extend my remarks, I include the text of a message to the employees and shareholders of the Gulf Oil Corp., which appeared in a recent edition of the Orange Disc, magazine of the Gulf companies:

GULF OIL CORP., Pittsburgh, Pa.

To Fellow Employees and Shareholders of Gulf Oll Corp.:

For some time now our Federal Government in the name of national security has been inching its way into the oil business. As so frequently happens when considera-tions of politics are imposed upon a competitive economic structure, the results are capricious and damaging to private industry.

This kind of activity has taken many forms, but the most recent, and from the standpoint of your interests in the Gulf Oil Corp., the most damaging sample has now taken form in a program of mandatory controls on imports of crude oil and its products, which became effective on March 11. The results of this action appear likely to bedevil the international oil industry years to come.

Gulf's position concerning imports of foreign crude has always been one that Gulf's management considered to be fair and statesmanlike in its approach. Historically, this company is one of the oldest crude importers in the country, having begun its international operations with the discovery of important oil deposits in Mexico in 1914. Since that time Gulf has spent hundreds of millions of dollars in discovering and developing petroleum reserves in various parts of the world. Its most notable successes have been in Kuwait, Venezuela, and Canada. During all of these years Gulf Oil Corp. has steadily pursued a policy aimed at finding a satisfactory balance between its imports and its position as a major producer of domestic crude. Because of this desire, and prior to any import restrictions, Guif of its own volition reduced imports, as in 1950 after domestic consumption lagged. Gulf's management also has consistently accepted and scrupulously abided by quotas fixed by governmental agencies under a voluntary program of holding imports down to such levels as may be required for the maintenance of a healthy and expanding domestic industry.

Now, however, the company finds itself, along with many other companies that occupy a historical import position, saddled with mandatory controls which are obviously more derived from political than realistic formulae, and are in the opinion of Gulf's management unfair, quixotic, and calculated to do an immeasurable amount of damage to your company's freedom of initiative and its rights to utilize crude oil deriving from its very large investments abroad. From a high point of 133,600 bar-rels per day of total imports in 1956, your company's imports have now been reduced to 80,800 barrels per day, a loss of 40 percent.

However, it is not the loss of Imports alone which are, in your management's view, the most serious aspect of the new imports control program. Presumably in answer to political pressures, the Government will allow an import quota for foreign crude oil to any refiner anywhere in the United States. A great many refiners who are eligible for quotas are so remotely removed from seaports to which foreign crude is initially delivered, that they do not, and under the very nature of things, cannot, have ever intended to use their import quotas for their own accounts. In other cases, they cannot profitably process foreign crudes simply because they lack the specialized equipment necessary for doing so.

These refiners are now actively engaged in exchanging their import quotas for domestic oil delivered to their manufacturing installations. What this means in fact is that through a policy of arbitrarily allowing quotas to refiners which the tas to refiners which have no historical importing position, have no investments abroad, have never risked a single dollar in the quest for foreign oil, the Government is in effect granting them a subsidy at the expense of those other companies which, like Gulf, have made substantial foreign investments. This, it seems to Gulf. it seems to Gulf's management, is a form of governmental confiscation.

The Government has notified the oil industry, particularly the domestic oil industry, that if the mandatory program should bring about an increase in domestic prices and it is very hard to see how it can fall to do so—then the same Government agencies will undertake to establish some form of price controls. In short, the Government having dumped an unfair and unworkable system on the industry is backing up its behavior by waving the shillelagh of price controls. From this position to complete control of the industry is but a short step.

Bad as this situation may be, it has still other aspects which are in effect contradictions of fundamental Government policy. The administration now in office and the Congress have both taken a position that one of the most effective means we have of developing and safeguarding mutual security of the free world is in promoting trade between nations and creating a climate conducive to private investment abroad. This is evidenced in the enactment of the Reciprocal Trade Act which Gulf supported and continues to support. In both international trade and international investment petroleum is a key commodity. Nearly one-third of the world's oceangoing fleet consists of tankers engaged in the work of moving petroleum. Almost one-third of the U.S. direct investment abroad is in petroleum and in 1956 well over one-half of the total U.S. capital expenditure abroad was made by the oil industry. Now the countries in which the oil is being produced, are, in effect, being told that the sale of their products in the United States constitutes a threat to our own national security, which is about the same thing as saying the maintenance of mutual security among the free nations is a threat to our national well-being.

To the embarrassment of our own Government, this contradiction has been pointed out by some of the countries which are receiving benefits from oil production created by American capital and, as a result of their protest, it now appears likely that the Federal Government will make some kind of an effort to grant one or more of these nations a favored import position. As always follows when a government that espouses the concept of free trade takes on the contradictory task of raising arbitrary barriers to trade freedom, this can only lead to a serious deterioration of our relations with those countries that may be discriminated against. But even this situation is not the end of it.

Trade barriers in one country inevitably lead to the erection of similar barriers in other countries and we now face the possibility that one of the great oil producing nations will impose production quotas and export quotas which would have the effect of denying some producers full access to the results of their long-time, large investments while granting markets to others who have made no investment in markets, either domestic or worldwide. In short, as a result of the U.S. mandatory program, the oil industry now faces governmental interference and arbitrary controls at the well-head in foreign lands.

To the extent that our national well-being or, and more particularly, the well-being of our European allies, depends on foreign oil twould appear that the U.S. program will not improve our national security but will in fact have the reverse effect.

Taken altogether, the question of oil imports is one of many facets and deep complexities, but one thing is obvious. The present Government program serves neither the interests of the Nation nor of Gulf's shareholders, its employees, its dealers, or its customers. It contsitutes one of the deepest and most dangerous intrusions of politics into the affairs of your company and the industry of which it is a part that we have yet had to face.

Sincerely,

W. K. WHITEFORD, President Reserve Officers Association of the Department of New York Outlines a Program for National Survival

EXTENSION OF REMARKS

#### HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. STRATTON. Mr. Speaker, in these days when America confronts the menace of world Communist aggression, nothing is more important than that we should be mentally, morally, psychologically, and spiritually prepared to resist this threat, just as we try to be militarily prepared.

In that connection I am most happy to commend to the attention of Members of the House a message recently printed for wide distribution by the members of the department of New York of the Reserve Officers Association of the United States. I am proud, myself, to be a member of this great organization so deeply dedicated to promoting the cause of national security. I believe their thoughtful document deserves to be read by every American.

The article follows:

[From the Schenectady (N.Y.) Gazette]
Seven Steps to Surrender

In May a "soldier" was buried at Arlington. He did not come from West Point or Annapolis. He wore no uniform. The battle-fields on which he served were not the beaches of Normandy, Salerno, Iwo Jimo, Inchon, Quemoy, and Lebanon. Yet no citizen more deserves the honor to lie down in peace with other warriors of the Republic.

The "war" he fought—sometimes almost alone—blazes now on all fronts: at Geneva; in the back alleys of Berlin and Budapest; in the ravines of Tibet and the jungles of Indo-China; in Iraq and the Formosa Straits; in the precincts of India, the villages of Africa, the once gay city of Havana, 90 miles from our mainland. Skirmlahes of that same war rage also in America's classrooms, pulpits, newspapers, and civic forums.

The "soldier" in Arlington is John Foster Dulles. The war he fought—and we must fight—is the war of nerves, the battle of public opinion, of courage in the face of nuclear blackmail, of character versus deceit, the war of sheer will to face down tyranny and survive.

The former Secretary of State knew (as some of his critics did not) that peace, in an imperfect world, can only be won by the strong and the brave. Goodwill and hopes for the best will not prevail against International Murder, Inc., whether that syndicate is called Nazi or Communist.

John Foster Dulles, statesman and student of history, knew what happens to men and nations who try to buy "peace in our time" from a Hitler, a Mao, a Stalin, a Khrushchev. It was said of the Romans that they made a desert and called it "peace." The Soviets made a dungeon for enslaved nations and captive peoples, and call it "peace."

#### SEVEN STEPS TO SURRENDER?

Some Americans, whose thinking relies on sentiment instead of facts, feel that flexibility is the path to world Utopia. But the Communists (to do them justice) have a purpose, a plan and a passion: to dominate the planet by the end of this century.

In the face of brutal determination and cunning, how will compromise, appeasement, or another scrap of paper signed by Khrushchev save America from the fate that overtook France in 1940. Except that the blitz-krieg of tomorrow may be nuclear; and the subversion of the Communists more massive than Nazi fifth columns.

Certain pressure groups inside the United States try to soften American character, corrode the will to resist, wash out the moral foundations of national defense. Here are their deceptive arguments and some answers:

1. Atomic weapons have made war unthinkable. "Unthinkable" to whom? The rules of the playing fields of Eton are not the rules of the joint chiefs of Ivan the Terrible.

Let Russian scientists once get the edge on us (as we had it on them with our atomic monopoly), and America will see "peaceful coexistence" defined in our own cities as in the corpse-lined gutters of Budapest.

2. Military aid to our allies is obsolete; economic growth will stop communism. The Sino-Soviet Axis has three major weapons: (1) missiles with atomic warheads; (2) vast land armies to fight conventional war; (3) underground, subversive, psychological, and economic warfare techniques. Communists can destroy the world with (1) if we do not deter them with a shield of air and missile supremacy. Communists can win the world piecemeal with (2) and (3) if we do not strengthen NATO and SEATO, keep our allies in the field, increase our own capacity for limited war, and learn to wage non-military combat more efficiently.

Economic growth in backward areas—without the force to protect new nations against overt aggression or covert operations—simply means Communists will take over factories we have built and enslave people we have helped to feed.

- 3. We can't save Berlin, or Quemoy, or country X unless we are prepared to destroy world civilization. The Communists want everyone to believe that any defense against Sino-Soviet aggression is a "provocation." The record shows that firmness in Greece, Turkey, Quemoy, Lebanon, Berlin does not lead to war.
- 4. Asians and other backward peoples have never had freedom; they will accept collectivist chains in order to get industry, sanitation, and education. Here is the arrogance of some Western intellectuals who think only they can define the eternal dignity of man.

What about the revolt in Tibet? What about the 100,000 "flowers of dissent" that Mao had to cut down recently on the Chinese mainland? What about the gallant soldiers of the Republic of Korea; the freedom fighters of South Vietnam; the defenders of Formosa; the brave men who risk careers and even death by opposing communism in Thailand, Malaya, India, the Arab Middle East, Africa, and Latin America?

5. Disengagement will reduce tensions. Tension is the chief export of the Communist bloc. It is not the face-to-face confrontation of Russian and American troops that creates tension, but the unchanging goals, ceaseless lies, continuing subversion, relentless political warfare of the conspiracy in Moscow and Peiping.

The withdrawal of NATO or SEATO power will only encourage the Communists to transfer their combat resources (military, economic, and psychological) to another front. Tension will be increased by American retreat and focused on the shrinking area of freedom.

So long as communism perverts every form of human activity to the cause of conflict, it is beyond our power to reduce tensions. We can only redistribute them by carry the torch of truth more boldly behind the Iron Curtain.

6. World communism is reforming from within. If the West is patient (and doesn't stir up trouble over Hungary and Tibet), communism and capitalism will eventually merge into the world welfare state.

Mao has submerged 600 million human beings in the insect slavery of the anthill state. Maoism is more reactionary than Stalinism, and more dangerous to all Asia. The committee government that was supposed to rule Russia after Stalin's death has been asked to resign. Beria was killed by his associates, and Serov (his successor) has been deposed. Zhukov and Bulganin, who stood by Comrade Khrushchev, have been sent to the shadows. And where are Molotov, Malenkov, Kaganovich?

Was Budapest an improvement over the butchery of Katyn Forest? Does "We'll bury you" sound more amicable than the threats of Lenin and Stalin?

The Communists are adding to their atomic stockpiles, racing ahead with missiles, keeping their infantry hordes under arms, subverting the Middle East, winning elections in India, reaching a tentacle toward Cuba and other areas of Latin America, saturating the precincts of Africa with trained revolutionaries. This is reform?

7. There's no place for morals in foreign policy. Let's face it: the tyranny of Red China and Red Russia is a fact. Why not make the best deal we can? A nation expedient and perfidious in its dealings with others will decay internally too. Moral force counts for a great deal in human affairs. Once America abandons her ideals in behalf of freedom for all men, she will have nothing left but money and weapons. Neither can buy security, if others lose faith in our mission and we no longer believe in ourselves.

The bake-ovens of Nazi Germany, were a fact. The seizure of the Philippines by imperial Japan was a fact. The might of Prussia under the Kaiser was a fact. The armies of Napoleon that trampled all Europe were a fact. The overwhelming superiority of the British in the winter of Valley Forge was a fact. These facts were refuted.

was a fact. These facts were refuted.
Freemen are always under pressure to make deals, give ground, take the easy out, face realities. Some of the most lasting realities are those intangibles of character, courage, and faith in freedom that adhered to the spirit of John Foster Dulles, and to so many other Americans who gave the last full measure of devotion to this country.

The men who died at Bunker Hill and Gettysburg; the men who left sight or mind at Chateau-Thierry and on the Marne; the marines at Tarawa, the sailors in the Coral Sea, the airmen over Schweinfurt and Ploesti, the doughboys on the road to Rome and Bastogne—none of these fought to barter away the dream that is America to some murderous minion of Stalin or cousin of Genghis Khan.

We salute the memory of John Foster Dulles and his policy of unyielding opposition to Communist aggression, any place, by any means, at any time.

We invite other Americans to join with us in waging the battle of public opinion and the war of nerves which seeks to delude and conquer by undercutting national will to pay for national defense, undergird our loyal allies and increase tough-minded, diplomatic and psychological support for tens of millions already enslayed.

One great soldier was buried in May at Arlington. But in the century of total war, the front is everywhere. We are all soldiers how. And if we all cannot sleep in Arlington or at Valley Forge, let's help pick up the check for those who do.

Address Delivered by Gen. Carlos P. Romulo, Philippine Ambassador to the United States, Before the First Annual State Convention of Filipino Community Associations in Hawaii, Friday, June 19, 1959

EXTENSION OF REMARKS

## HON. JOHN A. BURNS

DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Friday, June 26, 1959

Mr. BURNS of Hawaii. Mr. Speaker, recently I had the distinct privilege of attending the opening session of the United Filipino Council of Hawaii where I had the honor of making some remarks.

The Filipinos are the most recent addition to the amalgam that is Hawaii. The organization of the council marks their emergence from a semipupilage status in which they have made substantial contributions, not only to the economy of Hawaii and the United States, but to the social and cultural life of Hawaii. They have participated fully and significantly in the shaping of Hawaii's future.

Chief speaker at the convention was the Honorable Carlos Romulo, Ambassador of the Philippine Republic to the United States. An outstanding speaker who need yield to no one, General Romulo is also a highly respected, completely trustworthy friend of the United States. I am sure that the Members of the Congress—which includes many who remember General Romulo as Resident Commissioner—will find his speech informative and cogent:

#### ADDRESS BY GEN. CARLOS ROMULO

It is my privilege to convey to you at his behest the cordial greetings of the President of the Philippines. I need not tell you the keen interest that he has in your welfare. He showed it to you in person when he visited you here last June. He elevated our consulate here to consulate general. He also showed it when he sent to Honolulu to represent our Government one of the ablest officers in our foreign service. Consul General Juan Dionisio has shown by his competence, integrity of character, and patriotism that the President was right in assigning him to this delicate and important post. I know of no one who could have done a better job. He has lived up to our highest expectations.

I congratulate you for your initiative in holding this convention. Hawaii is on the threshold of a new era. You will soon be the 50th star on the American fing. There is in this action of the American people a special meaning for all Asia. It does not only establish America's permanent interest in the Pacific which is a safeguard for the peace of this important section of the globe but it is a forward step in the progress of the American people toward racial equality.

I come to you today as a representative of your mother country, the Philippines. I know that your interest in the homeland abides with you and it is for this reason that I have come to give you fresh news from our native land, I will speak frankly and honestly.

First of all, I wish to give you the solemn assurance that our freedom is not only secure but flourishing. The three coequal branches of our Government maintain their separate powers and jurisdiction; our judiciary is unassailable in its integrity; and our educational system, furnishing the lifeblood of democracy, is constantly growing. We have a Congress that has lived up to our people's faith in its ability and wisdom to legislate for the people's welfare. And no country can boast of a press less inhibited and freer than our Philippine press of which we are very proud.

Our national economy, which was completely ruined by the war when we became independent on July 4, 1946, despite the great handicaps that I will subsequently analyze, has gained new life and found a new sense of direction. We have started an industrialization program that has made it possible for us to establish 800 new industries in 5 years. We are producing more rice now than we ever did before and our aim is to produce eventually all the rice we need and have some left for export. We have succeeded the past few years in gradually narrowing the gap between our exports and imports and we hope that in the near future we will reestablish the prewar pattern of our foreign trade. (A summary of our economic progress in figures will be distributed with

copies of this address.)

Mention must also be made of the well-planned and brilliantly executed campaign against the Huks (Philippine Communists). We have defeated communism in the Philippines and staved off the threat of Communist subversion. President Garcia has signed a law outlawing the Communist Party from the Philippines. As our fighting men in Bataan and Corregidor once broke the timetable of the Japanese invasion of southeast Asia, so can we also justly claim that we have upset the timetable of Communist domination over the region and scored a telling victory for freedom and democracy. Moreover, the participation of Filipino soldiers in the Korean war affords further evidence of our determination to resist Communist aggression without as well as within our borders to the limit of our capacity.

The position of the Philippines in the strategic lifeline of the free world is not difficult to appreciate. That lifeline, as out-standing military experts have frequently stated, is based on a chain of islands extend-ing in an archive ing in an arc from the Aleutians through the Philippines to the Marianas. The need for buttressing the Philippines as a link in that defensive chain (and the advent of guided missiles has not made the chain any less important) was never more forcefully expressed than by Gen. Douglas MacArthur when, in his historic address to the U.S. Congrees, he said: "The holding of this littoral defense line in the Western Pacific is entirely dependent upon holding all segments thereof, for any breach of that line by an unfriendly power would render vulnerable to determined attack every major segment."

In the Philippines today, under President Carcia, the defenses of the free world rest securely in a situation of increasing strength. Joint Philippine-American effort is responsible for this. It is not an emergency effort based on the convenience of a transient alliance. It is the fruit, rather, of an intimate and unique partnership growing out of common devotion to freedom. It is obviously to the best interest of our two peoples that this partnership should continue unimpaired based on equality and mutual respect for each other's national sovereignty.

I have spoken of what I believe are on the credit side of our record. However, we are faced by many problems which must be

solved. To really understand our present difficulties in the Philippines in their proper perspective, it is necessary to relate them to the global picture.

The reports that come from Asia these days are not all optimistic. It is the picture really of the travall of an entire continent and the first contin and its adjacent archipelagoes. More than 1 billion people—about half of mankind—live in a region which is agitated by the tital sweep of a vast social, economic, and political transformation. The main outlines of this transformation are well known: Seveeral new states, former colonies, have come into being in Asia since the end of the war. That is a political revolution of the first magnitude. But these new states were born into a ruined and impoverished world. They have had to build their security as independent nations upon the moral and material rubble left by the war. In consequence they find themselves compelled to attempt a scotal a social and economic revolution corresponding to, and in some respects transcending to, and in some respects scending in scope and importance the political cal revolution that enabled them to wrest finally from alien hands the freedom which for long ages they had fought in vain to

This threefold revolution generated tremendous creative forces in Asia. If victory had brought real peace to the world, the new states of Asia might have had an opportunity to play their proper role and contribute their share to the life of abundance, security security, and contentment which the nations that fought for freedom envisioned and resolved to realize during the blackest days of the struggle. But the victory brought, not peace, but the cold war. The energies and and resources that might have been used to to create a new world have been diverted to, and are now being consumed in a sterile struggle which has already brought mankind perilously close to the brink of self-destruc-

How has the cold war affected us in Asia? The cold war has aggravated the political instability stability of the entire region. Economically, it has a stability of the entire region. it has impeded and stunted Asia's growth.

It has It has impeded and stunted Asias given a last impeded and stunted Asias given and the orderly evolution of a new angles of the control of the new and healthy relationship between the newly free states of Asia and the rest of the world based on their emergence from colonial to independent status.

By turning Asia into an arena of the struggle for power, the cold war has caused divisions to power, the cold war has caused the divisions between nations and intensified the conflicts between nations and intensity within patients between groups and classes within nations in the area. Under the stress of the cold war, disruptive forces which might otherwise have lain dormant or inutile have been stigntly to the play with been stimulated and brought into play with abnormal strength and malignancy

I have no intention of oversimplifying the problem. The cold war is an important factor, but only one of many factors, in the Asian equation. The aggressiveness of cer-tain nations to gain adherents for their declogy is another factor. The war left in its wake a herculean job of physical and spiritual and the control of the control o wake a herculean job of physical spiritual rehabilitation. We in Asia have our own faults and fallings which have aggravated gravated our plight and made it all the more difficult for us to solve the problems that confront us individually and as a group.

Our own people have our share of these faults. We are not a nation of saints and supermen and we do not pretend to be. We have however the saving grace of seeing ourselves as we are. Even more important we have the will and the capacity for self-cor-

You will remember that after the fall of Bataan in the spring of 1942 the Philippines was occupied by the enemy. For 3 cruel years our people endured all the terrors of occupation. occupation. Unarmed, they could not always fight in the open. They had to go underground and use the weapons of gulle, cunning, and sometimes deceit in order to harass their oppressor and hasten his downfall. Hemmed in on all sides, helpless and alone, they had be be preternaturally vigi-They had to watch everybody, including at times their own friends and kinsmen. Like all other nations which were under enemy occupation, the Filipino people experienced extremes of terror, privation, and despair which left deep wounds. They suffered, and to some extent are still suffering from moral trauma. It is part of the price of war, of resistance to tyranny, of the organic inability to submit to oppression without a struggle, of the stubborn desire, common to freemen everywhere, to fight on by whatever means, at whatever cost.

Is it strange that we are still paying today part of the cost of resistance that helped so much to win the final victory? It is an abnormal phenomenon and, I believe, a passing one. Strong corrective influences have already been set in motion. The healing process has begun. It is unfortunate that sensational reports in certain American magazines and newspapers tend to give an exaggerated and therefore a distorted and misleading picture. Isolated instances are sometimes stretched into unfair generalizations. Some of the reports that you read in a certain sector of the American press are unfair. I have taken great pains to acquaint myself thoroughly with conditions in the Philippines. I was there February and March this year. I can assure all of you that, despite the formidable obstacles that stand in its way, the Philippine Government is doing a good job of pulling itself out of the deep morass into which the war, the occupation, and the cold war have thrown it.

Like other countries, the United States included, we have had our share of corrupt and unworthy public officials, but their abuses have not been condoned or glossed over. Leading members of the party in power themselves are in the forefront in exposing those guilty of malfeasance in public office. I repeat: We have a press in the Philippines which is among the freest and the most vigilant in the world, and publishes without fear or favor the abuses it believes should be known by the people. Public opinion is untrammeled. There is no censorship of any kind and consequently the Government is under constant criticism and appears to casual, observers in a worse light than it should.

More than half a century ago, Dr. Jose Rizal, our national hero whose birthday we celebrate today, wrote a novel exposing mercilessly the social conditions obtaining at the time. He compared the nation to a sick man who, following the custom of the ancients, should be exposed on the steps of the temple so that all may see his ailment and offer a cure. Something of this healing process is going on in the Philippines today. It is a sign of health and strength in the body politic, proof that the nation is constitutionally sound.

The Filipino people have hed rough sailing throughout their recorded history. They were conquered by the Spaniards in the 16th century and had to submit to Spanish rule for more than 300 years. They bowed to superior force, but not supinely. They re-belled against their rulers once every 3 years on the average. They fought the Americans in 1898 when the United States supplanted Spain in the Philippines. Hopelessly disadvantaged in everything except courage, they nevertheless kept fighting for 3 years. stopped only when they were convinced by America's actions that America was sincere in her intention to give the Philippines independence in due time.

They fought the Japanese from the day of Pearl Harbor and they never ceased to fight even when the American Army had been defeated in Bataan and Corregidor.

We are still fighting today, on another field and with weapons not of war but of peace. We are trying to put our house in order, to secure maximum stability at home as the first step in helping effectively in the settlement of the larger problems involving the whole of Asia and the world at large. I make this somewhat arbitrary distinction solely for purposes of clarity, for in reality domestic and foreign problems interpenetrate. It would be nearer the truth to say that they are aspects of the same problem.

We recognize that the major part of the crucial task that lies ahead for us is the economic field. The political and social structure of the Philippine Republic have been tested and proved sound. Subjected to the severe pressures and stresses of systematic subversion and armed revolt by communism, the democratic framework of the Philippines has emerged stronger from the ordeal. The one thing lacking to complete the edifice and give it enduring stability is economic development to a degree that would raise the living standards of the Filipino people and create for them new opportunities for advancement.

This is the great job that awaits doing in the Philippines today. Impoverished by the war and lacking the technological equipment and the capital required to make the great leap from the status of an underdeveloped to that of a developed country, the Philip-pines cannot do the job alone. The assist-ance of the United States is needed on a mutually beneficial, mutually profitable

The challenge presents itself not only to the American and Philippine Governments but, also, and perhaps even more so, to individual Americans and Filipinos-a challenge to their resourcefulness and enterprising spirit, to their devotion to the ideal of peaceful progress, and, above all, to their capacity for continuing under new conditions the enlightened and fruitful collaboration which produced, in the first half of the 20th century, a new birth of freedom in the Far East and which today still stands as a beacon of hope in that troubled region.

The political and social conditions for success exist. The opportunity beckons. Let us hope the will and the vision will not be

The stakes, my fellow countrymen, are high: Security for the cause of freedom in a critical area of the struggle against Communist totalitarianism; the conquest of new frontlers for the democratic way of life; a substantial contribution to lasting peace in the world. I cannot think of a nobler challenge or a more deserving cause for the free peoples of America and the Philippines. You in Hawaii can play an important role. That is why I came to you today to give you this report on the Philippines with all its nuances that you may see in it not only a message of hope but a challenge for service to your mother country.

The Philippine program for economic development has been carried out with remarkable results. These figures and data tell eloquently the story of the postwar eco-nomic progress achieved by the Philippines:

1. Our national income has more than doubled since liberation, from P4.360 billion in 1946 to P8.799 billion in 1957. Our per capita income increased from \$118 in 1946 to \$172 in 1957 and, according to the latest report of the ICA, the Philippines has the highest per capita income of all of the new nations in Asia, except Malaya. The ICA

report gives the per capita income of each of

	Per ca	pita
	incom	e in
	U.S. do	llars
Burma		844
Cambodia		50
Ceylon		126
India		57
Indonesia		125
South Korea		70
Laos		50
Malaya		310
Pakistan		70
Philippines		172
South Vietnam		

2. Production of the 10 principal crops, including rice, corn, sugar, coconuts, etc., increased by 61 percent from 5,559,000 metric tons before the war in 1941 to 8,933,000 metric tons in 1957.

3. The value of the output of our mines increased 13 times, from #15,780,000 in 1947 to P215,384,000 in 1957.

4. Our timber and lumber production of 2.515 million board feet in 1957 was 71/2 times that of the prewar in 1941.

5. Electric power increased in capacity four times from 72.448 kilowatts in 1941 to 292,056 kilowatts in 1955 and the per capita consumption of electricity rose more than three times for the same period to 48.9 kilowatt hours.

6. Despite Government restrictions Philippine oversea commerce in 1957 amounted to over P2 billion or nearly three times that in 1946.

7. Since liberation bank assets have more than doubled to over P1,900 million and the supply of money has correspondingly creased 70 percent from #940 million in 1946

to approximately P1,600 million today.
8. Government revenues rose nearly five times from those of 1946 to P892 million in

9. And finally over 800 new industries have been established since the Philippines became independent in 1946.

Resolution of the National Sunday School and Baptist Training Union Congress on H.R. 3

> EXTENSION OF REMARKS OF

## HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, June 26, 1959

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

MEMPHIS, TENN., June 26, 1959. Congressman ADAM CLAYTON POWELL,

House of Representatives,

Washington, D.C ..

Report of the committee on resolutions of the 54th annual session of the National Sunday School and Baptist Training Union Congress, Memphis, Tenn.:

"Whereas the States rights bill, No. H.R. 3, designed to keep Federal legislation from canceling out the rights of the States to perpetuate their own laws and traditions;

Whereas the House of Representatives has already voted such bill H.R. 3, into law, pending its final passage by the Senate; and

"Whereas the passage of such bill can destroy the effectiveness of any decision of the Supreme Court of the United States outlawing segregation in the United States: "Resolved, That we, the delegates now in session of the National Sunday School and Baptist Training Union Congress, and representing approximately 5 million Negro Baptists of the National Baptist Convention, United States of America, Inc., go on record as condemning the passage of the States rights bill and any other such legislation that would weaken the influence of the Supreme Court or diminish its power in any way. We look upon the passage of such States rights bill, not as an attempt to curb the powers of the Supreme Court, in such cases as that of the uphouse case or the Court's 1956 Steve Nelson decision, we see it as a deceptive attempt, on the part of our lawmakers to undermine the 1954 ruling of the Supreme Court outlawing segregation in the public schools of the South and all of or other U.S. Supreme Court decision, guaranteeing equal rights and social justice for American Negroes. Because of our surprise that such deceptive devices would have been concocted by a coalition of both parties, the Democrats and the Republicans, to empty the civil destiny of the American Negro into the laps of a State rights bill."

We recommend that copies of this resolution, carrying our sternest condemnations, be sent to the Speakers of both Houses and be read in both Houses. We further recommend that it be sent to the President and Vice President of the United States. We also recommend that this be done immediately, before such law is allowed to be enacted.

O. CLAY MAXWELL President. " S. Y. NIXSON,

Chairman.

The Passing of the Tactical Bombardment Aircraft From the Arsenal of Tactical Air Command

EXTENSION OF REMARKS

## HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 26, 1959

Mr. DOWNING. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to pay tribute and call attention to the fact that the 1st of July 1959 will see the passing of the tactical bombardment aircraft from the arsenal of Tactical Air Command. On this date, the 345th Bombardment Wing, Tactical, will join the roster of those units who have served their country well in peace and war, but whose moment of glory is over, at least for the time. The 345th Bombardment Wing, Tactical, then known as the 345th Bombardment Group, Medium, made an awesome name for itself as a killer of Japanese shipping and airfields in the south Pacific during World War II and won two Presidential Unit Citations as well as many battle stars. At the end of the war, along with many other units, it was inactivated only to be brought to life after the Korean war. The group's forerunner did not directly engage in that conflict but was engaged in training numbers of aircrews who did participate with distinction. The 345th was selected to receive the new Martin B-57 light jet bomber in place of their conventional Douglas B-26's. The B-27, basically a British design, was nominated to carry out the traditional role of the tactical bomber, to seek out and destroy enemy aircraft and their landing places, attack ground targets, isolate the battlefield with conventional bombs and with the newly introduced small yield atomic weapons. Built to carry an enormous load at high speed, and able to travel both "on the deck" and at altitudes unprecented in Air Force experience, the B-57 became a potent item in the TAC inventory. Col. Albert W. Satterwhite became commander of the 345th Bom bardment Wing in October 1956. He found himself in the middle of the program of converting the unit to the B-51 from the reliable B-26. There were few written guidelines. The aircraft was new, it had growing

pains like all new machines. The train ing program had to be built from the ground up. On the ground were the maintenance personnel, eager but in experienced, in the sky combat crew ready and willing but requiring the guidance that a commander must extend to make them into a fighting machine That Colonel Satterwhite succeeded evidenced by the fact that Tactical Af Command chose the 345th to become part of the composite air strike for which was then becoming a reality Langley Air Force Base. This force, en visioned by the tactical genius of Gen O. P. Weyland, TAC commander, to prove its mettle when two international tional crises were met and dealt with by the far-ranging men and planes of Tactical Air Command. Brig. Gel Perry B. Griffith arrived to take command of the 836th Air Division, of which the 345th Bombardment Wing is a portion, and found himself amid events international importance. The 345th Bombardment Wing and the 4505th Air Refueling Wing, also of the 836th of Division, were in place on both sides of the world and prepared for combat General Griffith was able to visit echelons of his echelons of his command at their over sea bases and to comment favorably their readiness. Fortunately for world peace, both threats were dispelled the 345th Power the 345th Bombardment Wing and Took tical Air Command could well the with pride on their part in reducing the danger. Soon, the 345th Bombardmen Wing will be only a number in a the parade of history making units in historical files of the historical files of the Air Force, but that number will always have a special place in the hearts and minds of those men who kept it prepared and ready to the hold the place of their country in the

Health Care of the Aged

EXTENSION OF REMARKS OF

## HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. FOGARTY. Mr. Speaker, under ave to extend leave to extend my remarks I include

an address which I delivered at the first national conference luncheon of the Joint Council To Improve the Health Care of the Aged, Sheraton-Park Hotel, Washington, D.C., June 12, 1959:

Address of Hon. John E. Fogarty, U.S. Rep-RESENTATIVE, SECOND CONGRESSIONAL DIS-TRICT OF RHODE ISLAND, AT THE FIRST NA-TIONAL CONFERENCE LUNCHEON OF JOINT COUNCIL TO IMPROVE THE HEALTH CARE OF THE AGED, AT THE SHERATON-PARK HOTEL, Washington, D.C., on Friday, June 12, 1959

In considering the general problem of caring for our older people, there is no ques-tion that one of the most important aspects of our concern is the health care of older

Concurrent with our efforts to make them more comfortable and happier, we must ex-tend and enlarge our health and medical efforts for preventing or treating effectively the diseases which so often characterize old age. To be able to do this, we must seek through research—the basic reasons for these diseases so that they can be prevented. so that they can be detected early, and so that they may be cured.

In all of our concerns for the aging population—housing and income maintenance as well as health and medical care—we find ourselves sternly challenged by the demands of the present, in 1959, when there are more than 14 million persons in the United States over 65. We cannot consider the bad health of many of these people, their low income and and sometimes almost desperate conditions under which they live, without realizing that we are compelled to take efficient and fast active. fast action.

They need more medical care, more shortterm hospitalization, more long-term hospitalization, and more care in nursing homes and personal care homes. It is not clear at this time whether a comprehensive solution of the problem of health care can be achieved without the participation of the Federal Government.

Some fears have been expressed over the use of the Federal Government mechanism for this purpose. These fears include such questions as these:

Would the Government, in buying hospital care, be able to use the power of its money in various ways not necessarily to the best interest of hospital patients?

Would there we misuse of the Government's prepaid hospital benefits so that costs would get out of control with disastrous results to hospitals and the public?

Would to be a second to b

Would it be an acceptance of health insurance for one group of the population, thus encouraging its extension to other needy groups, leading ultimately to hospital insurance for our entire population?

These are questions which must be considered.

On the other hand the use of the Federal Government mechanism to provide health care would offer great advantages—and I have particularly in mind the breadth and immediately and the second of soully and immediacy of coverage and of equity and adequacy of financing, that probably cannot be matched nationwide by any other system, public or private. This analysis does suggest that unless some better method for handling the health problems of the aged is developed. and developed promptly, the advantages of the Federal Government approach may ap-pear to our fellow citizens to be over-

There is a tremendous problem in meeting the health needs of our older citizens, and the problem is rapidly growing. The one thing that becomes increasingly more evident is the urgent need for some responsible solution to this overall matter of health care for the aged. On that we are all agreed. The need is there and something should and must be done about it. We must find some way

If we are challenged by the problems of the present, however, we are staggered by the future potential problems of the aging population. Let us look ahead just 11 years, to 1970, when the number of persons over 65 will have increased to nearly 19 million— and then, if you will, to 1975 when there will be 21 million persons over 65 in the United States, an increase over the present of one-third.

Is it reasonable for us to assume that our problems also will be increased by one-half? Does this mean that we will have a one-half greater number of older persons in the very low income brackets? Does it mean that we will have a one-half greater number of older persons in inadequate housing? Does it mean that we will have a one-half greater number of older persons in bad health?

That is a key question. For it is obvious that if we can-through research-find ways for older people to remain healthier for a longer period, they then also will be more productive, more prosperous and certainly happier. Can you imagine, for example, what a wonderful thing it would be if our advances in medical science in the next 5 or 10 years were to be such as to change the idea that a man must be made to retire at an arbitrary age? Why not a new attitude which would let us work until we wanted to quit, be it age 65, 70, 75, or even 80, depending on his type of work.

Can you imagine a day when we no longer "accepted" the scourge of heart disease among our older people, when cancer and arthritis were defeated, when our population could look forward to a healthful, dignified,

active old age?

We would then see our aging population not as a problem, or not as a series of problems, but as a magnificent asset. Our older people would become substantial contributors to our expanding economy, a benefit to the entire Nation.

Our research scientists already have told us that much better health for our older people is not only possible but probable, provided we press forward with increasingly larger programs of research on every level, from studies of persons who already are old and ill, to very fundamental studies of the aging process itself in man and in lower forms of animal life.

We have made a sizable beginning in our Federal and State agencies, in our universities and in private research institutions. As an example let us take the National Institutes of Health, which is a principal focal point for medical and biological research in aging. In 1955, expenditures at NIH for research in aging as such totaled less than \$500,000. By January 31, 1958, the total had reached \$2,600,000 for research related primarily to aging and about \$2,600,000 for projects secondarily related to aging—a total of something over \$5 million. Today, a year later, NIH expenditures in aging total nearly \$10 million, involving all the different institutes and the newly established Division of General Medical Sciences which directs its attention principally toward basic research in medicine, medical care, biology, and research training.

In considering these figures, it is significant that more than 95 percent of this money is being spent in monetary grants to non-Federal research agencies—such as the medical schools and other private research institutions. The total number of outside or extramural research and training projects is approximately 400. Various groups in nearly every State in the Nation are apply-ing this money in diligent efforts to help solve the medical and biological problems in aging. The overall program derives much of its strength from the great diversity of re-search institutions and scientific minds directed toward the problem.

In two instances, there are very large projects located in universities. In such setings, the programs are able to draw on many different types of scientific disciplines and personnel, all concentrated on different facets of the aging problem. Then, periodically, the different departments hold seminars in which their respective findings are discussed and correlated with other findings. It makes for improved communication between the different fields of medical and biological research and thus speeds the process of finding the answers we need.

I confess that I am impressed by the great variety of research projects pertaining to aging. We have scientists studying various edible leaves, for example, to help determine the part that vegetable oils play in arteriosclerosis. Other scientists are carrying out very basic studies on the changes in tissue that occur with age. Others are studying longevity in rats and monkeys and such small animals as the rotifer. They are studying the relationship between the various glands of the body and aging, the possible effects of radiation and genetics. They are studying the sociological problem as a cause, and as a result of aging. I could go on here for some time listing the scores of research areas.

But what I want to emphasize is what we do not know. Despite our great start on research in aging, it is as yet only a start. We have made great progress, but our scientists will tell you very quickly that the best of their work so far has been to determine that they know much less than they probably thought they did. As a result of their work they now have just begun to realize how big

the task really is.

It may not come as a surprise to most of this group to realize that scientists are still debating, for example, just what aging is, and when, exactly, it starts. Some say it starts with conception. Others say it starts after maturity. Nor are they quite sure how it begins or why it may manifest in one individual in one respect and in quite a different manner in another individual. Recently I was told of the kind of mystery they are tackling. We have two men, and let us say they are both 60 years old. They are both in about the same level of health. Both have led about the same kind of life. They are very similar, in other words, and the same age. Yet one feels fine while the other feels very, very old. One still has vigor and vital-ity and a great interest in life. The other is tired and has only a passing interest in life.

Why? Why the difference?

Let's take another type of problem. We have two similar men of the same age who are retiring. One of them immediately gets interested in things he's always wanted to do, like boating or photography or gardening, or maybe even going into business for himself. The other man, by contrast, is overcome with a feeling of being washed up. His productiveness is ended. He feels that he is of no further use and he actually gets sick. There are records of hundreds of such cases, of men who actually get sick after retirement when actually they were quite well before retirement. But why are a few able to make the best of retirement and continue to lead productive, happy lives?

In their efforts to understand just what aging is, scientists are assuming for a number of sound reasons that aging, not unlike disease, involves alterations in the normal behavior of cells and tissues. The cells and tissues change and we must know what makes them change, when and to what extent. It is obvious, therefore, that we must increase our very basic investigations into cellular biology.

There are tremendous social and economic implications in this work. Simply stated, it can help determine whether we will ever be able to suspend or delay the biological process of aging. Most scientists now seem to be doubtful. But imagine, if you will, what it would mean to this Nation and to the world if ever we were able to delay the aging Assuming we will not be able to do this, the basic biological research remains of critical importance in helping our older people to overcome those many afflictions which tend to limit their physical and mental capacities. It will help to cure their ailments or help them to live with their infirmities

more comfortably and effectively.

To help point up the need for increased basic investigations into cellular biology I would like to quote Dr. Paul Weiss, of the Rockefeller Institute of Medical Research: "We do not know the physical basis of intracellular organization, the principles that sort biochemical processes and diverse molecular realms without \* \* rigid mechanical frameworks. We do not know what causes orderly substance transport within cells. \* \* We do not know how cells recognize each other, their foods, their enemies. \* \* We still have no more than shrewd guesses about the mechanism of protoplasmic reproduction that we call growth \* \* nor do we know what activates and checks and reawakens the powers for such growth in development, disease and aging."

But as vast as this is, it is certainly not the entire problem. Earlier I mentioned genetics. Scientists are giving more and more attention to the genetic influences in the manifestations of disease and in aging. It may well be that the genetic constitution of an individual is the primary determinant of his potential longevity. One scientists has observed that human beings finally may die from some "defect or weak spot that was present at birth." So that the gentic factor in aging—hardly explored at this point—is

due great consideration.

But this isn't all either, of course. In studies of aging, as in our studies of disease, we must give great consideration to the level of sanitation in the living and working conditions; the organic and mineral content of the soil in which food crops are grown; the effects of weather, altitude and air pollution; and the differences in occupations, religions, and cultural habits.

So, in general, if we are really going to define and defeat the biological and medical problems in aging, we must seek to understand the most basic processes of the body and the effects of heredity, and then we must understand the effects of the environment in which the child is reared and then, as a

man, works and lives.

If these are the challenges we have accepted, however, we are woefully lacking in one critical respect. And that is that at present nearly all—and I mean more than 95 percent—nearly all of our research in aging is concentrated within the continental limits of the United States. The Federal Government is supporting virtually no grants in foreign nations for research in aging. There is some exchange of information through research literature and visits by scientists—some—but this serves only to indicate more clearly the magnitude of the problem.

All of the research work I have been discussing can have its greatest meaning when it is projected onto an international level. Theories and findings about the genetic, biological, physiological, mental, and social aspects of aging, and about the methods of applied medicine for giving aged persons more dignified and healthier lives, will have firm bases only when they have been evaluated and tested under the many variables

in different cultures.

As if we didn't already have enough mysteries in the matter of aging, we could find some more by looking overseas. Why, for example, do the Norwegians live longer than

we do in the United States?

The answer to this kind of question, and to the hundreds of other questions plaguing our scientists, can come only when we have continued to press forward diligently in a broad program of research which includes expanded efforts in each of these three areas:

1. The basic sciences, such as the biological, wherein our scientists are studying age changes in matter and energy at the most basic levels, where the origins of the

aging process probably begin.

2. The clinical sciences, wherein our scientists are continuing their battle against chronic diseases and seeking means to prevent the development of these diseases as the handmaidens of aging. It is also in the clinical sciences that we must improve our methods for caring for older people and for rehabilitating them. We can improve our procedures and certainly we can find ways of caring for our older people with more

grace and dignity.

3. And the last of these three areas of research effort is the behavioral and social sciences. How many times have we heard our older citizens say, "Gosh the world has changed." Or "When I was a boy, things were different." The world is changing.
And there's a question of whether it's changing too fast for our older people; and there's a question of their ability to adjust to a fast-changing world. What kind of real problems does this cause for the older person? And is this fast-changing world one of the things that makes younger men old? I feel that we must probe deeply into the significance of this. This Nation has made marvelous accomplishments in the use of its natural resources in minerals, lumber, oil and water power. We have not, however, previously made the most advantageous use of our people, who are our greatest resource, and we are not doing so today. In a sense, our older persons can represent a tremendous reservoir of trained, experienced, mature personnel that can help this Nation to even greater accomplishments. Research is again the answer, research into sociology and psy-chology to aid in the proper utilization of these people.

In the law which I sponsored for the White House Conference on Aging, in January 1961, there is a five-point declaration of policy. I would like to quote point 5, which calls for a "\* \* stepping up of research designed to relieve old age of its burdens of sickness, mental breakdown, and social ostracism." This will be one of the most important focal points of the White House conference, one to which I shall endeavor to draw all possible Federal, State,

and private attention.

The job before us is very clear. In this talk, I have given considerable attention to the work of the National Institutes of Health. But the task obviously is not one that the Federal Government can support by itself—though its support must be increased. The fine work being carried out by State and private institutions must continue to expand greatly, not only with strengthened Federal support, but also with development of State and community resources.

Even this will not be enough, however. For emphasis I want to repeat that all this research will have its greatest meaning and value when it is projected onto an international level. The entire world already is deeply concerned with the aging problem. Other nations have seen that as they make further progress against infectious diseases they are going to have more and more people

living longer lives.

Some nations may already be ahead of us in reseach in aging. In Sweden, for example, they were carrying out farsighted programs to aid their older persons some years before aging attracted great interest in this country.

Nearly every civilized nation today is conducting research in aging, including Central and South America, Europe, Scandinavia, and the Far East.

Research in aging, like many other national programs, can become a two-way street when we seek a cooperative interchange of effort and information with other countries.

It would be to our own benefit to learn more of what other nations are doing in aging work, and to carry out reearch on the effects, in the aging process, of different environments overseas. It certainly seems reasonable to believe that we thus could make faster and more certain progress in research.

Let us, in turn, make available to the other nations of the world our findings and our program in aging. Let us help them with funds for training scientists and for research projects and for research facilities.

I can think of no more noble contribution toward the benefit of all minkind—including

our own population.

In specific reference again to the immediate challenge of this council, we have tre-mendous problems in this Nation, which must be met, now. The question I would like to leave with you is whether we are going to simply accept a multiplication these problems in number and size in the future-10 or 20 years from now-or whether we are going to redouble our efforts in medical and biological research to help ease the magnitude of our future tasks and give our Nation, on the whole, a more healthful, more productive, more prosperous population? This, obviously and unavoidably, is what we must do. We must consider the present generation and meet its problems fully; but concurrently we must provide for the future generations of the Nation. Otherwise we will be failing in the real meaning of our responsibility.

## Oil Import Quota Program Raises Specter of Price Controls

EXTENSION OF REMARKS

## HON, SILVIO O, CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Friday, June 26, 1959

Mr. CONTE. Mr. Speaker, under leave to extend my remarks I include an editorial from the Saturday Evening Post which reviews some of the most undesirable effects of the President's ruling placing quotas on oil imports:

QUOTAS ON IMPORTS OF OIL CAUSE AS MANY HEADACHES AS THEY CURE

The imposition of compulsory import quotas on the petroleum industry, designed to preserve to the greatest extent a vigorous, healthy petroleum industry in the United States, seems certain to have consequences far in excess of these latter.

far in excess of those intended.

One of these looks like an injustice to the importing companies. The injustice occurs because the import quotas are based on a company's refinery capacity instead of on its record as an importer. The result is that small domestic companies which never imported a barrel of foreign oil in the past receive import quotas which they are able to trade of, at a profit, to companies which need them. The importing companies contend that their ability to profit from their foreign operations, many of which were urged on them by the Government for strategic reasons, has been sabotaged for in benefit of domestic producers. They are in the privilege of refining their competitors for the growth of the companies of the privilege of refining their own product. The domestic produces a that inas-

The domestic producers argue that, masmuch as cheaper oil from Venezuela or the Middle East has an impact on the price oil throughout the country, they are entitled to this privilege. However, the domestic producers have not relied on economic arguments to support the need for import restrictions, but contend that imports have dis-

couraged the search for new oil fields in this country, fields which will be necessary If a war should deny us access to the foreign

That's for the hot war. On the cold-war front, as might be expected, the import quotas are causing severe pain in Latin America and the Middle East, not to mention Canada, which screamed so loudly that the President has already moved the quota an Canadian has already removed the quota an Canadian imports. The reason given was that, inas-much as Canadian oil need not come to this country by water, the defense argument did not apply.

The probable effect of these restrictions on consumers raised a storm in Congress. Senators as far apart on other issues as Senator Airen, of Vermont, Senator Moase, of Oregon, and Senator Holland, of Florida, let it be known that they considered the quotas a discrimination against the people of their sections of the country, a spur to inflation and a harbinger of bureaucratic control over all bureaucratic

all business.

On this last point they have something. In announcing the quotas President Eisenhower indicated that "in the event that price increases occur while the program is in effect, the director is required to determine whether such increases are necessary to accomplish the national-security objectives of the proclamation." The implication was that, if the domestic producers rode their advantage too hard, the Government might let in a little more imported oil.

The possibility of price control didn't sit well with domestic producers. One Kansas driller was quoted in the Wall Street Journal as saying, "If Mr. Eisenhower is going to police to have bolice the refiners' prices, he's going to have to police our labor costs, our higher octane costs and all that." The importing companies might appropriately reply that, if the Government is going to prevent them from selling their product in a free market, it ought to ing their product in a free market, it ought to pay some sort of bonus to compensate investors for the expensive, risky, and strategically important business of producing oil

Regulating any segment of the national economy inevitably creates the need for regulation lation somewhere else. This fact, complicated by all sorts of political arguments not to mention the emotional repercussions in allied countries—imposes upon the director of the Office of Civil and Defense Mobilization a superhuman task.

Free Port on South Coast of Newfoundland Proposed as Seaway Transfer

EXTENSION OF REMARKS

HON. E. Y. BERRY

OF SOUTH DAKOTA IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. BERRY. Mr. Speaker, on this day when the governments of two great nations observe the dedication of the St. Lawrence Seaway, it is most approbriate to speculate on the proposal of Senator Pratt, of Newfoundland, made during debate in the Canadian Senate, and the elaboration on the subject by C. F. MacLellan, of Toronto, Ontario, which could be as valuable to the United States as it is to Canada.

If the seaway, being dedicated today, can be made effective year round through warehousing at Mortier Bay, American agriculture could be materially benefited through reduced transportation costs, and our investment in the

seaway could be greatly enhanced.

The proposal as explained in an article in the May 23, 1959, issue of Traffic World as follows:

FREE PORT ON SOUTH COAST OF NEWFOUNDLAND PROPOSED AS SEAWAY TRANSFER POINT

In the course of debate in the Canadian Senate on a resolution urging greater use of Atlantic ports, Senator Pratt, of Newfoundland, said that, in connection with the St. Lawrence Seaway, "there is every reason for a very close and joint investigation into the mutual use of a modern seaport on the coast of Newfoundland."

Such a port, he said, would be "complementary to the joint services provided by the seaway in the open period of navigation.

Senator Pratt had spoken previously of an idea which he said had been discussed for a long time but had never officially been studied by the Government-a possible free port development in Newfoundland.

Two possible locations for such a port had been talked of, the Senator said, one Mortier Bay and the other Bay D'Espoir, both ice-free ports on the south coast of Newfoundland and on a direct course out of the Gulf of St. Lawrence to the ocean. He added:

"Those ports are in the direct line of overseas traffic. That area is closer to South America by several hundreds of miles than is New York, and closer to Brazil than is New Orleans, which is a great American center of traffic from the United States to South

America," said Senator Pratt.

Later he said that by setting up a free port in Newfoundland "we would be following an approved pattern in international trade and to a great extent overcoming the effect of winter closure of freight from the interior. It is certainly time for a thorough investigation into such an operation."

The Canadian Government has appointed a three-man commission to make such an

investigation.

DEVELOPMENT PLANS

In an interview with Traffic World in Washington, D.C., C. F. MacLellan, of Toron-to, Ont., president of Mortier Bay Development Co., Ltd., described the situation at Mortler Bay and its possibilities.

Aside from being ice-free the year around, said Mr. MacLellan, the depth of the bay at all points was more than ample to take care of ocean liners. He said the bay lay only 125 miles from the Great Circle sailing

It was his view that Mortier Bay offered a needed location for a transshipping point. Large ocean liners, instead of making the through the St. Lawrence Seaway, would discharge cargoes at Mortler Bay. cargoes would there be picked up by ships designed for use on the Great Lakes. Those ships, he said, because they need not be built to withstand the impact of ocean waves, could carry larger cargoes through the seaway and on the lakes. He said he had investigated the matter and found that, with some strengthening, the large "lakers"

could be made safe for the St. Lawrence Bay journey to Mortier Bay.

Mr. MacLellan observed that one advantage offered by such a transshipping point so close to the Great Circle sailing route was that cargoes could be shipped during the navigation season on the St. Lawrence Seaway in such volume that, when the seaway was closed by ice in the winter months, a regular schedule of shipments to Europe and South America, or other portions of the globe, could continue on a 12-month basis.

He said that the idea of transshipment was nothing new to the shipping industry, ob-serving that, before the scaway was deep-ened from 14 to 25 feet, large Great Lakes vessels dropped cargoes at Lake Erie ports to be taken in the small "canalers" through the 14-foot channel.

It was also his view that such a transshipping point, near the ocean sailing route, would serve to create traffic for the seaway by drawing larger tonnages from inland for export and by stimulating greater tonnage from overseas areas to be transshipped for movement inland over the seaway and the Great Lakes.

Mr. MacLellan estimated the cost of developing a port in Mortier Bay at about \$100 million. He said it would be financed as a private enterprise. In his interview with Traffic World he mentioned expressions of interest from financial circles, from shipping circles, and from one company desirous of serving the ships it anticipated would put in at Mortier Bay. The consul of one European country, Mr. MacLellan said, had asked if it would be possible to base a fleet of 30 of his country's ships on the bay.

From Port of Entry to a Happy Home: Wisconsin Family Adopts Two Sons From Korea

> EXTENSION OF REMARKS OF

## HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 17, 1959

Mr. FLYNN. Mr. Speaker, I am quoting a letter from my constituents, Mr. and Mrs. Andrew Venema, of Delayan, Wis.:

We would like to urge that you vote for and use your influence with others to continue the adoption of foreign orphans program which expires on June 30, 1959. own two boys were adopted through this program; they are happy boys with good minds and healthy bodies; they are friendly too, and are liked by the children at school as well as in the neighborhood. Our children were processed from Korea to us by Mr. Harry Holt, of Cresswell, Oreg., and the Holt adoption program, which has brought into this country 1,286 children. Mark, who came to us in October 1957, and Paul, who came to us in January 1958, are part of this group of children. A comparison of the pic-tures sent to us from Korea 2 years ago and those taken of them now would convince you and your fellow Congressmen that the Holts are doing an extraordinarily worthwhile job—and we are sure that our story can be duplicated by 1,286 other happy and proud parents who have received these Korean orphans into their families and into their

Will you please use your influence to con-tinue this adoption of foreign orphans program which expires on June 30, 1959?

Mr. Speaker, this letter speaks for itself, and I respectfully ask the support of all our Members for this truly good and merciful cause. Thank you.

[From the Delavan Enterprise, Apr. 16, 1959] YOUNG KOREAN BROTHERS BRING MERRIMFNT TO DELAVAN HOME

Two lively little boys, Mark, 6, and Paul, 9 years old, have brought much sunshine and merriment into the home of Mr. and Mrs. Andrew Venema in the past 16 months. Their adopted sons are brothers and were Korean-American orphans. The boys have sparkling dark eyes, black hair, and beautiful com-

Usually the elder child is in a family before a younger one, but in Mark's and Paul's cases, the opposite was true. Mark came to Delavan from Korea, via Japan, Portland, and Chicago in November 1957 and Paul arrived in January 1958.

As in all adoption cases, months passed before the Venemas met their sons. Finally a telephone call on November 4 summoned Mrs. Venema to Portland to meet the younger child on November 7. She was informed the older boy would arrive later.

Meeting Mark and bringing him home posed several problems as he spoke very little English. Communication was mainly by motions. However in no time Mark was chattering as though English was his mother

Paul spoke English when he arrived as he had attended school with instruction in the language. Paul likes school very much and feels it the best part of America and English is his favorite subject.

Paul is an active boy who enjoys outdoor play and activity. He has learned to play the all-American pasttime, baseball, and basketball. He is now anticipating golf lessons from his mother. He likes to shovel snow, rake the lawn, and work—most any kind, except dishes.

Mark has learned to play baseball, but is not as enthusiastic about sports as Paul. He prefers to listen to stories, especially Bible stories, color, and read. Best of all he likes "vacation and coloring," he replied to a question.

Favorite foods? Candy, cookies, spinach, oranges, apples, carrots, bananas, chicken, hamburger, chop suey, Spanish rice, and spaghetti are favorites. On one point they differ-Paul loves hot dogs, but Mark finds he can get along quite well without them.

Both boys have good voices and like to sing. They like to go to the story hour at the library on Saturdays and bring home many story books for reading. They attend Sunday school at the Christian Reformed Church and are enrolled at the Delavan Christian School. A train trip to Chicago for a visit with their grandmother is a thrill they look forward to with great delight.

A friend of the Venemas, who is a missionary in Korea, located the boys for them. Harry Holt, the Oregon farmer who has been godfather to Korean-American orphans and found homes for countless numbers, was contacted and he consented to process the children for the Venemas.

#### Price Supports

EXTENSION OF REMARKS

### HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Friday, June 26, 1959

Mr. DORN of South Carolina. Mr. Speaker, this fallacy, price supports, is really nonsupport for the American farmer. Government programs have brought the farmer to the brink of ruin. The difference between farm subsidies and subsidies to business is that the Government is supporting the farmer out of business while Government help to business aids it to stay in operation. For instance, the airlines are growing and expanding.

Mr. Speaker, the following letter was written by a great American and patriot: MARICOPA, CALIF., June 8, 1959.

U.S. NEWS & WORLD REPORT, Washington, D.C.

DEAR SIRS: I have read in the June 1, 1959, Issue of U.S. News & World Report, the article titled "Crisis in Wheat—Can It Be Ended?" I do not agree with the views of the "wheat king of the world," Mr. Thomas Campbell, as expressed in the interview on the subject. respectfully submit a few remarks concerning the matter.

I have had about as many years of experience in farming and livestock production as Mr. Campbell, although on a much smaller farming scale. However, I feel that I know the facts of farming life, and believe that I am qualified to enter the discussion.

At the outset, I believe that all farm plans to date are entirely socialistic, unsound, unconstitutional, unworkable, and immoral. They are making the rich farmers richer and the poor farmers poorer at the taxpayers' expense. Apparently Mr. Campbell believes otherwise.

The collapse of the farming industry of the 1930's which Mr. Campbell mentions, was due to the worldwide economic collapse which

affected alike all other industries.

Mr. Campbell says, "It costs us more per bushel to grow wheat than it does the smaller farmer who gets most of his work done with family help. On all of the family farms around us with 1,000 to 2,000 acres you will find four or five children, and the boys are driving small tractors at 10 to 12 years of age. The girls are out driving small trac-tors and hayloaders. When the boys are 15 or 16 they go on a big tractor, or even a combine. So you see they have no payroll at all."

I would say that these family groups are industrious, as they should be, but no reason why the parents of these children are not entitled to charge as costs, wages commensurate with the work they do just as Mr. Campbell and other big farmers charge as costs the wages they pay. Otherwise, I would call this family child labor sort of a

slave labor plan.

When questioned about Government loans on wheat, Mr. Campbell said, "We have had a loan on our wheat every year since the program started in 1933—26 years—and we've paid back, redeemed our loans with interest paid to the Government every year except 5." He says that his Government loan in 1958 was about \$510,000 and that it is not paid off. With a few \$510,000 loans which do not have to be paid, almost any farmer could be a king and establish a show place such as Mr. Campbell now owns. Mr. Campbell mentions no figure on the other four loans which he has not paid off. According to my understanding, these Government loans are made without recourse, so that on unpaid loans the Government stands any loss between the sum loaned and the sum recovered, besides interest, handling charges, and storage. Remember that Government is the taxpayer. The net result is that the taxpayer, regardless of how poor he or she may be, is paying all of the losses entailed in these transactions, which, of course, regardless of Mr. Campbell's opinion, is an outright subsidy.

These Government loan farm losses have run into the billions. Mr. Campbell says, "We are not the only pig that has his snout in the subsidy trough." He mentions railroads, merchant marine, airlines, postal service, etc., as being subsidized. There is a difference between the latter and the farm subsidy in that all of the public (citizens) have the privilege of using the latter, whereas, the farm subsidy is for a favored few. He classes a protective tariff as a subsidy. I do not, because those who are protected are still operating on a competitive basis. Furthermore, if the farm plan fulfilled the dreams of those who advocate it, the consumers would pay more for food. Of course, it is not working according to their dreams, and it never will. Mr. Campbell believes that the crisis can be ended after a 2-year period of drastic action, followed by use of a two-price system. I agree that a two-price system, providing serious foreign complications can be avoided. would be desirable if (and here is where Mr. Campbell will disagree) there is no Govern-ment subsidy and that the farmer pays out of his own pocket all losses entailed on such transactions. The payment of such losses will soon bring the farmer to the realization that unbridled overproduction is unwarranted. Then he will produce for the free

My further suggestions are that the farmer should have access to loans of commercial money on an equitable basis with all other industries, i.e., based upon his ability to repay, with reasonable interest rates. Government farm plans are rapidly converting the once stalwart individualists into men without pride and without the do-it-yourself

spirit of the presubsidy days.

There appears an editorial in the May 30, 1959, issue of the Saturday Evening Post titled "Controlling Farm Prices Leads to Controlling Farmers." In this article, Secretary Benson, U.S. Department of Agriculture, is quoted as saying that the results of a recent poll by a national farm magazine showed 8 out of 10 farmers voted for greater freedom and less Government in farming, and further that the ballot showed 55 percent voted for no supports, no controls, no floors, free market prices, get Government clear out. Then Mr. Benson says, "If this is what farm" ers want, what are we waiting for? What is Congress waiting for? We've made our recommendations, why don't they act? We have to face this question fairly: Does a sane agricultural policy require such unfair, un popular, and generally cockeyed laws?"

He says, "What is Congress waiting for?" learn Many Congressmen are waiting to which way the political wind is blowing before they will stand up to be counted on this

farm fiasco.

I regret to say that the waiting is largely due to just such well-publicized viewpoints as expressed by the acknowledged wheat king of the world, Mr. Thomas D. Campbell, and to other farming barons with like beliefs, who have fattened by getting something for nothing at the taxpayers' expense. Some follow the theory that the king can do no wrong-Thus, many Congressmen continue to play the political farm game while Rome burns. Very truly yours,

HUBBARD RUSSELL.

Record Growth Creates Problems

EXTENSION OF REMARKS OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. GUBSER. Mr. Speaker, with the problem of how best to assist the public schools of the schools of the country uppermost in the minds of every Member of Congress, I thought it might be particularly interesting for my colleagues to see what

Santa Clara County, in my own con-

gressional district, has done for itself. Under leave to extend my remarks, I submit for the attention of my colleagues an article in the February 1959 issue of the Superintendent's Bulletin, as published by the school superintendents in Santa Clara County:

## RECORD GROWTH CREATES PROBLEMS

The unprecedented growth in population which has taken place over the past decade in Santa Clara County has created problems and tensions unheard of before and is destined to make even greater demands before it has run its course. Caught in the eye of this human tornado are the public schools which, although limited in capacity, must admit all pupils of school age. The mag-nitude of the task of providing for these new pupils is revealed from the following figure. figures. The total enrollment in the public schools of Santa Clara County in 1948 was 42,662, exclusive of adults. Comparable figures for today show 130,045 pupils in attread for today show 130,045 pupils in attendance. This is an increase of 87,383 or 205 percent. The increase this year over last year was 12,205 pupils or 11 percent. To meet the needs of the new pupils has necessitated the building of 180 new schools.

necessitated the building of 180 new schools, an approximate the building of 180 new schools. an average of 18 a year. Many of the new schools replaced old structures which, having could not be expanded to meet the growth.

Staffin

Staffing of the new schools has required the addition of 400 new teachers each year, raising the total number of teachers in the county from 2,001 in 1943 to 6,042 in 1958. This is an increase of nearly 4,000 or 200 percent. Other essential requirements of a school organization such as classified em-ployees, equipment, and supplies have in-creased creased accordingly.

Because its service program grows out of the needs of the school districts it serves, the county office has felt the full impact of Dunity office has felt the full impact of the school districts it serves. pupil growth in the county. The problem has been made more acute by the addition through legislative action of many new services designed to give more aid to school districts and to give more aid to school districts and all singles in the school districts and school d tricts and meet the needs of special students. once its enlarged commitments, the county superintendent has increased his star from the county superintendent has been superintendent and the county superintendent has been superintendent. staff from 36 persons in 1948 to 109 in 1958 exclusive of special schools, with only moderate in erate increases in office space. As a result, the county staff has outgrown its present quarters and is in urgent need of more ade-

While the problems of adjustment resulting from growth have affected the schools in all areas, nowhere has the impact been greater than in the area of finance. This is evidenced by the fact that the total educational bill for the county has increased from \$5,525,870 in the year 1947-48 to \$74,941,813 in 1957-58. This is an increase of \$693,485,-increase, of course, is due to inflation which has reduced the dollar to about 40 percent has reduced the dollar to about 40 percent of its prewar purchasing power.

When will present growth trends subside? No one claims to know the answer to this question question. Certainly not in the immediate future. While the speed of growth may slow up, most people feel that it will not end until the value is sufficient and factories. the valley is filled with homes and factories. In view of the momentum of the present boom, it seems reasonable to assume that there may be another decade of rapid growth ahead. Citizens of Santa Clara County recognize this fact and will rise to the occasion in the future as they have in the past. To do to the past. past. To do less would be turning our backs on the needs of youth at a time when our very existence may depend upon turning out a superior school product.

#### Soviet Trade Myth

EXTENSION OF REMARKS

#### HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. FEIGHAN. Mr. Speaker, under leave previously obtained, I insert in the RECORD an article which recently appeared on "Soviet Trade Myth".

SOVIET TRADE MYTH: THE POPULAR FALLACY THAT MOSCOW'S FOREIGN COMMERCE, AID PROGRAM ARE THREAT TO WEST IS EASILY REFUTED

#### (By William Henry Chamberlin)

The Senate Foreign Relations Committee has reported out a \$4.1 billion foreign aid bill and during the coming debate great emphasis will be placed on the need for more and more economic aid to the uncommitted nations.

This is not surprising, for it has become fashionable to represent Soviet foreign trade and Soviet aid to uncommitted countries as mighty weapons in the cold war, and to try to offset those weapons with like ones of our own. In fact, the very issue of the cold war is sometimes represented as a race between Washington and Moscow to see which Government can extend the most help in the shortest time to economically retarded areas.

But before basing national policy on any hurried conclusions about the effectiveness of Soviet trade and aid it would seem advisable for the Senate to take a look at some of the facts.

#### OVERPLAYED NEWS

The dimensions of aid have been greatly exaggerated in the public imagination because of the news value attached to almost any Soviet move. The recent trade agreement between Great Britain and the Soviet Union was treated as front page news, whereas a commercial treaty involving much larger exchanges between Great Britain and some non-Communist country would doubtless have been reported back near the want ads. If a Soviet trade delegation visits India or South America there is a great trumpeting of publicity—but there isn't much follow-up in the way of analzing how much trade actually follows the visit.

Cyrus Eaton, an industrialist well-known for his friendly attitude toward the Soviet regime, recently won some headlines with a statement that U.S. exports of \$3 billion to the Soviet Union were within the bounds of possibility. But he offered no explanation as to how these exports were to be paid for. Total Soviet earnings of foreign exchange from foreign trade with the non-Communist world are only a little over \$1 billion a year, about on a par with Switzerland's. Soviet Government has not been a spendthrift with its gold reserve, the amount of which is a State secret. And there is no good political or economic reason for lending the Soviet Union the money to buy American goods.

Contrary to practice in the era of rigid secrecy enforced by dictator Josef Stalin, the Soviet authorities have been releasing more facts and figures about Soviet Foreign trade. Total Soviet exports in 1957 were a little over \$4 billion, total imports a little under \$4 billion. (The uncertain and debatable value of the Soviet ruble in internal purchasing power does not enter into the picture, because foreign trade transactions are reckoned in gold, dollars or sterling or other stable foreign currencies).

About three quarters of this 1957 trade was with Communist-ruled countries, East Germany leading the way with a total trade turnover with the Soviet Union of about \$1.6 billion and China second with about \$1.2 billion. This intra-block trade, of course, did not realize any hard money which could be used for purchases in the West. Trade with non-Communist countries was

just about in balance, at around 4.6 billion rubles of both imports and exports, or \$1,169,000,000 and about \$1,150,000,000. It is interesting and significant that the big-gest Soviet trade partner in the West was little Finland; Soviet-Finnish trade amounted to a little over \$300 million. Great Britain was a close second. Soviet trade with the United States was virtually nonexistent, \$16 million of exports and about \$10 million of imports.

The reason Finland, not a prominent in-dustrial country and with a population of a little over 4 million, plays such a large role in Soviet foreign trade is that Finland's industries were forced to expand after the war to meet Soviet reparation demands. After the reparations ceased, these industries, unable as a rule to compete in the West, found markets in the Soviet Union and the satellite area.

It seems highly improbable that the Soviet Union, with foreign trade extremely small in proportion to its resources, population and industrial output, could upset the whole trading system of the West by political manipulation of its exports and imports. Of course Soviet foreign trade is politically motivated, since it is a state monopoly and may be exploited for political ends.

When the Soviet Union was on the outs with Australia, because that country gave asylum to a defecting Soviet high espionage operative, it shifted its wool orders to South Africa. Oranges are bought in Morocco, not in Israel, because the Soviet Union favors the Arab countries in its foreign policy. There is a political element in Soviet pur-chases of fish in Iceland. However, the primary purpose of Soviet foreign trade is to make advantageous deals from the standpoint of the Soviet state economy. The fear that Soviet exports will be widely used to break prices by dumping overlooks two considerations. The Soviet Union itself would suffer from such a policy and the quantities of available exports are not sufficient to achieve such an end.

#### EXAGGERATED AID

The amount and significance of Soviet aid to underdeveloped lands have also been exaggerated. Up to November 1958, aid of this kind, extended by the Soviet Union, Red China, and the East European Soviet satellites, seems to have added up to \$2,120 million, of which \$850 million had actually gone into effect. But this aid in almost all cases has not been in the form of free grants. The standard arrangement has been the low interest loan, usually at the rate of 21/2 percent. Some of the satellites have charged higher rates; Czech credits to Indonesia have been at 5 percent, to India at 41/2 percent. Loans, which must be repaid, even at low interest. are not the same as handouts.

To cut the Soviet trade and aid (with repayment and 2½ percent interest stipulated) program down to realistic size does not mean that Soviet exports of such prodnot mean that Soviet exports of such prod-ucts as oil, iron ore, aluminum, diamonds, grain, and engineering products may not increase, along with Soviet purchases of rubber, copper, machinery, and even some consumer goods. But the first Soviet eco-nomic priority is to boost its internal development. The second is to back up China and the East European satellites.

Mr. Alec Nove, of the London School of Economics, who contributed a thoughtful

article on the subject of Soviet trade and aid to Lloyd's Bank Review, seems correct when he dismisses as "simply not so" the widely held belief that the U.S.R. is giving top priority to a gigantic trade and aid drive and is making major sacrifices to this end.

#### Pollution in Clear Creek

EXTENSION OF REMARKS OF

## HON, BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. JOHNSON of Colorado, Mr. Speaker, the American people have been warned that their source of water may be contaminated to epidemic proportions and a plague before their Government takes any appropriate action.

I am proud to say this House has acted on this increasingly serious American problem by passing H.R. 3610, introduced by our colleague, the gentleman from Minnesota [Mr. BLATNIK], to provide larger Federal grants to encourage consolidation of more economical metropolitan sewer districts and treatment plants.

The Rocky Mountain News, in the third article of its series on water polluton, presents a case study of nine different disposal plants along Clear Creek in my district.

In addition to being less efficient and more expensive than one or two consolidated plants, these nine are not adequate to the rapidly increasing populations. They argue most effectively for the kind of Federal assistance proposed in H.R. 3610.

The article follows:

CLEAR CREEK POSES MAJOR SEWAGE PROBLEM (By Bill Miller)

Clear Creek, and the name really riles downstream users whose supply of domestic water comes from it, is the critical spot sanitationwise, in the Denver metropolitan area.

Rapid development of the Clear Creek Valley has precipitated grave, if not dangerous, sewage disposal-and consequently, water-problems.

The population growth has resulted in construction of nine disposal plants since 1949, seven since 1953. Each plant serves one or more sanitation districts or incorporated communities.

#### DOUBLE LOAD

These plants receive wastes from a tributary population-estimated in 1957 at 45,500 but substantially more since then-plus organic industrial wastes.

This organic industrial waste load was equivalent (in 1957) to the wastes from a population of 54,500, making the total equivalent population load 130,000.

In some districts there is another reason why plants are overloaded. It is the problem of infiltration.

This means ground water is seeping through sewer lines and coming to the plants along with sewage.

One district, Fruitdale, located on the north bank of Clear Creek about 3 miles vest of the city of Denver, has a tremendous infiltration problem.

Black & Veatch, the Kansas City engineering firm that made a 1957 study of sewage problems in the Denver area, said of Fruitdala.

#### WASTED EFFORT

"A substantial amount of the sewage flow to the (Fruitdale) plant is believed to result from infiltration. This flow is in excess of 700 gallons per capita per day, which is more than seven times the daily per capita sewage flow normally observed in this area."

The report by Black & Veatch, the latest and most comprehensive available, stipulated

that the combined capacity of all nine plants was adequate for a total population of only 70,000.

#### PLANTS LISTED

In the report, Black & Veatch listed the following plants on Clear Creek and made these comments (based on 1956 statistic):

North Washington: Serves a population of 10,149 including organic industrial wastes population equivalent of 7,800; plant capacity 9,000; treatment needs-enlargement of existing facilities and addition of secondary treatment units; status of plantoverloaded.

Westminster: Population served, 7,000; plant capacity, 6,000; treatment neededenlargement of existing treatment facilities; status of plant, overloaded. (Present population of Westminster is nearly 15,000.)

Baker: Population served, 4,550; plant capacity, 3,000; treatment needed—enlargement of existing treatment facilities, addition of secondary treatment units to exist-ing facilities; plant status, overloaded.

Arvada: Population served, 7,700; plant capacity, 7,000; treatment needed-enlargement of existing treatment facilities; plant status, overloaded. (Arvada's current population also is around 15,000.)

Clear Creek Valley: Population served, 8,025, including industrial wastes with a population equivalent of 5,400; plant capacity, 4,000; treatment needs-enlargement of existing treatment facilities and addition of secondary treatment units to existing facilities; plant status, overloaded.

Wheat Ridge: Population served, 13,500; plant capacity, 11,000; treatment needs—enlargement of existing treatment facilities and addition of secondary treatment units to existing facilities; plant status, overloaded.

#### MOST INADEQUATE

Northwest Lakewood: Population served, 1.600; plant capacity, 5,000; treatment needs—enlargement of existing treatment facilities and addition of secondary treatment units to existing facilities; plant status, inadequate.

Golden: Population served, 76,800, including industrial wastes with a population equivalent of 70,000-plus; treatment needs enlargement of existing treatment facilities and addition of secondary treatment units to existing facilities; plant status, inadequate.

The Golden plant was built in 1953 and is owned and operated by Coors Brewery.

Coors is in the process of enlarging the plant and company representatives have promised that this enlargement and addi-tion of new equipment will be accomplished in the near future.

#### EXPANSION PLANS

Clear Creek Valley Sanitation District re-cently gained State approval for a plant addition, obtained Federal matching funds and is in the process of constructing a \$140,000 secondary sewage treatment plant.

But expansion hasn't been able to keep up with need.

Tests made by the State health department In February and March (keep in mind the maximum BOD count allowed under State law is 50 and the maximum coliform count is 1,000) show:

Plant	Average BOD	A verage coliform
Northwest Lakewood Westminster Arvada Clear Creck Valley Fruitdale Golden (Coors) Baker Wheat Ridge North Washington.	136 282 141 191 123 680 159 33 180	23, 000 240, 000 68, 000 93, 000 43, 000 215, 000 240, 000 230, 000

Sewage content in the raw water at the Arvada and Consolidated Water Co. (which serves a large area in Jefferson County) intakes just below Golden is estimated to have been about 7 percent of minimum daily September flows.

#### SEWAGE INCREASES

Furthermore, Black & Veatch reported. average daily total sewage discharge to the creek above Baker district increased almost

one-third from 1954 to 1956.

In the same period, maximum total do mestic water supply withdrawals have in-creased almost two-thirds.

Black and Veatch concluded:

"From these data it is certain that the average sewage content in the domestic raw water sources on Clear Creek has increased significantly. This increase has been accompained by added public health hazards in these water supplies."

That was 3 years ago.

If sewage flow into the creek and domestic water takeout has increased as it did from 1954 to 1956—and the assumption seems to be valid—then the creek is in much worse shape now than it was then.

George Nez, director of the intercounty regional planning commission, recently com pleted some Clear Creek Basin sewage-output water-intake estimates.

In 1958, he estimated the basin population at 75,000, using 15 million gallons of water per day. The same population was causing 10 million gallons of sewage to be discharged. discharged.

By 1965, he believes, the population will be 100,000, using 20 million gallons of water and discharging 10 and discharging 12 million gallons of sewage.

"The situation is bad now," he said. "But it will continue to get worse unless some thing is done immediately."

Upstream users get the break because their water is taken out before a considerable amount of sewage is dumped into the creek

#### Attacks on U.S. Planes

EXTENSION OF REMARKS OF

## HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. DORN of South Carolina. Speaker, when are we going to have to courage as a nation to put a stop to these cowardly attacks on our service men. The beastly attack last week on our Navy plane is another example. The longer we put up with these Red Communist insult up with these lies Communist insults then more will be coming. I recommend the following great speech by a patriot to every Member of this Congress:

ADDRESS BY SUMTER L. LOWRY TO THE NA-TIONAL GUARD ASSOCIATION, SARASOTA, FLA., APRIL 5, 1959

After the end of World War II, I became interested in the actions of the Russian Government and the world Communist conspiracy as related to our own country, the United States of America. It was clear to me that after winning World War II we had immediately entered into world war III.

I wish to quote parts of an address that I made to the Rotary Club of Miami in Novem-

The Russian Government, including the Russian people, who 2 years ago were our allies, are now our enemies, working 24 hours each day preparing to destroy our Government and to finally enslave our

"The first step of the Russian invasion of our country is already underway. I refer to the advance guard of Moscow, trained Communist termites, sent here by the Russian Government, to confuse our people, tear down our Government, and to soften us up for their intended conquest.

"Let me make this perfectly plain. I believe that Russia will never attack this country with armed force as long as she can conquer us from within. The only things that stand in her way of complete world domination this very minute are the people and resources of the United States.

I urge our Government to attack the Communist menace within our country today with the same energy and vigor that they attacked the Germans and Japanese in the last war. We must make the fight against communism and the Russian plan of conquest the first order of business of our Government and our people; pursued with the utmost vigor and courage."

These statements were met with ridicule from many of our people and most of the press of our State, but events over the last 12 years. 12 years have proven that what I said then

When World War II was over, the United States of America was the strongest nation in the world. It had the best equipped and finest armed forces in all history. Its people were were united. We had the respect of every nation; our financial position was sound; our will to fight for our country was an accepted part of our national life; but best of all, patriotism was strong in the heart of

Twelve years later we find an entirely different picture. By the softening influence of too much prosperity, by a national policy of appeasement of our enemies, by our reliance on the softening in the softening in the softening in the softening our reliance on the softening our inance on the United Nations to solve our international problems, by a desire for peace at any price, and through the work of trattors, this is what we find today: Our Nation's finances are close to bankruptcy; we have lost the respect of most of the nations of the world; our effort to buy friends with money has gained us only enemies; we have nations, Russia and China. Our people are built up two vast and powerful bitterly divided over the integration issue; our supreme Court is giving aid and comfort to the enemy by its many decisions favorable to Communist traitors; we are frightened and confused about our foreign policy; but worst on watered worst of all, our patriotism has been watered down and divided between the United States and the United Nations. Yes, we have all the earmarks of a nation that has reached its past and the state of a nation that has reached the past and the state of a nation that has reached the state of its peak and is on the downgrade. A sad and entirely unnecessary situation.

Let's examine the basic reason for our present plight. International communism with its headquarters in Moscow is a consultant the line of spiracy to capture the world with the United States as its final and grand objective. We are active. are actually at war with Russia, deadly, final, and and complete. Yet our Government has never recognized this fact. We still treat

Russia as a friendly nation. While Russia is doing all in her power to destroy us, we never a single offensive step against While Khrushchev openly says to the United States, "We will bury you," Mr. Eisenhower sends "best wishes and felicitations." This weak and unrealistic policy of ours can lead only to destruction.

But all is not lost. Our country can still survive, for we have the greatest Nation in the world, our people are the finest; our armed service cannot be surpassed; hearts are still strong; and we can lick the world, Russia included. But we must have a complete reversal of our policy in dealing with Russia; we must recognize that we are at war with Russia, and treat her as our common enemy; we must go all out to destroy Russian communism by every means, armed conflict if necessary. This must be the first and continuing objective of our Government and every citizen in our land.

We must also recognize and meet head on, with open and firm resistance, that part of the Communist conspiracy to integrate our race and make of us a mulatto people, devoid

of courage, ambition, and pride.

Finally, we must thoroughly understand that the real key to our survival is built around just one word "offense." For no war, battle, or combat was ever won by a purely defensive attitude.

If we do these things, we will destroy the evil doctrine of communism. Then freedom and liberty will be our gift to the world.

One of the most effective steps taken by the Russians in this war was their plan to destroy confidence in the United States throughout the world; she did this by a series of events designed to humiliate America before the people of the world. To make other nations feel that the United States is no longer a powerful country, that we will not fight, and that it is better to tie up with Russia than to put their trust in us.

Take a look at the events which have happened since 1946, all designed to humiliate the United States of America and to lower her world prestige.

First, let's review the list of American planes attacked by Russian military aircraft:

#### LIST OF ATTACKS

April 8, 1950, Baltic Sea, no survivors. November 6, 1951, Sea of Japan, no survivors.

November 19, 1951, Hungary, crew impris-

October 7, 1952, at sea near Yuvi Island, no survivors.

March 15, 1953, North Pacific area, plane fled, crew escaped,

July 29, 1953, Sea of Japan, eight dead, nine survivors.

September 4, 1954, 40 miles at sea from Siberia, no survivors.

November 7, 1954, over Japan, loss of life

undetermined. June 3, 1955, Bering Sea, crew members

injured.

June 27, 1958, Armenia, plane forced down; no casualties.

September 2, 1958, Armenia, no survivors. September 7, 1958, Baltic Sea, plane fled, crew escaped.

This is a shameful record indeed. And just think each one of these attacks was a brutal, unprovoked, and open act of war.

For 9 years we have watched the Russians shoot down our unarmed planes, murdering our men, humiliating us before the world, and what have we done about it? Nothing; we just stand and take it like a lot of scared rabbits. To me it is utterly fantastic that the great United States would sink so low as to allow the cheap dictators of Russia to frighten us so badly that we won't avenge the death of our own men. The best we can do is to send polite notes to Russia saying "We are unhappy about it. Please don't do

Go back to newspaper article of July 22, 1958; here are the headlines: "Americans Killed by Iraq Mob—Three U.S. Citizens Dragged From Hotel, Beaten to Death While Soldiers Stand and Watch." Unthinkable, but true.

Also remember how Castro, the unknown Cuban revolutionary, in 1958, kidnaped 35 marines in uniform, took them to his mountain stronghold and doled them out to us a few at a time, like candy to a child-a great humiliation. And what did we do? Nothing.

Also, don't forget that our good American soldiers are still held captive in Chinese jails, years after the Korean war, and we are

too impotent to get their release.

To me the crowning insult of all was the action of the Communist mob last year in Venezuela, casting every vile insult at Mr. NIXON, the Vice President of the United States, actually spitting in his face. more can the Communists do to humiliate us and lower our world prestige? Have we reached the point where we can't be insulted? It looks that way. When a man won't fight for his honor, he is through.

This national disgrace has been due to our cowardly foreign policy followed for the last 12 years. The policy that we must do nothing, absolutely nothing, that might

make Russia mad.

One bright spot in our sorry dealings with our enemy, Russia, was President Eisen-hower's television statement made on March 16, 1959, when he said the Western allies would not yield to Russian threats over Ber-This was extremely important, but still only a defensive measure. We don't seem to be able to come up with any aggressive action to hurt Russia.

Don't forget that Russia has no intentions of attacking us with armed force; she expects to overcome us from within, by destroying our moral fiber and our will to

Our Government policymakers have never been able to understand the Russian character. They can't realize that Russia lives by a code of deceit and trickery, while our code is based on honor and truth. We live by the golden rule of fair play to others, while Russia lives by no rules at all. We give Russia respectability and recognition to her code of deceit and trickery by our continued dealing with her over the conference table. We keep negotiating; we get nothing out of it except a kick in the teeth. We still haven't learned that you can't trust a nation who never keeps a promise. Does it make any sense to keep negotiating with a man when you know in advance he has no intentions of keeping his agreement?

Let's consider the Mikoyan visit to the United States last fall. Here is a man who is second in command of a hostile govern-ment, at war with us. Dedicated to our destruction. He is invited to come to our shores, treated as an honor guest, wined and dined by big businessmen, fawned over by autograph seekers, and is even offered public welcome by high Federal officials and certain State Governors. Now it was well understood that this man Mikoyan is one of the greatest murderers in history. He was known as a deceitful and cunning character, yet we give him respectability and treat him as our bosom friend. I would not be opposed to extending simple courtesies to this man if he were a reformed criminal sincerely trying to change his way, or if he were a representative of a beaten foe, trying to make a comeback, or, if he were just a misguided Russian citizens who might derive some good from contact with this country. But this is not the case. man is our enemy, and should definitely be treated as such. Our welcome to Mikoyan was a betrayal of every American who lost his life fighting for our great country. It was an insult to every patriotic American.

Russia's intended conquest of the United States of America is entering its last and final stage-the period of peaceful coexist-Russia after 10 years of pressure has greatly weakened our country's will to resist. A large segment of our people are weary of combat in the cold war, and are ready to grasp the false doctrine of peaceful coexistence with Russia. Peaceful coexistence with Russia is a fraud and a delusion; it is utterly impossible. The only basis on which Russia will coexist with the United States of America, is that of master and slave-Russia being the master and we being the This is the proven experience with every country that has tried it; they have all been swallowed up and are now Russian slaves. Peaceful coexistence is a deadly propaganda line and should be resisted by every patriotic American.

To bring about peaceful coexistence the idea now being sold to us, is to the effect, that we cannot match Russia in military strength-that she can press a button and destroy us at will. That she will soon surpass us in economic possibilities. That we cannot compete with her and survive. the traitors in this country will argue that it is better to join with Russia in a world government, to coexist with her, rather than be destroyed. I want to emphasize the words, "join with" because to join with Russia means abject surrender and the end of our Nation.

From now on a great effort will be made to condition the minds of the people to acthe idea that even slavery and sur-er are better than death. The conrender are better than death. spirators will attempt to see that a President will be elected who will go along with the philosophy that it is better to join with Russia than to risk destruction in an atomic war. His leadership will be so powerful and the people so well prepared that surrender could come overnight, without any warning.

It is very probable that the National Guard will never fire a shot except in the streets of our American cities, because the only war we are going to have with Russia is the one fought here if Russia can recruit enough traitors in our Nation to make our internal conquest possible. And you, the National Guard, will be the only force that can resist, if that time comes

As you well know, the National Guard has been under Federal attack for many years. A great effort has been made to take it out from under control of State governments. To make it a Federal force. But we must never give up or surrender our dual status as State and Federal troops.

The National Guard is the last stronghold of liberty and freedom in the United States. It is the final symbol of the sovereign rights of the people opposed to total centralized control in Washington. It is the last stand against those forces who would take over control of our local affairs and destroy the 10th amendment to our Constitution.

Each member of the National Guard in every local community has the obligation and the privilege of leading the fight against all un-American forces in his community. We must not fail to speak out as patriots against all groups of people who, by ignorance or by deceitful means, are trying to divide our loyalty to our country and flag. Always remember, "when good men are stlent, their freedom is lost." Never forget that freedom is not a permanent gift from our ancestors. It must be won or lost by each generation. You are the generation which now has the obligation to preserve it.

I am very proud that I am a National nardsman. I shall always stand with the guardsman. National Guard and consider it an honor to fight by your side for the survival of our

I hope you gentlemen will not think that I am too pessimistic or that I am a mis-guided alarmist. Well, maybe I am, but I earnest believe that we are locked in a life and death struggle with Russia. The results of this struggle will determine whether your children and my children will be slaves in a Russian police state or free Americans. America can stay free if you men here today and the people all over America will stand up and fight.

## Alltime Record Corn Acreage in Webster County

EXTENSION OF REMARKS

OF

## HON. MERWIN COAD

IN THE HOUSE OF REPRESENTATIVES Friday, June 12, 1959

Mr. COAD. Mr. Speaker, it is certainly to be regretted that the President vetoed the wheat bill which, as finally agreed to by both the House and Senate, would have cut wheat acreage over 25 percent, would have set price supports at 90 percent of parity and would have cost the taxpayers from \$250 to \$300 million less per year than the existing program. I had hoped that the administration's policy of price supports within the range of 75 to 90 percent of the last 3-year average market price with no controls on production would have been somewhat tempered by the reports coming in from the Midwest about the high prospects of a recordbreaking 4-billion-bushel corn crop, thanks to this same policy which was applied to the corn farmers a year ago. However, this was obviously not the case and it appears that the veto kills any chance for much needed wheat legislation for this year,

The following article from the Fort Dodge Messenger and Chronicle, Fort Dodge, Iowa, exemplifies the impact of no acreage restrictions on the production of crops in a typical Iowa county:

ALLTIME RECORD CORN ACREAGE IN WEBSTER COUNTY-90 PERCENT OF CROPLAND IN CORN AND BEANS

#### (By Wayne Messerly)

Fast-growing corn and soybean sprouts are rapidly changing the picture, but for weeks this spring. Webster County was a "black Sahara." Driving into the country was like getting lost in an ocean of black topsoil.

Entire sections of land were plowed under. The only green oasis in a desert of dirt were the homesteads, roadside ditches, and a sprinkling of oats and meadow.

On blustery, windy days farmers eyed the sky uneasily while tons of topsoil rolled into clouds of high-priced dust and loped Only last week, fierce duststorms awav. made fieldwork impossible for some farmers and drove them indoors for shelter.

Save for an ample supply of moisture and continued rainfall, the situation might have gotten out of hand here as it did in the Spencer area before heavy rains saved the

Now the green of corn and soybeans is filling up the black spaces, but the fact remains that Webster County is setting rowcrop history.

No one knows for sure, but according to the best estimates available, 340,000 acres of 380,000 crop acres in Webster County are in row crops this year, an alltime record.

Breaking these figures down, there are probably 230,000 acres of corn and 110,000 acres of soybeans. On this basis, about 90 percent of all the available cropland in Webster County is in row crop.

For basis of comparison, in 1958 the ASC corn allotment was only 105,000 acres although more corn than this was planted because only about hold of the cause of because only about half of the farmers complied with their corn allotments.

However, there is no question about it, that given the right combination of rain and sunshine, Webster County is heading for a record corn crop this fall.

A corn crop of at least 15 million bushels is quite possible in 1959.

Add this to the 25 million bushels which was stored in Government bins and privately last March, and it adds up to enough corn to supply every man, woman, and child in Web-

ster County with 1,000 bushels each.
Where all this prospective corn will be stored and how much money it will cost the taxpayers to store it in steel bins is another problem and another story.

For the present, let's look at some of the reasons behind the great row crop acreage

To some farmers, it makes good sense to put everything in corn, which many have done.

Here's the way they look at it:

Under the present price support program. farmers can raise all the corn they want and are guaranteed \$1.12 a bushel nationally or shout \$1.04 can be should be sh about \$1.04 to \$1.06 locally (not announce yet). At \$1.06 a bushel, a farmer's net profit per acre of 70-bushel corn is \$30.

On this basis, a farmer would net \$3,000 on 100 acres.

Last year, when corn was supported na-tionally at \$1.36 a bushel, his net profit on 70 bushels of corn was \$50 an acre.

In order to net \$3,000 in 1958, the farmer only had to raise 60 acres of corn (provided he was allotted that much acreage); Now, the farmer has to plant 100 acres to get the same income he had last year from 60 acres.

However, it would not be a true picture to say that all farmers are raising nothing

but row crops in Webster County.

Many farmers are convinced it is more profitable to balance crop and livestock production.

They agree with figures compiled by the Iowa Farm Business Associations that recordkeeping farms show a greater profit with livestock than with grain.

In Webster County, approximately 1,000 farmers are cooperating in the soil conservation program. They are sold on the idea of keeping from 20 to 25 percent of their crops in meadow. The majority of them are doing this in 1959 just as they have done in the past and will probably continue to do so in the future. the future.

What are their reasons for this:

1. In this area, good drainage is imperative and deep-rooted legumes in the crop rotation are necessary to are necessary to help tile function properly

2. On sloping soils, erosion control legumes and grasses is necessary if profitable crop yields are to be realized.

Weeds, insects, and plant diseases come an ever-mounting problem when crop rotations are dropped by the wayside.

4. Putting in more than one crop spreads out the workload and gives some protection against the danger of a total crop loss from weather heaven weather hazards, a danger which is more acute only when one crop is planted.

For these and other reasons, cooperators the soil-conservation in the soil-conservation program appreciate the value of legumes and grasses in their crop rotations

Their leadership may help turn the tide back to normal row crop acreage in 1960. Another factor in the return to normality

in row-crop acreage may be stricter Government production Congress may be forced to apply them for ment production controls. 1960 if—and this seems a certainty now they are confronted with the largest corn supply in the hist

supply in the history of the world.

## National Safe Boating Week

EXTENSION OF REMARKS

## HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 11, 1959

Mr. CHAMBERLAIN. Mr. Speaker, in the 85th Congress, it was my pleasure to sponsor a joint resolution authorizing the annual observance, by Presidential proclamation, of National Safe Boating Week during the week which contains the Fourth of July. This legislation was approved in time for the first Presidential proclamation to be issued last year.

I am happy to report that the 1958 National Safe Boating Week was an unqualified success in its objective of focusing attention upon the potential dangers—and the need for safe boating practices—in this fast growing recrea-

tional field.

On Saturday, June 27, this year's National Safe Boating Week will get under way. It is estimated that since the 1958 week some 9 million more Americans in a million more boats have taken up the sport. That rate of increase is showing few signs of diminishing, and only emphasizes the growing importance of boating safety work by numerous boating and yachting clubs, marine manufacturers and dealers, and safety asso-

Coordinating these activities are the U.S. Coast Guard and its civilian arm, the Coast Guard Auxiliary, the voluntary organization which was authorized by act of Congress some 20 years ago for the purpose of promoting safety in

the small boating field.

These organizations, I should emphasize, work the year around to make boating a safer recreation. The auxiliary, which is open to all citizens over 17 years old and own a 25 percent interest in a boat, plane or amateur radio station, now numbers nearly 17,000 members from the Atlantic coast to Hawaii, including Alaska.

I was privileged recently to attend the May 6 opening day of the Coast Guard Auxiliary's national conference in New York City, where I gained further insight into the valuable work of this or-

Under leave to extend my remarks in the Record, I include the auxiliary's report on the conference from its monthly digest, "under the Blue Ensign," and also the announcement of the 1959 National Safe Boating Week by Vice Adm. A. C. Richmond, commandant of the U.S. Coast Guard, in which he clearly sets forth the objectives of this special observance, and the President's proclamation, as follows:

UNDER THE BLUE ENSIGN (Monthly digest of the U.S. Coast Guard Auxiliary)

The annual national conference of the Coast Guard Auxiliary, recently held at the Hotel Astor, New York City, was the largest and one of the most successful held thus Members returned to their units

throughout the country, Alaska, Hawaii, and Puerto Rico, confident that with the plans for future activities, this, the 20th anniver-

sary of the auxiliary, will be a banner year.

After convening the conference, Capt.

Harold B. Roberts, chief director of the auxiliary, turned the presiding gavel over to National Commodore Charles S. Greanoff. The principal speaker for the opening session was Congressman CHARLES E. CHAMBER-LAIN. Republican of Michigan, who sponsored the National Safe Boating Week legislation. The Congressman stated that the fine reputation of the Coast Guard and the auxiliary was a tremendous assist in getting congressional approval of the Presidential procla-He expressed his availability to further aid in the promotion of safety, feeling that we must arouse a high degree of safety consciousness among boat operators com-parable to that which has been done with automobile operators.

At the Commodores' Luncheon, honoring the Commandant of the Coast Guard, Vice Adm. A. C. Richmond recalled that he had helped frame the original regulations for the organization in 1939, and thus took a certain personal pride in now viewing its steady growth and its fine record of accomplishments, especially in recent years. He stated that there is an even greater need for its services in public education and assistance to the Coast Guard. The commandant cautioned that the Boating Act of 1958 will not permit "resting leisurely on the oars"; education not regulation is the primary answer to safey affoat. In addition, the Coast Guard will still enforce the law on Federal waters, although it will coordinate its activities, wherever possible, with States providing adequate enforcement.

Certainly, if a State moves into the law enforcement field and if it is effectively enforcing its own State laws with respect to small boats, the Coast Guard, having limited facilities, will use those facilities in other States that are not enforcing the law or do not have comparable law enforcement provisions. But, this in no way relieves the Coast Guard of the responsibility of discharg-

ing the Federal functions.

At the conclusion of the luncheon, the Commandant presented certificates of office to each of the 12 district commodores in an installation ceremony.

The 4-day conference concluded with a windup dinner-dance. Assistant Secretary of the Treasury A. Gilmore Flues told the assembled members and guests that the auxiliary, like its parent service the Coast Guard, has a growing responsibility and importance in problems of peacetime activities. Mr. Flues observed that the auxiliary has assisted the boating public immeasurably by the promotion of safe boating through its educational and courtesy motorboat examination programs. He pointed out that if a maximum safety program, through a blending of law, regulation and education is achieved, much of the credit for its success will belong to the Coast Guard Auxiliary. A highlight of the evening was the special honor paid to Capt. and Mrs. H. B. Roberts by the officers of the Auxiliary National Board in behalf of the 17,000 members. The chief director leaves shortly to assume new duties as captain of the port, San Francisco.

This year, for the first time, a press conference was held for reporters and writers representing the newspapers and boating magazines. National Vice Commodore Bliss Woodward presided over the group and introduced Congressman Charles E. Chamber-LAIN; Chief Director Capt. H. B. Roberts; National Public Instruction Officer Joseph V. Day, of Chicago, Ill., and National Publications Officer Robert J. Boyle, of Montrose, Calif., who outlined Auxiliary activities and the educational and courtesy motorboat examination programs. This group also had an opportunity of viewing the posters, publications, and other materials used by the auxiliary.

Also, for the first time, leading training aids and promotional exhibits from various districts were on display, and competed for national honors. First place was awarded to the third district (northern area), New York, with second place to the third district (southern area). Philadelphia, and third place to the second district, St. Louis.

National Educational Research Officer Alan A. Atchison described new developments and projects and presented the latest edition of the public instruction course text, "Basic Seamanship and Small Boat Handling," formerly in eight separate pamphlets, and now combined into one booklet. It will be distributed when the remaining stock of separate pamphlets is exhausted.

Culminating the business meetings were the reelections of National Commodore Charles S. Greanoff, of Cleveland, Ohio, and National Vice Commodore Bliss Woodward, of Mamaroneck, N.Y., by unanimous vote in recognition of their effective leadership dur-

ing the past year.

Special acknowledgments were made to Rear Adm. H. C. Perkins, U.S. Coast Guard. commander, Third Coast Guard District, and Third District Commodore Lloyd A. Albin, and their respective staffs and committees, for their labors in arranging for the receptions, cruises, and other social events for the participants and guests.

Other honored guests who attended the conference were: Rear Adm. I. E. Eskridge, Chief, Office of Operations; Capt. W. P. Hawley, Chief of Staff, Third Coast Guard District; Capt. Richard Baxter, new Chief Director; and Chief Comdr. Lester C. Lowe,

U.S. Power Squadrons.

U.S. COAST GUARD.

To All Boating Enthusiasts:

I am pleased to announce that National Safe Boating Week will be observed June 27 through July 5 under the direction of the National Safe Boating Week Committee. committee is composed of representatives of industry, education, and sports groups who, together with the Coast Guard and Coast Guard Auxiliary, are concerned with recrea-

tional boating.

Boating has become America's No. 1 family recreation. With some 37 million Americans taking to the water in approximately 7 million pleasure boats of every description, a special effort must be made to focus attention on the growing need to know and observe basic safe boating rules and regulations to maintain boating's outstanding record as one of the safest of all outdoor sports. was the objective of the Coast Guard and the Auxiliary in originally sponsoring National Safe Boating Week.

This is a tremendous assignment and obviously is beyond the capabilities of any one organization, whether government or private, to carry out alone. If we are to make boating one of the safest outdoor activities, the National Safe Boating Week Committee must have the support and cooperation of the boating public and everyone interested in the safety of our citizens. Therefore, I call upon every boating enthusiast to join in this effort to advance the cause of boating safety.

A. C. RICHMOND. Vice Admiral, U.S. Coast Guard, Commandant.

THE WHITE HOUSE, April 24 1959. NATIONAL SAFE BOATING WEEK, 1959 (Proclamation by the President of the United States of America)

Whereas the waters of the United States provide recreation for many millions of our citizens during the boating season; and

Whereas safe boating practices contribute to greater enjoyment of the sport by reducing loss of life and damage to property; and

Whereas the Congress by a joint resolu-tion approved June 4, 1958 (72 Stat. 179), has authorized and requested the President of the United States to proclaim annually the week which includes July 4 as National Safe Boating Week:

Now, therefore, I. Dwight D. Eisenhower. President of the United States of America, do hereby designate the week beginning June 28, 1959, as National Safe Boating Week.

I urge all boatmen, boating organizations, the boating industry, State and Federal agencies, and all other groups interested in boating to join in this observance of National Safe Boating Week; and I call upon them to exert greater effort during that week and throughout the boating season to keep boating safe and pleasant.

I also invite the Governors of the States,

the Territory of Hawaii, the Commonwealth of Puerto Rico, and the possessions of the United States to provide for the observance of this week to encourage nationwide inter-

est in safe boating practices.

In witness whereof, I have hereunto set my hand and caused the Seal of the United States of America to be affixed.

Done at the city of Washington this 24th day of April in the year of our Lord 1959, and of the independence of the United States of America the 183d.

DWIGHT D. EISENHOWER.

By the President:

CHRISTIAN A. HERTER. Secretary of State.

#### Aptitudes and Attitudes

EXTENSION OF REMARKS OF

## HON, HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I am pleased to include a very fine and noteworthy address delivered by B. LeRoy Sheley, dean, Boston University College of In-dustrial Technology, at the commencement exercises of Franklin Technical Institute in Boston, on June 14, 1959:

APTITUDES AND ATTITUDES

(Commencement address delivered by B. LeRoy Sheley, dean, Boston University College of Industrial Technology, at Franklin Technical Institute, Sunday, June 14, 1959)

To you who are to graduate and your familles and loved ones, 1959 commencement at Franklin may have many different meanings. Money for that new car or badly needed vacation now that your son is on his own, for the young wife a chance to give up the job that has been so necessary and to become homemaker and mother that is her right. A day of joy and happiness for all, because it signifies achievement. A day of grave responsibility too, since it signifies that the time for decision has been reached. You can no longer feel safe in the security of knowing what is in store for you tomorrow, next week, or next month. No matter how well you have prepared yourself for the next step, you will feel some uneasiness, some trepidation, some concern about the wisdom of your decision. There is no formula to apply, there is no check list to guide. Self-analysis is in order.

This is a very difficult task, because you know the subject so well and are so used

to putting up with his weaknesses as well as overemphasizing his strengths. But don't confuse strengths and weaknesses because your success in industry, as well as your success as a member of society, depends upon an accurate analysis. Think of the wasted effort, time, and heartache that will be your lot if you decide to spend your life trying to be something or someone that is without your interests and abilitles.

There are really only two factors that are significant or influential to your develop-ment. These are aptitude and attitude. Simply defined, your abilities and the use to which they are put will determine your success, or lack of success, your position, or lack of position.

Since these are so important to you, let us spend some time with each, for a more complete and clear picture of their impli-

First, aptitude. Webster's Dictionary says, "readiness to learning; suitability to purpose; natural or potential capacity or ability." An identification of some of your aptitudes is what brought you to Franklin Technical 2 years ago. Your obvious success in your chosen program, as evidenced by your graduation today, is definite proof that your analysis of yourself to this point has been sound. A further study is now required in order to have confidence in the decisions you are required to make. For example, will you continue your education? What branch of industry will you choose for your career? Which is best for you, a small or a large company? Should you specialize or should you seek an avenue of experience that will give you a broad overview and a possibility for a management position in a few years? Can you identify the aptitudes involved in each of these problems? If you can, if you can relate them to yourself accurately, you are indeed a very fortunate person. You will not waste time floundering in the sea of uncertainty, seeking from experience to find your role in life. It is obvious the advantages the person who finds himself at 22 has over the person who stumbles from one experience to another until he is 30 or more, trying to find his proper niche.

If you are going to continue your education, it is almost essential that you do so now. Not necessarily by full-time study. since this isn't possible or necessary for all. But can you afford to wait for 6 or 8 years, and then find that the next rung in your ladder requires another degree or advanced work in chemistry or metallurgy? Every man in this graduating class is mentally capable of more education, but this is where we leave aptitudes and think about attitudes.

Define, attitude means a position assumed or studied to serve a purpose. Therefore, you have control. An attitude is not in-herent but acquired. Perhaps passed on from parent to child by association but not by genes. Learned from your teachers or from your associates, but, however acquired, a mighty force in determining the success or

failure of any individual.

As an educator, I have a much greater interest in attitudes than in aptitudes, because it is here that we can be creative. As students, you bring your aptitudes with you and there is little we can do to improve or change them. But with attitudes, we can mould and shape, and though it may take years for our efforts to be apparent or appreclated, we are stimulated by the possibilities offered by each freshman in each year's class. Attitudes might be more meaningful if I gave a few examples. What is your attitude about cheating, not necessarily on examinations, but on your employer, by giving less of yourself than you are being paid for? What are your attitudes about religion, education, smoking, drinking, marriage, and on

Attitudes, then, translated to the individual and, in specifics, combine with and be-

come a part of your personality and as such either your greatest asset or your greatest liability. It is an accepted fact in industry. in business, or in a profession, that few people fail due to the lack of technical knowledge or skill, but many fall because they are unable to get along with people or to cope with human problems.

Engineers and technicians have long been accused of being interested only in science and mathematics, and even if they are forced to take courses in the humanities and social sciences in college, little good results. A change is being effected, though, and you have evidence of this in the program of study you have just compeleted. you have just completed. You are graduating from one of the finest technical schools in the country, and without a doubt you possess the technical knowledge and techniques required by industry and the engineering profession. However, you have the responsibility, either by self-education or by formal course work, to acquire and to learn to utilize those techniques of communication and understanding of the humanities that are so necessary.

Your education, instead of being com-pleted, has just begun. Instead of using what you have learned only to be self-supporting and independent, use it well. as foundation upon which to build new or additional knowledge. What you become is entirely in your hands now, and you must know and believe that development is not some thing that others can do to you or for you

There is only one way; self-development.
Put this ahead of all other things.
Don't let any social or recreational activity take precedence. How many times I've had young man say, upon my suggesting an evening course, "Oh, but I can't. That's my bowling night." I doubt if bowling skill will ever he a doubt in the course of the course ever be a deciding factor in a promotion for him. Second to education, I would suggest an active interest in community affairs and participation if at all possible. Third would be active to the control of the control participation if at all possible. Third wolling be active participation in professional socious transfer and the second socious professional socious profess eties, which, with interested and intelligent people, can be as stimulating and as worth while in your development as formal course work.

Set some goals for yourself, and don't be afraid to aim high. Every man worth his salt will have goals at a level that will never that will inevitably cause a certain percentage of failure. Also, set time limits for attainment, but with enough flexibility to allow for patience. But when in your to allow for patience. when, in your best judgment, you are not making progress, be honest with yourself when you seek the when you seek the answers to the question 'What's holding me back?"

It is a very human tendency to blam conditions and others rather than admitting our own shortcomings, but if you prepare an objective answer to each of the following ing questions, you should pinpoint your problem:

1. Have you adequately prepared your self for your present responsibilities?

your objectives. Relate periods of time that are meaningful, such as next month, next 6 months, next year,

3. Have your goals been properly Maybe you are aiming too high but, member, you can stagnate just as completely

4. Have you been giving your very best to each and every task? Are you really willing and, yes, even eager, to do a day's work, every day? every day?

Remember that you and only you have tudes, habits of thought, can be directed into channels that will can be directed. into channels that will bring you to nificant answers to the preceding questions

Yours will not be an easy lot, because you be facing problem. will be facing problems greater than the world has ever known before, and, in addition they are tion, they are new. The answers and today-mards of our ancestors will not apply hands. The American way of life is in your hands.

and if we are to continue as a dominating force in the world of the future, you must force in the world of the future, you must provide new approaches to these new and complex problems. I hope you have pre-pared your foundations for growth with integrity and completeness. You dare not gamble that your talents will not be needed. It is almost certain that they will be.

## What One Family Can Do To Foster Better Foreign Relations

EXTENSION OF REMARKS

## HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Friday, June 26, 1959

Mr. ROGERS of Florida. Mr. Speak-er, I would like to call the attention of my colleagues to a letter which I have received from a Florida family, Mr. and Mrs. Ralph D. Priesmeyer.

These people, completely on their own, decided some years back to send copies of good, representative, American magazines to a public library overseas. In addition, they are making available the names of public libraries in other neutral nations to friends in Delray Beach, Fla., who are currently active in the magazine mailing campaign, This effort on the part of the Priesmeyers is as fine an example as I have seen of what can be done on the individual level to bring about a measure of understanding and good will among the people of the world, and to help spread a true picture of the United States and our way of life. It is suggested that each Congressman inform his constituents of this magazine mailing program and give support and encouragement to similar good will programs.

The personal efforts of the Priesmeyers have had reward, since a young man from Pakistan has written them several letters of appreciation. The latest one will be of interest to Members of Congress as an indication of what one family can do to foster better foreign relations. It is printed here in its en-

Mr. R. D. PRIESMEYER, Delray Beach, Fla.

DEAR SIR: I feel great pleasure in writing you this letter to convey to you my feelings of gratified. of gratitude for the large number of magaof gratitude for the large number of magazines and New Year cards you have been sending me over the past few years. I have got all the Readers Digests and National Geographic magazines neatly stacked in the most accessible approach in our drawing and most accessible corners in our drawing and living rooms. All the members of my mother, finds them very interesting and informative. Truly speaking, I think, you formative. Truly speaking, I think, you have completely won my family and me to

Over 2 years ago, one of my neighbors in college hostel used to receive literature from the Russian Embassy but when I showed him American magazines and literature he changed very much his ideas and now he is

Apart from this, these magazines have kindled a fierce fire of desire in my heart to see States with my own eyes and meet her people. Ever since my student days I have been preparing myself for this visit. Now I have equipped myself with the academic qualifications of a B.E. (electrical) degree and practical experience of 2 years working in factories on the designs of electrical machinery.

Now if you could, kindly get me an admission in some college in Florida or a small scholarship, then I can come to U.S.A. very easily with the help of small sum of money I have saved for this purpose for studies.

I am very much interested in receive you personally. Kindly reply me soon. I will write you in detail on receipt of your letter.

Mr. Speaker, the international student exchange program has been contacted in an effort to assist this young man from Pakistan to study here and to enable him to view first hand our United States of America.

Poison in Your Water-No. 133

EXTENSION OF REMARKS OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Houston (Tex.) Chronicle entitled "Galena Park Charges Sewage Goes Into Creek":

GALENA PARK CHARGES SEWAGE GOES INTO CREEK

Galena Park is considering court action to stop Houston from dumping untreated sewage into Panther Creek.

"It's a downright disgrace," said Galena Park's Mayor William J. Philpot Thursday.
"Our people are sick of this situation."

The mayor said he would seek a court order this summer to halt the dumping of the sewage if Houston did not take relief action. The mayor said the situation has prevailed for 10 years.

COMPLAIN OF ODOR

About 400 families in the area of Panther Creek have been complaining of the odor. At the Galena Park council meeting Wednesday the mayor said Houston's public works director, Travis Smith, will be asked to increase the amount of chlorine at the Clinton Park treatment plant.

The Galena Park council said sewage from this plant is dumped into Panther Creek.

The Houston City Council earlier this week authorized purchase of 212 acres for a new treatment plant to serve the Clinton Park

Galena Park Councilman George Garrett said: "It's a pitiful situation. We must get relief quickly."

#### EIGHT CHARGES FILED

Meanwhile, eight charges were Wednesday against the Willow Bend Utili-ties Co., alleging pollution of the air and waters around three southwest subdivisions.

Seven charges of polluting the air were filed by Dr. Walter A. Quebedeaux, director of the stream and air pollution of Harris County.

The complaints say the utilities company pumped raw sewage into the south fork of the bayou on seven specific dates back to April 1957.

The eighth complaint says the company's sewage treatment plant polluted the air last Monday.

This company services about 1,300 homes in the area.

Named in charges are E. L. West, president, and Lou Johnson, secretary.

"Rivers in the Desert: A History of the Negev, Being an Illustrated Account of Discoveries in a Frontierland of Civilization," by Nelson Glueck, Reviewed by Wendell Phillips Dodge, F.R.G.S.

EXTENSION OF REMARKS

## HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including herewith a review by the well-known explorer-ethnologist and editor, Wendell Phillips Dodge, of a recently published book "Rivers in the Desert: A History of the Negev, Being an Illustrated Account of Discoveries in a Frontierland of Civilization," by Dr. Nelson Glueck, appearing in the new scientific quarterly publication Voyages and Discoveries. The book is published by Farrar, Straus & Cudahy, of New York, and simultaneously in Canada by Ambassador Books, Ltd., Toronto, is of 284 pages plus several additional pages of indices, including Biblical citations of much interest to the reader and student of the Holy Land and is profusely illustrated. Dr. Glueck, the author, who is one of the world's outstanding explorers and archaeologists, is president of the Hebrew Union College-Jewish Institute of Religion. During the war years, 1942 to 1947, he was attached to the Office of Strategic Services, United States, in Transjordan. During the periods of his association with the American Schools of Oriental Research in Jerusalem and Baghdad, he initiated and completed the archaeological mapping of all of Transjordan, discovered King Solomon's copper mines in the Wadi Arabah, and directed the excavations of Ezion-geber-Solomon's seaport and industrial city on the Red Sea-and the Nabataean temple of Khirbet Tannur in Transjordan. Since 1951 Dr. Glueck has been engaged for about 3 months each summer in the archaeological exploration of the southern half of Israel, called the Negev.

The book review follows:

Here is a most welcome book on exploration without the too often first person projection of the explorer-author, a truly scientific account by a scholar written in an easy style that makes good reading for anyone Especially so, explorers. Further, this book should stimulate rereading the Holy Bible in the perspective of the present-day tinder-box of the Near East, so often erroneously called the Middle East. It, also, should make for a clearer understanding and a better interpretation of the Bible to clergy as well as laymen of whatever religion or sect.

Avoiding pedantic scientific treatment, Dr. Glueck, a scientific explorer and deeply sincere student not only of the Bible, but of

Hebrew religious and historical literature, presents evidence showing that there have been no major, permanent climatic changes in that part of the Holy Land called the Negev during the last 10,000 years. He further points out that not weather but wars and protracted economic catastrophes have been responsible for the destruction and disappearance of a whole series of civilizations in the Negev. Dr. Glueck's book, in popular fashion, shows the tremendous importance of the Negev as a passageway between continents. He emphasizes also the spiritual importance of the Negev in con-nection with the insights into the nature of God's moral imperatives achieved there by human beings. He tells of the present-day rebuilding of ancient towns and cities, showing a new rebirth that is bound to change

the order in the Neer East.
Dr. Glueck states that it is an eye-opening experience to visit the still extant ruins of the main Byzantine cities in the Negev. Having traversed much of the northerly portion of this land while exploring extensively in the Near East and the Middle East more than half a century ago (see Congressional, RECORD, Appendix, Thursday, Feb. 25, 1954, "An Ethnological Exploration Expedition in the Holy Land, Syria, Iraq Arabi (Mesopotamia), and Persia (Iran)," originally published in the Explorers Journal of the Explorers Club, New York, in its autumn, 1953 (vol. 31, No. 4) issue), this reviewer is deeply appreciative of what Dr. Glueck says of the phantom cities of the Wilderness of Shur, of Zin, and of Paran, the latter just above the trade route of Egypt-Arabia. Glueck's goal was the completely rulned Nabataen-Byzantine town of Ruhelbeh, the Biblical site of Rehoboth (Genesis 26: 22). He states that identification had been posited but never proved by Lawrence of Arabia, among others. Writes Dr. Glueck:
"Actually, Lawrence of Arabia had in his

hands what I consider to be adequate proof of the identification of Ruheibeh with

Biblical Rehoboth."

Several identifications have been proposed. of which the most probable is that made by Palmer with er-Ruhaibeh, about 20 miles south of Beershebs. Genesis 36: 37 tells us that the name of a king of Edom is called Rehoboth of the River. The river here certainly is not, as has been stated in many instances, the Euphrates, but rather the River of Egypt. This more properly is, or was, a brook, or wady. Numbers 34: 5 and Isalah 27: 12 speak of a "river (nahar) of Egypt," and Genesis 15: 18 simply "the Wady." It is the Wady el-Arish, boundary of Egypt in the desert half way between Pe'usium and Gaza. Bearing out Dr. Glueck's excellent book title, water is always to be found by digging in the bed of the wady, and after heavy rain it is filled with a rushing stream. El-Arish, where the wady reaches the Mediterranean, was an Egyptian frontier post to which malefactors were banished after having their noses cut off; hence its Greek name Rhinocorura.

It is possible that some persons may confuse Dr. Glucck's Ruhelbeh, or the Biblical aite of Rehobot, with Rehoboth-ir, literally "broad places (market-places) of the city," being one of the four cities in Assyria built by Nimrod (Genesis 10: 11). Identification has been found in the Assyrian rebit Nina, "broad places of Nineveh" mentioned by King Esarhaddon, 681-668 B.C. This is the exact equivalent of the Biblical name. In taking it over, "the city" was substituted for "Ninevah." Included in the dominions of Hammurabi, who restored the temple of Ishtar there, it was early an important city, and is frequently referred to in royal inscriptions. Sennacherib first raised it to the position of the capital of Assyria. It lay on the east of the Tigris, opposite the modern Mosul. The outline of the old walls can be traced, reports Dr. Glueck, stating that they enclosed some 1,800 acres, with a circumference of about 8 miles.

Dr. Glueck most interestingly puts down Dr. Glueck most interestingly puts down the archaeological periods of Palestine extending back to the palaeolithic, before 8,000 B.C., and including the Aurignacian and early Neolithic, the Neolithic, about 6,000-4,500 B.C., and so on down to the Byzantine, A.D. 323-A.D. 636. In his first chapter, "In the Beginning," he says the known story of mankind in Palestine reaches back more than a hundred millennia ago. back more than a hundred millennia ago, and sets forth that south of Mount Carmel at Haifa, overlooking the Mediterranean, bones or skulls or skeletons of human beings have been discovered which may be assigned to the middle palaeolithic period, as far back perhaps as 150,000 to 120,000 years ago. Dr. Glueck states the mixture of races they represented resulted from the meeting and interbreeding of the earliest peoples on the intercontinental bridgehead Palestine. 10 "The vast influence Palestine has always exercised because of its geographical position affected the gradual transformation there of homo sapiens, writes Dr. Glucek. "A new species came into being, which has become known as Palestine Man (Palaeonthropus Palestinensis)." And he states "monstrous rhinoceroses, hippotami, elephants and cave oxen were common in his age. Their bones have been dug up all over the country from the Medditerranean coast to the Jordan river valley and in the moun-tain ranges between \* \* Bones and teeth of these great beasts have been discovered also in the hills of Bethlehem."

Dr. Glueck traces the science of pottery identification, saying: "Pottery can be shat-tered, but the pieces will remain, indeed have remained intact for thousands of years. Stone crumbles. \* \* \* Copper and iron, unless specially treated, corrode, and decompose. Glass decays and flakes away. Wood, leather, papyrus, paper, and cloth disappear unless properly protected or buried in absolutely dry places where no moisture can penetrate. Pottery alone is impervious to such chemical changes and has endured since it was first invented, as an exceedingly important handmaid of history \* \* \* These artifacts were familiar to the ancients and were referred to frequently. 'Woe unto him that striveth with his Maker, a potsherds of the earth. Shall the clay say to him that fashioneth it, what markest thou?' (Isalah

45:9)."

Then he tells of gathering fragments of pottery from the surfaces of one or another ancient site "which fairly shout out the periods of history they belong to. It is as if they had been waiting for ages for someone to come along and notice them and pick them up, so that they could describe with eloquent pride the time and quality of their kingdoms. I can assure you that the archaeologist regards each artifact with feelings akin to personal affection." And Dr. Glueck goes on to tell how with the "open sesame" that such surface sherds afforded the expeditions he was associated with, and in some instances headed, they worked their way, square mile by square mile, through Transjordan and later in the Negev, prospecting for the treasures of antiquity.

Dr. Glueck uses a more modern-perhaps, Hebrew?-spelling of Negev, which this reviewer seems to recall as Negeb, originally meaning "the dry land." It is a definite geographical area (Deuteronomy 1:7, 34:3; Joshua 10:40, 12:8, etc.). The word is, however, used also in the sense of "south" (Genesis 13.14). The Negeb was often the scene of Abraham's wanderings (Genesis 12: 9, 13: 1, 20: 1). This reviewer's experiences in exploration in the Negeb were south of Hebron in Judah and in the Tih, or desert, bounded on the east by the Dead Sea and the 'Arabah, fading away to the west into the Maritime Plain, and south to Sodom. The country consists of a series of mountainous ridges running in a general east and west direction, with open wadys in which a certain amount of water collects even now. Dr. Glueck's far more extensive explorations in the Negev (using his spelling) went further south, where more rivers flow. Writes Dr. Glueck:

"The Negev has always played an epic role in the annals of Israel and of mankind. It represents an amazing phenomenon which cannot be made completely understandable by any sum of rational factors. The actual size of this triangularly shaped southland of the Bible, measuring some 70 by 120 miles at its greatest dimensions, bears no rela-tionship to its limitless and continuing importance. Neither its geographical position nor its physical characteristics can, by themselves, adequately explain the uniqueness of its influence. Of all the places which figured in its ancient past, the names of only a few stand out. The others are lost in deep obscurity. Even these few would not be known were it not for the highly selective records of Secretary. records of Sacred Writ. As a result, the Negev has long appeared to be an empty wilder ness which people crossed with all possible speed and in which only nomads were really at home!

But Dr. Glueck makes the reader of his new book, "Rivers in the Desert," feel very much at home. He has done what few ex plorers and writers have succeeded in doing in describing and making live again what he so aptly terms: "a frontierland of civili-

It is recommended that, after reading this fine fellow explorer's enlightening book that is highly positive and the state of the state is highly pertinent today in understanding the situation which currently confronts, as Senator Hubert H. Humphrey called attention to in the research tion to in his remarks about the "United States, Israel, and the World Crises" at a Jewish nation. Jewish national fund dinner in Chicago of April 1, 1959, one should reach for the Holy Bible and reread the many Biblical citations listed at the end of Nelson Glueck's "Rivers in the Desert."

Distressed Labor Market Areas Still Need Aid From Federal Government as Provided in Flood-Douglas Area Redevel opment Bill

EXTENSION OF REMARKS

## HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record of the Record o ORD, I include another in a series of re ports on unemployment, in support of the area redevelopment bill, sometimes called the Flood-Douglas bill. This re port, compiled by the Area Employment Expansion Comp Expansion Committee, lists the congressional distributions gressional districts with labor markets suffering from substantial labor surplus and indicates current and prospective date of eligibility for benefits under the area redevelopment bill. Report is as of

Congressional Districts With Labor Markets Suffering From Substantial Labor Surplus, Indicating Current and Prospective Date of Eligibility for Benefits Under Area Redevelopment Bill, May 1959

Note.—The following is a list of labor markets with a substantial labor surplus. Those currently eligible for benefits under proposed area redevelopment legislation are \*Eligible for easistance under the House Banking Committee recommendation, i.e., unemployment of 6 percent in at least 18 of the previous 24 months, 9 percent during at least 18 of the previous 18 months, 12 percent during the previous 6-month period.

The carliest likely date of eligibility for other labor markets is noted where information is available, on the assumption that the current level of unemployment will continue. A list of rural counties eligible for benefits is available separately.

#### The Fine Print on the Ballot Requires Business' Concern With Politics

EXTENSION OF REMARKS

## HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 26, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, in recent months there has been an increasing awareness on the part of businessmen as well as other citizens that they must participate actively in political affairs including precinct politics if we are to preserve a truly responsive form of government.

While I have a special interest in the Republican Party as chairman of the National Republican Congressional Committee, I believe that every citizen should be active in the party of his choice, and I know that both parties will benefit from a better understanding on the part of informed, participating citizens of the problems which confront us as legislators.

On May 28, Mr. George M. Humphrey, the former Secretary of the Treasury, who is now chairman of the National Steel Corp., delivered an address before the 67th general meeting of the American Iron and Steel Institute in New York entitled "The Fine Print on the Ballot Requires Business' Concern With Politics." Mr. Humphrey said:

Businessmen should be actively promoting the national interests in freedom of choice, in sound fiscal policies and sound monetary policy in both parties. The importance to the strength of this Nation of a healthy climate for business is far too great to be the policy prerogative of only one major political party.

#### He also said:

Political activity must not be shunned and left only to others. It must engage the high purpose of every patriotic citizen. It is the mechanism through which the great privileges of our precious freedoms are made to function. It's worthy of your best efforts and a lot of your time. If you will put the same effort into getting as good representation in politics, not only in your own area but for the Nation as a whole, as you have in your own business, the problems will be few. You and your whole organization must learn that in this day and age, the fine print on the ballot requires that you must get active in politics if you want to stay active in business.

These statements are characteristic of Mr. Humphrey. His comments included some penetrating observations concerning our present fiscal problems, and he also reviewed a few of the misconceptions regarding so-called administered prices which have confused some economists in their understanding of competitive forces in today's economy to wit:

Politically determined costs can price you out of your better markets. Politically determined regulations can restrict your exports and increase competitive imports against you. Bills are right now being urged in Congress that affect both your wage and pricing policies.

Wages are an important item of costs, which are more and more in competition with wages abroad. We no longer operate or sell in a vacuum. If any of our costs become noncompetitive, it will simply mean moving jobs from Pittsburgh, Cleveland, Detroit, and Chicago and other areas here at home, to Britain, Germany, other European centers, and even Russia. They will work and produce the goods, and we will have less business and fewer jobs.

Since I had the opportunity of working closely with Mr. Humphrey during his period of service as Secretary of the Treasury, I found this statment of great interest. Under the unanimous consent of my colleagues, I include the full text of the address at this point in my remarks:

THE FINE PRINT ON THE BALLOT REQUIRES BUSINESS' CONCERN WITH POLITICS

(By George M. Humphrey, chairman, National Steel Corp., Pittsburgh, Pa.)

Most of us have learned that when a document is handed to us for signature, it is wise to turn it over before signing and read the fine print on the back, which usually carries the real tough obligations and conditions.

The ballot is the most prized possession of citizenship in this country. It's our cherished evidence of the freedom of choice that we all hold so dear and that generations of Americans have fought and died to preserve.

But how many of us have thought to read the fine print on the back? How many of us appreciate the obligations, the responsibilities, this great privilege carries with it, if its benefits are to endure?

Of course, in a literal sense, there is no fine print on the back of the ballot. But in an absolutely real sense, a great deal of very important—and very fine—print is involved. This is found, not on the back of the ballot, but in the whole use and tradition of representative government as we have developed it in this country. The very word representative means that we elect people to represent us in our local, State, and Federal governments, and these people that we elect have tremendous power over our lives through the legislative and the executive branches of our system of government.

Our form of government is the best, the most effective, and the most equitable form of government ever devised. But our kind of government can only be the best kind of government if it is intelligently used by informed people determined to have the best
government on earth. We must always remember, we must never forget, that a good
form of government does not guarantee good
government. You only get good government
by using a good system vigorously and intelligently.

One of the most important things for us to preserve, defend, and improve through the exercise of our kind of government is our system of free economic choice—our free competitive enterprise system—and this, in practical form is our business system. It is our free business system that produces the jobs that make the goods and the wages and income by which we have gained the most satisfactory standard of living in man's history. It is from these jobs and goods and incomes-and only from these-that we draw the taxes to support our Government, to defend our Nation, to educate ourselves, and to provide us with our roads, harbors, social security and employment benefits, and to achieve the military and economic objectives of our foreign policy. It is from the jobs and goods and incomes of our free business system that we siphon off the wealth that supports our churches, our art and literature and music, our great private universities, our health and recreational facilities, and the entire material fabric of our cultural and spiritual life.

Business has been in the political doghouse in this country long enough. It is shot at from every quarter. I'm proud to be a businessman. Almost every material benefit we have is created by business, and it's time every American businessman takes his proper place in leadership toward sound governmental objectives and fulfills his political duties and obligations.

When we use the ballot, the fine print gives the political officeholder a power of attorney much more extensive and effective than any power of attorney you grant in the course of business, to improve and strengthen, or to warp, to hobble, and even to destroy our system of free economic choice.

This is a power of attorney to alter our lives in every way, because it is a power of attorney over our free competitive enterprise system, our freedom of economic choice.

The business has the right, and not only the right, but the duty, to use his citizen's responsibilities in our system of government to see to it that the people we elect are people who understand and appreciate our freedoms, who will use the power of attorney, and all the fine print provisions that go with it, to preserve and defend and improve free enterprise. This is why the businessman should be actively engaged in politics, and it is the way he should be engaged in politics. He has no more right than has anyone else to try to impose his personal business interests upon government. But the businessman has every right to defend through the ballot our climate of economic freedom and our free competitive business system.

And yet, how many of us really take the time to know and evaluate the capacity, intelligence and ideals of the representatives

to whom we assign such power over ourselves?

Worse yet, how many of us truly work to assure ourselves that our choice will not only be elected by the majority of voters in our area, but will also be assured of the support of a like-minded majority of the entire group in the Congress, the legislature, etc.

Why is this so important? What are some of the powers you have signed away? How vitally can this power of attorney with the fine print in it actually affect your personal

and affairs?

Take for instance just one thing: Taxes. Taxes are inseparably tied to government spending, balanced or deficit budgets and the national debt. All these taken together add up to our Government's fiscal responsibility, to inflationary pressures, to sound or flat money, and to the entire economic climate in which you are trying to run a business and work and live.

Taxes and Government spending are inseparable. Spending must be followed in equal amount by taxes, sooner or later, inevitably, if our country is to remain solvent and if our precious freedoms are to survive. The great preponderance of our taxes come from earnings of business, earnings from jobs in business, and earnings from those who serve in one way or another business and the people in business' jobs. Good profits and good personal earnings and wages are the foundation for the support of our Government and everything it does. Where would we be in America without good earnings in business and jobs?

There are many ways in which this money collected in taxes is spent. By far the greatest amount of money spent in Government operations is for the military security of our our country. I have always believed that this country should and can well afford to spend whatever may be required to provide a powerful posture of defense, adequate, to-Bether with the strength of our allies, to so obviously overpower the aggression of any group in the world that their mere thought of military aggression will be emphatically

deterred.

But I have never believed that the pursuit of this objective should be permitted to become a cloak to cover extravagant or wasteful spending. We must not confuse mere

spending with improved defense.

We must realize that to the extent our defense spending involves unnecessary duplication in programs, weapons or research, or excessive maintenance of outmoded methods, equipment or personnel, we damage ourselves not only in terms of money, but what is more

critical, in terms of defense. There are hard decisions to be made between what is really necessary and what is merely desirable, what is enough but not too much. Someone must weigh and reach a balance that will be abundantly adequate

for the present while avoiding excesses that would jeopardize the future. Some one must make the final decision as to what is

appropriate for the time.

Fortunately for America, for you and for me, we have now in charge a man trained in military science, the greatest winning military leader of the greatest military conflict of all time, who also has the balance of comprehension of sound economic necessity and an overwhelming devotion to the maintenance of our free competitive way of life, Dwight D. Eisenhower, the President of the United States. There is no one in this world who has an equally broad background of training and experience.

President Eisenhower deserves your active, support, the support of everyone, reof party, in keeping within the limits of Government spending that he has set in his budget, now pending before the Congress. Are you doing all you can to

Why is a balanced budget so important? It is important because the budget involves all the activities of your Federal Government, and its balance or lack of balance is fundamental to the fiscal responsibility or lack of responsibility of our Government. If the Government does not give the right, the responsible and creative lead, who will? And if the budget isn't balanced in times like these, when will it ever be balanced? Fiscal responsibility by our Government now is essential to fostering the confidence of our people and the rest of the world in our belief in the importance of sound fiscal management. It will reinforce continued confidence of our people and the rest of the world in the obligations of our Government, in the dependability of the dollar, and be a firm indication to the whole world that we practice what we preach.

These are national interests, not party interests. Businessmen should be actively promoting the national interests in freedom of choice, in sound fiscal policies and sound monetary policy in both parties. The importance to the strength of this Nation of a healthy climate for business is far too great to be the policy prerogative of only one ma-

jor political party.

It is business that must mobilize the savings and direct the expansion by which we provide jobs for those already in the labor force and for approximately a million new people who seek new jobs every year. It is business that must seek, find, and put to work through the savings it makes and the savings it mobilizes, the new production methods that increase our productivityand it is only from increasing productivity that we can raise our standard of living while at the same time paying our increasing social costs and paying the bill for adequate defense.

Everything we do through government, as private persons or as communities, as States, or as a nation, must be paid for by the taxes that our free ecnomy provides.

Taxes take, as you well know, from a minimum of one-fifth to a maximum of 87 percent overall of your personal taxable income. How seriously this will adversely affect our treasured opportunity in America and in-centive and the vigor of future generations, only time will tell.

Your business is told by virtue of the fine print on the ballot that the political officeholders can more wisely spend more of your corporate earnings than you can. So you are left with less than half of your company's earnings with which to meet its obligations to its stockholders, to pay your investors for the tools their money bought, to buy new tools as the old become obsolete and must be replaced at much higher cost, to say nothing of the need for buying more tools to make more jobs for the growing population and to meet your customers' requirements for expanded production.

This all raises serious questions as to how. as time goes on, we are going to keep our business competitive with costs in foreign lands, which are engaged, with our tax help, in rapid modernization, improvement, and expansion. How are we going to tool up for continually more and better jobs? How can we keep unemployment from increasing as the population grows? And above all, how can individual productivity go higher and higher so that this country can pay our high wages and still make more and better jobs to produce better and cheaper goods to increase our scale of living?

These taxes can only be reduced if Government spending is relatively reduced.

There is no other alternative.

These high tax rates, together with the high and increasing costs of defense, raise the most serious questions whether we can longer afford some of the governmental extravagances to which we are growing accus-

tomed. During the last 4 years, our spending for our most important military security has increased only 131/2 percent, while Government spending for the rest of the budget has increased over 45 percent, or more than \$2,700 million a year. While the cold war continues and we must spend so much tax money for our security, can we afford to also pay out such vast sums for so many of these other desirable but less essential expenditures?

Consider only a few examples:

Can we continue to pay out large sums for veterans for medical care that is in no way connected with any military service disability whatsoever?

Can we afford indiscriminate dupulications in our welfare outlays in addition to the growing adequacy of our social security system?

Can we, to take a most painful example. afford to go on paying out many billions of dollars a year in agricultural programs that distort the economy while they raise

the cost of food for everyone?

Now mark this. For fiscal year 1959 we will raise about \$6 billion in Federal taxes from all surtax rates higher than the 20 percent basic rate. Our outlays for agricultural subsidies of one kind or another will eat up over \$7,250 million during the same period-over \$5,250 million being for price supports alone. In other words, agricultural programs take all the surtaxes paid by all the individuals above the basic 20 percent rate, and then some, and five-sixths of the outlay is for price supports for farm products.

The irony of this is that so little has been finally accomplished, but at least it has added eloquent evidence why we must not have any governmental experimenting in price fixing in the steel business as some have suggested.

There are many more examples that require the most serious consideration.

The American businessman must personally take a far greater, more active part in politics. The largest items in your cost sheet are fixed for you by political decree, Politically determined costs can price you out of your better markets. Politically determined regulations can restrict your exports and increase competitive imports against you. Bills are right now being urged in Congress that affect both your wage and pricing policies.

Wages are an important item of costs, which are more and more in competition with wages abroad. We no longer operate or sell in a vacuum. If any of our costs become noncompetitive, it will simply mean moving jobs from Pittsburgh, Cleveland, Detroit, and Chicago and other areas here at home, to Britain, Germany, other European centers, and even Russia. They will work and produce the goods, and we will have less business and fewer jobs.

Both wages and prices are subject to competitive limitations that will eventually control them, no matter how powerful a union may seem to be or what the price levels in an industry may be for a limited time.

Both labor and business can price themselves out of the market with distressing results-labor with a high rate and no job, and business with a high price and no sale, but equally destructive to both. However, in all cases, the responsibility of the Government should only be to prevent monopolistic, restrictive, or compulsory practices by either, or by the Government itself, the detriment of the public, or eventually the whole free system will be destroyed. Short of interference, the system is self-correcting and self-policing for the benefit of all concerned.

For instance, the theory is being advanced that if only a few producers make and sell a large proportion of the total of any article,

that may prevent its pricing from being highly competitive. It is true that only a few makers are thus in competition with each other, no matter how bitter may be their battle for competitive position among themselves, but that does not make for so-called administered pricing. That tells only part of the story. A new automobile is in competition not only with all other makes of latest model but with all other older models owned by millions of our people who periodically have their own cars for trade or sale. If the price and quality and all the other attributes of pricing are not sufficient to induce the buyer to buy the new car, no sale is made. But again, that's only a part of what must be considered in pricing. An automobile is not only in competition with all other automobiles, but also with a refrigerator, a television, new furniture, or an addition to the house, or even a new house. It competes with the whole scale of current living, down to whether the family buys extra new clothes or even a sirloin steak instead of a hamburger.

The new car must be highly appealing and attractively priced for the family to take on the extra cost of added monthly payments and sacrifice the new furniture, the TV. and refrigerator or even fewer clothes or cheaper meals to do it.

Other competition limiting prices which is increasingly important in our world of technological advance is the competition of old with new or improved materials. Steel competes with aluminum, concrete, wood, glass, and plastics. Cotton competes with synthetics and the synthetics with one another and with paper, wool, and slik. Paper competes with plastics, glass, and steel for containers and other 4tems, and so on and on. This kind of competition is nearly endless and it is more important every day.

The idea that a few people can administer prices in a vacuum for the American people with their great range of full freedom of choice is purest imaginative theory.

As long as their full freedom of choice is preserved to the American people and not restricted or arbitrarily curtailed, the growing strength and greater service from our whole competitive economic machine is assured. No governmental bureaus, committees, or controls can begin to be so effective.

Public acceptance or rejection in a free market is the most potent influence in the world.

These are just a few of the many reasons why political activities, not once in 4 years, but day in and day out, must be made a large and important part of your daily business burden. It's not enough to occasionally issue wise pronouncements or full-page ads. Political decisions begin right in the precincts with the election of good people all along the line and they ultimately become the powerful voices that so vitally affect your future. Your own younger employees must be encouraged by you to take a more active part in politics in their own areas, and they will if they know the boss approves and is working at it himself.

You are being challenged by highly organized groups that are strenuously and seriously devoting themselves to the political task. They already have a good start. Highly organized, well funded labor groups are hard at work, seemingly without full realization of the disastrous consequences to themselves of failing to heed the simplest principles of competition. Theorists, high-minded, if you will, but wholly impractical, are filling newspaper columns, writing books and making speeches, with no practical experience and never having created a single job or met a payroll in their lives.

There are other powerful groups with a vested interest in high governmental spending, without regard for budgetary consequences or deficits or debts. All these and many more are busy now.

If you believe in our system of free competitive way of life, in the lasting power of sound economics, in the freedom of the individual to an opportunity to rise to any heights that his own merit, intelligence and hard work will take him, if you believe in a sound and solvent America that can meet Khrushchev's challenge to a war of production and trade as well as of military force, then it's time for you to put politics high on your active list, bend your back, and put hours of thought and effort on the job.

The sound, constructive things to do must be explained to all our people. tirely proper for business executives to inform their employees and stockholders at corporate expense where their best interests It is not a violation of law to do so. The dangers must be pointed out to your stockholders and to your organization, to your own employees. Their broad understanding will be a mighty force. They must understand that poor business means poor jobs, that good business means good jobs. and that higher pay and better goods at lower cost come only from greater produc-tivity and volume of sales. They must realize that our money is the medium of exchange which forms the basis of trade, and that if sound money deteriorates, it is destructive of trade and reduces jobs. They must be convinced that their best interests and good business are one and the same, and inseparable. They must know what national policies hurt business and therefore hurt them, and what are helpful to both. With this foundation firmly laid, you and they must be active in politics.

Political activity must not be shunned and left only to others. It must engage the high purpose of every patriotic citizen. It is the mechanism through which the great privileges of our precious freedoms are made to function. It's worthy of your best efforts and a lot of your time. If you will put the same effort into getting as good representation in politics, not only in your own area but for the Nation as a whole, as you have in your own business, the problems will be few. You and your whole organization must learn that in this day and age the fine print on the ballot requires that you must get active in politics if you want to stay active in business.

Audit Reports of the Federal Reserve System—Extravagant and Improper Uses of Public Funds—Other Deficiencies in Federal Reserve Bank Management

EXTENSION OF REMARKS

## HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Friday, June 26, 1959

Mr. PATMAN. Mr. Speaker, last Monday I made public a report—a fairly short report considering the nature and volume of the subject matter—based on my review of the audit reports of the Federal Reserve banks for the year 1957. I would like to insert that report in the Recorp herewith. I believe that the introductory remarks will make it explanatory

Previously I made a much longer and more thorough review of the operations of the Federal Reserve banks, giving a review of the audit reports for 1956

and several earlier years. That report is to be found in my testimony before the Committee on Banking and Currency of the House of Representatives, 85th Congress, 2d session, on S. 145 and H.R. 7026, hearings, part 2. My testimony begins at page 1535 of the hearings, and the specific review of the audit reports begins at page 1560.

Backfire in the War Against Insects

EXTENSION OF REMARKS

## HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, the need for funds to finance the large scale testing of pesticides is still urgent. Chemical sprays are among the most useful tools that man has developed to assist him in his fight against diseases and pests, but they can also be among the most dangerous if they are not used with an adequate knowledge of their results.

The new insecticides kill birds, fish, and animals along with insects of all kinds. Dr. George J. Wallace, eminent zoologist, has advised that—

The current widespread program poses the greatest threat that animal life in North America has ever faced—worse than deforestation, worse than illegal shooting worse than drainage, drought, oil pollution; possibly worse than all these decimating factors combined.

Dr. Wallace offers this prophecy:

If this and other pest-eradication programs are carried out as now projected, we shall have been witnesses, within a single decade, to a greater extermination of animal life than in all the previous years of man's history on earth.

I include at this point as part of my remarks an article by Robert S. Strother which was carried in the Reader's Digest of June 1959. It is one of the most interesting, informative articles on this subject it has been my pleasure to read:

From the Reader's Digest, June 1959| BACKFIRE IN THE WAR AGAINST INSECTS

(By Robert S. Strother)

The United States is engaged in an intensive war against destructive insects. The weapons employed are powerful and widespread, and so is the controversy they have engendered. Billions of pounds of Poisons were broadcast over 100 million acres of cropland and forest. More billions of pounds are being spread across the Nation year—against spruce budworm in northern forests, grasshoppers in 9 million acres of wheatland in the Midwest, white fringed beetle in the Southeast; against sand files, gnats, Japanese beetles, corn borers and groups months. The U.S. Department of Agriculture is only one of the large-scale users of insecticides. State, county, and even local groups also employ them, sometimes in cooperation with USDA, sometimes alone.

The new based below.

The new insecticides, often used as massive sprays from planes, kill birds, fish, and animals along with insects of all kinds, good as well as bad. The costs of the campaign money, destruction of wildlife, and possible harm to human health are not ade

quately known. The need for them is hotly challenged and hotly defended.

Says Dr. George J. Wallace, Michigan State University zoologist, "The current widespread program poses the greatest threat that animal life in North America has ever facedworse than deforestation, worse than illegal shooting, worse than drainage, drought, oil pollution; possibly worse than all these decimating factors combined."

The USDA points to the eradication of the Mediterranean fruit fly in Florida as an example of what spray programs can accom-plish. It also cites thousands of letters from grateful farmers all over the country. fits to agriculture and the public," says USDA, "far outweigh damages that have occurred. Claims of wildlife destruction are greatly overstated."

Nobody knows for certain just how much damage is done, but there have been indications. In Florida, when a 2,000-acre tidal marsh was treated with dieldrin for sandfly larvae, a biologist was on hand. His report:
"The fish kill was substantially complete.
The immediate overall kill was 20 to 30 tons of fish, or about 1,175,000 fish, of at least 30 species. The larger game and food fish succumbed most rapidly. Then crabs de-Voured them; next day the crabs themselves were dead."

Large numbers of dead and dying birdsmostly robins-were found on the campus of Michigan State University in the spring of 1955. Indications were that death was due to insecticide poisoning, and subsequent investigation disclosed the chain of events. In the previous year, campus elms had been sprayed against bark beetles, carriers of the fungus which causes Dutch elm disease. Earthworms eating the leaf litter accumulated DDT in their viscera. When spring came and the worms emerged from the thawed ground, the robins ate the worms

The annual elm spraying was continued. Its effect on reproduction among surviving robins was startling. In the spring of 1957 200logists searched the 185-acre north campus for nests, Only six were found. Of these, five produced no young and the fate of the sixth was undetermined. Late in June a 3-day a 3-day search for young robins found only one—all this in an area that in 1954 had produced, on the basis of sampling counts, at least 370 young robins.

The first public outcry against massive spraying arose in 1957 during the USDA campaign against the gypsy moth in southern New York. Planes flew over at low levels, discharging a fog of DDT-impregnated kerosene on 3 million acres, including densely populated communities in Westchester County and on Long Island. Commuters awaiting their trains were sprayed, as were dairy farms. dairy farms, ponds, vegetable gardens, and children, some of them three times.

Tempers flared, and 14 citizens charging careless use and official arrogance went into Federal court demanding an injunction against aerial spraying. After an extended hearing that hearing their application was denied.

Another and louder outery was in the making. According to reports, 27 million acres in 9 Southern States from eastern Texas to South Carolina were teeming with South American fire ants. These quarterinch-long ants, it was said, had captured much of the South's best farmland and were eating their way north and west, sucking plant juices, killing young wildlife, and swarming their way north and west, sucking plant juices, killing young wildlife, and swarming in vicious assault on men in the fields. Their onslaught, if unchecked, might not stop short of California and Canada.

To combat the menace Congress voted an emergency appropriation of \$2,400,000 for USDA. Plant pest control crews, without prior field testing, started an aerial broadcast of heavy started an aerial broadcast of heavy started and serial broadcast of heavy started and serial chlorinated cast of heptachlor, a powerful chlorinated hydrocarbon of the DDT family. They treated 700,000 acres before the appropriation ran out. The USDA now has asked Congress for another \$2,400,000 for the second step in a long-range poisoning program. Does the fire-ant threat justify this costly campaign?

To get a firsthand view I went to Alabama, where fire ants have flourished for 40 years, and talked with people for, against, and in the middle of the program. Some remark-

able facts emerged.

The foremost is this: the fire ant is not a serious crop pest; it may not be a crop pest at all, Dr. F. S. Arant, chief of the zoology-entomology department at Alabama Polytechnic Institute, told me, "Damage to crops by the imported fire ant in Alabama is practically nil. This department has not received a single report of such damage in the past 5 years. No damage to livestock has been observed. The ant eats other insects, including the cotton boll weevil. It is a major nuisance, but no more.'

Though USDA circular No. 350 asserted that the imported fire ants often attack newborn calves and pigs, are fond of quail and chase brooding hens off their nests to eat their chicks, researchers at Alabama Polytechnic could rarely induce fire ants, even starving ones, either to eat plants or attack young animals. Instead, the insects became cannibalistic and ate one another.

Farmers and cattlemen detest the fire ants because their ugly two-foot-high mounds clog mowing machines, and the ants bite when the farmer gets down to clear the blades. But none of the farmers I talked with had suffered any crop damage from fire ants. To control them, all farmers have to do is pour insecticides into the individual mounds or disk insecticides into the soil along with fertilizers-two successful, low-cost methods developed by the agricultural experiment stations of Alabama and Mississippi.

Last September, 52 experts, including a USDA contingent of 5, were present at a fire-ant research meeting in Auburn, Ala. Dr. L. D. Newson of Louisiana State University challenged anyone there to go on record as saying that the fire-ant eradication program could be justified by damages to crops

or animals. There was no answer. What was the effect of the 1957-58 fire-ant campaign on wildlife? Dan Lay, Texas wildlife biologist, reported from Hardin County: "On May 12, before the poisoning, the fields were noisy with birds singing for territorial establishment. Dickcissels, redwinged blackbirds, and meadow larks were building nests and laying eggs. Forty-one nests with eggs were found in one clover field."

Then the planes came, scattering tiny pellets of clay containing 10 percent heptachlor. The poison covered the ground, 7 to 12 sugarsize granules to the square inch. The birds ate poisoned insects, pulled worms through poisoned soil or absorbed the poison through their feet. Within a day they began to tremble, went into convulsions and died. Orphan broods hatched and died in their nests. By June 3, only 3 of the 41 nests in the clover field remained occupied. Birds along the roads were reduced 95 percent.

It was the same in other areas sprayed: quall and killdeer wiped out; doves, woodpeckers, snipe, mockingbirds, cardinals, woodcock, hawks, wild turkeys, shrikes, and many other species almost exterminated.

Animals died, too. A raccoon which had been seen rolling frenziedly in the road was later found dead by the roadside. Four fox pups were found dead in their den, poisoned by food brought in by their mother. Fish, turtles, snakes, rabbits, opossums, squirrels, armadillos were killed.

Today fish and game commissions in most of the afflicted States, finding the cure worse than the disease, have demanded a halt to aerial spraying. "It's like scalping yourself to cure dandruff," said Clarence Cottam, former official in the Fish and Wildlife

Service.
"Sickening," said Charles Kelley of the Alabama Conservation Department. people can kill more game in a month than our department can build up in 20 years." Kelley handed me one of the USDA ings given people whose lands are about to be doused:

Cover gardens and wash vegetables before eating them; cover small fishponds; take fish out of pools and wash pools before replacing the fish; don't put laundry out; keep milk cows off treated pastures for 30 days, and beef cattle 15 days; cover beehives or move them away; keep children off ground for a few days; don't let pets or poultry drink from puddles.

"How can any official read that and still say the losses of wildlife are insignificant?"

he demanded.

Last year, under the prodding of Representative LEE METCALF, of Montana, whose interest grew out of the wholesale destruction of fish in the Yellowstone River following a mishap in spraying DDT, Congress conducted hearings on the pesticide problem and set aside \$125,000 for studies to learn what we are doing to fish and wildlife. All witnesses agreed basic research was badly They raised many unanswered questions.

Do repeated small doses of the poison impair the reproductive ability and lower the survival rate of the young in animals and Most of the new chemicals retain their killing power in the soil for 3 years at least. Can they still kill after 5 years? Nobody knows.

What of the micro-organisms that create soil fertility in the first place? What of the bottom organisms in streams and bays, on which marine life feeds? Do they accumulate the poisons? Since pesticides kill mice-eating hawks, owls, and foxes, as well as rodents, and beneficial as well as harmful insects, may we not find ourselves without natural allies in the war on pests, and become wholly dependent on ever stronger chemicals?

What about insects developing immunity, fust as some germs have become immune to penicillin? The housefly and the mosquito were the initial targets for the new sprays. Now some common species of these insects are 1.800 times more resistant to DDT than were their ancestors of a few years ago. Are we trading a costly temporary victory over other pests for disaster in the form of superinsects later on? Nobody knows.

And finally there is the greatest question of all: How serious are the hazards to human Doctors are increasingly troubled by the possibility that DDT and its much more poisonous descendants may be responsible for the rise in leukemia, hepatitis, Hodgkin's disease, and other degenerative diseases.

It may take years to find the answers to some of these questions. But one thing seems plain enough: aerial spraying needlessly kills wildlife and should not be done except in small areas and real emergencies.

Our forests flourished without chemical help through eons of time, and man has practiced agriculture with reasonable success for 100 centuries of recorded history. The new pesticides have been in general use for 15 years. "Surely," says Dr. Fairfield Os-born, noted conservationist, "we would be wise to halt massive spraying until we know what effects the toxins are having on ourselves and our animal co-heirs to this planet."

Dr. Wallace has made a grim prophecy: "If this and other pest-eradication programs are carried out as now projected, we shall have been witnesses, within a single decade, to a greater extermination of animal life than in all the previous years of man's history on earth."

This may be a wildly pessimistic view. Nobody knows. But why risk it?

Says S. 1120 Would Be a "Great Misfortune for the Treasury"

> EXTENSION OF REMARKS OF

## HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Friday, June 26, 1959

Mr. PATMAN. Mr. Speaker, yesterday I received a telegram from Dr. Seymour E. Harris, chairman of the Department of Economics, Harvard University. Dr. Harris makes the point that the reductions in reserve requirements contemplated by this bill would either result (a) in a serious inflation or, (b) in the transfer of billions of dollars of Government securities now owned by the Federal Reserve over to the private banks. I think we can be certain that the Fed will not allow it to result in inflation.

This kind of transfer is, of course, what we can call, without reservation, a giveaway. And the whole \$15 billion involved in the giveaway is a net giveaway, none of which will come back in taxes. As far as I know, U.S. bonds and other interest-bearing obligations, which are worth instant cash, can be given away only to the banking system and only by the Federal Reserve System without the recipients of such gifts having to pay income taxes on the principal amount of the gift.

The American Bankers Association, in its first report proposing this legislation, argued that the transfer of these securities from the Federal Reserve over to the private banks would not be a complete loss to the Treasury, for this reason. The banks pay Federal income taxes. Therefore, if these securities are transferred to the banks, the banks will be paying back 52 percent of the annual interest payments on the securities in the form of income taxes. The American Bankers Association conveniently overlooked the point, however, that the banks have a unique position under the tax laws in that they do not pay taxes on the reserves which the Federal Reserve System gives them. What is proposed by this bill is that the Fed will give the banks the reserves with which to, quote, buy, unquote, the bonds; and it will simultaneously, quote, sell, unquote, the bonds.

Incidentally, the reason I use the words "quote" and "unquote" before and after the word "buy" and the word "sell" is that the Government Printing Office has some sort of rule which requires them to take the quotation marks off copy in most instances.

For example, on June 24 I inserted in the RECORD, at page 10750, a letter from Dr. Arthur P. Becker, chairman of the Department of Economics, the University of Wisconsin, at Milwaukee, who also roundly condemned this legislation, because he said that in order to prevent the bill from creating a monetary inflation, it would be necessary for the Fed to, quote, sell, unquote, \$15 billion worth

Head of Harvard Economics Department of U.S. obligations. Dr. Becker put the word "sell" in quotations for the reason that he meant to convey the idea that the word "sell" was being misused. More specifically he meant that while the transfer of bonds over to the private banks might be called a sale, it is no sale in the ordinary meaning of the term. In fact he added, and I quote: quote, these U.S. obligations will in reality be given free to the banks, unquote.

WHERE EXPLANATIONS OF THE BULL MAY BE FOUND

For those Members who might like to make a thorough review of this bill before it comes up on Tuesday, I might call attention to the analyses which I have submitted.

First, there is my testimony in the hearings before Subcommittee No. 2 of the House Committee on Banking and Currency on S. 1120.

Second, there are my dissenting views in the report of the House Committee on Banking and Currency to accompany S. 1120.

Third, there is a lengthy statement explaining the bill, explaining how bank reserves are created, explaining how the banks create money on these reserves, and so on, in the daily Congressional RECORD for June 2 at page 8667. This statement also includes extracts from the records of the testimony of Chairman Martin and former Chairman Eccles, and many other authorities on the question of who owns the Federal Reserve System, and on the question whether or not the Federal Reserve System has used the member banks' reserves to acquire its present holdings of almost \$26 billion of interest-bearing obligations of the United States. I might add, in summary, that all of these authorities have made clear that the Federal Reserve System is owned by the Government of the United States, not by the private banks; that the private banks have no ownership or claim whatever to the Federal Reserve's holdings of Government securities. Furthermore, the Federal Reserve has not used the banks' reserves to acquire these securities. The fact is the reserves which the banks have to their credit on the books of the Federal Reserve System have been created by the Federal Reserve System itself and given to the banks.

Finally, in the daily Congressional Record of June 15, at page 9850, there is a statement giving information which would be difficult to find elsewhere. First of all, the statement explains the bill in simple question-and-answer form for those Members who are not initiated to the mysteries of the Federal Reserve System and the banking system. But more important, following these questions and answers there are excerpts from the legislative history of the bill beginning with the American Bankers Association first report proposing the legislation, continuing with the Federal Reserve report on the legislation, then taking up the report on the bill by the Senate Committee on Banking and Currency. And finally, setting out extracts from what would normally be called the debate on the bill in the Senate.

The telegram which I received from Dr. Seymour E. Harris is inserted below:

TELEGRAM FROM DR. SEYMOUR E. HARRIS. CHAIRMAN, DEPARTMENT OF ECONOMICS, HARVARD UNIVERSITY, RE S. 1120, THE BOND GIVEAWAY BILL

Hon. WRIGHT PATMAN, U.S. House of Representatives,

Washington, D.C.
The Congress, I understand, is to vote the vault-cash bill on Tuesday. This bill makes possible a reduction of reserve requirements of more than \$11 billion. As reserve require ments are reduced, the Federal Reserve will have to sell Government securities to prevent the increase of reserves from bringing about a serious inflation. The net result would be that billions of dollars of Government securities (some estimates are as high as \$15 billion) would be transferred from the Federal Reserve to the public and largely to the banks. In this manner the profits of banks would be greatly increased and the Government which falls heir to the surplus profits of the Federal Reserve would lose correspondingly as the Federal Reserve dumps securities.

I have serious doubts on this legislation which I share with Prof. Alvin Hansen, as revealed in his recent article. At the very least there should be no legislation without much further publicity and understanding of the issues. The issues are difficult and the pros and cons should be aired more. The Senate voted the bill with a minimum attendance of the Senate. It would be a great misfortune for the Treasury and especially for the banks if this were to be interpreted later as a handout and particularly.

Professor Hansen says, to the larger banks.

If the Federal Reserve will have to sell 5, 10, or 15 billions of short-term issues in order to effect the order to effect the content of the order to offset the inflationary effects of reduced reserve requirements, interest rates on Government securities will rise and rise on short-term issues sufficiently to attract the purchases of these securities by the

> SEYMOUR E. HARRIS. Harvard University.

The Federal Reserve System Is Spending Millions of Dollars of Taxpayers Money Without Restraint and Without

> EXTENSION OF REMARKS OF

## HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Friday, June 26, 1959

Mr. PATMAN. Mr. Speaker, the Federal Reserve System has probably han dled larger amounts of public funds and larger amounts of Government bonds and other securities than any other Federal agency. It handles tens of billions of dollars of public funds annually. Yetit is one of the few Federal agencies which has never been audited by the General Accounting Office.

In fact, the Federal Reserve banks have never been audited except by employees of the Federal Reserve System itself. And in many cases the employees making the kep audits are people who work in the very bank and very department of the bank which is being audited. In any case, the auditors are selected by the same officials who are being audited, and they make their audits in accordance with instructions issued by the Board itself. I raised serious questions about this matter several years ago, and since that time the Federal Reserve Board has, on occasion, called in a private auditing firm to review its audit procedures and to do some spot checking of its audits. But its audits are still strictly internal audits, which is a contradiction of terms. The first requirement of an audit in any true sense of the term is that it be made by outside, disinterested people.

Another most peculiar aspect of this lack of audit control over the Federal Reserve System is that the greatest transfers of funds it makes are to and from the Comptroller of the Currency. Normal financial controls, both in Government and in private business, rest very heavily on this proposition: indebendent audits of different agencies or firms between which financial transactions take place provide the crucial and independent check of one agency's records against the other's. Yet the fact is, or so I was informed by the General Accounting Office last year, the Office of the Comptroller of the Currency happens to be one of the other Pederal agencies which is not audited.

In the latter part of 1957, I succeeded in prevailing upon Chairman Martin of the Federal Reserve Board to send copies of the System's recent audit reports up to the House Committee on Banking and Currency for my inspection. That he did, but only in part. Chairman Martin submitted parts of the audit reports for 1956 and for several earlier years. Chairman Martin refused, however, to allow me to inspect certain crucial parts of the audit reports. These are the portions of the reports dealing with the conduct of the officers and directors of the banks, their financial interests and, if any, their speculations in the bond and securities markets. Nevertheless, those portions of the audit reports dealing with the more routine operations of the banks and with the conduct of the lower echelon personnel revealed some almost unbelievably shocking things. As a consequence, I testified before the House Committee on Banking and Currency in February of 1958, calling the committee's attention to the freehanded manner in which personnel of the Federal Reserve System is spending Government funds, as well as to quite a variety of deficiencles and mismanagements of the Government's money.

Following my testimony, on April 29, 1958, Chairman Martin wrote a long letter to the chairman of the House Committee on Banking and Currency attempting to excuse, and in some cases attempting to explain, the factual matters I had pointed to. The most frequent explanation, and one which appeared time after time in Chairman Martin's letter, was to the effect that the matters I had pointed out had already come to the attention of the Board of Governors and had been corrected or were being corrected. At that time audits covering the System's operations in 1957 had not been made.

Now, however, I have obtained copies of the audit reports—or at least parts of the audit reports—covering the year 1957. Those parts of the audit reports pertaining to the conduct of the officers and directors of the banks, their financial speculations, and so on, were again refused. I have, however, reviewed those parts of the audit reports which are comparable to those I reviewed for earlier years.

The most notable improvement I have noted in the audit reports made since I called attention to the free-handed, extravagant, and fantastic ways in which the Federal Reserve officials and employees throw away the taxpayers money is that the new audit reports for almost all banks now carry statements such as the following:

All expenditures since our last examination were reviewed to determine their propriety and compliance with the rules and regulations of the Reserve bank and of the Board of Governors. Our review did not disclose any item of a nature warranting mention herein.

Despite these general comments that everything is according to the Board's regulations, and nothing was found worthy of comment, there are hundreds and perhaps thousands of items revealed in the detailed tables which seem to me entirely worthy of comment and worthy of public concern about how its money is being spent. I have extracted and quoted just a small percentage of such items from the 1957 reports. These are only illustrations. For the most part I have tried not to cite examples of the same kind of thing for two or more banks. The illustrations show beyond any question, however, that the deficiencies in the managements of the Federal Reserve banks and the freehanded kinds of spending of public money which Chairman Martin reported had already been corrected or were being corrected, were still not corrected in the year 1957.

Unrestrained and careless spending of funds by the Federal Reserve System is exactly comparable to the situation that would arise if the local postmasters spent freely from the funds the local post offices take in from the sale of stamps. These are Government funds. They come out of the taxpayers' pocket. Every million dollars wasted or spent for improper purposes is a million dollars out of the taxpayers' pockets.

Congress has provided a highly unusual way for supplying money to the Federal Reserve System. Congress does not make annual appropriations as it does for other Federal agencies. Rather, Congress has simply given the Federal Reserve System a separate and private door into the Government's money vaults, by which the Board of Governors can haul out money any time it wants money and in any amount it wants. This is the way it works.

Whenever the Federal Reserve Board wants money, it simply telephones the Bureau of Engraving and Printing and orders a batch of currency printed. Then it sends an armored truck over and hauls the currency away. This currency, called Federal Reserve notes, are

obligations of the U.S. Government, That is said plainly on their face. Furthermore, these Federal Reserve notes are signed by the Secretary of the Treasury and by the Treasurer of the United States, not by the Board of Governors of the Federal Reserve System. These notes cost the Federal Reserve System nothing. The System goes through the motions of paying the printing costs, but before the year is out these costs are taken out of money that would otherwise be returned to the Federal Treasury, so the Federal Reserve notes cost the Federal Reserve System nothing.

The Federal Reserve System then goes out into the market and buys interestbearing Government bonds and other interest-bearing Government obligations, pays for these bonds with Federal Reserve notes, puts the bonds in its vaults, and thereafter collects interest payments on the obligations from the Federal Treasury. It uses all this interest money it cares to use for expenses, puts aside 10 percent more in a surplus fund, and it then pays what is left over back into the Treasury. Yet these interest payments are so great that it turns back to the Treasury much more than it spends. It chooses to call these amounts it turns back to the Treasury interest payments for the use of the Federal Reserve notes. So it is quite clear that every dollar the Federal Reserve spends frivolously such as to build marble temples to provide rent-free quarters to bankers' associations and to clearinghouse associations, is a dollar taken out of the taxpayers' pockets.

At the present time the Federal Reserve is holding \$25.6 billion of interestbearing obligations of the United States. It has issued \$26.9 billion of non-interestbearing Federal Reserve notes which have gone to pay for these interest-bearing obligations, plus other things. Furthermore, this enormous hoard of Government securities—\$25.6 billion—is about five times as much as the Federal Reserve System needs to give it an interest income in an amount to which it has become accustomed. Both the Board of Governors and the American Bankers Association have agreed that this \$25.6 billion of Government securities is at least \$15 billion in excess of the amount for which it has any conceivable need. Furthermore, the Federal Reserve Board is recommending legislation sponsored by the American Bankers Association, S. 1120, which would transfer ownership of about \$15 billion of these Government-owned securities to the private banks on a cost-free basis. In plain words, the Board is recommending the biggest giveaway of all time, and the only excuse which it has given for this fan-tastic proposal is that transferring Government assets over to the private banks will help the banks earn more profits.

Instead of approving legislation to give away about \$15 billion of Government obligations, which the Government itself owns and does not need to own, Congress should require that these obligations be canceled immediately so as to reduce the Federal debt by this amount. Canceling \$15 billion of these obligations

would make it completely unnecessary to increase the Federal debt ceiling by \$12 billion, as the administration has asked Congress to do.

In considering the attached excerpts from the audit reports of the Federal Reserve banks for the year 1957, one point should be noted. Congress has not put restrictions on the expenditures of the Federal Reserve System, but with one exception: The law does require that no new branch bank building be built without specific approval of Congress, if the building is to cost more than \$250,000, exclusive of vaults, permanent equipment, furnishings, and fixtures.

No instance has come to my attention where there has been a violation of the strict letter of the law, which is loosely worded, but the attached excerpts from the audit reports will reveal that some fabulous expenditures have been made for overhauling already existing buildings and for purchasing new capital items such as furniture, cafeteria and clubroom equipment, and so on, and that such expenditures have been charged to current expenses.

One other item should be noted. One of the members of the Board of Governors. Governor Robertson, in testifying before the Senate Committee on Banking and Currency late in 1956, made the following statement:

We have reached the point now where we think, in view of all the talk that goes on about auditing in the Federal Reserve System, that Congress should take upon itself to make mandatory the use of a firm of certified public accountants to audit the Federal Reserve Board, and that we should be required to submit these audits to the committees of the Congress and that the auditors should be obliged to come before the committees of Congress and explain any defects. and that we, the Board, ought to be obliged to submit reports with respect to every criticized item in that report.

And we also should be compelled by legislation to submit to those committees the reports of examination of the Federal Reserve banks themselves.

So far, Congress has not acted upon Governor Robertson's recommendation. Referring back to my testimony before the House Committee on Banking and

Currency in February of 1958, I will now summarize some of the main deficiencies I pointed out at that time, then add excerpts from the 1957 audit reports so that the reader may determine whether or not the deficiencies previously pointed out have actually been corrected.

I commented upon numerous unusual expenses incurred by the Federal Reserve banks, which were noted by the examiners in the previous reports. These included expenditures for all kinds of employees' recreational activities, entertainment, cruises, entertainers, expenses for wives of officers at meetings of State bankers association, and all kinds of entertainment tickets, such as basketball, ice follies, and football. The Board's memorandum stated that these expenditures were "in connection with business meetings with direct interest or benefit to the Reserve banks. They were considered by the individual bank to be reasonable and appropriate for the occasion. In each case, however, after the matter was made an object of comment

in the examination report the bank reviewed its policy and subsequently discontinued incurring expenses of the type questioned."

The most glaring example of a continuation of an expenditure commented upon in previous reports by the examiners was with respect to Christmas remembrances given by the Chicago bank. In the 1956 report, the examiners questioned a charge of \$1,909 on December 23. 1955, covering expenses of Christmas remembrances to persons other than bank's own employees who rendered valuable service to the bank during 1955. In the 1957 report, the examiners called attention to the propriety and compliance with the rules and regulations of the Reserve bank and the Board of Governors. Again in December 1956. Christmas remembrances involving an expenditure of \$1,842.40 were commented upon as follows:

The Reserve bank believes that this type of expense should be considered a necessary business expense on the ground that gratuities of the kind mentioned are customarily made by banks and other business houses in the local financial community, and that having the good will of the persons who are the recipients of the Christmas remembrances is of material assistance in the conduct of the bank's operations. Although it feels that the elimination of these gratuities would be unwise, the bank intends to keep their total as low as possible by careful screening of the lists of proposed donees; the list of gifts for the 1957 holiday season has been reduced to a total not in excess of \$800.

In spite of the examiners disapproval. the bank intends to continue this practice of giving Christmas remembrances to the financial community It is inconceivable that the Federal Reserve banks would have to resort to disbursing gifts to spread good will in the financial community, particularly in view of the many free services which the Federal Reserve banks provide for the private banks. There is no indication of the policies of the Board and the Federal Reserve banks with respect to receiving gifts from bankers. I feel very strongly that the Board of Governors should take immediate steps to eliminate any taint of influence by either the giving or the receiving of gifts at the Federal Reserve banks

In the Kansas City report, it was noted that the bank had purchased \$800 of theater tickets for resale to employees.

#### BANK PREMISES

There are continuing heavy outlays for new building projects, modernization, alterations, improvements in bank premises, and purchases of land and build-There are instances where the banks acquire properties for possible future uses. As soon as one project is completed, new projects are contemplated or undertaken. This would provide a simple expedient for circumventing the limitation on expenditures for branch buildings. Another method of reduction of costs of projects is to remove certain expenditures, i.e., kitchen equipment of \$43,000, from construction accounts into current expenses. In addition, there are large fees to architects for projects which have not been approved.

In the Dallas district, for example, the Dallas Reserve Bank "has developed plans for comprehensive building and modernization program" at an estimated cost of \$7,400,329. In addition, to the extensive program at the Dallas bank, the El Paso branch has a project for a new building at a cost of \$1,200,000; at Houston, \$2,276,000 will be expended for new construction; and at the San Antonio bank a new building will be erected at a cost of \$2,055,727. By the end of 1957, the Dallas bank and branch had land, buildings-including vaultand fixed machinery and equipment costing the Government \$8.5 million and other real estate costing \$687,729, and these costs do not include any expenditures for furniture, and other construction or equipment costs which are arbitrarily charged off to current expenses. When one considers these fixed costs together with the 1957 current expenditures of \$6,8 million against the 1957 earnings of \$791,239 on loans and discounts—the only activities of the bank functioned in the Dallas district\_these extravagant outlays loom preposterous. Examples:

Chicago-head office-1957:

The Reserve bank has under way a comprehensive expansion and modernization program, the principal part of which is the construction of an addition to the present building. Remodeling work will be done in the existing building to bring it into harmony with the new addition.

As explained in our 1956 report of examination, the work of construction will pro-ceed in stages with the objective of first erecting a seven-story unit (to be an integral ral part of the main section of the building) to provide space for the U.S. Fidelity & Guar anty Co. in compliance with the purchase contract covering its building, one of those acquired in assembling the site. To enable the work to proceed, the bank negotiated the termination of leases with four tenants, making settlements totaling \$98,050. \* \*

Estimated costs in connection with the new construction on two contracts were million for the million for the general contract, and \$16 million for the steel contract.

The proposed addition will have five floor above ground and three basement levels, and will contain 140,731 square feet of usable floor space. Most recent estimates place the total cost of the project at \$7,400,320.

Final detailed place at \$7,400,320.

Final detailed plans and specifications were submitted to the Board of Governors on July 25 1057 on July 25, 1957, after the Reserve banks board of directors had approved the program with the reservation that (it) would review the project after plans and estimated costs are approved and before bids on the project are requested." On November 2017, the are requested." On November 20, 1957, and Board of Governors approved the program calling for the expenditure of approximately \$7,400,000 and informed to approximately \$7,400,000 and informed the Reserve bank that it is prepared to authorize at the appropriate time the priate time the call for bids. At a meeting held on December 12, 1957, the directors gave further consideration to the project and the timing of it in relation to the project and attornand voted at the economic sin ation and voted to review the matter again before the end of the first quarter of 1958. Architects' fees paid

Architects' fees paid to date in connection with the proposed addition to and alteration of the present head office building s183,210.95, and have been charged to

pense account—general."

As shown in the tabulation of changes in the net book value of the bank premises, presented at the beginning of these com-ments on bank premises, \$43,276.62 was ments on bank premises, \$43,276.62 unit transferred from the construction account to current expenses. The construction account was closed on June 5, 1957, by distribution of the balance of \$2,010,382.66 among the following accounts:

Building (including vaults) \_\_\_ 1,394,737.76 Fixed machinery and equip-569, 573, 42

Total\_\_\_\_\_ 2, 010, 382, 66

## Kansas City, 1957:

The remainder of the building, running from the 10th through the 18th floors and contained 84,531 square feet of usable space, is leased to outside tenants for monthly rentals totaling approximately \$23,700.

## Atlanta, 1957:

A program for construction of an addition to and the remodeling of the branch building at Birmingham which will provide 47,-780 square feet of usable space, as compared with 13,500 square feet in the existing building, is exepcted to cost \$2,900,000.

EXPENDITURES FOR BRANCH BANK BUILDINGS

No Federal Reserve bank has the authority to contract for the erection of a branch building in excess of \$250,000 witthout the approval of the Board of Governors. However, prior to such approval large expenditures have been made for architectural fees and other matters, such as the purchase of land and buildings. For instance, El Paso real estate acquired for banking house purposes" cost \$191,317.

## New York—Buffalo branch—1957:

Construction account—accumulated expenditures in connection with construction of new building (in addition to \$1,185,381.71 previously expended), \$2,462,570,55.

## Dallas, 1957:

Bank premises: The components of the bank premises at the head office and the three hards three branches are set forth in the schedule section of this report. Architects' and engineers' fees and sundry expenses in connection with proposed new building, \$126,750.83.

USE OF BANK PREMISES BY TENANTS OTHER THAN THE PEDERAL RESERVE, SOME ON A RENT-FREE BASIS

The banks lease space in the bank buildings to private organizations, such as the American Bankers Association. American Institute of Banking, and clearinghouse associations, while at the same time leasing space outside the buildings for bank operations. Furthermore, clearinghouse associations are provided rent-free space in some of the buildings sometimes in lieu of the banks' paying dues and assessments to the associations while at the same time the banks charge Government agencies for

At the Pittsburgh branch, the Pittsburgh Clearing House Association, which had been occupying space in a building leased by the branch, was removed to the new bank building. The Pittsburgh branch had gone one step farther than others banks, which were providing the associations rent-free clearinghouse space within their own quarters, to go outside the bank to rent space for such private organizations.

When members of the Board of Governors appeared before the House Small Business Committee in April of last year, Governor Shephardson objected to providing space in Federal Reserve bank buildings to small business capital banks. He said, "If they were in the same building, the public's reaction is that it is part of the same organization, and I think it would be unfortunate." Apparently, the Board of Governors protests the identification of a Government agency dedicated to small business financing with the Federal Reserve System—not the private banks' associations.

#### Examples:

250,000,00

800.00

Cleveland-Pittsburgh branch-1957:

On September 30 the check collection department and the Pittsburgh Clearing House Association were removed from Gulf Building where they were occupying rented quarters to space on the fourth floor of the new addition.

#### Philadelphia, 1957:

One thousand four hundred square feet furnished rent-free to the Philadelphia Clearing House Association.

#### St. Louis, 1957:

### HEAD OFFICE BUILDINGS

Space in the annex building not used or earmarked for Reserve bank occupancy totals 52.287 square feet and is leased to outside tenants as follows: 49,366 square feet to the U.S. Army Corps of Engineers at \$10,284.58 per month; 2,216 square feet to the District Chief National Bank Examiner at \$461.67 per month; and 705 square feet to the St. Louis Clearing House Association on a rent-free basis

#### San Francisco, 1957:

The building is used entirely for Reserve bank operations, with the exception of 1.450 square feet on the first floor made available to the San Francisco Clearing House Association on a rent-free basis (in lieu of the payment by the Reserve bank of association dues and assessments).

#### Minneapolis, 1957:

An area containing approximately 4,000 square feet, on the third floor, will be occupied by the American Institute of Banking for its offices and classrooms. \* \*

The Twin City Clearing House Association uses a small area of approximately 380 square feet, on the ground floor, rent free, for the exchange of clearinghouse items.

#### CHARGEOFF OF CONSTRUCTION COSTS TO CUR-RENT EXPENSES

The Board takes the position that the chargeoff of construction costs to current expenses refers to repairs and alterations. The basic principle followed in such charges, the Board states, is "to capitalize those which add to the intrinsic value of the property and to charge to expenses the cost of repairs and alternations which keep the properties in repair and make for efficient utilization of space and operations." Although the detail of the actual installations is not set forth in the audit reports, there appear to be substantial additions to facilities, such as vaults, security courts, furniture, equipment, and other fixed installations which would not normally be considered for business purposes properly chargeable to current expenses.

As examples of such chargeoffs to current expenses, at the Little Rock branch the renovation of the bank's quarters at cost approximately \$145,000 was charged to current expense. This project involved extensive remodeling of the interior of the bank's building. The major features of this project were the installation of the cafeteria on the second floor; a new directors' room; modernization of the main bank lobby, and alterations in the basement and mezzanine to make more space available for operations. In addition, the cafeteria was fully equipped and the office furniture throughout the building was replaced. At the Cincinnati Bank expenditures in connection with the construction of the security court of \$20,146.89 were charged off to current expenses.

Charging expenditures for capital assets, such as furniture, office equipment, additions to present buildings to current expense rather than capital assets subject to normal depreciation deprives the U.S. Treasury of current payments in the amount of 90 percent of the expenditure less depreciation. In other words, such a practice amounts to withholding from the Treasury amounts of money which would be immediately due to it and to the extent that these funds are not available to the Treasury, the Treasury must borrow in the open market and pay interest on its borrowings.

Examples:

San Francisco (Los Angeles branch), 1957:

Expenditures in connection with the building program aggregated \$4,471,475.03. As shown in the preceding tabulation, a portion of this total, in the amount of \$108,789.13, was allocated to current expenses.

Minneapolis-Helena branch-1957:

This project, now virtually completed, in-

cluding the following:

1. Enlargement of the book vault on the bank floor and the conversion of it into a teller's coin valut; also, the installation therein of tiered compartments.

2. Conversion of the basement storage

vault into a reserve coin vault.

Purchase of skids, trucks, loaders, and a powered forklift truck for the bulk handling of coin with a minimum of manual labor.

 Extension and remodeling of the bank floor security area, with provision of a coin shipping cage.

5. Extension of the electrical sound wave burglar alarm system to include the two coin vaults.

6. Installation of an inching device on the elevator to permit leveling at the bank and basement floors when bearing heavy loads

7. Replacement of the 72-hour vault door time lock movements with 120-hour movements (to provide for occasional 3-day weekends, the Helena branch now being on a 5-day workweek).

Expenditures on this project (except for a sum of less than \$1,000 pertaining to work still to be completed) totaled \$39,005.22. These expenditures have been charged to current expenses.

PARKING AREAS FOR EMPLOYEES' AUTOMOBILES

The Board contends that "parking areas provided for bank employees are similar to those provided for employees of Government departments." The bank has acquired considerable properties which it uses for employees' parking spaces. In one instance the bank has leased bank space to a gasoline station operator for \$1 for each half year for consideration of employees' parking at a return of \$4 a month. The Chicago bank leases property at a monthly rental of \$250 for parking spaces for night force employees' automobiles. In addition, it incurs a monthly rental of \$35 for parking space for the automobile of the bank nurse assigned to employee visitation.

Throughout the system there appeared to be heavy expenditures either for the procurement of parking lots or for the building of garages for automobiles both for bank-owned automobiles as well as automobiles belonging to employees. At the St. Louis Bank, expenditures totaling \$307,166.41 have been made for land, buildings, fixed machinery and equipment in connection with a garage which in 1957 had a book value of \$250,161.61.

Example:

Richmond, 1957:

Other real estate: Parcel of land in Richmond—cost of \$146,549.91, acquired in 1951, is leased to a parking lot and filling station operator at norminal rental of \$1 per half-year in consideration of his agreement to park employees' automobiles for a fee of \$4 a month.

EXPENDITURES FOR EMPLOYEES' RECREATIONAL FACILITIES AND ACTIVITIES

The Federal Reserve Board states:

Except for "buildings and land" category, all of the above (personnel activities, including training, recreation, loan funds, and employee insurance; membership dues; charitable activities; meetings and entertainment) reflect operating policies and decisions at the individual Reserve banks. The Board has taken the position that the responsibility for determining whether expenditures of this nature are necessary expenses within the meaning of section 7 of the Federal Reserve Act rests primarily with the officers and directors of the individual banks.

As examples of recreational activities, theater tickets in the amount of \$800 were purchased for which the bank had not received payment. The Cincinnati branch deposited with the Cincinnati board of parks \$55 for use of picnic grounds.

The banks are continuing to make heavy outlays to enlarge and build quarters for employees' lounges, cafeterias, assembly halls, officers' dining rooms, and other recreational facilities.

If the Board of Governors is not willing to take the responsibility of surveillance over expenditures of the individual Federal Reserve banks, certainly Congress should step in to protect the public's money from improper and wasteful handouts.

Example:

Chicago, 1957:

Deferred Charges: Undistributed charges—expenses in connection with employee welfare activities—

PAYMENT BY BANKS OF OFFICERS' AND EM-PLOYEES' DUES AND OTHER SERVICES, INCLUD-ING PURCHASE OF GOVERNMENT SECURITIES

There are several items carried on the accounts as due from officers and employees representing expenditures by banks for personal goods and services. For example, at the Boston bank, these include: Dues to bank officers associations, loans outstanding to employees, dining room service, advances to employees for expenses as officer of the American Institute of Banking; and Trading Post. The Trading Post item is \$2,002. At the Cleveland bank, loans due from bank employees amounted to \$4,215.05 and supplies purchased for officers and employees outstanding amounted to \$298.13.

At the Minneapolis bank, included in the transactions of securities functioned for member and nonmember banks were two purchases for an officer of the bank. The examiners recommended that the Reserve bank reexamine its policy with respect to handling of such transactions for members of the staff. More than that, I strongly believe that all officers of Federal Reserve banks should be prohibited from trading on inside information by speculating in U.S. Government securities. After all, the Federal Reserve by its purchase and sale of Government securities makes the market.

Examples:

Cleveland—Cincinnati branch—1957: Registration fee—Central State School of Banking, University of Wisconsin, \$20. San Francisco—Salt Lake City branch—1957:

Deferred charges: Advanced registration fee—meeting of Washington Bankers Association, \$40.

#### Boston, 1957:

Bank officers association dues	8446
Loans outstanding to employees	315
Dining room charges	278
Advance to employee for expenses as officer of AIB	2,002
Trading post	2,00-

#### EMPLOYEE LOAN FUNDS

Employee loan funds appeared in the accounts of most of the banks. In some instances the amounts outstanding are sizable. The audit reports do not reveal the terms of the loans nor the conditions prescribed

The Kansas City report disclosed that loans had been given without requirement of a written loan application, and that applications for loans of over \$500 are acted upon by the Discount Committee. In addition, if the loan was made after the previous examination, it cannot be determined at the next examination if the loan was approved by an authorized officer. It also could not be determined by the examiners whether loans made for under \$500 were for "qualified purposes."

Examples:

New York, 1957:

Officer and employees:

Loans outstanding:
Loans for educational purposes
Other loans to employees
Transportation charges for officers

and employees on assignment with mission to Vietnam\_\_\_\_\_ 6, 188. 89

Philadelphia, 1957:
Officers and employees—loans outstanding,

Dallas, 1957:

\$12,367.50.

Officers	and	employees-dining		+0
room	charges		\$2, 475. 6, 909.	14
Loans t	o emple	oyees	6, 909.	UU

Kansas City, 1957:

#### EMPLOYEES' LOAN FUND

Loans aggregating \$6,033.50 were outstanding to 35 employees at the head office; 7 loans totaling \$827.50 were outstanding at the Denver and Oklahoma City branches.

Written applications for loans are not required. The applications are made orally by the employees to an officer; at the head office, to one of the three top officers; and at each branch, to the vice president in charge.

Applications for loans of \$500 or more are acted upon by the discount committee, and the purpose of the loan and the committee's approval or disapproval are recorded in the minutes.

Loans under \$500 are approved or disapproved by one of the above-mentioned officers and, if approved, the approval is evidenced by the initials of the officer on the promissory notes tendered by the employees. Hence, when a loan is repaid and the relevant note is returned to the borrower, the evidence of the approval no longer is held; and if the loan was made after the last examination, it cannot be determined at an ext whether the loan was approved by an authorized officer. Also, there is no record from which to determine whether the loans in amounts under \$500 were for qualified purposes.

\$408.31

210

600

EXPENDITURE FOR DINNER PARTIES

The examiners questioned the appropriateness, propriety and compliance with the rules and regulations of the Reserve banks and the Board of Governors of dinner parties for officers of banks costing hundreds of dollars. At the New York bank, one dinner party cost \$501.61 and another, \$710.98. At the Minneapolis bank, a dinner party cost \$321.03 and another, \$313.91. Although my previous report to the committee had specifically called attention to costly dinner parties for officers of Which their own examiners questioned the propriety, the Board failed to ex-Plain these charges. In the 1955 audit report of the Minneapolis bank, the examiners had commented on the impro-Priety of similar expenditures for officers' dinner parties. Apparently, neither the auditors' reports nor the rules and regulations of the Board of Goverhors and the Reserve banks can stop the squandering of public funds for personal use. This continuing disregard of the auditors' comments certainly illustrates the insufficiency of internal audits to control improper expenditures.

INCREASES IN SALARY EXPENSES THROUGHOUT THE SYSTEM

In 1957 the total of salaries paid to officers were \$5.9 million and to employees \$77.5 million, an increase of \$5.1 million over the previous year.

#### LEAVES OF ABSENCE

Leaves of absense for medical reasons had not been formalized and therefore had been granted without any established policy of the bank.

Although the Reserve Bank of Cleveland had followed the practice of granting sick leave with pay, it was not until 1957 that the bank's practice was formalized and put into a written statement of policy.

UNCLASSIFIED STATUS OF EMPLOYEES SALARY VARIANCES FROM ESTABLISHED RANGES

The banks carry on their rolls a number of employees who are in an unclassifled status. At the Birmingham branch there were 42 such unclassified positions. The examiners found that frequently the employees were being paid at salaries below the minimums established for the Position, and in some instances, above the salaries established for the positions. At the Chicago bank 55 employees at the head office were receiving salaries above the maximums for their respective job grades.

### UNIVERSITY FELLOWSHIP PROGRAM

The Chicago bank instituted a university fellowship program for university graduate students for which the overall cost is approximately \$80,000.

## PAYMENTS TO RETIREMENT SYSTEM

The banks make large contributions to the retirement system. For instance, a lump sum payment of \$1.1 million was paid by the Chicago bank on September 1, 1957, and in 1956 the Cleveland bank made a lump sum payment to liquidate

the accrued liability for the retirement plan in the amount of \$752,928.

#### HOSPITALIZATION PAYMENTS BY BANKS

The Reserve banks pay a portion of the fees for the employees under the group hospitalization plan. At the Cleveland bank, for instance, the sum in 1956 amounted to \$4,384.39.

#### PERSONNEL TURNOVER

Personnel turnover in some of the banks has caused problems of recruitment, operations, and controls.

At the Baltimore branch, personnel turnover in 1956 was approximately 37 percent of the bank as a whole, and in the transit department, the turnover was approximately 60 percent. The separa-tions were attributed as follows: over one-third as a result of the employees having obtained employment elsewhere; about 15 percent because of unsatisfactory work performance or conduct, and approximately 10 percent because of dissatisfaction; and the remainder for various normal personal reasons. As a concomitant to the scarcity of applicants for positions their average quality has been below the bank's standard. In the transit department where there was high turnover, there were numerous times when substantial holdings of unprocessed checks existed. This condition prevailed throughout the last quarter of 1957.

PAYMENT OF DUES AND ASSESSMENTS TO VARIOUS PRIVATE-INTEREST ORGANIZATIONS

There are examples of increases in "Fees, other" in the expenses of the banks. As to the specific associations to which the bank pays fees, the only indication in the reports of those organizations which receive the fees is under "Deferred charges-unamortized portion of expenses paid in advance-assessments and dues.'

The Board memorandum states:

The most recent revision of the matter begun in the latter part of 1956, resulted in discontinuance of certain memberships carried at bank expense.

There is no record of any discontinuances of such memberships in the re-On the contrary, it was noted that "Fees, other" increased in several of the banks.

For example, in 1956 the New York bank fees doubled to a total of \$25,251, and at the Cleveland bank "Fees, other" in 1956 increased by \$14,197.75.

The banks continue to pay dues to the American Bankers Association, American Institute of Banking, clearinghouse associations, chambers of commerce, et cetera.

Examples:

Chicago, 1957:

#### CAFETERIA SUBSIDIES

The banks continue to subsidize cafeteria expenses at various percentages, presumably subject to a 50-percent overall limitation, but they install and equip expensive dining rooms for officers and cafeterias for employees which are not figured into the limitation for subsidization. However, the amounts of such subsidies were higher than previous years. In the case of one bank where there is no cafeteria, the subsidy is 100 percent for the operation of a coffee bar. In the New York bank in 1956 the subsidy amounted to \$230,159.07 or 46.2 percent of the disbursements and in the Buffalo branch, \$10,811.10 or 49.2 percent of the disbursements. At the Dallas bank, kitchen equipment in the amount of \$43,276 was installed and charged to current expenses.

Examples:

Minneapolis, 1957:

A spacious cafeteria has been Installed on the 12th floor, suitable for the accommodation of all employees. It is excellently lighted and attractively appointed and decorated. Connected with it is a well-designed and fully equipped kitchen. Employees' lounges and an officers' dining room are also located on this floor.

#### Boston, 1957:

## ATTEMPTS TO UNIONIZE EMPLOYEES

The Federal Reserve Bank of Fortland resisted attempts to unionize the employees of the bank on the grounds that the Board of Governors approves any compensation for officers or employees of the Federal Reserve Banks, as well as such matters as retirement and death benefits of employees, insurance, hospital and medical benefits, benefits upon termination of employment, and other related expenditures which are approved by the Board in accordance with system policies. On the other hand, the Board in setting forth the reasons why the Federal Reserve banks have a free hand in expenditures for personnel activities said:

The fact that employees of the Federal Reserve banks are not Government employees is particularly important when considering personnel program.

PAYMENT OF RESERVE BANK OF NEW YORK FOR TWO-THIRDS OF OPERATING EXPENSES OF NASSAU CLEARING HOUSE ASSOCIATION

The Reserve Bank of New York pays two-thirds of the total operating expenses of the county clearing bureau of the Nassau Clearing House Association. In 1956 the bank's contribution amounted to \$116,248. The bank justifies this expenditure as follows:

The bureau expedites the collection of items in the area it serves and at the same time it relieves the Reserve bank of the portion of its check-handling burden. Were it not for the bureau's operations, the Reserve bank might have had to process on its own premises substantially all such items, except "intrabank items."

SUBSTANTIAL INCREASES IN EXPENSES FOR THE FEDERAL RESERVE BANKS AND BRANCHES THROUGHOUT THE SYSTEM

While the overall increase in expenses for the year 1956 over 1955 amounted to approximately 10 percent throughout the System, the range of increases was substantially greater for individual banks and branches. For instance, at the Los Angeles branch the increase in net expenses was 30 percent in 1956 over 1955, and 18 percent above 1956 in the first 3 months of 1957. The net expenses of the Little Rock branch for the year 1956 increased 38 percent over 1955, and for the first 6 months of 1957 net expenses were 13 percent above the corresponding period of the previous year.

Examples:

Dallas-San Antonio branch-1957:

Net expenses of the branch for the year 1956 amounted to \$914,977.83, an increase of \$234,600.37 (34 percent) over 1955. For the first 9 months of 1957, net expenses were \$187,765.60 (34 percent) more than the amount for the corresponding period of the previous year.

### St. Louis-Little Rock branch-1957:

Net expenses of the branch for the year 1956 amounted to \$699,644.48, an increase of \$193,728.55 (38 percent) over 1955. For the first 6 months of 1957, net expenses were \$36,231.21 (13 percent) more than the amount for the corresponding period of the previous year.

#### Richmond, 1957:

Net expenses for 1956 amounted to \$1,468,-231, an increase of \$404,500 (38 percent) over 1955.

## CONTINUATION OF PURCHASE OF INSURANCE AND INCREASES IN INSURANCE COVERAGE

The Board claims that "the Federal Reserve banks have discontinued purchasing substantial amounts of insurance." In 1957 the banks' insurance expenditures rose to \$1.2 million—\$56,526 above 1956. Although the Federal Reserve banks have surpluses of \$809 million—which by their own admission is

large enough to cover any contingency—they have used the discontinuation of insurance for registered mail losses as justification for setting up a \$10 million reserve for mail losses. By this expedient, the Federal Reserve System is able to hold back these reserves from payment to the Treasury.

The Board takes the position that to insure itself would require legal knowledge on personal injury and other insurance matters. However, the banks do have the privilege of obtaining outside legal assistance, which they frequently employ.

The banks pay approximately \$750,000 annually for hospital and medical service insurance. There is nothing in the law which allows these extra benefits and no other branch of the Government pays such benefits.

In addition, the banks, carry insurance for nonbank functions including medical malpractice, bodily injury and blanket athletic accident expense, including medical payments and death benefits.

Examples:

New York, 1957:

Insured losses recovered and other settlements since date of last examination 1

Head office:

Bankers' blanket bond: Shortage in coin division of cash department \$200.00

Personal effects floater:

Replacement of a damaged piece of luggage 41.50

Loss of a pair of earrings 2.08

<sup>1</sup>Exclusive of workmen's compensation claims.

St. Louis, 1957:

Head office coverage: Comprehensive general liability: Medical malpractice—bodily injury, \$250,000-\$1,000,000.

Blanket athletic accident expense:

Medical payments, each person\_\_\_\_\_\_\$500
Death benefit, each person\_\_\_\_\_\_\_\$500

### Richmond, 1957:

OUTSIDE LEGAL FEES

Although the Board of Governors take the position that to insure themselves the banks would have to have specialized legal assistance, the banks already have authorization for paying for outside legal assistance. For instance, the Federal Reserve Bank of Kansas City in 1956 paid \$2,914.87 for legal fees.

The Federal Reserve Bank of Chicago retained outside counsel for general real estate tax litigation on a contingent fee basis equal to 15 percent to the amount of any recovery. It was stated "in keeping with the bank's established practice and in order to preserve its rights in respect of such errors and excesses which may have occurred in the 1956 tax levy, the real property tax for that year was paid under protest as to excessive and illegal tax rate."

VIOLATIONS OF BYLAWS OF RESERVE BANKS

The audit reports reveal violations of bylaws of Reserve banks and branches. At one bank where the practices were not in conformity with the bylaws, it was indicated that corrective action would be taken by amending the bylaws. The bylaws of the Reserve Bank of Kansas City provide that the board of directors shall appoint a secretary who will keep the minutes of all of the meetings of the board and of committees thereof. However, for some years a secretary was not appointed, and in lieu of having a permanent secretary the board of directors at each meeting designated a secretary pro tempore. The auditors recommended an officially designated secretary should be appointed by the board of directors, and he should be responsible for the maintenance of the minutes on a current basis. Minutes of the meetings of the board of directors held in December 1956 and in January and February 1957 were not recorded in the minutes book. Also minutes of the meetings since September 22. 1955, were not signed by the chairman or acting chairman.

The bylaws of the Federal Reserve Bank of Chicago and the Detroit branch make provisions for discount committees. Both have duly appointed discount committees but they do not hold meetings. Inasmuch as such discount committees as provided in the bylaws are given power to authorize, ratify, and approve discounts, loans, commitments and advances, these functions of discounting, and so forth, have not been carried on in conformance with the Reserve bank's bylaws.

Examples: Chicago, 1957:

#### DISCOUNT COMMITTEE

Article II, section 3, of the Reserve bank's bylaws, provides that a discount committee may be appointed; that, subject to the control of the board of directors or the executive committee, the discount committee shall have power "to authorize, ratify, and approved discounts, loans, commitments and avances"; and that it "shall make a report of all such discounts, loans, commitments, and advances at the next succeeding meeting of the executive committee."

The bylaws of the Detroit branch are more specific on the subject of a discount committee. Article III, section 1, states "A committee to be known as the discount committee to be known as the discount committee."

mittee shall be appointed by the Detroit board. \* \* \* The committee shall choose one of its members as a chairman, and the secretary of the board shall keep the minutes of all meetings, such minutes to be read at the next following regular meeting of the board of directors." The powers of the discount committee at the branch are the same as delegated to the committee at the head office, subject to the overriding authority of the head office and branch boards of directors.

Both the head office and Detroit branch have duly appointed discount committees, but they do not hold meetings nor keep We were advised that the situation would be studied with a view of bringing the bank's practices and the bylaws into agreement. It was indicated that the means of accomplishing this end probably will be a revision of the bylaws.

## Kansas City, 1957:

#### MAINTENANCE OF MINUTES

In our review of the minutes of meetings of the board of directors and of the various committees, the following were noted:

Minutes of the meetings of the board of directors held in December 1956, and in January and February 1957, were not recorded In the minutes book. Also, minutes of the meetings since September 22, 1955, were not signed by the chairman (or acting chairman).

Minutes of meetings of the executive committee had not been recorded in the minutes book since the meeting of October 25, 1956.

Minutes of meetings of the discount committee had not been recorded in the minutes book since the meeting of November 13, 1956. Also, minutes of the meetings since July 11, 1956, and minutes of meetings held from March 16 to April 27, from May 9 to 18, and from June 8 to 18, 1958, were not signed by

the secretary pro tempore.

Minutes of the nine meetings held by the building committee in 1956, and of four meetings held in 1957, were not prepared until after the commencement of our cur-

rent examination.

The bylaws of the Reserve bank provide that the board of directors shall appoint a secretary, and specify that the secretary shall keep the minutes of all meetings of the board and of all committees thereof. However, for some years a secretary has not been appointed, and in lieu of having a permanent secretary the board of directors at each meeting has designated a secretary pro tempore.

It appears, therefore, that an officially designated secretary should be appointed by the board of directors, and that he be responsible for the maintenance of the min-

utes on a current basis.

AUDIT DEPARTMENT'S FAILURE TO ABIDE BY REC-OMMENDATIONS OF CONFERENCE OF GENERAL AUDITORS

The banks failed to adopt practices, particularly with respect to frequency of audits, as recommended by the Conference of General Auditors. At the Minneapolis bank, it was a longstanding practice to reconcile member bank reserve accounts, nonmember bank clearing accounts, and relating deferred availability accounts only three times in each calendar year, although a minimum frequency of 11 of such reconciliations is recommended by the Conference of General Auditors.

Example:

Minneapolis, 1957:

It has been a long standing practice, approved by the Audit Committee of the Board of Directors, to reconcile member bank reserve accounts, nonmember bank clearing accounts, and related deferred availability accounts only three times in each calendar year. A minimum frequency of 11 such reconciliations annually is recommended by the Conference of General Auditors.

A special investigation was undertaken by the Audit Department during the period between February 21 and May 3, 1956, as the result of frequent small shortgages in incoming coin shipments from a local member From investigation, which was conducted in colloboration with the auditor of the bank concerned, it was determined that the shortages occurred after the coin had left the member bank and before it was delivered to the Reserve bank, and that no employee of the Reserve bank was involved.

#### FAULTY ACCOUNTABILITY FOR UNISSUED U.S. GOVERNMENT SECURITIES

The reports revealed errors in the accountability to the Treasury Department by the Federal Reserve banks and branches for unissued U.S. Government securities.

An instance of incorrect accountability was an item of \$773,000 more than the total shown by the control records of the Atlanta bank because of the failure of the Jacksonville branch through a procedural error to include in its accountability certain holdings of matured Treasury bills.

In the Chicago bank its accountability to the Treasury Department for unissued U.S. Government securities at the head office and the Detroit branch totaled \$14,308,288,035. The correct amount as determined by the verification of the auditors was \$14,311,170,660. The difference of \$2,882,625 consisted of \$2,752,000 in savings bonds that were shipped directly to an issuing agent by the Treasury Department and not entered into the records of the head office and \$132,625 representing savings bonds stubs that should have been included in the accountability figures of the Detroit branch as unclassified sales. Five differences in the accounts of the issuing agents at the head office remained unadjusted at the close of the examination.

Examples: Chicago, 1957:

#### Reconciliation

Add:

Head office: Accountability for savings bonds shipped Treasury Department direct to issuing agent-not reported \_\_\_ \_ \$2,752,000

Detroit branch: Savings bond stubs forming part of total accountability for unissued U.S. Government securitiesnot reported\_\_\_\_\_

Atlanta, 1957:

The accountability of the Reserve bank to the Treasury Department for unissued U.S. Government securities at the head office and branches totaled \$3,255,157,150. This amount is \$773,000 more than the total shown by the control records of the bank because of the failure of the Jacksonville branch, through a procedural error, to include in its accountability certain holdings of matured Treasury bills. UNNECESSARILY LARGE STOCKS OF SAVINGS BONDS

At the Minneapolis bank it was reported that the inventories of savings bonds in the hands of issuing agents were unusually high. Many had stocks in excess of 9 months and 55 agents held more than a 1-year supply. It was recommended by the auditors that a regular program for analysis of consignments accounts be instituted.

MEMBER BANK EXAMINATIONS DO NOT CONFORM WITH POLICIES

The Reserve banks make exceptions to their policies with respect to member bank examinations in; first, not examining every bank each year; second, not having joint examinations with State examiners; third, not examining branches simultaneously with the head office of a bank; and in some cases, not examining the branches at all, but only reviewing the findings of the State examiners; fourth, not examining trust departments simultaneously with com-mercial departments; and, fifth, not meeting their own standards of completeness of examinations.

The Board of Governors' memorandum states that a large majority of the banks not examined in a specific calendar year were examined during the latter part of the previous year, and as a general rule, during the early months of the following year. However, the trust department of the X bank was not examined during 1956 and the examination of this department did not take place until June 21, 1957, indicating at least 18 months between examinations. The reason given for this time lapse in examination was the lack of sufficient man-

Although it is the stated policy of the Federal Reserve banks to examine the trust departments concurrently with the commercial departments of member banks, the Richmond Bank in 1956 made an exception to its policy at the request of members bank itself and examined these departments at different times. With-out any further explanation, it seems unjustified to schedule bank examinations which are made for the purpose of enforcing Government regulations at the convenience of the banks to be examined

#### Examples:

New York, 1957:

All domestic branches are examined simultaneously with the main offices. In the examination of the larger branch banking organizations, the Reserve bank usually assigns examiners or senior assistant examiners to the more important branches and reviews the findings of the State examiners with respect to the other branches. With these exceptions, the Reserve bank is represented at all offices of the bank under examination.

#### Chicago, 1957:

132, 625

One bank, \* \* \*, was not examined in 1956 because it is too large for the Reserve bank to examine independently and the State authority was unable to join in its examination because of a shortage of man-

Present indications are that three State member banks in Indiana will not be examined by the Reserve bank in 1957. Three banks in the problem category have been examined twice in the current year.

Examinations of commercial departments are generally conducted jointly with the respective State supervisory authorities of the five States in the district. In 1956, however, the Reserve bank made independent examinations of 19 banks-16 in Illinois, 1 in Indiana, and 2 in Wisconsin-because the State authorities were handicapped by a shortage of personnel and were unable to join in the examinations.

The one holding company affiliate in the district is examined trienially, the most recent examination being in 1955. Four of the six companies coming under the Bank Holding Company Act of 1956 were investigated by the Reserve bank in the current year. The preliminary reports received from the two uninvestigated companies contained sufficient information, obviating any necessity for an on-the-spot investigation. Annual reports submitted by all holding companies are analyzed and summary reviews are forwarded to the Board of Governors.

#### LACK OF DEPARTMENTAL CONTROLS

In the operations of the Federal Reserve banks there are frequent examples of lack of adequate controls in the handling of currencies, securities, checks, and so forth, and of exceptions to the internal audits.

For instance, at the Federal Reserve bank in New York the receiving teller in the cash department did not make an immediate strapcount of currency in the denominations of \$20 or less with respect to over-the-counter deposits. Such a strapcount is deferred until the currency is later given to a currency counter for processing with various time elapsing up to as long as several weeks. In the interests of more effective internal control, the auditors recommended that all currency received should be strapcounted before it is released to the receiving teller's custody and that this verification should be accomplished by one person with another person as witness and that it should be done promptly after receipt.

There were only two audits of the check collection department in Chicago instead of three as recommended by the conference of auditors.

In a test review of the authorization on which the Reserve bank acted in making releases from custody, it was noted that in two instances securities held for the account of member banks were released on the authorization bearing the signature of only one officer, although the member banks had instructed that release be made on the authorization signed by two officers.

At the Helena branch the auditors found that the handling of cash did not provide for the necessary security. They recommended that shipments of money should be handled by two employees; that there be duplicate reports of differences on incoming shipments; that officers participate in all opening and closing of the vaults and that shields be placed over all combinations of vaults.

The aduditors observed an unwarranted delay of at least one day in the receipt by the New Orleans branch of remittances from a member bank for cash letters sent to it. The amounts involved are sizable. For example, the member banks remittances of January 3 and 4 1957, covered cash letters of \$564,233.76 and \$283,378.01, respectively.

New York, 1957:

The above figures are the balances as shown on the Reserve bank's books. The amount stated for transit items are \$1.432,452.23 less than the correct totals, the due-from-Buffalo-branch account having been understated on the head office books as the result of a duplication of entries.

New York, 1957:

INTERNAL CONTROLS

In the interest of more effective internal controls in the Collection Department, it was recommended that a plan of rotation be instituted whereby key personnel in this function (Collection Department), without advance notice, will be temporarlly replaced at least once each year for a continuous period of adequate duration by other employees engaged in unrelated activities; also, that there be another such period of temporary replacement in each instance in which the employee is not absent for vacation for a continuous period of at least 2 weeks.

Chicago, 1957: Petty cash funds, \$10,000.

San Francisco—Salt Lake City branch—1957:

#### TRANSIT DEPARTMENT

In our review of the difference account, it was noted that many of the differences were the result of the failure of the Transit Department to balance the aggregate total of outgoing cash letters and clearinghouse items against the aggregate credits for the cash items involved. A substantial number of the differences were of large amounts, and in many cases the appropriate adjustments were not made until the errors were reported by the drawee banks.

Past due items: At the Chicago and New York banks a review of the procedures revealed that in numerous instances commercial items (notes, drafts, etc.) had been left outstanding with collecting agents in accordance with the endorsers request or approval for extended periods and in some cases for several months after their due date. The examiners recommended the adoption of a policy under which all past due items would be recalled after a reasonable time and returned to the endorsers. It was also suggested that periodic reports be submitted by the department to the officer in charge concerning all items outstanding after a reasonable time after their due date.

#### DELAYS IN RETURNING UNPAID CHECKS

The Federal Reserve banks have become involved in suits where the Federal Reserve bank's prior endorser refused to accept return of checks to the drawee bank on the ground that the return had been unduly delayed. In one suit a check for \$2.875.52 was involved and the district court ruled in favor of the plaintiff.

Example: Boston, 1957:

### ACCOUNTS OF MEMBER BANKS

As shown in the schedule section of this report, there was one unadjusted exception of old dating, in the amount of \$12,006.93, on the reconcilement returned by the \* Bank, \* \* \*, Massachusetts. This pertains to a charge by the Reserve bank on Nowember 29, 1956, for three checks received from the \* \* \* Bank for collection and returned to it by the Reserve bank upon refusal of the drawee bank to pay the checks, which had been drawn against uncollected funds. The charge was not accepted by the member bank on the grounds that there had been an undue delay by the Reserve bank in presenting the checks to the drawee bank for payment. It appears that the outcome of this matter is contingent upon the settlement the \* \* \* Bank may be able to effect with its depositor.

FAULTY ACCOUNTABILITY FOR COLLATERAL AND CUSTODIES

There are instances throughout the system of faulty accountability for collateral and custodies. As examples, the following items required reconciliation at the Atlanta bank and its branches:

First. Jacksonville branch: Fiscal agency securities forming a part of the total accountability not reported, \$773,000.

Second. New Orleans branch: Securities held by other agency in own district as collateral for discounts and advances not reported, \$15.000.

Third. Head office: Duplication in reporting certain collateral for Treasury tax and loan accounts, \$300,000.

Fourth. Jacksonville branch: Overstatement of collateral for Treasury tax and loan accounts—withdrawal functioned by the head office on December 21, 1956, but corresponding entry not made in branch's records, \$250,000.

Fifth. New Orleans branch: Overstatement of new silver certificates held as special currency reserve for U.S.

Treasury, \$8,860,000.

With respect to the last item, on October 15, 1956, the New Orleans branch commenced a series of weekly withdrawals of new silver certificates of \$1 denominations from the special currency reserve held for the Treasury of the United States. This program was at the request of and under a specific authorization of the Treasury. Such withdrawals were to constitute issuances to the Reserve bank for current use in lieu of regular weekly shipments of currency from Washington. The withdrawals made by the branch to the date of examination totaled \$8,860,000, but the relevant custody control account was not correspondingly adjusted and showed at examination date a holding of \$21,200,-000 instead of \$12,340,000. This error could hardly be considered "exceedingly small,"

Collateral deficiencies were allowed to extend over the maximum 10-day period through inadvertence, due to delay by the Minneapolis bank in discovering these deficiencies.

In the Cleveland district, 19 banks at the time of the audit had deficiencies in collateral to secure Treasury tax and loan accounts in the amount of \$1,294,245.57.

Two member banks in the Jackson-ville branch had deficiencies in collateral which existed considerably longer than the 10-day period allowed by the Treasury Department regulations. Both cases involved collateral held by New York correspondents of the depositary banks subject to the order of the branch. The auditors felt that the time lapse for collecting the deficiency could have been shortened through more diligent followup by the fiscal agency department.

Another example of deficiencies in reserves and in collateral held to secure Treasury tax and loan accounts was the account of the X bank, which had a deposit balance of \$77.8 million with a deficiency of \$3.2 million in reserves.

"MYSTERIOUS DISAPPEARANCE" OF CASH AND SECURITIES

Audit reports show what are described as "mysterious disappearances" of cash, securities, and so forth. This is a term which the banks use to describe all shortages, the origin of which their

investigations do not reveal. For instance, at the Jacksonville branch there was a disappearance of \$100 from a strap of \$20 bills included in a shipment sent to the Birmingham branch and thence to the X bank; "mysterious" disappearance of \$240 from a shipment of unfit currency to the U.S Treasury; disappearance of \$200 in coins included in shipment forwarded by registered mail by the Jacksonville bank to a member bank; "mysterious" disappearance of two coupons from bonds held as Treasury tax and loan collateral for a member bank at the head office.

An investigation of the mysterious disappearance at Charlotte branch of \$100,000 in U.S. Treasury certificates revealed only that it was thought by all parties to the transaction that the certificates had not been removed from the envelope after delivery and that it was destroyed with trash burned up by the member bank.

Investigations between February 21 and May 3 of frequent shortages in incoming coin shipments from local banks to the Minneapolis bank determined that shortages were incurred after coins left member banks and before delivery to the Reserve tank. There was no satisfactory explanation made of the losses nor any indication that the situation had been resolved for future protection.

At the Bostop bank because of assorters' failure to inspect the totalizer meter on the currency sorting machine after processing the contents of each strap it was impossible to determine in which strap and in which deposit of 15 a shortage of \$500 occurred. This shortage was reported as a mysterious disappearance. A thousand-dollar shortage in a deposit, reported by receiving teller, also was classified as mysterious. The investigation was unable to pin down the exact place of disappearance and it was suggested that the deposit "may have been tampered with" while in transit and possibly while in possession of the X Service.

Richmond, 1957: We reviewed the circumstances regarding the mysterious disappearance of a \$100,000 U.S. Treasury 234 percent certificate of in-debtedness, series B-1057, tax anticipation series, dated August 15, 1956, due March 22, 1887. The certificate has been allotted on a direct subscription to the which requested that it be delivered to the Co. N.C., for safekeeping. According to the cording to the records of the branch, the certincate was one of seven lots of like securities, in the aggregate amount of \$885,000, to which were attached receipts Nos. 36 to 42, in-gust 16, 1958, and obtained a signed receipt for the total amount, but the consignee bank admits it did not open the package and verity the contents at the time of delivery. When the package was later opened, it reportedly contained only six lots of securities, totaling \$785,000 to which were attached recelpts Nos. 36 to 41. These receipts were duly signed on August 16, 1956, and mailed to the control of the cont mailed to the Charlotte branch. A clerk at the branch then or later noted that receipt No. 42, covering the missing certificate, had not been received but an inquiry was not - Co. This failure to

promptly alert the consignee bank placed a measure of responsibility on the branch because the consignee bank was not enabled to make a search through its waste paper (which is burned after 3 days) nor to institute other investigative measures that might have been effective if started promptly.

The Reserve bank has made inquiries of Treasury Department officials concerning replacement of the certificate. The Treasury is reluctant to take such action prior to the maturity of the certificate on March 22, 1957. The — Co, has stated that it would join with the Reserve bank, together with their respective insurers, in an agreement of indemnity if the Treasury Department will issue a replacement certificate.

Boston, 1957:

Two special investigations were made by the auditing department in the interval between examinations, one in November 1956 and the other in March 1957; both were in connection with shortages in incoming deposits of cash, reported by the currency and coin department.

The first of these investigations involved a shortage of \$500. Because of the assorter's faiure to inspect the totalizer meter on the currency sorting machine after processing the contents of each strap, it was impossible to determine in which strap and in which deposit, of 15 different deposits, the shortage occurred. All of the member banks concerned were contacted in an effort to ascertain whether any of them had an offsetting overage, and each gave a negative report. Following this, the shortage was classified as a mysterious disappearance, a claim was filed with the Reserve bank's insurers, and the latter reimbursed the bank for the full amount of the loss.

The other investigation pertained to a shortage of \$1,000, reported by a receiving The investigation disclosed that the deposit in which the shortage was found may have been tampered with while in transit to the Reserve bank, and possibly while it was in the possession of the armored car serv-ice that transported the deposit to the post office, for the depositing member bank. latter's insurer reimbursed it for the full amount of the shortage.

#### VIOLATIONS OF THE BANKING LAWS

There are several examples in the reports where employees have violated the banking laws. In one bank the man-- section had been using ager of the bank personnel and equipment for carrying on an outside business for several

A coin assorter at another bank was convicted of embezzlement of coins from incoming shipments.

#### BANK LIQUIDATION RESULTING FROM DEFLATION

One State member bank was liquidated by the bank commissioner of Texas because of insolvency resulting from defalcation. As a condition of membership in the Federal Reserve System a bank is subject to examinations by the Federal Reserve. These examinations are for the protection of the public. The discovery of defalcation in the State bank apparently did not originate with the Federal Reserve examiners but rather with the bank commissioner of Texas.

INCREASES IN DISCOUNTS AND ADVANCES AND INAPPROPRIATE USE OF FEDERAL RESERVE

The 1957 audit reports indicate that there has been extensive increased use of discounts and advances and continued use of Federal Reserve bank credit by certain member banks. In some cases, this borrowing, in effect, amounts to a continuous credit rather than for the purpose of temporary accommodations to the banks. The follow-up by the Federal Reserve banks to eliminate the continuous borrowing appears to be a haphazard approach to the banks which results in promises by them to improve the holdings in their portfolios which create their illiquidity and result in the need for such borrowing. For example, one bank promised that it would make no further additions to its holdings of Government bonds while showing considerable reluctance to dispose of present holdings at a loss.

Two banks in the Dallas district continued consistent borrowing in 1956-57 although this situation had been reported at the previous examination. One of these banks had borrowed in 43 computation periods out of 48. Although discussions had taken place with these banks, it was reported that "no discernible changes in their borrowing patterns" had taken place. Extensive use of discount facilities was attributed to heavy loan demands, declining or stationery deposits, and a reluctance to dispose of investments, particularly holdings of Government securities, at a loss.

In the Cleveland district one bank ascribed its continuance of borrowing to strong demands for loans combined with its holdings of long-term Government and municipal bonds on which it was reluctant to take a loss. It was reported that the bank is making an effort to adjust its assets' position, having sold a sizable amount of mortgage loans in May and confining its additional lending to established customers.

The auditors noted that a national bank in the Memphis branch area had borrowed almost continuously during the last half of 1956 and in February of 1957. It appeared that this bank was borrowing for purposes other than those considered appropriate uses for Federal Reserve credit.

The Federal Reserve Act clearly requires that the Federal Reserve banks shall give consideration to "whether undue use is being made of bank credit for the speculative carrying of or trading in securities, real estate or commodities,' and shall use this information "in determining whether to grant or refuse advances, rediscounts or other credit accommodations." Whenever, in the judgment of the Board of Governors, any member bank is making undue use of bank credit, the bank may suspend such banks from the use of credit facilities of the Federal Reserve System. The audit reports show numerous instances where the banks consider that Federal Reserve credit is being inappropriately used and yet there is no evidence that the Board of Governors has discontinued granting such credit. As the examples show, some of the banks have been speculating in Government bonds and then have gone to the Federal Reserve banks to get loans.

Examples:

Cleveland-Pittsburgh branch-1957: The \_\_\_\_ Bank has been a consistent borrower since midyear. From June 21 to September 29, or a total of 101 consecutive days in 15 reserve computation periods, it was indebted to the branch in amounts ranging from \$5 million to a high of \$100 million. The average daily borrowing for this bank was \$17 million. This bank and the three country banks had been frequent borrowers in 1956, also.

#### Philadelphia, 1957:

The Reserve bank has been following the practice of contacting country banks in regard to their borrowing programs after they have been borrowing continuously for 90 days. Recently, this policy was revised and now provides that the member bank will be contacted when it has borrowed continu-ously for 60 days. The Philadelphia banks generally borrow on 1-day notes. On occaslon, the Reserve bank has held group meetings with representatives of these banks at which the subject of continuous borrowing was discussed, with emphasis directed to consecutive reserve computation periods rather than consecutive days.

Several of the banks have adjusted their asset position in order to enable them to operate on their own resources during periods not subject to seasonal or emergency stresses. However, the Reserve bank recog-nizes that the necessary adjustments by some banks must be gradual.

### Chicago-Detroit branch-1957:

There were three banks which made consistent use of the Reserve banks discount facilities during the current year. The branch has had discussions with these banks concerning their borrowing programs. They each indicated an intention of reducing the frequency of their borrowings from the Reserve bank, but up to date of examination there had been no appreciable change in their borrowing patterns.

#### Chicago, 1957:

It is the Reserve bank's policy to keep the member banks that use its discount window informed as to the appropriate purposes of Federal Reserve credit. In the course of our review of member bank borrowing during the period between examinations, we noted that the Reserve banks held discusisons or exchanged correspondence with a number of banks whose borrowing patterns tended to become continuous. In most instances, the banks took themselves out of the category of steady borrowers. However, to date of examination, there had not been any appreclable change in the borrowing patterns of the banks listed in the following tabulation.

The steady borrowings or --, Chicago. is a continuation of the pattern it followed during 1955 and 1956. In 1955, it borrowed in 48 weekly computation periods, and in 1956, in 49 such periods. Its average daily borrowings amounted to \$31 million in 1955, \$53 million in 1956, and \$59 million in the current year. An analysis by the Reserve bank indicates that the reason for the 's prolonged borrowing is the continued expansion of its loans without a compensating increase in deposits or reduction in its security investments.

#### Dallas, 1957:

The consistent borrowing by both the - Bank is a continuation and of the situation that existed at our last examination. The Reserve bank has had periodic discussions with each of these banks concerning the nature of their borrowings but to date there has been no discernible change in their borrowing patterns.

#### Dallas-Houston branch-1957:

In our review of member bank borrowing from the branch, it was noted that in the current year the -- Bank, Houston, Tex., was indebted in 38 of the 48 reserve computation periods for a total of 168 days. It was stated that this bank's borrowings from the Reserve Bank were attributed to its re-luctance to sell Government securities at a

#### Richmond, 1957:

One bank had borrowed for 295 consecutive days and during 121 days the borrowing was greater than the bank's combined capital and surplus. The Reserve Bank advised that as a result of a change in the member bank's management, the bank's investment policy would be reaffirmed and a more satisfactory loan program instituted.

#### Richmond, 1957:

Out of 24 computation periods, one bank borrowed in 18, for 256 days, another bank borrowed for 17 periods for 232 days.

Each of the banks experienced heavy loan demands in the latter part of the year, and adverse trend in deposits which the State Treasurer of North Carolina began investing State funds in Treasury bills rather than depositing them in interest-bearing accounts with the bank.

#### LACK OF SECURITY IN CURRENCY VERIFICATION AND DESTRUCTION

The auditors' comments on currency verification and destruction follow very much the patterns of the previous reports. The reports comment on the lack of dual control in handling the currency; incomplete inspection of bundles; inadequate destruction equipment; failures in destroying currencies; lack of determination that the standard of fitness before destruction conforms to that prescribed by the Treasury Department; combining of cash and destruction functions in same area: violations of Treasury regulations; and inadequate tests for accuracy and integrity of the currency verification. These comments apply throughout the System.

Although the subject had been commented upon in a previous audit report, the Los Angeles branch continued to have the verification process performed in the utility cage in the cash department. The auditors believed that this operation should be performed in a properly protected area physically located outside the cash department, in view of the provision in the Treasury Department regulations that:

The verification and destruction of unfit U.S. paper currency at each Federal Reserve bank and branch shall be a fiscal agency operation and shall be performed in a cur-rency verification unit which should be separate and apart from other cash operations of such Federal Reserve banks and branches.

In the review of the operations at the Oklahoma City branch incident to the preparation of unfit U.S. paper currency for shipment to the head office, it was observed that the inspection of such currency for proper cancellation was made by one of the tellers engaged in the cancellation process. This practice does not conform to the provisions of paragraph 5f of the applicable Treasury Department regulations which directs that such examination "should be performed by an employee of the cash division who did not participate in the cancellation of the currency."

At the Philadelphia bank, the auditors found that procedures in the currency destruction process did not conform to the principles of dual control; that there was no verification of the contents of some bundles before destruction: that

the hinges on the locks of the firebox and ashpit access doors could be opened without disturbing the locks; and that it was a common experience for the furnace-feeding mechanism to fail so that unburned bills were found in the mecha-

The Federal Reserve banks destroy annually millions of dollars in U.S. currency. While the Treasury examiners make an annual visit to each of the Federal Reserve banks, in the interim between these visits the Federal Reserve banks are given a free hand in destroy ing U.S. Government money, The Boards' examiners comment year after year on the failings of the banks to verify this money before destruction and for their failure to conform to Treasury Department regulations in handling this money. It is frequently noted that the Federal Reserve banks destroy the currency without even determining whether the currency fitness was such that it should be destroyed. We have laws in this country which prevent a citizen from willfully putting a match to the coin of the realm but the Federal Reserve banks have been permitted to destroy money without even examining its condition.

#### Examples:

Philadelphia, 1957:

We reviewed the operations and observed the procedures followed, and have the fol-lowing comments with respect to certain of the procedures the procedures and/or conditions which came to our attention.

1. Upon receipt of the canceled currency in the Currency Vertification Unit, only one strap and bundle count was made—this by all the personner. all the personnel of the Unit, each accounting The section ing for a portion of the total. head then recapitulated the individual totals and signed the receipt given to the Cash Department. In our opinion, this procedure does not contain the cash of t does not conform to the principle of dust control. An effective dual control would require that the section head and the general service clerk each make an independent strap and bundle count of the entire lot when received in the Unit.

2. It was noted that in the handling of \$1 bills, the Unit did not employ the practice of "fanning" the burners the of "fanning" the bundles of currency not in cluded in the percentage count. Hence cluded in the percentage count. Hence there was no verification of the contents of the bundles.

3. The firebox and ashpit access door were each secured by one dual lock at the closure but no provision had been made to prevent the possibility. prevent the possibility of the doors being opened at the hinge end without disturbing the locks.

4. Upon inspection of the furnace feeding mechanism, 18 unburned bills were found in the trap and 20 bills in the belt feed mechanism. This is This is a common occurrence, in view of which the belt and trap are in spected weekly by the section head and the designated witness.

We reviewed the operations and observed the procedures followed, with particular reference to security features, and in connection therewith we noted the following matters;

1. The main door to the furnace was not adequately secured. It was recommended that steps be taken to secure the door in more satisfactory.

2. While the currency was being placed the the incinerator and before the locks on the door were sourced. door were secured, access to the area around the incinerator the incinerator was not sufficiently

stricted. It was recommended that access to the incinerator room be adequately restricted, at least until all currency to burned has been placed in the incinerator and the locks secured.

## Dallas-San Antonio branch-1957:

We reviewed the operations and observed the procedures followed, and noted that in the testing of the accuracy and integrity of the currency verifiers, only packages con-taining known overages or shortages of amounts are used.

### San Francisco—Los Angeles branch— 1957:

In our review of the operations and procedures, we again noted, as at last examination, that the verification process was being performed in a utility cage in the cash department. This operation, we believe, should be performed in an appro-priately protected area physically located outside the cash department, in view of the following provision in the Trensury Department regulations: "The verification and destruction of unfit United States paper currency at each Federal Reserve bank and branch shall be a fiscal agency operation and shall be performed in a currency verification unit which shall be separate and apart from other cash operations of such Federal Reserve banks and branches."

## Kansas City, 1957:

- 1. Dual control of the currency was not being maintained at all times in the money department from the time of its cancellation to the time of its delivery to the currency redemption unit.
- 2. Upon receipt of the canceled currency in the currency redemption unit, a bundle count was made by the receivers but only one strap count was made—this by the three nembers of the unit participating in the operation operation at the time, each accounting for a Portion of the total. In our opinion, this procedure does not conform to the principle of dual control. An effective dual control would be receivers would require that each of the receivers make an independent strap count of the entire lot when received in the unit.
- 3. The portion of the \$1 bills to be verified is selected by the chief of the unit but, conregistered by the chief of the unit but tary to instructions, the portion not to be verified is permitted to remain accessible to the verifiers, thus making it possible for them to make substitutions.
- 4. Some relaxation in the maintenance of dual control during the verification proc-ess also was noted. At times, the chief of unit unit removed the currency not to be verified from one location to another while the verifiers were occupied in the verification process and could not appropriately witness such transfers.

## Kansas City—Oklahoma City branch— 1957:

In our review of the operations incident to to the preparation of unfit U.S. paper currency for shipment to the head office, it was observed that the inspection of such currence that the inspection of such currence rency, for proper cancellation, was made one of the tellers engaged in the cancellation process. This practice does not conform to the provisions of paragraph 5(f) of the applicable Treasury Department regulations, which directs that such examination "shall be performed by an employee of the cash division who did not participate in the cancellation of the currency."

## Atlanta, 1957:

1. It was noted that in the handling of \$1 bills, the unit did not employ the practice of "fanning" the bundles of currency not included in the percentage count. Hence, there was no verification of the contents of the bundles or determination that the standard of fitness of the currency conformed to that prescribed by the Treasury Department.

2. The startlsor, who is one of the joint participants in preparing test errors for insertion in the packages of currency to be verified, and in supervising the incineration process, also was assisting in the actual verification of canceled currency at times of heavy volume. We believe that the security of this operation is weakened when the supervisor also participates in the verification process.

#### LOSSES AND DISCREPANCIES

There continued to be disappearances and shortages of money in the cash departments, the check departments. transit departments and the Government check departments. The banks usually account for these losses by subtracting the credits from the debits which are set out separately in the report before arriving at the net loss. In the 1957 report of the New York bank, however, the difference account shows only the net figures. This means that neither the Board of Governors nor the Congress can determine what the actual losses are and whether further safeguards should be instituted or investigations should be undertaken.

At the Salt Lake City branch the auditor noted that many of the differences were the result of the failures of the transit department to balance the aggrerate total of outgoing cash letters and clearinghouse items against the aggregate credits for the cash items involved. A substantial number of the differences were of large amounts and in many cases appropriate adjustments were not made until the errors were reported by the drawee bank. For the year 1956 the transit department had losses of \$3,-444.57 and had gains of \$1,996.82. Inasmuch as the Federal Reserve banks in their combined statement of condition, of head office and branches, report only the net figures of profit or loss, it is not a proper reflection of the total amount and number of errors which occur in the difference accounts.

At the Chicago bank in the collection department for the year 1956, there were losses of \$20,856.04 and credits of \$16,-636.78; in the period from January 1, to October 25, 1957, in the check collection department there were losses of \$28,-758.58 and credits of \$40,036.96. In its memorandum, the Board takes the position that in the light of the tremendous volume of checks and securities handled by the Reserve banks, losses and discrepancies have been exceedingly small infrequent. The continuing and amounts of losses in the check department in Chicago indicate, in the least, mismanagement of checks handled. The auditor's report comments that:

In the interest of more effective controls in the collection department, it was recommended that the supervisory employees be temporarily transferred on an unannounced basis to unrelated work outside the department at least once a year for a continuous period of adequate duration and that during such period they be replaced by other employees from outside the department.

#### LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

### GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity pur-chasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Gov-ernment officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a,

#### RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

#### CONGRESSIONAL DIRECTORY

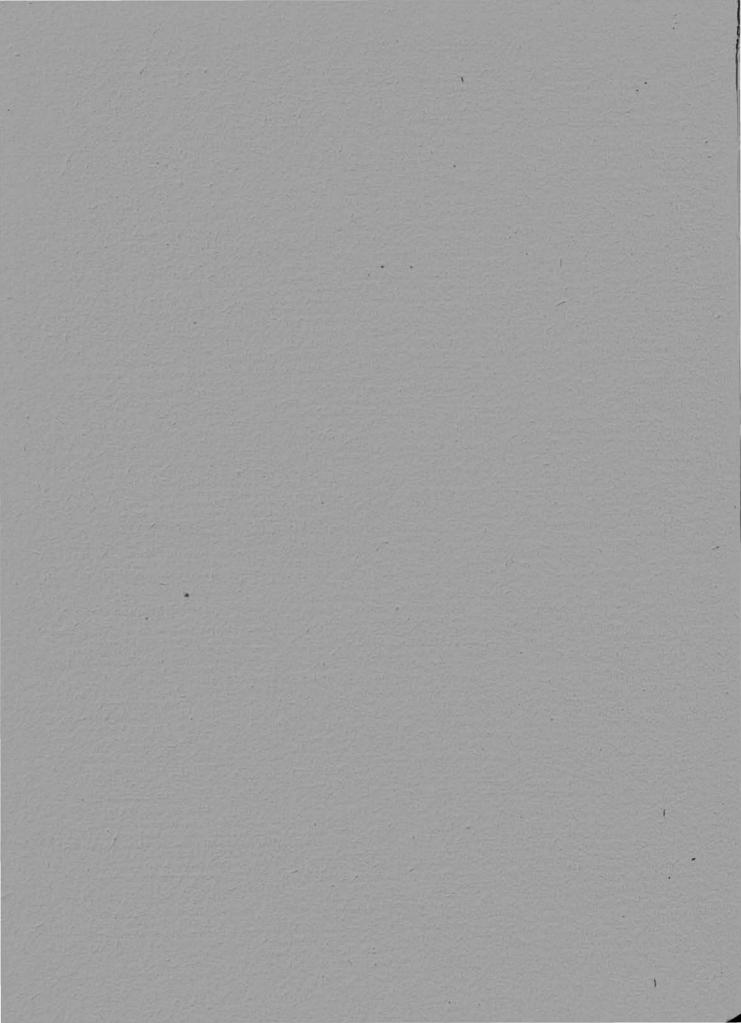

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p.

#### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

#### PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

# Appendix

## Present World Conditions

EXTENSION OF REMARKS

OF

## HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. ENGLE. Mr. President, on his recent trip to California, our colleague, the Senator from Missouri [Mr. Syming-TON] delivered an excellent address before the Commonwealth Club in San Francisco, one of the finest forums on the west coast. I believe that Members of Congress will find of interest these thoughtful remarks on the realities of the present world situation by the junior Senator from Missouri, and I ask unanimous consent to have the text of his address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR STUART SYMINGTON, BE-FORE THE SAN FRANCISCO, CALIF., COMMON-WEALTH CLUB, MAY 29, 1959

Back in the early twenties, in what has sometimes been termed the era of wonder-Coué attracted a vast national following with a simple formula for uncomplicated living

Americans flocked by the hundreds of Americans flocked by the numerous of thousands to the Coué Institute to hear the master intone the magic words: "Day by day in Section to the magic words of the course of day in every way I am getting better and

The Coue system, as it was called, was perfectly suited to the times. It was the period of the convivial Harding and the silent convivial than the sole obslient Coolidge, a period when the sole oblect of national desire was summed up in Garbo's famous proclamation: "I want to

The art of ignoring the obvious was carried in those years to its highest perfec-

Painful truths were smothered in a thick meringue of self-confidence that was really

Then in October 1929 the bubble exploded. The dream vanished.

The painful truths struck home. wonderful nonsense dissolved into the bitterness of the morning after.

The Nation which had allowed itself to be hypnotized by the self-assurance of Emil Coue would have been far wiser to heed the warnings of another Frenchman, Emile Zola, who had written, "If you shut up truth and bury it under the ground, it will but grow and gather to itself such explosive power that the day it bursts through it will blow up

everything in its way."

It is in the spirit of the second Frenchman, and not the first, that I would speak

For a long time I've had the unpleasant feeling that we are living through an echo of the 1920. of the 1920's. In certain respects, we have shown as a nation in the last few years the same disastrous disposition to hide from the

facts, to delude ourselves with slogans and tidy formulas.

Nowhere has this tendency been so strik-ing, and nowhere does it hold such explosive potential in Zola's sense, as in our seem-ingly inexhaustible capacity for underestimating the nature of the current problems incident to our position in the world today.

Seven weeks ago in New Orleans, Allen Dulles, the Chief of the Central Intelligence Agency, made an important address. It was a speech intended to alert the American people to the economic challenge of our possible enemies.

It was closely packed with disturbing information, gleaned from the best and presumably the latest intelligence reports.

It was a chilling report, which ought to have sobered a great number of people.

Tucked away in the text, however, was a warning not to take the claims of the Soviet 7-year plan at face value; and amazingly, press reports of the New Orleans speech featured this lone bit of reassurance and all but ignored the rest.

Readers who had before them both the news report and the complete speech must have had great difficulty in believing one was taken from the other.

Most of us simply do not want to believe that the Russian economic threat is as great as it appears to be-and we are ready to grasp at every little straw which offers us

reassurance. The biggest fool is the fool who fools himself.

Certainly we ought not to accept Soviet statistics at face value.

Certainly we ought to realize that Soviet economic progress begins from a lower absolute base.

Certainly we ought to stipulate that our economy is a good deal more mature than Russia's.

Certainly we ought to concede that in some of the areas where they are going all out to increase production we are producing more now than we can possibly use.

Certainly we ought to admit that the crucial question is not how much of an economic increase, but what kind.

Yet when all of these stipulations and concessions are made, I can derive no comfort from the valid comparisons which re-

One carries in one's mind's eye the picture of the jovial ruthless Nikita Khrushchev warning the West in his blunt and confident fashion: "We declare war upon you in the peaceful field of trade. We declare war. We will win over the United States. The threat to the United States is not the ICBM, but in the field of a peaceful production. We are relentless in this and it will prove the superiority of our system."

The Soviet 7-year plan envisions an annual expansion in production of 8.6 percent, and concedes us an annual increase of only 2.2 percent.

"If this is true," Mr. Dulles told his audience in New Orleans, that is, if we are unable to increase production more than 2.2 percent a year, then—and let me emphasize-"the United States will be virtually committing economic suicide."

The Chinese Reds today, after a decade in power, are well ahead of where the U.S.S.R. stood at a comparable stage in its develop-

This progress has been made possible partly through Soviet aid and partly through one of the most unbellevably inhuman slave

labor programs in modern history.

The tragedy is, we are not now maintaining even the rate which Allen Dulles says is the equivalent of economic suicide.

From 1953 to 1958, U.S. production moved ahead and sideways and backward; and in the overall, achieved a forward progress of only 1.3 percent a year.

This is not just a two-sided competition. The economic transformation now underway on the Chinese mainland is, in its way, even more significant than the performance of the Soviets.

In the 6-year period from 1952 to 1957, the Chinese Communists increased their production of coal at an annual rate of 14 percent; their production of oil, 28 percent; electric power, 21 percent a year; iron, 25 percent a year; steel, 31 percent a year.

The Chinese rate of growth far exceeded that of the Soviet Union in the period of the first 5-year plan, 1928-32.

Soviet steel production in that first 5-year period went up 8 percent a year: The Chinese Communist rate, as I noted a moment ago, was 31 percent a year.

The Chinese have done this by methods that almost defy belief. They have been producing steel in backyard furnaces employing human muscle power in numbers estimated at anywhere from 20 to 50 million persons.

Peiping radio claimed last year that the Chinese Communists have already outstripped Great Britain in the production of pig iron and coal.

Our own intelligence confirms that Sino-Soviet steel production in the recession year of 1958 exceeded that of the United States.

Communist China is challenging Japan for the economic leadership of Asia. it is clear the Sino-Soviet empire will be the largest economic power on the Eurasian land mass, exceeding the combined output of Western Europe and Japan.

Let me commend to your attention a study entitled "The Sino-Soviet Economic Offensive in the Less Developed Countries," published by the Department of State in May 1958.

The study is available in condensed form in a pamphlet entitled "The Communist Economic Threat," released this past March.

It shows that since 1954 the countries of the Sino-Soviet bloc have extended some \$2.4 billions in credits and grants to 18 underdeveloped countries.

More than there-quarters of a billion has gone to furnish arms to the Governments of Egypt, Syria, Iraq, Yemen, Indonesia, and Afghanistan.

On the economic side, the Sino-Soviet bloc has devoted itself to penetrating with capital resources and technical personnel the least stable of the uncommitted nations of Asia and the Middle East.

The Soviet Union has loaned \$132 million to India for construction of a giant steel mill at Bhilai in the central part of the country; and other credits for purchase of Soviet goods.

India has received \$304 million in economic aid from the Sino-Soviet bloc during the past 4 years.

Soviet technicians are descending on India in wholesale lots. And many Indians are receiving special training in the U.S.S.R.

The object of these aid programs is somewhat more subtle than the arms deals. The steel mill at Bhilai; for example, is fully under the control of Soviet technicians and engineers. It is, therefore, a demonstration project of Soviet industrial prowess. This is propaganda of achievement, the most convincing kind.

Moreover, it is clear that the Communists hope to infect their temporary charges with Marxist dogma, and then leave them behind as a kind of Trojan horse.

The Russians are also out to crack the

Western trade marts.

Between 1952 and 1956, the Soviet bloc increased its trade with Latin America by 609 percent.

The political usages of trade connections are too complex a matter for treatment here. However, I would like to point out two techniques which the Soviets have used to

great advantage.

In some cases, they have offered to buy goods-Ezyptian cotton, for example-at prices well above the prevailing market.

The result is a diversion of trade leading eventually to the disappearance of the previously existing outlets. This leaves the trading nation at the mercy of the Communists and experience teaches that it is not a very tender mercy.

The Soviet bloc has also utilized its vast and growing economic power to upset normal trade conditions by dumping commodities on the market, thus destroying the price

structure.

This is a powerful weapon, and permits the most persuasive blackmail. We will see a good deal more of it in the years ahead.

The inescapable lesson, it seems to me, of all these statistics and facts is that we cannot afford to drift complacently along, consoling ourselves with ready slogans.

We must make a concerted effort to step up our own rate of growth to 4 or 5 percent

annually.

And I believe this can be done without experiencing ruinous inflation.

The classic definition of inflation is too much money chasing too few goods.

So far, all our efforts at controlling inflation have been directed at limiting the supply of money.

I am not satisfied that budget balancing is the end-all and be-all of sound economic policy. In the face of the Sino-Soviet challenge, it may be a one-way ticket to disaster.

We must either face the facts, or face the music.

But we can't face the facts unless we know the facts. That is why it is so important for the people to have the truth. In this connection let me quote a remark made last month by the president of the American Soclety of Newspaper Editors, who said: "Our gravest danger is that we may learn to think we can reconcile freedom and secrecy-that we can have them both."

Yet, if I am certain of anything at all, I am sure that if we proceed as we are proceeding, toward more and more secrecy, we shall have less and less freedom-and 1 day we shall pass the line that distinguishes free and open government from secret and absolute government.

The strength of a nation depends upon the will of the people, and in our democratic form of government that will can function properly only when the people are informed.

That is why it is so important for the people to know the truth-then they will do whatever is necessary to remain strong and

#### Cancer Research

EXTENSION OF REMARKS OF

## HON, LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. JOHNSON of Texas. Mr. President, in light of the Senate's action last week in regard to cancer research, I believe that an editorial in the June 29 issue of Life is of particular interest.

This editorial pleads eloquently for a speedup in cancer research. That, of course, is the same conclusion reached

by the Senate.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### LET'S SPEED CANCER'S DEFEAT

The men closest to cancer research have now found enough leads to make them think that wholly new means for cancer cure and prevention are possible. They talk of finding a vaccine which may prevent cancer or a chemical which may cure. Since they have already found a number of such things which work on animals-but not on humans-they are tantalized by their progress.

In view of this one might think that a Nation-which proved, with the atomic bomb, that it could solve the supposedly "impossible"-would be stepping up its cancer research on all fronts, especially after the tragic end of John Foster Dulles. Yet the administration, which last year proposed a \$10 million cut in all medical research, this year has proposed another cut in cancer research, to hold it to \$75 million.

By contrast with this sum, we taxpayers

this year are spending \$155 million on agricultural research, in effect putting the health of the barnyard ahead of the conquest of cancer. No comparison with the \$40 billion going into defense to prevent a nuclear war is justified in logic, but the statistical fact that 40 million Americans now living will have cancer, unless it is conquered, does represent a national disaster comparable to the more sudden devastation of a nuclear

Fortunately, the House has already increased the cancer appropriation to \$83 mil-The Senate committee, which now has the bill, is talking of raising it to \$110 million, the minimum which experts regard as indispensable. There are some of the vital

To improve the procedures and methods of the intensive work now going on in chemotherapy. This has already yielded some 20 compounds which temporarily inhibit various forms of cancer, e.g. the lives of leukemic children can now be prolonged for a year or more.

To increase the study of viruses, which are now a chief suspect in cancer. A single virus has already been found which can cause 26 different types of cancer in animals. Since one virus can cause so many, it raises the hope that a single vaccine could prevent them. A Salk-type vaccine has already been found which makes mice immune to a virus causing leukemia.

To broaden the study of hormones, the internal glandular secretions which control growth, reproduction, digestion and the functioning of all the organs. Evidence links steroid hormones with the cause and progress of cancer. "Imitation" hormones may be able to block the harmful effects of real hormones.

To increase the supply of trained researchers, clinics, research centers, new medical school facilities. Experience has proved that where Federal matching funds are offered, private funds will quickly flow to fill the gap.

Something besides increased Federal aid also is needed. At present most medical research is dependent on the voluntary agencies which, month after month, stage a bewildering series of drives, now for heart disease, now for cancer, now for polio, now mental health, cerebral palsy or muscular dystrophy.

There are so many of these drives that the housewives who must do most of the door to-door fund-raising are beginning to revolt and so are the donors themselves. thermore, because so much of the funds raised is spent on fund-raising (in some cases as much as 25 percent or more). on patient care and on administration, a relatively small amount actually goes into the medical research which might render all these other expenditures unnecessary. For example, the National Foundation for in-fantile Paralysis fantile Paralysis, most successful in history spent most of \$500 million on patients, only \$34 million on research. Yet the payoff on the latter will soon save the huge former

All medical research is obviously interrelated (Enders' work on growing polio virus in live tissue led to Saik's polio break through; Saik's technique is being used in cancer). Diseases themselves may be inter-related. There is an obvious need for the many voluntary agencies to pool their drives for a single fund for medical research alone letting other drives, such as the United Fund, provide for patient care, therapy and rehabilitation. The need is not to stifle the American genius for voluntary organization which De Tocqueville celebrated; the real need is to organize it better. The sooner this is done, and the sooner the full need to need to be the sooner the full need to be the sooner the soon tional responsibility for adequate medical research is recognized, the sooner the great breakthroughs may come, in cancer and elsewhere.

## Procurement of Commercial Trucks by the Department of Defense

EXTENSION OF REMARKS OF

## HON. PHILIP A. HART

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. HART. Mr. President, the recent statement by the Department of the Army that it is now attempting to work out for the first time, a method by which contracts for the procurement of commercial trucks could be shared with bidders in a rocks ders in areas of substantial labor surplus could mean a great deal for employment prospects in Michigan.

Information that I have assembled indicates that there are 46 commercial truck assembly plants in the United States. Fifteen of these plants are today in areas of substantial labor surplus, and the firms operating these plants would thus be eligible for preference on any commercial truck contracts designated for labor surplus set-asides. In Michigan there were seven truck assembly plants in 1958 at Flint, Pontiac, Lansing, Dearborn, and Detroit. Five of the seven points where truck assembly was undertaken in Michigan during 1958 are today in areas of more than 12 percent unemployment. These are plants Flint, Pontiac, Detroit, and Dearborn. These are plants at

It is my belief that it will be possible for the Army to work out a method for applying the principle of earmarking 50 percent of the procurement on commercial truck contracts for areas with high unemployment. Certainly this is the type of situation for which the Office of Defense Mobilization issued this Man-Dower Order No. 4 a number of years

As the correspondence indicates, I have been working with the Department of the Army since last March to see if some attempt can be made to achieve a more meaningful application of the labor surplus set-aside program. I am encouraged by the latest advice from the Army that they are presently undertaking to accomplish this on the first fiscal 1960 major commercial truck procurement contract.

For the period of July 1, 1958, to March 31, 1959, the total value of defense contracts going to Michigan firms as a result of the labor surplus set-aside order was only \$1,543,000. This despite a very sizable number of Michigan firms

in areas above 12 percent unemployment. The Army is to be commended for its interest in bringing more defense jobs to States with high unemployment such as Michigan. There may well be reasons why some States are receiving more missile contracts than Michigan, although I certainly do not concede this, but there certainly is every reason why Michigan should today benefit from Federal programs designed to bring defense contracts into areas of high unemployment, when the item being bought by the Department of Defense is commercial

I ask unanimous consent that an exchange of correspondence between my office and the Office of the Chief of Ordhance of the Department of the Army with reference to the application of labor surplus set-asides under defense contracts to the procurement of commercial trucks by the Department of Defense, be

printed in the Appendix of the Record. There being no objection, the letters were ordered to be printed in the Record,

HEADQUARTERS. DEPARTMENT OF THE ARMY, OFFICE OF THE CHIEF OF ORDNANCE. Hon. PHILIP A. HART, Washington, D.C., April 15, 1959. U.S. Senate.

DEAR SENATOR HART: During my discussion with you, Senator McNamara, and Congress-man O'Hara on March 18, 1959, a question Was raised as to whether or not any consideration had been given to a distressed labor set-aside on a recent procurement of commercial trucks from the Ford Motor Co. I wish to advise you that such consideration was given in this case but a set-aside was considered impractical.

As you probably know the set-aside system prescribes the matching of quot ons between the set-aside and non-set-aside portions of a procurement. In procurements of commercial vehicles bids are evaluated by destination on the basis of prices quoted f.o.b. origin plus transportation to each destination. As a result each destination becomes a separate line item which, under the set-aside procedure, would have to undergo the splitting and matching process. In this, case Ford Motor Co. had nine assembly plants to be considered and Chevrolet had three. Additionally, there were approximately 200 different destinations for the vehicles. I think you will appreciate the permutations and combinations possible with 12 points of origin and 200 destinations. A further complicating factor is that neither of these manufacturers continuously assemble all types of trucks at each of their plants.

Taking all these factors into consideration was the determination of the procuring office that a set-aside was impracticable. It is to be noted, however, that although the assembly of these vehicles will not be performed in the Detroit area many of the components will be manufactured there and hence will provide some measure of relief to the distressed labor condition.

I hope this will answer your question. You may be sure that we concern ourselves constantly with the distressed labor situation and consideration is given to set-asides in every possible case.

Sincerely yours.

F. J. McMorrow, Brigadier General, U.S. Army, Assistant Chief of Ordnance.

> U.S. SENATE, Washington, D.C., May 14, 1959.

Brig. Gen. F. J. McMorrow, Assistant Chief of Ordnance, Office of the Chief of Ordnance, Department of the Army, Washington, D.C.

DEAR GENERAL McMorrow: Your letter of April 15, concerning the difficulties sur-rounding the application of a labor surplus set-aside to the procurement of commercial trucks has given me more insight into the problems that you face in this regard. The comments, together with a nonexpert's reading of the many announcements my office has received concerning awards for cars and trucks from the Office of the Chief of Ordnance, indicate to me that it is unreasonable to expect the Department of Defense to apply any set-aside procedures to this type of procurements.

Perhaps it is only accurate to draw this conclusion in those instances where vehicles are to be delivered to several different locations as was the case in the procurement of commercial trucks from the Ford Motor Co. It may be that my general assumption is wrong, but it occurs to me that in the long run I will have a better understanding of the limitations of labor surplus area setaside programs if I can delimit in my own mind the type of procurement activity to which such set-asides actually can be ap-

In addition to your comments on the above questions, I would appreciate your having assembled for me a set of announcements of contract awards for commercial trucks and cars that have been issued by the Office of the Chief of Ordnance during the past 12 months with an indication on each announcement of the firms, other than those awarded the contracts, which had made blds.

Thank you for your continued cooperation and assistance.

Sincerely,

PHILIP A. HART.

HEADQUARTERS. DEPARTMENT OF THE ARMY, OFFICE OF THE CHIEF OF ORDNANCE Washington, D.C., June 12, 1959. Hon. PHILIP A. HART, U.S. Senate.

DEAR SENATOR HART: This is with further reference to your letter of May 14, 1959. to Gen. F. J. McMorrow, concerning the type of procurements to which labor surplus area

set-asides can be applied.

Generally, all procurements over \$25,000 where the total quantity desired is sufficient to permit dividing into two economical production lots (one for the non-set-aside portion and the other for the set-aside portion), are considered suitable for the partial set-aside procedure. However, other factors may be present which might make the set-aside procedure impractical in a specific procurement. Among these factors are rates of delivery, timing of deliveries, multiple destination points, and multiple points from which each of the contractors may ship. In most procurements, these factors present no special problem to the use of the set-aside procedure, or means can be found to overcome any difficulties which arise. In the recent case of the procurement of commercial trucks, the set-aside was impracticable because of the combination of multiple destination points and multiple contractors' points of origin. However, since our discussions with you we have been attempting to develop a method which would permit the use of set-asides in our procurement of commercial vehicles. If we are successful, we shall apply the method on a trial basis to the first large commercial vehicle procurement in fiscal year 1960.

Typical items for which the Ordnance Corps has made surplus labor area setasides are ammunition metal components, rifles, repair parts for weapons, tactical vehicles, fire-control instruments, cleaning

components and antifreeze.

Enclosed as requested is a list of commercial vehicle awards reported by the Ordnance Tank-Automotive Command to the Department of Commerce for synop-sizing this fiscal year, together with the names of the unsuccessful bidders.

For the Chief of Ordnance:

Sincerely yours,

G. C. CARLSON, Brigadier General, P.S. Army, Assistant.

### Conversion of Salt Water to Fresh Water

EXTENSION OF REMARKS

## HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. JOHNSON of Texas. Mr. President, an increasing shortage of watercoupled with mounting industrial and domestic demand—poses a national problem cleaving both State and regional

The problem is under attack on various fronts, ranging from the Federal to the local level.

One phase of the assault on the problem aims at finding an economical method of converting salt or brackish water to fresh water.

An editorial carried June 28, 1959, in the Philadelphia Bulletin discusses this conversion program in the perspective of long-range, national needs. It points out that steady population increase and growing use will make the water situation critical in many places by 1975 or 1980. But the editorial also expresses belief that the near future holds promise of a solution of this grave problem.

Because of the wide interest in this problem, one that touches virtually every phase of our economy, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

WATER, WATER EVERYWHERE AN EARLY LIKELI-HOOD

To people in areas where water is scarce and high priced, it seems odd that Philadelphia should be urging its residents to use more water. But the have-not regions may find themselves in the next 20 or 30 years possessed of supplies as adequate as are now to be found in the Delaware and the Schuylkill.

Arid areas in the Great Plains and the Southwest obtain their hope from five research projects now underway at Federal expense, and scores more privately financed. Three of the Federal plants are experimenting with conversion of sea water; two with brackish water from lakes and wells.

Steady population increase and growing use will make the water situation critical in many places by 1975 or 1980. Conversion methods will be needed by that time. In anticipation of it, Congress has made \$10 million available for the five Federal experi-

Hope for success lies almost entirely in cutting costs. Methods of converting salt to fresh water have been known for centuries. Cost now runs more than \$1 per 1,000 gallons. Engineers think this can be cut to 50 or 60 cents. The average water cost throughout the country is now 35 cents.

What full-scale plants, producing millions of gallons a day, would cost nobody yet knows. Pipeline distribution systems would be an added investment. But there is knowledge of the cost of irrigation systems. The Colorado-Big Thompson job, in full operation within a month, supplies water for 720,000 acres of crops and for 10 communities. Its cost was originally estimated at \$44 million. So far the outlay has been \$160 million.

The \$10 million being spent for the experimental water-conversion plants are but a beginning. With 15 or 20 years to go be-fore the water need becomes critical, scientists have far more time to solve the problems than they had when creation of an atomic bomb was their goal.

That is why arid areas have reason to be hopeful.

Study of Democratic Institutions at Santa Barbara, Calif.

EXTENSION OF REMARKS OF

## HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. ENGLE. Mr. President, I ask unanimous consent that an editorial from the New York Times of June 18,

announcing the move of the Fund for the Republic to California, be printed in the Appendix of the RECORD.

The Fund for the Republic is a nonprofit educational corporation estab-lished to promote the principles of individual liberty expressed in the Declaration of Independence and the Constitution. One aim of the fund-to present reports on the gravest issues facing our country today—is an especially worthwhile one in contributing to congressional understanding of the needs of a free society.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### STUDYING FREEDOM

For the past 2 years the Fund for the Republic has been making a continuous study of what it calls basic issues. This study is directed at clarifying fundamental questions concerning freedom and justice, especially those constitutional questions raised by the emerging power of 20th century institutions. The goal has been to stay within the frame-work of the Founding Fathers in maintaining a free, just and democratic society under contemporary conditions in this country. The study has resulted in a number of important pamphlets and reports on the corporations, labor unions, the common defense, religion, the schools, and the media of mass communications.

Now the fund announces that it is moving its headquarters from New York to Cali-fornia. A center for the Study of Democratic Institutions is being set up at Santa Barbara, hard by the new cultural center established there by the University of California. Two of the major projects of the fund—labor and political parties—already are centered at the university. Robert M. Hutchins, the fund's president, hopes to make the most of the opportunity of working with the faculty members. It is an interesting development for the fund to be closely linked to a campus—a thoughtful atmosphere for the important work that the fund is doing

Mr. ENGLE. Mr. President, it is California's good fortune to be the home of another educational organization which will focus attention to the State's progress in cultural achievements.

Soviet Views of Strauss Defeat

EXTENSION OF REMARKS

#### HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. GOLDWATER. Mr. President, recently during my floor debate with the distinguished senior Senator from Oregon [Mr. Morse]. I mentioned that disturbing news had been coming to me from around the world as to not only the effects of the attacks on Mrs. Clare Boothe Luce, but also the effects of the attacks on Admiral Strauss. Just the other day I received a statement which was read in Russia, published by the Soviet Home Service, which went out over the radio there at 1600 Greenwich mean time on June 20, 1959. In order that my colleagues may see the point to which I was addressing myself-namely. the disturbing use of these attacks by the Communist Party around the world-I ask unanimous consent that the transcription be printed in the Appendix of the RECORD.

There being no objection, the transcription was ordered to be printed in the

RECORD, as follows:

STRAUSS CUSTER DEFEAT FOR EISENHOWER

(Valentin Zorin commentary)

Recently we spoke to our listeners about how U.S. Secretary of Commerce Strauss, in an outburst of zeal and contrary to obvious facts, announced that the U.S. economy was flourishing. Alas, however, this excessive zeal on Strauss' part was not accessed cor rectly. As has become known, in accordance with the decision of the Senate, Straus yesterday was removed from his post. What happened? The fact is, according to the U.S. Constitution, the appointment of Secretary is made by the President of his discretion. But, this appointment has to be confirmed by the Senate.

A few months ago, after the resignation of millionaire Sinclair Weeks as Secretary Commerce, Eisenhower chose as his succession another first sor another financial magnate, Lewis Strauss who then began to fulfill the functions of

Secretary of Commerce.

Strauss is by no means a novice in official Washington. During the last few years he headed the Atomic Energy Commission. the same time, he has also been active in business sphere, being the financial advise of the Rockefeller's and a partner in one of the big Wall Street firms, Kuhn, Loeb, Co. This completely respectable figure, from the point of view of the ruling constant turned out to be appearance. turned out to be unacceptable to the Senate

Opposing the appointment of Straussemocratic Sensitive Democratic Senators said that in his previous Communications ious Government post, Strauss unashamedi utilized his powers for the enrichment of companies in which he himself occupied directing posts. And, insofar as the opposi-tion party, the Democrats, has a majorist in the Senate, the candidature of Strauss failed.

The thunder and lightning which the Sen ators cast at Strauss might seem strange at first sight. Corruption is quite normal for the U.S. Canital, and the the U.S. Capital, and the dark machinations the U.S. Capital, and the dark machinations of many highly placed figures by no means hinders their careers. However, in United States at present a campaign is ginning for the presidential election which will take place next year, and evidently beaders of the Democratic Party have leaders of the Democratic Party have cided to make use of the damaged reputation of Strauss, a Republican, in their own political interests.

It must be added that Strauss has called forth the discontent of those realistically thinking circles which support the widening of U.S.-Saviet trade of U.S.-Soviet trade relations. has tried in every way to throw a of tree into the machinery in the matter of two development of trade between the two countries. But his position in U.S. busines circles is now by no means so popular as it was, let us say, a year or two ago. It is not without reason that yesterday's voting in the U.S. Senate is looked the property of the contract of U.S. Senate is looked upon by U.S. dementators as one of the biggest political feats suffered by Electrical programment feats suffered by Eisenhower's government

A political scandal has broken in Washington: for the first time in the last third of a century, the U.S. Senate has turned of the candidature for the candidature for a ministerial post proposed by the White House says Prayda commenting on the refusal of the U.S. Senste approve the appointment of the U.S. Senste sapprove the u.S. Senste s approve the appointment of Lewis Straus as Secretary of Commerce, a post which has already held for has already held for some time.

The paper recalls that long before the discussion of his candidature in the Capital Lewis Strauss aroused the hatred of all hon-orable Americans. The U.S. public has torn the down and feathers from Strauss, and he has appeared before the country stark naked as a dyed in the wool reactionary and inveterate enemy of peace.

## Tributes to the Late Thomas J. Walsh

EXTENSION OF REMARKS OF

## HON, JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials about the late, great Senator Thomas J. Walsh, of Montana. One is entitled "Anniversary of a Great Montanan Observed," which appeared in the June 17 issue of the Billings Gazette. The other is entitled "Today We Honor Senator Walsh," and appeared in the June 12 issue of the Great Falls Tribune.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Billings (Mont.) Gazette, June 17, 1959]

ANNIVERSARY OF A GREAT MONTANAN OBSERVED A number of relatives and friends gathered at Resurrection Cemetery in Helena last Friday, June 12, to pay tribute to the memory of Thomas J. Walsh on the occasion of the 100th anniversary of the birth of a great Montanan. After having won renown as one of the outstanding attorneys of his State and Nation, T. J. Walsh was elected to the U.S. Senate in 1913, the last person to be chosen to that body by the vote of the legislative assembly from Montana. After that, Senators were elected by direct vote of the people in accordance ance with the 17th amendment to the U.S.

Walsh's election was delayed for 2 years as the result of a deadlock in the 12th legislature. This attempt to select a successor to Senator Thomas H. Carter, another great Montan. Montanan, produced some more of the high doraman, produced some more of the marked the elections of U.S. Senators from Montana. Starting on the lower from Montana. the 10th day of that session, the 28 members of the senate, which then met in what is now the supreme court chamber, filed down to the present senate chamber where the house of representatives then sat and started voting for candidates for the U.S. Senate.

The Democrats had a majority of six on Joint ballot, but among them was a sufficient number of anti-Walsh men who cast their votes for different Democrats, including Senator W. B. George, of Billings, on different ballots, thus producing the deadlock. This continue the producing the deadlock. continued until the 60th, and final day, of the session, when balloting began at noon as usual. as usual and continued with no interrup-tion until about 8 o'clock that evening when Senator Edwards, Republican, of Rosebud, made a motion to adjourn the joint assembly sign made a motion to adjourn the joint assembly sign as it bly sine die. Had this motion carried, as it did initially by one vote, it would have meant that he also had be seen to be a seen to be that no election of a U.S. Senator would be

The Edwards motion would have been lost The Edwards motion would have been lost but for the fact that three Democrats, for reasons which can only be surmised, voted with the Republicans for adjournment which produced a tie. It was naturally assumed the tie would be broken in favor of adjournment by the presiding officer, Readjournment by the presiding officer, Republican Lt. Gov. W. R. Allen. Incidentally. in a later conversation with the writer, Gov ernor Allen, a native Montanan and highly conscientious public official, said, while the vote was being tabulated, he was doing some hard thinking trying to make up his mind whether to declare the motion out of order. He really doubted that the motion was in order but to have so ruled in that crisis would have forever put him in bad with his

The chief clerk of the house, the late Finley McRae, a Democrat, delayed announcing the total, a maneuver inspired by the hope that something might happen to change the result. That did happen when young Ronald Higgins, of Missoula, Republican, rose and changed his vote from "aye" to "no," which kept the session going. During the resulting confusion, Senator Walsh sent down word to the members on the floor who had been voting for him throughout, including the writer, then a senator from Fergus County, releasing them and a hurried conference between leaders of the two Democratic factions led to the election on the next ballot of Judge Henry L. Myers of Hamilton, later a resident of Billings.

Judge Myers had not been considered as a candidate and knew nothing of his election until he went downtown on an errand that evening and a friend told him he had just been elected U.S. Senator. He still thought his friend was spoofing him until he called Helena and had the report con-

That same legislative session enacted a preferential senatorial primary law prepared by Senators McCone, of Dawson, Everett, of Chouteau, and the writer. At the 1912 election, T. J. Walsh won the popular vote and when the 13th session was convened in 1913, he was placed in nomination and rereived the unanimous votes of the members of both houses.

During the 20 years he served in the U.S. Senate, the Montanan won enduring fame as one of the greatest constitutional authorities that ever sat in the body. He was chosen for the Cabinet position of Attorney General by President Franklin D. Roosevelt, but died while en route from Havana with his bride, a Spanish lady, the first Mrs. Walsh having died several years before, only a few days before he was to take office. One who had an opportunity to know Senator Walsh intimately for several years, has often wondered if the troubles President Roosevelt experienced with the U.S. Supreme Court which nullified some of his New Deal laws might not have been avoided had the brilliant Montanan lived to serve as the President's chief legal adviser at the head of the Justice Department.

[From the Great Falls (Mont.) Tribune, June 12, 1959]

TODAY WE HONOR SENATOR WALSH

A great man was born 100 years ago today. When Thomas James Walsh was born June 12, 1859, into a family of modest means in Two Rivers, Wis., few would have dared predict that the boy would become one of America's most distinguished Senators and one of Montana's most illustrious leaders.

Determined to become a lawyer, Walsh refused to permit adverse conditions to prevent him from reaching his goal. A man of high ideals, courage, and integrity, as well as competence, he became one of the most eminent attorneys in the West.

Walsh's sterling qualities also made him a leader in politics. A champion of the people and a true believer in democracy, Walsh was instrumental in helping win progressive reform measures such as the direct primary, the initiative and referendum, and the popular election of U.S. Senators.

Walsh's record in the Senate is a standout.

For example, his foresight made him one of For example, his foresignt made him one of the earliest influential backers of the St. Lawrence Seaway, which recently went into operation. His ability, integrity, courage, and fairness made him a leader in the Democratic Party. When he presided over the Democratic National Convention in 1924, he was introduced as "a real Democrat, and the greatest investigator in the history of the

It was Senator Walsh's brilliant investigation of the Teapot Dome oil scandal that made his name a byword in America. It was his role in that investigation that won him tributes from national leaders for being the first man in history who is worth a billion dollars to his Government in his own time.

Walsh's clear thinking as a member of the Senate Foreign Relations Committee earned him the respect of leaders of foreign nations.

When Montanans speak of great leaders, the name of Thomas J. Walsh is one of the first on their lips. It might be fitting, on this 100th anniversary of his birth, to start the ball rolling to place a statue of Senator Walsh in Montana's remaining niche in Statuary Hall in Washington, D.C. The Tribune, which suggested that editorially last January, thinks no finer selection could

But let's not take as long to get Senator Walsh into Statuary Hall as it did to get Charlie Russell there.

### Share Ownership in America

EXTENSION OF REMARKS OF

## HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. WILEY. Mr. President, we recognize that in our free-enterprise system, investments by our people in businesses and industries represent the lifeblood of the economy.

Over the years, the growth of shareowners in our economic enterprises illustrates not only the improving economic health of individuals; but also an ever-greater confidence in our free-enterprise system.

According to surveys, in 1952, one out of 16 adults owned stocks. In 1959, one out of eight adults owned stocks.

Today, over 12 million Americans own shares in corporations. Fortunately, too, these shareowners in America's future represent a broad cross section of the public, and of educational groups.

Today, our free enterprise systemtogether with our political institutions, philosophy, indeed, our very way of life—are in a battle for survival with communism.

If we are to survive, an even greater participation by the public in our eco-nomic future will be required—just as it will be necessary for more and more individuals to become sensitized to the political and philosophical challenges to our Nation.

However, I believe the growth of share ownership in corporations of this country represents confidence that more and more Americans are willing, and able, to invest in business and industry, and thus strengthen the economy and the fiber of the Nation

Recently, I received from Keith Funston, president of the New York Stock Exchange, a copy of Share Ownership in America.

Believing this picture of the remarkable growth of share ownership will help to provide a better idea of how Americans are investing in-as well as its importance to-our economy, I ask unanimous consent to have excerpts from the publication printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

#### HIGHLIGHTS

Twelve million four hundred ninety thousand Americans own shares in public corporations, nearly double the 1952 total 45 percent above 1956.

One out of eight adults is now a share-

Sixty-eight percent of the shareowners own stock listed on the New York Stock Ex-

The average shareowner has a median household income of \$7,000; comparable fig-

ure for new shareowners is \$6,900. Almost half of all shareowners are in the

\$5,000 to \$10,000 income range.

Median age of new shareowners (since 1956) is 35, compared to 49 for all shareowners.

Women outnumber men as shareowners by a somewhat larger margin than in 1956.

Four million housewives are shareownersthe largest single group of owners.

Adult shareowners are almost equally divided among those who attended college and those who did not.

One out of five shareowners first acquired stock through an employee stock purchase

Holders of shares in investment companies only number 1,235,000-four times the 1956 total.

California-second to New York in total shareowners—showed the greatest gain among the States since 1956. Pennsylvania moved into third place; Illinois dropped from third to fourth.

South Central and South Atlantic regions showed the largest percentage increase in shareowners from 1956 to 1959.

SHAREOWNERSHIP IN UNITED STATES HAS AL-MOST DOUBLED SINCE 1952

The number of individuals owning shares in publicly-held corporations reached 12,-490,000 in early 1959.

This total represents an increase of 45 percent since early 1956, when the stockholder population numbered 8,630,000. The 1959 figure is nearly double the 1952 figure of 6,490,000.

More than two-thirds (8,510,000) of American shareowners hold stocks listed on the New York Stock Exchange. This is almost equal to the total shareowning population in 1956.

Some 2,700,000 own shares traded on other exchanges or over-the-counter-a figure nearly double the 1956 total. An additional 1,235,000 shareowners hold only investment company shares. This is four times the total three years ago.

America's 12,490,000 stockholders are part owners of 5,100 publicly-held companies, which, in early 1959, had 10.2 billion shares of stock outstanding.

On the average, America's shareowners hold 3,5 different stock issues, compared to 4.25 in 1956.

The 1959 Census was concerned exclusively with shareowners of public corporations, but two other types of shareowners should be Shareowners of private corporations—those with less than 300 shareowners or whose shares are not available for purchase by the general public. In 1956-the latest which data are available-1,400,000 individuals owned shares in privately-held companies only;

Indirect shareowners whose savings in life insurance companies, pension funds, mutual savings banks, and other financial institu-tions are invested in part in equity securities. An estimated 110 million Americans are indirect shareowners.

WOMEN INCREASE LEAD OVER MEN SHAREOWNERS

The proportion of women in the Nation's shareowning population increased slightly from 1956 to 1959.

Women now account for 52.5 percent of all adult shareowners, compared to 51.4 percent in 1956. Men comprise 47.5 percent of the total. Three years ago, the proportion was 48.6 percent.

Among new shareowners only, women outnumbered men by an even greater margin, 56.3 to 43.7 percent.

However, the number of shareowners per thousand among men, 114, is virtually the same as it is among women, 115.

For the first time, census data show how shareowners first acquired stock, and these findings indicate that women are playing a more active role in the investment process than had been generally assumed,

Among all women shareowners:

Forty-two percent purchased shares through brokers.

Twenty-five percent acquired stock through companies they work for.

Seventeen percent received their shares through gifts or inheritance.

Sixteen percent acquired their shares through banks or were not classified.

ONE IN EIGHT ADULTS OWNS STOCK; AVERAGE NEW INVESTOR IS AGED 35.

Nowhere is the recent increase in shareownership more clearly illustrated than by these facts:

In 1959, one out of eight adults owns stocks.

In 1956, 1 out of 12 adults owned stocks. In 1952, 1 out of 16 adults owned stocks.

This rapid rise of direct shareownership among the adult population has encompassed all age groups, although the largest gains since 1956 were recorded in the 45 to 54 and the 65 and older age groups. Both showed increases of more than 1 million shareowners.

The smallest net increase, 200,000, took place in the 21 to 34 category. This modest gain occurred because the heavy inflow of new shareowners to this age group was almost completely offset by the number of shareowners who were in their early thirties in 1956 and who moved into the next higher age bracket, 35 to 44 years.

The median age of new shareowners is 35 For the total shareowning population, the median age is 49, compared to 48 in 1956.

Shareownership occurs most often in the 55 to 64 age bracket, with one out of six a shareowner. The 45 to 54 and 65 and older groups, with one out of seven, are next highest.

AVERAGE SHAREOWNER HAS \$7,000 HOUSEHOLD INCOME

The median household income of the Nation's shareowners has risen to \$7,000 from \$6,200 3 years ago. This 12-percent increase is about the same as the estimated rise in the average family income of the entire population.

Almost half of all shareowners are in the \$5,000 to \$10,000 income bracket; and 23 percent have household incomes above \$10,000. a year.

Shareowners with incomes below \$5,000 declined in the 3-year period from 38 percent of the total to 29 percent. One-quarter of this group are retired persons, students, and others who are not employed.

One out of six people with household incomes of \$7,500 or more is a stockholder compared with 1 out of 16 people in the \$5,000 to \$7,500 bracket and 1 out of 25 people under \$5,000.

Among new shareowners since 1956, the median income is \$6,900—only slightly below that of all shareowners. Fifty-five percent have household incomes between \$5,000 and \$10,000, and 20 percent are in the \$10,000and-over category.

Stocks are by no means the only investments held by shareowners, whether they are new shareowners since 1956 or long-time investors. Census findings show that:

Eighty-one percent have life insurance. Eighty percent have savings accounts.

Sixty-eight percent own their own homes. Fifty-nine percent have U.S. Government

Thirty-seven percent have pension plans. No attempt was made to measure the dollar value of stockholdings by various shareowner groups because of the confidential nature of the information and other difficulties involved in obtaining accurate data through survey methods.

SHAREOWNERS EQUALLY DIVIDED AMONG ALL EDUCATIONAL GROUPS

Shareowners are fairly evenly divided among the four major educational groups-However, as in the case of income, shareownership moves up sharply with the amount of formal education.

Almost 4 out of 10 adult Americans who are college graduates own shares in public corporations. This is roughly four times the rate among high school graduates, and eight times the rate. times the ratio among those who did not complete high school.

All told, 51 percent of the adult share owners have had some college training, com

pared to 48 percent in 1956.

Between 1956 and 1959, the largest relative gains were among persons with 1 to 3 years of college (19 to 21 percent) and those with 3 years or less of this of college (19 to 21 percent) and those per 3 years or less of high school (19 to 23 per pho cent). The proportion of shareowners W completed high school but who did not at tend college declined from 33 to 26 percent.

The average (median) shareowner is a high school graduate. His 1956 counterpart had completed 3 years of high school.

MANAGERIAL, PROFESSIONAL GROUPS GAIN; HOUSEWIVES NOW NUMBER 4 MILLION

Two leading occupational groups man agerial and professional—enhanced their relative importance in the total shareown ing population during the past 3 years. Each ing population during the past 3 years. Each showed a gain of nearly 1 million share

A smaller occupational group amons shareowners—operatives and laborers—was the only other category to increase its proportion of the shareowner total—from 2 to 3 percent. 3 percent.

women) are still by far the largest single occupational group among shareowners, just nonemployed as they are the largest group in the country's total adult try's total adult population. Four million shareowners are in this category, a gain of more than 1 million in

The fourth largest occupational group declined from 18 to 15 percent of the total clerical and sales-increased in numbers

Better than one in four adults in the professional or semiprofessional fields is a shareowner, compared to one in six in 1956.

The proportion of product to one in six in and The proportion of proprietors, managers, and officials who are shareowners also increased,

Among nonemployed adult males mainly retired persons—1 in 7 is now a shareowner,

Except for housewives, clerical and sales was the leading occupational group among new shareowners since 1956, accounting for 21 percent of the total.

Seventeen percent of the new shareowners were in professional and semiprofes-sional occupations, and 11 percent were in managerial occupations.

EMPLOYEE STOCK PURCHASE PLANS CONTRIBUTE TO SHAREOWNER GROWTH

Employee stock purchase plans have contributed materially to the increase in share-Ownership. Such plans, in a variety of forms, are available to employees of many publicly owned companies.

The importance of employee stock pur-chase plans is shown by these findings:

More than 2,500,000 shareowners (21 percent of the total) acquired their first shares through company plans.

An even larger proportion of new share-owners since 1956—27 percent—first acquired stock through this method.

An estimated 1,340,000 shareowners are now investing regularly through employee stock purchase plans.

Related census findings show that share-Owners are heavily in favor of owning shares owners are heavily in favor of owning state in the companies they work for. Of the shareowners employed by public corporations, 83 percent—or a total of 2,580,000—are

are stockholders in their own ocmpanies. Nine out of ten shareowners-including housewives and the other millions who do not work for public corporations—believe it is a good thing for employees to own shares in their own companies.

The major reason they cite is that the ownership of stock encourages greater employee incentive and interest in the company's activities.

SHAREOWNERS INCREASE IN LARGE CITIES; RURAL AREAS SHOW DECLINE

Since 1956, the largest increase in shareownership has occurred in the larger cities. Twenty-eight percent of all shareowners now live in cities of 500,000 or more population, compared to 20 percent 3 years ago.

The only other notable gain occurred in cities of 25,000 or 100,000 population, which now account for 19 percent of the total, compared to 14 percent in 1956. This increase was accompanied by a decline from 31 to 29 percent in shareowners residing in cities of 2,500 to 25,000 population, perhaps reflecting the expansion of many smaller communities into medium-sized

A major shift in shareowner population occurred in the rural areas, which decreased substantially both in actual numbers and percent of the totals. In 1956, almost 1.600,000 people in rural areas owned shares; by 1959, the total had dropped to slightly more than 1 million. Thus, rural areas now account for only 8 percent of the total shareautre. shareowner population, compared to 19 percent 3 years ago. The development may re-flect two factors: a decline in the number of farman of farmers who own shares; and a relatively smaller percentage of the total population now living in rural areas.

### SIDELIGHTS

During the past 3 years the geographical center of the shareowner population moved southwest from Kosciusko County (Warsaw). Ind., and is now in Sangamon County

An estimated 1,335,000 shareowners are members of labor unions.

One million two hundred and seventy-five thousand out of 6,347,000 women share-owners are to be outowners are housewives who have jobs out-

An estimated 136,000 members of the armed services own shares in public corpo-

Fifty thousand U.S. citizens living in 33 foreign countries own shares.

Among adult shareowners, women outnumber men in four of the five age groups. The exception is the "65 or over" category.

Excluding holdings in joint accounts and names of brokers and nominees, men hold 2.3 billion shares and women 2 billion.

Bergeley, Hartford, Pasadena, Rochester, St. Petersburg and Wilmington lead all other large cities in the proportion of shareholders to total population. In each of these cities. better than one out of five persons owns

Nearly half the 1,936,000 shareowners in New York State live in New York City.

Foreign shareowners are holders of 606 million shares of stock in public corporations-or 5.9 percent of the total outstand-

### Alaska's Airlines

EXTENSION OF REMARKS

OF

## HON. ERNEST GRUENING

OF ALASKA

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. GRUENING. - Mr. President. Alaskans are the flyingest of all Americans. They fly 30 to 40 times more than other Americans, either measured in passenger miles per capita or flights per capital.

Aviation got its start in Alaska and achieved its relatively greater importance there partly because in the early days of the century, when flying was in its infancy, this new method of transportation appealed to the pioneer spirit of Alaskans, and also because in the absence of highways, which Alaska still lacks lamentably, flying was the only way to get around that vast area.

Most of the intra-Alaskan lines, and two connecting with the States, were started by bush pilots. These intrepid aviators were without benefit of airfields or radio range stations. The Alaskan pilot would merely hold a moistened finger up to the breeze and take off. The only landing fields were small clearings in the wilderness, beaches, sandbars in rivers, lakes, and coastal waterways with pontoon equipment, or in winter on the snow-covered tundra with skis.

Among the bush pilots who have gradually developed fine airlines, through initiative, enterprise, organizing ability, hard work, and vision, is Art Woodley. An excellent article on his career and progress from bush pilot to head of a major airline appeared in the Sunday edition of the New York Times, which tells how Woodley built up his service between Anchorage, Kodiak, Juneau, Ketchikan, and Seattle-Tacoma. He is by no means the only Alaskan bush pilot who, starting from scratch, has thus built up his own airline. Others are the Wien brothers, Sigurd and Noel, Ray Petersen, Merle Smith, the late Haakon Christiansen, Bob Ellis, Bob Reeve, and Sheldon Simmons. Theirs have been stirring adventures culminating in achievement. They have done much to open up and develop Alaska.

I ask unanimous consent that this article on Art Woodley be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

[From the New York Times, June 28, 1959] PERSONALITY: PIONEER ON TOP OF THE WORLD-FORMER BUSH PILOT HEAD OF ALASKA'S NO. 1 AIRLINE

#### (By Robert E. Bedingfield)

Arthur Woodley went to Alaska in the summer of 1928 to visit a brother, who was a missionary. He returned to Alaska 3 years later to become a kind of secular missionary himself, determined to lure 2,500,000 of his fellow Americans to enjoy the bounties and beauties of the new 49th State within the next decade.

As president of Pacific Northern Airlines, Mr. Woodley has a certain pecuniary interest in getting all those people into Alaska, but the fervor with which he extols the advantages and opportunities of the State goes far beyond that of someone who is just try-

ing to make a tidy living.

A pioneer bush pilot, Mr. Woodley has thrived in Alaska. He started out with one rickety Bellanca on pontoons 28 years ago. Now he owns nearly one-third of the stock of a \$10 million sirling.

With a fleet of six Lockheed Constellations and three DC-3's, Pacific Northern is the largest carrier of all classes of traffic in Alaskan air service. It transports twice as many passengers in and out of the State as its second biggest competitor, Pan American Airways. In the 28 years of operations it has had an extraordinary good safety record, with no fatalities.

#### ALASKA A FERTILE FIELD

The head of an airline operating in Alaska-there are 10 certificated lines serving the State—is in the happy position from which Henry Ford and W. C. Durant have long since evicted the railroad tycoons of two generations ago.

Throughout much of the State, when one wants to move from place to place, it is still pretty much a matter of flying, riding a dog sled, walking, or paddling a canoe. If one's time is money, the airplane rules supreme.

The obvious future of air transportation was readily impressed upon Mr. when he first visited his brother in Alaska.

In an interview last week, he recalled that in 1928, "the only road in Anchorage, the largest city, was a 15-mile loop highway that started in the center of town and returned to town. There were no roads of any nature whatsoever connecting any two settlements. It was clear that aviation would have more meaning in the Territory—I still haven't gotten used to calling it a State—than anywhere else.

In 1928, when Mr. Woodley made his first trip, he was 22 years old and working as an automobile salesman in Boston. He had spent 3 years (1925-27) at Canisius College in Buffalo, but "quit Canisius because I felt I was just wasting my time going to college,"

"However, while I was in Alaska I met Dan Sutherland," he added, "who then was Delegate to Congress and, with his help, obtained an appointment to the Army Air Corps Flying School."

#### START OF CAREER

By the fall of 1931, Mr. Woodley was in the Reserve and spending much of his time flying his own plane, a Fleet training biplane, at Roosevelt Field on Long Island. Although his brother, whom he had taught to fly during the summer, had been killed on a hunting trip in Alaska, Mr. Woodley decided after the funeral to head directly for Anchorage on his own, flying a Bellanca all the way from New York.

"I started what today would constitute a charter service, flying anywhere anyone wanted to go in Alaska. Business was very good, if for no other reason than the convenience and economy," he said. days, it took a dogteam a month to make the trip from Anchorage to Nome and it cost \$750. With my plane I charged \$150 and it took only 5 or 6 hours."

After several months, Woodley Airways, as Mr. Woodley named his business, began a weekly flight between Anchorage and Kuskokwim, a mining area, and to Bristol Bay, famous for its fishing, "to more or less in-culcate the idea that there was at least a qausi-scheduled service available," Mr. Woodley explained.

By 1940, in the hope of arranging some permanent financing so he could acquire more planes—his fleet by then had grown to several trimotor Stinsons-Mr. Woodley applied to the Civil Aeronautics Board for a mail-pay subsidy and a permanent certificate to operate between Anchorage and Juneau. The application was turned down on the basis that the service was not required.

"I immediately petitioned for permission to operate regular service without a Government mall-pay subsidy, to demonstrate how very wrong they were," Mr. Woodley said. While the business grew, it was 1946, after he had reapplied for a route certificate between Anchorage and Seattle, before Mr. Woodley finally got the Anchorage-Juneau permanent certificate he had sought in 1940.

Today, with a subsidy of \$2 million a year the company operates over 1,200 permanently cerificated route miles within Alaska, serving Anchorage, Juneau, Kodiak, King Salmon, Cordoya, Kenai, Homer, and Ketchikan. It also operates a 1,580-mile route direct from Portland and Seattle and a 1.441-mile direct route from the Pacific Northwest to Kodiak.

Although Pacific Northern's routes embrace areas that serve about 80 percent of Alaska's population af about 250,000 and the State's most important cities and communities, Mr. Woodley isn't yet through with plans for expanding his line. He has applied for permission to extend service to San Diego, Calif., and also to Hawaii. Meanwhile, he is surveying the market for jet and turboprop equipment, with the expectation of upgrading his company's planes within the next year or two.

#### MERGER REJECTED

About 2 years ago, when Congress made all route certificates in Alaska permanent for their holders, the White House urged the Civil Aeronautics Board to determine whether the industry would be strengthened by a merger of two or more Alaskan carriers. response to the President's mandate, Pacific Northern explored the possibility of merger with Alaskan Airlines, which flies from Seattle to Fairbanks.

"We came to the conclusion," Mr. Woodley said, "that there would be no advantage to consolidation. We feel it would not be in the public interest or to our advantage, since our lines are noncompetitive."

Mr. Woodley confidently looks for 1959 to be the best year in Pacific Northern's history. He estimates that in the first half it will fiv more than 63,000 passengers, 13 percent more than in the 1958 period, and expects a record of 150,000 passengers for the full year. Last year it carried 130,000 passengers.

Gross revenues for the 6 months to June 30 are estimated at \$5,242,000, or 13 percent above last year's by Mr. Woodley and he ex-pects operating income and net income to be comfortably in the black." In the first half of last year the company operated in the red, although it finished 1958 with an operating profit of \$805,000 and a net income of \$400,000.

Mr. Woodley, who was born on February 15, 1906, in Elmira, N.Y., is the picture of an Alaskan out of a remake of "The Spoilers." He carries more than 210 pounds without a suggestion of fat. While he doesn't actually

hunt bears with a switch, he does like to rough it with his three young sons in the rugged San Juan area of Puget Sound.

They reach their camping sites by a 42foot cruiser from Seattle, where the Woodley family lives and where the line has its executive headquarters.

### Resistance to Integration in the North

EXTENSION OF REMARKS OF

## HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. JOHNSTON of South Carolina, Mr. President, I send to the desk an editorial from the Charleston (S.C.) News and Courier, entitled, "Parents Protest March in New York Reveals Resistance to Integration," which appeared in the June 27, 1959, edition.

This editorial points up the rising unrest in the North which is resulting from forced integration of people who otherwise wish to remain segregated. I ask that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

[From the News and Courier, June 27, 1959] PARENTS PROTEST MARCH IN NEW YORK RE-VEALS RESISTANCE TO INTEGRATION

The protest picketing of New York's City Hall by 300 white parents Thursday is an indication of increasing open opposition to forced race mixing in the Nation's largest city. The parents carried signs which read, "Don't tread on us." They were protesting plans to transport 1,000 Negroes and Puerto Ricans from tough Brooklyn neighborhoods into the orderly and respectable borough of Queens.

No doubt the "liberal" press, edited by men who live in safely white neighborhoods and apartment buildings, will deplore the protest march. No matter how much they deplore the action against forced mixing, they will not be able to cover up the social reality of New York today. The reality consists of respectable, middle-class areas such as Queens under heavy racial pressure approved by the political powers-that-be. This pressure has resulted in counterpressures, of which the protest march is an

The polltical pressure on whites who speak their minds is evident in the transfer, reported in the New York Times, of a police captain who spoke against the pupil transfer at a public meeting. Capt. Adrian P. Donohue was shifted from Queens to an unpleasant assignment in Manhattan. No doubt the punishment of Captain Donohue will only create sympathy for him in Queens and stiffen resistance to pressure from City Hall.

The real issue behind the protest picketing is identical with the basic issue in southern communities. It is whether law-abiding whites who have good personal standards are to be subjected to the domination of a racial group with lower standards. Liberals North and South who demand Justice for Negroes ignore the crime and other unpleasant realities which cause whites in New York City to seek racial separation.

By their control of the press, the liberals make it difficult for whites in New York City or below the Mason-Dixon line to protect

themselves. We believe, however, that in time hypocritical liberals will no longer be able to control the situation. People with decent standards will regain control of their communities.

Public Power Electric Rate the Same as It Was in 1912 in Roseville, Calif.

EXTENSION OF REMARKS

## HON. CLAIR ENGLE

OF CALTROPNIA

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. ENGLE. Mr. President, I wonder how many commodities or services sell today for the same price they did almost a half century ago. One, at least, is public power in California. As evidence submit for the Appendix of the RECORD & news article from the Sacramento Bee of June 11, 1959, entiled "Roseville Electric Rate Charge Is Same as 1912, Year Service Started."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROSEVILLE ELECTRIC RATE CHARGE IS SAME AS 1912, YEAR SERVICE STARTED

ROSEVILLE, PLACER COUNTY .- When the city of Roseville was incorporated 50 years ago one of the many problems faced by the first city council was the lack of adequate electrical trical service. Within a year the groundwork had been laid for the municipal electric de partment.

Because of this action, Roseville residents now obtain electricity at rates which pre-vailed in 1912, the year the municipal electric department was founded.

Records in the city hall indicate a small electric system owned by E. D. Lehe served the city from 1908 until 1910 when it was purchased by the control of the control o purchased by the Pacific Gas & Electric Co.

NINETEEN HUNDRED AND TEN BOND ISSUE

In June 1910, a city election authorized bond issue of \$10,000 for a municipal electric system. City Engineer U. S. Marshall est mated the value of the existing system to \$9,600 and a committee was appointed to negotiate for its purchase.

The prevailing rate for electricity was cents a kilowatt-hour and Marshall esti-mated the city could cut the rate in the stated the He stated the city could produce its own power for 21/2 cents per kilowatt-hour should not pay more than 2 cents per kilowatt-hour watt-hour for watt-hour if it purchased energy from some

In December 1911, the Great Westers Power Co. offered to furnish power to the city for 1½ cents per kilowatt-hour.

PACIFIC GAS & ELECTRIC OFFERS TO SELL

Pacific Gas & Electric turned down an offer of \$10.000 for its distribution system but 2 months later offered to sail for that but 2 months later offered to sell for the price and furnish power for the same figure

quoted by Great Western.

Great Western countered with an offer to duplicate the Pacific Gas & Electric system and supply current to the city for 10 years for 1 cent per kilowatt-hour. This offer was accepted and the municipal system. for I cent per kilowatt-hour. This offer was accepted and the municipal system into operation August 31, 1912, with customers. customers.

Pacific Gas & Electric retaliated by 10% ing it rates and signing up customer ale 3-year contracts at a flat monthly per City records report constant friction

tween the city and Pacific Gas & Electric until 1920 when the city bought the Pacific Gas & Electric distribution system for \$6,539. By that time, Pacific Gas & Electric had swallowed up its smaller competitor, Great Western.

Under an agreement approved by the California Railroad Commission, predecessor to the public utilities commission, Pacific Gas & Electric continued to serve the Southern Pacific Co. and Pacific Pruit Express Co. installations here.

In its first 8 years of operation the municipal electric department, despite stiff competition, accumulated a surplus of more than \$10,000, more than enough to buy the competing system.

Since then, residents of Roseville, through atronage of their own electric department, have built a distribution system with a replacement value of \$750,000. They spent more than \$200,000 during the last 3 years to modernize and expand the system without incurring any bonded indebtedness and have set aside \$65,000 in depreciation reserves.

City Manager David C. Koester said one of the most significant points in the history of the electrical department is that since 1941 it has contributed more than \$1,500,000 to the general operation of the city.

## U.S. Ambassador to Mexico, Robert C. Hill, Answers Big Lies

EXTENSION OF REMARKS OF

## HON, BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. GOLDWATER. Mr. President, we in the United States are very fortunate in having Mr. Robert C. Hill represent us as our Ambassador to Mexico. I have spent a good deal of my life on the border, and have lived with the Mexican people for many years of my life, so this has been a point of very tender interest to me as I have watched our ambassadors work.

I have always maintained, Mr. President, that Mr. William O'Dwyer was one of our outstanding ambassadors, but how I must place Robert C. Hill even above him. Mr. Hill has become very popular in Mexico. He has been un-hesitant about speaking against communism and against those people who want to change our form of government and other forms of government.

Mr. President, the other day Mr. Hill was invited to the American Institute for Foreign Trade, which is an outstanding school near my home city of Phoenix, Ariz., to deliver the commencement address. I ask unanimous consent that editorial comment regarding Ambassador Hill, published in the Arizona Republic of June 5, 1959, entitled "Answering Big Lie," be printed in the Appendix of the English of the E pendix of the RECOED:

There being no objection, the editorial was ordered to be printed in the Rec-ORD, as follows:

## Answering Big Lies

The American Institute for Foreign Trade and its president, Dr. Carl Sauer, should be congratulated for inviting U.S. Ambassador to Mexico, Robert C. Hill, to deliver this

year's commencement address at the institute. Ambassador Hill is obviously a very well-informed, level-headed, and blunt speaking Government official. He delivered an excellent address, speaking mainly on Russia and the Soviet economic system, which he knows at first hand. Mr. Hill referred to Russia as a paper tiger and stressed that nearly all reports concerning Soviet economic and industrial achievement are highly exaggerated. The United States, the Ambassador explained, is many years in advance of Soviet economic development. The Communist system, he added, is built on the sweat, the blood, and the misery of the people, while its leaders have the gall to boast of economic progress. To believe these boasts, Ambassador Hill concluded, is to fall victim to Communist propaganda.

We are very happy to note that a high ranking State Department official should talk sense concerning the Soviet economic progress. The Arizona Republic has maintained, for many years, that the Soviet economic offensive is nothing but a myth. When Moscow's Nikita Ehrushchev boasted a year or two ago that Soviet Russia would win the economic war of peaceful production against the United States, many prominent U.S. political leaders and Washington diplomatic observers were greatly impressed. Foreign-aid handouts were defended by Washington bureaucrats on the ground that the United States must win the economic war against Soviet Russia. The fight against communism, it was argued, had to be waged in the economic field, as Communist economic weapons were supposedly proving more deadly than political or military weapons.

But, as Ambassador Hill rightly observed, most Soviet statistics are pure propaganda figures. We should never forget that cial Soviet spokesmen, including the talkative Mr. K., are not ordinary llars; they are "big lie" liars. In stressing the importance of peaceful trade in their struggle for world supremacy the Reds have two aims in mind-to assure that their lying propaganda gets the widest possible publicity in the United States, and to fool American public opinion as to the real nature of the Soviet danger. Americans who are impressed by these Soviet lies and repeat them as arguments concerning U.S. foreign policy are perhaps unconscious, but nevertheless effective, Communist dupes.

## A Study of Rehabilitation Facilities

EXTENSION OF REMARKS OF

## HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. MURRAY. Mr. President, the June 21, 1959, issue of the New York Times carried a very interesting article entitled "Health in Montana," written by Howard A. Rusk, M.D., the Times' medical editor. This article, datelined in Billings, Mont., tells of the great work being done by the Montana Association for Rehabilitation. Favorable mention is made, too, of the Montana Center for Cerebral Palsy and Handicapped Children located on the campus of Eastern Montana College of Education in Billings, and St. Vincent's Hospital's rehabilitation center operated by the Sisters of Charity also in Billings. The article describes the activities of the

Montana State Board of Health, and that of the Public Health Service, which is doing fine work in improving the health of our Indian population.

Dr. Rusk concludes that the work of the Montana Association for Rehabilitation, "is a splendid example of community planning that of necessity must be statewide, and of the grassroots interest in seeing that every disabled American, no matter where he lives, has the opportunity for modern rehabilitation services."

Mr. President, I am very proud of the people of Montana who are leading out in this very important health work. I am proud, too, that the Congress has appropriated \$1 million to enable the Commissioner of Education to assist public or nonprofit institutions and State educational agencies in training professional personnel to conduct training of teachers in fields related to education of mentally retarded children. This appropriation will implement the law we passed last year, which was based upon a bill introduced by the senior Senator from Alabama, which I cosponsored.

Mr. President, I ask unanimous con-sent to have Dr. Rusk's article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 21, 1959] HEALTH IN MONTANA-A STUDY OF REHABILI-TATION FACILITIES IN STATE PRAISES COMMU-NITY PLANNING

#### (By Howard A. Rusk, M.D.)

BILLINGS, MONT .- Time is being rolled back here this weekend, and Billings for a few days has become a television western come true.

The town is full of both real and makebelieve cowboys and bearded miners from all parts of Montana and even Oregon and Wyoming. This is Go Western Week in Billings, and leading the parade is the Cisco Kid in full regalia.

But while most of Billings frolicked in

memories of the past a group of 125 professional and civic leaders spent Wednesday and Thursday in serious study. They looked forward-not back.

The occasion was the annual conference of the Montana Association for Rehabilitation. This group, now completing its second year, was formed after three statewide meetings were held to discuss the further development of rehabilitation in Montana.

Because of the great complexity of health, welfare, and rehabilitation services in large cities, one usually thinks of the need for coordinated planning and cooperation to be greater in urban than in rural areas.

#### NEED FOR PLANNING CITED

Montana's leaders dispute this. Montana, with less than 700,000 population, is the Nation's fourth largest State geographically. As they say out here, "There is a lot of space between people." This means that district or area planning must be done to make maximum use of available funds and limited trained rehabilitation personnel.

The cross-country traveler on one of the three great trains that serve the Northwestthe Great Northern Empire Builder, Milwaukee Hiawatha, and Northern Pacific North Coast Limited-will enter Montana about 4 a.m. and leave the State at about 10 p.m. He will travel 800 miles, cross the Continental Divide and see hundreds of miles of open ranch lands. (Horses rank second only to cars as a cause of accidents in Montana.)

Despite the great distance, the caseworker for any of the various agencies of the State or private organizations, particularly the counselors of the Montana Bureau of Vocational Rehabilitation, will still know the names of patients and clients in both ends of the State.

Billings is Montana's largest center of population. Here, in 1947, under grants of an experimental and research nature, was established the Montana Center for Cerebral Palsy and Handicapped Children. In 10 years its caseload has jumped from 43 to 510 children.

The center is on the campus of the Eastern Montana College of Education, a unit of the State university system. It attracts many visitors as an example of how complex services requiring a variety of highly skilled professional workers can be provided in a rural State.

Billings' newest rehabilitation resource is St. Vincent's Hospital's new rehabilitation department, which provides comprehenive services for both inpatients and outpatients. The center was developed from an existing orthopedic hospital and school, with the aid of a Federal grant.

The Sisters of Charity, who operate the center with the assistance of a lay advisory board that includes handleapped individuals, have exerted tremendous influence in developing interest and support for rehabilitation. Many patients come to the center from surrounding States, particularly from Wyoming, whose northern population is largely dependent on Billings for specialist medical care.

Billings also has a section of the State's mental hygine clinic private psychiatric facilities and the State's largest public health nursing group.

The community also has a cleft-lip-cleftpalate team sponsored by the Montana State Board of Health under the crippled children's program of the Federal Children's Bureau. Of the 46 such teams in the Nation, 3 are in Montana.

#### AID FOR INDIANS IMPROVED

Medical leaders in the State report there has been considererable improvement in medical services for the State's 16,500 Indians since this responsibility was transferred to the U.S. Public Health Service a few years ago. Rehabilitation is extremely difficult for most handicaped Indians, because of their lack of motivation. Many use their disabilities as an excuse for not working, and if they are pressed to accept rehabilitation services they frequently slip across the border into Canada for a few months.

Tomorrow the now-bearded citizens of Billings will be clean-shaven and their cowboy outfits will be put away until nextyear's Go Western Week. The Montana Association for Rehabilitation, however, will be busy until next year's conference implementing the objectives of last week's meeting.

Its work is a splendid example of community planning that of necessity must be statewide, and of the "grass-roots" interest in seeing that every disabled American, no matter where he lives, has the opporunity for modern rehabilitation services.

## Proposed Reappraisal of Military and Strategic Objectives

EXTENSION OF REMARKS

## HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, June 29, 1959

Mr. JACKSON. Mr. President, Gen. Maxwell D. Taylor, retiring Chief of Staff, U.S. Army, speaking before the National Press Club, on Thursday, June 25, 1959, made an impressive plea for a reappraisal of our military and strategic objectives and of our requirements to meet these objectives. The highlight of his speech is the parable of the unhappy mess sergeant, which no one should miss.

I ask unanimous consent that the transcript of General Taylor's remarks be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TRANSCRIPT OF REMARKS OF GEN. MAXWELL D. TAYLOR, RETIRING CHIEF OF STAFF, U.S. ARMY, BEFORE THE NATIONAL PRESS CLUB, WASHINGTON, D.C., JUNE 25, 1959

Mr. President, gentlemen of the Press Club, and their guests, I am very much honored and very happy to return here to the Press Club for the third time during my tour as Chief of Staff. You were good enough to ask me as one of my first appearances after assuming this office in 1955. You gave me an interim appearance about a year and a half ago, and now I am here in my last public appearance in this uniform as the retiring Chief of Staff.

I am afraid that Mr. Lawrence has overbilled my appearance as one in which I would render a report on the 4 years in which I have occupied this post. I would rather turn it over to you in a question period to develop those aspects which interest you.

Nothing is more dangerous than to turn an old soldier loose on his career.

I want to thank you gentlemen as members of the club and also as representatives of the media of the United States for the very considerate way in which you have treated the Chief of Staff and the service which he represents.

I am always impressed with the difficulty which faces you gentlemen who comment on and study and report on the national security and related matters.

Certainly, we who wear the uniform and are the official representatives of these activities have not made it easy for you.

First, our problems are increasingly complex. They are difficult to define and in many areas, it is very difficult to establish the facts.

We have made it additionally complex by developing a jargon of our own that is becoming more or less notorious about the country, and so in an area when even the experts have only limited facts and have to predict and estimate the effects and the potential effects of weapons, for example which don't exist and which may never exist, obviously, the reporter who wants to present the problem with clarity to the public is in a serious disadvantage.

I think the best we could hope for is to find those men who are closest to the facts and have access to them and then hope they will use them with intelligence and with sincerity.

I have a friend in the Adjutant General's Department who knows my weakness for the reading of the pros and the comments found on officers' efficiency reports. You get some really delicious literary gems from time to time.

One was brought to me quite recently which described an officer who obviously was a pretty hot shot. He was all right. He had a brilliant potential, but the final sentence of the rating officer had, with a note of regret, this to say. He said:

gret, this to say. He said:
"Unfortunately, this officer is often confused when giving conflicting orders."
[Laughter.]

I said. "Put in that file—'not qualified for service in Washington."

So I feel, indeed, that some of our best citizens as they contemplate the problems of national events and try to understand them would admit to the same disability; that while they don't receive a conflicting audience, nonetheless the conflicting views of the experts make it difficult to arrive at a sound conclusion as to how we are doing in national defense.

Now, from this point of view I might well be justified in backing away from making any sort of valedictory statement today. Everybody knows that the generals and admirals are talking too much and this might be an excellent occasion to demonstrate restraint. However, it did occur to me that I might perform a limited service in taking some basic statement relating to our defense and express it first in that opaque way which is characteristic of a professional statement and then prove what I believe to be the case that namely, complex as our problems are, most of them lend themselves to lay interpretation.

themselves to lay interpretation.

It is possible to make this thing plain if one goes to the necessary trouble. So I would lead off and make a declaration of sincere belief, namely, that one of the great problems we are faced with in our country today is the need for a complete reappraisal of our military and strategic objectives in the light of the changes which have occurred in the world and which have invalidated, in my judgment, the dependence upon massive retailation as the fundamental keystone of our strategic art; that following such a reappraisal we then need to determine once more the building blocks which should go into our national strategy.

We should determine the kinds of military forces which are appropriate to these changed conditions and, after that, then determine yardsticks of sufficiency for these various functional categories. I mean by functional categories those functions that contribute toward strategic retailatory forces; those forces that go into continental air defense; the so-called limited war forces; the antisubmarine forces. Those are the categories I have in mind.

Then, having determined what is the yard-stick, how much is enough in these areas, then we should recast our entire budget-making procedure of the Department of Defense so that we budget, not vertically in terms of the forces of the Army, Navy, and Air Force, but horizontally in terms of these functional forces.

Now, that is clear, isn't it? [Laughter.] a Well, if it is not, then let me tell you a story. I would like to recount the parable of the unhappy mess sergeant.

Once upon a time there was a company commander who was having real trouble with his company mess. The men were going AWOL: they were complaining of the quality of the food. He realized it was time for him to make a personal investigation.

Now I stress the fact the company commander decided to do this himself. He didn't feel the need of an outside expert. He just didn't call in a dietitian or hotel manager. He was one of these old-fashioned, do-it yourself kind of company commander, it didn't take him long when he got down into the mess to find out what the trouble was.

He had a mess sergeant who was new at the job. He was a fine upstanding soldief, but very little experiences in the mess. As matter of fact, he had been transferred from the Finance Department. And so, ing no personal experience, he had to turn to his cooks and he had four of them. They were a pretty tough lot. They were hardheaded. They were stubborn, and they liked to have their own way. Furthermore, sithough one was a little older than the rest, no one was really boss, Furthermore, were all artists, more or less in their right. A couple of them had worked to gether before so they knew each other they happened to be specialists in airy soulf fles and that sort of thing.

The third man was a scafood expert. He went into what the French call the fruits of the sea; whereas the fourth fellow was an unimaginative cook in the art of meat and potatoes and that sort of thing.

Now the trouble was these cooks could never get together and agree on the next day's menu. They argued among themselves so that when morning came and it was time for the mess sergeant to go to mark. market and make his purchases, all four came running out with four different lists and thrust it into the sergeant's hand.

Well, he was always in a hurry. He never had enough time so he had to go up to market with the four lists. But he did notice the money value of all four lists was about all he had to spend for the entire day. he got into market and he was surrounded by these vendors all trying to hawk their wares and he would have to go around buying as best he could what looked good or sounded good and then return to the mess hall with his groceries.

Well, he found his cooks unhappy and having a hard time and well they might, because when they got all this stock of grocarles, it never came out right. He didn't have the necessary ingredients for three square meals for the troops, and the troops complained.

Well, the company commander looked this over and said obviously this isn't the way to run the railroad, so he called in the mess sergeant. He called in the cooks and said. Look here boys, we are going to change all this, In the first place, sergeant, you get from these cooks a menu for at least a week in advance and check it over and bring it to me and I will approve it.

"Then you guys go down to the market and don't listen to the vendors. You bring what is on the menu. Bring it back and turn is turn it over to the cooks and see that they make the right chow out of it. If you have any trouble with these boys, fire them

all and put the best one in charge.

Now finally, if you really then need any help, you might have a meas council formed out of three or four of your best NCO's and you are three or four of your best NCO's and you can turn to them from time to time and ask how the meas is doing.

Well, to make a long story short, that is exactly what they did, and the improvement was immediate.

The mess sergeant kept his job and the captain was promoted.

All right now, why? Why this success? Because the company commander had made a complete reappraisal of the requirements of his men and came upon a method whereby every meal was an aggregate, contributed to by each cook according to his ability and according to the needs of the men.

Menny to the needs of the men.

Menu making had become a horizontal operation rather than a vertical operation conducted by four artists in their own right. The resulting harmony in the company was

This ends the parable of the unhappy mess sergeant. [Laughter.] Now gentlemen, I know that there is no need for me to explain this parable to a sharp and sophisticated nudlence.

If there are any points in it not clear.

If there are any points in it not clear.

We can bring it up in the question period.

I will simply close with the expression of the hope that someday the Secretary field that the comparable to the compar ficult task, will enjoy a relief comparable to that of this mess sergeant who finally found a solution to his unhappiness and furthermore, that the peace which the company enjoyed loyed will depend upon the councils of the Pentagon.

Thank you very much. [Applause.]

### Regulation and Control of Atomic Forces

EXTENSION OF REMARKS

## HON, FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. LAUSCHE. Mr. President, the introduction of the nuclear energy age has brought to Government many new problems involving the regulation and control of these new atomic forces. We have entered into a period in which these new sources of energy and power have been channeled into industrial uses and made available for further, research and study by scientists in our universities and research centers.

Along with this growth of interest and opportunity for research has arisen in many communities a fear of the potential hazards of locating power and test reactors within the boundaries or close proximity to congested industrial areas. It is evident that there is need for a thorough examination of this entire question by those technically qualified.

It is my understanding that the Atomic Energy Commission is presently proposing new rules for the location of and exclusion of areas for power and test reactors. I have received an interesting letter from Warren F. Stubbins, associate professor of nuclear science at the University of Cincinnati, in which he gives his views on these issues.

I believe that without in any way expressing my approval or disapproval, the negative and affirmative aspects of this important subject should be openly discussed and studies. I ask unanimous consent that the letter from Mr. Stubbins, addressed to the U.S. Atomic Energy Commission, be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD.

as follows:

JUNE 17, 1959.

Re 10 Code of Federal Regulations, Chapter 1: Power and Test Reactors, Notice of Proposed Rulemaking.

U.S. ATOMIC ENERGY COMMISSION, DIVISION OF LICENSING AND REGULATION,

Washington, D.C.

GENTLEMEN: I recommend reconsideration of the proposed rules for the location of and exclusion areas for power and test reactors feel that the regulations as suggested in the proposal are unreasonable general re-strictions and ones which would be impossible to apply realistically. The objections are as follows:

(a) The proposed exclusion areas are so large that the rule may prevent institutions or industries of moderate size from participating in the test or power reactor programs. Institutions or industries having an established operating base in an industrial community should not be prohibited by regulation from entering into the reactor field, since in many cases, the use of their facilities plays an important part in their participation.

(b) The development of nuclear power stations at or near existing electrical generating stations or electrical distributing points will be severely handicapped because of the location of the stations and points near waterways and population centers.

(c) Low population density in the sur-rounding areas cannot be maintained by the reactor operating company. Even if the in-itial selection of the site is based on this condition, the company cannot control or even direct the use of adjacent lands not in its possession. Further restrictions to the use of the land will not be acceptable to the landowners.

(d) The publication of these restrictions would reenforce the public objections to and suspicions of reactors projects being placed in the community which do not fall into the classification of test or power.

(e) The remoteness of a reactor facility to

arterial highways, airfields and factories can-not be maintained by the reactor operating companies. Indeed, the nearness to these facilities may be a significant advantage to the reactor operation. This is contrudic-tory to the development of nuclear propulsion systems for ships, locomotives and air-

It is suggested that the basis of safety of

operation be the following:

(a) That there be adequate containment of the reactor by physical means, not by

(b) That the proposed rules on placement of and exclusion areas for reactors be applied only to retctors of untested types or those for test of extreme conditions.

Sincerely yours,
WARREN F. STUBBINS. Associate Professor, Nuclear Science.

## Preparation for Life After College

EXTENSION OF REMARKS OF

## HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. KEFAUVER. Mr. President, my attention has been called to the very thoughful speech by Noble C. Caudill, a high official of Genesco Corp., at Nashville, that contains mighty good advice to students graduating from college. The speech was delivered at Belmont College, which is sponsored by the Southern Baptist Church at Nashville, Tenn. I am certain that Mr. Caudill's message will be appreciated by young men and women who are planning their after college life.

I ask unanimous consent to have the speech printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

PREPARATION FOR LIFE AFTER COLLEGE

(By Noble C. Caudill, Vice President and Treasurer of Genesco; at Belmont College. Nashville, Tenn., on May 13, 1959) My subject today is "Preparation for Life after College." I shall briefly try to think

with you about three points-

1. Be strong physically.

2. Be strong mentally.

3. Be strong spiritually.

I do not mean that they should come in this order, because actually I think the most Important of all is spiritual strength. But let's think a minute about being strong physically. I think to be strong physically is mostly within your will. In many cases sickness is a crime. You have done something foolish and nature is being hard put to it to repair your mistake. The pain is a tuition that you pay for your instruction in living. Care of the health should be a required course for at least an hour each week, in every years from kindergarten to Ph.D. Actually, our bodies are what we eat plus what our ancestors ate. Thought unbalanced by action is a disease. I almost envy you the great things that will unfold before you as you leave college to go into various phases of life that you select, so be prepared physically to take advantage of the great opportunities that you will have.

the great opportunities that you will have. Second, be strong mentally. And this does not necessarily mean that being strong mentally is just what you learn out of books. Think for yourself. Plan ahead. I have found if you set yourself goals and keep them before you at all times you will be amazed at the great help this will be to you. Write down on a sheet of paper where you want to be 5 years from now, 10 years from now, and keep that sheet in front of you. I have been impressed in a great way how effective this is in watching the development of General Shoe Corp.-now known as Genesco. I don't want to really bring any personal things into these comments, but there is this situation about the development of this great company that I want to point out to you, and the way it happened. I have watched and been a part of this company growing from a very small operation of one factory into an operation of over \$250 million, employing approximately 20,000 people and making 125,000 pairs of shoes a day. And this is the way it developed. Every year we check to see where we are. Are we on schedule on the plans we have made? If we are behind we step up the tempo to really get the job done. Incidentally, I think this company is still in its infancy, and in years to come will really be an astounding development. The people who started this company were Christian people, and great emphasis has always been put on the Christian approach and doing unto others as you would have them do unto you. It is really the only right way to do.

Next, never forget the great part that personality development plays in success, regardless what your field is to be. I have seen one of the finest engineering graduates from one of the Nation's finest technical schools become a miserable and unhappy failure because he could not engineer his own personality. He could not express his own ideas about a project. He could not influence as-sociates in behalf of his otherwise sound ideas. He did not develop his human relationships in school and he came into business ill equipped to get along with people. He knew all about everything except himself. Go at once and read a dozen good easy books on how to develop your personality-"How To Win Friends and Influence People" is one. You think that's hammy. You wait and see how it pays off when you start rubbing elbows with people you are dependent upon. Learn to communicate with everyone-and remember being a good communicator also means being a good listener. If I stopped right now and suggested 3 minutes of silence, you probably couldn't write down the names of five people who really enjoy listening. Next week, next year, all the rest of your life, you will be wiser, more respected, a more successful to sit down with a clate and simply listen.

The greatest task assumed by such schools as this is to transform egos into gentlemen. A gentleman as my wife once defined it. is a person who is continually considerate. Kind words cost so little and are worth so much.

Speak no evil of anyone. Every unkind word will sooner or later fly back in your face and make you stumble in the race of life.

Build an economic basis under your life, but don't get caught in the rattrap of moneymaking as a profession. That too, like sex, can be a consuming fever and bring only fitful pleasures and no healthy happiness. If you become an employer, your relations with your employees will count for more in your happiness than adding a zero to the measure of your wealth. Give every employee the full equivalent of his share in the product. Don't live in a boastful and selfish luxury based on taking more from the world than you give.

Take a real interest in public affairs, but don't take politics too seriously. Expect to reform the government only after you have reformed human nature-beginning with your own. I feel very strongly that more young people should take an active interest in political affairs. It is a great field and you owe it to your country to understand the problems and to do your part to make this a better place to live. I have found many unselfish people dedicated to public life and they make great sacrifices to serve their country. Don't be frightened by the international situation. It is normal. Man is a competitive animal, individually and in Peace is war by other means, and see, even in depression times, the relative happiness of the American people, killing one another in the pleasure of their holidays.

Now I come to my third and final point, and to me by far the most important. Be strong spiritually. I am convinced beyond a shadow of a doubt that miracles are happening every day because of prayer. It has happened in my life many times. I do believe the Lord watches over us—I do believe the Lord answers prayers, and I am convinced that if you ask the Lord daily for help in the development of yourself—physically, mentally, and spiritually—that your prayers will be answered.

Young ladies and gentlemen, you have nothing to fear. The world belongs to you and the great experiences ahead of you will be thrilling beyond imagination. Let me leave this closing thought with you—the boy or girl who graduates today and stops learning tomorrow is uneducated the day

Boston's Museum of Science

EXTENSION OF REMARKS

### HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, June 29, 1959

Mr. SALTONSTALL. Mr. President, Greater Boston has a well-merited reputation as a hub of effective concern for science. By no means the least of the many institutions on which this reputation is based in Boston's Museum of Science, the first unit of which was opened in 1951. Last year the second unit, a new planetarium was opened. A third unit is under construction and two more are planned.

I ask unanimous consent to have printed in the Appendix of the Record an informative article about the Museum of Science which appeared in the April 1959 issue of Ford Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Boston's Museum of Science (By David McCord)

In 1939 a young mountain climber (now a distinguished geologist) on being interviewed in Seattle as a candidate for a scholarship at Harvard, declared quite frankly that his application had been made in part because he hoped to meet a Bostonian named Bradford Washburn, whose reputation as a mountaineer and explorer of Alaska was already widely known. That same year Washburn became director of Boston's old Museum of Natural History, built in 1864. This museum—first step in the new vision—was sold in 1947.

Three years later the Commonwealth gave the trustees a 5-acre site at the spillway end of the Charles River Basin, and in the spring of 1951 the first unit of a close to \$10 million Museum of Science was officially opened to the public. This first unit is perhaps one-fifth of the ultimate whole, but it defined immediately something in terms of the imagination which is boundless: a new and dynamic center of popular science education. Last year the Hayden Planetarium, considered the finest in the world, became unit two.

The third and imposing multi-story unit now under construction will include a large lecture and demonstration hall, a Hall of Man, Medicine, and Public Health, a new library, rooms for education, exhibits, and administration, and a rooftop lunchroom with a wide majestic view. Still ahead: a west wing, theater and Hall of Electrical Science, and aquarium.

. Science and the humanities remain uneas; bedfellows. Shakespeare and sputnik, Plato and powersteering, Michelangelo and the bathysphere, Emerson and nuclear fission. Dylan Thomas and electronic computer seem difficult to bring together. But in Boston the 48-year-old Washburn and his dedicated associates have already solved to public advantage and growing acclaim one method of demonstrating the achievements of science in simple, humanistic terms. To begin with, this is a teaching museum, and while most of the teaching staff are scientists, the top level (including the director) shows a background of history and literature. The visitor therefore does not enter the museum merely to stop and stare—he stops and participates This is no collection of bones and beetles in a cabinet. Birds and fossils still have their place, but now and then a bird is unstuffed for demonstration, like popular Spooky, the live great horned owl. Living porcupines, spakes turtler and only the living porcuping of snakes, turtles, and weasels are all part of the show.

Far more important still, the museum is dedicated to the principle that the natural and physical sciences be a completely mixed offering, so that the visitor moves at once from birds to boats, from turbine engines to cosmic rays, from gears and levers to bears and sonar, from telephone dials to enormous models of the house fly or the black widow spider. Everywhere are lights to light, buttons to push, wheels to revolve, cross sections to examine—such as a working been hive or the underground abode of chipmunks, snalls, and worms. There is a ships bridge just for you, looking up the basilincomplete with all modern navigational aids. Stand by.

Does it attract? Since 1951 there have been more than 2 million visitors, over 300,000 in 1958 alone, with groups from 336 different communities and 77,000 visits from organized class groups of children. It is Bradford Washburn's profound conviction that "from the cradle through the 10th grade" is the time to expose the mind. Just as important, he feels, that some children should be exposed to the wonders of science in order to repei them (the future artists, musicians, poets) as it is to attract the future physicists, chemists, engineers, and astronomers. Young men and women

about to enter college are given (in his Phraseology) a large menu from which to pick a single course. How much wiser will be the choice if one has nibbled through the menu from the beginning. And he is not, we may assume, forgetting that except for the scientists we are all children in the Presence of science.

## Cracking Down on Traffic of Obscene Material

EXTENSION OF REMARKS OF

## HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. WILEY. Mr. President, the in-Vasion of the American home by pornographic materials—including publications, slides, films, and other such materials—is an attack on the morals and integrity of our society.

Today, efforts are being made at the local, State, and Federal levels to stop this traffic in obscene materials. Unfortunately, our counteroffensive has not been effective enough. Over the years, the traffic in obscenity has increased to a half-billion-dollar business.

On June 5, I introduced a bill to stiffen penalities for violation of Federal anti-obscenity laws. The bill would provide mandatory prison sentences for second, and successive, violations of the Federal law in mailing, importing, and transporting of obscene material.

Since introduction of the measure, I have received messages indicating broad support from individuals in many walks of life.

To crack down on this illicit business, however, will require the cooperation not only of local, State, and Federal officials, but also of civic-minded individuals, groups, and associations in the local communities.

Commendably, too, the Post Office Department is alerting its personnel in an effort to halt the traffic of obscene materials through the mails.

Recently, in the June 5 edition of Postal Service News there was published an article entitled "We Have Declared War on Muck in the Mails"—outlining ways in which the postal service is attempting to halt the traffic of obscene materials through the mails. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Record,

WE HAVE DECLARED WAR ON MUCK IN THE MATTE

The Postmaster General has declared war on obscene material sent through the mails. Here is a battle all of us postal people can, and should be all of us postal people can, and should, get into wholcheartedly—for our own sakes as dwellers in our communities which which can become crime-ridden through pornography and sadism addicts; for the take of our children who can be debauched by such at the sade of the such as the who deby such filth; for our patrons' sake who depend upon us and our postal service to deliver their mail into their homes.

Ruthless mail order merchants in filth are violating the homes of the Nation in de-finance of the National Government. They are callously dumping into the hands of our children, through our home mallboxes, unordered lewd material, as well as samples soliciting the sale of even more objectionable pictures, slides, films, and related filth.

CONTRIBUTED TO DELINQUENCY

Unquestionably, these large defiant barons of obscenity are contributing to the alarming increase in juvenile delinquency, as many noted authorities have repeatedly and publicly observed.

Just how important is this mass of mailed muck to you and to me? To our children? Our community? Here is part of the testimony the Postmaster General and the Chief Postal Inspector gave before the House Post Office and Civil Service Subcommittee Investigating the Mailing of Obscene and

Pornographic Material: "It is my deep conviction-frequently expressed to individual Members of Congress, religious and educational leaders, newspaper editors, and citizen groups-that one of the most serious moral and social problems in the United States today is the multi-million dollar mail order traffic in obscenity," said Postmaster General Arthur E. Summerfield. "In spite of the frustrations and the legal complications, and even the court decisions, I feel a responsibility to the public to attempt to prevent the use of the mails for indecent material, and to seek indictments and prosecutions for such offenses, even though there have been previous rulings favorable to the promoters. Only by this method can the dimensions of this problem become clearly established before the courts, the Congress, and the American pub-

And here is one of the points Chief Inspector David Stephens made:

"The rapid increase in the sale of filth through the mails, and otherwise, scems to have developed far ahead of general public awareness of its scope. The volume today can be measured in tons. That juvenile delinquency stems in large part from the demoralizing influence of exposure to obscenity and pornography is well knewn to all law enforcement groups. Time after time in our investigations of armed robbery, extortion, embezzlement, and forgery, we learn that those responsible for such crimes were early collectors of obscene pictures and films. Also, in the many vicious murder and sex crimes, it is often disclosed that criminals responsible were addicts to pornographic and sadist material.

#### VITAL STATISTICS

To get some idea of the magnitude of this beastly business, these statistics are offered; Pornography peddlers net an estimated half billion dollars a year.

Simultaneous raids on the New York headquarters of three dealers in pornography and obscenity uncovered 15 tons of filthy films, slides, photos. In fiscal 1958 postal inspectors investi-

gated 4,000 separate cases, caused the arrest of 293 persons. The highest number of cases on record, this is a 45-percent increase over the year before—and 1959 is topping 1958.

More than 50,000 alarmed parents, parentteacher associations, clergymen, school and newspaper officials, flood the Department with their complaints each year.

#### WHY MAIL OBSCENITY?

Since World War II commercialized pornography has reached alarming proportions certain areas of the country. Because:

- 1. Purveyors of pornography reap huge profits.
- 2. In some cities courts interpret obscenity so liberally that getting indictments is very difficult; punishment of those convicted consists of only small fines or light prison sen-

tences-and they continue to operate while in jail through other people.

Muck merchants have plenty of money to hire high-priced unscrupulous but clever legal talent, which has successfully defended some of the largest dealers in dirt time after time in certain cities.

4. Court decisions which favored them in earlier investigations are cited as precedent

by those brought to trial.

5. Frequently they can attack and ridicule the postal service, with the help of others who, confusing liberty with license, unwittingly assist them.

Well aware of the sanctity of sealed mail, they know they can rely on this secu-

rity intended for lawful mailings.

- 7. They know they are safe unless the receiver of their mailings complains, and they know, too. that a percentage of addresses will accept it, while others will refrain from complaining because that would embarrass them.
- 8. In the particular cities which spawn pornography and where its interpretation is most liberal, very few public complaints are made even though raids prove that such wholesale mailings were delivered in these
- 9. Their continued success and huge profits have served to build an increasing smugness and deflance on the part of obscenity dealers, who are quick to demand privileges and to scream "censorship" when the Post Office tries to stop their filth.

Mailing lists can be bought, stolen, pirated, or built from telephone and city directories, high-school yearbooks, lists of people's names printed by newspapers, etc. One single list taken in a New York City raid contained the names of 100,000 customers and prospects.

Innocent advertisements can offer model airplanes or railroads for sale chesp, but if inserted by a baron of obscenity, the child who sends his dime or quarter for these is on the sucker list for the merchant's muck.

They send their salesmen to lurk, with samples, wherever youth congregates—schools, churches, boy scout halls, etc., even into suburban residential areas; and they solicit profit-seeking juvenile delinquents to do the same.

#### THE LAW

The Congress first enacted legislation making it a Federal offense to mail obscene matter on March 3, 1865. An expanded version of this basic law was embodied in the great Postal Reorganization and Codification Act of June 8, 1872.

The present obscenity statute, section 1461 of title 18, United States Code, provides penalties for the mailing of "every obscene, lewd, lascivious, indecent, filthy or vile article."

But, prior to last year, controlling de-cisions of the courts held that prosecutions under the pertinent statutes could be effected only in the district where the office

of mailing was located.

For the past several years the Post Office Department strongly urged the enactment of leigslation which would grant prosecutive venue at intermediate offices and offices of address, where the actual damage undoubtedly occurs. Such legislation in the form of an amendment to section 1461, title 18, United States Code, was passed by the 85th Congress and signed into law by President Eisenhower, August 28, 1958.

The present law permits people in a community where obscene material is received to evaluate it according to their own standards of morality and decency. Through the Post Office Department they now can refer the matter to the U.S. attorney in their own judicial district. It also permits fining second offenders up to \$10,000 and imprisoning them for 10 years.

The Post Office Department is pressing the use of this new legislation to the fullest possible extent.

The Department is convinced that this new legislation provides an effective weapon against these dealers in filth who have heretofore operated with little interruption and with comparative security from certain large cities.

In addition to the new legislation, more vigorous use is being made of an earlier law permitting the Department to stop incoming mail to alleged purveyors (which stops the money coming in from his suckers). Also, the establishment of the new post of judicial officer enables the Department to process cases much faster than under the usual hearing examiner process which, with its delays and continuances, could run into months, during which the operators could make a killing before effective action could be taken. For further details see "Protecting Patrons From Fraud-Filth" in the January 1959 Postal Service News.

One of the basic reasons for the increasing volume of filth in the mails, in addition to the tremendous profits its purveyors realize, is the very broad definition of obscenity handed down by certain courts, notably in Los Angeles and New York where most of the mail-order business in pornography originates. Obtaining indictments against the mailers of muck in such cities is most difficult, and their effective prosecu-tion is equally difficult if not impossible.

In interpreting the intent of Congress the courts stated in effect:

- 1. That obscenity must be evaluated in relation to contemporary community standards.
- 2. That nudity in itself is not obscenity. 3. That a publication is not obscene unless the general content is devoted to what may be termed obscenity.

#### STANDARDS DIFFER

Obviously, the "contemporary community standards" in New York City may be vastly different from those in the smaller, less blase, cities and towns in which so many of us live.

These liberal rulings in some cities have established, over a period of time, virtual sanctuaries in which dealers in obscenity have operated with impunity and in open defiance of the Post Office Department's best efforts to bar their use of the mails or bring them to justice.

However, the number and nature of the public complaints bear importantly on the decisions of prosecutors and courts, and the new amendment to the obscenity statute permitting such dealers to be brought to trial in the community where their mailings are delivered is having an important and beneficial effect.

This means that every one of us, no matter where we live, can help by watching our own mailboxes for such material and by alerting our neighbors and patrons to the problem and how they can help us solve it.

The "public" in the above paragraph includes everyone-you and me, our families and friends, our neighbors and associates in our communities. The Postmaster General has declared war-now it is our battle.

## A Communist Victory

EXTENSION OF REMARKS OF

## HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. BEALL. Mr. President, an editorial, titled "A Communist Victory," about the rejection of Mr. Strauss, written by the famous writer and editor,

David Lawrence and published in the July 6, 1959, issue of the periodical, U.S. News & World Report, has attracted my attention, and I think that all Senators and everyone else interested in good government should read it. It is filled with shattering facts about a disgraceful chapter in the history of the U.S. Senate.

Mr. President, I ask unanimous consent to have the editorial, "A Communist Victory," printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

#### A COMMUNIST VICTORY (By David Lawrence)

Nobody can feel happy about the rejection by the Senate of the nomination of Admiral Strauss to be Secretary of Commerce, unless, perhaps, it is the Communists here and abroad, and those Americans who satisfied their personal vengefulness.

Many of the Senators who voted against Mr. Strauss did so with the greatest reluctance and under a political pressure which caused them much uneasiness.

The Nation does not yet know the full story of what happened. The American people ought to be told just why the upper House of Congress, on the filmslest grounds, came to reject an appointment to the Cabinet.

There were several potential candidates for the Presidency who voted against Mr. Strauss. They were warned by their fellow-Senators that unless they played ball with the leadership it would hurt them next year at the Democratic National Convention.

There were Democratic Senators who were advised, in realistic language, that unless they voted with the group which was out to punish Admiral Strauss, they could not expect help reciprocally on their own legislative measures.

There were Democratic Senators in the

public ownership group who were told that a vote for Strauss would be construed as a vote against public power.

There were Democratic Senators who teamed up with the ringleaders of the opposition to Mr. Strauss because they believed that party members should stick together. Whatever the reasons, 48 Democratic votes out of 64 were recorded against the nomination, while 32 out of 34 Republicans favored the confirmation of Mr.

There were 15 Democrats who rose above the passions of partisanship to support Admiral Strauss. They deserve the thanks of the Nation.

This was one of the rare instances in which a Presidential appointment to the Cabinet was rejected by the Senate. But there is really no parallel. For in almost all the other cases, there was a serious defect, either in the character or record of the nominee, or a possible conflict of private interest with a Government post.

Efforts were made to trump up charges against Admiral Strauss, to form some kind of basis for rejecting the nomination. The record shows the charges were transparently partisan and unproved.

Here is a man confirmed twice before by the Senate when both a Republican and a Democratic President appointed him to important posts.

Here is a man of unimpeachable character and honesty, who was elected annually for 6 years to be president of the Temple Emanuel, on Fifth Avenue in New York City, one of the most widely known Hebrew congregations in the world.

Here is a man who now is president of the board of trustees of the Institute for Ad-

vanced Studies at Princeton, a post he has held for several years.

Here is a man who fought the Communists inside Government, and who was to no small extent responsible for the development of the hydrogen bomb during the Truman regime, when some scientists with Communist connections were trying to stop or retard our Government's study of that weapon, even as the Soviets were rushing their experiments

Here is a man who in 1953 brought to the attention of the President serious charges against a well-known scientist. The latter was subsequently denied clearance for security reasons by an impartial board of which Mr. Strauss was not a member. This same scientist was revealed to have lied to his own Government. He confessed his lie after 3 years, during which time he misled the se-

curity officers as they hunted a Soviet spy.
But for patriotically bringing this matter
to the President's attention, Admiral Strauss won the undying enmity of many scientists who are free thinkers about such things as security. Some of these scientists helped to spur the movement that led to the Senate's action.

It would be wrong to infer that any Sen ators were consciously influenced by the Communist drive. But the effect is the same. The Communist broadcasts for months have been demanding that Strauss be fired. feared that in his position as Secretary of Commerce he would effectively carry on an anti-Communist drive on the economic front Since the rejection of the nomination by the Senate, the Moscow radio has been boldly exultant.

The world has been told, moreover, that the President of the United States cannot appoint a member of his own Cabinet and secure confirmation, unless he gets the consent of the opposition party. What a travesty on so-called democratic government.

What can the American people do about such things? They can vote at the polls against the kind of Democratic Party leadership that permits on the polls are the polls against the kind of Democratic Party leadership that permits on the province of the prov ership that permits an insidious vendetta to transcend the public interest.

Admiral Strauss, whose record of public service is exemplary, cannot be injured in the eyes of those who have known his public service. The Dry have known his public service the public service th service. The Democratic Party has made him a martyr. It has written a disgraceful chapter in the history of the U.S. Senate.

## Caliber and Achievements of University of Oregon Medical School

EXTENSION OF REMARKS OF

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. NEUBERGER. Mr. President, we of the State of Oregon are immensely proud of the caliber and quality of our University of Oregon Medical School This caliber has been demonstrated again through the through the grant of \$1,297,000 from the National Institutes of Health for a great medical research building, to be consum-mated with an account of the consummated with an equal sum from the State of Oregon—a sum already wisely appropriated by the 1959 session of the Oregon State Legislat.

Our medical school is proving a lode stone for illustrious teachers throughout the Nation. The June 1959, issue of the latest throughout the Nation. 1959, issue of the Journal of the Massa

chusetts Medical Society describes the coming to Oregon, as professor of surgery and head of the department of surgery, of Dr. J. Englebert Dunphy, distinguished professor of surgery at Harvard Medical School and director of the Harvard Surgical Unit.

We are proud of this expression of confidence and faith by Dr. Dunphy, and I ask unanimous consent that the editorial entitled "Oregon Trail," from the Journal of the Massachusetts Medical Society in tribute to the skill and talent of Dr. J. Englebert Dunphy, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD,

as follows:

[From the Journal of Massachusetts Medical Society, June 25, 1959]

OREGON TRAIL

The Journal, as well as the medical com-munity of Boston, will be the losers this summer when Dr. John Englebert Dunphy thank charts whatever course is necessary to get himself, his family, and his household goods to Portland, Oreg. For Dr. Dunphy, a practically irreplaceable and supposedly immov-Professor of surgery at Harvard and director of the Harvard surgical unit and the Sears Surgical Laboratory at the Boston City Rospital, will, within a matter of days, sep arate himself from these posts in order to become professor of surgery and head of the become professor of surgery and head of the department of surgery at the University of Oregon Medical School. Of especially dire import is the fact that, by this policy of westward ho, Dr. Dunphy will separate himself also from the editorial board of the Journal to which he has given distinguished Journal, to which he has given distinguished service since 1949.

Trailblazer Dunphy, a student of motorcar accidents, and personally addicted to the safety belt, graduated from Holy Cross College in 1929, and from the Harvard Medical School in 1929, and from the harvard school in 1933; he has taught at Harvard aince his graduation and has been a member of the of the faculty of medicine since 1938. He served for 6 years in the Army Medical Corps, receiving his discharge in 1946 as a lieutenant colonel. When the Harvard surgical unit was reestablished at the Boston City Hospital pital in 1955, Dr. Dunphy became its first direct. director, and he has been responsible for the development of its present strong program of teaching, research, and surgical practice. Senior author of the surgical textbook, The Physical Examination of the Surgical Patient," edition in 1958, Dr. Dunphy has also written on the healing of wounds, tissue transplanta-tion, surgery of the gastrointestinal tract, and cancer. In addition to the usual assort-ment of ment of society affiliations, he is a member of the Sciences and the Royal Society of Medicine.

Essentially adaptable, Dr. Dunphy is expected from the bearded pioneers who carved an empire from the rain forests of the great

The Honorable Samuel Jackson Randall

EXTENSION OF REMARKS

# HON. A. WILLIS ROBERTSON

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a reprint from the Wednesday, June 24, issue of my hometown paper the Lexington Gazette of an editorial of June 26, 1884, commending the great Pennsylvania statesman, Hon. Samuel Jackson Randall, and a quotation from the biographical directory of the American Congress reminding the present Members of the Congress that Representative Samuel Jackson Randall, of Philadelphia, Pa., who served as Speaker of the House of Representatives during the 44th, 45th, and 46th Congresses, desired to see healed the wounds of an unfortunte fraternal war.

There being no objection, the editorial and quotation were ordered to be printed in the RECORD, as follows:

[From the Lexington Gazette, June 24, 1959] GAZETTE EDITORIALS AND OLD NEWS TAKEN FROM OUR FILES—NEWS OF 75 YEARS AGO

(From the Lexington Gazette and Citizen, June 26, 1884)

distinguished visitor, the Honorable Samuel J. Randall, the pure and uncorruptable patriot, the able and distinguished statesman, the wise and prudent political leader, arrived at Lexington on Wednesday morning last and addressed the literary society of our university on commencement day.

The distinguished Pennsylvanian is admired and beloved in all the South for his manly and determined opposition to radical reconstruction measures, and we hope the day is not far distant when the Democratic Party will advance him to the front place in honor and trust within the gift of the American people.

QUOTATION FROM THE BIOGRAPHICAL DIRECTORY OF THE AMERICAN CONGRESS

Randall, Samuel Jackson, a Representative from Pennsylvania; born in Philadelphia, Pa., October 10, 1828; attended the common schools and the University Academy in Philadelphia; engaged in mercantile pursuits; member of the Common Council of Philadelphia 1852-55; member of the State senate in 1858 and 1859; during the Civil War served as a member of the 1st Troop of Philadelphia in 1861 and was in the Union Army 3 months of that year and again as captain in 1863; was promoted to provost marshal at Gettysburg; elected as a Demo-crat to the 38th and to the 13 succeeding Congresses and served from March 4, 1863, until his death; Speaker of the House during the last session of the 44th and also during the 45th and 46th Congresses; dled in Washington, D.C., April 13, 1890; interment in Laurel Hill Cemetery, Philadelphia, Pa,

#### Veterans' Pensions

EXTENSION OF REMARKS OF

### HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. TEAGUE of Texas. Mr. Speaker, Mr. Richard E. Mooney, of the New York Times, has written a rather illuminating article on the pension bill, H.R. 7650, which passed the House on June 15, 1959. I believe Members will find this interesting and helpful to them in their thinking on this subject.

[From the New York Times, June 21, 1959] THE VETERANS AND THEIR BENEFITS (By Richard E. Mooney)

Washington, June 20 .- In 1636, in the Plymouth colony, it was provided that should a man be sent forth as a soldier and return maimed he would be maintained by the colony from that time until his death.

Today slightly more than 2 million veterans of later fighting collect benefit payments based on disabling injuries or illness suffered while they were in service.
Since 1918, there also have been benefits

for the veteran who becomes disabled after he leaves service, and who is in need. Today there are 850,000 veterans with non-serviceconnected disabilities on the rolls.

The pension bill passed by the House last Monday would touch only the smaller group. It also would make one costly adjustment in benefits for deceased veterans' widows and children, of whom there are more than 800,-000 now collecting benefits.

The 2,850,000 veterans collecting benefits constitute one-eighth of the veteran population, which in turn is roughly one-eighth of the national population.

There are 22,700,000 veterans living today. Their average age is almost 41. Some 19,-750,000 are veterans of World War II or Korea, or both, and are in the 25-to-45 age bracket. Nearly 2,800,000 are World War veterans, mostly in their 60's. The small remainder are veterans of earlier wars or peacetime military career men.

The Nation spends upwards of \$5 billion a year on its veterans through the Veterans' Administration, three-fifths of it in benefit payments. The VA also builds hospitals and provides medical services. It finances education under the "GI bill of rights" and other programs. It builds specially designed homes and provides automobiles for paraplegics. It makes some mortgage loans and backs more. It administers a vast life insurance program. It provides guardianship for the estates of minor or incompetent beneficiaries.

Pensions for veterans with nonservice connected disability are the issue of the moment.

To qualify, a veteran's annual income cannot exceed \$1,400 if he is single or \$2,700 if he has dependents, and he must have some disability which makes it impossible to work more than half-time.

There are three pension rates for veterans: \$794 per year basic, \$945 for a veteran who is over 65 or has been on pension for 10 years, and \$1,625 for the veteran who needs constant aid and attendance.

As the veteran population grows older, developing disabilities as it advances, the cost of pensions is bound to rise. It is estimated that pension payments would quadruple between now and the end of the century if the current law were left as is.

President Eisenhower has proposed, and Congress is considering, a new principle that would slow, not stop, the tide. Basically, it would raise benefits for those in greatest need and lower them for the not-too-needy, and redefine "need."

#### ADMINISTRATION PLAN

No veteran now on pension would have his pension cut or terminated. It has been estimated that the administration plan would save \$40 billion between now and the year 2000, in comparison to present law.

The House has accepted the principle of this plan but improved its benefit levels and terms of qualification with an estimated saving of \$12 billion instead of \$40 billion.

The House has also added widows' equalization, which removes the current requirement that a veteran of World War II or Korea have some service-connected disability at the time of his death if his widow or

child is to qualify for his pension. It puts them on an equal footing with widows and children of World War I veterans.

This would add \$22 billion over the remaining years of the century. Thus, the House bill's net effect is to raise costs by \$10 billion.

Before the House Veterans' Affairs Committee would even consider the new plan, veterans' organization support, or at least interest, has to be enlisted. It was.

Regardless of how much merit versus how

Regardless of how much merit versus how much politics was involved in winning House approval of the bill and its principle of greater and lesser need, the winning was an impressive achievement. It leads to the belief that the Senate may do likewise, with changes, before long.

#### DAV Services in Minnesota

EXTENSION OF REMARKS

## HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. JUDD. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Minnesota citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby directly, and indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Minnesota, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war.

DAV SET-UP

Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have very substantially benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger, its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris—all located at its National Service Headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation, in 1920, the DAV National Headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veteran organization of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 dis-

trict offices of the U.S. Veterans' Administration, and its central office in Washington, D.C.

They there have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

DAY SERVICES IN MINNESOTA

The DAV maintains two national service officers in Minnesota, James L. Monnahan and Hiram J. Fuller, at the VA. Center, Building 17, Fort Snelling, St. Paul; Mr. Frank A. Howard, 116 South 13th Street, Minneapolis, full-time adjutant of the Minneapolis chapter, is also an accredited national service officer. Mr. Monnahan also serves as department adjutant. Mr. Stuart A. Lindman, 5549 Woodlawn Boulevard, Minneapolis, is the department commander. Mr. Monnahan, Mr. Howard, and Department Commander Lindman are long-time friends of mine.

DAV national officers from Minnesota this year are Mr. Frank Barstow, national executive committeeman, box 430, Brainerd, and his alternate, Mr. John Kalland, 1789 Bush Avenue, St. Paul. Past national commanders from Minnesota, now living, are James L. Monnahan, John L. Golob, post office box 521, Hibbing and Millard W. Rice, now executive secretary of the DAV Service Foundation, while Mr. Golob is the chairman of its board of trustees and Mr. Monnahan is also a trustee. DAV voluntary services representatives at the two VA hosiptals are Carl F. Mousky at Fort Snelling, with 1,014 beds for GM patients, and James L. Patterson, at St. Cloud, with 1,379 beds for NP patients.

During the last fiscal year the VA paid out \$108,332,000 for its veteran program in Minnesota, including \$32,237,484 disability compensation to its 41,133 service-disabled veterans. These Federal expenditures in Minnesota furnish substantial purchasing power in all communities. Only about 16 percent—6,444—are members of the 25 DAV chapters in Minnesota.

This 16-percent record seems small, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Minnesota veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted - estimated\_\_\_\_ 48,056 Claim folders reviewed .... 40,007 Appearances before rating 17,718 Compensation increases obtained----4, 752 Service connections obtained\_ 1,494 Non-service pensions\_\_\_\_\_ Death benefits obtained\_\_\_\_ 1,072 627 Total monetary benefits obtained\_\_\_\_\_\_\$2,345,502,18

These above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three

district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of \$20,850,335,32, and in the central office they handled 58,282 reviews and appeals, resulting in monetary benefits of \$5,337,389.05. Proportionate additional benefits were thereby obtained for Minnesota veterans, their dependents, and their survivors.

SERVICES BEYOND STATISTICS

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV national service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans-only about 16 percent of whom were DAV members-their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment. hospitalization, prosthetic appliances. vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment-to utilize their remaining abilities-civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service-connection of a disability becomes extremely difficult—too many times impossible.

A VA Claims and Rating Board can obviously not grant favorable action merely based on the opinions, impressions or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specified what additional evidence is essential. The claim ant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations and schedule of disability ratings. No DAV national service officer, I feel certain. ever uses his skill, except in behalf of

Worthy claimants. with claims.

The VA has denied more claims than it has allowed—partly because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the ald of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

#### LOSSES BY REVIEWS

Another fact not generally known is that, under the overall reivew of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others, amounting in the aggregate to more than \$23 million per year. About 1.9 percent of such discontinuances and reductions have probably occurred as to disabled veterans in Minnesota, with a consequent loss of about \$532,000 per year.

Most of the claimants suffering reduction or discontinuance were not represented by the DAV or by any other veteran organization. Judging by the past, such adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Minnesota to give his power of attorney to the national service officer of the DAV, or of some other veteran or-Sanization, or of the American Red Cross, just as a protective measure against losing disability compensation because of inadequate handling of his claim.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

## COSTS OF DAY SERVICES

Measured by the DAV's overall costs of about \$12,197,600 during a 10-year period, one would find that it has expended about \$3.50 for each claim folder reviewed, or about \$8.80 for each rating board appearance, or, again, about \$22.70 for each favorable award obtained, or about \$123 for each service connection Obtained, or about \$54 for each compensation increase obtained, and has obtained about \$14,10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many

## METHODS OF PROVIDING SERVICES

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income of its Idento-Tag-miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans-a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1.400,000 owners of sets of lost keys have received them back from the DAV's Idento-Tag Department, 16,954 of whom, during the last 8 years, were Minnesota residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

#### MEMORIAL HONOR ROLL

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee the DAV Service Foundation, aggregating \$3,300,-000 exclusively for salaries to its national service officers. Its reserves hav-ing been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all serviced claimants, DAV members and other social-minded Americans-by direct donation, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago which concerned disabled veteran members of the DAV Chapter in Butte, Mont., which established the first Perpetual Rehabilitation Fund of \$1,000 with the DAV Service Foundation to which it recently added another \$100. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from \$100 to \$1,100, equivalent to about \$4 per DAV member—an excellent objective for all other States. Benefactors from 26 States have, up to this time, become enrolled on the memorial honor roll.

Inasmuch as only the interest earning from special donations will be available for appropriation to the DAV for its use in maintaining its national service officer program in the State of residence of each such benefactor, this is an excellent objective also for Minnesota. Each such special benefactor is enrolled on a permanent memorial honor roll which, updated, is then included in the annual report of the DAV and of its incorporated trustee, the DAV Service Foundation, to the U.S. Congress.

Each claimant who has received any such free rehabilitation service can help to make it possible for the DAV to continue this excellent rehabilitation service for other distressed disabled veterans and their dependents in Minnesota by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington 4, D.C. Every such "serviced" claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is \$100-\$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints-labor unions. trade associations, and various religious, fraternal, and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice-the DAV.

If eligible, I would certainly be proud to be a life member of the DAV.

#### Cigarettes Without Tobacco

EXTENSION OF REMARKS

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the CONGRESSIONAL RECORD an article from the June 24 issue of the Wall Street Journal describing a cigarette that is now being produced without the use of tobacco.

This, in my opinion, should be a warning to most of the tobacco companies and to many of the tobacco growers in this Nation. Smoking is, in many respects, a nervous habit. If those addicted to smoking can find a cigarette without tobacco and which yet answers some of the urgent nervous tension need to have something in their hands, the outcome could revolutionize the cigarette industry in our Nation.

Mr. President, I ask unanimous consent that this article from the Wall Street Journal, enttiled "Tobaccoless Cigarette Newest Health Entry," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

TOBACCOLESS CIGARETTE NEWEST HEALTH ENTRY

New York.-The latest wrinkle in the cigarette-health controversy is a new cigarette with no tobacco.

Bantob Products Corp. has introduced a new brand, called Vanguard, which purportedly smells, looks, and smokes like regular cigarets, but has a vegetable fiber content instead of tobacco.

Because it contains no tobacco, Bantob claims the smoke from Vanguards contains no tobacco tars, nicotine or arsenic. guards are made from what Bantob calls a scientifically-processed combination of natural fibers, patented under the name Fibrila.

Some scientific studies have related tobacco tars and cigarette nicotine content with higher incidence of lung cancer and heart ailments. However, other studies, as well as the tobacco companies, contend such claims are based on circumstantial evidence of statistical studies and have never/been proved.

## Address by Dr. James R. Killian, Jr., During Commencement Exercises at MIT

EXTENSION OF REMARKS OF

## HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. McCORMACK. Mr. Speaker, on June 12, 1959, Dr. James R. Killian, Jr., until recently special adviser to President Eisenhower in the field of science and engineering, gave the commencement address at Massachusetts Institute of Technology.

By reason of his knowledge and experience, both in and out of Government, any remarks of Dr. Killian's are significant and worthy of widespread dessimination and consideration.

In my remarks I include the text of Dr. Killian's commencement address to the 1959 graduates of Massachusetts Institute of Technology, of Cambridge.

For the past 2 years I have been engaged in mobilizing scientific and engineering advice and analysis for President Eisenhower and have observed at first hand the complex problems our Nation faces day by day, and the vital part which science and engineering play in our security and our public policy-making. Out of this intense experience have come some deeply felt convictions, a few of which I report to you today.

The United States must summon all its latent strength and all of its adaptability if it is to meet the rapid changes, the threat of unprecedented dangers, the abiding menace, and the vast responsibilities we face today. We must operate at peak performance, we must be willing to make sacrifices; these, no less, are the requirements both for leadership and survival in a divided world in a nuclear age.

This is the lesson, my friends, that we are painfully learning today, that the cold war, no less than a shooting war, requires America to be a taut ship, firm in its course and purpose, vigorous and disciplined in its life and work, adventuresome and revolutionary in its creative activities.

Our vitality and sense of purpose are under test. The protracted conflict between democracy and communism requires democracy to be strong and tautly alert both with its shared convictions and principles as well as with its military forces and weapons.

No informed human being can feel himself disengaged from the effects of Government actions, both of his own and other governments, and as a consequence every person should recognize his involvement and responsibility in the course of events. In a period of total weapons, we must recognize the possibility of total decisions and total ideas, the mass effects of which may leave no one untouched or no civilized society unaffected. We live also in a period of such potential instability that small effects or vagrant forces have the possibility for causing large effects both good and bad.

With all of these conditions confronting us, the United States must seek with vigor and resource to build superior equipment for peace as well as superior equipment for defense and resolutely seek to reduce without appeasement the tensions and forces, both large and small, which might imperil the peace. These convictions reflect no estimate of weakness or any sense of fear. They suggest to me that we go forward with zest and awakened purpose, free both of panic and apathy, feeling the exhilaration of great exertion and great responsibility.

From these convictions come the things

would say to you today. My wish for you, first, is that you can avoid the apathy and indifference to na-tional problems which is all too common today among many citizens. Apathy comes in part from the absence of any image, especially any large and exciting concept, of where we want to go and what we want to be. We need people who do not alternate, because III informed, between panic and apathy, but who are informed and who think seriously and responsibly about the great issues-our need, for example, to achieve enhanced excellence in our system of education, our need to enlarge our investment in human resources as we augment our investment in material resources, our need to accept the responsibilities and the sacrifices required to be strong and to keep the peace in a divided world.

My wish, next, is that many of you will have the motivation and the opportunity to contribute, through your work, however specialized, to the effective use of science and engineering and the other professions represented among you in shaping public policy and in evolving our social strategy. We need stateman-scientists and statesmanengineers—men who become molders of opinion and public leaders, who make a vital contribution to the common account, because they are, first of all, scientists and engineers and possess the insight and understanding of their specialties. We are now in a period when science and engineering are major influences on domestic and foreign policy and in turn are greatly affected by such policy. Yet there is a great shortage of men and women with adequate scientific understanding who can be or are willing to try to be effective in the political and policy-making arena. We need more scientists and engineers with the education, competence, and motivation for foreign service. We need more who have the breadth and the special understanding to help in dealing wisely with the multiplying technico-political problems in our Government. I hope that many of you will have an opportunity and the will to contribute to public policymaking and to the public philosophy in the years ahead.

I would remind you, next, that we are the inheritors of a very ancient faith-a faith in the primacy of man as a person. This faith has been a cornerstone of Western society and has been valiantly affirmed through deeds and words throughout its existence. The concept that might does not make right, that there is in each individual human being a worth that must be respected, that freedom is better than unfreedom, has been affirmed and reaffirmed in many parts of the world over and over again. But the per-sistent reappareance of tryrannical rule, of the phillosophy that careers should be determined by the class or race into which you are born instead of by natural endowments and acquired talents, the belief that men are made to serve the State rather than that the State exists to serve man, shows that Goethe was right in saying: "What our fathers have bequeathed to us, we must earn anew if we are to possess it."

It is my earnest hope that you will share diligently in earning anew these priceless

If we are to live in peace and freedom, it will only be because there are enough peo-

ple who care enough and who know enough to make the effort which freedom and truth and moral law require. It will be because there are men and women who can break through apathy and indifference and enjoy the exhibitation of intense and purposeful effort.

My wish and hope is that you will mobilize your talents, education, and personal force both to demonstrate and support the sacred value of the free mind and the free spirit, and the significance of individual man as a human being. You can play a major

role in this great mission. And now a more personal word. Whatever may befall you on your journey through life, success in the deepest and truest sense will be found in the dignity and poise which you reveal in meeting both the failures and the successes of life. It will be found in your perception and acceptance of high standards and ideal aims. Your success will reside especially in your relations with people, in your capacity to be compassionate as well as steadfast, tender as well as high-minded in your loyalties and your alle-giances. Each of you, by enhancing the excellence and dignity of your own life, can contribute to the quality and dignity and strength of our national life.

As Dr. John Gardner recently said, "Every good man strengthens society. In this day of sophisticated judgments on man and soclety that is a notably unfashionable thing to say. Men of integrity, by their very existence, rekindle the belief that as a people we can live above the level of moral squalor. We need that belief; a cynical community is a corrupt community."

I record these observations about the spe

cial conditions and opportunities which you face by way of expressing our confidence in you and in the adventuresome future which lles before you.

We who continue here shall always be glad for the days we have worked and lived together with you, always cherish the privilege of having had you as members of this community of scholars, always rejoice in your progress and accomplishments. salute you for your record as students and as citizens of this community. We speak our admiration of your parents for their contribution to some students. contribution to your parents for success. We celebrate with them and with you this day of fulfill ment and however. ment and hopeful beginnings.

With these sentiments of pride and leave taking, of affection and felicitation, and cherishing your continued affiliation with this institution, we bid you Godspeed and farewell.

## Twenty-fifth Anniversary of the Federal Credit Union

SPEECH

## HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. BURDICK. Mr. Speaker, I wish to compliment our distinguished colleague from Texas, the Honorable WRIGHT PATMAN, for his remarks made upon the 25th anniversary of the creation of credit union legislation. On be half of the thousands of credit unled members in North Dakota, I am pleased to join in and associate myself with his remarks. remarks. I might also state that I am a cosponsor with Mr. PATMAN, and other colleagues in this House, of the legislation now pending to amend the Federal Credit Union Act which became law 25 years ago.

One great milestone has been passed. Those last 25 years have been marked by the growth of a savings and service institution which has operated to the bene-At of thousands of our citizens across the length and breadth of this land. The unconscionable money lender was effectively challenged and, in many places, stopped.

It is well that we celebrate this anniversary and look back upon the accomplishments of the past, but there is much to be done. The necessity for credit unions still exists. Let us enact the necessary legislation to aid in this program. More credit and more service to more people, at reasonable rates, helps to build a healthier and stronger economy.

## Philadelphia's Robin Hood Dell

EXTENSION OF REMARKS OF

## HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. GREEN of Pennsylvania. Mr. Speaker, I call the attention of Congress, and, through this body, the attention of the Nation, to America's greatest cultural bargain—the Robin Hood Dell in Philadelphia, on the commencement of the 30th year of fine summer music in one of the world's loveliest settings. Our Dell can guarantee superb music played by one of the world's greatest orchestras, with celebrated conductors, instrumentalists and vocalists. It can guaran-tee a full house, some 400,000 music-lovers each year for the series of 21

Our Dell can guarantee an exemplary quality of music in a sylvan setting in Verdant Fairmount Park—and that the highest of cultural standards will be attained without the fear of deficit. For the Dell budget is assured before the series begins. Each of the concerts is free—simply for the cost of a 4-cent stamp

This musical miracle is brought about by the Philadelphia plan of joint mu-nicipal-private sponsorship, the plan which has attracted international acclaim as an agency of cultural contribution. Indeed, the Philadelphia plan which enables Robin Hood Dell to maintain consistently superior standards, is a harbinger of the enlightened social planning that is sweeping our land. Under the plan. Philadelphia's City Council voluntarily assumed its responsibility to gratify the cultural hungers of its enlightened community.

To perpetuate the Robin Hood Dell, our city council annually supplies half the budget—\$75,000. The balance is assumed by a group of some 800 music lovers who buy membership in the Friends of the Deil for \$100 apiece. This amount—equivalent of less than \$2.40 for two reserved seats for each of 21 concerts-is itself a bargain. But together-this merger of municipal and private investment in good citizenship makes the Robin Hood Dell the greatest cultural bargain in the land. And, the pian is a pattern of patronage that might well be followed by cities the world

Therefore, on the commencement of the 30th year of this world-leading summer music series, I would like to extend to Robin Hood Dell, on behalf of the Congress of the United States of America, our greetings and gratitude and good wishes.

### Post Mortems on Operation Mikovan

EXTENSION OF REMARKS

## HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. JUDD. Mr. Speaker, it would be the height of folly for anyone to divorce the Mikoyan episode early this year from many current developments in the international field. Pressures for expanded trade with the Soviet Union, acceptance of Communist China despite its crimes against its neighbors and against humanity, acceptance of the status quo in a divided Europe, and other appeasing objectives were greatly abetted by Mikoyan's mission to this country.

A careful analysis of the Mikoyan mission appears in the editorial of the March issue of the Ukrainian Quarterly, one of our scholarly publications on the Soviet Union, entitled "Post Mortems on Op-eration Mikoyan," The editorial methodically analyzes the aims and content of the operation and shows its basic importance for Moscow's drive to a summit meeting. Written by Dr. Lev E. Dobriansky, of Georgetown University, the editorial also shows the role played by Cyrus Eaton in the generation of the idea leading to the operation.

Because of the light it sheds on this subsequent phase to the Mikoyan operation, I include the editorial under the leave to extend my remarks in the RECORD:

POST MORTEMS ON OPERATION MIKOYAN

This examination of the causes, nature, and effects of the visit of Moscow's Deputy Premier to the United States will surely not be the last. Anastas I. Mikoyan has un-doubtedly left his imprints here. Operation Mikoyan is closed, but the campaign continues. The operation in which the traitor to the Armenian people featured, was only the first phase of a direct cold war campaign against the United States on its own terrain. Despite the decettful pleas of Miyokan and also Khrushchev for ending the cold war, Operation Mikoyan was an integral part of Moscow's cold war activity. This activity is a necessarily continuous one. Significantly, the prodigious paradox of the visit is that too many Americans failed to see it in this

When Mikoyan just arrived here, the alert Committee on Un-American Activities greet-

ed him with its sobering report on Patterns of Communist Espionage. The report at least alludes to the cold war nature of this typical Russian Bear maneuver. At the very outset it soundly states that Moscow's "protestations of peaceful intent and a desire for true friendship with the United States are an utter sham." The rich material in the report should have been used consistently in the course of the press interviews and other appearances of this visitor on a tourist visa. But the reason why this did not eventuate can be found in the prime lessons to be drawn from the entire affair.

For one, the spectacle brought into the open the nalvete of countless Americans in regard to tried Russian techniques of undermining the targeted enemy. Second, it disclosed the short memories and the shoddy character of thinking in many sections of our populace as concerns not only present international circumstances but also those of the immediate past. And third, the minor errors of the administration scarcely contributed to an enlightened atmosphere in connection with the real aims, intent, and purposes of this celebrated tourist who was allowed to enjoy free advantages which no foreign tourist of comparable rank could possibly realize in the Soviet Union. Instead, the atmosphere was one of confusion, bewilderment, and foolishness until, toward the close of the visit, Mikoyan showed some of his real character.

An evaluation of this cold war operation must deal with its aims, actual behavior, and noted effects. The field for the operation was, of course, the traditional warmth and good fellowship of Americans generally. Menshikov was sent here long ago to exploit and cultivate this field. In this respect, Mikoyan had a nicely set stage for his own operation and took full advantage of it. Moreover, the operation was being executed in an international context. It would be the height of political immaturity to think that the visit was a good will tour in an isolated American setting. Actually, it was just one facet of an unfolding pattern. The Lunk, West Berlin, the forthcoming 21st Community Party Congress, the 7-year plan, and a resultant impact upon not only the captive nations and the underdeveloped countries but upon our free world allies as well—all of this was tied to Operation Mikoyan. This integralist viewpoint is no rationalist imputation; that is, viewing it in a way the Fremlin did not. What Mikoyan himself had to say and what the propaganda machine in Moscow was disgorging at the same time, easily substantiate this view-

#### THE PRIMARY AIM OF MIK-OPERATION

While Mikoyan was here, there was a great deal of speculation as to the aims of his mission. Editorials, radio, and TV commentarics, and a number of public and private utterances produced a mass of possible explanations. Some were plainly superfictal and even ridiculous, others were well grounded and incisive. Taking the more sensible ones, it is not difficult to boil them down in an order of relative importance. The order itself is based on certain criteria of knowledge and understanding concerning the chief drives and problems of the present Kremlin leadership. In short, one couldn't begin to make an assessment of this kind without constant reference to developments in the Soviet Union itself,

In immediate terms, the first aim was to drive a wedge between American public opinion and the Government. When this was emphasized by certain groups and individuals in this country-weeks before Mikoyan himself distemperately admitted it-a cold shoulder of skepticism and impatience was the response. Yet the fact is that this

warning was no idle inference or speculation. It was generally based on known techniques of the Russian manipulators and it was specifically related to the wild impressions created by Cyrus Eaton during his stay in Moscow. Most Americans don't bother to read U.S.S.R. publications. Thus they couldn't know the irresponsible encouragement given by Eaton for Moscow's use of traditional techniques of divide et impera in the United States. Instead of employing their ever-active subversive channels, Mos-cow was fully encouraged to realize this aim openly and directly. It correctly reasoned that if an opulent industrialist like Eaton can be duped, there must be quite a reservoir of guilibility in the higher and leading circles of American society.

It is very strange, indeed, that our press

failed to seize upon the following statements made by Eaton in Moscow last year. They were virtually repeated verbatim by Mikoyan at the close of his trip. In one interview Eaton said: "But it should be borne in mind that in the United States the Government is the Government and the people are the people." He elaborated on this as follows: 'In the Soviet Union the Government speaks in the name of all the people. In the United States this is not the case. It does not speak in the name of the people." Fantastic, isn't it? What would you do if you were in Khrushchev's or Mikoyan's shoes? The an-

But this is not all. In another interview we note these additional political gems scattered about by one of our captains of industry. "I have convinced myself," says our expert in moneymaking, "that the Soviet Union desires to improve relations with the United States. In our country, too, there is an influential group that feels the same way." Of course, Eaton doesn't say how he arrived at this conviction or on the basis of what solid evidence is Moscow's alleged desire founded. Further, he observes that "Nothing in the world can justify a nation trying to impose its convictions on other countries \* \* . There are some in the United States who want to impose our system on other countries." From this one would think the United States is the imperialist and colonial power, not the Russians. And finally, Eaton told his Russian audience in Moscow, "The United States of America has not been built up by statesmen and soldiers but mainly by the genius of its industrialists and leaders in commerce. There is a large group in my country, representing every phase of business, that wishes to promote trade and commerce between our two great nations." 5 These are the words of a supposedly enlightened business leader in our society. The U.S.S.R. is not a nation, but Eaton's statement is indicative of his understanding of that state.

No great amount of analytic effort is required to directly connect Eaton's inspirations with Mik-operation. Could the Kremlin possibly have a more voluntarily tutored spokesman here? If you carefully followed the Mikoyan operation, you doubtlessly were impressed by the reiteration of most of the points quoted above. By the time he was heading for home, he openly accused the Government of deliberately continuing the cold war in a manner contrary to the interests and desires of the American people. cold war in the State Department is continuing," he charged. This and other charges, poised on the fundamental driving-wedge tactic, were afforded ample psychological cushion here by leaders who should know better. For instance, with little discretion or judgment, an American public figure thought it was a stroke of humor to blurt out in Chicago: "I feel about the Republicans about the same way Mr. Mikoyan feels about Molotov. I would trust them with any post except public office." This public remark couldn't have served the primary immediate aim of Operation Mikovan better.

Regardless of party affiliation, an intelligent citizen respects the fact that a Republican named Eisenhower is also, and more importantly, the President of this Nation. He is respectfully cognizant also of the fact that as Chief Executive of the Government, our Republican President is vested with powers and responsibilities to conduct the foreign affairs of this country. Not the Eatons, the Stevensons and other misguided private citizens, but the President is held accountable for this serious undertaking. The intelligent citizen cannot compliment Mr. Truman enough for his excellent article which appeared in this period. Our former President not only reduced Mikoyan to proper size but he also depicted these amateur diplomats in their true light.

#### SEVERAL CONTINGENT AIMS OF MIKOYAN

It is evident that a marked degree of success with the primary aim would open the way for the realization of several contingent and even higher aims. These bear on a summit meeting, trade, West Berlin, and peace propaganda in Asia and Africa. With soft spots adequately tapped in this country, Moscow reasons that it could gain valuable support here for the fulfillment of its other objectives. After all, weren't there many voices raised to ditch Matsu and Que-The push to realize these contingent aims, each in greater or lesser degree, actually constitutes the second phase of Moscow's cold war campaign on the American terrain. This is the phase we're in now. Mikoyan was supposed to have driven the wedge sufficiently for pressure to be exerted on our Government to relent somewhat on its present policies. He was supposed to have influenced enough influential Americans in business and industry to undertake this campaign, ultimately in behalf of Moscow. If there is one Eaton, there must be thousands of them.

Basically, there is nothing that Moscow wants more at this time than a summit meeting. It has angled for this since the Bulganin missives were launched at the end of 1957. Throughout 1958 and into the 21st Communist Congress at the beginning of this year, Moscow has pressed hard for such a meeting. As Khrushchev has so often let the world know, a summit agenda must exclude any talk about the captive nations. If this were to come to pass, the Russians would achieve their greatest victory since the establishment of their new empire, the U.S.S.R. Within their expanded empire today, they would convincingly make known to every captive that the West is really hypocritical in the espousal of its principles. They would effectively convey the idea that the West is resigned to the permanent captivity of the enslaved nations. Khrushchev's personal power would be fortified and entrenched beyond question. Briefly, such a summit meeting would seal Moscow's desperate consolidation of its empire. Russian operations in the basically secondary areas of Western Europe, the Middle East, and Asia would become that much easier.

A corollary aim for the attainment of this grand objective is to consummate bilateral treaties between the U.S.S.R. and the United This aim has the further advantage of splitting the free world allies. This trap would be prepared by preliminary visits and exchanges of the heads of state, perhaps a treaty on banning nuclear weapons and similar subsidiary negotiations. Mikoyan and some of his benighted American friends have urged this. It is enough to quote here the excellent statement made by Dr. Emilio Nunez-Portuondo of Cuba in the Emergency Special Session of the General Assembly of

"The Moscow Government bound itself by solemn treatles to respect the political sovereignty and territorial integrity of Rumania, Bulgaria, Czechoslovakia, Poland. Albania and martyred Hungary. Yet all these states have been subjected to a pitiless colonialism, which is maintained by vast Russian armies. We could say the same of China which has signed a solemn treaty of friendship—later violated—with the Soviet Union. We could say the same about Outer Mongolia, Ukraine, East Germany, North Korea and North Vietnam. Thousands of square pulses have been solded. square miles have been conquered and colonized by the Soviet Union in recent years and the number of human beings now beneath its pitiless yoke runs into hundreds of

Needless to say, sudden smiles are no substitute for hard experience.

Moscow's operations of methodical infiltration, subversion, and gradual dominationso typical of centuries of Russian diplomatic and political history—would also be im-mensely facilitated by unrestricted trade between the United States and the Soviet Union. Moscow is seeking this and Mikoyan has laid down the precondition of long-term credits. Amity through trade is a fatuous slogan in this instance. Britain and Germany were mutually best customers for decades but two ades but two wars in this century were fought between them. A close analysis of the 7-year plan shows that Moscow will be exceedingly under pressure for capital accretions—this aside from its already overdrawn commitments in the underdeveloped Very simply, unrestricted trade on a long-term credit basis—and even without this—would to some extent relieve Moscow of this pressure, abet the fulfillment of some of its industrial goals, and indirectly sponsor its operations in Asia, Africa, and Latin America. America.

The propaganda value attached to the success of any of these aims need hardly be stated. Mikoyan was able, for example, to exact from the lips of many American businessmen tributes to the rapid strides of the Soviet economy. These tributes will be read and heard of in Asia and Africa, and to Moscow's advantage. Mikoyan searched for the soft spots in the political, and even moral, fibers of our Nation and found them. The Cleveland conference of Protestant clergy, sponsored by the National Council of Churches of Christ in the U.S.A. last November 18 vember, is a recent example of political weakness. Its unanimous vote for the recognition of Red China nition of Red China surely attracted the attention of those planning Operation Mikoyan. The tapping of such weak spots, coupled with Khrushchev's boasts at the 21st congress about the "serial" production of ICBM's, was obviously calculated also to further Moscow's aim on West Berlin. Which fight over this small bit of territory which we want to be "free" anyway? Operation Mikoyan voiced this.

## SALIENT ASPECTS OF THE OPERATION

In carrying out the operation, Mikoyan dwelt on each of these major alms, hammered away at peace, the summit, and treaty agreements to further the aim of the wedge. Upon his return to Magazin he had wedge. Upon his return to Moscow, he had the temerity to say, "An increasing number of Americans are beginning to understand that war and the threat of war are an altogether unsuitable means of settling international issues." With record to the imternational issues." With regard to the implication of this remark, the New York Times quite properly stressed, "What vicious nonsense this is." Assistant Secretary of State Berding provided the best succinet reply to the spurious pages also in the opreply to the spurious peace plea in the operation: "\* \* we are not just interested in peace, but in peace with justice. If all tomorrow, with a maintenance of the status quo."

The equally spurious plea for trade was effectively answered by Under Secretary of State Dillon. Although he didn't present some of the points raised in this editorial, the Under Secretary nevertheless made clear the fact that we are ready to trade without the fact that we are ready to trade without credits and predominantly in the category of consumer good items. Undoubtedly, the low standard of living in the U.S.R. justifies this. As for the West Berlin aim, Mikoyan showed his hand at the National Press Curb hardson. We warned his audi-Press Club luncheon. He warned his audience that Moscow would meet force with force if the United States should use military Power to maintain its access to West Berlin. This characteristic Russian bluster can be wholly discounted. No one trust the armed forces of the Soviet Union less than the Kremlin itself." Behind the ICBM's, the tanks, etc., are armed forces made up of over 40 percent captives. This is scarcely a guarantee for victory.

One cannot compliment too highly those who questioned Mikoyan on the "Meet the Press" program, Lawrence Spivak and Harry Schwartz brought out the worst in Mikoyan. His parallel between Moscow's brutal domination over Hungary and United States intervention in Lebanon was indicative of the lying casuistry in which he and his kind This program capped the growing irritability of the so-called factfinding tour-The demonstrations certainly contributed to this as, also, had the public condemnation of the political criminal by some of our leading citizens.

The Presidential message on a show of courtesy toward the man was ineptly worded. It conveyed the impression that demonstrations per se were acts of discourtesy. This unfortunately played into the hands of those who sought to paint the demonstrators as merely "Hungarian refugees." Mikoyan, in turn, lost no time in seizing upon this op-portunity. "I do not think," he said, "that picketter." ly the Americans get rid of these freedoms, freedoms for hooligans, the better for yourselves." He expressed the opinion that "99 percent of the American people" had nothing to do with this. That might have been, but a good percentage sympathized with the demonstrators. The public condemnation of the of the man for his political crimes in the Caucasus, Ukraine, and Hungary by such. leaders as Congressman Judd, George Meany, Cardinal Cushing, and others indicated the temper of broad sections of our population. Basic principles were maintained in the midst of a secming loss of them.

EFFECTS AND THE SECOND PHASE

It would be foolish to deny that Operation Mikoyan made definite inroads here. sort spots were expertly tapped and will show themselves themselves again in drives for the recognition of Red China, a compromised summit meeting, more cultural and political exchanges, a retreat on West Berlin, and more trade with the U.S.R. Moreover, it provided propaganda fodder for Moscow's use in Asia and Africa bandwinking the neuin Asia and Africa, hoodwinking the neutralists and undermining the faith of some of our stanchest allies. It bred confusion in the minds of innumerable Americans and succeeded in exacting an audience for the tourist with the President. Also, the operation revealed the low state of principled behavior on the part of many of our groups who lavishingly feted the political criminal.

About the part of many of our groups who lavishingly feted the political criminal. About 20 years ago Dr. Hjalmar Schacht was placed in a deep political and social freeze for the government he represented; today, a man is honored for the crimes he committed, one Just over 2 years ago.

The second phase, from Moscow's view-point, is to capitalize on these inroads. We are how to capitalize on these inroads. are now in this phase. Internal pressures

here will mount for expanded trade with the U.S.S.R. and some retreat in West Berlin. As in the past, an alert and vigilant opposition to complacency and softness can thwart Moscow's cold war plan to exploit misguided Americans for its own end. The consummate end is nothing less than our defeat,

#### Debate on Defense

EXTENSION OF REMARKS

## HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. McCORMACK. Mr. Speaker, in my remarks I include an objective appraisal by Walter Lippmann appearing in the Washington Post and Times Herald of June 25, 1959, of the recent statement of the Democratic Advisory Council dealing with our national defense.

As Mr. Lippmann, in favorably commenting on the statement said:

The pamphlet contains a carefully reasoned and persuasive argument why expenditures should be increased to close the missile gap and to increase our conventional forces

The article follows:

DEBATE ON DEFENSE

(By Walter Lippmann)

Last week the Democratic Advisory Council issued a long pamphlet dealing with na-The worst thing that can tional defense. The worst thing that can said about it is that it is sponsored by a political party, or rather by a faction of a political party, and that it will, therefore, be heavily discounted. This is a pity. For, disregarding a few unnecessary and extraneous partisan phrases, the pamphlet deserves a very careful reading.

There is a large literature already existing which is critical of our defense policy. Having read a good deal of it, I would venture to say that this pamphlet is much the best in its field, evidently quite expertly informed, reasonable and civilian in its temper, and lucidly written.

It ought not to be brushed aside as a partisan document. For, in fact, the argument it makes has the support of large numbers of Republicans, especially of those who have paid close attention to the problem of defense, and of many of the military men who by common consent are leaders in military thought. Moreover, the pamphlet is not a Democratic Party document since there is no reason to think that the present Democratic leadership in Congress agrees with it.

The two main points of the pamphlet are familiar enough. The first one deals with the missile gap which, on the admission of Secretary McElroy, is likely to bring it about that in the next 3 years the U.S.S.R. will have in intercontinental ballistic missiles a su-

premacy of 3 to 1. This could mean that during these years the U.S.S.R. would be theoretically capable of knocking out the bulk of our Strategic Air Force. The pamphlet does not say that the U.S.S.R. would, or is likely to, try for such a Pearl Harbor. But it is right in saying that the existence of this theoretical power would have an important effect on the political relations between the West and the Communist powers.

The other point, which is also familiar. is that defense cannot be allowed to depend solely on nuclear weapons—the big ones which are suicidal or the small ones which would be devastating to our allies and to the uncommitted countries.

The pamphlet contains a carefully reasoned and persuasive argument why expenditures should be increased to close the missile gap and to increase our conventional forces.

What interested me most in the pamphlet, given the fact that it was written under the auspices of Mr. Dean Acheson, was the illuminating candor with which it explains how things have changed since the Truman administration. The critical change is this: Our original strategy in NATO was based on our possession at the time of a monopoly of nuclear weapons. Under those conditions, a small ground force, backed by the irresistible power of the Strategic Air Force, was quite sufficient to hold in check the enormously superior masses of the Red army.

Our monopoly was broken by the Soviets in 1949, and this has brought with it, as the U.S.S.R. developed its bombs and its missiles, a radical change in the balance of power. We are far from being defenseless against this new might of the Soviet Union. But there is no doubt that our allies in Western Europe and our client states in Asia are far more vulnerable than they were 10 years ago. This could have serious political consequences, if the missile gap is allowed to become so wide that this country, which is the ultimate protector of the non-Communist

world, becomes itself highly vulnerable.

No matter what it costs, this must not be allowed to happen.

It would be a very useful thing if the administration issued a thoroughgoing, fully considered reply. This would not be easy to do, because within the Pentagon and within the administration itself there are so many who agree with the pamphlet. But it would be a true public service if the President, who does not agree, would see to it that there is a reply.

### Release by George J. Burger

EXTENSION OF REMARKS

## HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a release by Mr. George J. Burger, vice president, National Federation of Independent Business. His statement should be noted by my colleagues in view of the early interest taken, under my chairmanship, by the Senate Small Business Committee on the subject matter of his release.

The committee in 1951 made the problems of the independent tire dealers one of its principal studies, and took action to assist them by recommending remedial legislation. In fact, this action was unanimous on the part of the committee.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

A call for action, not merely lipservice, was made on behalf of the rubber tire industry today by George J. Burger, vice presi-National Federation of Independent

In a letter to the editor and publisher of National Independent, Burger said that he is making no appeal to appear before the subcommittee of the Senate Small Business Committee which opened hearings this morning on basic problems of the rubber tire industry.

'I was consulted on these hearings many months back by Chairman HUMPHREY and his staff \* \* \* as to what position, if any, the writer, would take in his appearance before the subcommittee. So as to set the perfore the specommittee. So to set the record straight, I was desirous from the very first instant \* \* \* of bringing fair competition within the rubber tire industry which would not alone be beneficial to the independents but at the same time would be beneficial to the industry as a whole."

A veteran of 40 years working with independent tire dealers. Burger said he saw no reason for hearings to be held on matters with which the committee is already well posted on and on which they have all the

He stressed three important steps to be taken, "and the committee has all the facts on hand right now to carry through," which he believes would cure most of the present

problems of the industry: "First, the adoption of the rubber tires bill. This bill would bring about complete divorcement of tire manufacturing from the retail field. It also places certain restrictions on oil companies concerning the sale of tires. This bill is a sound and a needed piece of legislation. It has gone through dozens of hearings and has even gotten to the floor of the Senate.

"A second step or alternative would be all-out, consistent, vigorous support of the Magnuson (S. 1742), Bentley (H.R. 2729)

"Third, a thorough exposé of the handling of the quantity discount rule by the antitrust agencies.

'My position as to these hearings is that we must be satisfied that the objective is to cure the cancer once and for all time. We want action."

Following is the full text of Mr. Burger's letter:

JUNE 10, 1959.

EDITOR AND PUBLISHER NATIONAL INDEPENDENT, New York, N.Y.

DEAR MR. EDITOR: You will note the attached which covers the announcement by the chairman of the Senate Small Business chairman of Committee, the Honoroble John Sparkman, that the subcommittee headed by the Honorable Hubert Humphrey will hold hearings on dual distribution, etc., in the rubber tire industry, which hearings will be held on June 17, 18, and 19.

In my dual capacity, representing the above and in my official position with the National Federation of Independent Business, I was consulted on these hearings many months back by the chairman of the subcommittee and his staff as to the overall planning, and as to what position, if any, the writer would take in his appearance before the subcommittee.

So as to set the record straight, I was desirous from the very first instant these many years back of bringing fair competition within the rubber tire industry, which would not alone be beneficial to the independents but at the same time would be beneficial to the industry as a whole. I be-

lieve my actions have been recognized and confirmed time and again by many Members of Congress, One remarked: "All you are trying to do, Mr. Burger, is to save the industry before it destroys itself."

you well know from the record, the Senate Small Business Committee has many thousands of pages of testimony over the many years as to the problems in the rub-ber tire industry—dating back to the beginning and the continual follow through by us up until 1954, so this means 13 years complete background on the problem, and this condition hasn't changed for the better. It may have eased up a bit during the war period and the period of Government spending, but the basic problems remain.

I need not tell you of the single-handed fight for adoption of the rubber tires bill these many years, which was in-stituted in the first instance by that sincere leader, the Honorable James E. MURRAY, who, by the way, has reintroduced this legislation in every succeeding Congress since 1942.

It will be found in many annual reports

of the Senate Small Business Committee the recommendation was made that the legislation be voted by the Congress.

When we single handed instituted the quantity discount rule for the rubber tire industry, under the law, we felt that this in itself, if finally validated, would go a long ways to bring fair competition in the rubber tire industry. Keep in the forefront that we alone, in our dual capacity, supported the Commission's findings. The case dragged on for many years in the Federal courts, and at one time during these court hearings the presiding judge remarked that it appeared to him the Commission never intended to enforce the rule

Keeping in front of us this opinion of the Judge and other actions in the handling of this major case by the antitrust agencies. 2 years ago this present month there was a promise made and a complete understanding that a member of the Senate Small Business Committee would institute public hearings. We have kept pressuring for such action and have permitted our private files to be examined on this major case but still no concrete action has been instituted up to this point. It is our opinion, and we are making no charges against the antitrust agencies, that a thorough investigation should be made of the handling of this case, and particularly calling in all Government officials who had anything to do with the handling of this case and it might develop some interesting information as to the enforcement of the antitrust laws.

Holding this action paramount, as late as the fall of 1958 when the committee was considering these hearings, we held to the premise that the hearings should be on that case, and on that case alone.

As you well know, an extensive national survey by the National Independent was instituted some 4 years ago, the survey reaching at least 4,000 independent members of the rubber tire industry. The findings in that survey were all delivered to the respective small business committees and both antitrust agencies. That survey disclosed the problems existing as reported earlier in a similar survey by the Senate Small Business Committee in 1941.

Apparently these findings have been gathering dust in the files of the respective re-

If the accredited dealer leaders are sincere in wanting to bring about long overdue relief to protect efficient independent tire sales and services it would appear to the writer, who has lived with this problem of the independents consistently for close to 40 years, that action should be taken by them and the committee not to rehash what has already been told but both the committee and the alleged dealer leaders should act on:

- 1. The adoption of the rubber tires bill-2. If that is too drastic, then allout, consistent, vigorous support should be given to the Magnuson (S. 1742), Bently (H.R. 2729) bills.
- 3. A demand for a thorough expose of the handling of the quantity discount rule by the antitrust agencies.

If the dealer leaders and the committee will not take positive action on these three major recommendations as noted above, then we see no reason for such additional hearings to be held on matters with which the com-mittee is already well posted on, and on which they have all the facts.

I am making no appeal to appear until we are satisfied that the objective is to cure the cancer once and for all times.

Of course you will make this letter a matter of public information so the dealers, nationwide, will know once and for all times that we never have and never will duck an issue in their behalf. We want action, not merely lipservice. Sincerely,

GEORGE J. BURGER, Washington Representative.

## Editorial Comment in Oregon on the Wheat Bill

EXTENSION OF REMARKS

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. NEUBERGER. Mr. President the wheat situation is still very much in controversy since the veto by the President of the wheat bill enacted by Congress. This was the bill which called for 90 percent price supports with a 25-per cent reduction in acreage. I felt that the bill would not accomplish its proclaimed purpose because the history of acreage reductions. acreage reductions has been that farm ers retire their acres of poorest quality, while fertilizing intensively their best acres. Thus production has remained high—even at record levels—during per riods of acreage reduction. Further more, egg and poultry producers are sulfering a fering a grave financial crisis, part of which is aggravated by high feed prices. Wheat price supports of 90 percent in the Pacific Northwest could only worsen this situation for egg producers by raising feed principles ing feed prices still further. Wheat is the natural feed for Pacific Northwest poultry grows poultry growers.

For these, and other reasons, I voted against the recent wheat bill which now has been vetoed at the White House.

Two thoughtful editorials were published in the daily newspapers of my home community of Portland, ores, about this question. One, entitled Answer For Wheat Dilemma," appeared in the Oregon D in the Oregon Daily Journal of June 25. The other, entitled "Inviting a Veto, 24 published in the Oregonian of June 1 ask unanimous I ask unanimous consent, Mr. President that these editorials be printed in the

There being no objection, the editor rials were ordered to be printed in the

RECORD, as follows:

[From the Oregon Journal, June 25, 1959] No Answer for Wheat DILEMMA

Some Democratic critics in Congress of Secretary of Agriculture Ezra Taft Benson have argued that price supports for wheat at 75 percent of parity have encouraged rather than discouraged overproduction. At this level, farmers have to produce heavily to make up for lower profit margins, they say.

This is the reasoning behind the new Democratic-sponsored wheat bill, passed first by the House and now accepted by the Senate after the House had refused to approve Senate-passed compromises.

But there are few people close to the problem, including Members of Congress,

believe the latest piece of legislation, which calls for reducing acreages by 25 percent and paying 90 percent of parity, will begin to solve the wheat dilemma.

It fails to take into account the still rising productivity of the soil, brought about by improved practices which have by no means reached the limit of their potential. Under the spur of higher per bushel prices. one may look for ever larger production per acre, with probably little or no lapse in the piling up of surpluses. This plan goes contrary to the views of many farmers and farm organizations, which have advocated a gradreduction of the role of Government. The new legislation increases that role.

One of its effects, as pointed out by Senator Richard L. Neuberger, one of the few Democrats voting against the bill, will be to make wheat more costly than ever to egg and poultry producers, already in distress because of low prices for their products and high feed costs. The continued high price of wheat also discourages its use for the fattening of cattle and hogs, favored by some Pacific Northwest agriculturists as a needed development for our region.

Congressional leaders believe President Elsenhower is almost certain to veto the bill. But this poses a dilemma, for his veto will continue the present wheat program, which the President had already said is leading the country toward farm disaster.

Congress would have time, following a veto, to reenact another piece of legislation. The prospects that it could come up with a wise plan are slim. The nature of the problem has defied the wisdom of Congress for many years. There is little reason to be optimistic now.

[From the Oregonian, June 24, 1959] INVITING A VETO

The House wheat bill, which the Senate narrowly approved after the House had rea compromise conference measure, is worse than the conference committee's proposal. It raises the support price from the present 75 percent of parity to 90, pushing wheat farther out of competition as a feed prain

Its cutback of wheat acreage by 25 percent creates a problem in what to do with the idled land. Most assuredly, wheatgrowers will make every effort to grow as much on the best ve the best 75 percent of their present acreage allotments as improved technology permits, should the bill become law. If weather is good, nothing like a 25 percent reduction in production can be expected. The taxpayers will invest many more millions in wheat that cannot be used, and at about \$2.13 a bushel,

Actually, few Senators expect the bill to become law. They are lukewarm about it themselves and they foresee a veto by President me It was a display of stubborness on the part of Democrats and farm-bloc Republicans who hold to the long discredited highparity program. It makes one wonder if Congress really wants to solve the farm

Of seven Democratic Senators from Oregon, Washington, Idaho, and Alaska, only two, Neuberger, of Oregon, and Gruening, of Alaska, voted "nay." Senator Neuberger explained he felt the bill might not only encourage further surpluses, with improved planting methods, but also would make wheat more costly than ever as a feed source for egg and poultry producers, who already are suffering from high feed prices. If 90 percent of parity was voted for wheat, he said, argument would be furnished for similar increase for cotton, tobacco, corn, peanuts, and other favored crops already in surplus supply. Senator Neuberger still believes the domestic parity, or two-price plan, offers the best hope for wheat.

Whether the two-price plan would solve the problem is debatable. But one believes Senators Neuberger and Gruening are closer to the thinking of Pacific-Northwest wheatgrowers and city people, alike, than are the other five Senators of their party from this

## A Tribute to Delegate John A. Burns of Hawaii

EXTENSION OF REMARKS OF

## HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. JACKSON. Mr. President, the June 26 issue of the Pacific Citizen, the publication of the American Citizens League, contains a splendid tribute to the Delegate from Hawaii, John A. Burns, who is well known to us in the Senate because of his brilliant and farsighted leadership in the campaign for Hawaiian statehood. The article is written by Mr. Mike Masaoka, the Washington representative of the Japanese Citizens League, who also is known to many Members of this body for his exceptionally able work on behalf of Americans of Japanese ancestry. Mr. Masaoka is particularly qualified to write about Delegate Burns' achievements in helping American citizens of Asian ancestry during World War II, and afterward since he conceived the idea of the 442d Combat Team, the famous all Nesei fighting group that served with such gallantry during World War II.

Mr. President, I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

#### EAST-WEST UNIVERSITY

During the congressional debates leading to statehood for Hawaii earlier this session, much was made-by its proponents-of Hawaii's cosmopolitan population and the unique contributions which its people could make to a better understanding and appreciation of the many problems of the Pacific Basin, that yast area around whose perimeter more than half of the peoples of earth reside and where the next great development in civilization may well take place.

To implement this reality, Hawaii's Delegate John A. Buans joined with Senate Majority Leader Lyndon Johnson to introduce legislation authorizing the establishment— as an extension to the University of Hawaii in Honolulu-of an East-West University to serve as the cultural, educational, and infor-mational center for both the Occident and the Orient.

Such a university would not only provide facilities for scholars and educators but more for public officials, civic and religious leadbusinessmen, sociologists-for people in all walks of life-to meet in an "aloha" atmosphere for the full, free, and frank exchange of thoughts and ideas. Only in this way may those of the East and the West understand each other.

To many of us who have for decades past

deplored what we consider the understandable but undue preoccupation of our country with the problems of Europe, while too often overlooking or minimizing those of Asia, this East-West University concept comes as a welcome suggestion that, at long last, a balance may be provided in public discussion of the concerns of the world, East as well as West, to the mutual benefit of both

To those who know Delegate Buans' passion for better relations between the United States and the Pacific nations and his devotion to his fellow Americans of Asian ancestry in Hawaii, his sponsorship with the most influential Member of the U.S. Senate of this thoughtful proposal is not surprising.

To Washingtonians, Delegate Burns' all-Hawaiian staff, including Nisei as his administrative assistant and as his chief secretary, was unprecedented back in 1956, when he first came to Congress, but only a forerunner of his positive position on the Americanism and loyalty of all Hawaiians regardless of their Asian background. Instead of minimizing or trying to explain away the preponderantly Asian character of Hawaii's population, he translated this into a major argument for statehood; a new citizenry whose background would better enable the United States to understand and cope with the momentous problems arising out of Asia.

American of Japanese ancestry particularly cannot forget Delegate Bunns' solicitude back in the dark and grim days following the attack on Pearl Harbor sympathy for those of Japanese ancestry was not a popular reaction. As a captain in the Honolulu Police Department and the chief of its espionage division, he worked with the FBI and others in authority allay the fears of the Hawaiian population against their neighbors of Japanese ancestry. By his bold and determined defense of the loyalty and integrity of Hawaiians of Japanese ancestry, he may well have been responsible for the lack of hate and hysteria in Hawaii such as that which developed on the west coast and precipitated the mass and arbitrary evacuation of all persons of Japanese ancestry-aliens and citizens alike-from their homes and associations.

We on the mainland have heard stories of his efforts to help Japanese Americans regain their morale and confidence; how he helped channel the activities of the Issei and the Nisel into contributions to the final victory. We know too of his immeasurable support which made possible the activation of the famed 442d Regimental Combat Team, and the sending into battle of the 100th Infantry Battalion, thereby making possible an epic history of military gallantry which more than any other single factor accounts for the current welcome acceptance accorded all persons of Japanese ancestry everywhere in the land. The record of the Nisei units in combat also made possible statehood for Hawaii by putting the lie to the racism of those who would deny equality of status to the Island

Capitol observers know of Delegate Burns' courageous and visionary decision only a year ago to allow statehood for Alaska to precede that for Hawil. By his statesmanship, he made it possible for both Territories to achieve statehood, though we are he received.

In that fateful hour when statehood for Hawaii was assured by allowing Alaska to move ahead, he showed the same kind of courage and Americanism that he showed in the troubled and tragic days after December 7, 1941.

In the public hearings on the Hawaiian statehood bill this past winter, Republicans vied with Democrats to acknowledge the debt which all Americans owe to Delegate Burns for enabling Hawaii to achieve full-fledged statehood.

The writer who himself was a witness at the final hearings before the Senate Interior and Insular Affairs Subcommittee on Territories recalls with a thrill the bipartisanship that marks the vitality of our way of life when every member of that subcommittee, Republicans and Democrats, paid special tribute to Delegate Burns for his statesmanship and leadership in the statehood battle.

Especially remembered are the remarks of California's Senator Thomas H. Kuchel, assistant Republican leader: "Delegate Burns, you took the path of a statesman and you avoided the path of demagogery. I salute you for doing it."

Americans of good will join in that tribute. And particularly do Americans of Japanese ancestry who do not forget,

## Nationalist China Ban Is Condemned by AAU

EXTENSION OF REMARKS OF

## HON, JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a resolution adopted by the Amateur Athletic Union of the United States on June 19 and 20 at Boulder, Colo., together with a news item appearing in the Washington Sunday Star on June 21, 1959, condemning the International Olympic Committee for its unjustified action against Nationalist China. This resolution was cabled to Mr. Otto Mayer, chancellor of the International Olympic Committee:

RESOLUTION OF THE AMATEUR ATHLETIC UNION OF THE UNITED STATES

Whereas the International Olympic Committee at its last meeting in Munich summarily and without proper reason withdrew recognition of Nationalist China and thereby excluded it as a participant in the Olympic games.

Whereas at a meeting of the executive and foreign relations committees of the Amateur Athletic Union of the United States of America, held at Boulder, Colo., this 19th day of June, all facts leading to this expulsion were reviewed and carefully con-

Be it resolved, That the action of the In-ternational Olympic Committee in this regard be condemned, and that the Amateur Athletic Union of the United States of America demands that the International Olympic Committee rescind immediately its unjustified action against Nationalist China.

aware of the criticisms and even ridicule that [From the Washington Sunday Star, June 21, 1959]

NATIONALIST CHINA BAN IS CONDEMNED BY AAU

BOULDER, Colo., June 20.—The executive committee of the National Amateur Athletic Union today condemned the International Olympic Committee for withdrawing recognition of Nationalist China. Without the recognition, Nationalist China cannot compete in the Olympic games.

A resolution, which AAU officials said was approved unanimously, demanded that the IOC "rescind immediately its unjustified action against Nationalist China."

The IOC in a meeting at Munich May 29 ordered the National Chinese group to withdraw. Red China representatives on the IOC withdrew August 19, 1958, in a dispute over the presence of the Nationalists on the same committee,

#### MOVE INTERPRETED

Kellum Johnson, of Dallas, president of the AAU, said he interpreted the IOC's action in Munich as a move to give both Chinese groups representation on the committee. He said he understood the IOC intended to invite the Nationalists to reapply for admission under another name. (At Munich the Nationalists were told they would be acceptable as the Formosan Olympic Committee).

The AAU committee's action was announced at a news conference in conjunction with the National AAU track and field championships here.

Johnson said the decision was taken after Douglas Roby, of Detroit, a member of the IOC and the AAU executive committee, had reported on the Munich meeting.

Roby and Jack Garland of Los Angeles, also a member of the IOC, voted against the expulsion. Avery Brundage of Chicago, president of the IOC, did not vote on the issue as presiding officer. There were about 50 IOC committee members present at Munich and it was announced that 28 favored withdrawing recognition of Nationalist China.

The negative vote was not announced.

Johnson said copies of the resolution were being sent to all members of the IOC and to the headquarters of all international sports

He said the AAU was hopeful that the IOC could take some temporary action that would permit the Nationalists to participate in next year's Olympics.

In reply to a question, Johnson said, "if the Reds join the IOC and the other international sports federations, and meet those requirements, we feel that they would be entitled to participate in the Olympics like Hungary and some of the satellite countries."

Why Not a Memorial for the Father of Our Constitution. President James Madison?

EXTENSION OF REMARKS

## HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. KASTENMEIER. Mr. Speaker, I wish to call the attention of the Members of the House of Representatives to the following article and editorial which appeared in the Sunday, June 28, 1959, issue of the Washington Post and Times Herald:

WHY NOT A MEMORIAL FOR MADISON?

James Madison, who died 123 years ago today, is the only American of the highest rank in history who is not honored with a memorial in Washington or a historical shrine in his native State.

Here in the Capital we have the Washington Monument, the Jefferson Memorial, the Lincoln Memorial. Surely a place with these is deserved by the man who is known in history as the father of the Constitution and author of the Bill of Rights.

Henry Clay, leader of Congress during the presidency of Madison, called him the great est American statesman after Washington. It is strange indeed that at a time when the stability of American institutions and the precious rights of citizens are geared to Madison's work in the building and perfecting of the Constitution, there should be no visible mark of respect to his memory.

Political admirers build a carillon tower for a Senator whose place in history is still in doubt. We should erect a memorial to Madison not because he needs it but because we do.

This is a project in which all who believe in our form and principles of government can join with equal heartiness. Conservatives and liberals alike benefit from the sound political structure Madison took the lead in building, and from the constitutional guarantees of civil rights and liberties which he sponsored.

Place his words on the wall of a national memorial and there will be the text for a hundred thousand high-school essays in what he said to follow the wall of the said to follow the sai he said to fellow Members of Congress who were assailing an unpopular political minority:

"If we advert to the nature of republicant government, we shall find that the censorial power is in the people over the government and not in the government over the people.

It is more or less by the chance of long continued private ownership and tenure that the beautiful Madison estate, Montpeller, in Orange County, Va., has not the status of a Mount Vernon or a Monticello. In the full ness of time, with public spirit and goodwill that may come about. But a national memorial in West in the rial in Washington depends on nothing but

the will to create it. Madison was an unassuming man of sim ple tastes. Might not that fact solve the current problem of what to do with the columns lately removed from the Capitol?
They could be made a Madison memorial of surpassing beauty, harmoniously placed in relation to the Washington, Jefferson, and Lincoln memorials Lincoln memorials. Standing as a symbol of enduring nationhood, they would link the present to the past as they are linked in law and history by the work of Madison.

This suggestion was both more as the control of t

This suggestion was being put into words when I opened a book obtained for an unrelated purpose—the "Memoirs, Official and Personal," of Thomas L. McKenney, pub-lished in 1846. It proved to be dedicated Mrs. James Madison and the dedicators words almost foreshadow what is here pro-posed:

"Madam: There is such a thing as the memory of the heart. \* \* \* Mine for your illustrious husband can never die. I delight in the contemporaries in the contemporaries with the contemporaries and the contemporaries with the contemporaries and the contemporaries are the contemporaries are the contemporaries are the contemporaries and the contemporaries are the contemporaries are the contemporaries are the contemporaries and the contemporaries are the contem posed: in the contemplation of his purity his patriotism—his statesmanship. fame, madam, is so delicately and beautifully mingled with his, as to become identified with it. \* If his is the column that sustains the Capitol yours tell the cap. that sustains the Capitol, yours is the cap that

IRVING BRANT.

WASHINGTON.

(Mr. Brant is completing the final volumes of a definitive biography of James Madison.)

#### NEGLECTED FATHER

We second with pleasure a suggestion by Irring Brant that the country ought to me morialize in an appropriate way the fourth President of the United States, James Madison. In his letter elsewhere on this page, Mr. Brant notes that Madison is the only American of the highest rank who is not honored either by a memorial in Washington or a shrine in his native State. It is a caprice of history that this should be so, but happily a particularly fitting remedy is possible. Of all the proposals for using the dis-carded 24 columns from the Capitol's east front, none seems to us more immediately appealing than the suggestion Mr. Brant makes for using these relics to compose a Madison memorial situated harmoniously with the existing memorials to Washington, Jefferson, and Lincoln.

James Madison's claim to high honor from his countrymen seems beyond debate. In a famous phrase, Gladstone once described the Constitution as "the most wonderful work ever struck off at a given time by the brain and purpose of man." No one was more perand purpose of man." No one was more per-sonally responsible for the Constitution's final final form than Madison, who served brillantly, as a mediator at the Philadelphia Convention and who defended it with persuasive logic as an author of the "Federalist Madison crowned his achievement by drawing up the Bill of Rights embodied

in the first 10 amendments. The Constitution has long since proven its Worth as a marvelously flexible instrument of government; indeed, it is the oldest of its kind in the world. Surely it is worth considering ways to pay appropriate tribute to the man known as the father of the Constitution. Even if the proposed memorial should prove not feasible, wouldn't it be fitting to consider taking steps to make Montpelier, Madison's home in Orange, Va., a public shrine comparable to Monticello and Mount Vernon? We invite our readers to comment on Mr. Brant's thoughtful letter.

# Unemployment Compensation

EXTENSION OF REMARKS

# HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. LIBONATI. Mr. Speaker, I have received a communication from the members of the Illinois General Assembly, enclosing a copy of Senate Resolution 19, adopted in the 71st General Assembly of the State of Illinois, relative to unemployment compensation, which would compel the various States to drastically amend their laws to conform with Federal standards.

I am, by request, presenting this resolution, which follows herewith:

SENATE RESOLUTION 19

Resolved by the Senate of the 71st Gen-

eral Assembly—
Whereas there is legislation pending in the Congress of the United States, relating unemployment compensation, which would compel the various States to drastically amend their unemployment compensation laws to conform with Federal standards: and

Whereas Illinois is firmly dedicated to the beliefs that the individual States are best qualified to determine the provisions of their unemployment compensation statutes based upon the economic conditions of the States and the needs of their citizens; and

Whereas the Illinois General Assembly, over the years, has made amendments to the Illinois Unemployment Compensation Act through mutual agreement of a tripartite board which has provided for equitable treatment of employees and employers and the general assembly is now in session considering further improvements in its unemployment compensation program; and

Whereas the Illinois General Assembly recently enacted legislation to pay extended benefits independently of Federal action and without the use of Federal funds: Now, therefore, be it

Resolved by the Illinois State Senate, That it opposes Federal legislation which would compel the various States to provide minimum unemployment compensation standards in conformity with Federal laws, thus depriving the Illinois General Assembly of its rightful authority and responsibility in such matters; and be it further

Resolved, That a copy of this resolution be sent by the secretary of state to the President of the United States; Secretary of Labor of the United States; Senate minority leader, EVERETT McKINLEY DIRKSEN; Senator Paul H. Douglas, and all Members of the U.S. House of Representatives from Illinois.

Adopted by the senate, March 25, 1959.

JOHN WM. CHAPMAN,

President of the Senate. EDWARD E. FERNANDES, Secretary of the Senate.

# The Administration's Ultimatum on Highway Funds

EXTENSION OF REMARKS

## HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. KARTH. Mr. Speaker, on June 12 of this year I sent a letter to Mr. Bertram Tallamy, Federal Highway Administrator, informing him of the urgency in apportioning regluar Federal aid funds for State highway programs.

I also informed him that Minnesota has obligated all of the 1960 ABC funds and is depending on the regular apportionment of 1961 ABC funds at a very early date in order to continue Minnesota's regular Federal Aid highway construction program.

Just how important ABC funds are to the State of Minnesota's highway construction program can be shown by the following letter:

Re Federal highway financing. Hon. Joseph E. Karth House of Representatives, Washington, D.C.

DEAR MR. KARTH: The apportionment of Federal aid for highways is a matter of vital concern to the State of Minnesota, particularly for the so-called ABC categories,

which apply to construction on the primary. secondary, and urban systems. Our unobli gated balances in these particular funds are practically exhausted.

Provided that Federal aid for the fiscal year 1961 had been apportioned in time. Minnesota would proceed with construction on the basis of the following schedule of lettings:

Letting date	Total cost	Federal aid required		
		Primary	Second- ary	Urban
July 24 Aug. 21 Sept. 18 Oct. 16	2, 600, 000	2, 250, 000 1, 100, 000	SECTION SECTION	230, 000
Total	19,860,000	7, 850, 000	1, 200, 000	880,000

Since apportionent of Federal aid for the fiscal year 1961 has not been made, it will be necessary for the Minnesota Department of Highways to eliminate all projects on the primary system, amounting to \$7,200,000 from our letting schedule for July 24, 1959.

We wish to emphasize that delay and post-ponement of projects included in the above schedule, is bound to have serious adverse effects on the State's economy. Your active support in expediting legislation pertaining to Federal highway aids, will be important to our State in providing employment, before the construction season comes to an end.

Yours very truly, FRANK D. MARZITELLI, Deputy Commissioner of Highways.

Mr. Speaker, on June 18, I received a reply to my letter to Mr. Tallamy from Mr. Ellis L. Armstrong, Commissioner of Public Roads. I was, frankly, shocked that a responsible public official should write such a letter. Because of the seri-ousness of the implications of this letter, I am including it here for every Member of Congress to read:

Hon. JOSEPH E. KARTH, House of Representatives, Washington, D.C.

DEAR MR. KARTH: I have received your let-ter of June 12, addressed to Mr. B. D. Tallamy, relative to Minnesota's need for any early apportionment of the ABC funds authorized for the fiscal year 1961. These funds are required to be apportioned on or before January 1, 1960, and the apportionment will be made as far in advance of this date as is practicable in the light of congressional action needed to provide additional revenues in the Highway Trust Fund.

The ABC funds have first call on the revenues available in the Highway Trust Fund. and the ABC funds authorized for the fiscal year 1961 will be apportioned in full. It is not expected the apportionment will be made. however, until after the Congress has taken action on the President's recommendation in the 1960 Budget Document for a temporary increase in motor fuel taxes from 3 cents to  $4\frac{1}{2}$  cents per gallon during the fiscal years 1960 through 1964. The need for additional revenue in the Highway Trust Fund at this time is explained in the enclosed statement entitled "Financing the Federal-Aid Highway Program."

We appreciate your concern in this matter, and you may be sure that the ABC funds will be apportioned to the States at the earliest possible date consistent with the enactment of legislation to provide revenues needed in the Highway Trust Fund.

Please advise if I can be of further assistance to you on Federal-aid highway matters.

Sincerely yours, ELLIS L. ARMSTRONG, Commissioner of Public Roads, Department of Commerce, Washington, D.C.

This Congress has already authorized the funds to make the ABC payments. The Bureau of Public Roads knows that ABC funds have been apportioned. They admit that it is important that these funds be apportioned at an early date so as not to jeopardize State highway building programs.

Last Friday, the distinguished chair-man of the Committee on Ways and Means said:

In effect, the President is giving the Congress an ultimatum that we either agree to handle the financing of the highway building program as he recommends or he will considerably reduce and ultimately stop the construction of the Interstate System.

It is my considered judgment that if such a result is made to flow from a decision of this Congress not to levy increased taxes on the American people, the responsibility for termination of the highway program must rest directly on the President and his administration because of his insistence that a solution can be found only by increasing the gasoline tax. There are alternative approaches to the handling of the immediate problems relative to the Highway Trust Fund which are preferable to an increase of 11/4 cents in the Federal gasoline tax at this time. The President and the administration have evidently taken a position that if things are not done precisely their way, they will terminate the whole program. If the program is terminated under these circumstances the responsibility is on the President.

If, as the Commissioner of Public Road's letter implies, ABC Federalaid highway funds are not being apportioned on the basis of pressuring the Congress to accept the administration's proposal for financing the Interstate Highway program, I personally believe it is the ultimate of irresponsibility in government.

The following telegram I received on last Friday clearly indicates, I believe, just how the people of Minnesota feel about an increase in Federal gasoline taxes:

Representative Joseph Karth, House Office Building, Washington, D.C.:

We urgently request you to give earnest consideration to vote for the elimination of the 10-percent travel excise tax and to kill any boost in the Federal gasoline tax.

A poll conducted among our 136,000 AAA families in Minnesota early this year showed they are overwhelming opposed to further increases in the Federal gasoline tax. This area of taxation belongs to the State for their own desperate highway needs. The 10 percent on passenger travel and telephone communication should receive your personal disapproval.

It doesn't make sense to allow diversion from the highway trust fund for other uses and at the same time increase the highways users taxes for highway purposes to make up for the diversion losses.

We would appreciate your letting us know your attitude in these matters.

MINNESOTA STATE AUTOMOBILE ASSOCIATION. E. RAY CORY, President.

The Federal-Aid Highway Act

EXTENSION OF REMARKS

### HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. LIBONATI. Mr. Speaker, I am in receipt of a communication from the members of the 71st General Assembly of the State of Illinois, enclosing a copy of Senate Resolution 57, adopted in the 71st session, relative to the Federal-Aid Highway Act of 1956, to provide for the early completion of the National System of Interstate and Defense Highways, to meet the needs of local and interstate commerce, the national and civil defense. It is in the national interest to provide for the early completion of these interstate and defense highways. This program has, by the Congress, committed the Federal Government to a program of constructing the national system and also sets forth, by authorized appropriations, for 13 years in the 1956 act, making subsequent appropriations therefor. The State of Illinois has proceeded, at a great expense, to enlarge their facilities to accomplish this task within the time limit set by Congress, and the State of Illinois has been joined in this effort by components of the highway construction industry, consisting of labor, contractors, material producers, and equipment manufacturers. After 3 years of intense effort, the State and the many components of the highway industry have reached a point where the program is being executed expeditiously and economically, and have carried out the provisions to the letter. It has come to the attention of the Illinois State Senate that no provision has been enacted by Congress for financing the apportionment of Federal interstate funds, authorized for the fiscal year of 1961.

At this late date, the State of Illinois only has 2 months in which to award contracts for interstate construction. otherwise the program necessitates suspension after September 1959. It will have a terrific economic impact and create disastrous results to the components of the highway construction industry, consisting of labor, contractors, material producers, and equipment manufacturers, who have enlarged their facilities to accomplish this program. It will cause widespread unemployment.

We beg that this interruption be cured by proper legislation thereon.

I am in full accord with this resolution, which follows herewith:

SENATE RESOLUTION 57

Whereas it was declared by the Congress in the Federal-Aid Highway Act of 1956, to be essential in the national interest to provide for the early completion of the National System of Interstate and Defense Highways, to meet the needs of local and interstate commerce, the national and the civil defense;

Whereas the Congress has committed the Federal Government to the program of completing the National System of Interstate and Defense Highways by setting forth the authorizations for appropriations for a 13year period in the 1956 act and making subsequent appropriations therefor; and

Whereas the State of Illinois, along with the components of the highway construction industry, consisting of labor, contractors, material producers, and equipment manufacturers, have at great expense enlarged their facilities to accomplish the task within the time limit set by Congress; and

Whereas after 3 years of intense effort the State and the many components of the highway construction industry have reached a point where the program is being executed expeditiously and economically; and

Whereas it has come to the attention of the Sanate of the 71st General Assembly of the State of Illinois that no provision has been enacted by Congress for financing the apportionment of Federal interstate funds authorized for fiscal year 1961; and

Whereas if no apportionment of Federal interstate funds for the fiscal year 1961 is made within the next 2 months the award of contracts for interstate construction in Illinois will be suspended after September 14. 1959: and

Whereas the economic impact of the suspension of contract awards will be disastrous to the components of the highway construction industry consisting of labor, contractors, material producers, and equipment manu-facturers, who have enlarged their facilities

to accomplish the program; and
Whereas the interruption of the program will result in delaying the completion of this vitally necessary System of Interstate and Defense Highways, and will also result in widespread unemployment; Now, therefore,

be it Resolved by the Senate of the 71st General Assembly of the State of Illinois, That the 86th Congress of the United States be respectfully requested and urged to take the steps necessary to insure the continuation of the program for constructing the Na-tional System of Interstate and Defense Highways without interruption and without stretchout; and be it further

Resolved, That the secretary of state is directed to send a copy of this preamble and resolution to each of the Members from Illinois in the Senate and House of Represents tives in Congress of the United States.

Adopted by the senate, June 24, 1959. ARTHUR J. BIDWILL, President pro tempore of the Senats. EDWARD E. FERNANDES, Sccretary of the Senate.

South Dakota Science Essay Winner

EXTENSION OF REMARKS OF

# HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. McGOVERN. Mr. Speaker, in order to stimulate thinking on the role of science in our atomic age a contest was recently sponsored by the Northwestern Public Service Co. in their South Dakota service area for junior-senior high school students. The first place winner was Miss Mary Gugin, of Web-ster C. Dallaces ster, S. Dak. Second and third places went to Robert Pavelis, of Geddes, S. Dak., and Eva Kenton, of DeSmet, S.

Dak. The effort these young people displayed and the high quality of their thought is a satisfaction to all of us from South Dakota. They are to be con-gratulated as is the Northwestern Public Service Co. for sponsoring the contest. Under unanimous consent, I include Miss Gugin's essay in the Congressional RECORD:

THE IMPORTANCE OF SCIENCE IN OUR MODERN WORLD

The words science and modern world call to mind a very timely topic. Just what is science? What is our modern world? How are the two related?

Basically our world of today consists of three things: Man, the mind of man, and the creations of man's mind. In the past, man seemed to have complete control over his mind. his mind and the products of his mind, but as time has elapsed, the mind of man and its creations have gradually gained control of life resulting in our very complex and fast-moving world. Fundamentally this knowledge of man and its application is the knowledge and application of science. Our modern world, then, is the struggle between man and science. If there is a victor in the battle, our world will be destroyed, but if the two join hands in compromise, our world will be peaceful and prosperous.

The material comforts we Americans enjoy today, our physical well being, our protection, and our sense of security are all results of scientific research and application. things are vital to our existence, and rightly These so, but life is much more than material things. It is composed of human relationships, and only if we can enjoy the companionship of others the world over, and can be secure and peaceful with each other in our relationships, can human life be lived as it was planned to be lived by God, Himself.

The key for the development of these strong relationships among the men of nations lies in the grasp of science. This key can be used to unlock the door of better world relations or it can be used to unlock the door to world destruction.

The atom is but one example of the power of science. By the application of its fission, men of science have laid a tool before the feet of men that is capable of destroying thousands and millions of human lives and one that have been sent thousands. one that has already destroyed hundreds of lives lives. Since the first use of this atomic bomb, millions of dollars have been spent in developing more deadly weapons to protect the nations of the world and their interests. I will agree that it is very important to provide for the defense of persons and their rights, but has this reascarch become a mad race between nations for

On the other hand, the atom is capable of furthering the advancement of backward nations and developing strong nations to a higher degree. Many countries lack natural resources and are unable to compete with the rest of the world because of power short-rest. To these nations the atom is the ages. To these nations the atom in many other and wise use of the atom in many other fields is the answer. Even if the United States atomic power is vital to our future for the states ato future for our fuel resources are diminishing. Thus the task of science is more than providing for defense, and the vastness of this task is the importance of science in our

Science must not rule the world and the Science must not rule the world and the lust of men for power must not rule the world, but together man and science and God misst beginning to the control of the control o God must have dominion over all for man cannot live by bread alone nor can he live by science alone, but he must also live with the power and understanding of God and with the fellowship and understanding of

In our modern world peace and good will are the highest callings of man and science. and the task of development in science for peaceful purposes is the important role of science now and in the future.

Shouse Backs Nixon-Says Labor Dominates Democrats

EXTENSION OF REMARKS OF

# HON, RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks. I include an article which appeared in the Washington Evening Star for June 11, 1959.

It will be noted that one of the most distinguished Democrat leaders of recent years, Mr. Jouett Shouse, has taken a public stand in support of Vice President Nixon for the Presidency in 1960. The reasons cited by Mr. Shouse for his decision are of particular interest. He points to the obvious fact that certain leaders of organized labor have achieved almost unlimited power within the ranks of the Democrat Party.

To be effective and to serve the best interests of those it represents, a political party must resist domination by any one special interest group. As thinking Democrats are coming to realize, their party virtually has become the instrument by which organized labor seeks to attain its political ends.

Mr. Shouse and many others view the situation with a mounting degree of alarm, and rightfully so. The obliga-tion devolving upon the Republican Party is clear. Not only must it offer the electorate a positive alternative to the radical tendencies of the opposition, but it must also continue to take the lead in the fight for effective labor union reform legislation. I am confident of the support that our party will receive from the American people-both Republicans and perceptive Democrats alike-in these endeavors.

The article reporting on the views expressed by Mr. Shouse follows:

SHOUSE BACKS NIXON-SAYS LABOR DOMINATES DEMOCRATS

Jouett Shouse charged today that "the old Democratic Party has been stolen and absorbed by the labor forces" and said he would support Vice President Nixon for the Presidency next year.

Mr. Shouse, once a power in Democratic circles, was chairman of the Democratic National Committee from 1928 to 1932. He later broke with the Democrats and was a supporter of President Eisenhower.

In announcing his support of Mr. Nixon well in advance of the 1960 presidential convention, Mr. Shouse called on the Vice President and the Republican Party to make labor reforms the major issue in the next campaign.

### SAYS GOP CAN WIN

"If the Republican Party, and particularly the Republican nominee in 1960, have the courage to make a real and lasting issue of this situation," Mr. Shouse said, "the Republican Party can win; otherwise its possible victory is doubtful."

Mr. Shouse expressed his views in a letter to Carl L. Shipley, chairman of the Republi-can State Committee for the District of Columbia. The letter was forwarded to the Vice President.

He wrote that he was strongly in favor of Mr. Nixon's being nominated as the Republican candidate for President, and added:

"To that end I have exerted and shall contine to exert such influence as may be possible. My principal hope of any valuable contribution in this connection will lie in the attempt, in case of Mr. Nixon's nomination, to persuade Democrats of the more thoughtful stripe to vote for him.'

Mr. Shouse, who said he was not opposed to organized labor and had been its defender all his life, said Senate hearings had re-vealed the brutal, abused, and unauthorized power exercised by some union leaders.

"They have indicated," Mr. Shouse wrote, "a helplessness and a listlessness on the part of the Federal Government to deal promptly and properly with a situation which is a disgrace to our country."

### SAYS LABOR CRACKS WHIP

Mr. Shouse said the Democratic Party no longer can call its soul its own and added: "It is owned in its entirety. Walter Reuther et al., crack the whip and make the self-designated leaders of the party respond. We cannot have two labor parties in this country. Unless the Republican Party has the courage to take a firm stand and the determination to continue that stand, we shall see inevitably an increased control of the Government by labor under the usurped name of the once proud Democratic Party."

# Matthew Wysocki, Plains, Pa., Youngster, New U.S. Marble Champ

EXTENSION OF REMARKS

# HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. FLOOD. Mr. Speaker, it gives me great pleasure to announce that the newly crowned national marbles champion is a 13-year-old constitutent of mine, Matthew Wysocki, of Plains, a community adjacent to Wilkes-Barre.

To be first in a communitywide, regional or State competition is certainly a proud distinction, but to come out the very best in national competition is, indeed, an occasion for great rejoicing and calls for proper recognition in the annals of the Congress.

There is a moral and lesson to be learned from this youngster's great accomplishment. As the Wilkes-Barre Times Leader noted in a lead editorial in its edition of Saturday, June 27, 1959, this year was Matthew's third try for national honors and even in last week's competition held at Asbury Park, N.J., he had to come from behind to win the coveted national championship. A mark of a true champion, indeed.

Therefore, Mr. Speaker, I wish to take this occasion to warmly congratulate the new national champion for his spirit, determination, and perseverence and wish him such success in the endeavors

which which he will undertake in the years that are ahead.

The indicated editorial from the Wilkes-Barre Times-Leader follows under leave to extend my remarks in the

U.S. MARBLE CHAMP: PLAINS BOY PERSEVERES AND WINS

It is a privilege for the Times-Leader, the Evening News to salute Matthew Wysocki, of Plains Township, for winning the national marbles championship at Asbury Park, N.J., yesterday. This newspaper was his sponsor in the competition.

Not many youngsters have had the distinction of being a national champ at the age of 13. To be the national marbles champ at that age or any age is not easy, for the competition is keen and interest high.

Matthew Wysocki had what it takes, the first place, it was his third bid for the title. Not the least discouraged by the setbacks he received in the past 2 years, he went to the seashore, full of determination and confidence. This time, he was not going to be denied.

He battled his way to the finals yester-day, only to lose the first two games, anything but an auspicious start in the final round. Like all true champions, he showed he had what it takes when he came through then with seven consecutive victories to win. When the chips were down, he did not despair, but rose to the challenge. That is the stuff of which champs are made.

By winning in this fashion, Matthew Wysocki taught adults as well as adolescents a lesson by his stimulating example. And we might include the community which could use more of the spirit of the Plains lad at this crucial period in its existence.

A national marbles champion today. Who knows what Matthew Wysocki will be tomor-We have high hopes for his future, if he will continue to display the same per-severance and fortitude in the years immediately ahead.

New Homes With Polluted Water

EXTENSION OF REMARKS OF

# HON. BYRON L. JCHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, I hope the experiences of three of my constituent families who live in beautiful modern homes near Denver, but have to put up with polluted, smelly water or buy or carry in fresh water, will impress those who think local communities can handle all their sewage problems without Federal assistance.

We are indebted to the Rocky Mountain News for its series on water pollution. I ask that the Appendix to the RECORD recite the fourth article by Bill Miller, discussing conditions in the Baker Water and Sanitation District: THEY LIKE THEIR HOMES-BUT THEY HATE THE WATER

(By Bill Miller)

"I thought that I would never say, I wish that winter was here to stay. But in the cold, cold days gone by, We had such good water when we were dry. Here in Perl-Mack we thought relief had come at last, But, we were wrong, alas, alas.

Now that spring has finally sprung,

I guess the well water is done. Again the smell of fish comes through,

When we draw up a glass or two. I don't drink much coffee strong and black,

I just like pure water, straight from the tap,

Denver, Denver, hear our plea,

When you draw that water line that is to be.

Don't pass us in Perl-Mack by, For with Clear Creek, we will stay so dry, Please, please, hear our cry

For water, pure clear water."

These lines may not be great poetry, but they express the feelings of Mrs. Ruby Yedo, of 7000 Zuni Street.

Mrs. Yedo and her husband, Joe, a pipefitter with Grinnell Co. of Denver, are owners of 1 of the 2,500-plus homes that make up the unincorporated Adams County area of Perl-Mack.

They like their home. But they hate the water.

Their sentiments are shared by hundreds of other families in the area.

#### GIVE UP WATER

The Yedos, unlike many other families, have given up and are drinking the tap-water supplied by the Baker Water and Sanitation District.

"Since they put the wells in, it isn't too bad." Yedo said. "It's not good. But you can get used to anything." Mr. and Mrs. William Robinson of 7089

Masey Street, however, still refuse to drink

the tapwater.

"I don't even bathe the children in it," Mrs. Robinson said, "until I add a goodly amount of bubble bath. Sometimes the water is dirtler than the kids."

Her husband is president of Denver Pre-Forming Co., a firm that makes paper milk cartons.

### PROBLEM SIMPLIFIED

"That simplifies our problem," Mrs. Robinson said. "Bill just fills up several cara tons with Denver water before he leaves the plant each night. It's not convenient, but I refuse to drink this water and I certainly won't allow the kids to touch it.'

Why?

"Because we all got sick last summer," she answered. "Not once but several times. The kids got diarrhea sometimes as often as two or three times a week. Some say the water is O. K. now, but I'll bet it won't be this summer.

"In any event, we simply refuse to risk our health or the health of the kids."

The kids are Ricky, 7; Cindy, 31/2; and

Mr. and Mrs. Marvin Dansky of 7935 Cyd Drive, have adopted much the same attitude.

"We and our children experienced several illnesses last summer," Mrs. Dansky said. "We stopped drinking the water. We have been O. K. since."

#### EXPENSIVE SOLUTION

They found a rather expensive solution to their drinking water problem. Each week Mrs. Dansky drives to downtown Danver and purchases three cases of distilled water from a private company.

"It costs us 90 cents a case plus deposits on the bottles," Mrs. Dansky said. "Of course, there is gas and oil and wear on the car. But we think it's worth it.

"The only time we really get sore is when we receive our monthly water bill from Baker. And that amounts to pretty expensive irrigation and bath water-that's about all we use it for."

Dansky, a Denver attorney, and his wife, have been active, as have the Robinsons and Yedos, in community affairs since joining the community.

These three families are not unique in Perl-Mack. Many hundreds of others have the same problems. Many of them spent hundreds of dollars purchasing and installing various devices in an effort to purify their drinking water.

Their stories graphically illustrate the need for cooperation in cleaning up Clear Creek, a major source of water for thousands

of families.

#### DISTRICT TRYING

The Baker District, which supplies most Ferl-Mack families with water, is attempting to solve the problem.

But the district draws its waterthat is contaminated by sewage dumped into it by ustream users from Clear Creek.

The district is supplementing its water supply by digging wells, 600 to 800 feet deep-At a recent board meeting, the district accepted a bid for two additional wells.

The digging of wells, constructing pump-

houses, etc., is an expensive business.
In April, the Baker District called a meeting of all Clear Creek water users in an attempt to solve the pollution problem.

State health department representatives were present.

#### AGREEMENT

They agreed the stream should be cleaned np. But, they stressed, Baker District has the responsibility of providing "only safe and palatable water to your people."

Among the several recommendations the State made to Baker were these: Obtain more ground water; obtain more finished water from Denver; obtain better quality raw water; improve treatment at the present plant.

The district is obtaining more ground water by digging wells; it has, time after time, begged Denver for "finished water" but has been turned down because it is, for the most part, outside the Blue Line. and is trying to obtain better quality raw water.

The district also is trying to improve its treatment processes at its plant. But it's a difficult job to treat water that is sometimes

While even one family, in Perl-Mack of elsewhere, has to drink this type of water, the Metropolitan Denver area can be sure of one thing:

It is not doing an adequate job of collect. ing, treating, and disposing of sewage.

Because sewage and its disposal has a direct bearing on someone's drinking water.

And that someone usually lives down stream.

An Author Looks at Ilis Bill-The White House Conference on Aging Act

> EXTENSION OF REMARKS OF

# HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address which I delivered at the Third New England Conference on the Aging. University of Rhode Island, June 16,

AN AUTHOR LOOKS AT HIS BILL-THE WHITE House Conference on Aging Act

Ladies and gentlemen of New England, you all know that the older population of the country and particularly that of New England is grown. England is growing rapidly. Life expectancy is being extended far beyond the expectations of the scientists of even a generation ago. I wish I could stand before you and say that the years we have added to life are satisfying years to all. Unfortunately, I cannot.

From my position in the Congress I have been able to support and expedite a good deal of legislation which has helped to improve the health, welfare, income, and housing of our older people. We have accomplished a great deal over the past 10, 15, 20 years. Yet, we have a long way to go.

In spite of our social security and pension programs, it is reported that fully half of our older people do not have enough income to live at a minimum level of health and decency. We are making great strides in medical research. Yet, three-fourths of our older people are suffering from one and often two or more long-term illnesses or disabling conditions and that many of them are in desperate need of medical care. Poor health accounts for more than half of all retirement from work.

In the matter of housing, the circumstances are almost as tragic as those I have lust mentioned. A few years ago our Rhode Island Commission on Aging made a survey of the situation of older people. One-third of them have no central heating in their homes. And more than one-fourth are living in homes that are either dilapidated or without elementary sanitary facilities.

My friends, I know that many of our older people are here today. They could speak much more eloquently than I of the conditions under which they are trying to get along.

I say to all of you that we must do better. We know that much of the deprivation and illness among our older people today is unnecessary. We know that thousands who are vegetating in mental hospitals, infirmaries, and nursing homes could be living in the community if medical care and rehabilitation were available to them. In Rhode Island, in Massachusetts, and in Connecticut there are public housing programs for older people who are setting models for the whole ccuntry.

We can provide a better life for older people. Our economy is growing even more rapidly than the older population. Automation is giving us more and more goods and services and higher incomes with less and less expenditure of effort. It is said that the standard of living for the whole population will be increased by a half during the next 10 or 15 years. We must learn how to share this increase with those who have retired; they are our neighbors, our friends, indeed, many of them are our relatives. They helped produce this growing wealth; surely they are entitled to share in it.

Ladies and gentlemen, a year and a half ago, I decided that what we need is action. In many places around the country, States this matter and are improving the conditions of living for their older people. There are many examples of fine programs in our New England States. Most of what is being done is excellent. The trouble is that there is not enough of it; that, it is moving too slowly. I am very much afraid that our efforts are not increasing as rapidly as the older population itself.

I believe that more people in our communities need to know about the problems of aging. More people need to become concerned. More need to be convinced that we must act and act now.

This is the reason, these are some of the circumstances, that led me to introduce a bill for a White House Conference on Aging. It seemed to me that if we could stimulate a problems and the need we might get the whole country moving.

Apparently there were others who thought so, too. I received a good many letters from all parts of the country and many other members of the Congress received letters urging that we pass the bill. And I am happy to say that we did pass it during the closing weeks of the session last summer.

Since its passage, the White House Conference on Aging Act has attracted much attention and favorable comment. It is widely regarded as a clear reflection of the conviction of the Congress of the pressing need for broad-scale, stepped-up action on behalf of our mounting population of middle-aged and older citizens.

Included in the act is a broad statement of the purposes of the White House conference. The act states that it is "the policy of the Congress that the Federal Government shall work jointly with the States and their citizens to develop recommendations and plans for action \* \* \* which will serve the purposes of—

"(1) Assuring middle-aged and older persons equal opportunity with others to engage in gainful employment which they are capable of performing, gaining for our economy the benefits of their skills, experience, and productive capacities; and

"(2) Enabling retired persons to enjoy income sufficient for health and for participation in family and community life as selfrespecting citizens; and

"(3) Providing housing suited to the needs of older persons and at prices they can afford to pay; and

"(4) Assisting middle-aged and older persons to make the preparation, develop skills and interests, and find social contacts which will make the gift of added years of life a period of reward and satisfaction and avoid unnecessary social costs of premature deterioration and disability; and

"(5) Stepping up research designed to relieve old age of its burdens of sickness, mental breakdown, and social ostracism."

These are the objectives of the White House Conference on Aging Act. I hope very much that we shall begin to achieve them while they can still be meaningful to the present generation of older citizens.

Now, let me tell you something about how this legislation is being put into effect, about how we expect to get results. The Department of Health, Education, and Welfare, and its predecessor the Federal Security Agency, has had a wealth of experience in this field of the aging population. Therefore, responsibility for organizing and conducting this Conference was assigned to the Secretary of Health, Education, and Welfare. He is being aided by a national advisory committee composed of recognized leaders in gerontology and in the fields of economics, education, health, housing, recreation, religion, and welfare, and distinguished citizens in public life. These individuals on the Advisory Committee have a vitally important to play in relation to the Conference, and I understand that Mr. Fitch, staff director of the Conference, will be telling you more about the Committee and its first meeting last week. You will be interested to know that the average age of the Advisory Committee members is close to 60, with a number being well into the eighties. I certainly hope that older people, with their wisdom and personal concern, will be closely involved in all the State and local activities in relation to the White House Conference. I think you may wish to know, too, that 11 of the members of this Advisory Committee represent our New England States.

My colleagues and I in the Congress were convinced that the aims and objectives of the White House Conference Act could not be achieved merely by having a big meeting in Washington in January 1961. States and

communities have a most significant part in this total national effort, and the legislation provides for their participation.

The act authorized grants of from \$5,000 to \$15,000 per State to carry out their responsibilities, which include the conduct of one or more statewide conferences prior to 1961 and the development of facts and recommendations about their older people, which are to be reported to the Secretary of Health, Education, and Welfare. Funds not used for these purposes may be allocated to help pay for the expenses of the State's delegation to the White House Conference itself. These funds are available now and several States have already asked for their share.

It is obvious that States cannot hope to do an effective job of preparing for this conference without the maximum possible involvement of individuals and organizations, governmental and voluntary, at the local and State levels.

During my years in Congress I have had a part in the enactment of many pieces of legislation. Some of them have not always lived up to our expectations, and with others the results have been a long time becoming evident. This is assuredly not the case with Public Law 85-908, the White House Conference on Aging Act.

There has been an immediate response to this law, and this naturally served to reinforce my already strong conviction about its wisdom and timeliness. Organizations and individuals began at once to express their interest, and I understand that the Department of Health, Education, and Welfare was deluged with offers of help and with requests for information as to how groups and people could start mobilizing their own resources in relation to the conference.

Let me give you a few instances. The National Committee on the Aging of the National Social Welfare Assembly named a liaison committee to work with the Department of Health, Education, and Welfare in relation to the conference. The American Public Welfare Association is naming a similar committee. The National Tuberculosis Association promptly informed its State and local affiliates and urged them to participate to the fullest possible extent in the preparatory activities. The National Council of Churches has circularized all the local councils with information about the conference and has urged its 40 affiliated denominations to offer their total resources in helping to establish stronger State and local programs and to take part in the White House conference planning. The Joint Council to Improve the Health Care of the Aged, whose first annual meeting I addressed last Friday. has as one of its major objectives the stimulation of greater interest in the White House Conference on Aging.

Response from the States was equally swift and gratifying. In a number of State legislatures the White House Conference Act. and the need for coordinated State action to implement its provisions, was the major argument used in favor of creation of an official commission or committee on aging. In others the act served to give new life to groups which were lacking purpose or needed stimulation. There are now 38 of these official State coordinating agencies in aging, and it is especially significant that some of them are now getting more adequate financial support than they ever did in the past. I am glad to know that all but one of the States in our New England region have a statewide coordinating council or committee. For reasons of both our own obvious need and for pride of leadership, I hope that we shall continue to find ourselves in the front rank. The prospect of Federal grants to the States for White House Conference purposes

is serving-as was hoped-to prime the pump at the State level. But much more of this financial support provided by the States themselves will be required in order to fully carry out the State and local activities which

I regard as so essential.

One of the State conferences on aging has already been held, and many others are now being planned. Efforts are underway in many States and localities to survey the needs of their older people and to assess the adequacy of present programs and resources. Demonstration projects of one sort or another are being set up so that they can be evaluated by the time of the 1961 conference. State and local leaders will get additional stimulation and concrete help next week through participation in the National Leadership Training Institute which the conference staff is conducting at Ann Arbor, Mich.

It is an encouraging feeling to be able to review the progress which has been made as the result of a piece of legislation in which I was so vitally interested. But this progress only scratches the surface. We still have a long way to go to achieve the objectives of the White House Conference on Aging Act. More special commissions and committees need to be established in the States and localities; more organizations and agencies need to be involved; more civic leaders and plain everyday citizens need to be stirred up about aging; more money needs to be ex-pended at all levels of Government and through voluntary sources. I am confident, however, that the big movement has been started, triggered by the

White House Conference on Aging Act, and the Nation is now rolling up its sleeves to tackle this challenge. Together—at the National, State, and local levels—we can rise to this challenge and assure a better way of life for our older people in whose behalf the

act was passed.

Heroic Milkman Honored

EXTENSION OF REMARKS

# HON. WILLIAM T. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. MURPHY. Mr. Speaker, under leave to extend my remarks, I wish to include an article which appeared in the June 10 issue of the Southtown Economist, honoring Casimir Janik, a resident of my congressional district, on the heroic deed he performed on that fateful day last December in the School of Our Lady of the Angels, where 94 innocent schoolchildren perished by fire:

CASIMIR JANIK RECEIVES THE PASTEUR GOLD MEDAL FOR HEROISM FROM THE MILK INDUS-TRY FOUNDATION, PRESENTED BY VICE PRESI-DENT RICHARD NIXON, FOR HIS DISREGARD OF SELF IN THE RESCUE OF 10 CHILDREN IN THE TRAGIC FIRE AT OUR LADY OF THE ANGELS SCHOOL LAST DECEMBER

Casimir Janik, 38, the milkman who helped keep the tragic death toll down to 94 in the Our Lady of the Angeles School fire last December, has been given his industry's highest honor.

Milkmen, who are usually working as others are winding up their sleep, often perform heroic acts of lifesaving.

But Casimir Janik did a king-size job.

Janik, who lives with his wife and two children, Frank, 14, and Victoria, 5, at 6314 S. Wood Street, was en route home that fateful day, driving south in Hamilin Avenue, approaching Our Lady of the Angels School. He saw smoke. Children were running.

Others were screaming.

He saw children at the upper windows, calling for help. He ran up the stairs past the nuns who were bringing the first children down.

More children were following in disorder. One, a little girl about 10 or 11, was clutching the bannister, frozen in panic, keeping others from getting down.

Janik jerked her hands away from the rall and rushed her downstairs to safety.

Rushing back upstairs, he was stopped at landing by heat and smoke, and more youngsters on the floor, some of whom were burned.

Carrying two to three children each trip, he was removing the 10th child, a badly burned girl about 12, when he saw firemen arrive and felt it best for them to take

He carried his little burden to a waiting ambulance and left the scene, nervous and trembling, to make his way home.

Janik, an oarsman on a Navy destroyer in World War II, had seen sea battles and sea rescues, but he said nothing had ever touched him like the tots at Our Lady of the Angels.

### Policy Statement of Caterpillar Tractor Co. on Interstate Highway Program

EXTENSION OF REMARKS OF

# HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. MICHEL. Mr. Speaker, today we are facing a critical situation relative to the future progress of the interstate highway construction program. The trust fund into which flows the 1-cent per gallon increase in Federal gasoline tax enacted in 1956 to finance this program will be depleted and in arears to the tune of \$241 million by the end of fiscal year 1960.

The President has requested an addi-tional cent and a half increase in the Federal gasoline tax to get the program back on a pay-as-we-go basis. The Congress has been reluctant to grant the increase so we are in the position where we must either appropriate directly out of general revenues and throw the budget out of balance, raise the needed funds from some other revenue raising measure or cut back on the program.

Whatever course of action is pursued, millions of Americans will be affected. Some more than others. I should like, Mr. Speaker, at this point to bring to the attention of the House the policy statement of the Caterpillar Tractor Co. which has a very vital interest in the highway construction program by virtue of the fine tractors and heavy earthmoving machinery it manufactures.

One might expect a company so vitally affected to take a selfish view and urge completion of the program on schedule regardless of cost and regardless of any ill effect it may have on the budget. I am happy to note that this policy statement of Caterpillar gives overriding consideration to the national interest first by stating that "Deficit financing, either directly through overextension of the highway fund, or indirectly through depletion of the general fund, is to be avoided."

In conclusion, Mr. Speaker, every Member of Congress should ponder the warning raised in the third paragraph relative to the need for continuity and the wastes resulting from costly starts and stops in the program. The policy statement reads as follows:

Pursuant to a review of the status of the Interstate Defense Highway System and of pertinent legislative proposals as of this date, the position of Caterpillar Tractor Co. is as follows:

We believe that the development and control of major cross-country highway systems is a proper area for Federal legislation. Heavily traveled highways are built primarily as arteries for the long-distance flow of traffic. The localized use of such roads-and the ability of given localities to finance their construction—are not normally among pri-mary governing factors. Coordination of a highway system that crosses and connects the several States requires Federal participa-tion. This principle has been recognized by almost 40 years of Federal highway legisla-

2. We believe, as we have since passage of the 1956 enabling legislation, that the Interstate Defense Highway System is a sound investment for the Nation; in terms of lives saved and accidents avoided; substantial savings in rebiding ings in vehicle operating costs; convenience and comfort in travel; encouragement to industrial and residential development; and increased mobility for defense purposes. There are few, if any, programs that offer as much value in return for taxpayers' dollars.

3. We believe that continuity programs.

3. We believe that continuity is urgently required in planning and building the interstate System. Programs, once started, should be reflected in steady, consistent progress rather than the consistent progress rather tha progress, rather than in a wasteful succession of starts and stops. The various highway departments, contractors, material sup pliers and equipment manufacturers should know well in advance what is expected of them, within broad general limits. They should not be led to believe that one rate of construction will prevail \* \* \* and then discover that something and the state of the something and t discover that something entirely different is the case. Such is not only unfair \* is also manifestly expensive and wasteful of highway funds.

4. We believe that planning should be long range in respect to financing as it is to construction. Deficit financing as it is is construction. Deficit financing, either directly through overextension of the Highway Fund, or indirectly through depletion of the General Fund, is to be avoided.

5. We believe the general public—and the highway user in particular—is enthusiastic about the Interstate System \* \* and further, that it would be more willing to pro-

ther, that it would be more willing to provide the additional revenues required to support the pay-as-you-go principle than to add to the threat of further inflation with deficit financing.

The Dangers of Socialized Medicine

EXTENSION OF REMARKS OF

# HON. DALE ALFORD

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. ALFORD. Mr. Speaker, under leave to extend my remarks I include an address which I had the honor and privilege of delivering at the Arkansas breakfast on the opening day of the annual meeting of the American Medical Association, Atlantic City, N.J., June 8, 1959. This invitation was extended by Dr. James Kolb, president of the Arkansas Medical Society, and Dr. R. B. Robins, past president of the American Academy of General Practice and member of the board of trustees of the American Medical Association. The address follows:

THE DANGERS OF SOCIALIZED MEDICINE

There is, perhaps, no subject about which there is more discussion than the various proposals for so-called health insurance. Sometimes they are presented as a brandnew idea for achieving a utopian state. Actually, of course, we know that systems of so-called national health insurance date back to ancient history. In the United States these proposals began as early as 1812. The most recent proposal for compulsory health insurance is for the age group over 65 who are social security recipients. This is the Porand bill, with which I am sure you are all familiar.

You will notice that these proposals are never described as socialized medicine. Perhaps its proponents believe that if we do not call it socialized medicine, then, in fact it will not be socialized medicine. This reminds me very much of the ostrich burying his head beneath the sand when an un-pleasant problem or a danger seems imminent. And if we accept any plan of socialized medicine to solve our problem, if we bury our head beneath such a political panacea, we may as well expect to keep our heads buried, for that is one part of our anatomy that will be of less and less use. We can just sit back and let the Government take care of us, and give us seucrity; but we must be very careful to keep our heads covered, because if we should ever take a good look at our "security" we might begin to see the bindings and fetters. Incidentally, it might also be wise to include the cost of prefrontal lobotomies in the compulsory health insurance, as this might be the only remedy for those of us who would persist in the insanity of thinking in terms of individual rights and freedoms or questioning the merits of the new role of our Government as brother and keeper.

However, before we bury our heads, let us first look directly at our problem. I think we all agree that medical care should be available to everyone. We know that there are segments of our population who cannot afford adequate medical care. I think we agree that we must not, nor do we intend to, ignore the needs of those elderly and low income groups who cannot afford medical care. We should and we will find a solution to our problem.

Let us also define socialized medicine. A simple definition is that it is a Government-operated system of providing medical care. All legislation which has been introduced in our country for remedying our problem is, then, by this definition, socialized medicine. All such proposals call for some degree of Government control—some more and some less than others. You doctors have diligent and articulate in calling a spade by

Now, we do not have to conjecture about the nature of socialized medicine. We have at our fingertips very adequate documentation of the contents of the Pandora's box we would open if we should accept any deplete of socialized medicine. We know that, historically, the beginning of socialized medicine is associated with despotism. As

early as the Roman Empire, medical care was furnished by Greek slaves who were trained in the medical profession and sold to wealthy households. The poorer people depended on the services of quacks who roamed the country drumming up business. Doctors were not respected. They were even exploited by their own countrymen, for it was their own countrymen who trained them and then sold them to the Romans. It is noted by Jacob Burckhardt in his "The Age of Constantine the Great" that the whole system of Roman government resulted in an unexampled rise in taxation. The system rested on the principle of dispensing demestic wealth through political channels without regard to productivity. Eventually the number of those who received far exceeded the number of those who paid. Such a system thrived on high taxation. It collapsed when the sources of taxation dried

In more recent times we have the examples of Bismarck, Lenin, Stalin, Hitler, and Mussolini, among othrs, who used government provision of health care as a political power, incorporating socialized medicine as an integral part of their totalitarian, welfare states. And we should give the Devil his due: even Satan was smart enough to offer the Lord all worldly security in return for His soul. As modern dictators used it, the control of medical care by the government provided them with another economic means of enslaving a nation of people who had allowed themselves to become so dependent upon the machinery of government that, in turn, they became helpless and could not wrest themselves free of the "socialized" octopus that bound them. Socialized medicine in origin and in practice is associated with a way of life completely alien and repulsive of Americans. Most of us intuitively recoil at the term "socialized medicine," as well we should, unless we are willing to give our souls in return for security.

Let us consider also the dollar cost of such a free medical care system. Americans today are spending approximately \$11 billion on medical and health needs, yet the estimates of a government-run program range anywhere from \$16 to \$23 billion. total income tax in the United States vields about \$39 billion a year, so that approximately one-half of this would cover the cost of a nationwide system of compulsory health insurance. The estimates of the cost of the Forand bill, which would cover only those who are eligible for old-age and survivors insurance benefits, indicate an increase of three-fourths of 1 percent in the social security tax, split 50-50 between employers and employees. This latter provision would cover all those people age over who were receiving social security benefits, regardless of their need for help with hospitalization and surgery costs.

It has been found that almost none of the compulsory health systems are self-supporting—that is, none are completely supported by payroll deductions or any single form of tax, but that there are hidden subsidies and, in many instances, notably in France, the system must be maintained in part by charity. In France, large firms take over much of the clerical work inherent in the free care system; local authorities and charitable organizations contribute to the cost of hospitalization, since the French system provides payment of 80 percent of medical costs. Another subsidy is the other 20 percent, which the consumer himself pays in addition to the taxes he has already paid.

Also, consider that the bureaucracy which accompanies compulsory health insurance absorbs a higher percentage of total outlay than do similar costs in commercial health insurance. More importantly, there is no way to accurately estimate what the prob-

able total cost of any degree of socialized medicine would be. The British estimated that their system would cost 107 million pounds each year; however, in 1958 the cost of this system had soared to 705 million pounds and it is estimated that it will cost \$740 million in 1959. On the basis of others' experience, how can we remotely think it is practical to consider socialized medicine?

We have mentioned that some of the proposed legislation required governmental control to lesser degree than others. It has been pointed out by Melchior Palyi in his book, "Compulsory Medical Care and the Welfare State," that compulsory medical insurance "puts a mechanism of its own into motion." When the poor are taken care of on a charity basis, there is a means-test which provides an automatic check. When this check is gone, gone also are all pretensions that we are not socializing our system of medical care. We then have a situation much like the old adage, "people who get everything for next to nothing think next to nothing of everything they get."

We are, if we accept socialized medicine, condoning and even promoting a system which discourages any incentive to be provident, thrifty, and self-reliant. Now-even though some of the proposals for compulsory health insurance would not initially cover all segments of our population—it is the nature of such socialistic systems to grow. First it takes in new age groups or occupational classes and their dependents. All socialistic systems have this tendency. In our own country we have only to look at the similar growth of our social security program and the gradual increases in taxation necessary to keep it self-supporting. Unlike other security measures, however, compulsory health insurance, which is socialized medicine, provides gratuities in kind, i.e., "free" medical care service. To quote Mr. Palyi, "Distinct from any other field of social security legislation, governmentalized health care means direct intervention by the authorities into a large sector of business activities and private lives."

Then there is the increase in benefits and the growth of the bureaucracy which accompanies all such programs. In actuality, there are no degrees of socialized medicine. In most instances, the beginnings were small, gradually evolving into a na-tionwide system of socialized medicine. This method of socialistic evolution, common to all nations having socialized medicine, is much like creeping paralysis in that the significant factor is the presence of the disease, not the degree to which it has established itself, for each will cripple its victims in time. In Great Britain the program of socialized medicine actually began in 1912 when workers were partially covered by national health insurance plan. The philosophy of governmentalization and cheapness being synonymous is contagious. As a result, "What's good for the goose is for the gander," made the program si for the gander," made the program spread to include all groups. At present, approxi-mately 97 percent of the British are now included in the National Health Service.

Now, how have the doctor, the patient, and hospitals fared? What has been the result in other countries? They are all burdened by the redtape typical of bureaucratic operations. The doctor's time is so taken up with filling out forms for patients requesting everything from sick leave to wigs, from hearing alds to prescriptions, that his office has become little more than a clearinghouse for clerical work and referral to specialists. The doctor's job is not so secure, either. Doctors are subject to dismissal from medical service by tribunals appointed under the National Health Service Act. Only one of the three members of the tribunal is a medical man. They, therefore, become subservient to their patients who

may make complaints to the tribunal about the quality of service or even the doctor's refusal to grant them a sick leave permit, It is, therefore, much easier for the doctor to give the patient what he wants, regardless of whether his state of health warrants it.

To make a net income of around \$4,000 a year, a doctor in Britain under the National Health Service needs approximately 3,000 registered patients and superhuman strength to take care of that number—which is almost 2,000 too many. A private practice is almost a thing of the past. The doctor has so little time for private patients (and there are very few doctors who have any private practice left) that the cost to those very few is very high. There is no reward coming to a doctor for the quality of his work, as his remuneration is not based on his effort skill or inventiveness but on the number of patients registered with him. According to a recent article in U.S. News & World Report, about 20,000 family doctors were threatening to pull out of the whole setup and go back to private practice unless the Government gave them a 24-percent increase in fees. At the present time they re-ceive an annual fee of about \$2.45 per patient, no matter how many visits are in-

Another complaint is that the system is killing the general practitioner's interest in medical advances since he must send all unusual cases to specialists who are the only ones who have access to hospital facilities in their practice. The specialists are paid on a salary scale ranging from \$5,040 to \$3,600 a year. As one British doctor phrased it, "could any system of payment be more utterly absurd than the present one which rewards more work with less pay."

How does the patient come out in the conveyor-belt dispensing of medical care? After all, we are concerned literally with life and death. I would like to quote from an article written by a British general practitioner. "Of some 40 or 50 people seen during the course of a morning, there may be one or two suffering from some serious organic disease. Of the remainder, there will be some half dozen with injuries of various sorts, ranging from a Colles' fracture to a scratch so small that it can hardly be seen without a magnifying glass. There will be a dozen patients coughs and colds and the rheumatic complaints so common in this part of the world. There will be at least 10 persons suffering from psychiatric disorders, usually of a minor degree. The remainder will be peo-ple who require a certificate—certificates for extra milk, certificates to have an eye test. certificates to draw money from a NHI office. 'I haven't quite got over my cold yet, doctor. I think I'll have another week off work, Can I have a certificate?" The patients who are really sick must suffer through hours of wait-The really sick ones who cannot be cured with a pill or a certificate will be referred to specialists at a hospital and go through another waiting period to see another doctor.

The result is that the doctor has about 3 minutes for each patient—now that may be fine for boiling an egg, but I want a little more time with my doctor. The few minutes a doctor has to give to each patient could not possibly create the very personal rapport that underlies an effective doctor-patient relationship. This relationship, it seems, is basic to both preventive and curative medicine, especially since we have come to realize more and more how complex sickness really is and the extent to which psychological factors contribute to illness. Is this actually medical care as we recognize it? What have we gained by substituting quantity for quality? We might accept this sub-

stitution for other commodities; we can buy cheaper brands of food and yet be properly fed. There is no such quality scale in medicine—we must have the best if it is to be enough.

The tendency of socialized medicine is to dehumanize the relationship between doctor and patient, and to leave the doctor far less than adequate time for the really sick person. Those who can afford a better kind of medical care and are willing to pay twice—once privately and once to MHS—find that no amount of money can buy the best medical care, for it has ceased to exist. They simply pay to get ahead in the waiting line.

It is also the case that a new group of submarginal patients is an outgrowth of free medical care—those who cannot get what they are entitled to in place of the former group who could not nay for medical care.

group who could not pay for medical care.

The condition of hospitals was a big selling point in Great Britain for socialized medicine. Yet, to quote a recent American Medical Association publication, "Presently, the Government is investing in hospital buildings and equipment barely one-fourth of the amount measured in dollars of constant purchasing power, that charitable and other institutions were spending in 1938—in the depression—while a growing population is becoming increasingly hospital-conscious."
Only in Great Britain are women advised to request a bed in a maternity ward 12 months before their expected confinement, according to the same recent American Medical Association publication.

We are also informed by this pamphlet that hospitals are forced to economize on medicine, food, and X-ray films. And the simplest matter of acquiring an instrument which the hospital urgently needs goes to ridiculous lengths-first a detailed description of the instrument, then a statement as to whether it is to be a replacement or additional equipment must be submitted. This request must be referred through the cogs of five committees before a decision may be reached as to whether or not the request is to be granted. In summary, as regards hospital care, patient care, and the status of doctors, the system has little to offer except redtape, confusion, personal frustration, burgeoning taxes, and the substitution of quantity for quality in medical care service. After 10 years of socialized medicine in Britaln, cases of whooping cough, smallpox, and measles are far more common than they are the United States.

We in the United States have the best and highest quality of medical care in the world. We have the best doctors in the world. We have the highest wages in the world and we have developed, and are developing voluntary plans of health insurance which are designed to meet the needs of our people and to give them some choice as to the kind of health insurance is best suited to their particular situation. At present some 121 million people out of a population of some 175 million are covered by some form of voluntary health insurance. Three out of eight people over age 65 have health insurance, and the proportion of people in the United States covered by voluntary health insurance is steadily increasing, according to the May 1953 publication of the Health Information Foundation.

Why, then, should we regress to any such archaic, demoralizing, and dangerous system as socialized medicine—a system which crushes individuality. Even though the wolf is sometimes presented to us in sheep's clothing, by being described as "national health insurance," or "compulsory health insurance," let us remember the words of John Stuart Mill who said, "Whatever crushes individuality is despotism, by whatever name it may be called."

Prompt Debt Servicing and Controls Sought Over TVA by Mississippi Valley Association

EXTENSION OF REMARKS

### HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. JENSEN. Mr. Speaker, the Great Lakes division of the Mississippi Valley Association with headquarters in Chicago, Ill., released the following statement on June 22 last. I commend the association for this forthright pro-American statement. It is both timely and good.

PROMPT DEBT SERVICING AND CONTROLS
SOUGHT OVER TVA

Eighth district directors of the Mississippl Valley Association at a luncheon Friday resolved to seck public support for three provisions in pending TVA legislation.

This legislation would authorize TVA "to sell bonds, notes, and other evidences of indebtedness in an amount not to exceed at any one time \$750 million to assist in financing its power program "may use the proceeds for acquisition, enlargement, improvement, or replacement of any plant or other facility used of to be used "and for other purposes incidental thereto." The bill has passed the House and is now before a Senate committee.

The legislation which the directors believe should be a part of this bill would provide for (A) bona fide controls over this Federal agency, (B) recognition of the need for immediate servicing of TVA's debt to the Federal Government, and (C) provide effective territorial limitation to TVA's present power servicing area.

Commenting on the directors' action, H. W. Goodall, manager of the association's Great Lakes division office, said, "We believe these provisions of vital importance for the protection of private enterprise and in preserving a representative form of government Without the above safeguards, this legislation could be an opening wedge for social ism and eventually a totalitarian form of government. It was the wealth made available by private enterprise, collected, and appropriated by the Government, which created TVA. Its primary objective of rehabilitation of the area's people and water and soil re-sources has been accomplished. Further enlargement of its powers, extension of its area of eminent domain and a determent of its just obligations are a real threat to private enterprise."

Goodail continued, "It would be ironic indeed if this creation made possible by private enterprise were to be granted the means
to destroy free enterprise. The use of taxpayers' money to rehabilitate an area so that
the citizens of that area may have the
means to become self-supporting is one
thing, but legislation which would excuse
the citizens of that area from taxes borne
by others is morally wrong. TVA's debt to
the Federal Government is about 1.1 billions
of dollars without interest."

Goodall said. "The heart of the issue is Federal generation and distribution for sale of power. Low cost power is a corner stone of high living standards, but its sale by the Federal Government establishes unequal distribution of Federal taxes to the advantage of those in a Federal power servicing area.

Pallure to service TVA's debt, with Interest, is another facet of the same issue.

Unequal taxation and failure to honor Just obligations tend to corrupt society and will undermine our form of government. The lure of obtaining something for nothing is all-persuasive with mankind and a practiced medium for securing the reelection to public office. Is there anyone who believes an extension of these concepts can do other than destroy our representative form of government?

There are several solutions to this prob-First, the rates charged by TVA should be raised to repay, with interest, its debt to the Federal Government. Second, to this rate should also be added the Federal tax rate borne by privately owned utilities, or Federal taxes on private utilities should be removed. Finally, if the American people wish, the generation and distribution of Power should be all Federal, or otherwise, to quote Abraham Lincoln, 'A house divided against itself cannot stand'."

Goodall said, "The Association is opposed only to the Federal government being in the Power business."

Directors of the 8th District of the Valy Association are: Floyd Dana, Casimir Griglik, Dan Hallahan, W. Stanley Huggett, John Innes, Hjalmar W. Johnson, H. D. Kas-tlen Sona Innes, Hjalmar W. Johnson, H. D. Kastien, Ralph J. Morgan, V. A. Kogge, K. T. Levins, J. T. Moore, R. E. Mortimer, Donald O'Toole, J. H. Price, Arnold Sobel and A. H. Vall and J. R. Sona and J. Sona and J. Sona and J. R. Sona and J. So Vail, and J. J. Haines.

With the exception of Messrs. Kastien and Morgan who live in Peoria, and Mr. Mortimer in Cleveland, all others are residents of the Chicago metropolitan area.

# Panama Canal Traffic Peak

EXTENSION OF REMARKS

# HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. FLOOD. Mr. Speaker, a news story in the June 21, 1959, issue of the Star in the June 21, 1959, issue of the Star and Herald, Panama City, Republic of Panama, describes a recent transit traffic peak at the Panama Canal. Because traffic peaks are problems related to the question of increased capacity and operational improvement of the waterway now under study by a special board of consultants under the supervision of the Committee on Merchant Marine and Pisheries, under leave granted to extend my remarks, the indicated news story

RECORD BACKLOG OF 26 SHIPS BUILDS UP AT PANAMA CANAL—NO RELIEF IN SIGHT FOR JAM—19 VESSELS WILL BE CROWDED OUT OF WATERWAY TODAY

A record backlog of 26 ships—the biggest times of ordinary peacetime operation within memory of canal officials—piled up at both entrances of the waterway yesterday as the current traffic jam showed no signs of

Twelve vessels were held over at the Pacific entrance, while 14 waited their turn on the

Yesterday's figure was seven more than the backlog on Priday. With ships arriving round the clock at both Balboa and Cristobal, at least 10 at least 19 were certain to be crowded out of the waterway today. Of these, 8 are northbound and 11 are southbound.

With arrivals at a rate exceeding the Canal's current capacity, transits were at a peak. Thirty-five vessels were put through the waterway Saturday in 28 lockages. Thirty transits were scheduled for today, 13 from Balboa and 17 from Cristobal.

The traffic jam started building up last

Wednesday.

Whether it had reached its peak yesterday was uncertain. The situation will depend on arrivals over the weekend. Sixteen were at anchor outside Balboa last night. Officials, however, hoped that the backlog on the Pacific side will be cleared by tomorrow. was no such optimism as to Cristobal.

A combination of circumstances accounted for the unusual congestion. There has been a heavy arrival of ships at both ends of the Canal at a time when the east at Gatun Locks has been closed to traffic because of the power conversion work from 25 to 60 cycles. Upon the completion of the work, the west lane is scheduled to be closed for conversion. Waterfront sources speculated that the start the conversion work on the west lane might be held up to facilitate handling of the backlog of ships. Some of these sources said if the jam keeps up, 24-hour operations would be the only solution.

Another factor is the unusually heavy influx of supersized ships among arrivals in the last few days. These are the clear-cut ves-sels which because of size or other conditions cannot meet other ships in either direction while passing through Gaillard Cut. Many clear-cut craft, in addition, must go through the cut in daylight hours. The effect of such transits is to cut down the number of ships that can be handled.

Nine clear-cut vessels have transited in both directions in the last 3 days. Today's transits include three more, one of which is a daylight clear-cut supertanker.

Officials said the traffic jam is beginning to tell on the pilot force. With practically every man on overtime for 2 days running, officials were beginning to worry that there might not be enough pilots available to handle the heavy traffic if there is no letup in the arrival of ships.

# Opposition to Fair Trade Bill

EXTENSION OF REMARKS OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the RECORD a statement made by Dr. Joseph M. Klamon, professor of marketing at Washington University, St. Louis, Mo., on June 15, 1959, before the U.S. Senate Committee on Interstate and Foreign Commerce, in opposition to the so-called fair trade bill, S. 1083.

Dr. Klamon is a distinguished economist, professor of marketing in the School of Business Administration, Washington University, a member of the Maryland and Missouri bars. This outstanding educator holds a degree of doctor of philosophy in economics, master of arts and J.D. degrees from Yale University and an LL.B. from Washington University.

He has served as tutor at Yale and instructor in business policy in the Har-

vard Graduate School of Business. He has also been the chairman of the department of economics at William and Mary and served as professor of economics at Carnegie Institute of Technology. as well as having served as professor at the University of Pittsburgh.

With the rich experience derived from such a distinguished background and such thorough experience in the field of economics, law and marketing, Dr. Klamon is singularly well qualified by outstanding ability and complete knowledge of his subject to set forth the reasons why the fair trade bills pending before this Congress are not only not in the public interest but are damaging to business, large and small, and to the retailer and consumer alike.

I hope all will read the powerful arguments by Dr. Joseph M. Klamon against fair trade legislation.

STATEMENT PRESENTED ON BEHALF OF THE CONSUMERS' FEDERATION OF ST. LOUIS AND ST. LOUIS COUNTY BY DR. JOSEPH M. KLA-MON, PROFESSOR OF MARKETING, WASHING-TON UNIVERSITY, ST. LOUIS, Mo., ON JUNE 15, 16, 1959, BEFORE THE U.S. SENATE SUB-COMMITTEE. IN RE INTERSTATE AND FOREIGN COMMERCE ON THE BILL INTRODUCED IN THE SENATE, S. 1083, FEBRUARY 17, 1959, BY SENATOR HUBERT H. HUMPHREY, MINNESOTA. AND SENATOR PROXMIRE, OF WISCONSIN CONCERNING THE ENACTMENT OF A FEDERAL FAIR TRADE PRICE-FIXING BILL ON BRANDED MERCHANDISE

For the purpose of identifying myself for the record I should like to say the following: My name is Joseph M. Klamon. I live at 8007 Stanford Avenue, University City, Mo. I wish to thank the committee for permitting me to submit testimony today on the subject matter before you. I offer this statement on behalf of myself, as an individual, and also on behalf of the Consumers Federation of St. Louis and St. Louis County. For the past 30 years I have been professor of marketing in the School professor of marketing in the School of Business Administration, Washington Uni-versity, St. Louis, Mo. I am a member of the Maryland District Court Federal Bar, since January 1934, and a member of the bar in Missouri since July 21, 1921. I have served as consultant to the St. Louis Consumers Federation since its organization under the N.R.A. in 1933. I was appointed by Prof. Paul H. Douglas, now U.S. Senator from Illinois, as one of its charter members, when it was first organized under the N.R.A.

I am strongly opposed to this effort by S. 1083 to enact for the first time a Federal substantive fair trade price-flixing bill which would virtually destroy a good deal of our antitrust laws, price freedom, competitive pricing and free markets.

A central and important economic fact that proponents ignore is that costs of coing business differ markedly on all levels, manufacturing, retailing, and in all fields. Many retailers operate full service stores. We also have the giant limited service super-stores and the vast number of discount houses. This bill is an effort to force back by Federal law for the first time to compel retailers to charge higher prices than they wish to charge if a manufacturer wants them to do so. If a retailer fails to abide by such compulsory price fixing on brand goods he will then be subject to Federal and State lawsuits by manufacturers and/or allegedly adversely affected retailers who may feel they suffer damage as a result of such lower competitive prices, or who may even anticipate such damage.

In order to make my points in opposition to this bill as clear as possible I shall endeavor to use as little technical economic and legal terms as I can.

Congress of course derives its authority and control of interstate commerce from the U.S. Constitution. It has very little if any authority over purely intrastate commerce. Have we forgotten the experience of the NRA? Or are our memories that short? You may recall the NRA attempted to regulate many activities that were purely intrastate, such as the retail price of coal, chickens, pants, pressing, beauty parlor and barber shop services, and other matters that were not even remotely related to interstate commerce, In the Schecter case the U.S. Supreme Court by unanimous decision struck down as unconstitutional the NIRA on the ground that the retailing of chickens in New York City was purely intrastate commerce. Another ground for this action was the unconstitutional delegation of legislative authority by Congress to NIRA Code authorities. The point I wish to make is of considerable importance. Should Congress enact S. 1083, the bill before you, into law it should state in the clearest terms that nothing in the act shall in any way affect the right of anyone, or any retailer, to sell any merchandise, branded or otherwise, which he has purchased for any price satisfactory to himself and to his customer. My impression is that the NARD, the National Association of Retail Druggists, the lobby behind this bill, will find the foregoing suggestion rather distasteful. For I believe that the bill before you and the Oren Harris bill in the House represents an effort to induce Congress to permit the fixing of minimum prices on branded goods in Yazoo City, Miss., Flat River and Cabool, Mo., Flint, Mich., and every other smaller town or village in the country. Now, if Congress can really legislate minimum prices on branded goods in all retail trade, in all intrastate commerce, why can't it also fix

minimum wages everywhere?

Is Congress really ready at this time to destroy completely all States rights? This is not a purely rhetorical question. Is it legal or constitutional for Congress to legislate on all forms of retail pricing and intrastate commerce? Is it legal, and if so, is Congress willing to establsh a minimum wage law to cover all trade, inter- and intrastate trade as well? Would such a law have any chance of being held constitutional by the Federal

courts?

One of the gravest problems presently facing the country is that of inflation. The President has spoken often relative thereto and has warned the country of the grave danger of the shrinking buying power of the dollar. The Federal Reserve Board too is gravely concerned. It is almost impossible to pick up any newspaper or business journal without reading of the grave dangers of in-flation. The bill before you is perhaps the most inflationary bill before Congress at this time. It is conservatively estimated that if Federal fair trade price fixing is forced upon the 50 States on all branded goods, where a manufacturer wants to pursue such a policy, that it will cost consumers between \$8 and \$10 billion a year in higher prices. It is idle to pretend that S. 1083 will do anything but raise prices very sharply. Are we going to have privileged price protection and higher prices to satisfy 36,000 retail druggists, the NARD, appliance dealers, and others, or are we truly going to legislate in the public interest and show some concern about the effect of this bill upon 170 million consumers?

In a similar bill, equally bad in my judgment, introduced last year public hearings were held before the House and Senate Congress committees. On that occasion as well as this year before your committee and the Harris committee a few months ago, hearings were held and many testified. It is unreasonable to ask that the views of all witnesses be tabulated in order to secure a fair appraisal of the opinions of professional people in Government service and in various universities, those not directly interested, those without an ax to grind, in order to ascertain whether or not this bill is in the public interest?

In all of the above hearings the Department of Justice, Antitrust Division, the Federal Trade Commission, Agriculture, Commerce, Labor, Budget Bureau, and many others have gone on record in opposition to bills of this nature. This was also true more than 6 years ago when the McGuire Act was passed. Attorney General Brownell's Com-mittee of Sixty almost unanimously concluded that fair trade price fixing was definitely not in the public interest. to ignore all of the foregoing, as fair traders do, as of little value?

On page 306 of the published hearings before the Committee on Interstate and Foreign Commerce, House of Representatives, 86th Congress, 1st Session, my testimony given on Thursday, March 10, 1959, appears; on pages 295 through 306 the formal statement appears and then several questions. At this point I merely wish to call your attention to one question that was asked, and my answer thereto:

"Mr. DINGELL. May I ask a question, Mr. Chairman?

"Mr. Klamon, do you know of any reputable economist, other than Dr. Adams, from Michigan State, who favors fair trade?

"Dr. KLAMON. I do not know of a single one. I could name a hundred, all the way from Malcolm McNair of Harvard, the dean of the Yale Law School, all the way to Dean Grather, dean at California. I have asked a dozen times, in order to get the facts and not listen to this pressure, that this committee make a survey, which would not take more than 30 days, of the hundred leading law schools and the hundred leading business schools, to find out what people who are in this field, who do not have an ax to grind, feel. There is a man at Johns Hopkins University, and there are faculty members right back here. Start at Harvard and Yale, and pick your own hundred schools, business schools and law schools, and you will find that professional men who do not have an ax to grind are 100 percent against this effort to impose price fixing and repeal the law of supply and demand. You cannot do it."

Relative to the above, there are perhaps 15,000 economists throughout the country. Of these, several thousand are in the field of marketing and pricing policies. There are hundreds of law professors in the same field who approach the problem from the legal point of view. Does it not appear rather interesting that very few indeed favor fair trade whereas literally hundreds oppose it?

The press of the country is almost entirely opposed to fair trade price fixing. Fortune magazine in January of 1952 and in April of 1952 has two strong articles opposed to fair trade; this in spite of enormous pressure by fair trade lobbyists brought to bear on Time, Life, and Fortune, either to change their views or at least to kill the second article. Just one or two editorials from our St. Louis newspapers should be of interest to your committee. Less than 2 weeks ago. on June 3, 1959, the St. Louis Globe-Democrat in a two-column editorial had this to sav:

"Back Again, Fair Trade Sleeper."

Set back on his legislative heels last year, when he tried to maneuver a so-called fair trade measure through Congress, Representative OREN HARRIS, of Arkansas, is nothing daunted. No sooner was the new House hopper opened than he slipped in another fair trade bill.

Possibly he hoped it might become a

sleeper, as a like proposal almost did last year, until outery arose, and it was prop-erly smothered. The measure is an eco-nomic atrocity, reportedly sired by the 36,000-member retail druggists organization.

An identical bill has been sponsored in the Senate by Senators HUMPHREY, of Minnesota, and Proxmire, of Wisconsin. Hearings have been set for this measure on June 15 and 16, when Prof. Joseph M. Klamon, of Washington University will appear in behalf of the Consumers Federation of St. Louis and St. Louis County, opposing the scheme.
The Harris legislation seeks to establish

minimum retail prices on all merchandise except perishable foods. That means it would compel retailers to sell at prices fixed by manufacturers, under pain of Federal re-

This is an arrogant scheme for making consumers pay high prices under whip of Federal law. Such an act would be a violation of free enterprise and competition, a straitjacket for the economy. It would be sharply inflationary in a period when inflation is a graya rout. tion is a grave peril.

The Department of Justice says this kind of law would shoot prices up 28 percent on fair trade items. This would be rank

cartelization.

What Mr. Harris wants is to shunt onto Uncle Sam practices which States are fast junking, because they have found them unjust. It would be a price-fixing statute enforced upon all 50 States.

Only Missouri, Texas, Vermont, and the District of Columbia have stanchly refused to enact State fair trade laws. But 18 States in recent years have repudiated such statutes. With fair trade price fixing being discarded over much of the land, retail protection tionists are trying to foist their dead horse upon Washington and slip the Harris measure to passage.

This is a bill against the public interests. It should be killed outright. It will be if the public and Congress are alerted to its exis-

tence, its injustice, and danger.

Just about a year ago when a bill almost identical with S. 1083 was before the House Commerce Committee, the following appeared in the St. Louis Post-Dispatch and also in the St. Louis Globe-Democrat:

St. Louis Post-Dispatch, June 2, 1958:

"MISSOURI WANTS NONE OF IT

"With House passage of a fair trade bill reported almost certain, Missouri risks being forced under price-fixing legislation it has successfully avoided for 25 years.

"Despite warnings against it by the Justice, Agriculture, and Commerce Departments and ments and the Federal Trade Commissions the House is reported to favor by an over-whelming margin the fair trade bill spon-sored by Bankard Arsored by Representative Oren Harris, of Ar-

"In the Senate, the picture is not helped by the fact that Senator Humphrey, of Minnesota, an ardent advocate of fair trade legis lation, is chairman of the Small Business Subcommittee which will conduct hearings on the measure June 23-25.

"Fair trade laws permit manufacturers to fix prices on trademarked products, despite the antitrust laws, which outlaw pricefixing. What is more, they impose penalties on re-tailers for violation. The Harris bill outdoes all its predecessors by letting manufacturers act without the least consent by retailers, and by forcing the system on States whose legislatures have rejected it.

"As the Justice Department warned ha House, this would 'dractically change the basic concepts of our basic economy

"It would raise prices substantially at time when inflation is already a problem.
"It would close some stores, principaly the discount houses, and throw people out of work although business recession unemployment are already to be Nation.

unemployment are already vexing the Nation

"It would damage retailers by preventing them from getting rid of excess inventories by reducing prices.

"Fair trade laws have always been unfair. At the present they would also be dangerous folly,"

St. Louis Globe-Democrat, Saturday, May 31, 1958;

"PREPOSTEROUS FAIR TRADE SCHEME

"Legislation for establishment of a national fair trade law has been proposed in Congress by Representative OREN HARRIS, of Arkansas. It would permit every national manufacturer to set retail prices for his products and provide tough enforcement penalties.

This is as wrong and dangerous a piece of economic hugger-mugger as has been dumped into the Capitol hopper this season.

This measure has received scant attention. But it is reported likely to pass the House. It is a preposterous scheme that should be summarily killed.

The diehard lobby for misnamed 'fair trade' would buttress its crumbling drive for fixed prices by a Federal act, when the socalled fair trade statutes are falling by the Wayside like windblown cards.

"Portunately, Missouri has had no fair trade law. But through the years 45 States enacted such measures. Recently this sys-tem tem of price protection has been heading for fast collapse.

Fourteen State courts have decreed their own State laws unconstitutional. manufacturers, such as General Electric, have abandoned any effort to enforce fair trade practices.

"It would be grossly unjust to the buying Public and inimical for the economy to tolerate passage of the Harris proposal.

"It would use Federal law to clobber price competition and prostitute free enterprise. It would clout initiative of merchants. Above all, it would freeze high prices consumers have to pay under penalty of Federal crackdown."

The Harris legislation would allow manufacturers to fix minimum retail prices simply by edict. Old State laws at least required some consent of retailers. It would enable manufacturers, if a substantial part of their output crossed State lines, to fix prices for the whole Nation. It would alter part of the Sherman antitrust law to bar prosecution for all such price fixing. And it would provide right of Federal or State court injunction to punish undercutting the set prices.

The Justice Department has protested the bill in a letter to Representative Harris. So should every consumer group, progressive mechants, and individual buyers.

Obvious results of this special interest legislation would be to wipe out price competition in nationally distributed manufacturers' products, smash the business of discount houses, further distress appliance sales, suppress competition—the safeguard and life of trade—both in manufacturing and at almost all levels of distribution.

The frank purpose of the bill is to wipe out competition.

The cost of living would rise sharply as a consequence of such an act. A Federal Antitrust Division survey 4 years ago showed drug and appliance prices were approximately 28 percent higher in fair trade areas than in localities where prices were not fixed.

The Harris measure for a national fair trade law belies its name tag. It is most unfair, a noose around competition, a boost for inflation, an inivdious blow to the consuming

There are literally dozens of editorials throughout the country of a similar nature. We cannot here reproduce them. They will be offered as exhibits. A little over a year ago we were in a rather serious recession. Unemployment rose to considerably over 5 million. As of today, early June 1959, un-

employment has decreased by over 2 million to a little over 3 million. The gross national product is at a record level. Business appears to be extremely good in most quarters. This would seem to show that recovery from recession is facilitated by the absence of legislative interference, and recessions are often prolonged by artificial legislative interference Business is not alded by a change of venue from the free market or economic arena to a legislative political price-fixing arena. Price fixing and free competitive markets are obviously antithetical.

The following advertisement appears to be worth reproducing, for it puts a few points rather well and succintly. It appeared in the New York Times on May 8, 1958. It related to a very similar bill to the one presently before you as S. 1083. It reads as follows:

"FAIR TRADE AND THE AMERICAN CONSUMER

"A few weeks ago a bill was introduced in Congress which would make price cutting on consumer products a crime. This means that the American consumer may soon be compelled by law to pay high fixed prices for the purchases of many necessaries of life.

The group sponsoring this measure is the organized drug industry. They are seeking and claim to have the support of a large segment of the Nation's retail merchants through their associations.

The bill was introduced by Representative HARRIS, and is numbered H.R. 10527. It is an anticonsumer law. The effect of the law would be felt immediately by every consumer in the Nation in the form of higher prices.

Fair trade has been greatly weakened in recent years because courageous judges have looked past the high-sounding name and into the reality of the subject. Fair trade in its prime was merely a legal device to allow a manufactures to prevent price competition among retailers. Bargain sales and good buys are impossible under fair trade. So judges in 15 States disregarded the label of fair trade and condemned it for what it is-a price fixing scheme to make consumers pay the highest possible price. These judges refused to enforce the scheme in their courts, so the fair trade system is now badly weakened.

The appliance industry recently abandoned fair trade. The result-a wave of bargain sales which gave the consumer his first break in years. Consumers responded by jamming the stores. This demonstrates how fair trade hurts sales and the consumer both.

"The Harris fair trade bill seeks to reestablish fair trade as the law of the land. It will cost consumers billions of dollars if enacted, and help deepen the recession by discouraging sales of many consumer items because the price is too high.

Don't underestimate the political power of the retail groups who are backing the Harris bill. American consumers (170 million of them) have no lobby in Congress, and their interests are often overlooked when the pressure groups become active. Unless American consumers speak out in strong disapproval, this raid on the purse of the pubwill be made part of our Nation's laws.

"CONSUMERS INFORMATION BUREAU."

As heretofore indicated, at the beginning of the above quotations, many additional editorials—all opposed to price-fixing fair trade—will be included in the regular appendix to this testimony or offered into the record as supplementary exhibits.

What is truly the attitude of most ap-pliance manufacturers and other manufacturers of branded goods relative to whether or not they want price fixing on their branded goods? The manufacturer's position is obviously a rather difficult one. In many cases he does a major part of the selling job, by advertising through all media

and also through many dealer helps. To maximize his earnings he has to operate as close to capacity as possible. To get the greatest return on his costly advertising, his branded goods must be available everywhere, full service and limited service stores; discount houses, appliance stores, drug stores, department stores, etc. must be on good terms with all of his channels. Despite all this, manufacturers, as have many others, and in spite of increased volume, often have lesser margins due to rising costs. Higher prices caused by fair trade would only aggravate the problem, by tending to decrease volume. Manufacturers must therefore resort to selling multiple branded goods, off-brands, and fighting brands. The truth is that if manufacturers fighting wanted fair trade, they need only to cut off entirely selling their branded merchandise to superstores, discount houses, and similar lower cost retailers. No discount house in the country, of any consequence, is gasping for merchandise. If manufacturers sin-cerely want their trade, then a great many of their salesmen are wasting a lot of expensive time in calling on discount houses and supermarkets in efforts to sell them branded merchandise.

The Federal Trade Commission has in the recent past taken the position that manufacturers cannot be allowed to play favorites. Either manufacturers must enforce their trade, if it is legal at all, or not enforce it without discrimination. This is essentially the position that R. H. Macy took in New York City when General Electric tried to enforce the New York fair trade law against Macy, at the time when thousands of discount houses were selling practically all branded merchandise at prices sharply below fair trade minimums. Is it reasonable to ask R. H. Macy to send his customers to discount houses and not to buy from them, since such discount houses were selling branded goods in huge quantities (of branded merchandise) at competitive prices while Macy was not permitted to do so? Your committee, if it considers enacting the bill before you at all, should include an amendment that manufacturers must either "fish or cut bait"; go along with fair trade whole-hog everywhere, or not at all, and under no circumstances play favorites by discriminating between retailers or areas.

Professor McLaughlin, of the Harvard Law School, admitted before the Harris committee last year in his testimony when Congressman Peter Mack, Ja., of Illinois, was presiding, that he, McLaughlin, was the author of the Harris fair trade bill which is very similar to the bill before you at present. His explanation of its provisions was anything but clear; in fact, so unclear that Chairman Mack was obliged to ask Professor McLaughlin how he expected the House Committee to understand the bill when the author of the bill was himself so unsure of it. The most striking, unusual, and possibly illegal provision in this bill was the part that dealt with giving a manufacturer a proprietary interest in a branded goods even after the maker had completely perted title to such merchandise. Mr. Justice Charles Evans Hughes in the famous Miles Laboratory case, said in effect that once a manufacturer completely parts with title, he can no longer control the price of such goods and that the public is entitled to all subsequent traffic and competition in such merchandise. The bill before you is an effort to reverse by legislation Mr. Justice Hughes' excellent opinion, which is still good law. Even fair traders recognize the novel and possibly illegal effort to give a proprietary interest in merchandise to a maker after all title has passed. See the testimony of John Anderson, of the American Fair Trade Council, in the hearings earlier this year on the Harris bill, page 650 of the March 1959 hearings. Anderson's view is that the goodwill of a branded goods is damaged by price cutting. This is economically and legally utterly fallacious. For no truly meritorious product has ever been driven from the marketplace by sharp price competition. The volume, the immense quantity of branded goods, that move through superstores and discount houses conclusively proves this. A housewife does not regard herself as a criminal or moral reprobate if she can buy a Mixmaster, a GE toaster, a Westinghouse TV, or a Shaeffer pen, or any other product at a saving of a few dollars by purchasing in a lower cost, limited service outlet.

A glance at the history of the activity of the fair traders may be of value. First they asked for and received from Congress the Miller-Tydings Act in the early 1930's. This they said preserved States rights; it was merely a permisisve enabling act; it was a rider to a District of Columbia appropria-tion bill. It said if a State law allows vertical price control on branded goods, the Federal antitrust laws will stand aside. It was a hunting license that declared open season on all State legislatures. The NARD as a result forced State fair trade laws through 45 States. In no less than 35 of these there was not even a pretense of a public hearing. Professor Malcolm McNair of the Harvard Business School, in the Journal of Market-ing for April 1938, said that in 17 of these States the fair trade law was passed in such a hurry that in 10 of the 17 there was enacted into law the identical stenographic error. Of course most of, if not all of, these laws came from the same switch. Usually they came from John Dargavel and his National Association of Retail Druggists in Chicago. the same organization that authored the Harris bill of last year and this year and who indirectly also authored the bill presently before you. Note the emphasis on allowing the States to do as they wished to do and the recognition of States rights. Then 14 years later, on May 21, 1951, the U.S. Supreme Court in the famous Schwegmann case knocked out in a 6 to 3 decision the voluntary nonsigner clause and held that State fair trade laws applied only to those who sign such agreements with manufacturers. Mr. Justice Douglas said you could not drag Schweg-mann in by the heels and force him to comply with a contract he had never seen, much

less signed. Recent important history was thus made by the U.S. Supreme Court on May 21, 1951. It virtually destroyed effective compulsory price fixing since the Court held that nonsigners were not bound. Within 6 months John Anderson and his American Fair Trade Council held a meeting in November 1951 at the Waldorf-Astoria in New York. The meeting was called Operation Restoration. This meant reverse by legislation the Court's action in the Schwegmann case. The Keogh bill was sponsored by the AFTC. This bill was called by the AFTC the hometown bill. This bill was aimed at the Albert Wentling, Palmyra, Pa., situation. In this case a U.S. circuit court of appeals held that a mailorder discount house sending goods across a State line did not have to respect the fair trade law of any State, and did not have to respect the fair trade law of the State into which the merchandise The McGuire Act sponsored by the NARD was directly aimed at the Schwegmann case and attempted to permit or legalize a compulsory nonsigner clause. has happened in the past 6 or 7 years is history. No less than 18 States have in-validated laws based upon the McGuire Act. Practically all important manufacturers have dumped fair trade and now sell under conditions of price freedom instead of price fixing. Apparently in so doing they are enjoying very good health, as are most retailers. There appears to be no strong public demand for the type of compulsory substantive fair trade law such as the bill before you.

Under the McGuire Act, enacted in July 1952, discount houses have had the greatest growth. In 1952 there were 200 discount houses in New York City doing an annual volume of \$500 million. Today there are more than 2,000 discount houses in New York City alone, and over 10,000 throughout the country. Whether we like them or not, I believe they are here to stay. If they do stay, any and all efforts to reverse our antitrust laws and to legislate Federal fair trade would be utter folly. Efforts to repeal the law of supply and demand have failed and, I believe, will fail. For people suffering from inflation, the shrinking buying power of their dollars will make every honest effort to shop for values, and sellers will help them to circumvent artificial roadblocks to competition and free markets.

May I add one more point?

If the House should pass the Harris bill and the U.S. Senate pass the Humphrey-Proxmire bill, I have every hope and belief and every confidence that the President will accept the judgment of every important governmental agency concerned and veto Federal fair trade. This confidence and expectation is based upon the President's frequently voiced grave concern about the dangers to the public of inflation. May I add the following, too. If enacted by Congress and signed into law by the President, I have even greater confidence that the U.S. Supreme Court will hold such Federal fair trade legislation unconstitutional for the reasons so very well set forth by Mr. Bicks of the Antitrust Division of the Department of Justice in his testimony before the Harris committee given in March 1959.

May I be granted permission to send to you for the record a supplementary statement including the exhibits referred to above which are pertinent to the bill presently before you. A bill which threatens to increase the prices of branded goods to the public by \$8 to \$10 billion should not be enacted into law too hurriedly.

May I not, in closing, respectfully urge you not to approve, but to reject, the bill before you as contrary to public interests. The proponents of this bill do not confuse their interest with the public interest, they identify their private interest as the public interest. Finally may I urge you to consider with the greatest care the reasons given for the position taken by Justice, Labor, Agriculture, Commerce, the Fedral Trade Commission, and other governmental agencies who have and who may offer additional testimony in re S. 1083. This time I believe the fair trade lobbyists, the NARD, the AFTC, and other trade groups who sponsor this legislation have gone much too far. are asking you to destroy the antitrust laws. to destroy all States rights, to throw gasoline on the fires of inflation, to increase consumer prices on branded goods in all 50 States rather sharply, and to go beyond the power of Congress to regulate interstate commerce but also to regulate from Washington, D.C., all intrastate commerce and put floors under prices on retail trade in branded goods. This is asking a great deal, all of which is clearly inimical to the public and consumers generally. I do not believe that the House, the Senate, or the President, or our courts will go as far as the fair trade proponents want them to go.

Report to the Lincoln Sesquicentennial Commission by Bertha S. Adkins, Chairman of the Executive Committee of the Commission

EXTENSION OF REMARKS

## HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. SCHWENGEL. Mr. Speaker, on Saturday, June 27, I had the distinct honor of participating in the honorary members dinner of the Lincoln Sesquicentennial Commission at the Cosmos Club in Washington.

One of the features of this function was a report by Bertha S. Adkins, Under Secretary of the Department of Health, Education, and Welfare, and chairman of the executive committee of the Commission, on the activities of this group.

I was impressed by this report and feel that it reflects the high caliber of the leadership which the Commission has enjoyed since its inception. Miss Adkins is a distinguished educator in her own right, having served as dean of residence of Bradford Junior College in Bradford, Mass., and as dean of women of Western Maryland College in Westminster, Md. She was honored with doctor of laws degree from this institution. She is presently serving on the board of trustees of American University in Washington, D.C.

In connection with her educational duties, she has been active in club work for women; especially the Maryland Federation of Women's Clubs; the National Federation of Business and Professional Women and the Association of American University Women. She served with distinction as the assistant chairman of the Republican National Committee.

Because of her activities in the field of education and in woman's club work, she was appointed by President Eisenhower to serve on the Lincoln Sesquicentennial Commission and was chosen by the other members to be chairman of the executive committee.

This makes her report all the more important and I ask consent that it be printed in the Appendix of the Record. Remarks by Miss Bertha Adrins, Honorary Members' Dinner, Lincoln Spague Centennial Commission, Cosmos Club. Washington, D.C., Saturday, June 27, 1959

I would like to express my personal appreciation to all of you honorary members who have come (some of you from great distances from as far away as California) to be with us this evening on this auspicious occasion. And to that, I would like to add my gratitude to Commissioner Victor M. Birely, the Chairman of the Lincoln Commission Honorary Memembers Committee who has been indefatigable in his effort to provide a means such as this by which we may pay you due tribute.

Senator Cooper has asked that I give you a brief summation of the activities of the Commission during Lincoln Year which was proclaimed as such by President Eisenhower on December 31, 1958. The Commission itself was established, as you know, by proceeding the commission itself was established, as you know, by proceeding the commission of the commission of the commission itself was established. by public law, and it was instructed in the language of that law to undertake all possible projects to honor the memory of Lincoln, the 16th President of the Onited States, who was born 150 years ago on February 12, 1809.

We on the Commission, aware of the Challes

qualities of compassionate leadership which personified this great man, and aware also of the need for such human and brotherly qualities in these difficult times, approached the problem of this observance with one premise in mind-that there should be participation in the observance by people from all walks of life, of all ages, of all educational and cultural attainments and that the observance should extend beyond our shores to all of the lands of the world, even to those that have erected barriers

against the free world.

Our entire effort, therefore, has been based entire effort, therefore, has been based upon the assumption that the people need only be reminded of the observance and they would undertake participation by their own initiative. We have employed this general approach in all aspects of the undertaktors approach in the press. undertaking—in working with the press, broadcasting media, the motion pictures, the about the press. the churches, the educational institutions, numerous clubs, societies and associations,

the unions, and other Government officials. On this board over here you see some which has supported this movement in every corner of our land and in lands beyond our

At the outset, the staff of the Lincoln Sesquicentennial Commission, under Dr. Baringer, prepared a handbook which spelled out in the contract of the contract out in broad terms the objectives intended by the Congress, offered a brief chronology of the life of Mr. Lincoln, reprinted some the more famous quotations from his public statements and private communications, and presented specific suggestions for the participation of individuals and organizations throughout the Nation.

I should like to say that we on the Commission could take full credit for the tremendous job that has been done by all of those participating in Lincoln Year. This is not the case. Most of that material you see distill see displayed resulted from a groundswell of enthusiasm for the project which found newspapers, broadcasters, churches, schools, union organizations, industry, and others spontaneously turning their attention to Mr. Lincoln and to the things for which he stood turning their attention with such wholehearters their attention with such wholehearted support that one working closely with the Commission soon had the feeling with the Commission soon walking. feeling that Abraham Lincoln was walking

As a Commission, we did, of course, undertake some specific programs. We published a booklet called "The Lincoln Ideals," and we broadcasters and we asked newspapers and broadcasters to offer this booklet without cost to readers and listeners and viewers who would write to Lincoln, Box 1959, Washington, D.C. The response during February and March as a Veritable flood. Letters came in from every State in the Union, including our new States and States, and, whether by a wandering broad-cast signal or word of mouth, the news we had record in many foreign lands—for we had requests in at least 30 different languages for the Ideals.

At one time, the Commission staff was picking up as many as four sacks of mail daily at the post office.

Filling these orders alone has been a prodigious task, as you can imagine—and I am told now that just about 150,000, includ-

ing two print runs, of this booklet have been distributed throughout the world.

We have published also a smaller pamphlet under the title, "Abraham Lincoln Said \* \* \*" The print run on this pocket piece has now reached 200,000. Over 100,000 of them have been given to visitors to the Lincoln Memorial here in Washington and another 35,000 have been distributed on sightseeing buses here. Fourteen airlines, both domestic, and overseas, are now supplying this little booklet to their passengers.

We distributed also to newspapers throughout the Nation filler items, being newspapers direct—albeit condensed—quotations from Mr. Lincoln, this under the title of "Lincoln Line-A-Days". As no doubt many of you have noticed, these have been widely used and in some cases on a daily basis with line

drawings.

Additionally, we have published three issues of the Lincoln Sesquicentennial Intelligencer so far this year. Some index as to the snowballing activity in the observance is found in these publications, which I believe are sent to all of you honorary members. The first issue was contained in four pages. The second required six, and the last one needed eight pages and I understand quite a bit of type for that issue was carried over for the next scheduled publication. The Intelligencer is mailed to public media, organizations, educators, schools, union, and industry organizations, scholars, and collectors and government people throughout the

One of the most gratifying developments has been the enthusiasm with which the state historical societies have devoted themselves to the observance, and the additional establishment of special State Lincoln Sesquicentennial Commissions. There are active right now in 32 states such commissions or societies, all of which have regularly reported to this national commission their activities-some of which have already been recorded in the Intelligencer.

Our school campaign, conducted in cooperation with the National Education Association, is well underway-and we expect a great deal of residual value in the fall of the year when the schools reopen. In this case, a special staff of the National Education Association, under contract with the Commission, prepared a teaching handbook about Lincoln for distribution in the nation's 28,000 high schools. This program, developed under the direction of a committee chaired by Father Remert, has met with good success. Classroom exericses conducted in the fall in many of our schools throughout the land will encourage youngsters again to turn their attention to Mr. Lincoln-to learn more of him and to write about him.

Many of you may have been here for the events in February which launched this Lincoln Year. If you were, I hardly need tell you of the magnificient program that took place on February 12 in a Joint Session of Congress when Mr. Carl Sandburg. one of our honorary members, spoke so mov ingly. I am happy to report to you that Congressman Fred Schwengel, also an honorary member, who is here this evening, has introduced a resolution in the House seeking funds to reprint this wonderful program for distribution to all of you and to others throughout the country.

On the evening preceding that memorable event, the Lincoln group, in cooperation with the Commission, sponsored a delightful ban-quet at the Statler Hotel which was attended by President Eisenhower, many other of our Washington leaders, and a full house of Lincoln enthusiasts. On that evening, the distinguished NBC documentary "Meet Mr. Lincoln" was shown, and later, via television, was seen by millions in their homes throughout the Nation.

And on Lincoln's Birthday, also, the Loyal Legion sponsored the annual wreath ceremonies at the Lincoln Memorial, under the direction of General Vogel, General Grant, and Colonel McHarg-all of whom are here this evening.

The U.S. Information Agency has been working prodigiously on Lincoln Year projects since January. They have sent literally boxes of materials to their representatives throughout the world, and the name of Lincoln today is almost as familiar in Calcutta, India, as it is in Des Moines, Iowa.

One of our Commissioners, John B. Fisher. did a 2-week lecture tour of the West Indies, and a summary of that Lincoln pilgrimage was placed recently in the Congressional RECORD. Reading of the reaction of all of the folks down there to the name of Mr. Lincoln, and particularly of the reaction of boys and girls who heard Mr. Fisher, reveals again the high place this great man's memory occupies among our neighbors. I could tell you also, but will not take the time now, of my own recent trip to Bogotá, Colombia, for a special conference at which I had an opportunity to talk about Abraham Lincoln and the Lincoln Year and the inspiring opportunity to see the reaction of some of our neighbors to the south at the mention of the name of the 16th President.

Next week, on July 1, there will be a celebration of the 75th anniversary of the gift of the Statue of Liberty by the people of France to the people of the United States. On that occasion, Mr. Walter Rothschild, of the Commission, representing the people of the United States, will present to the people of France a bust of Abraham Lincoln with an appropriate inscription by the Lincoln Commission.

We could spend hours here discussing the tremendous support that has been given to the observance here and abroad. Perhaps, it is best summarized in a postal card that arrived at Box 1959 shortly after February 12. It was signed, obviously by a little boy, "Juan Espinosa." It was postmarked Providence, R.I. It said, simply, "Happy Birthday, Mr. Lincoln."

One can only know that Abraham Lincoln still lives in this land-and although, as it has been said, we may never know his like again, it is equally true that we will never know his loss. His mark upon civilization as the symbol of the free man is indelible.

### A Lifetime of Service to Conservation

EXTENSION OF REMARKS OF

### HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. McGOVERN. Mr. Speaker, South Dakota has lost a cherished friend in the death of Ross D. Davies, chief administrative officer of the South Dakota Soil Conservation Service. The growth and progress of South Dakota is closely related to the conservation and development of our soil and water resources. Beginning as a pioneer in this field of endeavor, Ross Davies, life is symbolic of the increasing recognition now being given to soil and water resources as the foundation on which the future growth of our Nation must depend.

An editorial in the Huron Daily Plainsman of June 28, 1959, expresses

the feelings of all South Dakotans who look back over the contributions of this great friend of conservation. Under unanimous consent I include this editorial at this point in the RECORD:

STATE HAS LOST A MAN OF STATURE

In an interview for the Nugget, Lead High School publication, the late Ross D. Davies, an alumnus of that institution, said about soil and water conservation;

"It is a field of endeavor that offers an opportunity to protect and promote sustained, wise use of basic soil and water resources

for the present and the future."

And for 22 years, Mr. Davies toiled in that field of endeavor as the chief administrative officer of the South Dakota Soil Conservation Service.

He was a ploneer of soil conservation in the State. When he first joined the Soil Conservation Service, the national Soil Conservation Act was only 2 years old. The national movement to save the soil was just getting under way after 10 years of premilminary experimental work at Government stations

Recognizing the importance of and the need for soil conservation, he worked hard for the State law which enacted in 1937, was among the first in the Nation. His main role was that of adviser to the agricultural committee that drafted the State law and introduced It in the legislature.

All through the years he was interested in the development of the total soil and water resources of the northern Great Plains. This interest made him a champion of the Missouri Basin development program in general and, more particularly, of those aspects of the program which had to do with watersheds and irrigation.

As State conservationist, he was in charge of all the administrative and technical work of the U.S. Soil Conservation Service in South Dakota.

This was an important position because the SCS provides the technical assistance farmers need to develop conservation plans and to use the land to its utmost capacity while improving and protecting the soil for future generations.

It was a difficult job, too, yet-under Mr. Davies' leadership-the service in the State grew from an organization operating a few Civilian Conservation Corps camps and wind erosion projects into an organization serving nearly 35,000 farmers and ranchers in 68 soll conservation districts.

A South Dakota State College graduate (1923), he was extremely active in the in-

stitution's alumni association.

He was president from 1941 to 1943, held other offices and served several terms on the board of directors. He often was called upon for committee work.

In his last job, as chairman of the almuni division of the "Stadium for State" fund drive, he was responsible for raising \$138,-000, a substantial portion of the total raised to date.

"He had been active in the association ever since he left school," D. B. Doner, associa-tion secretary-treasurer, said. "He had been so active for so long that we took what he did for granted."

Ross Davies was active in other circles, too. He was chairman of the Huron Plan Commission and the only original member still sitting on the board. As a member of this group and later on, as chairman, he helped draft the city's zoning ordinance and formulate a master plan to guide the physical growth of the city.

This same commission brought into the city new areas to the southwest and southeast and promoted the widening of high-ways 37 and 14 at Huron.

There were other improvements which Ross Davies helped to bring about, too. He was a stanch supporter of the move to build a Federal office building in Huron, for instance.

He was active in churchwork, serving as president and trustee of the American Lutheran Church and heading the fund drive for the educational unit which was completed in 1955.

Then, of course, there were the projects with which he was associated as a member of various civic and fraternal groups.

But a recitation of his accomplishments will never begin to measure the stature of this man.

He had great ability to work with people. probably because he was so human himself. He was patient and tolerant, even in the most trying circumstances, and he had the ability to differ with people on matters of policy without losing their respect or friend-

He was a positive thinker-a man who believed in boosting what he favored rather than knocking the other fellow or what the other fellow had to offer.

And he was an adventurer who encouraged the timid to take a chance with new ideas and new experiences.

There is no wonder, then, that his death June 24, following a heart attack, left a vold in the community.

This man was a leader, one who was always just a little bit ahead of others in his planning and his thinking. And he inspired others to do by setting an example through his own hard work.

Men with the personal stature of Ross Davies are rare indeed—and the presence of rare ones always is missed even though their

influence endures.

Address by Maj. Gen. Wallace M. Greene. Jr., U.S. Marine Corps, Before Marine Corps Combat Correspondents Convention, Mayflower Hetel, Washington, D.C., June 27, 1959

EXTENSION OF REMARKS

# HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. THOMPSON of Texas. Mr. Speaker, on Saturday night I had the pleasure of attending the banquet of the Marine Corps Combat Correspondent's Association. Members were in Washington from all over the United States to attend the 1959 annual military conference and convention. The banquet was the windup of the affair. It featured an address by Maj. Gen. Wallace M. Greene, Jr., U.S.M.C. This address is so timely and tells a story of such great importance to the Congress and to the Nation that I believe it should be published in the CONCRESSIONAL RECORD.

The Marine Corps has always been appreciated by the Congress. Every Member who has in the past voted in behalf of the corps will appreciate General Greene's reassuring words and will realize that the faith and confidence we have placed in the corps are well founded. The address follows:

ADDRESS BY MAJ. GEN. WALLACE M. GREENE JR., USMC, BEFORE MARINE CORPS COMBAT CORRESPONDENTS CONVENTION, MAYFLOWER HOTEL, WASHINGTON, D.C., SATURDAY, JUNE 27, 1959

Colonel McCahill, General Denig, ladies, and gentlemen, 14 years ago tonight, Marines were finishing the mopup of southern Okinawa. Many at this table have reason to remember the end of June 1945. For along side the riflemen were the Marine Corps combat correspondents who would preserve forever the agonies and the glories of the Pacific campaigns.

The era of the combat correspondent was then at its zenith. So were the fortunes of

our corps.

As Capt. Bill McCahill said in his book "First To Fight," "today's men have more than lived up to yesterday's motto of 'Semper Fidelis'."

Capt. Ray Henri and 1st Lt. Jim Lucas put it another way. They said, "Sometimes an iron heart is better than a steel shield outside. Our tanks and buildozers and trucks were supported by the iron hearts of men who fought until they fell in the field, through with all battles.

But what of today's Marines? Are they deserving of this tradition? What do you think of the Marine Corps as you view it in

June 1959?

One of the uses of the past is to employ it as a measuring stick for the present would like to use the Marine Corps as we knew it in 1945 as a basis on which measure the Marine Corps of today.

Fourteen years ago the Marine Corps was 2½ times as large as it is today. Then we had six divisions and five wings, scattered out in the Pacific from Hawaii to Okinawa. Out effort was concentrated in one ocean, the

Today we have three division-wing teams One is located in Okinawa and Japan, the other two on the seacoasts of the United States. We maintain a battalion landing team on a continuous basis in the Mediterranean. Today the Marine Corps is well-balanced on both the major oceans ready to move out on a moment. move out on a moment's notice to any point in the world. During the past 2 years. Marine Corps units have moved to meet emergencies on eight different occasions in the Atlantic, the Pacific, the Mediterraneau, and the Indian Oceans.

In 1945 the Marine Corps division are composed of 19,163 men. Today there the 18.717. We are studying how to reduce the division to 15,000 and, at the same time, to increase its punch. Today's division all-transportable. air-transportable. Its assault elements can all be lifted by helicopter. This wasn't true of the old World War II division. Today's Marine Corps is lighter, faster, and packs a bigger wallon a bigger wallop.

So much for organization-what about marines themselves. Today all marines They joined the corps because they want to belong to it. Enlistment con volunteers. tracts have been upped from a minimum of 2 to 3, and, recently, to 4 years. Enlistment standards have been raised. This is reflected in the mental in the mental quality of recruits which has risen to a GCT of 106.8. Reculistment of first term man. first term men is now approximately 22 per cent; second term and longer are reenlisting at the rate of 771/2 percent.

Pay is better. Today's recruit draws no much as a sergeant did in 1945 (\$73). new paygrades have been added. Additional money is awarded for proficiency in certain fields. Fringe benefits in the way of de-pendents' medicare and have been established. Promotion rates for enlisted marines enlisted marines are generally excellent. Low caliber noncommissioned officers are being weeded out. Marines' tours are being str bilized through a unit transplacement pro-

We still have the problem of the promotion hump for officers. Corrective legislation is now under consideration by Congress. We are also supposed to take 12 percent of first enlistments from inferior category IV per-Sonnel. The retention rate of young ground officers is not satisfactory. Promotion rates for enlisted marines in some fields are slow.

However, we can sum up the situation by saying that the quality and the ability of today's marine is certainly as good as found in the marine of 1945.

Let's look at training. We still have our two recruit depots and two infantry training regiments. Out of the cauldron of the Mc-Reon affair has come a tougher and better recruit depot. Recruit training has retained all of the desirable features of longtime Marine Corps tradition. To these have been added improvements, such as the finest physical training program in the country and increased emphasis on combat training in the field. This matter of changes in recruit training has excited some controversy, particularly among oldtimers who have feared that our recruit depots were going soft Soft. This is not so. The course is more than ever. We are now spending a total of 4 months on a recruit before he ever. ever joins a division. A 6-month reservist gets 5 months of training.

During the past 2 years we have conducted 28 major amphibious exercises, ranging the continuous are the cont ing in locale from the coasts of the continental United States to Alaska, the Caribbean, Okinawa, the Philippines, Hawaii, Turkey, Taiwan, Korea, Borneo, and Libya, In many of these exercises we have been training with marine and army forces of our

In scope and efficiency, Marine Corps training today is at the highest level in our

Weapons and equipment constitute an important point of comparison. We are keeping on top of that problem, too.

In weapons we are about to adopt a new family of small arms greatly superior to

family of small arms greatly superior to those of World War II.

At the other end of the weapons spectrum we are also improving our nuclear capability for amphibious operations.

In transportation we have a revolutionary animal, the mechanical mule. Aviation is about to take delivery on a

high speed combination transport and refueler (the C-130B). Our aviators are also flying better fighter and attack aircraft. The jet has replaced

There are three helicopter carriers now in operation—two in the Pacific and one in the Atlantic. These support our new concept of vertical vertical envelopment. We had neither concept or carriers in 1945. Our tank battalions are better equipped

than in World War II.

To fight enemy tanks we have the airtransportable 106-millimeter weapons carrier

As you can see, we have better and more powerful weapons than we did 14 years ago. The real payoff, of course, lies in combat readiness. The Marine Corps must be combat ready at all times. All of us were proud of our combat readiness throughout World Worl World War II. In the early fifty's, we could again again stick out our chests as a result of what we did in the Korean campaign.

Today we are in a high state of combat readiness. For example, we can start moving elements of the 2d Division out of Camp Lejeune in the matter of minutes.

During the recent emergency in Lebanon, marines were ashore in less than 24 hours after being alerted. Marines were the first to land in Lebanon. Within 3 days we put

ashore three battallon landing teams and had flown in another from the United States.

In the recent Formosa Strait crisis, we moved MAG-11 from Iwakuni, Japan, to Taiwan. During this emergency we also moved MAG-13 from Hawaii to Japan. fact one fighter squadron of this group flew all the way from Hawaii to Japan with Air Force and Navy air tankers refuelling our ships over the Pacific. We couldn't do that in the old days.

The Marine Corps today is just as combat ready as it was in 1945. I believe we have the iron hearts as well as the steel shields that Ray Henri and Jim Lucas were talking

General "Howling Mad" Smith in his book, "Coral And Brass," tells about the time that the Secretary of the Navy, James Forrestal, and he observed the flag going up on Mount Suribachi on Iwo Jima. The Secretary's party was going ashore in a Higgins boat and Secretary Forrestal turned to General Smith and said: "Howland, the raising of that flag on Suribachi means a Marine Corps for the next 500 years."

Some marines think that we can glide along on this reputation-I don think so. The Marine Corps can't afford to live on what it has banked in the past. It must continue to deposit to its account by daily out-

standing performance.

We have to live up to our great traditionthe tradition which you helped to build. This means hard work all the time. I think we are doing this.

Nor can we hide our light under a bushel. The American public must be kept informed about the Marine Corps. Sometimes I think we forget that. Here is an area where you can be of great help-by telling the story of today's Marine Corps.

Throughout World War II the Army used to say that we marines had a combat correspondent in every foxhole. We had a reputation then that we were mighty proud of, and I guess it's true that we weren't letting anybody forget about it either. The American people were proud of their Marine Corps.

Today's Marine Corps is worthy of its tra-tion. We must continously tell the Ameridition. can people what the Marine Corps really means to them. All of you are in a unique position to assist in this. You appreciate more than most marines do the importance of good public relations-the power of the press, and you know how good relations are You occupy positions of leaderdeveloped. ship and influence in your communities. Tell our story.

What is say to you then, in closing, is simply this: The Marine Corps continues to be a sound commodity. You can be proud of it. Let's put some of the old-time effort of 14 years ago into telling the American people about it. We need your help to do

Just as in the old days, let's make sure that there is a Marine Corps combat correspondent in every Marine Corps foxhole.

#### Problems of Urban Areas

EXTENSION OF REMARKS

# HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. WILLIAMS of New Jersey. Mr. President, we have heard many words about the problems facing our urban

areas. We have heard many proposals for programs intended to help our cities and the suburbs around those cities. A new suggestion was made by Governor Robert B. Meyner, of New Jersey, June 17 at the National Citizens Planning Conference in Memphis, Tenn. He would mobilize the resources of our universities to give us a unified study of what has become known as our metropolitan problem.

The Governor's proposal comes at a time when we read of efforts by a few individual universities to establish such urban study centers. It comes at a time when Congress may consider the creation of a new commission to study part

of the same problem.

This great interest from so many sources is heartening and significant. I believe that many leaders in this Nation are encouraging others to give consideration to one of the great crises of our times that now face urban areas throughout the Nation.

Since I feel that this proposal has great possibilities, I ask unanimous consent to have Governor Meyner's remarks printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD.

as follows:

REMARKS OF GOV. ROBERT B. MEYNER, OF NEW JERSEY, AT NATIONAL CITIZENS PLANNING CONFERENCE, MEMPHIS, TENN., JUNE 17,

Mr. Chairman, I am delighted to be here today, in response to General Grant's invitation, and to be given the chance to join in your discussion of the problems of metropolitan areas and the needs of communities to meet present-day conditions.

My own State of New Jersey. I believe, serves as a kind of laboratory for the study of urban conditions. With the exception of Rhode Island and Connecticut, New Jersey is smaller in area than any other State, and it is actually the most urban State in the Union. Within our borders are no fewer than 567 communities.

Nearly all of New Jersey's citizens live within one of the six standard metropolitan areas, as defined by the U.S. Census Bureau. These include New York and Philadelphia. the first and fourth largest in the Nation. Four of our metropolitan areas have their central citles outside the State itself—in Delaware, New York, and Pennsylvania.

Nearly every day some problem arises out of the fact that metropolitan areas transcend political boundary lines. For example, we are now engaged in discussion with the State of New York over the fact that citizens of New Jersey who work in New York are dis-criminated against in the levy of New York's State income tax.

For another example, we are cooperating with New York in a major effort to solve the problem of commuters, at a time when the railroads, because of financial losses, are constantly seeking to curtail or eliminate services.

I could give endless examples of New Jersey's urban difficulties, both interstate and You name the problem. intrastate. have it.

But first let me say how fitting it is that this conference should be held in the city of Memphis and in the State of Tennessee. Here we have what is perhaps the Nation's finest example of planning. I refer, of course, to the Tennessee Valley Authority. An eminent person once described TVA as creeping socialism. I hardly think the people of the

Tennessee Valley react kindly to this epithet. They have seen, within the short space of a quarter of a century, the transformation of this area from poverty to prosperity. What was once burned-out land is now a cornucopia. They have seen industry, great and small, come here to flourish with TVA power. The farms and towns and cities long since have been electrified. Floods are a thing of the past. And here, at Oak Ridge, with power generated in the Tennessee Valley, is one of the vital centers of the atomic age. Moreover, the lakes created by TVA are offering recreation to many thousands of our people. A salute to TVA.

I think you will agree that when we talk about planning for people, we are also talking about planning by people. For if we are to succeed in the task of making urban society one in which men can fulfill their destinies and realize the substance of their dreams, many men must serve. Many men

must accept their responsibilities.

It is somewhat disquieting to find that our people nowadays tend to confine their activities to stratified groups. Bankers con-sort with bankers. Labor union members consort with labor union members. In the East, we have whole communities whose residents are linked by occupation, wealth, and so-called social position. Our society seems rigid—lacking in fluidity. There is too little social intercourse and exchange of ideas among the various segments. People retreat to their homes, their clubs, their groups, and pay too little attention to public affairs, whether they be politics, community planning, or whatever.

You in this audience, grappling with problems of the utmost importance to every citizen, must be aware of this apathy and you must be aware of how it is hampering your efforts. Later on in this speech I will outline one way in which it can be attacked, one way in which our scholars and bright young people can be encouraged to think and act particularly about the urban problems

confront the Nation.

Not too many years ago, 80 percent of the population gained their living on the farms or in rural areas. Today, more than 80 percent of our people live in communities of

2.500 or more population.
Since World War II, we have witnessed an ever-increasing concentration of population, employment, and wealth in metropolitan areas and, at the same time, an alarming decay in our central cities, and in a widening band around them. We have witnessed rapid development of suburban areas, which are too often ill-prepared to provide needed services to their expanding population.

Dedicated citizens, haunted by the sight of a Nation racing toward the day when the urban complex may engulf the land, are laboring in many ways to grapple with the monster. Thus, master plans for cities and regions have come into being; thus we have public housing, middle income housing, slum clearance, urban renewal, and improvement of building and housing codes. There is a growing realization that cities must be made more livable, and that the central city must remain a focal point of civilization.

Historically, cities have been the cultural, educational, industrial and commercial centers. In cities, the greatest social, scientific and humanitarian advances have been made. Cities have been the mainstream of life and the center for the dissemination of ideas. They have an apparent indestructibility and a power of resurgence that is almost magical. Cities survive both natural catastrophe and the havce of war. Rome, the "Eternal City" has lasted for more than 2,000 years. Is it possible to imagine a world without Paris, London, Vienna, Rio de Janeiro, New York, Chicago, and San Francisco?

As it happens, only last week I spoke at a large gathering in Trenton, our State capital, at which was unfolded a master plan for the improvement and beautification of the downtown area. It was an inspiring meeting and an inspired idea. The impetus for the Trenton plan came, interestingly enough, from a study of the city made 2 years ago by a group of graduate students from the University of Pennsylvania. Their findings, published in an article called "Case City, U.S.A.", predicted disaster for Trenton within the next generation unless heroic action were taken. That action is now under way. I am happy to say that the State government will play an important part in the renaissance of Trenton.

At the same meeting, Governor Lawrence of Pennsylvania told of the recent rebirth of the central city of Pittsburgh, beginning, in the Golden Triangle, and brought about by the cooperation of public officials and great numbers of interested private citizens. His keynote thought was that people in the country must provide the initiative, the imagination and leadership to do the job. A similar ferment is working in many other American cities. In almost all cases, it gains strength from an aroused citizenry led by strong leaders, and by the enthusiastic cooperation of civic and public-spirited groups working with public officials. In these cases, there has been a breaking down of the stratification to which I have alluded. Men and women of all types are appearing to work together for the good of all. We need more of this type of community spirit all over the country if our urban problems are to be successfully attacked.

Congress, it is encouraging to note, is lending a hand. Despite administration opposition, the omnibus housing bill has passed both Houses and is now in conference. The bill would make it easier to build and buy homes, encourage cities to clear their slums. and help colleges to construct dormitories. It would increase the total amount of mortgages FHA can insure; establish a new program of rental housing for elderly persons; authorize more public housing units; and increase urban renewal grants.

Many tasks lie before us. We need to rescue people from urban ghettoes. We need to help the farmer squeezed, as now in the critical case of New Jersey egg and poultry farmers, by the encroachment of suburbia, by high taxes and costs of feed and by falling prices. We need to guard against the frag-mentation that results when 20, 30, or 50 municipalities in a county or region each draws its own master plan, too often without

relationship to any other plan.

We need mass production of housing; reduction of home finance and building costs; effective code enforcement, and preservation of open land for park, playground, and rec-reational uses. We need new highways and freeways, and modernized street plans, to make it easier to get in and out of cities, and to move freely and comfortably within their limits. We need parking space and ever more parking space. We need central city shopping centers and breathing areas. We need a whole revolution in our thinking concerning the needs and demands of the urban age. Politically, we need reapportionment of legislative and congressional districts to give cities a fairer representation. We need representation for people instead of for acreage.

Cities destroyed physically by war or otherwise can rebuild. Why cannot cities equally destroyed by inertia be revived?

Now, let me offer you an idea which I believe has enormous possibilities—an idea which is borrowed from our historical heritage. In 1857, Justin Smith Morrill, then a

Congressman from Vermont and later a U.S. Senator, introduced his famous land-grant act. The bill granted federally owned land to each State for the endowment, support and maintenance of at least one college in that State, where the leading object would be to foster agriculture and the mechanical arts. The bill, passed by Congress, was vetoed by President Buchanan, hardly one of our greater Chief Executives, as being outside the legitimate powers of the Federal Government. Thus a bill to provide the special training so essential to what was then an agrarian society was made victim of the struggle between States rights and national power.

Morrill persisted in his aim after the election of Abraham Lincoln. The land-grant bill, repassed by Congress, arrived on the President's desk on July 2, 1862, a tragic day. On that day word had reached Washington that the 3-month peninsula campaign had failed. The assault up the James River that was to carry General McClellon and the second se Clellan and the Army of the Potomac to Richmond and an end to the war-this assault had ended in retreat. It seemed at the time that ahead, as far as anyone could

see, lay only conflict and death.

Yet, at this moment, Lincoln signed the Morrill bill, an act of faith in the Nation's future. It proclaimed, in one stroke, his belief that the war would end, that our people needed higher education and that, in particular, agricultural methods must be improved if the Nation was to progress and prosper. Under the act, each state received 30,000 acres of land for each senator and representative then in Congress. The land was sold and the proceeds used to create land-grant colleges, which have grown into the splendid State universities of the present day.

The colleges produced an intense interest in training young people in the art and science of farming and in the development of new agricultural methods through research and experiment. Indeed, as we look ruefully today at our huge agricultural surpluses, it might be said that the land-grant colleges succeeded to the said that the land-grant colleges succeeded the said that the said that the land-grant colleges succeeded the said that the said that the land-grant colleges succeeded the said that the s colleges succeeded too well, but that is nuother story. Today half a million students are educated each year in the land-grant colleges, and the Morrill Act remains one of the pinnacles in our legislative history.

We have and can seek in these colleges, and in other colleges and universities, an immense reservoir of brains which can be brought to bear on the problems of the highly urban society into which we have been transformed in the century since the passage of the Morrill Act. The land-grant colleges are themselves alert to the role they should play in urban study and re-search. Michigan State University, the first of the lang-grant schools, has created the Institute for Community Development and Services, which is beginning to serve communities on an extension basis. In my own State, a committee broadly representative of the entire faculty of Rutgers, the State university, has proposed the establishment of an Institute on Urban Problems.

The Nation has no great stretches of fertile land to give away, but it can well afford to set aside funds to encourage such institutes, each school to which a grant is made to use it at its own discretion and according to its own best judgment. We might well give consideration to bringing up to date the Morrill Act of 1862, either upon its 100th an niversary or before, to provide a new horizon for our land-grant colleges, and for other schools of higher learning which desire to participate in study control of the schools of higher learning which desire to participate in study and research on present day urban problems.

So I propose a new act of faith in the future of our Nation, in tune with modern heeds. Let us give to our colleges and universities the chance to turn their best minds to studying how best to tackle the difficulties of our cities and metropolitan areas. And we might well make the administration of a vast program of research and service the first order of business of a new Federal Department of Housing and Urban Affairs. The creation of this addition to the President's Cabinet has already been proposed in

Given such an impetus in our colleges and universities, you and all others who now labor with limited funds and limited knowledge on urban problems will find conjecture giving way to exact knowledge, and meagerly supported urban programs but-tressed by research, fact-finding and new answers to old questions. In place of the spotty progress we are now making, the creation of urban institutes in our centers of higher education could well produce a national renaissance of American cities.

It has been a great pleasure to come here to Memphis to the National Citizens Planning Conference and to the 55th annual meeting of the American Planning and Civic Association. I am confident that much good will come of your deliberations.

# Address by Hon. Siguard Anderson at Second Annual Convention, National Independent Dairies Association

EXTENSION OF REMARKS OF

# HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks, I am pleased to include for the RECORD a very interesting address given by the Honorable Siguard Anderson, Commissioner, Federal Trade Commission, during the tecond annual convention of the National Independent Dairies Association recently held in Washington.

REMARKS OF HON. SIGURD ANDERSON, COM-MISSIONER, FEDERAL TRADE COMMISSION, WILLARD HOTEL, WASHINGTON, D.C., TUES-DAY, APRIL 14, 1959.

Commissioner Anderson, Mr. Chairman Daniel, distinguished guests, distinguished Members of Congress, efficers, members, and guests. guesta of the National Independent Dairies Association here gathered in national convention, it is a pleasure to be your guest on this occasion, and I take this opportunity to extend to you the greetings of the Federal Trade Commission, an organization that has been called, for these many years, the "watchdog of the American free enterprise" NIDA will be most successful. I hope that this 1959 convention of

I congratulate this organization on its rapid and substantial growth. It is indeed a husky 2-year-old. And if it keeps up the same rate of growth, you are going to have to get another hard to hold your future conto get another hotel to hold your future conventions. And I hope that your growth in the years ahead will be as rapid ductive as your growth has been in the last 2 years, under the able direction of your present officers and of Scotty Daniel.

Now, when Scotty Daniel, the capable and cow, when Scotty Daniel, the capable and the NIDA, invited me to be on this program. I told him I was not an authority on dairying: I was only a kind of a quasi-expert, in

that I had grown up on the South Dakota farm where we milked no more than seven or eight cows.

Like most of you who are ex-farm boys, milking cows produced this fringe benefit: it developed my grip [laughter], which was helpful in campaigning for public office.

[Laughter and applause ]
I recall people saying, "My, that skinny guy has a firm grip. He must really believe in his cause." The fact of the matter was: It came from milking cows.

And I suppose that like most of you who are ex-farm boys, we have got to say that our

success is partly due to udders. [Laughter.]
With your kind permission, I would like to make some observations on the regulation of competition by the Federal Trade Commission.

I realize that I come here as a bureaucrat; that I am one of those fellows from Washington that by congressional mandate has been made an expert by flat action. I hope that I will not be in the position of the Washington expert who went out to some place, I think in Alabama-I think Union Spring; I am not sure-and he spoke to a group of ladies on a very important problem. And the chairman of the meeting said: "We are very happy to have the latest dope from Washington today." [Laughter.]

However, in making my brief remarks, I am going to take as little time as possible.

It reminds me-because this problem of speaking is a serious thing, the time element, that is. I have friends in the audience here from South Dakota that can bear me out, that it is a difficult thing to stop when you should. I am looking at a couple of them right now.

It reminds me of a speaker at a Kiwanis luncheon. He asked the chairman: "How long shall I speak?" And the chairman said, "Take as long as you like. We all leave at 1:30." [Laughter ]

[Laughter.]

In Africa I think that they have partially solved the long speech problem. The speakers are required to stand on one foot. When the other foot touches the ground, the speech is over. [Laughter.] That might not be a bad idea.

Your industry, the dairy industry, is a great and important industry.

Dairy products are a prime necessity of life. It is milk that first reaches the stomach of a newborn baby, and it is milk that is the last food of the dying octogenarian.

Ice cream is now the dessert of billionsnot as a luxury, but as a necessary part of a meal. It is a basic food. And butter and cottage cheese and other dairy products are found in the homes of the rich and the poor. And you can be proud of your great contribution to the dining tables of America, a nation that eats better than any other in the world.

And not for one moment should you minimize the part that you play in the life of this Nation. Whenever there is a strike called in any city, where there is a tieup of transportation, the first though that comes to the people's minds is: Will we get our milk? Will we get our dairy products?

So not for one moment should you forget that you are engaged in giving to the public one of the most necessary of all products in the life of the American Nation.

Your industry, like most of American industry, is ever changing. All you need to do is to recall the dairies of your boyhood days and compare them with those we have today. Today they are the very epitome of neatness, cleanliness, sanitation, the best. It is a far cry from the day when they used to haul around in a 10 gallon wooden can and ladle out the milk to those who wanted

You have made tremendous progress, and the progress has not stopped. You have gone on the assumption that your customer

should get the best and only the very best. And I can say that in my own State of South Dakota, dairying is really our No. 1 income industry.

Farming is number one, but the dairy products are worth more to us than the grains that we produce. And it was that yellow cow that pulled us through the depression days, the "dirty thirties," as we knew them in the Middle West. And many a boy and girl, by countless numbers, went to college because of the cream check and the milk check that the yellow cow produced.

And I would say that if there is to be raised in the average Middle West community a statue, it could well be a statue to the dairy cow, because of the importance of dairying and the distribution of dairy prod-

Along with these great advances that you have made, there have come some problems, particularly in the field of competition.

Competition is a great and necessary force. It is that force in the life of a nation and in the people of a nation that brings out the best. And in the zeal to be good, there are those who forget the rules of the game; and. as Shakespeare said, "Ay, there's the rub."
In the United States of America we have

had to contend with this problem. And the Federal Trade Commission is an answer in part to the problem of unfair competition.

We at the Federal Trade Commission have heard of these problems. The Commission was created by Congress to regulate competition, not to control it, but to regulate it; because free and fair competition is a foundation of our American way of life. Free enterprise, as we love to consider it, cannot flourish if competition is unfair and illegal.

Since the days of the Interstate Com-merce Act of 1887, Congress has spoken out many times against unfair competition. The Sherman Act in 1800, the Federal Trade Commission Act in 1914, the Clayton Act in 1914, the Robinson-Patman Act in 1936, and a host of other regulatory measures, have gone on the books because the people of the United States demanded that competition be fair and clean and honest. And Congress has accommodated the wishes of the people to keep competition that way.

But always there seem to be a few who are not going to follow the rules of the game, and they are the ones that make it necessary to have these regulatory measures and regu-

latory agencies.

In the United States, we have rules and referees and umpires in baseball and bas-ketball and football. We have rules of the game for golf and even card games. And Congress has provided for rules in the conduct of the competition in industry toward the end that all shall play fair. And it is the purpose of the Federal Trade Commission to keep the climate of competition in industry on a high plane of fairness.

We have great powers. We have the power to put people and corporations in the penalty box. But then, again, we are not a great agency in size. I think that the effect that we have on the body economic is entirely out of proportion to the size of our agency. Why, we have only 717 people for the purposes that we were created for, 717. Why, that is just the size of a tiny South Dakota town.

Our annual appropriation is \$5,975,000. and we have a request at the present time for \$540,000 more to supplement the salary increases that were granted by Congress last year. We practice rigid economy at the Federal Trade Commission. There is nothing else we can do.

And speaking of rigid economy, I suppose you know that the best example of that is a dead Scotchman. [Laughter.]

Well, anyway, the Members of Congress here tonight rather overawe me. I was going to make a pitch, Senator Mundt, for more appropriations for the Federal Trade Commission; but now I don't believe I shall. I can't refrain from observing, however, that our job at the Federal Trade Commission grows ever more difficult with the rapidly expanding American economy when our means do not expand accordingly. The American economy is mushrooming, while we are falling behind because of the fact that we somehow or other lack the means.

In connection with the dairy industry, the Federal Trade Commission has brought a great many cases against violators of the laws dealing with business practices. At the present time—and I think these have probably been fully discussed by members of our staff—we have nine ice cream cases with a hearing examiner, awaiting his decision. We have four antimerger cases in process of trial

Right now in the United States there seems to be an urge to merge. [Laughter.] There has been during the last several years a great swallowing up of corporations and concerns by other corporations and con-

Now, as far as we are concerned, that is entirely all right, provided that such mergers do not have a tendency to lessen competition or to create a monopoly.

Congress has spoken very plainly on that score, and the courts have spoken recently almost as plainly. And we are engaged in the trial of many antimerger cases, and

four in the dairy industry.

We also have at the present time two cases dealing with price discrimination that we feel are most important. And during the last 2 years we have also brought a number of cases in connection with oleo. It seems as though some of the people in the cleo business have tried to stand under the umbrella of butter. There seems to be something attractive about butter, and we have had to fend them away and say that it is not a dairy product. We have really a very strict law on that point.

Some of you come from peanut States. I don't understand how you can really satisfy both the peanut people and the dairy people, but you southern Congressmen seem to be doing all right on that score. I imagine it is at times a test of diplomacy.

Our Bureau of Investigation informs me that a number of investigations are in progress in connection with the activities of the dairy operators all over the United States.

As a member of the Faderal Trade Commission, I would like to discuss some of these cases, but you are aware, of course, of the APA that prevents a Commissioner from making any comments on matters that have not yet come to the Commission for ruling. The members of our staff can talk all they want to, as long as they make a disclaimer, but a Commissioner is somewhat handicapped and has to be inhibited.

However, I would like to point out that at the Commission we proceed in the following manner: Somebody makes a complaint, and our Bureau of Investigation goes out with their briefcases and they go into every section of the country, and they talk to people, and they get the information. And after it is fully assimilated, then, of course, recommendations are made as to whether or not a complaint shall issue. In many cases, it appears that a complaint is not warranted. But of course, we have issued a goodly number of complaints.

After all, we, too, have to observe the rules in connection with what appears to be enough evidence to make a case. And we have received this information. We don't have to go out and seek out these violations. It isn't a hidden mystery or anything like

that. We have had tremendous help from the members of this industry, this organization, who have come forward to us and given us information, invaluable information, in the prosecution of our cases. And I would like to say this to the mem-

And I would like to say this to the members of this organization: At any time you wish to consult with the Federal Trade Commission at Sixth and Pennsylvania, you certainly are at liberty to do so. And anything that you tell us will be kept on a confidential basis.

I know that Scotty Daniel has been up and has discussed these matters with our attorneys on many occasions. I am telling you this because I want you to know that the \$25,000 that you paid in is well earned. [Laughter.]

Mr. Daniel. Will you mention that figure again?

Commissioner Anderson. Yes. I say your

\$35,000 is well earned. [Laughter.]
After we have investigated and have issued a complaint, then we go ahead and try
the case.

We don't put people in jail. We don't quite have that power. But we do issue an order to cease and desist, which says, "You have got to stop it. You can't do it any more." And those orders, unless they are amended, are in perpetuity, which is a long time. And many people are very unhappy about things like that. But many of them say: "Look. My gosh. Can't you keep it out of the papers?" Well, we don't want to be accused by Congress of suppressing things, so we give it to the press, and what they do with it, of course, is the business of the press.

But we do have these tremendous powers. And sometimes the Federal Trade Commission has a deterrent power—like Justice Holmes said about the common law: "That trooding omnipresence in the sky." And that is in a way the power of the Commission, in addition to its regular powers to enter a cease and desist order.

Many of our cases take a long time. I know that the members of this industry and other industries have repeatedly said, "Can't you speed it up?" Well, now, ladies and gentlemen, these cases that we have are hard fought. There is much at stake. And the respondents-normally they would be called defendants-fight every inch of the way, right down to the wire, and right up, in many cases, to the Supreme Court of the United States. And their attorneys see to it that there is no denial of due process. As a result, it takes time. Possibly they should be shortened. There are many things that we would like to have, but in the United States, justice here seems to be characterized not by the speed but more by the thoroughness.

It is not like the justice in Texas or Kansas years ago, when the judge said, "What do you have to say as to whether you are guilty or not before we hang you?" [Laughter.] We can't quite be that peremptory in our activity.

At this point, I would like to commend this organization for its splendid efforts in establishing a high plane of executive activity. After all, ladies and gentlemen, it is a difficult thing to be honest, businesswise, when your competitors are dishonest; because illegality begets greater illegality. And I could offer no better advice than that which was given by Scott in his very fine talk preceding this one, when he suggested that the observance of the law is most important. And this organization has had that kind of an attitude, which is certainly a good attitude for the dairy industry, and for other industries in this country.

I also want to thank you, on behalf of the Commission, for the very helpful manner in which you have conducted your affairs, in that you have gone to Congress and raised your voice in behalf of measures that would help the Commission in carrying out its activities.

There are several things that we would like to have. We would like to have a finalization of Clayton Act orders. We would like to have premerger clearances. We would like to have the injunctive powers in connection with premerger clearances. And in all of those matters you have spoken loudly and I hope effectively.

Many of these measures now are just about ready to go over into that area of accomplishment.

I have just about exhausted my time. I don't want to be in the position of the Englishman who said, "I don't mind if the members of the audience during my peroration will look at their wristwatches. That is a kind of a natural thing to do. But I jolly well don't like it when they do like this—they take their watches out and then do this (holding to ear) and hold them and shake them." [Laughter.] And I know how busy you Members of Congress are. I can just see the stacks of mail that are in your offices, you Senators and you Representatives.

I don't mind so much you members of the industry that have come to Washington for a lark; you aren't going to sleep tonight, anyway. And the longer we keep you here, the shorter your stay at the milk bar—which might be good.

But I do feel that we have got to kind of hurry on. And I just can't close without again calling to your attention the need for fair and clean competition in American industry. At the Federal Trade Commission it is so easy for us, as we stand on the high hill with a vantage point, to look down into the valley of competition and see the practices that have given American business in many instances a kind of a reputation of disreputa-

Most people are good competitors, but there are those who are not. And isn't it a tragedy when good, honest competitor, who is trying to sell his product on the merits, has to go to the wall because of illegal competitive practices by those who are in the same business?

I don't mind, in running a race, if a man is faster than I am, but I don't like it if he trips me and thereby wins. And I think that that is putting in a fair way the attitude of the American businessman.

America has for years called herself a nation that is honest, forthright, and fair. And that applies across the board, in our dealings with foreign nations and our dealings with one another. A competitor has a right to demand and expect that in a competitive race all competitors begin the race from the same starting point, and that there should be no tripping, no elbowing, and that the timers will choose the placing winners as they cross the finish line, whether they are big or little.

And so at this time, I, like Lady Godival am approaching my clo'se. [Laughter.] And as I do, I would like again to say to you and to the members of this industry that the Federal Trade Commission shall endeavor to the fullest extent of its powers to see to it that the competitive races are run fairly. We ask your help and the help of the Members of Congress and all of those who the applaud the American free enterprise system.

Ladies and gentlemen, it is a job for all of

And at this time, I say, "Thank you for your invitation, and may God attend you in your endeavors." [Standing applause.]

A Fine Civic Theater To Support and Complement the National Cultural Center Is Within Reach of the Voteless Citizens of Washington, D.C.

EXTENSION OF REMARKS

OF

# HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES
Monday, June 29, 1959

Mr. McDOWELL. Mr. Speaker, a fine downtown civic theater, similar in many respects to the New York City Center, the new Boston Arts Center, and to scores of other art centers in cities from coast to coast is within easy reach of the Voteless citizens of Washington, D.C., and could be quickly established at fire-sale prices at the historic Shubert Theater in the heart of this great Capital City.

The early establishment of such a civic theater in the Nation's Capital would undoubtedly be acclaimed throughout the United States and in foreign nations as tangible proof that the citizens of our great country are not materialistic and that they are, indeed, deeply concerned with the lasting values which, in the words of President Eisenhower, "make our civilization endure and flourish." In point of fact, the creation of a fine municipal theater in Washington, D.C., would be worth, at a minimum, \$10 million worth of Federal propaganda in other nations about how culturally minded the United States is. It would do as much in a month as the U.S. Information Agency in some countries can do in a year-in fact, it would be of truly inestimable value to the U.S. Information Agency in the wonderful job it is doing to put our best foot forward around the world.

But, of course, the establishment of a civic art center in the Nation's Capital has distinct values of its own quite aside from the propaganda values and it is these that dictate immediate action.

The decision, recently announced, to sell the Shubert Theater—one of the truly distinguished theaters of our country, and one in which some of the greatest actors and actresses of the English-speaking world have performed, provides a golden opportunity to the voteless citizens of the Nation's Capital to demonstrate their cultural maturity. An opportunity such as this is rarely occurs, and when it does it must be acted upon at once or the chance of success may pass forever. It must not be razed to make room for a parking lot, as proposed.

Mr. Day Thorpe, eminent music critic of the Washington (D.C.) Star acutely summed the matter up this way in his newspaper on Sunday, June 28, 1959:

Washington needs the Shubert Theater if it needs any kind of amusement house at alt, leeds any kind of amusement house at from being torn down to make room for a parking lot, we should henceforth shut up about a cultural center. Why fill the air with further talk about our need for cul-

ture? The chatter is either hypocrisy or drivel.

The Shubert Theater of course is not everything demanded in the proposed cultural center, but it fills one need adequately, probably comparatively inexpensively, and virtually presently—not 10 or 20 years hence. It could be converted into an intimate opera house and legitimate theater at relatively small expense. It would be an opera house comparable in size to many of the best in Europe, and there is no reason why the finest facilities could not be incorporated into its rebuilding as easily as created in the planning of a completely new house.

It is important to point out at once that the conversion of the Shubert Theater to a municipal theater would in no way conflict with the National Cultural Center, but would, rather, support and complement this projected center when it is finally established. That this is true can be easily demonstrated, and we need look no further than New York City where the New York City Center will continue to serve in the future as it has in the past as a great producing center while the new Lincoln Center of the Performing Arts will provide badly needed homes for a number of New York Cty's cultural groups and activities.

The Shubert Theater is ideally located in downtown Washington, and is superbly served by transportation of all kinds. Its conversion to a civic theater would contribute importantly to the renewal and redevelopment of a major shopping

In addition, the Shubert Theater is only half a block from the historic Civil Service Building which was transferred to the Smithsonian Institution to be a branch of that Federal Agency and to house the National Collection of Fine Arts. The legislation to make the Civil Service Building a great new National Art Museum was sponsored by the distinguished gentleman from New Jersey [Mr. Thompson], and cosponsored by Senator Hubert H. Humphrey and Senator Clinton P. Anderson.

Obviously, if converted to a civic theater the Sam S. Shubert Theater would be a significant part of a major downtown cultural complex which would include this new National Art Museum. As a part of such a great complex it would help immeasurably in reclaiming and upgrading an intown area and making it immensely attractive as a shopping area.

Because of the contribution such a civic theater would make to one of the most important business districts of Washington, D.C., the Washington Board of Trade and its cultural development committee should wholeheartedly and enthusiastically support this proposal—indeed it should immediately launch a Save the Shubert drive. This would be in line with the fine suggestion of Patrick Hayes, one of the country's outstanding concert managers, which he made Sunday, June 28, 1959.

Of course, money will be needed to restore the Shubert Theater to make it suitable as a nonprofit cultural center which is able to adequately serve the many fine cultural groups in the Nation's Capital—groups which need housing no

less than do New York City's cultural groups.

This money could be easily raised and is readily available by means of the simple device common to scores of other cities in our country and which could quickly be put into effect here. That is, simply earmark 1 mill out of each \$1 of tax revenue of the Government of the District of Columbia for cultural purposes. This money could be used to purchase and rehabilitate the Shubert Theater.

It is shocking to me that in face of the large sums of money which other major Americans cities give to the fine arts that the Nation's Capital does practically nothing at all. In fact, out of the current budget of \$241 million only \$16.000 is devoted to the fine arts. This is indeed a piddling sum and isn't worthy of this great city and its hundreds of thousands of fine citizens.

I have recently introduced a bill, H.R. 7989, which would create a special cultural fund to enable Washington, D.C., to discharge the very same role that scores of other American cities have performed in support of the fine arts for decades. It is a reasonable bill, and it is many decades late in arriving.

In conclusion may I say that Washington's leading newspapers are to be commended for their interest in preserving the Shubert Theater as a major cultural resource for the voteless citizens of Washington and their children. Patrick Hayes and Day Thorpe and Lida Brodenova are to be commended likewise for their foresight in calling this matter to the attention of Washingtonians and for urging that a save-the-Shubert drive be launched immediately.

I am pleased to include as part of my remarks the text of my bill which would make the early acquisition and conversion of the Shubert Theater possible, as Patrick Hayes has pointed out. In addition, I include articles from the Washington (D.C.) Star, the Washington (D.C.) Post and Times Herald, and the New York Herald Tribune,

### H.R. 7989

A bill to provide for the adoption in the Nation's Capital of the practice common to many other cities in the United States with regard to cultural activities by depositing in a special fund 1 mill out of each \$1 of tax revenue of the government of the District of Columbia to be used for such programs, to advance the National Cultural Center and its educational and recreational programs, to provide financial assistance to the nonprofit art programs of the District of Columbia, and for other purposes, by amending the Act of April 29, 1942

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That section 4 of the Act entitled "An Act to create a Recreation Board for the District of Columbia, to define its duties, and for other purposes", approved April 29, 1942, as amended (D.C. Code, sec. 8-211), is amended by inserting "(a)" immediately after "Sec. 4." and by adding at the end thereof the following:

(b) In addition to the trust fund authorized by subsection (a) of this section, there shall be deposited in a special fund in the Treasury of the United States to the credit

of the Board 1 mill out of each \$1 of tax revenue of the government of the District of Columbia. There is authorized to be appropriated to the Board each fiscal year, an amount equal to the amount deposited in such special fund during the preceding fiscal year out of such tax revenue. Such appropriated amount shall also be deposited in such special fund.

"(c) All money in the special fund authorized by subsection (b) of this section shall be available to the Board to defray in whole or in part the expense of programs in arts and crafts, music, drama, speech, dancing (other than social dancing), lectures, forums for informal discussions, and other creative opportunities for leisure-time participation, as authorized in section 3 of article II of this Act, and the expense of carrying out the programs authorized by paragraph 3 of section 4 of the National Cultural Center Act."

SEC. 2. The amendment made by the first section of this Act shall take effect July 1,

SAVE-SHUBERT RALLY URGED ON CITIZENS

A "Save the Shubert" movement by the citizens of Washington was called for yesterday by Concert Manager Patrick Hayes, a champion of cultural life in the Nation's Capital.

Hayes, speaking over radio station WGMS, said that leaders of Washington's cultural organizations should call a citizens' rally to find ways of saving the Sam S. Shubert Theater from possibly being torn down to make way for a parking lot.

A Washington real estate broker who recently contracted to purchase the Shubert, whose stage was destroyed by fire January 29, has said that the theater at 513 Ninth Street NW., might be torn down.

Hayes said it would be a "civic shame" to have the theater "disappear from the cultural horizon of the town. He said that pub-lic opposition, organized with civic and financial strength, could prevent this.

He suggested that it could be used as a

home for the Opera Society of Washington, the Washington Civic Opera Association, and for many programs now given by the District Recreation Department in the Roosevelt High School Auditorium.

Hayes also suggested that the District government could operate the Shubert or that it could be taken over by a civic body "in the form of a nonprofit trust, like a hospital corporation, with the institution backed by the city budget."

Referring to a House bill that would earmark some \$175,000 in District tax money annually to advance the city's cultural life Hayes proposed that the first \$175,000 could be used as the downpayment on the Shubert property.

[From the Sunday Star, Washington, D.C., June 28, 1959]

NEWS OF MUSIC-TIME IS RUNNING OUT FOR SAVING SHUBERT

(By Day Thorpe)

This week let's consider a curiosity and a ritual.

First the curiosity-the razing of the Shubert Theater. Washington needs the Shu-bert Theater if it needs any kind of amusement house at all. If there is no civic attempt to keep it from being torn down to make room for a parking lot, we should henceforth shut up about a cultural center. Why fill the air with further talk about our need for culture? The chatter is either hypocrisy or drivel.

The Shubert Theater of course is not everything demanded in the proposed cultural center, but it fills one need adequately, probably comparatively inexpensively, and virutally presently—not 10 or 20 years hence. It could be converted into an intimate opera house and legitimate theater at relatively small expense. It would be an opera house comparable in size to many of the best in Europe, and there is no reason why the finest facilities could not be incorporated into its rebuilding as easily as created in the planning of a completely new

#### LOCATION OF CENTER

Opinion concerning location of the cul-tural center is divided among the various members of the committee. The dominant opinion is that the center should be a single building or complex of buildings at one single location. Some people feel, on the other hand, that there is no need to keep the various activities of the cultural center under one roof, and that the various concert halls and auditoriums could be scattered about the city. In any event, even if the center is at a single location, a small theater of about the Shubert's capacity-it has 1,542 seats-will be a necessity.

Now the Shubert before the fire was one of the most charming and acoustically excellent theaters in the country. It could be made so again, with the paramout improvement of a large pit, which heretofore it has never had. Presumably the new owners would rent the building for an amount equal to what they will make in parking fees.

The argument that even after rehabiltation the Shubert could never be financially profitable is meaningless, for we are not talking about profitable burlesque when we speak soulfully about our dear Cultural Center, but of nonprofit cultural opera, ballet, and highbrow threater. If the Shubert runs a deficit, so will any conceivable similar auditorium devised for the Cultural Center.

### EXCELLENT ARCHITECTURALLY

Here, then, is the first unit of our new Cultural Center-the inside the worse for fire. but architecturally excellent, the four walls already in place. To overlook it while still having Cultural Center committee meetings, public appeals for \$50 million, talk of design and of purpose, and of crying need and of showing the Russians that we are not really rubes, to overlook the Shubert, I say, is an inanity comparable to that which we can now see in New York. In New York the citizens have Carnegie Hall, a building that, through some magic in its construction, is such a good place for music that a majority of those best qualified to voice an opinion consider it the finest of its kind anywhere Yet with the millions for Linin the world. coin Square (the symphony hall of which is, like all untried music rooms, a question mark), there seems to be neither money nor inclination to save Carnegie Hall.

As these words are written, the latest information is that the new owners of the Shubert may be open to propositions to save the theater. It will be interesting to see if any

are advanced.

[From the Evening Star. Washington, D.C., June 26, 1959]

#### URGES CITY CENTER

I read with real distress the Star's article on the end of the brilliant career of the Shubert Theater. This was magnificent reporting.

If this were New York there would have been such a public outcry. A citizens com-mittee would have been formed, money would have been raised to buy the theater for civic purposes. All this happened in New York and the glorious result was and is the New York City Center-which has contributed immeasurably to New York's cul-tural status. Why can't the District of Columbia Commissioners be equally clever?

Here the Washington Board of Trade has stars in its eyes. It talks grandiloquently about 1962 and an arts festival which will cost approximately \$1 million. It is too bad there aren't some practical, hardheaded busi-nessmen in the Washington Board of Trade who are deeply versed in the money end of the arts like Sol Hurok and Pat Hayes. If there were, they would seize on this golden opportunity to create a city center for the citizens of Washington. We can expect no help at all from the District of Columbia government, which has never put a penny

It will take at least 5 years, perhaps more. to raise the \$25 million to \$35 million for the National Cultural Center, and an equal period of time to build this center-10 years in all. Here is an unequalled opportunity for the District of Columbia government to grow up culturally. It could lead to a drive to make the Shubert a nonprofit cultural center for everyone.

The citizens of Washington pay taxes to the Federal Government. Here is where \$150,000 to \$200,000 of our tax money could be spent to advantage.

LIDA BRODENOVA.

[From the Washington Post and Times Herald, June 28, 1959|

ONE HUNDRED AND SEVENTY-FIVE THOUSAND DOLLARS ASKED IN BILL TO PUSH DISTRICT OF COLUMBIA CULTURE

#### (By Jean White)

A bill that would earmark some \$175,000 in District tax money to bolster the city's cultural life has been introduced in the

Representative HARRIS B. McDowell, Ja., Democrat, of Delaware, the sponsor, proposes that 1 mill of each District tax dollar go into a special cultural fund. The District Recreation Board would administer

money. Up to now, McDowell said, Congress has never appropriated anything more than piddling sums for the cause of culture and the fine arts in the Nation's Capital. Only \$15,000 of a \$2 million recreation budget is now being spent for year-round art pro-grams, he charged.

#### APPROPRIATIONS "PIDDLING"

"Many cities contribute sizable sums to their orchestras, art galleries, and summer programs in the performing arts," the Con-gressman explained yesterday. "The Congressman explained yesterday. "The Con-gress authorized similar cultural programs in the act creating the District of Columbia has Recreation Board, but, unfortunately, has never appropriated anything but pidding sums to carry these programs out."

When he read articles calling the Nation's Capital a "cultural backwater" among other things, McDownt, said, he decided it was

things, McDowell said he decided it was about time to do something. His 1-mill automatic appropriation, he feels, would pump-prime the arts here.

The District now is collecting about \$175 million in tax dollars, District finance offcers estimated.

#### WHY MONEY IS LACKING

Schuyler Lowe, the District's General Administration Director, pointed out yesterday that the Commissioners customarily have opposed earmarking revenue to special funds because this limits flexibility in budget-making. As far as money goes, he added, many of the Recreation Department's adult activities fall into the fine arts field.

Concert Manager Patrick Hayes, defender of Washington against short-on-culture criticisms, said the principle of city-supported culture has many precedents. More than 20 years ago, he said, San Francisco added a mill to the tax rate to support the San Francisco Opera.

The Recreation Board, he added, should be given latitude in supporting theater as well as music, helping the National Sym-

Phony, and even commissioning works.

McDowell's bill includes provision for the money to be used for programs connected with the proposed National Cultural Center.

[From the Sunday Star, Washington, D.C., June 28, 1959]

BILL EARMARKS \$175,000 FOR DISTRICT OF COLUMBIA CULTURAL FUNDS

A Delaware lawmaker has devised a new scheme to raise money for the National Culture Center and an expanded program of arts in Washington.

At least \$175,000 of District tax money could be spent on cultural activities annually under legislation introduced by Democratic

Representative McDowell.

His bill would create a cultural fund for the District. One-tenth of a cent of each tax dollar collected here would be earmarked for cultural activities and be deposited in the Treasury for that use.

The District Recreation Board would be charged with using the money for arts and crafts, music, drama, speech, dancing other than social dancing, lectures, and other

creative opportunities for leisure time. Mr. McDowell has asked Congress to amend the 1942 act establishing the Recreation Board in order to channel more money into the arts.

He said he offered his bill to answer charges that the Nation's Capital was a cultural backwater. Charges have been given wide circulation recently by national magazines and newspapers.

"The National Culture Center would be assisted," he said, "and the National Symphony Chartes Son Phony Orchestra, the Washington Opera Soclety, and art galleries could benefit if the bill were adopted."

If passed, the bill would lift a ban on use of public funds for construction of the center proposed to overlook the Potomac in Poggy Bottom. Congress limited donations to private subscriptions or gifts.

A Presidentially appointed Board of Trustees has hired consultants to find the best means of raising an estimated \$25 million to

start building the center.

Trustees would be bound to have a voice in how the proposed cultural funds should be spent. So would a 50-member arts council seed. cij set up last January by the District Commissioners to coordinate cultural activities of the city.

Mr. McDowell noted the District never Mr. McDowell noted the District had budgeted anything but piddling sums for cultural programs the Recreation Board is supported by the board draws empowered to carry out. The board draws about \$2 million annually. Of this, about

42,000 is spent for an art program.

"Here is another example of the great gulf between is another example of the great gulf between the state of the great gulf between speech and performance which too often characterizes the American performance in the arts," the Congress maintained.

He said Washington lagged behind New York York, which contributes to the New York City Center, the Metropolitan Museum of Art and Shakespearean productions in Cen-

For orchestras alone Philadelphia budgets annually \$150,000; Detroit, \$50,000; San Prancisco, \$45,000 plus use of two audi-toriums. toriums; Baltimore, Atlanta, and Denver, 860,000 each; St. Louis, \$75,000, and Milwaukee and Torium; St. 250,000 each. kee and Indianapolis, \$50,000 each.

[From the New York Herald Tribune, June 28, 1959]

MASSACHUSETTS SPONSOR OF A SUBSIDIZED

On July 9, Massachusetts will step into the theatrical limelight by sponsoring the first major subsidized theater in America the Boston Arts Center now being built on

the banks of the Charles River east of the Watertown Bridge in the Bostonian suburb of Brighton. The opening bill will consist of Siobhan McKenna in "Twelfth Night," to be followed at 3-week intervals by Jason Robards, Jr., and Miss McKenna in "Macbeth," and Sir John Gielgud and Margaret Leighton in "Much Ado About Nothing." three will be presented under the direction of the Cambridge Drama Festival, but the expenses of building the theater and producing the plays will be borne by the Metropolitian District Commission of Massachusetts.

The original announcement was issued in the office of Gov. Foster Furcolo, who re-cently proved his versatility by writing a novel called "Let George Do It" under the pseudonym John Foster (Mr. Furcolo appears likely to become further involved in matters theatrical, as Arthur Kober is currently preparing a dramatization of "Let George Do It.")

#### OPERA HOUSE PLANNED

The Metropolitan District Commission is building both a 2,000-seat theater and an art gallery along the banks of the Charles. It further proposes to construct a 3,800-seat opera house to handle operas, concerts, and large musical shows.

The Arts Center Theater, rapidly nearing completion, will be an open-air affair with an elliptical, detachable roof that will rise four stores from the ground. This roof is 145 feet in diameter and is made of vinycoated nylon. Completely air-inflated, it will be 20 feet thick between top and underside and will be supported by a series of steel columns attached to a steel hula hoop at the top.

The stage will be adaptable for either proscenium or projected stage (three-fourths in the round) productions. The latter staging will be utilized for "Twelfth Night" and "Macbeth." "Much Ado About Nothing" will be presented as a proscenium production.

The only one that will be shown any-where outside Boston will be "Much Ado About Nothing," scheduled for Broadway presentation next season by the Producers Theater. Sir John Gielgud will direct as well as reenact the role of Benedick in which he scored a great London success. Margaret Leighton, last seen here in "Separate Tables," will be costarred as Beatrice, with Tammy Grimes, Hurd Hatfield, George Ross, and Malcolm Keen in other leading

## Cardinal Cushing's Blessing on the Cape's New Cranberry Highway

EXTENSION OF REMARKS OF

# HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. McCORMACK. Mr. Speaker, at Buzzards Bay on June 7, 1959, the new "Cranberry Highway," located in Massachusetts, which runs from the Middleboro traffic circle over Route 28 to Buzzards Bay, then along the Cape Cod Canal to Sycamore and over Route 6-A to Orleans, Mass., was dedicated by special exercises with a blessing by Richard Cardinal Cushing, Archbishop of Boston, which blessing was delivered by Rev. (F.) David O'Brien, pastor of St. Margaret's Church of Buzzards Bay, Mass., representing Cardinal Cushing.

In my remarks, I include the spiritual and beautiful blessing of Cardinal Cush-

CARDINAL CUSHING'S BLESSING ON THE CAPE'S NEW CRANBERRY HIGHWAY

Almighty and most merciful God, Who hast destined us to live in a land rich in beauty and comforting in its variety of natural advantage, teach us, we pray Thee, to see Thy good and gracious providence in the blessings to which our attention is called on this occasion which brings us together in Thy name. Keep us ever mindful of the glorious traditions of personal integrity and civic pride which have grown up within every town and hamlet of this rugged strip of land, of old the cradle of our Nation's freedom, and in our own day a haven of peace and rest where freemen may still withdraw from the tension and turmoil of competitive striv-And as we live from day to day in a world which advances in scientific achievement and becomes more efficient in its conquest of the forces of nature, let us always remember that only from Thee do we possess the means which are favorable to our success, and that only through Thee do we lator in the works by which our happiness in association with one another is sustained.

We rejoice today in the heritage which is symbolized by this road. We have called it "Cranberry Highway." Thus do we proclaim our indebtedness to Thee, O God, for the abundant vegetation whose luscious fruit has found so many uses and brought to us such great measure of material prosperity. Preserve in us, loving Father of us all, a right intention in our every undertaking, and shield us from every danger in our pursuit of earthly advantage. May all who pass over this road find Thee ever at their side; and may they be lifted up from contemplation of its loveliness and its historic associations to deep and lasting appreciation of Thine own infinite beauty and goodness, Who livest and reignest forever and ever, Amen.

#### Ides of 1960

EXTENSION OF REMARKS OF

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. McMILLAN. Mr. Speaker, I take great pleasure in having inserted in the CONGRESSIONAL RECORD an item which appeared in the Nashville (Tenn.) Ban-

This item was prepared by Mr. Frederick Taylor Wilson who is well known by the majority of the Members of this Congress. Mr. Wilson has published a number of very important books and it is always a pleasure to read any article he prepares.

IDES OF 1960

Much is being said and written about who will be nominated and elected President of the United States in 1960.

The writer submits these sober facts of history. William Henry Harrison—elected President in 1840—died exactly 30 days after his inauguration on March 4, 1841.

Abraham Lincoln who was elected in 1860, 20 years after Harrison, died 42 days after his second inaugural (March 4, 1865) by as-

James A. Garfield who was elected in 1880, or 20 years after Lincoln's first election, died like Lincoln as a result of assassination 6 months and 15 days after his only inaugura-

And believe it or not William McKinley. elected for the second time in 1900, 20 years after Garfield's election, died 6 months and 10 days after his second inauguration, like Lincoln and Garfield, at the hands of an assassin.

Warren G. Harding elected in 1920, or 20 years after McKinley's second election, died in office about 2 years and 5 months after his only inauguration (March 4, 1921).

Franklin D. Roosevelt elected for the third time in 1940, or 100 years after the election of William Henry Harrison (1840), reelected in 1944, died 82 days after his fourth inauguration (January 20, 1945).

Let him who would seek the Presidency in 1960 ponder well these fateful facts of

history.

FREDERICK TAYLOR WILSON.

### Against Unwarranted Secrecy

EXTENSION OF REMARKS

## HON. EURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. HARRISON. Mr. Speaker, as the Federal bureaucracy has grown, it has been increasingly difficult for the public to keep itself informed about the public business. The so-called executive privilege frequently has been invoked to deny information not only to news media, but even to the people's elected representatives in the Congress. This has been done despite the fact not an iota of national security was involved in the subject matter.

Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial from the Richmond Times-Dispatch of June 27, 1959, commenting on the effective work of Virginia's Representative Porter Hardy, Jr., in sponsoring certain "freedom of information" amendments to the Mutual Security

A BLOW AT EXECUTIVE SECRECY

A heavy blow at the executive privilege secrecy racket invoked by many Federal offi-cials, has just been struck by the House of Representatives. In passing recently the Mutual Security Act, the House unani-mously approved "freedom of information" amendments sponsored by Representative PORTER HARDY, Virginia Democrat, and banning executive privilege, insofar as the International Cooperation Administration, which handles billions in foreign aid, is concerned.

It is greatly to be hoped that the Senate will endorse the amendments, and that both branches of Congress will then adopt legislation outlawing executive privilege for all

Federal departments.

(For an incisive and authoritative account of how executive privilege was invoked for the first time 5 years ago in Washington, and the manner in which it has been grossly abused by Federal offi-cials, see "Secrecy in Washington" by Clark Mollenhoff in the July Atlantic.)

Under this phony protense of privilege, department heads have contended that they could withhold practically any information. from Congress, the General Accounting Office, and the public concerning their departments, irrespective of whether national security was involved, and despite the fact that they are required by law to make some of this material available.

Since executives outside the ICA are not affected by the Hardy freedom of informa-tion amendments, many of them will doubt-less continue to assert this privilege at every opportunity, with a view to preventing the public from finding out how they are spending the public's money. As noted above, they should be stopped by the passage of legislation.

It was high time that legislative restrictions were imposed on the ICA, in view of the wholesale waste in such countries as Laos and Iran. The scandalous conditions unveiled recently by the Hardy subcommittee in its Laos inquiry were shocking. It is claimed that these conditions had been greatly improved in the past year or two. If so, why the objection to letting Congress and the people know what's going on? Representative Moss, of California, and

Representative FASCELL, of Florida, issued a joint statement concerning the Hardy amendments, saying that they strike di-rectly at the heart of the claim of executive privilege under which Federal officials have been telling Congress and the public that the operations of the Federal Government are none of your business. They then go

on to say:

"The shield of executive privilege has been held up against congressional access to facts about the Nation's missile program. It has been used to cover up financial operations by the Navy and even to hide scandals in high government offices. Probably the most arrogant claim of executive privilege was advanced by the International Cooperation Administration, which spends billions of dol-lars for foreign aid. The information which the ICA has been secreting from the Congress and its auditors-the evaluation reports on aid to South America, to Formosa, to Pakistan, Laos, and many other countries—cannot be hidden with the Hardy amendments in effect. If the Senate approves the amendments, the General Accounting Office and the Congress will be able to get the information necessary to do their jobs."

But only insofar as ICA is concerned. Numerous other Federal departments will continue to invoke executive privilege until somebody hits their officials over the head with a legislative baseball bat and tells them they have no right to bottle up facts con-

cerning the public business.

Our Highway Program and the Gasoline Tax

EXTENSION OF REMARKS OF

### HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. PELLY. Mr. Speaker, the President's budget called for a continuation of the stepped-up interstate road building program by providing Federal help through a boost in the tax on gasoline of 11/2 cents a gallon.

Under the accelerated highway building program for the year beginning July 1 authorized by Congress in the 85th Congress, my State of Washington would receive \$44,800,000 in 1900 and \$39,400,-

000 in 1961, a total of \$84,200,000. If Congress does not approve of President Eisenhower's budget request, my State's allotment of 1960 Federal highway funds will be nothing and only \$9 million in

In this connection, I offer a telegram which I received from our State of Washington Director of Highways which speaks for itself:

W. A. Bugge, Director of Highways.

National Welfare Demands Republican Party Must Be Given Full Control of the Machinery of Government

> EXTENSION OF REMARKS OF

# HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. REECE of Tennessee. Mr. Speak er, on June 8 at the Sheraton-Park Hotel in Washington, there was a magnificent turnout of Americans who attended testimonial dinner in honor of the serv.

ice to the Nation of Republican Members of Congress. It was the first dinner of kind ever held, and it was a great suc-

One of the speakers at this dinner was the Honorable Joseph W. Martin, Jr., of Massachusetts, one of the living great Americans, a former Republican Speaker of the House and former minority leader, and who has served five times as permanent chairman of the Republican National Convention. He reviewed the accomplishments of the 80th and 83d Congresses when the Republican Party was in control of Congress. These Con-gresses produced a real record of achievement for the American people. This record suggests what accomplishments could be expected from another Republican Congress.

Since the past is so easily forgotten, I include as part of my remarks the address of Mr. MARTIN, as a reminder to the Nation of the work of the 80th and 83d Republican Congresses:

REMARKS OF REPRESENTATIVE JOSEPH W. MAR-TIN, JR., OF MASSACHUSETTS, AT TESTIMONIAL DINNER HONORING REPUBLICAN MEMBERS OF CONGRESS, SHERATON-PARK HOTEL, JUNE 8,

This splendid gathering, at the first testi-monial dinner ever held to honor the Re-publish publican Members of Congress, makes certain of success in the 1960 election.

We firmly believe that we will, through the election of a Republican President, be continued in control of the future destinies of

With energy and aggressiveness we can

with energy and aggressiveness in addition win control of the Congress. Control of both the White House and Congress and Congress with the White House and Congress with the Congres gress will give us the opportunity to demonstrate what we can accomplish by unity and Cooperation in building a stronger and better Nation.

As we see our present and former Members of Congress gathered together here tonight, we realize what their services have been to America. I wish to join with every person present to thank my friends and colleagues of many years for a job well done.

I am most happy to participate at this occasion when Republican Congressmen and Senators Senators of long service are being specially

With the presentation of their long-term ervice pins, we recall how much we owe to

They served in the dark days when there was a real threat of a one-party government.
They stood steadfast; fought back; paved
the way for the dark days when the back; paved the way for the day when our Grand Old Party again emerged triumphant.

The Republicans in Congress, in the past and today, are the torchbearers of liberty, to light the way for the Nation and for the

These legislators have always been in the forefront of the battle for individual rights. for free enterprise for free people.

They believe that a government is the servant of the people, not their master. They are workers for the ideal of an honest, efficient and economical Federal Government, efficient and economical Federal Government ernment, to provide protection and services that cannot well be handled on a State or local leval.

local level. They seek to save, rather than They believe that a strong America repre-

sents the world's best hope for peace.

They stand firm against appeasement of the Constant firm against appeasement of the constant against appearance and against against appearance and against appearance and against appearance They stand firm against appeasement the Communists, against creeping socialism, reckless

reckless spending, inflation and crushing taxation, undue regulation and interference. against red ink and redtape in Government. These legislators are fighting the good fight for you, this year, as they did last year, and

the year before, 10 years ago and 20 years ago, and I am sure they will continue to do so in the future. This splendid gathering of interested Americans will give them inspiration and courage to fight a never ending battle for a free Government.

Many of the people here tonight served in the Republican 80th Congress in 1947 and

The 80th Congress balanced the budget for a huge surplus. This is the Congress which cut the Democratic administration's budget by \$6 billion. It passed the bill to improve labor-management relations, over a Presidential veto.

Taxes were reduced by \$4.8 billion per year for 47 million taxpayers, and 7 million Americans with low incomes were removed from the tax books, all this over Presidential vetos.

At the same time payments were increased for needy dependent children, the aged and the blind.

The next bright Republican years were 1953 and 1954 when President Eisenhower in the White House had the help of a Republican Congress in the Capitol.

This Republican 83d Congress had a real record of achievement, continuing the good

work of the Republican 80th.

It cut down on Federal spending, reduced taxes, ended wage, price, rent, and materials controls to start the Nation on its greatest peacetime prosperity boom in history.

It expanded social security coverage to 10 million more citizens and increased benefits. It extended unemployment insurance cover-

age to 4 million more citizens.

It increased grants for research on cancer, heart disease, mental health and arthritis, The Department of Health, Education, and Welfare was established.

A strong national defense was set up, as the fighting in Korea was ended.

Legislation by the 83d Congress sparked a big housing boom.

adopted 12 reorganization plans for greater Government economy and efficiency and revived the Hoover Commission. It created the Small Business Administration.

That is the record many in this hall created and it should inspire us for the future.

Since that time, with Democrats in control of the 84th, 85th, and 86th Congresses, the Republican minority has been most effective in stopping bad legislation, but we have only been able to get a fraction of our Republican programs adopted.

When one party controls the White House and the other party controls the Congress, legislative accomplishment slows down to a

snall's pace.

We must go forward again and give the Republican Party full control of the ma-chinery of government. Of course, we understand that the task ahead is a difficult one. Our journey back to White House control was a long and arduous struggle but we did it. We can do it again if our hearts are in the task and if we struggle unselfishly

The Republican Congress will accomplish those things which need to be done for the benefit of the Nation as a whole.

It will cut Federal spending and balance the budget to provide for a surplus which can be used to start reducing the national debt and to reduce the crushing burden of taxation.

In my opinion, the only hope of any substantial tax cut in the future is the election of a Republican Congress. It is our hope for tax relief.

The Republican program of fiscal sanity with our friendly attitude toward free enterprise which has made America great is the Nation's best guarantee for future progress and prosperity-for continued sound economic growth, for full employment so that there is a job for everyone, for a curb to the inflation which robs the retired senior citizen, the widow and the orphan, the housewife buying her family's groceries.

The Republican Congress will back the Republican administration in its American foreign policy-stand firm to all the world against aggression and gangsterism, build further on our present sound national defense. Our policy is the strong policy that offers the world its best chance for peace.

The fine record of accomplishment by the Eisenhower administration with its strong appeal to the people, plus a hard-hitting campaign, will bring the election of another Republican President next year, along with a Republican Congress.

This gathering here tonight is just one phase of the campaign which is underway all over the country to elect a Republican House and Senate.

With the help of every Republican and every thoughtful American, we shall succeed. Won't you enlist in this worthy cause?

### Lewis L. Strauss

EXTENSION OF REMARKS OF

# HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. DEROUNIAN. Mr. Speaker, I commend to the attention of our colleagues the following editorials and articles which have appeared in the Washington newspapers within the last few days.

Washington's Evening Star, June 19, an article by David Lawrence:

SAD CHAPTER IN THE SENATE-VOTE AGAINST NOMINATION OF STRAUSS HELD TRAGIC, BASED ON PERSONAL FEUD

### (By David Lawrence)

One of the most tragic episodes in the entire history of the U.S. Senate is the fight that was waged to prevent the confirmation of Liewis L. Strauss as Secretary of Commerce.

It is tragic because it was based on a personal feud. When hatreds become deep-seated, they sometimes produce far-reaching cleavages, with emotion substituted for rea-

The dispute was the outgrowth of friction between Mr. Strauss and Senator CLINTON ANDERSON, Democrat, of New Mexico. When the former was Chairman of the Atomic Energy Commission, he rubbed Senator Anderson the wrong way.

The New Mexico Senator is Chairman of the Joint Atomic Energy Committee in Congress. He is influential with his colleagues. Many sided with him-as members of the senatorial club often do-without particular regard to the merits of a question but with greater regard for the wishes of a fellow-Senator

Senator Anderson's home State-New Mexico-is the seat of the atomic laboratories where many scientists are gathered. Some of them were embittered over what they believed was Mr. Strauss' animosity toward J. Robert Oppenheimer, the scientist whose "clearance" was denied for security reasons by a Presidential board. While Mr. Strauss was not a member of this board, he did present to the White House the charges that led to the inquiry. It was natural that many of Senator Anderson's constituents should expect him to do what he could to punish Mr. Strauss.

But this wasn't all of the controversy. It couldn't be focused on the Communist issue alone. It so happens that Mr. Strauss fought against governmental operation of power projects and in favor of private power. So this gave an opportunity for some of his foes in that field to be lined up against him.

The tactics have been palpable for months. The hearing held by a Senate committee was more of an inquisition than the normal recording of the views of a prospective Cabinet officer. Usually the opposition party doesn't object to the appointment by a President of whomever he wants in a Cabinet post. the recent hearings resulted in a bitter fencing match and naturally the answers provoked were not always as clear cut as they would be if a different atmosphere had prevailed. Mr. Strauss was thereupon attacked as being "deceitful" and as lacking in character.

But not all the Democrats allowed this vendetta to envelop them. Senator Thomas J. Done, of Connecticut, for instance, in a speech yesterday to the Senate, said:

"Lewis L. Strauss is a man of 63 years. He is a former shoe salesman with a high school education who has received honorary degrees from 29 colleges and universities.
"He has a background of devoted service to

phllanthropic and religious affairs.

"He has earned distinction and wealth in the field of finance.

"He has a record of honorable achivement in the naval service in which he rose progressively to the rank of rear admiral.

"He has played some role in almost every administration, Democratic or Republican, since the days of Woodrow Wilson.

"He has earned letters of commendation from five Presidents.

"He has been awarded five of his country's highest decorations.

"He has been honored by grateful nations of the free world.

"He has taken positions on matters of first importance to this Nation, positions that were controversial, positions that were right.

"In the 42d year of his public life, at its climactic hour, we in the Senate are asked to reward this man by visiting upon him a condemnation and a repudiation that have nct been accorded any American in a generation."

Senator Dopp referred to the case of Dr. Oppenheimer and said: "If ever a Government official, in possession of critical secret information, indicted himself as a security risk by his own words and actions, it was Oppenheimer. \* \* \*

'It is uncontested that over a period of many years, Dr. Oppenheimer persisted in his Communist associations. He was a regular financial contributor to the Communist

Party. Senator Doop, referring to the Haakon Chevaller case, said it "Is an admitted matter of record that Oppenheimer concealed this espionage attempt from security investigators, in an attempt to protect a Communist

spy. Indignant denials are being made that the friends of Dr. Oppenheimer had influenced the waging of the fight against the confirmation of Mr. Strauss. But the fact remains that for some unexplained reason, the retiring Secretary of Commerce has been the victim of the same kind of smears and in-nuendoes which only a few years ago were being denounced as "character assassina-tion" in an era of so-called McCarthyism. Many of the liberal Senators were lined up against Lewis Strauss.

The most charitable interpretation of all this is that it was a personal feud, and that where human foregiveness should long ago have settled the quarrel between two strongly dedicated men, it lingered on until the Senate, itself, became the vehicle for personal spite and recrimination. It is a sad chapter in American history.

Washington's Evening Star, June 20, an editorial:

THE LEADER'S CHOICE

The majority leader of the U.S. Senate Is a man who must wear two hats-the hat of the leader of a political party seeking every political advantage that opportunity offers, and the hat of the leader of the Senate in its exercise of functions assigned to it as a part of the legislative branch of our Gov-

The grace with which he can wear these two hats depends in large measure upon his ability to seek political advantage for his party without inflicting injury to the interests of his country. We have been one of many who have developed genuine respect in the years, of his leadership for Senator Lyndon Johnson. He has worn the two hats with considerable grace.

And it is with considerable regret that we express the opinion that both of his hats look rather ill fitting on this weekend. He had it in his power to see that Lewis Strauss was confirmed or defeated, and he chose the latter course. He did it for political expediency, which is a part of his job. But we are not sure that such expediency will pay off for him, or his beloved Senate. It was the Senate under his leadership that committed an error in statesmanship and fair play which many admirers of that great institution will continue to regret.

Washington's Evening Star, June 21, an article by Gould Lincoln:

WHO WANTS TO FACE SENATE NOW? (By Gould Lincoln)

The rejection by the Senate of the nomination of Adm. Lewis L. Strauss to be Sccretary of Commerce leaves a bad taste in the mouths of millions of Americans. There are a number of reasons. In a measure, the action of the Senate against President Eisenhower's choice for an important Cabinet post is a blow to the prestige of the President of the United States when this country is engaged in vital negotiations with foreign powers. But mostly, many Americans will view the action of the Senate in rejecting Mr. Strauss as an injustice to a man who has faithfully served his country in important offices. They will view the action of the Senate as a rejection on flimsy and unsubstantiated charges-charges brought because of personal animosity, because of Admiral Strauss' position against the plans of those who want the Federal Government to go farther and farther into the development of public power, and because of partisan poli-

There was no charge of venality against Mr. Strauss. Not even his enemies said he was corrupt or flatly dishonest. It is noticeable that 15 Democratic Senators voted for his confirmation. Some of them praised him highly. It is noticeable, too, that all four of the Democratic Senators who are considered potential, if not actual, candidates for a presidential nomination next year voted against Mr. Strauss-Senators Lyndon Johnson of Texas, John F. Kennedy, of Massa-chusetts, Stuart Symington, of Missouri, and Senator HUBERT HUMPHEEY, of Minne-

JOHNSON VOTE IS KEY

Senator Johnson is the majority leader of the Senate. Had he voted for Mr. Strauss, it is widely believed, the admiral would have been confirmed. As it was, the change of only two votes on the rollcall would have brought victory to Mr. Strauss and President Eisenhower in this contest. Whether the votes against Mr. Strauss will aid any of the potential candidates for the Democratic presidential nomination-and if one is nominated, will aid him in the general

election next year—remains to be seen.

Not all the blame for the defeat attaches to the Democrats. Two Republicans, Sena-tors Langer, of North Dakota, and Margaret

CHASE SMITH, of Maine, voted no. Had they voted for Mr. Strauss, he would have been confirmed. Senator Langer early in the debate on the nomination announced he would oppose confirmation. Mrs. Smith's vote came as a surprise. She made no speech prior to the vote.

Mr. Strauss served his country well as Chairman of the Atomic Energy Commission, to which he was first appointed by former President Harry S. Truman. He was one member of the Commission who insisted on going ahead with the development of the hydrogen bomb, and in this he went right along with President Truman. Had the United States not pressed for the develop-ment of—and had not developed—this bomb of tremendous force, we would have been outdistanced in the field of nuclear weapons by the Communist Russians.

#### FOE OF COMMUNISTS

Mr. Strauss, too, has been strongly anti-Communist at all times, and committed to maximum security for this country. It is easy to understand that the Communists abroad and in this country will rejoice at the defeat he has now suffered at the hands of the Senate. When Provide the hands of the Senate. When President Eisenhower became Chief Executive in 1953, he persuaded Mr. Strauss to accept appointment as Chairman of the Atomic Energy Commission. After his term, he was appointed Secretary of Commerce. During his service on the Commission, he ran afoul of Senator CLINTON P. ANDERSON, of New Mexico, Chairman of the Joint Committee on Atomic Energy, who has been a persistent and bitter foe of Mr. Strauss ever since. The Anderson vendetts

finally paid off.

The Senate, by its harassment and attempted character assassinations of Mr. Strauss, has done itself no good. If by action it has seemed to say to the outside world, President Elsenhower does not have the support of the support of Americans in his firm stand on Berlin and Germany, as opposed to the Russian Reds, it will have done the country no good.

One thing the Senate successfully accessfully plished. By its long-drawn out inquisition of Mr. Strauss, its permission of charges by innuendo and the filmsiest kind of argu-ment, it has made it even more difficult to get the most competent men in private life to accept appointment to high office which must be confirmed by the Senate. Many will hesitate to subject themselves to such attacks animated by attacks animated by personal venom or partisan politics.

Lewis L. Strauss

EXTENSION OF REMARKS

# HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. DEROUNIAN. Mr. Speaker, pur suant to permission granted me, I in sert in the Appendix of the RECORD, forthright editorial, mincing no words, that appeared on June 22 in Virginia's "The Richmond News Leader": Prom the Richmond News Leader, June

22, 1959] THE LYNCHING OF LEWIS STRAUSS Easily the most powerful legislative as sembly on the face of the earth, the Sentate of the United St. ate of the United States last Friday showed how petty men will abuse great power. The Senate's refusal to confirm Lewis Strauss as Secretary of Commerce was the trutal climax of a vicious persecution. Because he thought for himself, a man of integrity was pulled down by a vindictive

Appointed Secretary last November, after rejuctantly leaving retirement. Admiral Strauss was forced to suffer a deliberately prolonged inquisition that became a national diagrace. For 3 months the "hearings" dragged on, as self-styled "liberals" heaped on the head of this honorable public lie servant the most vile, baseless accusations. Men who fairly burst with pompous self-esteem inveighed against the "false Pride" of Admiral Strauss. Men who are strangers to the truth called him a "liar." Men who had never known Lewis Strauss appeared to testify about his character, and their venomous hearsay fouled the air.

Lewis Strauss was lynched for his opinions; let no hypocritical foe of "McCarthyism, say otherwise. A conservative Republican, perhaps the most authentic Republican named to a Cabinet post by President Essenhower, he was the target of every voteseeking, publicity-craving politician in the Democratic Party. "The Little Tin Gods on Wheels," as Kipling described the hacks of another. another day, sank to a new low of pettiness in their unwarranted assault.

The incredible Mr. KEFAUVER, of the motheaten coonskin cap, was a leading antagonist, who sought mightly to play the role of champion of public power for the folks back home in TVA country. Crying "Dixon-Yates," the Senator from Tennessee charged charged, without a shred of evidence, that Admiral Strauss, while chairman of the Atomic Energy Commission, had attempted to "sale

Another critic was Senator Chinton Anbrason of New Mexico, a man capable of boundless, unreasoning hatred. Chairman of the last surreasoning hatred. of the Joint Atomic Energy Commission, he nursed a long-festering grudge against Admiral Strauss. He, too, sought to portray the Secretary as an enemy of public power, who had bloom as an enemy of public power, who had blocked Federal atomic energy projects. And Senator Anneason joined with left-wing scientists to flay Admiral Strauss for his part in branding Dr. J. Robert Oppenheimer a security risk." Oppenheimer has been hailed a martyr by the left. Anyone who assisted in his assisted in his fall from grace is marked for

Two other Democrats also must be ar-Taloned as leaders of this lynching bee:
Warnen Magnuson, chairman of the Interstate and magnuson, chairman of the Interstate and Foreign Commerce Committee, and Lavidon Johnson, Machiavellian party lead-If Magnuson should ever cry out against er. If Macauson should ever cry out against "McCarthyism," he is a rank hypocrite, for his conduct of the Strauss hearings was scandalous. Anyone, however unqualified, who had something descriptory to say about who had something deregatory to say about Lewis Strauss, was afforded an opportunity before Senator Magnuson's committee; no slander was so base, no lie so flagrant, as to draw the chairman's frown.

And, finally, we come to likable Lyndon Johnson, a cutthroat in pinstripes. Covertive and the control of t Volknson, a cutthroat in pinstripes. Covere-iy, discreetly, Johnson was ringmaster; Without him, there very probably would have been no spectacle. Like other men in the lynching pasts. Canadas Johnson doubthave been no spectacle. Like other men in the lynching party, Senator Johnson doubtless sees himself as superbly equipped to his dreams of glory, but his irresponsibility speaks eloquently of his lack of qualification for any post above the level of party "fixer."

for any post above the level of party "fixer."

Party of the level of party "fixer." Party advantage and personal animosity were the chief motives behind the conspiracy to "get" Lewis Strauss. The challenge to the party advantage and personal animosity spiracy to "get" Lewis Strauss. lenge to the President is plain, the campaign was paign war cry of 1960 easily forecast: "Get Big Business Out of the White House." Pre-dictable has been supported by the Big Business of the White House." dictably, by a sleazy dialetic, the Democrats will attempt to link Sherman Adams, Bernard Casas But it hard Goldfine and Lewis Strauss. But it backs, work. Moreover, it will probably

There is no "case" against Lewis Strauss, no "conflict of interest" and certainly, no suspicion of wrongdoing. A brilliant rec-ord of public service, under five Presidents, speaks for Lewis Strauss; his enemies have nothing to match it. An innocent man was hung last Friday, and we believe the American people are smart enough to realize it. Come 1960, they may even be mad enough to do something about it.

EXTENSION OF REMARKS OF

## HON, EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include in the appendix a very timely article by the noted physician, Dr. Howard A. Rusk, entitled "Health Research Needs," which appeared in the New York Sunday Times yesterday. This article deals with the so-called health for peace bill which has passed the Senate:

HEALTH RESEARCH NEEDS-STUDY OF CON-GRESSIONAL ACTION ON FUNDS FINDS DELAY ON HEALTH FOR PEACE BILL

#### (By Howard A. Rusk, M.D.)

Last Wednesday the Senate, by a vote of 83 to 10, increased the administration's budget request for the Department of Health, Education, and Welfare for the next fiscal year by \$365 million.

The major increase was in the appropriation of \$484,604,000 for medical research. This was \$186 million more than President Eisenhower requested.

Significantly, this was the first appropria-tion bill passed by the Senate this session that has been higher than the President requested.

Of the many reasons for this action by the Senate, there are two that are primary,

One is the firm conviction in the overwhelming majority of the Senate that saving human lives is more important than saving dollars.

The second is their recognition that their constituents, the American people, believe in medical research and are willing to pay tax dollars to expand it.

### CASUALTY TOLL CITED

In urging his colleagues to support this increase, Senator LISTER HILL, of Alabama, quoted a number of impressive figures from the newly released 1959 Factbook of the National Health Education Committee. Among the facts he cited were the following:

Based on the 1957 casualty toll, heart disease and cancer will take the lives of 1,-147,270 Americans this year.

Medical advances within the last 15 years, directly resulting from federally supported medical research programs of the National Institutes of Health, have saved 1,800,000 lives in the United States.

The \$484,604,000 voted by the Senate for medical research compares to \$665 million being spent this year for river, harbor and flood-control maintenance.

Senator Hull also called the attention of his colleagues to the second factor-the belief of the American people in medical research.

He summarized a report developed in May 1958, for the National Association of Science Writers, in which a nationwide sampling of citizens was asked which of four projects they would prefer if funds were available for only one.

#### MEDICAL BESEARCH FIRST

The selections were: a new program for medical research, 54 percent; new approaches to juvenile delinquency, 32 percent; basic research in sciences such as chemistry and physics, 7 percent, putting the first man on the moon, 3 percent.

These same two primary factors that were applicable to our national domestic medical research program are also applicable to the health for peace bill. This legislation, which would create a new program of international medical research funded at \$50 million a year, was passed by the Senate by a 63-to-17 vote

Editorial comment throughout the country and the support of this legislation by all organizations indicate that the action of the Senate reflected the will of the people.

More than a month has passed since the Senate passed this International Health and Medical Research Act of 1959. Yet, as this newspaper pointed out editorially last Sunday, no hearings have been scheduled in the House of Representatives. Now another week has passed. If hearings are not held in the very near future, the prospect of the legislation's coming to a vote before the House this session is unlikely.

During the next fiscal year the Department of Defense will spend more than \$5,600 million in research and development.

The Senate recently voted an authorization of \$485 million for the new National Aeronautics and Space Administration.

#### OUTLAY NOT DISPROPORTIONATE

Our citizens and their Representatives in the Congress recognize the necessity for these investments in our national defense. Our citizens also recognize that to invest \$50 million a year in international medical research against disease and death is not disproportionate while we are spending \$40 million for military defense.

It will be tragic indeed if through failure

hold hearings immediately the Members of the House of Representatives are not permitted to reflect this interest of their constituents in a vote on the health for peace

The basic observations that produced penicillin lay for years in the notebook of the late Sir Alexander Fleming. Rauwolfia, which revolutioned the treatment of high blood pressure, was known to native doctors in India hundreds of years before its great therapeutic possibilities were recognized here in the United States.

The key to the cause and treatment of cancer, arteriosclerosis, and arthritis may now be lying dormant some place in the world, waiting to be brought to light by eager scientists who ask only for tools and opportunity.

### Reclamation Policy Needs a Review

EXTENSION OF REMARKS OF

# HON, EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. BOLAND. Mr. Speaker, I recommend to the Members of the House a thought-provoking editorial clipped from the Sunday, June 28, 1959, edition of the Washington Post.

It points up the necessity now of a review of the Nation's reclamation policies. Changing conditions of our farms,

their products and ever-mounting surplus crops clearly indicate that Congress ought to get another look at and study of a program that has changed little over the past half hundred years.

IRRIGATING QUESTION

A bill to authorize a new Federal reclamation project in California raises a question far more fundamental than the 160-acre limitation argument which was hotly debated before the bill was passed by the Senate. Should the Federal Government on the one hand continue to allocate hundreds of millions of dollars to new western reclamation projects when on the other hand the Government spends billions of dollars a year to subsidize surplus farm production?

The proposed San Luis unit of the Central Valley project in California would cost the Government \$290 million, most of which, it is true, would be repaid over a period of 50 years by the farmers who would benefit from the dam and irrigation system. Even so, the effect of the Federal expenditures would be to subsidize a relatively small group of farmers by granting them interest-free loans to keep 500,000 acres of land in production. The area is now irrigated by wells which have practically dried up existing ground-water

supplies.

Of course it would be unfair to single out the San Luis project for undue criticism. The reservoir was planned some time ago and ought not to be used as a horrible example. It is no different from many other reclamation projects which have been authorized by Congress in recent years. Nevertheless, it seems to us that the San Luis project should serve as a reminder to Congress as well as to the administration of the need for a fundamental review of reclamation policy insofar as it may be inconsistent with farm policy.

The Federal Government should be doing more to encourage farmers to take addi-tional land out of production. More farmland is surely not needed now, and it may be that a sizable increase in productive land will not be necessary for many years. Fertilizers may soon become so potent that sudden demands for additional food and fiber production can be met merely by turn-

ing on a nozzle.

Although it may be true, as reclamation enthusiasts argue, that irrigated land is seldom used to produce surplus crops like wheat, corn, or cotton, any significant addition to the Nation's farm acreage is bound to have an effect soonor or later on all farm production. Cotton, for example, has moved westward largely because of the expansion of irrigation in Arizona and California.

Obviously there is nothing the Federal Government can or should do to prevent States like California, Texas, and North Dakota from undertaking their own irrigation projects, and existing Federal projects must be supported. But there is a real question whether it ought to be Federal policy to reclaim more land for production at this time (and there are plans for Federal projects in each of the mentioned States). In some cases the farmers who would benefit from the projects probably could work out the financing at least for modest projects through cooperative agreements.

The Americans to whom reclamation is almost a religion ought to reconsider their aims in the context of the multibillion-dollar farm surpluses of 1959. The successful fight which Senator DougLas and Senator Mosse made for the retention of the 160-acre limitation in the San Luis project was admirable, but the realities of the reclamation program also need some championing. Today's agricultural needs are certainly far different from the farm and ranch problems of 50 years ago when reclamation poli-cles that are still in existence were largely formulated.

## Labor Plans Active Political Push for 1960

EXTENSION OF REMARKS

### HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES Monday, June 29, 1959

Mr. MUNDT. Mr. President, in my opinion it is important to maintain the stability of American institutions so that both the political parties in America retain their integrity and independence. Neither political party should become the tools of either big business, organized labor, or any other pressure group.

From the column written by Doris Fleeson which appears in the Washington Evening Star for May 13 of this year entitled "Labor Active on Plans for 1960," it appears as though organized labor is attempting to take over the Democrat party and use that party as the vehicle to implement its own ends

after the 1960 election.

The Margaret Thornburgh referred to in this column has been active in my State of South Dakota organizing and teaching Democrat precinct workers for techniques of big city machine politics. Since the Regional Director for the AFL-CIO in a recent address in Rapid City, S. Dak., stated that I should be retired from political life, I am not surprised that labor organizers are teaching Democrat precinct workers their techniques for winning elections.

In the belief that Doris Fleeson's analysis of labor's present political sophistication will be of interest to my colleagues, I ask unanimous consent that it may be printed in the appendix of the RECORD, along with the report on this subject contained in my newsletter entitled, "Eastern Labor Leaders Turn 'Scalp Hunters' Loose in South Dakota." I also request permission to have included in this insertion the United Press International story appearing in the Huron Plainsman for June 19 entitled, "Trade Union Leaders To Meet To Confer on Political Education." Quite obviously, insofar as COPE is concerned, its campaign to control the country through political victories in 1960 is already underway.

There being no objection the articles and newsletter were ordered to be printed in the RECORD, as follows:

From the Huron Plainsman, Friday, June 19, 1959 |

TRADE UNION LEADERS TO MEET TO CONFER ON POLITICAL EDUCATION

President Albert J. Maag of the South Dakota State Federation of Labor, AFL-CIO announced today (Thursday) that trade union leaders throughout the State will attend a conference in Fargo, N. Dak., June 20 and 21 on political education procedures.

The conference will be sponsored by the Committee on Political Education (COPE), the political arm of the American Federation of Labor and Congress of Industrial Organ-

Meeting with South Dakota delegates will be those from North Dakota. Those attending the conference will include State organization, internate, and national union officers, local union officers, local union officials,

and delegates from city central bodies. City-county and congressional district COPEs, and women's activities departments.

Wives of delegates have been invited to

participate in all sessions,

Officers from national COPE headquarters omcers from national COPE headquarters in Washington, D.C., headed by national director James L. McDevitt and deputy di-rector Alexander Barkan, will attend the conference.

The conference is aimed at stimulating COPE's organizational activities. The conference program will include procedures and problems of COPE's activities in voting reg-istration, education and campaign techniques.

Maag pointed out that the labor movement is confronted with a concerted, organized drive on the political front by businessmen and industrialists. He said that emphasized the necessity of trade unionists to become involved in realistance. involved in political education and to be politically active.

Conferences held last year are credited by COPE officials with a large measure of the success which organized labor achieved in

the 1958 elections.

"The 1958 conferences were the most successful we have ever held," McDevitt said, "and undoubtedly a major portion of our accomplishment in the November elections can be attributed to them. This year we are confident that the opportunity which the conferences afford for people in the same area of the Nation to exchange information regarding political tactics and strategy and regarding know-how on political is sues, and to renew contacts with the tipal COPE and the sues. tional COPE staff, will give similar impetus sional elections in 1960."

Twenty area conferences are being held during the spring and early summer.

[From the Washington Evening Star. May 13, 1959]

LABOR ACTIVE ON PLANS FOR 1960-LEADERS FOUND APPLYING LESSONS LEARNED IN E FORT TO PURGE TAFT

(By Doris Fleeson)

In the earliest presidential campaign in years, labor is getting ready actively for the battle of 1960. There will be exceptions, but the chief taxon will be exceptions. but the chief target will again be the Re-

David Dubinsky, president of the International Ladies Garment Workers, has sounded the tocsin. He has told his unions convention in Miami that the way must be cleared for "a positive rather than a negative Government." He is a member of New York's Liberal Party, but he was speaking for the Democrats against the Republicans the only choice which greatly matters in the only choice which greatly matters in

Labor has learned a great deal about politics since the days when it went down to defeat with "Jumping Joe" Ferguson in the effort to pure South effort to purge Senator Tart. That was the nadir of labor's political reputation in America, if not its ica, if not its fortunes. It has learned great deal since.

One of the things it has learned is to keef quiet about what it is doing politically.

neither does it openly threaten its foes.

It learned the hard way that the political choices made choices made by its officers cannot always be effectively communicated to its members. In this area it has recently done its members effective work. There is little doubt that its effective work. There is little doubt that in the 1958 campaign labor voted more solidit than ever before. And more members of labor unions voted than perhaps had ever voted in a nonpresident was helped notably by the presence of right to-work proposals on the ballots of several States.

A secret discovered by labor's political experts is now paying off. That is that a powerful factor in powerful factor in a union man's vote

his wife's opinion. With remarkable assiduity labor has been cultivating its wives for 4 years. The effort has paid off to an astonishing degree. Now not only union women but the wives of union men conatitute the most formidable political weapon in labor's arsenal.

The two women who head this work, Esther Murray in the East and Margaret Thornburgh in the West, are personally unassum-They have nevertheless become among the most influential women in American

Labor's Political Education Committee is now holding a series of 30 area meetings of local officials in preparation for 1960. An AFI CIO officer says that the meetings are for the purpose of studying our navel. Actually the meetings are for a reassessment of labor's performance in 1958 and a preview of techniques.

The meetings have been embarrassingly successful. They were doubled in number this year so that they would be smaller and supplies that they would be smaller and supplies. supposedly more effective. The attendance has remained as high as when far fewer meetings when the supposed workshop at meetings were held. A recent workshop at Cleveland for labor leaders from Ohio and Pennestra Pennsylvania drew 1,500.

Labor has now forged, and is perfecting, an organization which in many States is far better manned than the organizations of either of the major political parties. And whether lenders of national labor like it or not, the organization is beginning to produce candidates. That was certainly not the intention, but when one initiates the unschools of politics it unschooled into the mysteries of politics it probably is the inevitable result.

EASTERN LABOR LEADERS TURN "SCALP HUNTERS" LOOSE IN SOUTH DAKOTA

(By Senator KARL E. MUNDT)

On my arrival in Watertown, S. Dak., during the Memorial Day weekend to begin a series of South Dakots appearances, my attention was called to a news story in which a regional representative of the AFL-CIO had made made a number of statements about me during a speech he was giving in Rapid City. I learned that the speaker was a Carl Winn from St. Paul, Minn.

The fact that my record was attacked is not of significance: anyone who serves in public life sooner or later becomes a target. But, because this particular statement comes from comes from someone sent into the State for this purpose, I am bringing my reply to the attention of "Your Washington and You" readers. My statement follows:

The fact that Carl Winn, of St. Paul, Minn., a regional director of big labor's AFL-CIO is reported by our South Dakota wire services as selecting me as a prime target for attacks by out-of-State labor politicians, financed by the big bosses of eastern unions, comes as no

The only surprising feature is that these paid political "scalp hunters" have come out into the open so early in an obvious attempt either to inc. either to influence my votes in the Senate or to frighten me into silence or retreat. righten me into silence or retreat.

tried the same tactics last year on Senator Goldware, of Arizona, due to his membership on the comship on our Senate Labor Investigating Com-

They have made similar threats against Senator McClellan, the chairman of our committee of the chairman of the chairman of the committee of the chairman would committee. It was expected that they would employ the same techniques against me as vice chairman of this committee. But the tactics of these political mercenaries did not Work against Goldware or McClellan, and they will not intimidate me.

I promise my fellow South Dakotans I shall continue to try to provide American workers with the dampy to provide American workers with the democratic tools they need to con-trol their own destinies and that I shall fol-low man to reflect in low my conscience in an effort to reflect in Congress as faithfully as I can South Dakota's needs, ideals, and attitudes, regardless of the tough talk and threats of these big city labor bosses.

Actually, I have known for over a year that certain eastern labor politicians whose toes we have tramped on by our Senate investigations have put out the word "to get KARL MUNDT." Carl Winn was apparently firing their opening salvo. These men have had such success in pushing around and dominating their members in certain unions, they bitterly resent any congressional committee or public official they cannot control.

If I am the Republican senatorial standard bearer in 1980, these outside political overlords will try to find a candidate against me who will accept their money and their directions. If they succeed, they will assure him of almost limitless financing; if they cannot find such a candidate, they will spend their money surreptiously and send in carpetbag political workers disguised as tourists and visitors in an attempt to defeat me.

They are determined to demonstrate to the country that no man can defy them and live in public life. These power-bloc labor politicians do not like the labor reform legislation our committee's investigation has inspired, and the measures we have supported to strip unsavory labor bosses of their and privilege through giving the authority for union direction to the rank and file membership who pay the dues.

Weak and inadequate though it is, these eastern labor czars, egged on by Jimmy Hoffa, are now even opposing in the House the key sections of the Kennedy-Ervin bill, adopted by the Senate. In their wrath they are out to get all of us on the committee who helped produce the evidence and who wrote the reforms which put some teeth into this labor-reform legislation.

Fortunately, tens of thousands of duespaying union members applaud our committee's efforts to protect them from being cheated or coerced by corrupt bosses whom they can neither vote out of office or con-The last-ditch fight of these retreating labor bosses to defeat or destroy the men in public life whom they cannot intimidate or control is just one more manifestation of the strong-arm tactics to which they have become accustomed.

They will learn that neither the votes nor the voters of South Dakota are for sale.

The workers, farmers, and other citizens of our State will not be misled into following the siren call of outside political promoters who have only their own selfish interests to

I suggest that Mr. Winn take his advice and his money back home to St. Paul where he has much to do in trying to end the chaos and the financial crisis in State government which he and his confederates helped to create in Minnesota

Remarks of Julius Epstein, Esq., in Support of House Resolution 24

> EXTENSION OF REMARKS OF

### HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 9, 1959

Mr. BOSCH. Mr. Speaker, Julius Epstein, Esq., 470 Fourth Avenue, New York City, recently participated in the White House Conference on Refugees. I know of no man who has shown more genuine interest in the cause of refugees than has Mr. Epstein. At this Conference, Mr. Epstein had prepared remarks in support

of House Resolution 24, introduced by me, but because of the lack of time he was unable to deliver them. However, at a meeting of the U.S. Committee on Refugees, following the close of the Conference, he was able to give a portion of his prepared text.

Under leave to extend my remarks, I include the full text of Mr. Epstein's message:

REMARKS ORIGINALLY INTENDED TO BE MADE AT THE WHITE HOUSE CONFERENCE ON REFU-GEES, WASHINGTON, MAY 21-22, 1959

#### (By Julius Epstein)

As we enter the World Refugee Year on July 1, 1959. I deem it my duty to call this meeting's attention to a moral problem of greatest significance. It is the moral necessity to purge ourselves of a great wrong, considered by many authorities as a crime under national and international law. I am speaking, of course, of the forced repatriation of many hundreds of thousands of anti-Communist prisoners of war and displaced persons to Stalin's executioners, particularly in the years 1945, 1946, and 1947.

Fortunately, I am not alone to ask the American people to purge themselves of this wrong which resulted in death and misery of untold thousands of forcibly returned pris-oners of war and civilians, including not only men, but also women and children.

The protagonist of this great cause in Congress is the Honorable Albert H. Bosch, of New York, a man of outstanding courage, who has introduced three times an identical resolution in the American Congress asking for the creation of a select House committee to investigate past and present forced re-patriation of prisoners of war as well as of civilians.

This resolution is now again pending as House Resolution 24, introduced in the American Congress by Congressman Bosch—for the third time—on January 7, 1959.

Since the moral obligation to purge ourselves of this crime has never been stated so clearly and so concisely as in the preamble of the Bosch resolution, I ask your indulgence when I am going to read this preamble. I quote from House Resolution

"Whereas the forced repatriation to Soviet-controlled countries of millions of anti-Communist prisoners of war and civilians by American military and civilian authori-ties in the years 1945-47 in Germany and in other countries brought death and misery to untold thousands of these anti-Communists before Soviet firing squads, on Soviet gallows, and in the Siberian slave labor camps; and

"Whereas this forced repatriation of prisoners of war and civilians cannot be justified by the agreement on prisoners of war signed at Yalta on February 11, 1945; and

Whereas this forced repatriation was in violation of the rulings in implementation of the Yalta agreement on prisoners of war, made public by the Department of State on March 8, 1946; and

"Whereas the forced repatriation of prisoners of war who had enlisted in the enemy's army was in contradiction to the opinion of the Judge Advocate General of the Army, as expressed during the last 40 years; and

"Whereas the forced repatriation of millions of anti-Communist prisoners of war and civilians represent an indelible blot on the American tradition of ready asylum for political exiles; and

"Whereas the forced repatriation and annihilation of millions of anti-Communist prisoners of war and civilians of Russian. Ukrainian, Polish, Hungarlan, Baltic, and other origin is still poisoning our spiritual relations with the vigorously anti-Commu-nist peoples behind the Iron Curtain, and is

therefore impeding our foreign policy: Therefore be it

"Resolved, that there is hereby created a select committee \* \* \*.

'The committee is authorized and directed (1) to conduct a full and complete investigation and study of the facts, evidence, and extenuating circumstances of the forced repatriation program, carried out by our military and civilian authorities in Germany and other countries in the years 1945-47, under which millions of anti-Communist prisoners of war and civillans were forcibly repatriated to Soviet-controlled countries; and (2) to fix the responsibility for such program."

As a direct result of the forced repatriation, many refugees from the Soviet orbit came to our country by way of false identi-ties. They had to falsify their identities in order to escape this American sponsored forced repatriation. They did it very often under the direct advice of American military and civilian authorities. After hearings be-fore the Senate Internal Security Subcommittee (chairman, Senator EASTLAND), Congress passed an amendment to the McCarran-Walter Act, which makes falsification of identitles in order to gain entry into the United States of America no crime, punishable by deportation, provided that falsification was committed in order to escape forced repatriation behind the Iron Curtain and provided the falsification is revealed to the Attorney General. This amendment was signed into law by President Eisenhower on September 11, 1957.

It is my purpose to urge you to study the Bosch resolution which certainly is, from an ethical point of view, one of the most significant resolutions ever to be introduced in the American Congress. But to study it is not enough. I also urge you in the name of hundreds of thousands of innocent victims of American forced repatriation, now tragically silenced, to support House Resolution 24 with all your strength, so that the Speaker of the House, the Honorable Sam RAYBURN. will give the green light to the House Committee on Rules to send House Reclution 24 to the floor of the House to be debated and voted upon.

Only by carrying out an impartial congressional investigation of our own shameful deed of forcibly repatriating innocent people to their sure death, can we purge ourselves of the misdeed. Only then shall we have purified the still poisoned spiritual relations to our secret allies behind the Iron Curtain.

May God give us the strength to do this as we enter the World Refugee Year of 1959-60.

## The Choice Between the Easy Wrong and the Hard Right

EXTENSION OF REMARKS OF

# HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks, I wish to call attention to an excellent editorial which appears in "Our Navy" on "The Choice Between the Easy Wrong and the Hard Right."

In these days of decision, it is necessary for us to keep uppermost in our minds the frightening alternatives when we elect to take the easy way and give ground to the forces which would enslave

This editorial is an exhortation to the fighting men who are the deterrent to further Soviet advances. The men who make the decisions and formulate our policy need the same type of exhortation. Let us hope it does not fall on deaf ears. THE CHOICE BETWEEN THE EASY WRONG AND THE HARD RIGHT

This Fourth of July will be the 183d birthday of our country. That is a long time when looked at through the eyes of a man who is 18 or 20 or 25. But in terms of the life of nations it is not so long a time. Europe and Asia are full of lands with much longer histories. But so much of the history over there is a sad tale, while our story is chiefly a joyous one.

There is no land whose story is sadder than Russia's. And now we and the Russians stand opposed as leaders of two powerful coalitions. Whichever of the two leaders has the stamina and the strength of purpose to overcome the will of the other will gain its way, and all human beings who live on earth after the moment of decision will bear the mark of that decision

Should the Russians overcome our will. the world will slide rapidly into as evil a condition as it has ever known. There have been evil despotisms before, but none be-fore has covered the whole earth. There would be big cities and autos, TV sets and skyscrapers: These things are not incompatible with despotism any more than they are incompatible with freedom. The only thing really that would be missing would be the sense that the individual is important in his own right and that he is responsible to himself, to God, and to all other men for his actions.

There lies the difference between our society and what we think is right and good and the Communist concept of what is right and good. Without that concept at the root of our lives there wouldn't be much difference between the life we lead and the life led by a Russian or a citizen of one of those unfortunate lands dominated by the Red commissars and their armies.

If we win the decision, matters won't be so easy for the ordinary man as they would be under a Communist-dominated world. For he will have to make decisions continually: Whether he will go to work for a big firm or set up his own business; whether the taxes he pays must rise or must fall or must stay as they are; whether he must be concerned about the freedom of other men or whether they can go hang. Under a Communist-dominated world he needn't be concerned about these things, for the leaders will tend to them all. Indeed, he mustn't be concerned, for if he shows an interest in matters contrary to his leaders' will, he will be punished.

That such a condition is attractive to many people is evident from the strength of the Communist Party in many parts of the world. Those people think that under communism they would be free-free from having to make their own decisions, free from having to be human beings to the fullest of their ability. And they will trick, lie, cheat, murder, and steal in order to bring this benefit to themselves and their fellow countrymen whether or not the latter agree with them.

Those are the stakes in the cold war. The foe is courageous, intelligent, and dedicated to his cause. We must be more courageous, more intelligent, and more dedicated to our cause, or we shall fail.

That is one of the things that John Foster Dulles knew. And another thing he knew was that whenever we did the right thing, no matter how dangerous it might be, we never got very badly hurt. Our war in Korea to preserve a few million desperately

poor people from the indignities of commu-nism is proof of that. Even more so was our landing last summer on the Lebanese shore to protect a small people from powerful outside forces. And last fall at Quemoy it was the same. There were only 40,000 Oriental farmers on those poor little islands off the Chinese mainland. It would have been easy—and safe—to let them be swallowed by the Reds. Once they had been swallowed we would never again be bothered with the problem, for the Reds would have solved it to their satisfaction. But we took the chance—we walked along the brink of destruction-and we won. The Quemoy farmers are still free, and so are we. But because we are free we must fight the battle over and over again, whether it be at Quemoy or Lebanon or Berlin or some other place not yet touched. If we don't do that we aren't worth much, we aren't worth the men who fought for our freedom many years before any of us were born.

But of course we must have the proper tools and enough of them if we are to lead this dangerous life for freedom. Among those tools are the assorted weapons possessed by the Navy and the other military services, wielded by men who know how to use them. We have been able to use them effectively in the service of freedom wherever the sea touches the threatened land; Quemoy and Taiwan are islands, Korea and Lebanon have long coasts. It is more diffcult where we cannot reach the threatened people by sea, as at Berlin. Indeed, it is usually impossible to help where there is no seacoast. We need only look to the events in Hungary and Tibet to see that. There we watched in humiliating impotence while valiant people valiant people were crushed by trickery and overwhelming power.

That is why there are so many men in the Navy today and that is why what they do and how well they do it is important to all the world, whether they are on a carrier un-dergoing repairs in a Norfolk drydock or on an overcrowded applying an overcrowded amphibious ship in the Mediterranean or an undermanned, overaged des stroyer in the Taiwan Strait. They leaving their mark on the world. If they fail, men in the future will probably say it was inevitable; for the triumph of communication That is nism was foreordained by history. That the only thing they will be allowed to say. But if they do their duty—and that means doing more than just enough to get them by—in the dangerous, weary struggle, men will be free in the future to go on making their own migrates. their own mistakes and own glorious suc-

That is the burden America must bear and that is the burden especially of her warriors-Our NAVY.

America's Forgotten Industry

EXTENSION OF REMARKS OF

# HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. EDMONDSON. Mr. Speaker, be parade of witnesses appeared before the Subcommittee on Mines and Mining day to paint a graphic picture of a great American industry—an industry vital to a strong America—which is still seeking relief from a manmade depression which has been with it since 1953.

This forgotten American industry is our domestic lead and zinc mining industry, which has been the unquestioned victim of governmental policies that have delivered 75 percent of our domestic market to foreign producers.

This morning, Mr. C. E. Schwabe summed up the situation on lead and zinc

in these eloquent words:

It is regretful-almost tragic-that after all that the lead-zinc mine producers have done in the last few years, these two commodities are again the subject of your committee's attention in a discussion of the depressed condition of the domestic mining industry. After all the labors of many Members of the House of Representatives, of the Senate, of unions representing employees in this industry and of members of the industry, we find the lead-zinc are still two of our metals and minerals which remain in an extremely distressed condition—and this being the case 9 months after the President proclaimed quotas, which have proved to be woofully inadequate.

The unparalled and unequalled record that these two metals have followed in seeking an answer to their problem is well known to this committee. I only wish to emphasize again that lead-zinc are the only commodifies in the United States which have received two unanimous—may I repeat unanimous—findings of injury by the U.S. Tariff Commission. It is also two mine commodities on which stopgap measures have been tried—all of which resulted in failure. We have had stockpilling tried and we have had barter tried. Attempts have been made to provide subsidy legislation and import tax legislation. Now, we have had quotas tried. The ineffectiveness of the quotas will be detalled later, but very obviously however, we would not be here today if the quota plan were working. Thus, after faithfully following all the provisions of the Trade Agree-ments Act, the "escape clause" procedure, and every other avenue which seem to hold some measure of hope for a solution—the net result at this point, for all practical purposes has been nil.

From my own section of the country, which is part of the famous tristate lead and zinc area, Mr. Tom Kiser, of Miami, Okla., reported his district's current situation in these words:

We had 68 mining companies whose production statistics were available for the month of May 1952. They employed 2,184 men (mines and mills only) and produced 13,721 short tons of zinc concentrates and 2,138 short tons of lead concentrates. On January 1,1957, we had 43 companies reporting 1,474 employees and produced 8,565 short tons of zinc and 2,665 short tons of lead. We had larger companies reporting 25 to 30 tons of crude ore per man-shift, while the smaller operations were running about 15 tons of crude ore per man-shift. \* \* Our production is now at zero and could possibly be lost forever if this committee doesn't see fit to breathe new life into our industry.

From the State of Utah, Mr. Clark L. Wilson made this report:

Our experience during the last 3 years is typical of the domestic lead-zinc economic problems. The market price—production cost squeeze, really hit the Mayflower mine during 1956. At that time we had 290 employees. Toward the end of the year this to the better grade ores, in effect high gradior the deposit. We were determined to try as many people working as possible and still prices dropped in May and June 1957, we more employees in spite of employee morale problems created. This 1957 lead-zinc metal

price drop resulted in a loss of 77 percent of Mayflower mine ore reserve. We still kept the mine producing at a loss, in hopes that proposed legislation then in Congress would provide protection to the domestic lead-zinc markets. Congress adjourned after taking no action, and we were forced to close the mine on September 27, 1957. We were then approached by former employees requesting a lease on the property. This was negotiated and the mine has since been operated by 85 independent contractors. New Park has only 18 employees. Gross ore sales are now less than one-half the previous year's average. The contractors maintain the mine, do their own development work, and meet all their own costs. They are "getting by" as they are approximately 50 percent more efficient than a company-type operation. New Park continues this arrangement at a loss in the hope that the domestic miner will soon be allowed a fair share of the domestic mar-ket. New Park needs minimum prices of 131/2 cents zinc and 151/2 cents lead to produce normal metal tonnages and provide sufficient income for necessary exploration and development.

The miners of this district live in Park City and other nearby towns. Park City is wholly dependent on the mining industry and is becoming a typical example of the ghost town. The population has decreased in the past 10 years from 3,000 to 1,500. Ten years ago housing was at a premium. Today apartment houses are vacant as are many homes. The dentist and doctor have left the area. The town is truly in tough shape.

Mr. Speaker, we heard similar reports from witnesses representing Wisconsin, Illinois, Iowa, Colorado, New Jersey, New Mexico, Tennessee, and Missouri production.

This condition is nationwide in its scope, and it is not getting better under the administration's quota plan.

An escape clause which does not provide general relief is merely a snare and a delusion in the hands of administrators who do not have the will to apply it.

This industry has waited 9 months to prove the failure of the quota plan.

The lead and zinc industry has already proved its case twice before the Tariff Commission, and won unanimous verdicts of injury in both cases.

How long will this Congress wait to make good the promise of the escape clause?

### The Fair Trade Bill

EXTENSION OF REMARKS

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the Congressional Record a statement made by Dr. Joseph M. Klamon, professor of marketing, Washington University, St. Louis, Mo., on June 15, 1959, before the U.S. Senate Committee on Interstate and Foreign commerce against S. 1083 the so-called Federal fair trade bill and similiar legislation.

From his rich experience as professor of marketing at Washington University, as tutor at Yale and instructor in busi-

ness policy at Harvard Graduate School of Business, as well as his service in the Department of Economics at William and Mary, Carnegie Institute of Technology and teaching at the University of Pittsburgh, Dr. Klamon, distinguished economist, member of the bar of two States, is well qualified to set forth reasons why fair trade is singularly against the interests of the American people, business large and small, and especially to the consumers.

SUPPLEMENTARY STATEMENT PRESENTED ON BEHALF OF THE CONSUMERS' FEDERATION OF
ST. LOUIS AND ST. LOUIS COUNTY BY DR.
JOSEPH M. KLAMAN, PROFESSOR OF MARKETING, WASHINGTON UNIVERSITY, ST. LOUIS,
MO., ON JUNE 15, 16, 1959, BEFORE THE U.S.
SENATE SUBCOMMITTEE, IN RE INTERSTATE
AND FOREIGN COMMERCE ON THE BILL INTRODUCED IN THE SENATE, S. 1083, FEBRUARY
17, 1959 BY SENATOR HUBERT H. HUMPHREY,
MINNESOTA, AND SENATOR PROXMIRE, OF
WISCONSIN, CONCERNING THE ENACTMENT OF
A FEDERAL FAIR TRADE PRICE-FIXING BILL ON
BRANDED MERCHANDISE

I have already identified myself for the record. Perhaps I should add that I received the master of arts, doctor of laws, and doctor of philosophy from Yale University and the bachelor of laws from Washington University. In addition to teaching marketing for the past 30 years I have been a tutor at Yale, instructor in business policy in the Harvard Graduate School of Business, and chairman of the department of economics at William and Mary. I have also been professor of economics at Carnegle Institute of Technology, visiting professor at the University of Pittsburgh for 2 years and since September 1929 I have been in marketing in the school of business at Washington University.

This bill, if enacted into law, will cost consumers no less than \$8 billion annually.

This bill, if enacted into law, will cost consumers no less than \$8 billion annually. It is in effect a retail sales tax between 10 and 12 percent on branded goods sold at the retail level if fair traded. The following questions should be answered by the proponents of S. 1083.

Those who are responsible for the effort to legalize trade restraint should give us clear simple answers to a few questions anent the current fair trade bill.

If a cash and carry superstore has lower costs, should not the public be permitted to benefit (in lower prices) from all such lower cost methods of doing business?

In the above situation, why should all be required to sell a so-called fair traded item at the same retail price?

If competition among producers of an item is good for the public, why should competition among retail sellers of that item be

denied?

Has any pressure group ever campaigned for price fixing privileges except to make prices higher than they are under free competition?

What real and specific evidence is there that truly meritorious articles have ever been driven from the market by price competition?

Why should out-of-State interests come into Missouri and spend money to lobby for a bill to make the public pay more than they now pay for aspirin, toothpaste, whisky and almost any item?

How much lobby money has been supplied to put this bill over and by whom?

If a merchant wants to locate a store outside the city limits and sell at lower prices because of his lower costs, what good reason is there to deny him that right and forbid the public that benefit?

If the public is deceived by "loss leader" prices, what would prevent equal deception as to fair trade prices which are exorbitant?

If we grant monopoly price privileges to the select few, who is going to regulate those prices to make certain that the public is not

mulcted by the price fixers?

Every time a fair trade law has been proposed, or legislation relative thereto on the Federal level, proponents have filled the record with endless criticism of loss-lead selling. Yet when Senator Paul Douglas of Illinois offered proponents an antiloss lead bill at the time the McGuire Act was passed they rejected his offer. A loss-lead is merely an attention-attracting, traffic creating, sales promotional device. Even if it is sometimes undesirable, why not legislate specifically against it and not grant limitless private monopoly price fixing powers to manufacturers of branded goods over all retail sales?

Everyone knows, or should know, that the U.S. Constitution gives Congress control over Interstate commerce but not over purely retall intrastate commerce. Now the most novel and perhaps unconstitutional phase of the bill before you is the one on pages 4 and following of S. 1083 which gives a manufacturer a proprietary interest in his goods that are branded even after he has completely parted with title by selling such goods to a retailer. If a manufacturer wants to continue to be a proprietor or to control price on the retail level he can do so very easily in at least two ways: (1) by estab lishing his own retail outlets, and (2) by selling on consignment. Now the fact of course is that few manufacturers are willing to assume the obvious hazard involved in the foregoing. The unique feature of the bill before you which endeavors to give a maker control of price on the retail level without selling on consignment or establishing his own retail stores, is in reality a transparent effort to give Congress that which the U.S. Constitution does not give it, namely control over purely intrastate retailing. Anyone who has the remotest knowledge of the hazards and uncertainties of prices at the retail level and the frequent need for sharp markdowns for purposes of inventory clearance, or to adjust prices to competition and market requirements, realizes what economic folly is involved in attempting by Federal law to legislate fixed prices on all branded goods everywhere at the retail level regardless of relative costs of doing business or relative efficiency. brief, it would seem rather evident that a substantive Federal fair trade law is no more enforcible than previous efforts have been to repeal the law of supply and demand.

Since 1931 fair trade proponents by means of powerful lobbying tactics have demanded and received fair trade laws in 45 States, in all States except Missouri, Texas, Vermont, and the District of Columbia. All of these laws, as well as the Miller-Tydings Act, and the McGuire Act, have all gone down the drain. They conclusively prove the economic and legal futility and folly of trying to destroy free markets, competitive pricing, and substitute price fixing for what we presently have, which essentially, is price freedom virtually throughout the country.

The McGuire Act encouraged and fostered the mushroom growth of cut-rate discount houses from 2,000 to 10,000 throughout the country. Manufacturers for the most part naturally have been delighted to move their inventories through all channels at prices evidently satisfactory to themselves, discount houses, and their customers. The bill before you, if enacted into law, I imagine will be no more successful than previous efforts by law have been, to destroy our antitrust laws or to prevent people from shopping for values as they are forced to do because of the higher prices caused by infiation. If S. 1083 becomes law I expect it will be challenged rather quickly in State and Federal courts and will suffer the same fate that the McGuire Act and the Miller-Tydings Act have heretofore received. Merely to give you a fairly representative cross section of public opinion

which appears almost unanimously opposed to fair trade, a number of exhibits will be filed to be incorporated into these hearings, with your permission. To me this is the worst bill now before Congress. As I have stated, it is very inflationary; it will reach into the pockets of every consumer of the country; it is price protection for a privileged few and contrary to the interests of the public. The public will no more buy at artificial fixed prices than they did under the McGuire Act. An artificial price level which does not make economic sense inevitably and invariably tends to defeat it-self. Would anyone in Congress suggest that our farm price policy since 1933 has been an unqualified success? The effort to remove farm products from the normal correctives of free markets has been rather disastrous. No less disastrous and costly to the public has been the protectionist price-fixing policies of fair trade laws of the past 28 years. Undoubtedly to the extent that they have been effective before declared illegal, they have cost the public incalculable billions. This bill is so important to the public that it should be given the utmost care. Every effort should be made by Congress to get the facts which are easily available from many truly disinterested professional sources, such as your own governmental bureaus and from all of our universities. More than 50 law professors from all over the country have made statements at the hearings 3 months ago on the Harris bill, the year before on the Harris bill, and 6 years earlier on the McGuire Act. Antitrust. FTC, Labor, Agriculture, Commerce, and the Budget Bureau are opposed to this bill and have said so in the record, as they also did 6 years earlier before the McGuire Act was passed. May I not again urge you to reject S. 1083 as not in the public interest and very highly inflationary?

One or two newspaper items, editorials, etc., should be of interest to your committee:

The Kansas City Star, Thursday, May 3, 1951:

#### "THE PRICE FIXING BILL AGAIN

"Every session of the Missouri Legislature receives a bill which would permit the manufacturers of brand name products to fix and thereby increase the retail prices. The only difference this year is a high pressure sales campaign to stir up a flood of letters and telegrams to the legislature.

"Speakers have been sent around the State ostensibly to talk on the disarming subject of attracting industries. Along with all the well known methods of attracting industries they urge support for the price fixing plan.

"The sponsors of this privilege believe in the magic of an appealing name. Here and in other States they have always referred to their bill as the 'fair trade' bill.

"According to the St. Louis Consumer Federation the bill would increase the average Missouri retail price of branded products by at least 12 percent. It is easy to make a fairly accurate comparison of present Missouri prices with prices in States that have the 'fair trade' law.

"Through their national organization set up for the purpose the American manufacturers are asking the elected representatives of Missouri people to slap them with a big increase in the cost of living, an increase many times as great as the present Missouri sales tax.

"The big push is concentrated on drug lines and liquor where competition has been most effective in slashing prices. Missourians who like to shop for price in highly competitive lines frequently make savings far beyond 12 percent. Most people think of bargain hunting as a perfectly proper part of the system of free competition.

"In order to permit general price increases in Missouri the legislature would have to amend the State's anti-trust law. It would have to specify in the law that the competitive system no longer applies in the case of branded products.

"In other years the legislature has been skeptical of the plan to increase the cost of living in Missouri. We doubt that it will yield to the highly organized and heavily financed pressure campaign of this year. But the Missouri public, the people who buy across the counter, had better be on guard."

St. Louis Post-Dispatch, May 22, 1951:

"CONSUMERS WIN A BILLION

"Consumers have won a notable victory in the decision of the U.S. Supreme Court on the so-called fair trade laws. So have retail merchants who really want to compete for their customers' business. These laws are estimated to be costing consumers a billion dollars a year through high pricefixing.

"Pair trade is a legal price-fixing device which can be invoked to throttle price competition on any trademarked product. When the first such law was passed, in California 20 years ago, it proved ineffective because retail merchants who did not sign the price-fixing agreement with the manufacturer were not compelled to abide by the

fixed price.

"Two years later the California law was amended to provide that if a single retailer signed up for price fixing, all the retailers in the State were required to abide by the fixed price on that product. This is known as the nonsigner clause. It was tremendously effective. Every State that has adopted fair trade law has also adopted the nonsigner clause, and there are now 45 of them. Price fixing of trademarked goods has been legalized all over the nation except in Missouri, Texas, Vermont and the District of Columbia.

"It is the nonsigner clause which the Supreme Court has just struck down. Justice Douglas, who delivered the decision, said that although the fair trade contracts are worded to suggest voluntary cooperation, the fact is that 'recalcitrants are dragged in by the heels and compelled to submit to price fixing.'

"The ruling should make a dead issue of the fair trade bills pending in the Missouri Legislature. If these bills were enacted they would lack force for want of the nonsigner clause. This does not mean that the fair trade lobby should be permitted to sneak its laws onto the Missouri statute books in the expectation of later giving it force with new Federal legislation. Effective or ineffective, Missouri wants no fair trade law.

"How seriously the fair trade price-fixers view the nonsigner clause may be gathered from a release this month sent out by one of their propaganda agencies. The Bureau of Education on fair trade said that if the Supreme Court ruled against the nonsigner clause, Federal legislation permitting the States to enact these price-fixing laws will have proved a futile gesture.

"Its next words should be taken to heart by consumers as due warning that the price of competitive free enterprise will continue to be constant vigilance: New enabling legislation permitting fair trade to operate in interstate commerce may be sought again from Congress, however, so long as the new legislation meets whatever objections the court may raise."

"Congress should be no party to further efforts to legalize price fixing. The Supreme Court struck down price fixing in the NRA and in the Guffey Coal Act, and has now taken the force from the amendment to the Federal antitrust laws under which prices are fixed in the name of fair trade.

"Price fixing differs from price control times of national emergency, consumers re-

Quire price control, exercised by their government, to keep prices from rising de-structively high. Price fixing is a device operated, not by government, but by private vendors, and not to prevent high prices but to insure them. Price fixing is restraint of trade at the expense of the consumer. It had better be let go at that."

The Nation, June 2, 1951:

"THE FAIR TRADE WALL CRUMBLES

"Violent disagreement exists over the effect of fair-trade legislation on retail prices. The weight of economic opinion, however, supports the contention that fair trading raises prices to consumers; in fact, one ex-Pert contends that fair trade taxes American consumers \$1 billion a year. It is significant that both the Department of Justice and the Temporary National Economic Committee found the Miller-Tydings amendment Inconsistent with the Sherman Antitrust 'I find it difficult to believe,' writes Dr. Joseph M. Klamon, of Washington University, that the drug retail lobby, in putting over the Miller-Tydings Act, and in establishing the sanctity of wider retailers' margins, was only concerned with helping the consumer and the manufacturer. This in-Volves spending a vast amount of money \* \* \* in the interests of sheer altruism."

The Denver Post reported on March 3, 1951, that liquor prices were 29 percent higher in Colorado than in St. Louis, after making allowance for differences in freight rates and excise taxes. In a similar survey the St. Louis Star-Times found, some time back, that 54 fair-traded drug items cost an average of 16.2 percent more on the east bank of the Mississippi than on the St. Louis It is probably true, however, that the Initial effect of minimum, and uniform, resale prices in the drug trade was to reduce the cost of certain exorbitantly priced proprietary medicines and other items. And the fair traders unquestionably have a point when they contend that fair-trade laws are only one means by which resale price mainte-nance can be achieved."

St. Louis Post-Dispatch, May 11, 1951:

"AN OLD GOUGE AGAIN

"State Representative John W. Green, of St. Louis, is misguided, we believe, in sponsoring a fair-trade bill in the Missouri Legis-

Fair trade is a misnomer. What so-called fair-trade is a misnomer. ufacturers to fix prices, thus preventing merchants from engaging in price competition, and depriving consumers of an opportunity to shop for the lowest prices.

Fair-trade laws lead to such absurdities as the arrest of a St. Paul merchant because he sold a shortening which cost him 90 cents for 95 cents instead of 98. 'I figure I'm better of to sell 100 items and make a nickel apiece—that's \$5—than to sell 10 items at a dime apiece and make only \$1,' said the arrested merchant. Where fair-trade laws are enacted, merchants are forbidden to figure that way.

"Three years ago, when a fair-trade bill was up in the legislature at Jefferson City, certain merchants in Illinois and Kansas (States where fair-trade laws are on the statute where fair-trade laws are been been to merbecause they were losing business to mer-chants in Missouri, where prices were lower.

Joseph Klamon, professor of marketing at Washington University, and consultant to the Consumers Federation of St. Louis and

St. Louis County, testified at that time:

"This bill has only one purpose, and that
is to be devilish legislais to increase prices. It is devilish legislation at any time, and particularly now, in a period of high inflation, when persons of low income. income are compelled to shop for bargains to observe are compelled to shop for bargains to obtain the bare necessities of life within their to their income. You could not possibly enact a tax bill which would bear as heavily on the people as would this bill."

"What Professor Klamon said about price fixing at a time of high inflation is even more pertinent today than it was when he said it, because the inflation is worse. Food prices, notably, are at their highest in American history. Should price fixing be allowed to boost them still higher? To the contrary-the interests of national security, as well as those of the consumers' pocketbooks, require that prices must be controlled. In recognition of that fact, the Government has just clamped controls on prices, and on wages as well. At a time when consumers and public administrators are trying to keep soaring prices down, the fair-trade advocates are trying to increase them.

The Wall Street Journal said editorially last year: "This newspaper has repeatedly insisted that the so-called fair trade laws are a contradiction in a free enterprise society. If manufacturers are to tell retailers the minimum prices at which to sell products what incentive is there for more efficient distribution? For more efficient retailing? Competition is the lifeblood of a free

economy."

"Then, pointing out that Missouri and Texas not only do not have fair trade laws but do have antitrust laws that positively forbid price fixing (Vermont is a third State which has kept free of fair trade laws) the Journal said:

"'We hope that Missouri and Texas will keep their up their good work. We trust that other States will learn from their example.

"That is our hope also."

STAR-TIMES REPRINT MAY 11, 1951: THE PRICE-FIXING BILL AGAIN

"Every session of the Missouri Legislature receives a bill which would permit the manufacturers of brand name products to fix and thereby increase the retail prices. The only difference this year is a high pressure sales campaign to stir up a flood of letters and telegrams to the legislature.

"Speakers have been sent around the State ostensibly to talk on the disarming subject of attracting industries. Along with all the well-known methods of attracting industres they urge suport for the price-

fixing plan.

The sponsors of this privilege believe in the magic of an appealing name. Here and in other States they have always referred to their bill as the fair trade bill.

"According to the St. Louis Consumers Federation, the bill would increase the average Missouri retail price of branded products by at least 12 percent. It is easy to make a fairly accurate comparison of present Missouri prices with prices in States that have the fair trade law.

"Through their national organization set up for the purpose the American manufacturers are asking the elected representatives of Missouri people to slap them with a big increase in the cost of living, an increase many times as great as the present Missouri sales tax.

"The big push is concentrated on drug lines and liquor where competition has been most effective in slashing prices. Missourians who like to shop for prices in highly competitive lines frequently make savings far beyond 12 percent. Most people think of bargain hunting as a perfectly proper part of the system of free competition.

"In order to permit general price increases in Missouri the legislature would have to amend the State's antitrust law. It would have to specify in the law that the competitive system no longer applies in the case of

branded products. "In other years the legislature has been skeptical of the plan to increase the cost of living in Missouri. We doubt that it will yield to the highly organized and heavily financed pressure campaign of this year. But the Missouri public, the people who buy across the counter, had better be on guard.

The St. Louis Star-Times, April 19, 1951: "RETAIL LIQUOR PRICES 16 PERCENT HIGHER IN PAIR TRADE ILLINOIS THAN IN FREE MARKET

"Thirty-five brand-name products in fifth size cost \$161.92 across river and \$139.67 in St. Louis, Star-Times survey shows.'

The St. Louis Star-Times, May 19, 1951: "THE DREAM HAS FADED

"Small retailers were sold on fair trade back in the 1930's on the theory that it would protect them against their big competitors, especially the chain stores. The reasoning seemed simple: If everything sold for the same price everywhere, the big store or chain, notwithstanding its large buying power, would have no advantage; it could not shave prices to get customers.

"But has this price-fixing by law actually protected the small retailer? There are reasons to doubt it.

"Druggists are among the strongest backers of fair trade. They sell many more pricefixed items than other retailers.

"Of late, supermarkets have begun to sell drug items, because the high profit margin required by fair trade makes them an attractive line. Druggists are greatly concerned.

"The same thing happened in England, which has had price-fixing longer than this country. The secretary of the British National Pharmaceutical Union told about it in a letter to the American Journal, Drug Trade News, a part of which is quoted below:

'In our country all proprietary medicine vendors have to be licensed, and we woke up to the fact that the number of these vendors was increasing at the rate of 8,000 to 9,000 a year. \* \* \* Owing to the price-maintenance movement \* \* \* the prices of proprietary medicines are maintained, and the 20 to 30 percent profit which those articles yield has proved a tremendous temptation to other shopkeepers to invade the proprietary medicine business. Hence you will see that the success of our own war to prevent price cutting without our own ranks has produced an army of competitors in our own busi-

"In one other important respect price-fixing has failed to help the little merchant in competition with the big merchant.

"With price-fixing, to be sure, a brand of aspirin which we shall call Super Strong, and a toaster which we shall call Little Wonder, must sell at the same price every place.

"But the big stores found this no great handicap. They simply put up their own aspirin under their own brand. Macy's in New York now sells about 1,500 drug items under its private brand, at prices generally below those charged for fair-traded articles. Similar stores elsewhere, including Omaha, are following suit. The same thing has happened with the Little Wonder toaster. Large retail chains simply went to the Little Wonder Co. and ordered thousands or tens of thousands of the toasters with the retail stores' brand names on them. They sell the same toaster, made by the same manufacturer, at a price lower than the one that the small merchant is legally permitted to charge.

"Thus the small retailer has found that his lovely dream of a noncompetitive Utopia has faded. By tying his hands, while leaving the big stores relatively free, it may in time put him in a hopeless competitive situation.

The Washington Daily News, February 25,

"FAIR TRADE IS PUBLIC'S LOSS

"An economist warned Congress today that reviewing the so-called fair trade law would cost the consuming public as much as 10 to 12 percent sales tax.

"Dr. Joseph M. Klamon, professor of marketing at Washington University in St. Louis, made the statement in testimony prepared for delivery before the House Monopoly

Subcommittee.

"Also called to testify before the subcommittee was Q. Forrest Walker, an executive of Macy's, the big New York department store which set off a spectacular price war last year on branded merchandise which had long sold at fair-traded—or fixed prices.

"Two House subcommittees are studying bills to restore the fair trade laws. would permit a manufacturer and any one retailer to fix minimum resale prices on the manufacturer's name brand product and make it binding on all other retailers in the State.

"A Supreme Court decision last year in effect scuttled the fair trade laws, on the books of 45 States. Pending bills would

overturn the Court decision.

Fair trade supporters claim they need the price-fixing provisions to protect small, independent merchants from predatory price slashed by big chains and department stores.

"But Dr. Klamon asserted that the pending legislation would 'destroy our antitrust laws' and 'would seriously affect the living standards of a large portion of our popula-

"He said that the fair trade laws during the years they were in operation 'cost the consuming public many billions in higher fixed prices on branded goods.

'Legislation of this sort is the equivalent of a 10 to 12 percent sales tax collected by retailers and manufacturers of branded

goods, for themselves,' he said.

'Federal agencies charged with enforcing antitrust laws also have testified that the fair trade laws would open the door to pricefixing conspiracles now prohibited under antitrust statutes."

St. Louis Globe-Democrat, February 26.

"WASHINGTON UNIVERSITY PROFESSOR RAPS FAIR TRADE AT HEARING

"Washington

"Prof. Joseph M. Klamon, of Washington University, St. Louis, in testimony here today opposed fair trade laws, testimating that they cost the public \$2 billion a year in higher prices.

"He said goods sold in a free market averaged 10 to 12 percent less than the same brands sold under retail prices fixed by the manufacturer, which are permitted under

fair trade laws.

"Klamon who is a professor of marketing in the school of business at Washington University, appeared as a witness before a subcommittee of the House Judiciary Committee holding hearings on four bills to strengthen a Federal Fair Trade Act. One bill, by Representative Thomas Curtis, of St. Louis, before the committee, would wipe out the act.

"Heated exchange

"So forcefully did Klamon present his arguments against fair trade laws that there was a heated interchange between Klamon and Representative Rogers (Democrat). Colorado, over political pressure the pro-fessor claimed was brought on the 45 State legislatures which have passed State fair trade laws. Rocers is a former member of the Colorado Legislature. Klamon maintained that State legislators knew what was going on but were powerless to resist the pressure from proponents of fair trade leg-

"When Rocens pressed him as to what he would do if 'he lived by the ballot' Klamon retorted that there were some things that made the price of elective public office too high and one of the fair trade bills before the committee was one of them.

"St. Louis cited

"'You cannot repeal the law of supply and demand,' Klamon said. "The best thing

you can do is to keep your hands off the

free economic system.'
"He begged the Congressmen to look beyond those who are flooding you with mail demanding laws to strengthen fair trade through Federal legislation, and look at the 160 million consumers who cannot come be-

fore Congress to plead the public interest.
"Klamon cited St. Louis, in a non-fair-trade State, as having the lowest prices on

shoes, drugs, toiletries and liquor.

"Before a Supreme Court decision last year, retailers in fair-trade States were bound to sell brand-named or trademarked articles at retail prices fixed by the manufacturer. This applied to retailers whether they signed a contract or not, providing that in their State another retailer signed an agreement for a fair-trade price of the same

"Price raising

"Last year the Supreme Court ruled that those who did not sign could not be forced to sell at the fixed price because someone else in the State did sign an agreement.

"Q. Forrest Walker, economist of R. H. Macy & Co., Inc., of New York, one of the firms involved in a price war which flared after the Supreme Court decision, also testi-

"Walker said the effect of fair-trade legislation was to 'hogtie competition at the retalling level'; that 'price fixing always results in price raising' and that 'arguments that price fixing is necessary to protect small businessmen are not substantlated by facts.

"Missouri, Texas, and Vermont are the only three States that do not have fair trade laws. Committee Chairman CELLER (Democrat, New York) said that his subcommittee hopes to end the hearings Wednesday and report on fair-trade bills in about 10 days."

# Representative John M. Slack, Jr., Analyzes the West Virginia Economy

EXTENSION OF REMARKS OF

### HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. HECHLER. Mr. Speaker, last Friday evening the Kanawha County Young Democratic Club held a summer rally at St. Albans, W. Va., at which the main address was delivered by my colleague, the Honorable John M. Slack, Jr.

I was present at this rally, Mr. Speaker, and I had an opportunity to observe firsthand the respect and affection which the voters of West Virginia hold for Representative SLACK. As I said at the rally, there are few freshmen Members of the House who have done as much in a short time. Representative SLACK has pioneered in analyzing the problem of "gone" employment in certain areas of the country. He has done an outstanding job in evolving new approaches to this problem through community enterprise. He has gained high prestige among his fellow Members of the House for his grasp and understanding of key issues.

I believe that Representative SLACK's address of June 26 represents a deep, perceptive, and statesmanlike approach to some of the major economic issues of today. His address is a credit to West Virginia and the Nation. Under unanimous consent, I include it in the RECORD at this point:

Address By Representative John M. Slack, Jr., Democrat, of West Virginia, at Sum-MER RALLY OF KANAWHA COUNTY DEMO-CRATIC CLUB, ST. ALBANS, JUNE 26, 1959

We Democrats have always taken our politics seriously. And so we should. The bigger our Nation grows, in population and resources, the more we will need seriousminded men and women to administer our public affairs. In my judgment there was never a time in West Virginia when our politics should be taken more seriously.

Most of us are convinced that the prosects for the Democratic Party are good in 1960. We have reason to believe that we will win the support of a majority of the voters. and will again return to the administration of our State's public affairs. I have not come to visit with you this evening for the purpose of opening the 1960 political campaign a year in advance. What I would like to do here is to place before you some conclusions I have reached about trends in our State, economic and political, and as seriousminded Democrats, to ask you to think carefully about them during the coming months.

First of all, let us recognize the fact that the Democratic Party is the majority party in West Virginia. It has a strong registered majority. Most State elective offices, and majority. Most State elective offices, and seven of the eight Federal elective offices are held by Democrats. In the last statewide election we won a resounding victory, including the election of a heavy majority of our candidates to the State legislature.

We have earned the majority status in the years since 1932, because each year an increasing number of voters became convinced that our party programs came nearer to meeting the needs of the people. But—with that majority there is included a very heavy responsibility. We must continue to devise programs that are in tune with the needs of the State and the will of the majority or we will fail in our trust, and be swept from

Looking about us today, what is the major

need facing our State?

I don't think there can be any argument about it. Our one big problem today is an economic one, the need to take steps which will correct the negative position of West Virginia in relation to the expansion of American economy as a whole.

What is the will of the majority? Again. I think our economic problem outweighs other considerations in the minds of most of our citizens, and they will rally around the party and the candidates who give most convincing evidence of a sound program to

attack this problem.

We have many other needs, roads, schools, public institutions, to name a few, but all States have those needs to a greater or lesser extent. Our one great need is for a turnabout in the State's economic cycle, because if that is achieved, it will be much easier to obtain the public facilities we would like to enjoy.

Now I ask you to look at the situation through the eyes of a typical voter, not committed to either party. What can he do about the situation in 1960?

He can do one of three things, in view

of the majority position of the Democratic Party: First, he can help support and elect a State government consisting of a Republican Governor and a Democratic legislature.

Second, he can elect a Democratic Governor and a Democratic legislature with a program of promises which will appear to provide betterment for the State, but which actually serve only as a means of spending tax money, and improving the political fortunes of those elected.

Third, he can elect a Democratic Governor and a Democratio legislature, pledged in advance to a program which will come to grips with our basic economic problems on a short-range and long-range basis combined. Such a program must inevitably require that the Democratic Party be retained in office over a period of 8 or 12 Years.

In the first instance, the new State administration will be ineffective. It will be a continuation of what exists today in the State capitol. The clash of partisan politics and aims will forbid organized progress, and the big State problem will receive only partisan attention.

In the second instance, there will be some progress, but not enough, because a West Virginia Governor cannot succeed himself. Influential elements often begin to groom another gubernatorial candidate the day after a Governor is elected. As a result, a Governor is always conscious of what he can do and can receive credit for in only 4 Years.

In the third instance, there is a real opportunity for impressive statewide progress, and for the Democratic majority in this State to demonstrate its responsibility and

Willingness to provide leadership.

Let me say that I am not here this evening to criticize the program of the present Republican Governor or to debate whether or not he might have done more if the legislature had agreed with him. We all know that he was elected with the help of Democratic voters who had lost confidence in some candidates and had doubts about the path the party leadership was taking.

Under the present State administration, suffice it to say that the routine affairs of our State have moved along in a routine fashion, but too little has been accomplished in the major area of need, the relationship between the economic condition of West Virginia and the general economic progress of the nation as a whole. This issue will, I am sure, be debated in great detail during the 1960 campaign, and it is not necessary to discuss it here.

What we must begin to think about and to discuss is the big economic problem. The solution of this problem is the very center of any hope for State betterment, and gives evidence of being the one big issue of the 1900 political campaign. Now, how do we know that this problem will dominate the campaign? I suggest two big reasons:

First, the Governor elected in 1960 will face a very distasteful fact. The 1930 census will almost certainly find that our State has suffered a population loss of some 200,000 persons—a decline in the face of national population growth. This loss will reflect the migration of young people to areas of greater job opportunity, and can lead to a very serious condition for the State if it is not reversed.

Second, the State will still have in 1960 Some 50,000 unemployed-employables—men who want to work, but whose job sources wand want to work, but whose job sources have vanished. They are with us today and will be with us next year. They are the unwilling victims of scientific progress in industry. They reside chiefly in the coal counties where mechanization is replacing the the miner, even while coal production is high. At present there is no sound longrange program to recreate job opportunity them, or to hold out hope for their children. All of the evidence to date indicates that no matter how prosperous our national economy may be by 1930, that level of prosperity will offer little or nothing to those who reside in the one-industry areas where technological advance is displacing men with machines every day.

Further, the administration elected in 1960 must work against a rigid deadline—and the deadline is June 20, 1963. That is the date of the probable opening of the State centennial celebration, and during the remainder of that year the Governor and his

aides must use every means to focus national attention on the State. That is the chief purpose of the celebration, to mark our milestones of past history and to tell the world where we intend to go during our second century, and how we expect to get there. At that time there will be millions of Americans who will read about us, and we hope that thousands will visit with us, and we must have for them a program in being, we must have tangible evidence that we have come to grips with our major problem and that our State is united in a determined effort to gain its proper place in the national economic picture—that our morale is high, our confidence unshakable, and our determination strong.

mination strong.

The technological unemployment in our coal counties affects all of us, because it increases the tax burden on all who work, and limits the services we can obtain through State government for ourselves and our children. It did not arise overnight. It has been gradually assuming alarming proportions ever since 1947. It is an economic illness that cannot be cured overnight. But it will never be cured unless we begin to work on it. We must assume that a 10-year program will be required if we expect to show a definite about-face in the economic situation of the State.

During the 10 years between 1949 and 1959 we did nothing to arrest the creeping sickness in our economic position which arose out of technological advance in the mining industry. I suggest that during the 10 years between 1959 and 1969 we apply ourselves to a program of cure, sacrificing some other things to that program, so that the census of 1970 will show that West Virginia holds her own and attracts others.

Have you ever stopped to think what will happen if the census of 1970 shows that another 200,000 people have left the State? We have almost 300,000 receiving surplus food commodities today, and that is certainly no incentive for them to stay. We cannot afford to lose another 200,000 of our educated young people and our skilled and determined older workers.

During the past 5 or 6 years there has been a great deal of public attention devoted to the hardship resulting from unemployment in the coal counties. There have been a lot of stories about a depression in West Virginia in the midst of plenty everywhere else. This has begun to create a defeatist complex among our own people, and uneasiness among outside investors and employers.

All of this talk about a one-State depression is false, foolish, and dangerous.

It is false because technological advance is striking seriously today at the employment of seven major industries, not just mining. Its effects on employment are noticable in 210 counties in America, not just 2 dozen mining counties in West Virginia.

It is false because our general economic condition, aside from the depressed mining counties, is good. We have growing job opportunities in the river valleys, and industry generally is showing more appreciation every day for our natural resources, climate, and location.

It is false because our State's credit is unimpaired and our State fiscal affairs are in much sounder condition than those of a dozen larger States—Michigan, Pennsylvania, New York, and California to name a few.

It is foolish because it paints the wrong picture of our total condition and our future prospects, and thereby discourages many investors who would otherwise join with us to provide further economic development.

It is dangerous because it adds to defeatism and eats away at our morale. One of the best ways to lose any contest is to tell yourself you are licked before you start.

I am opposed to all depression talk. I say that we must take a realistic look at our con-

dition, and concentrate on our points of weakness, while encouraging and praising at every opportunity those aspects of our economy which are moving ahead with the national trends.

I mention this matter because it leads to something else—the question of the economic redevelopment program to be adopted. I know that many of our fellow citizens have given much thought to our situation, but to date no overall program has been established. I believe that any successful program cannot consist of a single pattern adopted on a statewide basis. We must have a program containing three separate and distinct patterns, each based on the particular advantages of three separate portions of the State:

First. A pattern of encouragement for heavy industry in the river valleys where cheap water transportation and abundant

power are advantageous.

Second. A pattern concentrating on procurement of sensitive Government-sponsored industry, or experiment and testing stations, in the mountain-locked coal counties where such installations are defensible to the maximum extent and can be given full security treatment.

Third. A pattern encouraging development of vacation and recreation facilities in the 20 counties facing the East where excellent climate and attractive mountain terrain can prove a great attraction to tourists. The swarming millions residing in the Eastern States have no place to go any more. Vacation and travel expenditures are now reported to constitute the second largest industry on a national basis. With the growth of leisure time, the coming of a shorter workweek, and the displacement of more manhours by automation in industry, tourism may well be the No. 1 industry in a few years. We are ideally situated to profit from this trend.

A unified and integrated State program based on these three patterns, in my judgment, offers the best hope for a complete reversal of our economic position within the next 10 years.

But remember, the State administration we elect in 1960 must work against a centennial deadline—against the spotlight of national attention which will be on us, noting what we are doing and how well we are doing it. The centennial Governor and his official family, and the legislature, therefore, must have this program split into two parts—the short-range objectives which can be accomplished before 1963, and the long-range objectives which must be underway and showing signs of initial success when viewed by our thousands of visitors.

What does all of this add up to? To my mind, only one conclusion is possible:

The next State administration must be a Democratic administration.

The centennial Governor must be a Democrat.

Only an administration representing the will of the majority party can hope to accomplish the things that must be done in the limited time available to us.

And we must elect him. We must adopt principles which will merit overwhelming public support and public confidence. We must choose wisely when we select candidates. And by that I mean candidates at the local level also. Our standard-bearers in city and county must be leaders who will add to the strength of our statewide effort, not shirt tail riders who will hold back the State's progress. Because much of what is to be undertaken will need strong efforts at the local level also, and that means local public officials must represent the best local

thinking and planning.

I am not suggesting here that we should sit on our hands and close our minds until 1960. Far from it. We who represent the State in Washington will keep our attention concentrated on the big economic prob-

lem, I assure you, and will turn our hands to any practical effort to help solve it. Thoughout this session of Congress our two Senators and the Democratic Representatives in the House have demonstrated a teamwork that is the envy of many other delegations. We will continue to press for measures that will bolster the economic foundation of the State—for area redevelopment, aid for small business, public works improvements, coal research, additional sur-plus commodities, funds for forest management and elimination of stream pollution, and many similar programs. I have strong hopes for the success of the community enterprise bill which will give funds and encouragement to the depressed coal communities and stimulate redevelopment at the local level.

But there is a limit to the things that can be done through the Congress and at the Federal level. In fact, there is a limit beyond which we would not want the Federal Government to go. Most of our prospects for the future must depend upon our own skill and energy at the State level, un-der the direction of a State administration that is committed to concentrate its major attentions on tools and devices which will deal with the big economic problem that faces us.

All of us must get our thinking caps on, and set to the job of creating a program shaped to fit the big problem that faces the State The people will support the party and the candidates who offer the most congestions to offer about solutions to that problem. We are the majority party. Ours is the major responsibility. It is up to us to offer a program that meets the need, and to convince the people that we will put that program into operation.

When we have the program, it will be time to review the possible candidates. We must choose men to fit the measure of the public needs, not a program which is compromised to fit the quality of the candi-

I am sure all of you have heard the names of many candidates mentioned already, as I have. During recent weeks I have heard or read of a dozen Democrats who are reported to be interested in becoming candidates for the governorship. Each of these men has good points.

I am not attempting to define who the candidate should be. I am rather attempting to create a picture of the job ahead of us, so that the dimensions of the job will give us an image of the man we need to lead the party in 1960 and the State in the 4 years to follow.

I have two suggestions to offer for the

consideration of all Democrats:

First, that we deliberately dedicate ourselves to the formulation of a program which will merit the continuous support of the electorate in this State for sufficient time to create and entrench a 10-year plan for economic redevelopment, a plan which will reverse our present negative position in relation to the national economy. Obvi-ously, this means we must win not just in 1960, but in three consecutive statewide but in three consecutive statewide elections.

This is a big order indeed. It means our leadership must consist of men who are above reproach. It means that we must convince a heavy majority of the electorate that we are undertaking the job in the public interest. It means we must have a moratorium on the sectionalism, factionalism and the bowing and scraping before special pressure

We must not lack the courage to make significant proposals toward solution of the State's one big problem, or we may well lose public confidence again after 4 years. But an action program devised to grapple with the problem will draw wide and sweeping

support. It must-because it is to the advantage of everyone-the workingman, the merchant, the banker, the union leader, the public official, all of us must gain by remov-ing more than 200,000 fellow West Virginians from the relief rolls.

My second suggestion is that our party leadership signify an understanding of the situation we face, and take first steps toward consideration of it. A seminar study session of those who hold responsible Demo-cratic Party positions and of those Democrats in major public office would be one way to begin. Let us pool our thinking and see where we stand. As a lifelong Democrat I assure you that I will always be available to meet with my fellow Democrats in consideration of what lies ahead.

The strength of the Democratic Party has always been at the grass roots, and, therefore, I urge you to give careful thought to the situation we face, and to make your views known to fellow Democrats. We can profit most from a full exchange of ideas. Your ideas and your support are both necessary to our success in 1960.

Poison in Your Water-No. 134

EXTENSION OF REMARKS OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congres-SIONAL RECORD an article appearing in the Camden (Ark.) News of October 2, 1958, entitled "Shelton Says Camden Ideal Location for Factories, Sewers Are Drawback":

SHELTON SAYS CAMDEN IDEAL LOCATION FOR FACTORIES, SEWERS ARE DRAWBACK

'Our city seems to have everything to make it ideal for industrial factories. only drawback I can think of is our sewer system which may be the reason none have chose to locate here recently," Bill Shelton, chamber of commerce manager said last night.

Industries seeking locations for their plants look for water, good labor, good trans-portation facilities, electrical power and a good clean community for their employees. Camden with its Ouachita River, three railroads, five highways, good climate, adequate electrical power, plenty of labor and located in a good central section of the Nation seems to be ideal. The drawback could be the sewer, Shelton said.

He spoke during a panel discussion Wednesday night at the Whiteside School before a crowd of 102. The discussions are being held all over the city in an effort to inform the public of the need for sewer improvements. The next meeting will be held Friday at 7:30 p.m., at the Carpenters Union Hall.

In backing up his statement, he cited an example of why one industry decided against building a large plant here back in 1955. He quoted the reason given by the corporation in a statement turning down Camden. "Much of Camden's sewage is dumped raw and untreated into the Oua-chita River" was among the reasons given on the statement.

Shelton told the group that Camden has the best industrial prospect now that it has had for several years. "Four large industries are considering Camden as a pos-

sible location for one of their factories," he said. They have already made preliminary investigations but as yet don't know about our inadequate sewers, he said. "I'm hoping after the election on Tuesday, October 14 I can tell them we will have it as soon as it can be constructed," he said.

Shelton said he leaves Thursday for New York where he will meet with one of the in-dustrialists for a conference on Friday morn-

ing. "It looks like a good one," he said.
Other speakers on the panel Wednesday
night were; Dr. Jim Hawley Floyd Byrd,
and W. A. Geddie. They spoke following 3 talk by Mayor James Rowan who gave the background of the proposed project.

He said 5,000 families are being asked to pay \$2 per month to finance the project which will be paid off over a period of 30 years. One dollar and fifty cents would be used for constructing the system while 50 cents will be used to maintain it. The mayor predicted that the city could probably pay off the sewer bonds in 15 to 20 years, as in the case of the municipal water bonds. bonds.

He mentioned that the system is designed to serve a population of 30,000 people. The present population is 17,000 which would allow for an increase over the years.

Dr. Hawley spoke on the need of adequate sewers to combat diseases caused by open sewers. He showed a map pinpointing Camden's 33 paralytic pollo cases during the past 8 years. Only one was in areas served by sewers. He named over about eight other diseases caused by open sewers.

The audience applauded a remark by one of those attending that "It would be worth my \$2 a month simply to rid the city of polio and other diseases, disregarding the system

Leaders said this was the best attended meeting held so far with 102 attending.

THATCHER BACKS NEW SEWER PROJECT

H. K. Thatcher, executive vice president of the Ouachita River Valley Association, has been working for the proposed sewer system project in Camden. He has sent the following letter to the editor of the Camden News:

'DEAR AL: I know of your interest in Camden and this prompts me to encourage you and your paper to even greater efforts in securing the passage of the sewer bond issue to be voted on November 14.

"My special interest is in protecting the Ouachita River and making its waters safe and serviceable for recreational, domestic, and industrial use.

"Camden dumps its raw and untreated sewage into the Ouachita River-some of it within the city limits. This is admittedly bad and the Arkansas Water Pollution Control Commission has issued a cease and desist order against us.

"Desirable as it may be to keep the Ouachita River at Camden and below free from filth and disease-bearing material, that in my opinion is not the main objective. The point is that in the very act of keeping the river clean and wholesome the city rid itself of the stigma of outdoor toilets. open running sewers, and inefficient septic tanks. This must be done if Camden is to be made into a desirable place to live and rear children.

"Camden has many economic advantages to offer industries, including an abundance of water and low cost barge transportation. but large industries have been reluctant to move their people from communities that do have sanitary sewage disposal systems into one such as Camden which does not presently have such devices.

"The one way before us now to correct our difficulty is to vote favorably on the upcoming sewage bond issue.

"Very sincerely yours,

"H. K. Thatcher,

"Executive Vice President."

An Appreciation of the Service of the Honorable Christian A. Herter, Secretary of State

EXTENSION OF REMARKS

# HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. AUCHINCLOSS. Mr. Speaker, I am sure that no one who listened to or saw our Secretary of State, Christian A. Herter, on the radio and television when he made his report about the futile Geneva conference could fail to be impressed with the man's sincerity, his ability, and his incisive vision. The ability, and his incisive vision. The record clearly shows by the thoughts expressed on the editorial pages of the press all over the country as well as the spoken statements of our prominent citizens that our Secretary of State represented the people of the United States and indeed all the freedom-loving people of the world in his firm and unequivocal attitude toward the frustrating policies of the Soviet Union. In these days of the atomic age which cause uncertainty and unrest among peace-loving peoples, the knowledge that a man of Mr. Herter's caliber and character is at the head of our Department of State is a Breat assurance to our peace of mind. I rejoice with Americans in his determined stand to support our friends in West Germany and in the pledge that the United States will not go back on its obligations or foresake the brave people in West Berlin. That firm decision is a statement of fact which will be sup-ported to the end by those men and women who love democracy and peace and good will on earth. I am pleased to include in my remarks an excellent editorial appearing in the Asbury Park Evening Press, Asbury Park, N.J., on Thursday, June 25, entitled "Herter Sees the Real Issue." I believe it clearly expresses the feelings of the people of America.

### HERTER SEES THE REAL ISSUE

Those who are familiar with the precepts of Karl Marx will understand Secretary of State Herter's contention that the Soviet Boal at Geneva was domination of all Germany. For Lenin, Stalin, and Khrushchev have closely adhered to the Marxian doctrine looking toward world conquest. On occasion expedience diverted each of the Soviet dictators from this goal, but they never completely abundoned it and when circumstances appeared favorable they pressed toward it.

The present is such an occasion. Soviet success with rocketry, dramatized by spectacular publicity, has emboldened Khrushchev to deliver what amounts to an ultimatum. to deliver what amounts to an ultimate the proclaims the violation of existing agreements by permitting the East German puppet region of through its terpet regime to close all roads through its ter-ritory leading to West Berlin. Such an eventuality of the force eventuality would be tantamount to forcing West Berlin into the Communist sphere.

but as Mr. Herter has observed, this is far from the ultimate Soviet objective. For should it succeed in the diplomatic conquest of West Berlin, Moscow would continue its westward expansion through all West Germany. And this accomplished, it would have all Western Europe within its grasp.

Mr. Herter's report on the first stage of the Geneva conference should strengthen our determination to make no concessions that would open the door to further Communist expansion. We have offered reasonable compromises only to hear Gromyko summarily reject them. In return he has offered no basis for negotiation. In fact, his every pro-posal is wrapped in the language of an ultimatum that implies complete surrender should we accept it.

The stakes at Geneva are far greater than West Berlin or, for that matter, all Germany. For the Soviet Union has made it plain that it is not satisfied with the tremendous expansion of its domain produced by more than 10 years of military and diplomatic ruthlessness. It is still obsessed with the Marxian dream of a Communist world. Should we permit it to take the relatively short stride into West Berlin we would but encourage it to increase its pace and attempt the longer step across Western Europe. Resisting this march of conquest may carry us to the brink of war and even to war itself. Fallure to halt it now would definitely precipitate the holo-caust that historians, if any survive, would call world war III.

### Brig. Gen. Sanford H. Wadhams

EXTENSION OF REMARKS

### HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. MONAGAN. Mr. Speaker, Brig. Gen. Sanford H. Wadhams died June 14. 1959, thus ending a long and brilliant career of service to his community, his State, and his country.

His Federal career included service in the U.S. Medical Corps during the Spanish-American War, in Panama during the building of the Canal, in Puerto Rico, in the Philippines, and in the Hawaiian Islands.

He served as inspector-instructor to the New York State National Guard in 1914, and later as military observer and attaché of the American Embassy in Paris.

His service to the State of Connecticut was brilliant and constructive. His particular interest was in the State water commission, and in the field of sanitation and the preservation of water resources he made contributions which will make the people of the State his debtors for many decades to come.

No better summing up of General Wadhams' career and personality has been made than the editorial from the Torrington (Conn.) Register which I append herewith:

#### GENERAL WADHAMS

It is not really accurate to call Sanford H. Wadhams a gentleman of the old school. Up until the very end-he was not only interested in but also active in the modern world. Notably, when it came to the matters that occupied him during the later years, such as flood control, water resources, or water power, his touch was as modern as that of men half a century his junior. So in many ways he was a gentleman of the modern school. Yet he was an exemplar of the old Yankee virtues. It is also true that in his quiet manner, his almost old world courtesy set off by a ready smile and a friendly sparkle in the eyes, General Wadhams represented a generation whose like is not often encountered

He had a zest and vigor and interest in the world about him that kept him going at virtually full strength until his death at four score and five. Right up through this last winter, on a snowy night that might serve as an excuse for younger men to stay home, he would think nothing of driving all by himself from Torrington to Hartford and back, just to visit with his friends in the Twilight Club or wherever else something of interest was going on Similarly if a matter of business in his field of interest came up, no effort was too great for

So modest was this member of Yale's class of 1894, this veteran of the Spanish-American War, that it was difficult to find the facts of his varied career, which included among other things graduating from medical school and rising in the Army Medical Corps to the rank of brigadier general. Small of Stature, slight of build, quiet, yet full of fire down underneath, here was a man who lived a full and useful life and lived it gracefully

Disaster Scene Slogan: To Wit "Don't Hamper Relief-Just To Watch Others' Grief" Is Adopted by Kiwanis International Division of California, Hawaii. and Nevada Clubs-Idea Originated by Compton Kiwanis Club

> EXTENSION OF REMARKS OF

## HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 24, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to extend to your attention, and that of all the other distinguished Members of this legislative body, the following information about what appears clearly to be a very significant and valuable program initiated by the Compton (Los Angeles County), Calif., Kiwanis Club through the informed and diligent efforts of Dr. Harold William Wood, of Compton, Calif., and his club member associates on the Agriculture and Conservation Committee of the Compton Kiwanis

I herewith submit text of letter to me dated November 28, 1958, from Dr. Wood, which will further explain the very evident appropriateness of this splendid club objective, together with the press release on said club program.

The award as the winning author of the disaster scene slogan was Mr. William E. Allison, 1104 Palms Boulevard, Venice, Los Angeles County, Calif. There were 16 Kiwanis Clubs of that area represented and the award was made at the Kiwanis International, California, Hawaii, and Nevada district banquet, with the lieutenant governor of the Kiwanis district officiating on May 5, 1959.

Dr. Wood and the Kiwanis Club of Compton, Calif., located in the great 23d District which I represent in this my 13th year in this great legislative body, is naturally expectant that the very cordial response which the Compton club has had to this worthy project over a large geographical area will lead to other communities emphasizing the impera-tive need of preparation against disaster being greatly emphasized through the adoption of some such community emphasis as was initiated in Compton by the Compton Kiwanis Club members.

Mr. Speaker, I am sure all the Members of this great legislative body will join me in congratulating my fellowcitizens of Compton, Calif., in this splendid and significant achievement as did the club congratulate William E. Allison on submitting the winning slogan.

I might say that neighbor Allison communicated to me as follows:

I trust that in some small way, I may have contributed to a worthwhile effort to alleviate a vital problem which confronts us today.

KIWANIS CLUB OF COMPTON, Compton, Calif., November 28, 1958. Hon. CLYDE DOYLE,

U.S. Congressman, South Gate, Calif.

DEAR MR. DOYLE: Several months ago members of the Agriculture & Conservation Committee of the Compton Kiwanis Club started a campaign in an effort to make the general public aware of the danger involved in rushing to scenes of disaster. We feel an appropriate slogan would help to educate these citizens and consequently, we offered a \$25.00 savings bond for the slogan selected by our group.

We have had some publicity on our efforts but we feel this has not been extensive enough and we aspire to get the idea across

Nationwide.

The enclosed letter will give you an idea of the acceptance we have had in some areas, but we hope the idea will catch on on a much larger scale.

In our own areas we have seen needless property damage, suffering of disaster victims, panic and even death—simply because curious sightseers hampered the rescue workers. We are certain you know of such hap-

penings in your area.

We will appreciate anything you may do to help us in combating this mass psychology. Let's educate! "Satan's scheme is a crowded disaster scene."

Please send all suggested slogans to me at the address appearing at the caption of this

Sincerely,

Dr. HAROLD WM. WOOD.

COMPTON KIWANIS SPONSOR PUBLIC SAFETY CONTEST

The Compton Kiwanis Club is offering a \$25 savings bond to the individual who submits the most appropriate slogan emphasizing the great necessity for the general public to avoid the scene of a disaster.

Upon three occasions in recent months, the work of police, firemen and rescue crews have been hampered and delayed by the curious who rushed to the scene of the disaster. The Norwalk plane crash, the Olive Street bridge fire and the Signal Hill oil refinery fire were catastrophes that drew the curious by the hundreds. As a result, ambulances, firefighting equipment and police experienced long delays and much difficulty in arriving at the scene with help and assist-

Charles Sorrell and Harold Wood, members of the Kiwanis conservation committee, feel that people can best help and protect themselves as well as others by staying away from the place of disaster.

All entries are to be mailed to Dr. Harold W. Wood, 220 E. Olive Street, Compton, Calif.

Tribute to William R. Connole, Vice Chairman of the Federal Power Commission

EXTENSION OF REMARKS

OF

# HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. DADDARIO. Mr. Speaker, in the June 19 issue, Petroleum Week singles out Mr. Wilbur D. Mills, our distinguished colleague from Arkansas; Raymond J. Saulnier, Chairman of the Council of Economic Advisers; Leo A. Hoegh, Director of the Office of the Civil and Defense Mobilization; and William R. Connole, Vice Chairman of the Federal Power Commission; as four Government officials holding the keys to depletion, gas regulation, oil prices,

I think it is particularly interesting to note the tribute paid to the young Vice Chairman of the Federal Power Commission, a constituent of the First Connecticut District, Mr. William R. Connole of West Hartford, and under leave to extend my remarks in the RECORD I include that portion of the article giving recognition to his efforts in natural gas matters:

William R. Connole, Vice Chairman of the Federal Power Commission, is becoming increasingly influential in natural gas matters.

While some FPC members have dragged their feet on producer regulation since the U.S. Supreme Court's Phillips gas decision in 1954, Connole since his appointment in 1955 has striven for an early and workable method of determining producer gas prices.

Because he insists that production costs are a vital factor in rate determination, and because he is FPC's strongest adherent of regulation, Connole has become something of an enemy in the view of many gas producers.

But he has the respect of those who disagree with his views. "He is smart, he works hard, and he does his homework," says one Washington gas industry representative. "When he takes a stand on a case, you can argue his theory but seldom his knowledge of the case."

Connole took a middle-of-the-road position on such natural gas bills as the Harris-O'Hara legislation. He did not believe the bills would accomplish their announced goals.

"No system of rate-making which com-pletely eliminates costs and concentrates only on demand will ever succeed," Connole says.

He believes FPC must consider costs in producer regulation, but not follow a course of slavish adherence to the eminent domain concept or so-called public utility control.

Looking at FPC's problems, Connole sees initial gas prices in contracts in south Louisiana as the most important shortrange difficulty. He wants FPC to start now to investigate producer rates, which rose from an average of 8 cents to 21 cents per thousand cubic feet in 4 years. Connole says he doesn't know whether the prices are too high-or even too low-but he thinks a strong look is necessary.

FPC's major long-range problem is gas pipeline certification, Connole believes. "There is only so much coke in the bottle," he says. "The problem is—how many straws can fit?"

Connole is pressing for formation of a national energy policy—covering fuels and

"It is the responsibility of the Government and industry to determine if we are getting the greatest possible use from our natural resources," he says. He feels that the need for a national policy is becoming increasingly evident-a policy which would not be aimed at helping or protecting a particular fuel such as coal or natural gas—but at the proper role for each.

Connole's present term on FPC expires next June, and he is expected to be reappointed to another 5-year term. When he was first named to the commission, in 1955. he was the youngest member of a Federal

regulatory body.

## A Nuclear Physicist Gives His Reasons for Stopping Bomb Tests Now

EXTENSION OF REMARKS

# HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Thursday, June 18, 1959

Mr. PORTER. Mr. Speaker, the following letter by Dr. Ralph E. Lapp, wellknown nuclear physicist and science writer, was published in the Washington Post and Times Herald on June 12, 1959. Dr. Lapp sets forth his considered reasons for stopping nuclear tests now. Under previous consent I am including his letter here. I commend it to the attention of my colleagues in the interest of the removal of this horrible threat to the survival of humanity:

### WHY NUCLEAR TESTS MUST CEASE

While our test cessation talks are going on at Geneva, we are witnessing in this country an increasing effort to undermine these negotiations. Military men are emphasizing the need for more sophisticated nuclear weapons that can be attained through fur ther testing. Admirals testify before the Congress that missile warheads can be doubled or tripled in power if tests resume. Congressional advisers, such as Mr. Thomas Murray, plead for further tests to perfect tao tical nuclear weapons. Scientists, such as Dr. Edward Teller, urge that tests be continued in order to develop really clean nuclear weapons. All forces combine to warn that you can't trust the second trust that you can't trust the second trust the second trust that you can't trust the second trust trust the second trust trust the second trust trust the second trust trus that you can't trust the Russians, that they will cheat on a test ban and that a foolproof inspection system for detecting illicit tests is impossible.

I am sure that these men are sincere in believing that is it in the best interest of our Nation's security that nuclear tests be re-sumed. Were I a military man imbued with traditional concepts of national security, believe that I would champion the resump tion of tests. It is entirely proper that the case for and against test cessation be presented to the American people in full per-

As one who believes that all nuclear tests should cease I would like to summarize the reasons for my belief. The arguments in of der of importance are:

(1) The first step: The world must take the first step away from war on the road to peace. The tempo of the arms race must abate and I believe that ceasing tests on a global basis is a series of the global basis is a rational first approach. contemplation of the ultimate consequences of a runaway arms race ending in nuclear chaos should reached chaos should remind all nations of the mutual advantage in controlling nuclear arms.

(2) The nth power: France is getting ready to knock on the door of the threemember nuclear club. It will soon become the fourth nuclear power. Then there will be inevitably a fifth and a sixth member as nuclear arms spread to smaller and less responsible nations. The Soviets must be conscious of the extreme danger that this repre-

sents to the stability of world peace.

3. Warhead limitation; Present model warheads for ballistic missiles range from a yield of below 1 megaton (1 million tons of TNT equivalent) to several times the 1 megaton value. Continued testing will multiply the explosive force of these missile warheads. A technological brake can be applied to this development now. In retrospect, had the brake been used last year, the multi-megaton bomb proved out by Soviet testers

in 1953 test series would still be-unproved.
4. Defense imbalance: Further testing places more and more emphasis and reliance upon nuclear weapons in our Defense Es-tablishment. Greater dependence upon nuclear weapons creates imbalance in our defense posture and limits military response to acts of provocation.

5. U.S. nuclear lead: An unofficial count of bomb tests to date shows that the United States has tested approximately 100 more nuclear devices than its competition. In a Poker game, if you can get out with a big plie of chips it's to your advantage.

6. Fear of fallout: The global hazard from nuclear

nuclear testing is real, not imaginary as test advocates would have one believe, and poses a moral decision for the test nation. However, certain test curbs such as underground detonation and magaton test limits restrict this hazard.

I have deliberately placed item 6 at the end of the list because I believe first things come first. Getting an agreement which minimizes radiation hazards does not solve the the problem of the uncontrolled arms race. RALPH E. LAPP.

## Washington Report

EXTENSION OF REMARKS OF

# HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. leave to extend my remarks in the Rec-ALGER. Mr. Speaker, under ORD, I include the following newsletter of June 27, 1959:

WASHINGTON REPORT (By Congressman BRUCE ALGER, Fifth District, Texas)

The Housing Act of 1959 came back from House-Senate conference, allegedly a compromise, represented as costing less than the administration program. A Republican committee member called this a hoax, and the facts bore this out. The facts: The Senate passed a \$3.6 billion bill, the House a \$6.1 billion (the house bill which most billion (the administration bill which most Republicans and some Democrats supported requested \$1.9 billion). Out of this came the conference compromise of \$5.2 billion, not the conference compromise of \$5.2 billion. not the \$1.4 billion cost represented by proponents of the compromise. Also objectionable were provisions for more public housing. urban renewal, and most objectionable to some of us, the deletion of the House amendment that kept Congress in constitutional supervision of the spending, permitting instead direct raids on the Treasury, bypassing Congress. Republicans joined by some emocrats could not defeat this sorry bill. It passed 241 to 177 (ALGER against). Lobbying pressures by the home builders' organization is no credit to them. The people should check who voted for and against this freespending budget-busting bill. The Texans split. As is true so often, those who sponsor debt reduction bills voted for the spending. Let's hope-the President vetoes the bill.

H.R. 3, the States rights bill, stipulates, "No act of Congress shall be construed as indicating an intent on the part of Congress to occupy the field in which such act operates, to the exclusion of all State laws on the same subject matter, unless such act contains an express provision to that effect, or unless there is a direct and positive conflict between such act and a State law so that the two cannot be reconciled or con-sistently stand together." The bill is aimed at the Supreme Court's inclination to "preempt by implication" States rights in fields of traditional State or concurrent Federal-State jurisdiction. Liberals fought the bill fiercely and were joined by some who feared the language would create more problems than it solved. I am heartly for it. It passed 225 to 192. Only one Texan voted against it. Now, the question is, will it be killed in the Senate as it was last year 41 to 40? Let's hope not.

The Ways and Means Committee is currently tinkering with the value of the dollar, which obviously will affect every citizen. Unfortunately, the technical nature of the subject results in (1) basic misunderstanding; and (2) political expediency. - At the moment, the political matter of who's to be blamed as responsible for increasing the interest rate overshadows the fact that demand for a commodity in a free economy raises its price; that interest rates, as the price for money's use, goes up in prosperous times (or deficit financing periods), a natural economic law, as gravity is a physical law. Failure to recognize or understand the facts and artificially to hold down interest rates by law will not only fail to solve the problem but will hurt the free economy and debase our currency.

The facts: (1) Money for investment is

available from two sources: (a) Savings; and (b) money creation by the Federal Reserve, an independent Government agency. While it is true that the Federal Reserve does reg-ulate the "money creation" supply of money, it is equally true that the Reserve Board of Governors is motivated by natural economic laws of supply and demand to prevent inflation and cheapening the dollar, no matter the pressure on them from business, labor, or politicians, each of whom is vitally concerned; (2) Government spending beyond income results in Government financing and refinancing problems (Federal debt of \$285 billion plus), weakens bond values, adds pressure for interest rate increases and infiation (or cheapening) of our money. So the big Federal spenders are (a) creating the very problem they seek to blame on others, and (b) preventing the imposition of the necessary Interest rate corrections they have necessitated. The 10 Republicans of Ways and Means are backing Bob Anderson's sensible requests.

Facts versus politics is the problem. Sincere belief as a matter of conviction, liberal or conservative, as to rightness, is one thing. There can be healthy difference of viewpoint and debate. Regrettably, misunderstanding the facts is frequent. This is human and excusable. What is wrong and inexcusable, as I see it, is to play politics regardless of facts just to gain expediently an alleged political advantage. Political parties should study issues and disagree. That's their function. But neither parties nor individ-uals should disregard the facts or even be lazy in digging out the truth. Members, by accepted practice, do not question each other's motives or integrity in Congress. This is left to the people.

"Every man has a right to his opinion, but no man has a right to be wrong in his facts." (Bernard Baruch.)

The AFL-CIO COPE (Committee on Political Education), yardstick for the six-State area including Texas, grades me wrong every time on 14 issues this Congress. I hope union members are interested in facts and what the union legislative program is costing them and will cost in taxes from their pay envelopes. I look forward to any debate on this subject.

## Central Valley Project

EXTENSION OF REMARKS

# HON, CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. GUBSER. Mr. Speaker, there are now bills, one of which I introduced in March, pending before the House Committee on Interior and Insular Affairs, in support of the joint development of the Trinity River division of the Central Valley project in California.

Under the partnership proposal, recommended by the Secretary of the Interior, private capital would construct the power facilities at a cost of \$60 million, pay \$83 million in Federal taxes and increase the surplus available for water development in the Central Valley project by \$175 million.

Proponents of all-Federal Trinity generators are now requesting the Senate Appropriations Committee for Federal moneys. The House has already refused to include an amount for this purpose. There is no reason why the legislative committee, which intends to hold hearings on the pending bills shortly, should be bypassed, for Congress itself, in the Trinity authorization legislation, directed the Secretary of the Interior to report back to Congress on proposals by non-Federal entities for the purchase of the Trinity falling water. It remains for Congress to consider and act upon his recommendations.

Last year extensive hearings were held on similar bills, but a vote was not permitted. This year the bills are even more favorable to the Government, as will soon be made evident during the course of the hearings before the House Interior and Insular Affairs Committee. The following article calls attention to the fact that every taxpayer in the Nation will foot the bill for all-Federal Trinity powerplants, while joint development with the Pacific Gas & Electric Co., means a lightened taxload on each citizen, for the company's offer adds \$258 million to the Federal Government's assets, in Federal taxes and Central Valley project surplus funds, and, at the same time, save the Government the expenditure of \$60 million in construction costs. The editor of the San Juan Mission News. a fine newspaper in my district, appreciates the need to stop the expenditure of Government money when private capital offers to do the job, as exemplified by the following editorial of March 13, 1959:

[From the San Juan Mission News, Mar. 13, 1959]

THAT TIME AGAIN

Along about this time every year the cost of running our Federal Government is trought home very strongly, because it's income-tax time.

Speaking for this writer only (although I imagine I echo the thoughts of many others), I don't begrudge paying income tax for necessary operations of Government. However, the way the Washington, D.C., spending merry-go-round is whirling, it makes one wonder where it will stop.

For example, a proposed new Federal prison's cost is set at \$110 million. How many men will it hold? Six hundred. That sets the cost at about \$183,333 per man-

rather expensive housing.

Another example, a proposed expenditure of \$100,000 to bring the as-yet unopened ultramodern \$3 million Air Force hospital "up to standards." The "standards" include oxygen outlets in every room, a radio station for special music, a walkie-talkie system to permit a nurse to talk with any patient.

The editorial then points out how "an avid advocate of Government power and a strong knocker of private-enterprise power is contributing to the fiscal foolishness. He is continuing his argument on the Eisenhower administration's proposal to save tax dollars and earn income for the Government through taxes for private power companies" and is opposing "the Trinity River partnership long advocated by the Eisenhower administration. He is now attempting to push through an appropriation of \$21/2 million for Federal construction of the power facilities."

"Then, on top of that," the editor notes, he "declared that the budget-can be balanced by cutting spending and

increasing income."

"We might suggest," the editorial continues, "that one way to cut Federal spending would be to let private enterprise do the power job. Not only would this save money, but it would provide the Federal Government with income via taxes paid by the private companies."

# Trinity River Partnership

EXTENSION OF REMARKS

## HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 19, 1959

Mr. HOSMER. Mr. Speaker, as a member of the House Interior and Insular Affairs Committee, and as a member of the committee last year which held extensive hearings concerning the joint development proposal for the Trinity River power facilities, I see no merit in current attempts to urge the Appropriations Committee of the other body to sink Federal funds in an endeavor which private capital is ready, willing and able to construct.

The President's budget did not include money for this purpose, nor did the House grant any amount. Having heard the evidence a year ago, I joined a majority of the committee, when it became apparent that the proposal would not come to a vote, in urging the Secretary of the Interior not to request funds, and the Appropriations Committees not to approve funds for the Trinity River project power facilities, until such time as the Congress has had an opportunity to carefully consider and act on this legislation. I am still of the same opinion, and am hopeful that hearings will soon be held to determine the issue.

I feel that the following editorial from the Mill Valley Record, California, of March 19, 1959, states the alternatives

clearly and decisively:

[From the Mill Valley (Calif.) Record, Mar. 19, 1959]

TRINITY POWER COMPROMISE MAKES SENSE TO TAXPAYER

Something took place in Washington, D.C. last week that could make history in California by clearing the way for development of Trinity River as an electric power and water reclamation project. Two California Congressmen, James B. Utr., and Charles S. GUESER, introduced identical bills providing for partnership development of Trinity power facilities, and recapture by the United States on 2 years' notice.

Historically, Pacific Gas & Electric Co. has a standing offer to build and operate the Trinity power facilities at its expense under a 50-year license and to make an average annual payment to the United States of \$4,617,-000 for use of the falling water made avail-

able by the Government dams.

Following introduction of the Utt-Gubser bills. Pacific Gas & Electric announced it would accept this compromise and is willing to give up assurance of a 50-year license, "in the hope of ending this controversy and getting the Trinity facilities built and in service."

Secretary of the Interior Fred A. Seaton has found that the greatest benefits to water users and taxpayers would result from Pacific Gas & Electric's construction and operation of Trinity power under a 50-year license. But this new recapture provision would allow the Federal Government to take over the power facilities at an early date should Congress so desire.

Joint development of Trinity would save the Federal Treasury \$60 million in con-struction costs, pay \$175 million more in net revenue to the Central Valley project and \$145 million in additional taxes to Federal, State and local treasuries-in a period of 50 years. Total benefit adds up to \$320 million.

In their joint announcement spelling out significance of their views, Congressman

GUBSER and UTT said:

"Today more than ever it behooves all of us to make every effort to do what we can to keep the budget in balance. Hundreds of millions of dollars will be needed for missiles and research, housing, airports, new water projects, and so forth. We simply can-not in good conscience pass up this opportunity to avoid the expenditure of this additional \$60 million for federally-owned power facilities at Trinity. Especially is this so when a private utility under Federal and

State regulation will put up this money.

"The Secretary said in his report that by selling the falling water to Pacific Gas & Electric Co. the Government would not only be spared the expenditure of this \$60 million. but that in so doing the Trinity power operation would provide over \$175 million in additional power revenues, whereas under all-Federal development Trinity plants would actually be a financial drag and a drain.

"Opponents of the Secretary's proposal have stated that the agreements reached between the Secretary and the company were not equitable—that they provided windfalls

for the company—that Federal Trinity power is needed for project pumping, and many other such charges.

"We do not believe these charges to be true or well founded, but at any rate we have provided for their correction if future

operations prove otherwise.

"Our amendment simply provides that the Federal Government may take over the power facilities from the company by paying them their net investment as determined by the Federal Power Commission any time after 1967, or when the San Luis project is completed, whichever is the earlier.

"We realize that this addition will not satisfy those opponents of partnership who are not so much concerned about a balanced budget, about the Central Valley project, and future water development in California and the West as they are in providing additional below-cost power to the Sacramento Municipal Utility District and to other preferred customers who comprise less than 7 percent of the power users in northern California.

"The Sacramento Municipal Utility District, it seems to us, is already getting more than its share of handouts from the Federal Treasury and from the water users of the Central Valley project. They have a \$23 million REA loan at 2 percent, which is at least 11/2 percent lea least 11/2 percent less than it costs the Government to borrow money. This giveaway amounts to over \$340,000 every year. They get all their power from the Federal Government at 4.5 mills or less under a 40-year contract. This is three-fourths of all Central Valley project power available. They pay no taxes to either the Federal or State or local governments. This freeloading district seems to be the fair-haired boy to the all-Federal power proponents, and indeed to some it seems to represent all the people.

"We believe that Trinity power facilities should truly benefit all the people, not just the 7 percent in a preferred class.

When Congress authorized the Central Valley project back in 1937—of which Trinity is now a part—it specifically provided that power revenues were to be a means of financially alding and assisting the water features. That provision still stands in the law governing the Central Valley project. would cost the Federal Government 8 of 9 mills per kilowatt-hour to generate Trinity power. If this power were then sold to so called preferred customers such as Sacra mento for 4.5 mills, there would be a loss of around 4 mills for every kilowatt-hour produced by the Federal Trinity plants. can Trinity Federal power be a 'means of financially alding and assisting the water features if it will be sold at a loss? would be contrary to the law authorizing the Central Valley project.

"If the opponents of partnership are so dedicated to selling below-cost power sacrements and the selling below-cost power sacrements and the selling below-cost power sacrements and the selling below-cost power selling below-cost powers." Sacramento and other preferred customers they should offer an amendment to the 1937 act which would provide that power shall be generated and sold to aid and assist the preferred customers instead of the water users. Apparently that is what they are advocating: therefore the ing: therefore they should be pressing for such a change in the 1937 act."

We have dared to devote this much space to a subject which many persons believe be complex and profound, because both moral and an economic and profound and an economic and an econom moral and an economic principle is plainty

involved here.

Some cockeyed, and to us offensive, inequities are permitted to rise openly in this country simple because try simply because people are not willing study the issues involved as intently as the are willing to study the sports and comic pages.

One of these inequities has to do with so

called public power.

By some hocus-pocus concocted in the backrooms of politicians and demagogs, word has been spread abroad that Govern

ment can produce electric power cheaper than can a private company. They both pay the same wages, the same for copper wire and steel and generators and turbines and for concrete dams, you understand.

Then what is it, you might ask, which causes Government to be able to produce electric power cheaper than a private com-

The answer is, Government can't produce electric power more cheaply.

Government only says it can.

Government can give electric power away for less, simply because Government in busihess pays no taxes. All corporations and

citizens must pay taxes.

In his song, "Under a Psychiatree," Danny Kaye, the comedian, says: "The neurotic knows that two and two make four \* \* \* but he can't stand it."

Under this definition American Government qualifies notably as neurotic.

We count it as immoral that Government, paying no taxes, is permitted to sell electric Power to Sacramento citizens at a preferred

And on Trinity: We cheer the good statesmanship and generous compromise offered by Congressmen UTT and GUBSER.

This is no time for Government to be quandering more tax dollars on nontaxable investments. We wish the Trinity River de-Velopment partnership well."

# LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompa-nied by nied by an estimate from the Public Printer as to the probable cost thereof. Any executive for the probable cost thereof. tive department, bureau, board, or independent ent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolution

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Admin-istration istration of the Senate, who, in making their renors report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed, and no extra copies reported (U. S. Copies such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

# GOVERNMENT PUBLICATIONS FOR SALE Additional copies of Government publications are offered for sale to the public by the Superint Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof thereof as determined by the Public Printer, plus 50 plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorize purauthorized bookdcalers and quantity purchasers, but such printing shall not intercasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Conditions and prescribe the terms and the resale of Government publications by resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government officer his agent for the regulations ernment publications under such regulations as shall be as shall be agreed upon by the Superintendent of Documents and the head of the respective descriptions are the second sections of the second se spective department or establishment of the Government (T. C. Code, title, 44, sec. 72a, Spective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2)

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181, CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the Congres-SIONAL RECORD, and while providing that it shall be substantially a verbatim re-port of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)
TITLE 44, SECTION 182b. SAME; ILLUS-

TRATIONS, MAPS, DIAGRAMS.-No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record .- The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.
- 2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Recorp, in 71/2-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These re-strictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
- 3. Return of manuscript.-When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p, m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.
- 4. Tabular matter.-The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.
- 5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.-If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. Thirty-day limit.—The Public Printer shall not publish in the Congressional Record any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections,-The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time; Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee; Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to

apply to conference reports.

10. Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. Estimate of cost .- No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or with-out individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional RECORD which is in contravention of this paragraph.

12. Official Reporters.-The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place

in the proceedings.

## CONGRESSIONAL RECORD

	CONGRESSIONAL RECORD	
REPRESENTATIVES WITH RESIDENCES IN WASHINGTON OFFICE ADDRESS: House Office Building, Washington, D. C. [Streets northwest unless otherwise stated] Speaker, Sam Rayburn Abbitt, Watkins M., Va Abernethy, Thomas G., 6278 29th St. Miss. Adair, E. Ross, Ind	Canfield, Gordon, N. # Appendix

# Scholarships for Rural Librarians

EXTENSION OF REMARKS

# HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 30, 1959

Mr. WILEY. Mr. President, today the Nation's library system, particularly in this fast-changing, technological age, provides the American people, of all ages, a tremendous opportunity to continue their education.

We recognize, of course, that the education of our people is not confined to, nor does it end with, the completion of formal schooling. Rather, it is a continuous process. Across the country, our libraries are providing our citizens, both youth and adult, with opportunity to extend their education at minimum cost to themselves and to the community.

Constructively, we recall the Congress enacted the Library Services Act in 1956. Among the important provisions of that legislation was a program of scholarships for rural libraries.

A recent edition of the Wilson Library Bulletin devoted an article to this scholarship program as it is being carried out in Wisconsin and a number of other States. Recognizing that the strengthening of our rural, as well as other library systems, is important to the people of America, I ask unanimous consent that the article by Helen Luce be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCHOLARSHIP FOR RURAL LIBRARIANS
(By Helen Luce)

(By Helen Luce)

The shortage of trained personnel is affecting all types of libraries. Certainly the State and local public library agencies have not escaped this immediate problem in their programs under the Library Services Act. During the first 2 years of the act, over 180 new were created—and filled—but many positions are still vacant. The future? In the next demand for professional librarians, particularly in the new regional library systems that are being established.

Five States—Missouri, New York, South Carolina, Virginia, and Wisconsin—have made a direct approach to this need by incorporating scholarship programs in library education as part of their State plans under lows; Services Act. A brief rundown follows:

In January 1958, the Missouri State Library started a scholarship project to provide

new professional personnel for the new library service programs which were developing in the State. Scholarships were made available, each worth \$2,000, which may be used at any ALA-accredited library school. Applicants must eligible for library school admission, must be technically employed by a Missouri public library or by the State library, and must agree to return after graduation to a Missouri rural public library for a 2-year period. The grant may be used for continuous training until the degree is earned, or it may be used for a consecutive series of summer school sessions.

The recruiting committee of the Missouri Library Association screens applicants, making recommendations to the State library. Six applications were received in fiscal 1958, and two Missourians were qualified and accepted. These first two scholarship winners will return to Missouri this summer; one already has a position in a regional library enlarged through a Federal demonstration grant, and the other will return in time to select one of several openings created through regional demonstrations. Paxton Price, State librarian, reports that there appear to be enough applicants this second year of the program to award this year's five grants, as well as the remainder from last year.

#### NEW YORK

New York State is in the second year of an active training grant program, and scholarships are one phase of this project of education for rural librarians. The maximum grant is \$2,000 for a year of study; the minimum of \$350 is applicable to students who attend an approved library school within 35 miles of their residence. The grant, which is pald to the school or university in behalf of the student, may be used to defray living expenses and fees as well as tuition.

Awards under the New York State scholarship plan follow the general pattern of the other educational scholarship programs under the New York regents and are restricted to U.S. citizens and residents of the State. Inasmuch as the basic aim of the program is to act as an incentive to bring new people into the library field, candidates must not have matriculated in a library degree program prior to receiving a scholarship. Awards are made in the order of standing in qualifying examinations, and the amount of the grant is dependent upon the net taxable balance of the recipient's income. The successful applicant must be admissable to an approved New York State library school and must also declare intention of serving in a public library or library system serving rural people for a 2-year period after completion of his library education.

As a result of examinations held in eight locations in New York State in January and June 1958, 23 candidates were offered awards ranging from \$350 to \$2,000. All accepted and have registered at four of the library schools within the State. New York reports that interest in the program is increasing so that it is likely the competition and awards will be continued on a twice-a-year basis.

#### SOUTH CAROLINA, VIRGINIA

Included in the South Carolina State plan is a general "personnel project," aimed at supplying more professionally trained librarians for public libraries in the State, Grants of \$3,000 a year over a 4-year period are available to 10 county or regional library systems which meet State-aid requirements. The libraries receiving grants must agree to employ a person who has been admitted to an accredited library school, granting a leave of absence each summer so the recipient may attend library school, and supplement the basic salary by annual increases of \$200 during the grant period. Interns receive full salary during study periods; and they agree to work in a South Carolina public library under the plan for 2 years after completing degree requirements.

South Carolina now has six interns working under the personnel project in Charleston, Greenville, Oconee, Pickens, Greenwood, and Horry Counties. Plans are being made to revise the program on a 2-year basis in order to get in three additional interns before the end of 1961. Under the revised plan, interns will work 6 moneths, go to school 6 months, and so on. The 2-year working requirement will still apply, and the libraries employing these interns will be required to increase salaries after the first year by \$400.

The Virginia State plan has provided scholarships in the amount of \$1,000 since July 1957. Any public library receiving State aid may apply for grants. The amount for scholarships is then deducted from the library's State aid. Applicants must have been accepted for admission to an ALA-accredited library school, must be employed by the library, and must agree to return for a 2-year period immediately following receipt of the degree. In this State the training is expected to be completed within 12 months.

The Roanoke County Library has received one scholarship, and the Fairfax County Library two for the 1958-59 academic year. The Fairfax County students are attending Catholic University and McGill University.

## WISCONSIN

In Wisconsin the scholarship program is sponsored jointly by the Wisconsin Library Association and the Wisconsin Free Library Commission. This project was started in September 1958, at which time three scholarships of \$1,000 each were made available for graduate study. Applicants must be residents of Wisconsin and agree to work 2 years in a Wisconsin library serving rural people.

Wisconsin library serving rural people.

The scholarship committee of the Wisconsin Library Association worked closely with the secretary of the Free Library Commission in recruiting and screening candidates for the first awards. Three applicants were approved and accepted in September 1958; but, unfortunately, one recipient found it impossible to remain in school.

A cynic could point out that—even when taken together—the scholarship programs, limited as they are, can alleviate only a small portion of the immediate and pressing needs of the Library Services Act programs throughout the Nation. Their value, however, has already been noted in States with these scholarship programs. Irving A. Verschoor, director of the Library Extension Division, New York State Library, wrote in "Library Services Act Scholarships in New York State" (ALA Bulletin, 52: 349–350, May 1958): "The point of universal agreement in the division is, however, that we are determined on the continuance of the training grant program."

### Civil Rights

EXTENSION OF REMARKS

### HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 30, 1959

Mr. PROXMIRE. Mr. President, I commend to my colleagues a recent disturbing editorial from the Milwaukee Journal. This is a depressing report on the status of the 1957 civil rights right-to-vote bill. The highly responsible Milwaukee Journal charges that this act is having little effect. It needs teeth. This Congress should supply those teeth.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered printed in the Appendix of the RECORD as follows:

[From the Milwaukee Journal, June 27, 1959]
FEDERAL CIVIL RIGHTS GROUP GETTING
ABSOLUTELY NOWHERE

The Federal Civil Rights Commission is preparing to hold hearings in Louisiana on complaint of 83 Negroes that they have been refused the right to vote because of their

sace.
So far cooperation by Louisiana has added up to zero. The State refused to let Commission officers inspect voting records. It agreed to consider written questions aimed at local voting officials, but when the questionnaires were made out the State called them ridiculous and irrelevant. By calling a hearing, the Commission can try its luck at subpenaing records and voting registrars.

But chances of much coming of it all aren't very bright. The Commission held such hearings in Alabama last year. The voting registrars merely resigned and shrugged off questioning by saying that they no longer had anything to do with the case. The Government carried the matter to the courts. A lower court dismissed the suit. And now the U.S. court of appeals in New Orleans has upheld the lower court.

The court of appeals ruling practically ties the Government's hands. It says that there is nothing in the Civil Rights Act of 1957 giving the Federal Government the right to sue a State, and that Congress did not intend such suits. And it says that there is no law to prevent registrars from resigning.

The Government is appealing to the Supreme Court. But the weakness of the Commission and the law under which it operates so far upholds those who said from the start that the Civil Rights Act of 1957 was little more than window dressing covering inaction in the field of civil rights.

The Civil Rights Commission's life ends in September. It has only a 2-year mandate and it took 9 months of those 2 years for the President to name the Commission and for the Commission to get a Director. It has some 200 cases in 13 States to investigate.

The President wants the Commission extended for 2 more years. Fine. But only if it is also given some powers. It can't enforce its own subpenas. It can't hold witnesses who flout it in contempt. The courts so far say the Government can't even sue States which violate the voting laws.

Obviously teeth are needed in the Civil Rights Act of 1957—else the Commission can do little and Negroes will go into the 1960 elections as voteless as ever.

## Popular Participation in Surplus Food Donation

EXTENSION OF REMARKS

# OF

HON. RICHARD L. NEUBERGER

IN THE SENATE OF THE UNITED STATES

Tuesday, June 30, 1959

Mr. NEUBERGER. Mr. President, I call attention to an editorial which appeared June 1, 1959, in the McMinnville (Oreg.) News-Register. This editorial makes a suggestion for dealing with our burgeoning farm surplus which I believe is worthy of serious consideration. The idea is not novel, but it has a new twist which should make it appealing and practically effective.

The basic plan is to send agricultural surplus to countries abroad suffering from a food scarcity. The novelty-and I believe the most appealing aspect of the idea—is to have the President deliver a radio plea to the hundreds of thousands of local service clubs in the United States asking them to contribute whatever they can to finance the program. The purpose would not be to build or depress agricultural markets, buy good will, or coerce ideological conformity, but merely to extend-through a non-partisan program—a helping hand to those countries of the world less fortunate than we in products of the soil.

I think the American people would respond to such a plea, Mr. President. I think they already realize the need to deplete our farm glut if the American farmer is ever to cut the ties of parity payments that now shackle his economic movements.

In this regard, I think we would do well to remember that the very able senior Senator from Minnesota [Mr. HUMPHREY] has recently introduced legislation, S. 1711, termed the food-forpeace bill. It would empower the President of the United States to carry out various plans utilizing our surplus agricultural commodities for oversea assistance. I was privileged to cosponsor that bill, along with several of my colleagues; I did so within the same frame of reference that spurs me to insert this excellent editorial in the McMinnville News-Register. I am speaking about the urgent need for our country, and this Congress in particular, to face up to the dual responsibilities posed by our domestic farm economy and foreign food scarcities. Neither is an obligation that we may conscientiously shirk any

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the News-Register, McMinnville, Oreg., June 1, 1959]

#### IMAGINEERING WITH HEART

(An open letter to President Dwight Eisenhower, Vice President Richard Nixon, and to

all Members of the U.S. Senate and House of Representatives.)

When we were young we were taught that because he was frugal and built up a surplus during good times Joseph was called a provider. Today we have a great surplus of certain basic farm commodities, and we call it a problem. We have been pondering this strange thing and would like to make this suggestion:

Let us make our problem an opportunity-In the face of the strange anachronism that we have mountains of food grains in storage and yet countless of our brothers and sisters in other parts of the world go to bed each night hungry, we suggest that you men and women, all of you, put on a great radio and television program, emanating from the White House and beamed to the entire Nation, during which you would plead with each organization of almost any sort to give \$100 or a share of that amount to send abroad some of our surplus. This would mean every church, every fraternal organization, every veterans' organization, every service club, every youth group, every farm organization, and any others which might want to take part.

There is already a program set up whereby the U.S. Government matches dollar for dollar funds given for this purpose through already operating and trustworthy organizations such as the church service groups and CARE.

Let us do this, not with the attitude of building markets. Let us do it, not to buy good will. This is where our present aid pragram is so often a failure. We expect to get ideological conformity or some semblance of international support. Let us do this simply because these folks are our brothers and sisters, and because the world is a neighborhood and they are our neighbors.

It is our opinion that the imagination of the American people could be captured by a program such as this, especially if it has behind it the prestige of the White House and the nonpartisan support of all of our highest elected representatives. In this way the problem of our surpluses could be transformed into a rich experience, both for us and for those who receive the gifts.

# The Facts on the Farm Population Decline

EXTENSION OF REMARKS

# HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1959

Mr. QUIE. Mr. Speaker, several days ago I called to the attention of the Congress an article which appears in the current issue of Successful Farming which deals with the decline of our farm population.

Now, in pursuing the subject further, I would like to present some statistics which, I think, will put the problem in perspective and will remove the blurred image which has been created.

For a number of years now, the fact that farmers have been leaving the land has prompted a flurry of speeches, from some quarters—some blaming this administration or that administration, this policy or that program, as being responsible for the exodus.

Farm population has been declining for many years. More than 100 years

ago, in 1858, farm people made up an estimated 65 percent of the population of the country. As of April 1958—100 years later—farm people accounted for only 12 percent of our population.

The following table, based on U.S. Census and U.S. Department of Agriculture surveys, shows U.S. farm population since 1910:

Year (April)	Total popu-	Farm population			
	including Armed Forces Overseas	Number of persons	Percent of total popu- lation		
1955 1957 1956 1956 1954 1964 1962	Thousands 173, 485 170, 510 167, 498 164, 619 161, 761 159, 012	Thousands 20, 827 20, 396 22, 257 22, 158 21, 890 22, 679	12.0 12.0 13.3 13.5 13.5 14.3		
1951 1950 1549 1548 1917 1945	156, 421 153, 691 151, 132 148, 595 146, 051 143, 480	24, 283 24, 160 25, 058 25, 954 25, 903 27, 124	15, 5 15, 7 16, 6 17, 5 17, 7 18, 9		
1944 1943 1942 1941 1940	141, 039 139, 583 138, 027 136, 297 134, 498 133, 008 131, 820	26, 483 25, 295 25, 495 26, 681 29, 234 30, 273 30, 547	18.8 18.1 18.5 19.6 21.7 22.7 23.2		
1938 1937 1935 1934 1933 1932	130, 642 129, 589 128, 649 127, 886 127, 057 126, 192 125, 401	30, 840 30, 980 31, 266 31, 737 32, 161 32, 305 32, 393	23, 6 23, 9 24, 3 24, 8 25, 3 25, 6 25, 8		
1931 1930 1929 1928 1927	124, 668 123, 841 122, 775 121, 463 120, 135 118, 628	31, 388 30, 845 30, 529 30, 580 30, 548 30, 530	25, 2 24, 9 24, 9 25, 2 25, 4 25, 7		
1925 1924 1923 1923 1922 1921 1920	117, 007 115, 402 113, 573 111, 476 109, 676 108, 023	30, 979 31, 190 31, 177 31, 490 32, 109 32, 123	20, 5 27, 0 27, 5 28, 2 29, 3 20, 7		
1918 1947 1940 1915 1914 1913 1913	106, 089 104, 935 104, 266 103, 052 101, 612 100, 191 98, 645	31, 974 31, 200 31, 950 32, 430 32, 530 32, 440 32, 320	30, 1 29, 7 30, 6 31, 5 32, 0 32, 4 32, 8		
1911 1910	96, 753 94, 965 93, 502 91, 885	32, 270 32, 210 32, 110 32, 077	33. 4 33. 9 34. 3 34. 9		

Mr. Speaker, I believe that three significant conclusions can be drawn from the statistics

First. The percentage of farm people in our country has been steadily decreasing from 1910, when they amounted to 34.9 percent of the population, to 1958, when 12 percent were farmers and their families. This decrease in percentage has been primarily due to the increase in the total population of the United States.

Secondly, the number of farm people remained between 30 and 32 million until 1941. From 1941 to 1958 the number of farm people has dropped from nearly 10 million to the present 20.8 million.

The period since the start of World War II was one of great technological change. The change is still being effected today, as we see that today's farm worker can produce as much in 8 hours as he did in 10 hours in 1950. He can do in 1940.

In 1940, 1 farm worker produced enough to feed himself and 12 others. In 1950 he fed himself and 14 others. Today he feeds himself and 23 others. Finally, when the 4,231,000 decrease in farm population between April 1950 and April 1958 is taken into account, it can be seen that most of the decrease occurred between April 1950 and April 1954.

It has been said many times that the policies of the present administration are responsible for driving farmers from the land—yet, while the comparative figures are correct, their interpretation is often misleading and distorted.

Since population estimates are made on April 1, the year 1952 cannot be attributed to the present administration, because it did not take office until January 1953.

An analysis of farm population statistics reveals the following comparisons.

During the last 5 years—from April 1, 1953, to April 1, 1958—farm population dropped 1,852,000, or at a rate of 370,000 per year.

During the previous 5 years, during the previous Presidential administration, farm population dropped 3,224,000, or at the rate of 644,800 per year.

In summary, Mr. Speaker, I believe that the drop in farm population has been a long-range economic trend, and that statistics are best understood when they are not forced into the pattern of a political allegation.

#### White Man's Burden

EXTENSION OF REMARKS

# HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. DAVIS of Georgia. Mr. Speaker, the New York Age, a weekly newspaper published in New York City, in its issue of June 13, 1959, carried a column which contains some very sensible comments. Under unanimous consent to extend my remarks, I include the article in the CONGRESSIONAL RECORD:

WHITE MAN'S BURDEN (By Chuck Stone)

"P.S.-If I were going to give any advice to the Negro group in this country it would Take the chip off your shoulder and begin to be proud of your heritage as a Negro and quit trying to be a white man. The Jew is a minority race but you never hear him crying for entry into the Gentiles' group, but he stands on his own feet and is doing very well, thank you, in this minority position. It is doubtful that any other group of people ever made the progress that the Negro has made over the last two centuries. Of course such progress would never have been possible without the help of the white man, and I dare say he has had more actual help from the southern white man because there are so many Negroes down here. Surely anyone knows that the Negro pays a very small part of the cost of his schools anywhere in this land, and now that so many of them are on welfare of course even a smaller part of this tremendous cost is being paid by them. 'The Negro is the white man's burden' was at one time a familiar saying. Truly, now with welfare from cradle to grave, plus good schooling, he really is the white man's burden-although a lot of white critics never seem to realize it."

These words leaped off a page of the Concressional Record of May 28, 1959, which we were reading last week. They were the "P.S." to a letter which had

They were the "P.S." to a letter which had been written by a Mr. N. G. Sherouse of Reddick, Fla., to the Saturday Evening Post recently about the integration problem. The letter which we found to be a most reasonable appraisal of the American racial conflict was inserted in the Congressional Record by Representative James C. Davis, Democrat, of Georgia.

Our frank reaction to Mr. Sherouse's words were simply: how true,

Within the historical concept of the 19th century, the Negro, or more accurately, all colored people, were the "white man's burden."

This Rudyard Kipling phrase later buttressed by President McKinley's "Manifest destiny" was the white men's personal compulsion. Nobody asked him to make us his "burden." These were his own sociological kicks.

But, today when the Negro should be standing on his own two feet and making formidable contributions to the American culture and economic system, he is still "the white man's burden."

Take New York City, for example.

Of the 145,000 welfare cases, over 65 percent are Negroes.

Of the 386,000 crimes committed in New York City last year over 60 percent are Negroes.

The worst slums in the city are located in Harlem.

Oh, but we've got good excuses.

We're on welfare, we say, because there's discrimination in employment and we can't find a job.

Au contraire—we're on welfare because we're lazy.

We offer cogent social psychological explanations for our lack of opportunity, slum areas, etc. The plain fact is that we find crime such an easy way to take out our aggression toward the society instead of measuring up to it as real men.

Whatever the social scientific explanations for our cultural lag and our deficiencies, we are still "the white man's burden." The difference is, however, that today this burden is of our own making and perpetuation.

When the white man looks around him and sees the high crime rate, the disproportionate load of welfare cases, and the miserable slums in which Negroes are living, he might well ask his 20th century "white man's burden": "What are you peddling now—human misery?"

If you were a white man, wouldn't you?

# Our Nation's Need for a Youth Conservation Corps

EXTENSION OF REMARKS

## HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1959

Mrs. KEE. Mr. Speaker, recently, I read an interesting history, by Arthur Schlessinger, Jr., about the first years of the Roosevelt administration. I was particularly interested in the writer's comments on the Civilian Conservation Corps, an emergency agency set up to take young men off the city streets and put them to work in our Nation's forests.

It is Schlessinger's contention that the CCC was the most successful of all New Deal agencies. I believe most people would agree with him. Within 3 months of the establishment of CCC, thousands of young men were at work building roads and water-check dams in forests. Millions of trees were planted. Not only were these young men given an opportunity to support themselves but they gained an appreciation of nature which undoubtedly enabled each one to lead a fuller and richer life.

I was particularly interested in this review of the CCC because I have introduced a bill (H.R. 7777) to set up a Youth Conservation Corps patterned along the lines of the old Civilian Conservation Corps.

Mr. Speaker, the purpose of my bill is best described in its short title:

To provide healthful and outdoor training and employment for young men and to advance the conservation, development and management of national resources of timber, soil, range, and recreational areas.

In many sections of our country young men are now finding that jobs are very scarce. Unfortunately, many of them face idleness. This is not good for the young men or for the Nation.

On the other hand, our land and water resources need protecting more now than ever before in history. Our population is increasing at a rapid rate. There is an ever-growing pressure on land and water resources.

It seems to me it would be a wise and highly useful step to take these young men who need and want jobs and put them to work in forest camps. We need to step up our activities to conserve soil and water. Once soil and water are lost they can never be recovered.

A group of Senators introduced similar legislation. Widespread interest has been expressed in the proposal to establish a Youth Conservation Corps, and we are hopeful that hearings can be held this year.

The cost for such a program would be small, especially when measured in terms of what it could do both for the young men who would be put to useful work and of what it will mean to the country's natural resources.

The CCC left lasting marks upon our Nation's forests and wooded areas. The dams which CCC boys built across small streams are still serving their dual purposes—checking the flow of floodwater to prevent soil erosion and the providing of valuable recreational areas.

Mr. Speaker, the need for work of this kind is perhaps more urgent today than it was back in the Thirties.

Conditions in the Steel Industry

EXTENSION OF REMARKS

### HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 30, 1959

Mr. PROXMIRE. Mr. President, a recent letter to me from Mr. D. A. Milligan, vice president of the J. I. Case Co. of Racine, Wis., contains a tremen-

dously competent and timely analysis of inflation and what we can do about it. He writes from broad and direct experience of the practical effects that persistent inflation has on the manufacturing segment of the economy. He has written an objective and reasonable presentation of the impact of rising steel prices on his company, which is one of Wisconsin's major industries.

Mr. President, each Member of the Senate is pleased, I am sure, that the steel industry and the Steelworkers Union have heeded the President's urging to continue their contract negotiations. None of us want to see a strike in this basic industry. Mr. Milligan has effectively pointed up the important stake that industry, business, and indeed all Americans have in maintaining stable prices in the steel industry.

I may differ with Mr. Milligan on the emphasis in his analysis or on the legislative prescription, but I feel Senators will be rewarded and informed by reading this thoughtful analysis.

I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

J. I. Case Co.,

Racine, Wis., June 15, 1959.

Subject: Local and national situations.

Senator William Proxmine,

U.S. Senate Washington, D.C.

DEAR SENATOR PROXMIRE: Having spent considerable time in Washington in an advisory capacity, and having been a party to certain decisions, gives us an appreciation of the problems you are facing. As a representative of the State of Wisconsin and of the United States you certainly have many very major decisions to make and many, many facts to consider. We trust that some of the points we raise in this letter may be of interest to you and give you an appreciation of the situation in certain fields as we see it.

#### STEEL SITUATION AND GENERAL INFLATION

For the last 7 years, I have had the distasteful responsibility of writing a letter to our dealers announcing an increase in the price of our product because of the increase in the price of steel. It is quite evident that that same letter will have to be written again some time this year. We are attaching a copy of our transmittal letter dated August 28, 1958. The statistics in that letter show an increase every year for 12 years, with the exception of the Korean period. To me this is very, very scrious.

We are in a very competitive market. progress that has been made in the United States has been a result of this competition. Every one of our competitors has raised their price at the same time, approximately the same amount. You may know that the Case Co. was facing a very serious situation. They did \$170 million worth of business in 1949 which gradually shrunk until in 1956 they did \$87 million worth of business. Through the merger with the American Tractor Co., and the inauguration of many changes, in 1957, we were able to achieve a volume of approximately \$124 million, in 1958 approximately \$178 million, and this year we are hoping to do \$210 million. To achieve this expansion, the addition of new products, and the merchandising and floor planning of inventory, required the borrowing of approximately \$100 million, plus the selling of approximately another \$25 million worth of convertible debenture bonds. We mention this as an indication of a chance or gamble that the company has to take to expand and progress. Today the indebtedness of the Case Co. is approximately equal to its net worth. What does the result of this expansion mean to Wisconsin and to the Racine area? The attached reprint from the May 17 issue of the Racine Journal-Times specifically showed what it means to Racine—an increase of 97 percent employment in approximately 2 years time. It would, therefore, look like the Case Co. is well on its way to expansion and stability, but to carry on this expansion requires not only becoming more dominant in the domestic market, but it requires export volume.

Through the wage rates now in effect and through the cost of steel, the cost of rubber, and the other commodities made from steel, our costs in the United States are constantly increasing. This is true not only with the Case Co. but with all of our competitors. As you no doubt know, Massey-Harris closed their manufacturing operations in Racine and instead of building the transmission parts and certain other items for their tractor line, they are now building these in Coventry, England, and shipping them into their tractor plant in Detroit. Thus, because of the wage rate and the costs in the United States, that production was transferred from Racine to Coventry, England. One of the executives of International Harvester recently advised that their average wage rate in the United States is \$2.59\(\frac{1}{2}\) per hour. The wage rate in their French operation is 63 cents; in Great Britain it is 80% cents per hour; in Germany 76 cents, and in Australia \$1.03 per hour. In Germany, specifically, they advise that the output per man-hour is much higher. International Harvester is now importing tractors into Canada. They are starting to bring certain models of the tractors into the United States. The Ford Motor Co. has been bringing diesel tractors for several years into the United States.

Several years ago when I was an executive with Harry Ferguson, Inc., we were importing tractors into Canada from Coventry, Eng. land, delivering them into Montreal for \$55 per tractor. For an additional \$4 that same tractor could be delivered into Vancouver. British Columbia. A comparable tractor shipped from Detroit, Mich., to Portland. Oreg., cost \$90—this ratio was correct in 1952. Freight rates have increased the cost and made the spread even greater today. It, therefore, appears that if the tractor is to compete in the export market, we must produce in the export field. Unfortunately, it is beginning to look as though in order compete in the United States it may be necessary to build a product in the export field and import it. No doubt you are familiar with the White Sewing Machine Co. closing down their entire manfacturing plant in Cleveland. They are now producing their entire output in Japan and importing it and selling it in the United States. According to an official of that company, he said it placed them in a competitive position by so

Another effect of this is the shipping of gold from the United States. We are importing larger amounts of goods and there has been a drop in export. Because of this, the United States in the last year and a half is paying out more money than we are taking in. To balance these international payments, gold is being transferred from the United States to foreign banks.

The writer is not antiunion or opposed to labor making a good living. The answer is not a high tariff nor a controlled economy. In our opinion, competition makes for progress and we can hold our own and expand in a similar market under comparable conditions. But the U.S. manufacturers cannot continue to pay more for steel, continue to pay more for labor, and to pay more taxes

and compete with the lower wages being pald in the foreign countries. We feel that the best thing that could happen to this country Would be a status quo and a halt in the vicious inflation cycle. It is evident that this cannot be achieved as long as Hoffa and certain other labor leaders have unlimited control. The recent series of interviews cov-ered by U.S. News indicates that many of the laboring people are contented. They recognize that time lost through strikes Would probably never be regained and that in all probability the cost of living would go up before they could recover and then the ratio of what they earned to what it cost them to live would be no better than it is

As our representative in the U.S. Senate, You have a terrific responsibility not only to Wisconsin but to the Nation. It is our opin-ion that the public today is willing to face up to the facts and make the necessary ad-Justiments if they are permitted to do so, and if their representatives have the intestinal fortitude to give them the facts and not as is commonly expressed in Washington, when certain people give a speech state that that is for home consumption, knowing fairly well that the individual is not sincere and will not act in accordance with the speech as re-

In our opinion bill S. 215 is a needless law and will generate more redtape. With the terrine competition existing today in the construction field and in the agricultural machinery field, every manufacturer will sell all the merchandise he can and use the price increase, or the possible price increase, as a selling. selling device to get the people to buy and increase his volume. Under that bill, in a competitive market, this, in our opinion, is superfluous.

Very sincerely yours, J. I. CASE Co., D. A. MILLIGAN,

Vice President.

# FHA's 25th Anniversary

EXTENSION OF REMARKS

# OF HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, June 30, 1959

Mr. WILEY. Mr. President, this year the Federal Housing Administration, one of the most significant forces in expansion sion of our home-building programs, celebrates its 25th anniversary.

During its lifetime the FHA—through its mortgage insurance program—has helped to provide homes for 5 million American families and housing for 800,-000 other families in rental and cooperative projects. In addition, it has helped to repair or improve 22 million prop-

From its beginning, it has written insurance for these and related projects totaling more than \$53 billion.

Overall, FHA has helped to make it possible for three out of every five

American families to own their homes. Although a federally sponsored program, it is significant to the American taxpayer that FHA is self-supporting. Despite the vast volume of insurance written, only a very small percentage of mortgage guarantees have had to be written off as losses. have been the creation of:

A larger volume of home building: Wider opportunity for home ownership:

Better construction standards: A sound system of home financing; Research and building techniques;

Consumer credit to finance home improvements.

These and other contributions toward enabling more Americans to own their own homes, in Wisconsin and throughout the country, have marked FHA's 25-year history.

Recently, Mr. James M. Udall, president of the National Association of Real Estate Boards, published in Realtors Headlines an editorial entitled, "FHA's 25th Anniversary." The editorial pays tribute to the splendid contribution FHA has made to the home-building

In recognition of the fine work of FHA, I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### FHA'S 25TH ANNIVERSARY

In the last 25 years the Federal Housing Administration has forcefully demonstrated that the long-term, low-interest-rate home loan is both a good, solid investment and a constructive method of spreading the advantages of home ownership to the greatest number of people.

To the skeptics who once freely voiced the opinion that FHA would never work or would wind up placing just another burden on the taxpayer, the best answer is the extremely low percentage of borrowers who have defaulted on loans once considered risky.

FHA has not cost the American taxpayer I cent. Since 1940 the agency has been entirely self-sustaining, and in 1954 it repaid all debts to the U.S. Treasury with interest. All expenses and losses are paid out of the huge reserve of premiums paid by borrowers.

As president of the National Association of Real Estate Boards, I should like to offer FHA on its 25th anniversary (to be celebrated June 18) the hearty congratulations of the association for this excellent record.

National Association of Real Estate Boards is proud to have been one of the earliest supporters of the FHA idea. The association took part in the successive development of the Home Loan Bank system, the Home Owners Loan Corporation, and the FHA. The association's confidence has been more than justified by FHA's experience.

Without FHA mortgage insurance, millions of responsible, hard-working Americans would not own homes today. FHA's favorable experience had far-reaching effects throughout the real estate market. It provided the example which led conventional home lenders into the field of long-term, low-interest-rate financing.

FHA has shown that it can adapt to new conditions and changing needs. This is the mark of an unlightened organization.

Because of its special interest in everything affecting real estate, National Association of Real Estate Boards is constantly alert to sug-gested new ways of improving the FHA program. The association gave its support to the certified agency program under which mortgage lending institutions in small communities are designated as authorized FHA agents to process applications and issue commitments.

We are looking forward to the expansion

Among the objectives of this program of this successful program which is planned for this summer. Now operating largely in cities of 15,000 or less, certified agency program will move into cities up to 20,000, thus offering more people the advantages of the shorter time it takes to process applications under this system.

Through our own build America better program National Association of Real Estate Boards has taken a strong, active interest in urban renewal. We are happy to see the steady growth of the section 220 and 221 programs under which FHA insures mortgages on new and rehabilitated housing in urban renewal areas and low-cost relocation housing for families displaced by redevelopment or other governmental action.

On this momentous anniversary, FHA can take great pride in its achievements.

# DiNatale's New Ideas Speed Roadbuilding

EXTENSION OF REMARKS

# HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. BURKE of Massachusetts. Mr. Speaker, on Wednesday, June 24, 1959, John Harris, writer for the Boston Globe newspaper, wrote an article entitled "DiNatale's New Ideas Speed Roadbuilding." Public Works Commissioner Anthony N. DiNatale has done an outstanding job in bringing about the completion of the Southeast Expressway months ahead of schedule. He has released a major part of the bottleneck on traffic which has been strangling the trucking and automobile traffic from the North Shore to the South Shore of Massachusetts. Commissioner DiNatale is a resident of my hometown in Milton, Mass., so I am doubly honored to have his accomplishments included in my remarks today.

On Thursday, June 25, 1959, the Southeast Expressway was officially opened.

Its opening received widespread plaudits from newspapers, businessmen, civic leaders and public officials. The Southeast Expressway has opened new possibilities for business and industrial development.

I am very happy to day that Congress THOMAS P. O'NEILL and myself were members of the Massachusetts General Court when this great roadbuilding program was inaugurated un-der the leadership of the late beloved Governor Paul A. Dever.

Gov. Foster Furcolo is to be commended for his part in completing the work on the Southeast Expressway which shall play such a prominent part in the future economic development in Massachusetts:

DINATALE'S NEW IDEAS SPEED ROADBUILDING (By John Harris)

The opening tomorrow of the Southeast Expressway, which for the first time in history will provide a superhighway link between North and South Shores, has stimulated Beacon Hill interest in the man who

directed its construction-State Public Works Commissioner Anthony N. DiNatale.

The speed with which the commissioner gets things done and the businesslike innovations he has brought to his department, the largest in our State government, have been winning him recognition as one of the greatest executives ever to head State public works.

The Southeast Expressway will open 8 months in advance of schedule, a boon to motorists, a lift to public safety, and, by chance, a partial solution at least in the event of the now expected shutdown of the Old Colony system.

But that's only one example of DiNatale's

manner of solving pressing road problems.

In time for the summer traffic, the last gap in the Mid-Cape Highway has been com-pleted with the opening of the Eastham-Orleans stretch 4 months ahead of schedule.

The Kingston-Plymouth bypass on Route 3 has been double-barrelled and will be opened July 1, 6 months ahead of schedule. This will provide 85 miles of nonstop travel from Duxbury to Provincetown.

Thanks to DiNatale's efficiency our whole statewide highway program has been so handled that it will be his administration that will have earned the honor of having brought to fruition the long-desired master plan for Bay State superhighways.

Last year he opened more than 50 miles of new roads and this year the program is going to provide 65 miles more, according

to present commitments.

These are not the old-type roads of about 30-foot width, with 3-foot shoulders. are mostly 40-foot or more, with 10-foot

shoulders for greater safety.

In addition, the commissioner has been pressing forward on the so-called outer belt-a projected circle from Salisbury to Foxboro, 17 miles west of Route 128. Seven contracts on that have parmitted construction to begin in the Lowell-Chelmsford-Westford area. And DiNatale already has the inner belt (projected east of Route 128) under study.

That might sound like quite a workload for any man. DiNatale takes it in stride though he works long, long hours to keep it

all going.

He is busy, at the same time, with participation in the Federal Government's interstate road program and has several of these sections here under construction, including the Worcester Expressway, a high-speed road through the Connecticut Valley and the new road from Boston to the New Hampshire line (new Route 93).
Officials and lawmakers on Beacon Hill

appreciate what DiNatale has been doing and this is among the reasons there is an absence of any desire to slash the public works budget. There is another reason, too, which is not always fully appreciated.

Funds for the State department of public works come out of the highway fund. This fund, under our constitution as amended, can be used only for highway purposes. So the only effect of cutting down on the appropriation would be to slow down the State's getting a highway system capable of handling the record number of

automobiles which now try to use it.

Since the highway fund is also used to pay off bonds which have been floated for highway work, the amount of money currently in the fund will not be sufficient to carry on our road improvement at its presstepped-up (and, from a safety viewpoint, highly desirable) pace unless the extra one-half cent gasoline tax the Governor has asked is approved. Thus its final passage is vital.

There is space to list only a few of the many innovations DiNatale has introduced in the operations of his vast department. Massachusetts has become the first State to earmark for contract its entire State highway grass-mowing program, which means the department no longer has the immense annual expense of buying and maintaining seasonal equipment.

This spring, for the first time, the spring cleaning of highways was done on a contractual basis. In another month the de-partment will have its own helicopter for surveying road projects from the air rather than the old, slow, expensive way of doing it with surveying parties on the ground.

In this latter connection highway departments throughout the Nation are watching another DiNatale innevation. With the help of Massachusetts Institute of Technology, an electronic computer has been placed in the basement of the department on Nashua Street to speed up the analysis of highway projects. It has already saved thousands of engineering manhours.

Another DiNatale first being watched nationwide is his project to use peat formerly dug and discarded from new highway routes. Under the new plan it is being mixed with sand and is providing loam to cut down one of the former big costs of

road construction.

Most striking innovation of all, at least pictorially, are two huge, swinging wall maps DiNatale has in his office. These took a year to provide. Now, however, they furnish the commissioner with an at-a-glance, up-tothe-minute report on the condition of every road in the State's highway system, about 3,000 miles of them. Thus needlest roads now get first attention.

North Dakota Is Quite a Place

EXTENSION OF REMARKS OF

# HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. BURDICK. Mr. Speaker, it is with a great deal of pride that I call to the attention of my colleagues a recent article by M. D. Goddard of the Dickey County Leader, Ellendale, N. Dak. Yes, "North Dakota is quite a place."

RANDOM THOUGHTS OF THE PAST WEEK

North Dakota is quite a place. Being a native, I've always thought so; but the feeling has been reenforced several times this spring.

The first boost came last month when I had an opportunity to view the new soundcolor motion picture which has been produced for promotional purposes by Greater North Dakota Association.

I was, of course, impressed by the very professional polish displayed by the film, but the subject matter itself-that is, North Dakota-was the real star of the picure.

While viewing he film, I had to keep reminding myself that this was actually my native State. I certainly do not mean to imly that the subect matter was so dressed up I didn't recognize it. Rather, I had never before seen all of North Dakota's many virtues gathered together and dis-played so ably in one package.

The rich farming land of the Red River Valley, the rolling plains immediately west of it and then the Missouri plateau with its stark, rough beauty. The oil wells, mineral wealth, hunting, fishing, recreational activities, invigorating climate, warm, friendly people.

All of these things are absolutely true. Living in any one spot tends to give one a strictly local viewpoint and we are apt to forget that all of these many asets actually lie within the boundaries of our State.

If I may borrow a slogan from our neighboring State of South Dakota, it's certainly appropriate to term North Dakota "the land of infinite variety," and I'm proud to be a resident.

Oregon Dunes National Seashore Area

EXTENSION OF REMARKS

# HON, RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, June 30, 1959

Mr. NEUBERGER. Mr. President, 8 group of Oregon coast residents have organized to express their opposition to the proposal I have made for establishment of the Oregon Dunes National Seashore Area along a 23-mile section of Oregon's uniquely beautiful seacoast. These individuals are exercising the historic American right to air their grievances. They have every right to make known their views on legislation before Congress, and, as a member of the Senate Public Lands Subcommittee, I will do my utmost to assure ample opportunity for them to present their viewpoint to Members of Congress through the holding of hearings in the vicinity of the proposed seashore park development.

However, Mr. President, question has been raised about one aspect of the oppo sition to the Oregon Dunes proposal, and I think that this criticism of tactics being used to show disapproval of my proposal should be brought to the attention of the Congress. An editorial in the Oregon Journal of June 26, 1959, expressed the belief that members of Oregon's coastal tribes were being "used" by opponents of the Oregon and the Oregon belief that the Oregon belief the Oregon Dunes park. Also, this editorial emphasizes that opposition to the park may not represent majority opinion among residents of the Oregon coast and mentions the strong support given to our project by Mr. William M. Tugman, editor of the Port Umpqua Courier of Reeds port, a newspaper published in the area affected by the park legislation. I ask consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

[From the Oregon Journal, June 26, 1959] USING COAST INDIANS AS PAWNS

The Western Lane County Taxpayers as sociation cannot be blamed for organizing to resist the proposed national seasons regreation area. recreation area in the sand dunes between

But the ethics of its program to stir up the Indians in its behalf are certainly open to question

question.

The association is asking the Coos, Low Umpqua and Siuslaw tribes to help it fight the park proposal, telling the Indians that they have ancient claims to the land worked which have read to the land volved which have never been settled.

This is not the place to argue the valid ity of those claims, subject of a lawfull several years ago in which the Indians lost. But the Florence But the Florence area group is loss com-cerned about the Indians' rights than about

finding a way to thwart the acquisition by the national park service of land for national designation and development. hope the Indians will realize they are being used as pawns in this instance and will not build their hopes for payment on the basis of

what the taxpayer group tells them.
While opponents of the national seashore proposals have been getting most of the publicity, they do not necessarily represent that the local state of the publicity.

majority opinion along the coast.

William Tugman, publisher of the Port Umpqua Courier, Reedsport, who is as close to the whole picture as any other man, strongly endorses the proposal on the basis that recreation and service industries offer that area the best chance for growth and development without jeopardizing essential industrial potential in the ports of Siuslaw and Umpqua.

Those who object to the vicious grab of homes in the proposed area knew very well that the Government would permit their homes.

owners to live out their lives in their homes. Rearings this fall are to be held on the national seashore issue. There will be ample room and time to argue it on its merits.

The matter of the Indians' alleged claims was not brought in for a worthy purpose. The taxpayer group says this was done partly for its publicity value. In our opinion, it is not good publicity.

#### Poll Results

EXTENSION OF REMARKS

# HON. SILVIO O. CONTE

OF MASSACHUSETTS IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. CONTE. Mr. Speaker, under leave to extend my remarks, I include the results of a poll which I recently conducted. The questionnaire was returned by over 25 by over 25 percent of the persons who received it, which I consider to be an excellent result, reflecting deep interest in important problems of the day:

WASHINGTON.—A questionnaire on major sues of the day sent out to constituents by Congressman Silvio O. Conte has revealed exceptionally strong sentiment for some form of labor legislation, a balanced budget and continued assistance to friendly nations.

Congressman Conte mailed out 4,000 ques Congressman CONTE mailed out 4,000 questionnaires along with his newsletter, and received 1,000 replies for an unusual 25 percent response. These came from every community in the district and represented the thinking of constituents from all walks of thinking of constituents from all walks of life and both political parties.

In addition to questions on the issues bean addition to questions on the issues of ore Congress, a straw poll on the 1960 Presidential election was offered which included Senators I.

Senators Kennedy and Humphrey, Vice President Nixon, and Governor Rockefeller.

Of the 1,000 who returned the questionnaire, Vice President Nixon led the field as the choice of 470 persons. Senator Kennedy the choice of 47.9 percent, Senator Kennery was favored by 21.9 percent, and Governor of 20.6 percent was close behind as the choice of 20.6 percent. of 20.6 percent. Senator Humphrey apparently has not made much of a dent in the First District of Massachusetts as he polled only 1.7 percent of the total.

An overwhelming 96.4 percent approved the country's firm stand in the Berlin crisis, and part is firm stand in the Berlin crisis, and next in line was the 87.1 percent figure in favor of the balanced budget. On the latter point, however, many commented that while they save holes part budget, they while they favored a balanced budget, they did not want it at the expense of national security or assistance to friendly nations.

In answer to the question: "Considering world tensions, should we continue our mutual security military and economic aid to friendly nations?" 85.9 percent said "Yes," while only 3.4 percent voted "No." In this case many pointed out that while such aid should be continued, a thorough examination should be conducted to prevent wasteful and unnecessary expenditures.

Concerning labor legislation, 84.3 percent

voted in favor of including the problems of secondary boycotts and blackmail picketing in any reform. However, of those who commented on this question, the consensus was that any legislation was better than none.

The omnibus housing bill was treated more cautiously as 39 percent were against it and 30.7 percent were in favor. Stating that they were not sure were 25.8 percent.

A somewhat similar situation developed over the question of a fair trade bill.

Against such legislation were 46.9 percent while only 39.7 percent registered their approval. Recording themselves as "not sure" were 10.4 percent.

Federal aid to education hit some rough sledding as 63.7 percent considered education primarily a local and State problem while only 21.9 percent felt that the Federal Government should be more concerned.

However, 50 percent stated that they would flowever, so percent stated that they would favor Federal aid in the construction of schools. Regarding Federal assistance in paying teachers' salaries, 68.4 percent were against, and only 18.1 percent were in favor. The major comment on this question was: "If the government is going to pay teachers' salaries, why not pay mine, too?"

Despite varying opinions on the issues, almost all stated how pleased they were to be given such an opportunity to express their

Utilizing Surplus Food in International Economic Programs

> EXTENSION OF REMARKS OF

# HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, June 30, 1959

Mr. WILEY. Mr. President, today I was privileged to participate in the conference on U.S. economy and international relations.

In the light of the Soviet threat to our existence, particularly in the economic field, constructive efforts to review and strengthen our economic programs are most fitting in these challenging times.

During the conference, sponsored by the International Economic Policy Association, of which Dr. N. R. Danelian is president, such vital topics of discussion were covered as:

"The U.S. Government's Role in International Finance"; "Trade Barriers Abroad"; "The Economic Program of Argentina": "Using Farm Products in International Economic Programs"; "Gov-ernment Aid Programs"; "Problems of Private Investment Abroad, Including Private Investments in a Changing World, Counterpart Funds and Local Currencies-Their Use Through Private Channels, and What Can Be Done To Encourage Private Investments"; "Objectives of Long-Range International Economic Relations."

At the meeting this morning, I had the opportunity to join in the discussions relating to using farm products in international programs.

Among other things, I have suggested a cooperative effort between the administration and Congress to develop a more clearly defined national food policy. The recommendation does not propose any new Government agency. Rather, it envisions conferences between the Secretary of Agriculture and a bipartisan group selected from the Senate and House Agriculture Committees.

The purpose would be to:

Attempt to define a long-range national food policy; and

Obtain maximum bipartisan participation for a more effective program to utilize food in our international programs in order to promote the cause of peace, to meet humanitarian needs, and for other purposes.

I ask unanimous consent to have the text of my remarks printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

#### ADDRESS BY SENATOR WILEY

I welcome the opportunity to join in the discussion of vital issues being considered by this conference on U.S. economy and international relations.

Particularly, I am happy to have the opportunity to discuss briefly the outlook for further using farm products in international economic programs.

The challenge is complex. The opportunities are manyfold. The successful creation of better programs for utilization of such resources offers rich rewards of economic, political, strategic, and humanitarian values.

#### SURPLUSES: PRIMARILY A DOMESTIC PROBLEM

We recognize, of course, that-realistically speaking—a major impulse behind our food distribution programs, at home and abroad, has been the pile up of surpluses-wheat, corn, cotton, dairy products, and other farm commodities. To find outlets for these stockpiles, special programs-many of them meritorious-have been designed.

Despite these efforts, however, the American people still have about \$9 billion invested in surpluses. Historically, the Government has recovered about 84 cents of each dollar spent for price supports. Nevertheless, this still represents a sizeable outlay of

Frankly, I feel that finding a solution for our surplus problem is, primarily, a domestic challenge.

What can be done?

Overall, there must be an effective effort to establish a production-consumption balance of farm commodities.

Too. I believe that real contributions can be made toward a solution of our surplus problem by application of a three-step formula:

(1) Increasing consumption; (2) getting better distribution; and (3) achieving greater utilization of basic components of farm products for commercial and other uses.

The adoption of this formula, I believe, can increase domestic consumption; in addition, it can also be useful in our programs for consumption of food abroad.

#### FOOD FOR PEACE NOT A NEW IDEA

The major objective of further utilizing food in our international economic policies. of course, is that of promoting peace.

We recognize, however, that the utilization of food-either for humanitarian, political, or other purposes-is not a new idea.

Over the years, nations of the world, from time to time, have shared their food resources with needy people, to supplement inadequate diets, stave off starvation in times of crises, natural disasters, or emergencies, and for other purposes.

We recall that in January of this year, President Eisenhower advanced a food-forpeace program. In May, a wheat conference of major wheat producing countries was held to attempt to deal with the surplus problem.

Too, the distinguished Senators participating in this discussion, Senator Carlson and Senator HUMPHREY, have given considerable thought to the challenges in this field, as evidenced here at this discussion.

Efforts, also, have been carried on through the United Nations agencies, regional international groups, through the export programs of individual countries, activities of churches, civic, and other organizations.

Under these programs, it is estimated that the total assistance to all nations amounted to over \$16 billion, for example, during the 4-year period from 1954 through 1957.

### NEED FOR IMPROVED FOOD POLICY

However, in view of the fact that: We have a \$9 billion surplus stockpile; yet at the same time, about one-half of the 2.7 billion world population is estimated to be undernourished, and almost one-third of the people of the world live on inadequate diet

development of a more effective utilization of our food resources offers an opportunity not only to carry on a humanitarian program-which, traditionally, has been an instinctive and creative effort by Americans, as well as other people—but also to gain side benefits of political, economic, and strategic value.

In view of these facts, the United States, I believe, can well reexamine its programs, policies, and planning with the objective of better utilizing our vast food resources-and perhaps our production plant-not only for the good of ourselves, but also for the good of the world.

#### REVIEW OF EXISTING PROGRAM

Under Public Law 480, and section 402 of the Mutual Security Act, we are aware that food is shipped abroad in a number of ways, including:

(1) Sales-for foreign currencies; grants—for emergency relief; (3) donations—to needy persons abroad; (4) barter for strategic materials.

The objectives of Public Law 480 include efforts to: Promote economic stability in America agriculture; expand international trade in agricultural commodities; encourage the economic development of friendly countries; promote the collective strength of the free world.

Generally, the objectives of these and other similar programs have received, wide support.

PROBLEMS INVOLVED IN EXPANDING USE OF FARM PRODUCTS

Now the question arises: How then can we establish an improved program for utilization of our food in international policy?

Superficially, it would appear to be a simple task to move stockpiles of surplus foods in one country directly to the hungry people of a less resourceful country, foodwise.

As we all appreciate, however, there are complex and difficult problems in distributing such food through either domestic or international channels.

In international economic programs, of course, it is vitally necessary to attempt to assure that:

1. The intentions and motivations with which we provide such food are not twisted so as to be used against us, rather than for creating good will for us.

2. The food gets to the people who really need it—either through sales or grants—rather than perhaps being sold through the black market or in other ways mishandled.

3. The foods are readily utilizable by the recipient people-and adaptable to their

4. There is minimum interference with normal economic channels.

We recall that the President's food-forpeace program recommended, too, that:

(5) The program be motivated by the humanitarian concept of sharing.

(6) The program be an integral part of a larger effort to promote the economic development of underdeveloped countries.

These guidelines, I believe, are sound. IMPROVING OUR FOOD DISTRIBUTION PROGRAM

Despite the acute problems, there is a recognized need for a better program to utilize our surplus foodstuffs-both at home and abroad; to turn these food resources into economic assets instead of liabilities; to feed hungry people; and to give support to our international economic policies.

#### PROBLEMS AND OBJECTIVES

In this, as in other international programs, we face of course the task of getting support of mature public thinking.

Today, the United States is a leader of the free world.

With that leadership goes the responsibil-

ity of attempting to assure that nations less fortunate-less rich in land, resources and technical know-how for production-share, as much as possible, in the benefits of our modern civilization.

This sharing must not be aimed solely at developing their military ability to support the free world defense; but also in terms of bettering their standards of living, and offering new opportunities for their people.

We cannot maintain leadership, without this responsible attitude. Nor can we-at this stage in history-cast off the role of leadership. To do so would seriously en-

danger our own survival.

However, if we fail to adequately fulfill our role, the free nations may well become disillusioned-become easier prey for Communist aggression. The uncommitted nations, too, might turn to communism to secure the food, technological know-howand yes, the governmental structure of com-munism—that poses as the "fairy godmother" of socialism-but in reality is more "kill-or-maim" type of totalitarian communism striving to control more land and people at any cost to achieve their ultimate goal of world domination.

NEEDED: BIPARTISAN CONFERENCE TO ESTABLISH LONG-RANGE NATIONAL FOOD POLICY

In view of these factors, the Congress and the administration, I believe, have an obligation for cooperating to develop a clearer, more effective national food policy.

To help meet what is a very great need, as well as to take advantage of what is also a real opportunity, I believe that a series of bipartisan conferences should be underconferences would include taken. The members of the Agriculture Committees of the House of Representatives and the Senate (from both parties) together with the

Secretary of Agriculture.

Among other things, the purpose would be to more clearly define our national food policy. Answers, of course, would need to be provided to a number of questions, in cluding: To what degree can, and should, farm products be utilized in planning in ternational policies; presently, are we making the best use of surpluses; how can we better utilize anticipated surpluses of the future; should it be national policy to carry on a food-for-peace program only, and s long as there are surpluses on the American market; or would it be advisable to enact a long-range program with the idea of making up any commitment deficits, if these exceed available surpluses, by planned productions for the food-for-peace program.

Would a food-for-peace program deemed important enough—from a humanitarian, as well as a political, economic, strategic and other viewpoints to merit making to a greater extent, part and parcel of

our cold war policy.

Until these and other objectives are clearly defined, our policy can, at best, be a tem porary one—perhaps marked by less efficiency than could otherwise be obtained. To some the food-for-peace program contains enough merits to put it on a long-range basis, even

I am aware that specific proposals for example, along the lines of Senator Huss PHREY'S bill for setting up Food for Pes Administration (S. 1711) as a separate agency

with a Food Administrator.

Naturally, I fully appreciate the motives of such action as well as the merits of

However, the foundation should—if at all objectives. possible—be firmly established upon a bro base of congressional, executive, and public support.

The proposal of a bipartisan conference aimed at getting broader support for a clearly defined program, I believe, would have following advantages: Obviously, it would help to meet a very great need; it would better enable us to take advantage of a very great opportunity; it would act as a protec-tion against the political bickering that often accompanies the development of policy in such fields; it would provide broader support, more continuity—and less interruptions, and switches of policy or design with the change of political complexion in Washington.

Upon conclusions of the Conference, rec-Ommendations could then be submitted to the President and to the Congress for consideration.

#### CONCLUSION

As yet, no "cure-all" solution has been created for the problem of surpluses.

At the same time, it is apparent: (1) That the problem of inadequate diets—at home and abroad-will be with us for the foreseeable future; (2) that the cold war with communism, too, exists for a long time.

In view of these factors, it is most desirable, I believe: (a) That we constitute our attempts to get production in line with consumption to provide a healthier domestic economy; (b) that we attempt to increase consumption at home and abroad through the three-step formula—increased consumption, better distribution, greater utilization for commercial and other purposes; (c) that we go forward speedily on the development of a national food policy—to enable us to uti-lize our rich food-producing resources for maximum benefit—humanitarian, economic, political, and strategic—domestically and internationally.

In conclusion, I want to express my warm appreciation for the opportunity to participate in this discussion.

Thank you.

# Tribute to Dr. Michael DeBakey, of Houston, Tex., for Heart Surgery

EXTENSION OF REMARKS

# HON. RALPH W. YARBOROUGH

IN THE SENATE OF THE UNITED STATES Tuesday, June 30, 1959

Mr. YARBOROUGH. Mr. President, Houston surgeon, Dr. Michael De-Bakey, has been presented the American Medical Association's Distinguished Service Award, the association's highest honor, for his discoveries and advancements in cardiovascular surgery. He is the first Texan to be so honored.

As a special recognition of Dr. De-Bakey, I ask unanimous consent to have printed in the Appendix of the Record an article relating the story of his honor, as printed in the Houston Press for Tuesday, June 9, 1959, under the heading: "For Distinguished Service—Dr. Department of the heading of the heading." DeBakey Wins AMA's Highest Honor."

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Houston Press, June 9, 1959] DR DEBAKEY WINS AMA'S HIGHEST HONOR FOR DISTINGUISHED SERVICE

Dr. Michael DeBakey, who has gained worldwide renown for his leading role in cardiosass. cardiovascular surgery's most recent techniques, yesterday became the first Texan to receive the American Medical Association's Distinguished Service Award.

Dr. DeBakey, who heads the surgical staff of Jefferson Davis Hospital and the department of surgery at Baylor University College Medicine, is the fourth southerner to receive the AMA's highest honor since 1938.

#### THREE NOMINEES

The Houston surgeon was one of three top nominees considered for the honor. The others were Jonas Salk, who developed Salk vaccine for polio, and Dr. Shields Warren,

President Eisenhower will be the principal speaker tonight at the AMA's annual meeting in Atlantic City, at which the award will be presented to the Houstonian.

Dr. DeBakey was honored for his out-standing contribution to medical science and humanity.

#### EARLIER AWARD

It was the second time in recent years that the heart specialist received an award for his accomplishments in cardiovascular

surgery.

In 1947 he received the highest award for outstanding achievement from the International Society of Surgery-for a publication that contributed much to surgical

As a professor of surgery, at Tulane University, after he was graduated from that school and completed residences at Charity Hospital in New Orleans and studies at the Universities of Strasbourg (France) and Heidelberg (Germany), Dr. DeBakey began a brilliant career that took him to the top of his profession.

#### INTERNATIONAL LECTURER

His accomplishments have been of such worldwide significance that he has been in constant demand as a lecturer on heart surgery. Last year he was a featured speaker at the international cardiac meeting in Brussels. From there he went on a lecture tour that took him around the world, including Moscow.

Among Dr. DeBakey's contributions to heart surgery was the development of a pump that allowed the bloodstream to bypass the heart while the heart was being held

inactive for surgery.

He and his staff have made the Texas Medical Center a world mecca for sufferers of heart ailments, handling surgical operations that lesser medical centers dared not attempt.

#### HEART SURGERY PIONEER

Among their accomplishments have been preserving and grafting human heart arteries in heart patients to replace sections of wornout blood vessels, and an operation on blood vessels in the neck to prevent strokes. Also a cleaning operation to remove rust from the main arteries.

Yesterday a team of Houston doctors showed the AMA a new plastic mesh for repairing hernias in the same manner that a boot is used to reinforce a punctured tire a new method that is better than metallic or other plastic meshes.

Bishop Lane Speaker at Carnegie Hall Meeting

EXTENSION OF REMARKS

# HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the speech of the Most Reverend Raymond A. Lane, M.M., D.D., at a mass meeting held in Carnegie Hall, New York City, for the purpose of calling attention to the enslaved conditions behind the Iron Curtain. Bishop Lane, a

native of Lawrence, Mass., was held under house arrest by the Japanese and Communists while he was a Maryknoll bishop in Manchuria. He urged his listeners to strive to know more about the enemy and danger that confronts us, the deception of his techniques, and the need of urgency for action.

Bishop Lane spoke in part as follows: Fellow believers in God, fellow sufferers from the tyranny of men, fellow defenders of freedom, you are familiar with the cry of the blind man, aware that Christ was passing by: "Lord, that I may see." The question of how to see, how to realize and how to remember the tyranny that faces us, not only in Moscow, in Peiping, in Budaus, not only in Moscow, in Feiping, in Buda-pest, in Prague, in Baghdad, in Kabul, in Lhasa and in other places, including our own United States, is a complicated one. Perhaps the best way to begin the process

of seeing what it is, and knowing what is to be done about it, is to look into our own soul and ask ourselves the question: "Why do I dislike this thing? Is it because of my loyalty to the belief in a supreme being to the idea of human freedom, and to the love of my neighbor? Or am I self-centered in my reactions to the menace that con-fronts us, and that destroys our good, easy way of life, and engenders in me, perhaps a resentment that could color my judgment and spoil my effort?"

It seems to me that much of the current opposition to the system that has enslaved so many and that threatens all of our values, springs from a fear of what we may lose. of what we may suffer, of what may incon-venience us, what may, perchance, topple down our golden calf of a higher standard

of living.

There is indeed a positive danger of substituting nationalism in an exaggerated form for something, that is higher, namely; the fatherland of God and the brotherhood of man. Boris Pasternak has Dr. Zhivago discussing this very point, and showing that when it comes to the final accounting, we shall be judged not as people of such and such a nationality, but as individuals. It is an established fact that Russian nationis an established last that Russian hationalism could be, and perhaps is, a stronger force among the Russian people as a whole than the Marxian ideology. I hope I shall not be misunderstood. I am condemning only that type of nationalism which is inconsistent with the kingdom of God.

This is a time when every man must ask himself: "Why am I upset by this ever growing monster of absolute power? Am I afraid of what it may mean to me; am I interested in the victims of this tyranny as though they were my next door neighbors?"

Am I indifferent or disinterested in, or downright lacking in compassion for people, flesh and blood people, suffering at this very moment, though they may be alien to my way of life, my color, nationality, religious belief, or the lack of it? This is an im-portant question, and it should have an honest and sincere reply if I am to engage in combating this evil effectively. If the answer is not in the affirmative, then it is quite possible that I may be consciously or otherwise aiding the enemy by causing re-sentment which, in turn, is the cause of so many millions espousing a system that they do not believe in and even despise and fear. All of us, from personal experience, realize how much confusion of mind and disturbance of heart result from resentment often enough not fully realized.

#### OFFERS SUGGESTION

May I suggest that we concentrate primarily on the evils of the system that has caused so much suffering and which hundreds of you people here present tonight have experienced, rather than building up resentment against individuals, many of

whom may be the victims of environment and of other factors, such as fear, that have paralyzed their power of resistance. I know of many cases from personal experience, one of which has touched me deeply. One of the best priests whom I knew in Manchuria, a who took charge of an important section of our mission for almost 4 years while I was a guest of the Japanese, had been consecrated a bishop in Shanghai, and was arrested as he descended from the train in Peiping. He was exposed for 4½ years to physical torture and brainwashing, and has now joined the so-called national church, and in fact, is considered their leader. He has consecrated several bishops, but I feel in my heart that this man is physically and mentally incapable of realizing the actual situation.

#### PERSONAL EXPERIENCES

Last winter I met on the east coast a Russian lady, a former parishloner of mine in Manchuria, who had suffered much before coming here. She said: "Please do not think of the Russian people as irreligious." This reminds me of another experience I had with the Russians in Manchuria after I was released from concentration. On one occasion I was asked by a friend, a captain of the Soviet Army, to entertain a group of officers. At the end of the meal, as the group was leaving the dining room, one of them held up for a moment, reached inside his tunic, showed me a crucifix, and said: "We are of the same mind." And on an-other occasion 6 months after the war, I went from Fushun to Mukden with five Chinese Sisters to reopen a mission in Dairen. There was chaos in and around the railroad station. The train, supposed to arrive at 6 p.m., arrived 7 hours later. During this period, time and again, groups of drunken Russian soldiers roamed the station, inside and out, shooting, robbing the passengers and causing great anxiety. haps 10 or more times they approached our group as we stood on the platform in a temperature well below zero, and I confess that I was prepared for the worst. After two or three narrow escapes, two young Russian civilians approached us. The older one asked in perfect English: "Can I help you?" I explained the situation. They remained with us, and as each group approached they talked them out of their evil designs. There is much more to the story, but no time to tell it. Suffice to say, the following day in Dairen when I asked them if they were so-called White Russians, they said: "No, we are Soviets."

It may occur to you that I may seem to be excusing individuals for their acts of cruelty and oppression. Please do not misunderstand me. What I am trying to do is to induce a feeling of compassion for all the principals of this diabolical conspiracy, the leaders, the collaborators, and the victims. I think my approach is a religious one, but it does not obviate the need of vigilance, of opposition, and of punishment wherever guilt is legally established.

Finally, the question most likely will occur to all of us here: "What can I do as an individual to combat a force which has repeatedly expressed itself as determined to overthrow all that we hold sacred?"

Let us all resolve, here and now, to expose at every opportunity, the big lie of the so-called freedom of the democracy according to the Marxist blueprint. Let us do this in private conversation, by correspondence, by letters to newspapers and magazines, by radio, television, and by every possible means of communication. Let us drop the hypocrisy, expose the deceit, oppose the crueity, and terminate the soft and deadly policy of appeasement.

METHODS OF PROCEDURE

May I suggest five methods of procedure. First let us strive to know more and more about the enemy and danger that confronts us, the deception of his techniques, and the need of urgency of action. (I have just read in the newspaper of my native town in New England, with a population of some 75,000 people, that there exists there at this time 15 Communist cells. This evidence was presented just a few days ago by an agent who had joined the Communist Party in order to investigate the situation. So, my dear friends, the danger is imminent and the need of action is obvious.) In 1944 there were more party members (80,000), in this country than there were in Russia when the revolution occurred 45 years ago, and we know that, for every card-carrying Communist, at least 10 others would join the hardcore members if anything like a revolution seemed imminent.

The second suggestion is that we make our opposition positive, in this sense; that we should strive to improve constantly ourselves, the communities in which we live, and the Nation as a whole. A negative stand is hopeless and usually barren of results. My third suggestion is that we concentrate more and more on the youth of our country, the hope for the future. The fourth suggestion is that we accept our responsibility at this very moment, not tomorrow, or the following day, or at some future date. It is already too late, and the need of immediate action is therefore crucial.

And, finally, my fifth suggestion is that we increase and deepen our faith. Communists have a misplaced faith, and many a former ardent communist is now a most fervent opponent of communism.

#### Safer Automobiles

EXTENSION OF REMARKS

# HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. ROBERTS. Mr. Speaker, I was delighted to read the editorial entitled "Public Can Spur Making of Safer Autos," which appeared in the Daily Journal of Tupelo. Miss. recently

Journal of Tupelo, Miss., recently.

Under leave to extend my remarks,
I ask that this editorial be included in
the Record.

The editorial referred to follows:

Public Can Spur Making of Safer Autors
Automobiles, which last year injured 1
person for each 10 families in America, will
be made safer in the future if the public
supports congressional hearings set for next
month by an Alabama Congressman, KenNETH ROBERTS.

This is not to say that Representative ROBERTS will win his battle seeking to force the Nation's richest industry to submit to Government regulation regarding installation of safety features. For there is little chance that the Roberts bill requiring certain safety features on all automobiles purchased by the Federal Government will be approved this year.

approved this year.

But merely turning a spotlight on the automotive industry's failure to emphasize safety to the extent demanded by the presence of 68 million fast-moving cars on the Nation's highways will go far toward obtaining safer construction features.

And faced with the possibility of safety regulation in some other form even if the Roberts bill does not win approval, automakers are certain to begin giving increased attention to safety—perhaps eventually as much as they give to style.

It was Congressman Roberts who pushed through a law requiring manufacturers to put escape handles inside their refrigerators so that children trapped in them could get out.

And he has a point in arguing that if Congress can insist on safety features in electric refrigerators, in airplanes, and even in food, it can insist on safety features in automobiles—at least in the tens of thousands of cars bought by the Federal Government each year.

It is significant that American medical

It is significant that American medical leaders showed concern over the lack of safety considerations in auto construction even before Congress took note of this problem.

And it is on such organizations as the American Medical Association that Representative ROBERTS is depending for support in his uphill fight to get auto manufacturers to put all known practical safety devices on their cars.

Four years ago the American Medical Association Journal carried an article stating:

"Auto accidents may occur as the result of speed, inadequate highways, poor driver judgment, or mechanical failure. But none of these actually causes the passenger intury."

"Injury, itself, occurs primarily as a result of faulty interior design of the automobile. And 'faulty' is actually a gross understatement as there is almost no feature of the interior design of a car that provides for safety.

"The elimination of mechanically hazardous features of interior auto design would prevent approximately 75 percent of the 37,-000 highway fatalities that occur each year," the Medical Association article pointed out.

And the American College of Surgeons, whose members have the unhappy task of patching up and trying to save the lives of the 5 million persons injured in autos each year, followed up this article with a resolution calling upon auto makers to "stress occupant safety as a basic factor of design."

It is quite true that people don't drive as well as they know how and that highways have not yet been made as safe as is possible.

And both these facts play a role in the high automotive accident toll.

But progress is being made in both these fields, with almost \$40 billion being spent on new multilane interstate highways and such programs as high school driver education seeking to improve the human factor in auto safety. And similar progress is needed in safer auto construction.

For wrecks will, without doubt, continue in spite of anything that can be done, but they can be made less deadly and less crippling by improving auto design, particularly on the interior.

Congressman Roberts, therefore, deserves both public interest and public support for what he is trying to do.

And though Congress may not pass the bill he proposes requiring on all Government-purchased autos such features as padded dash boards, "deep dish" steering wheels, safety belt attachments built into the frame, and rollover bars to prevent collapse of the top in event of a wreck, we can be sure that if the public becomes genuirely aroused by the congressional hearings next month, the automotive industry will step up its efforts to provide the needed safety features even though Congress never takes official action on the problem.

"Dangerous, Misleading Impression" Given by Bock, Robertson Asserts

> EXTENSION OF REMARKS OF

# HON. J. VAUGHAN GARY

OF VIEGINIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article with reference to "The Ugly American" written by Assistant Secretary of State Walter S. Robertson, which was published in the Richmond Times-Dispatch last Sunday.

"The Ugly American" has attracted wide interest in the United States and for weeks has been listed as one of the five best selling works of fiction. There is no question about the fact that Americans have made mistakes abroad but I do not believe that these mistakes are typical of American behavior. "The Ugly American" has aroused so much discussion that the Richmond Times-Dispatch asked my fellow townsman and warm personal friend Walter Robertson to comment upon it. His article has impressed me so favorably that I think every Member of the Congress should have the benefit of his views:

"DANGEROUS, MISLEADING IMPRESSION" GIVEN BY BOOK, ROBERTSON ASSERTS

(By Walter S. Robertson)

"The Ugly American" has attracted widespread attention that reflects the interest and concern of the people about our representatives abroad. It is precisely because of this interest and concern that I am glad to discuss the book which I think has given a dangerously misleading impression of how our problems can be solved as well as many completely erroneous impressions of what the problems are.

While the authors Insist that materials in the book was based upon factual situations, they also describe the work as both fiction and fact. It is difficult to deal with it on this basis, for if it were all fiction one could say either is or is not a good story and could comment upon its literary merit. If it were Offered as all fact it would be easy indeed to comment because the book is filled with distortions, plain errors and misleading con-

clusions.

This book does make some points that need to be made. For instance, it warns against the serious Communist threat to southeast Asia. In this respect the book performs a public service. On balance, however, I think the book basically performs a disservice, because it pretends that the Communist threat can be met and successfully Overcome simply by introducing gimmicks at the grassroots level.

#### PREPOSTEROUS ASSERTION

It is preposterous to assert that introduction of the right kind of chickens, water Pumps powered by jacked-up bicycles, longer handles for brooms and other similarly sim-Ple and useful ideas can adequately cope With the Communists' many-faceted attack upon the economies, the political fabric and the social institutions of the southeast Asian countries.

The book closes with dangerously delusive conclusions. The ideas of the ugly American Homer Atkins, are presented as words of wisdom. He says: "You don't need dams and roads. Have you ever heard of a

food shortage being solved by someone building roads.'

The answer to that question is, of course, Yes." The building of roads has a great deal "Yes." to do with solving food shortages. Food gets from farm to market on roads, and where there are no roads the food doesn't get there in adequate quantity.

But what is more important, food shortage is not a major problem in southeast Asia. In fact, food is exported from most of these agricultural countries as a principal earner of foreign exchange.

#### ECONOMIC IMBALANCE

Dams provide electric power as well as irrigation and flood control. Power runs fac-tories. Factories produce goods which are in very short supply, but which are needed in southeast Asia, and which must be purchased now with scarce foreign exchange. Without adequate electric power, there is an imbalance of agriculture in the economy. This is in a measure responsible for the relatively low standard of living in many places which, in turn, offers exceptional oppor-tunities to the Communists. Dams and roads are indeed necessary to southeast Asian countries' efforts to develop and give their peoples a better life.

Now, undoubtedly the American assistance programs in southeast Asia have imperfec-tions. But an encouraging high proportion of them have been very effective. There have been some persons recruited to carry on these programs and to represent our Government on the official level who may not have met all the exacting tests one might like to apply as a standard of what is the very best, but these have been the exceptions. The large these have been the exceptions. majority are actually a competent and dedicated group. They have accomplished a very

It is grossly unfair to give the impression, as the book under discussion does, that most of these people are frivolous and ineffectiveand it is ridiculous to suggest that it would be far better to dispense with them and send instead persons skilled in palmistry for use on "superstitious, irresponsible Asian leaders." [Quotation marks mine.] This laters." [Quotation marks mine.] This latter idea is insulting to our highly cultured friends in the Far East. It is also simply untrue, as well as a denial of faith in America. to suggest as this book does, that practically everything that we have done is bad and practically everything the Russians do is

MUTUAL SECURITY

The book does not deal at all with the question of mutual security, and I emphasize both words, "mutual" and "security." does not indicate that what is often mis-called our "foreign aid" program supports Far Eastern armies totaling one and threefourths million men, all Asians, who stand ready to defend their own new-found freedom and, by doing so, to defend ours, too.

One of our greatest needs is understanding at home of why these programs and peo-ple are necessary. The book does not make this clear. We need understanding of how difficult the job is. The book oversimplifies this. We need voter support for the kind of mutual security program that tackles the whole job of opposing the Communist advance in all its aspects in the Far East. The book tends to destroy this concept.

There need be no defeatism about the situation in Asia. The book tends to foster such an attitude by implying that our Gov-ernment has falled while the Russians have found the answer,

In an effort to demonstrate that the Russians have learned how to deal with the local populations, the book relates an incident in which a Russian Ambassador paid his respects to a high Buddhist priest. The incident is pure fiction. But an American Ambassador actually did just what the book said a Russian Ambassador did.

The book also says the Russians have solved the language problem better than we have. There is no evidence that this is true.

The language proficiencies of American representatives are grossly misrepresented in the book. On almost the first page, an American Ambassador is wishing someone on his staff could read the local newspaper. There is not a single American embassy in southeast Asia without language experts on the staff.

The language abilities of our personnel are growing constantly with every passing month through intensive programs that have been in operation for several years. They should be larger and would be larger if there had been congressional approval of fund requests to build them up.

#### WISHFUL THINKING

The limited type of program which the book advocates would leave southeast Asia largely undefended against the Communists' attacks. I fear the book fosters wishful thinking and may result in reduced support for our programs which are based upon plans developed mutually with the free Asians to meet the Communist challenge.

These are plans that follow many Asian suggestions, plans that put Asians in the forefront of action in their own development and in their own defense, and plans that call from us the best skills, includingbut by no means limited to-those concerning how to raise more food. Most of all, the plans call upon us to be willing to stay with this problem until it is solved, which will not be soon. The problem is not simple. The enemy is persistent and alert.

The interest and concern of Americans

about their representatives abroad is most desirable. But this must be honestly met with undistorted accounts of how things are. I am sure the American people will port the kind of programs needed if they are enabled to understand the problem and what it means to their security and the future happiness of their children.

Fiction may be an effective way of getting this across. Maybe some day someone will write a book that does it; a book, per-haps, about "The Determined Americans."

# Personal Relations Between Oregon

EXTENSION OF REMARKS OF

# HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, June 30, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated June 20, 1959, from my colleague [Mr. Neuberger], to the editor of the Bend (Oreg.) Bulletin, which letter was published in the June 22, 1959, issue of that newspaper. I am sure the letter will be of interest to the Senate.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

To the EDITOR:

I appreciate your favorable comments about me in the editorial in the Bend Bulletin of May 29.

Let me assure you definitely that I have no intention whatsoever of becoming trapped in a name-calling contest with Senator Morse. I could not possibly match his invective. Furthermore, such a spectacle could only bring disrepute to our State in general.

It is my opinion that Senator Morse has now denounced and abused so many different people in unbridled terms, that the general public is quite able to appraise accurately his latest onslaught against me.
After having suffered the kind of serious

illness I have undergone, I think one gains a perspective on political feuding which reduces it to proper proportionsand those proportions are very small and unimportant

Furthermore, I was greatly pleased with your editorial giving your own roster of favorite places in Oregon. I imagine Oregon is the kind of place where each of its 1,700,-000 residents could compile a different list and still be well within the realm of plausibility.

With warm regards, I am, Sincerely,

RICHARD L. NEUBERGER, U.S. Senator. WASHINGTON, D.C., June 20, 1959.

#### Statement on Foreign Aid

EXTENSION OF REMARKS OF

## HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. WHITENER. Mr. Speaker, on June 24, 1959, Mr. A. G. Heinsohn, Jr., a prominent textile industrialist who has a textile plant in my district at Spindale, N.C., made a statement before the House Appropriations Subcommittee on Foreign Operations in regard to our foreign aid program.

Mr. Heinsohn's statement outlines the serious effect that our foreign aid spending is having on domestic industry. I believe my colleagues in the House will be interested in reading Mr. Heinsohn's remarks, and I request that his statement be inserted in the Appendix of the RECORD.

STATEMENT OF MR. A. G. HEINSOHN, JR., MEMBER, AND REPRESENTING THE CITIZENS FOREIGN AID COMMITTEE, BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON FOREIGN OPERATIONS, WEDNESDAY, JUNE 24, 1959

Mr. Chairman and members of the committee, my name is A. G. Heinsohn, Jr. am president of two small cotton mills, the Spindale Mills of Spindale, N.C., and the Cherokee Textile Mills of Sevierville, Tenn. The title of my presentation is: "Foreign Aid Finances Competition With U.S. Industry.'

In promoting the welfare of other countries through the foreign aid program the United States has been creating competition for the products of U.S. industry both abroad and at home, impoverishing American business and taking jobs from the American workman.

The textile industry is an example. In the 10 years from April 3, 1948, to June 30, 1958, the United States has paid for \$141,-019,000 of textile machinery to be installed in other foreign countries. This is in addi-tion to sums lent through the Export-Import Bank for the export of textile machinery, or lent through the foreign aid program, or made available for the purchase of textile machinery through nonallocated grants.

The consequence of this generosity has been to build up textile industries abroad with new machines and the latest processes and equipment, that are able, with the cheaper labor available abroad, to cut deeply into the U.S. textile market both abroad and at home. The New York Times for Monday, May 25, 1959, carries a feature story with pictures, of the latest entrant into the U.S. textile market-the Taiwan textile industry. The report confirmed that mills on this island were preparing to fill orders from the United States for 3 million yards of printed cotton flannel valued at about \$500,000. This was termed by Taiwan textile people as a modest beginning. The growth of the Talwan textile industry is considered worthy of comment in Taiwan, the article states, because of the fact that before World War II the island imported large quantities of fabrics from Japan. Hence our gifts for the erection of a textile industry in the island are not a case of helping to rebuild a shattered economy but to create a new textile industry in competition with U.S. textile products.

In addition to fomenting the textile industries of 36 different foreign countries, the administrators of the foreign aid program have favored the build-up of foreign competition by increased purchases of foreign made textiles under its various procurement programs. In 1955, the Government, through the aid program, purchased \$16,-046,000 of foreign made textiles, representing 62 percent of total textile purchases under the aid program. By 1957, the total was \$89,112,000, or 93 percent of the total, and in 1958, \$57,563,000 or 85 percent of the

The consequences of this policy upon the vitality of the domestic textile industry are obvious, though they cannot be traced in detail. We may note that the textile in-dustry of this country has not shared in the prosperity since the war. The Senate Committee on Interstate and Foreign Commerce recently reported the following pertinent facts:

(a) Industrial production in the United States has gone up 45 percent from the 1947-49 base level, but textile production has declined 2 percent. Within the industry, the branches showing the greatest declines are; cotton goods, 2.9 percent; rayon and acetate fabrics, 26.3 percent; woolen and worsted goods, 44.2 percent.

(b) The amount of textile machinery in place has shown even more striking declines. The number of cotton system spinning spindles declined by 11 percent between 1947 and 1957. The number of cotton-system broad-woven looms declined 15.8 percent. Woolen spinning spindles declined 52.8 percent, and woolen and worsted looms, 49.1 percent.

(c) Total employment in the textile mills of the United States dropped by 325,000, or 24 percent, in the 10-year period.

(d) Between 1946 and 1957, a total of 717 mill liquidations were reported in the press, displacing a total of 196,875 workers.

(e) While consumer prices in 1957 had risen 20.2 percent from the 1947-49 base, and wholesale prices 17.6 percent, the price of apparel—the product which represents the end-use of textiles-rose only 6.9 percent, and the market price for textile fabrics actually declined. The average annual price of cotton cloth dropped 31 percent.

(f) While profits as a percent of sales, the manufacturing industry generally, dropped from 6.7 percent to 4.8 percent in the decade 1947-57, the corresponding profit rate for the textile industry dropped from 8.2 percent to 1.9 percent.

(g) Between 1946 and 1957, exports of cotton cloth declined 29 percent while imports went up 175 percent. While the

United States still exports some four times the amount imported, producers of cotton cloth have been faced with declining export markets. The same situation applies to woolen and man-made fibers. From 1947 to 1957, exports of man-made fibers declined 27 percent, while the period witnessed a fifteenfold increase in imports. In the case of woolen goods, imports increased 639 percent between 1946 and 1957 while exports dropped by 97 percent. The substantial loss of export markets and the rapid increase of imports, coupled with growing interfiber competition, has meant that in a period of about 10 years the domestic woolen and worsted industry has been virtually cut in half in terms of production, employment, and machinery in place.

Part of these results are of course attributable to changes in the domestic economy. There has been a decline in the percentage of disposable income that individuals have spent on apparel and textile products-though this has been offset to some extent by the increase in population. An even more significant decline has occurred in industrial consumption of textile products, resulting from competition of plastics, paper, and similar products.

A major cause of the decline of the textile industry, however, is Government poli-cies. Among these are the two-price system by which foreign countries, under our aid program and the agricultural price support system, are able to acquire American cotton at some 18 percent less than the domestic textile mill. Since the cost of raw material accounts for some 40 percent 50 percent of the cost of producing cotton fibers. American mills are at a competitive disadvantage apart from other cost differ-

Financial encouragement to other nations to expand textile prdouction, under the foreign aid program, have had a major adverse effect on the domestic textile industry, as indicated by the figures given earlier.

The depression in the textile industry. if it has not been caused entirely by the policies of the Government, has been seriously aggravated by these policies. There has been nothing in the international policies of the Government to relieve the textile industry, but everything to depress it.
What has occurred to the textile industry.

either by the action or by the neglect of the Government, is happening to a score of other industries. I append a table drawn from official ICA statistics, showing the purthe Inchases of commodities abroad by ternational Cooperation Administration and the percentage which these purchases represent of total purchases of such commodities. From the table it will be seen that the Government, far from taking note of the plight of the textile industry, has been aggravating that plight by increasing the share of purchases of textiles abroad. The same trend is observable in a wide list of other commodities. Fours years ago, the Government bought 78 percent of its chemi-cal requirements for the aid program at home: last year it bought only 44 percent-In 1955, 97 percent of freight car purchases were bought from American manufacturers; in 1958, only 11 percent. For all commodities, the aid administration went to American suppliers for 79 percent in 1955; 4 years later it was giving nearly half the business to foreign suppliers.

Among the industries most seriously affected by this policy besides textiles, are iron and steel mill products, pulp and paper products, fertilizer, cement and other non-metallic minerals, nonferrous metals and products, copper, lumber, and lumber manufacturers, machinery and equipment, motor vehicles, engines and parts, and

freight cars.

#### Tax Legislation

EXTENSION OF REMARKS

# HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks I wish to insert into the RECORD an article by the distinguished columnist Drew Pearson, from the Washington Post, and an article by C. P. Trussell in the New York Times. These articles deal with the broblem of tax legislation passed by the Senate and the House yesterday besides considering the problem of the conference committee between the House and Senate.

There have been other comments on conference committees by members of this House which suggest that both Houses of Congress should seriously study what the conference committee does to our legislative system. One of the most common charges is that these groups do not always reflect the view of their particular body. For an interesting comment on this question note, page 8743. June 3, Congressional Record by DAN FLOOD.

Where the conference report does not reflect the will of the body, but only those of the conferees, it is incumbent on Members of Congress to object to that

[From the Washington Post, June 30, 1959] GROUP OVERRIDES SENATE'S ACTION

(By Drew Pearson)

The Senate of the United States met until 1 a.m. last week voting on taxes scheduled to expire at midnight tonight (June 30). The debate was preceded by a secret huddle between Senator John Carroll, of Colorado, and Senator Lyndon Johnson, of Texas, at which the Democratic leader emphatically agreed that the liberal Demo-crats should bring up for a vote certain tightening of tax loopholes and tax provisions favoring big business.

During the subsequent voting, three of these were voted down as follows:

1. Senator Paul Douglas, Illinois, lost a move to cut the oil depletion allowance.

2. Senator Joe CLARK, Pennsylvania, failed to plug the loophole permitting big tax-payers to deduct yachts, private airplanes, world series boxes, and other entertainment.

3. Senator WILLIAM PROXMIRE, Wisconsin, failed in his proposal to put those who receive dividends on the same withholding basis as wage earners whose taxes are withheld from payrolls.

However, one important proposal by Senator Eugene McCarthy, Minnesota, won. It was to abolish the 4 percent tax deduction given those who make their money from stock market dividends as against those who earn it from salaries or Government bonds. This so-called George Humphrey amendment proposed by the recent Secretary of the Treasury in order to stimulate the stock market, was abolished.

But 1 day later, the Joint Committee of the House and Senate, with a stroke of the pen, wiped out the Senate vote. It reinstated tax favoritism for stock market investors-despite the fact that this favoritism costs the Treasury \$335 million annually.

#### BIG BUSINESS COMMITTEE

On the joint committee were: Bynn, of Virginia, biggest applegrower in the world; KERR, of Oklahoma, one of the biggest oilmen in the United States; FREAR, of Delaware, who sometimes votes with the Du Ponts—all Democrats; plus Bennett, of Utah, former president of the U.S. Chamber of Commerce, and BUTLER, of Maryland, elected with Texas oil money, Republicans.

On the House side were Democrats Mills of Arkansas, King of California, and FORAND of Rhode Island, always jealous of the right of the House of Representatives to initiate tax legislation; with SIMPSON of Pennsylvania and Mason of Illinois, archeonservative Republicans. Only man on the joint committee who battles for small taxpayers is Senator Russell Long, of Louislana.

#### REVEALING DEBATE

Here is a cross section of the Senate debate before Senators voted to abolish the 4 percent tax preference for stock market investors.

Senator Douglas, of Illinois: "The then Secretary of the Treasury George Humphrey was sponsor of the amendment. In his testimony before the Banking and Currency Committee, of which I am a member, he represented this as being an aid to persons of low incomes, because he said those with low incomes were the primary owners of American industry."

Senator McCarthy had just shown that low-income taxpayers got almost no benefit from the 4 percent stock dividend deduction. He agreed with Douglas that Humphrey was

about 99.44 percent wrong. Senator Lausche, of Ohio: "Is not preferential treatment given to those who derive their incomes from stock holdings over those who derive their income from Government bonds?

Senator Douglas: "The Eisenhower administration, having given this tax favor to the owner of stocks, helped send up the prices of stocks. It helped stimulate the movement of capital investment into stocks. But now they say that is one reason they must increase the interest rate on bonds. In other words, having gotten us into the fix through the improper benefits to owners of stocks, they now want to use that fact as a leverage to increase the in-terest rate on bonds."

The Senate then voted to repeal the Humphrey amendment. One day later, the joint committee knocked the Senate's vote into a cocked hat.

[From the New York Times, June 30, 1959] CONGRESS PASSES TAX COMPROMISE TO BEAT DEADLINE—PRESIDENT EXPECTED TO SIGN BILL ON CORPORATE INCOME AND EXCISE LEVIES TODAY

#### (By C. P. Trussell)

Washington, June 29 .- Congress approved and sent to the White House tonight final legislation to prevent \$3,138 million of corporate income and excise tax revenues from expiring tomorrow at midnight.

President Eisenhower was expected to sign the measure tomorrow and thus avert the loss of \$3 billion in annual revenues.

The House of Representatives approved the conference adjustment of Senate and House differences promptly and by a voice vote But the compromise ran into a major battle in the Senate.

The Senate vote was 57 to 35. After 6 hours of floor debate in which it was alleged that the House had imposed a "gag" upon itself against amendments and had tried to impose the same restrictions on the Senate. Republicans and 25 Democrats released the compromise for what was viewed as a certain Presidential signature. All of the "no" votes were cast by Democrats.

#### LONG LEADS OPPOSITION

This vote was not expected to close the issues that brought the Senate and House into sharp disagreement. Senate debate broke away from the usual amenities observed by the two Houses. The House was accused by Senator Russell B. Long, Democrat, of Louisiana, of making a deal to freeze the Schate.

While the \$3 billion of taxes were continued, it was indicated that the fight had not ended. Other attempts to work the eliminated or modified Senate amendments were expected to follow when other germane legislation reached the floor.

The current levies were imposed on a "temporary" basis to help meet the cost of the Korean war. They have been extended six times, with corporate taxes staying at 52 percent, instead of sliding back to 47 percent. Excise taxes affected include those on whisky, beer, wines, cigarettes and their parts.

Senator Long gained support as he charged that the Senate conferees, headed by HARRY F. BYRD, Democrat of Virginia and chairman of the Senate Finance Committee, had yielded too soon and too softly to demands by House conferees that Senate amendments be discarded or watered down.

Before the Senate accepted the measure, Senator Lyndon B. Johnson of Texas, the majority leader, served notice that he would hold the Senate into around-the-clock sessions, if necessary.

When the Senate-House conferees met last Friday they eliminated three of five amendments that the Senate had added during a session lasting from 9:30 a.m., Thursday until 1 a.m. Friday. They compromised on two.

One of those eliminated was an amend-ment designed to repeal the 4 percent tax credit on dividend income of more than \$50. This would have brought an estimated \$335 million into the Treasury from stock and bond holders.

conferees also accepted Senate amendments to increase by some \$142 million annually the funds that the Government provided the States for public assistance to the needy, aged, blind, disabled, and dependent children. The conferees decided that this question could be handled in separate legislation later in the session. Senate attempts to terminate the 10 per-

cent tax on passenger travel as of August I were modified into an agreement to reduce the levy to 5 percent as of June 30, 1960, bringing in about \$125 million a year without effect on the heavily unbalanced 1960 budget. Meanwhile, Congress could change its mind.

## Appropriations for National Aeronautics and Space Agency for 1960

SPEECH

# HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7978) making supplemental appropriations for the fiscal year ending June 30, 1960, and for other purposes.

Mr. JENSEN. Mr. Chairman, I yield the balance of the time to the gentleman from Pennsylvania [Mr. Fulton].

Mr. FULTON. Mr. Chairman, the problem we face here today is to determine what is an adequate budget for this Space Agency. I am sure every Member of the House is interested in having an adequate program and a full and well-balanced space and scientific research and development program. I am sure there is no one on this floor and no one within the National Aeronautics and Space Agency who can tell within \$10 million how much that program is going to require. We Members of Congress can have a legitimate difference of opinion on this particular appropriation bill and on this particular

I feel the members of the House Appropriations Subcommittee have decided the amount according to their own best lights what they think is most important. We, on the House Committee on Science and Astronautics, of which I am a member, should accept that statement of current position of the Appropriations Subcommittee under the leadership of the gentleman from Texas | Mr. THOMASI, the gentleman from Virginia IMr. Garyl, and the gentleman from Iowa [Mr. JENSEN], whose judgment I value highly.

I would like to ask the subcommittee chairman, my good friend, the gentleman from Texas [Mr. Thomas], as well as the gentleman from Iowa [Mr. JENsen], the ranking Republican, what the future position of the committee will be.

It is a serious question of how this proposed cut of approximately \$45 million affects necessary research and development programs of the NASA agency for space and aeronautics. If there are necessary programs that are held back substantially or our authorizing com-mittee feels should be expedited and should be emphasized, will the subcommittee cooperate, and be open to our coming back in the future to point out further recommendations and requirements? I am sure the answer will be "Yes," but I would like to ask you whether you will be open to further consideration of recommendations from us on the Science and Astronautics Committee from time to time.

Mr. THOMAS. The answer is "Absolutely yes." I want to commend the gentleman for his statement. The gentleman has expressed my own thoughts even better than I could in what he has just said. Of course, there is no disposition on the part of anybody on the floor of this House to hold back this Agency in any way. But we realize, as the gentleman has stated, in talking about fixed costs, there is no such thing as fixed costs here except the item of salaries. There is no such thing as fixed costs in research and development.

Mr. FULTON. I thank the gentle-

Mr. JENSEN. Mr. Chairman, I must add at this point that I agree 100 percent with what the chairman of my committee has just said.

#### Population and Pollution Increase

EXTENSION OF REMARKS OF

# HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 23, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, the Rocky Mountain News in its fifth of articles on water pollution, published June 25, 1959, describes the unsuccessful efforts of the city of Denver to keep up with the treatment of sewage from a rapidly increasing population.

An outstanding disposal plant there cannot provide secondary treatment as required by the State of Colorado. Furthermore, even the primary treatment has to be abandoned during heavy storms or at peak use periods. At these times Denver dumps raw sewage into the South Platte River, which damages my constituents and others downstream.

I call my colleagues' attention to the kind of economy the voter gets from a modern disposal plant. Sewage solids are converted into fertilizer for the city's parks, and gases produced in the treatment process are used to heat the facility and operate the digesters used to treat the sewage. But plants must be con-structed, and the Federal Government should help more generously in partnership with metropolitan areas.

[From the Rocky Mountain News, June 25. 1959

DENVER'S NEED FOR SECONDARY PLANT GROWS (By Bill Miller)

"Before the construction of the disposal plant (1937), the sewage of Denver was discharged through several outlets conveniently located along the (Platte) river channel through the city."

(From a Black & Veatch (engineering) report submitted to Denver in 1946.)

"The effluent produced by the North Side (main Denver) plant will not meet the requirements of the Colorado State Department of Public Health. To meet these require-ments addition of secondary treatment works is necessary although the plant capacity would remain at 85 million gallons per day.

"The cost of these additional treatment units is estimated to be \$8.5 million."

#### ESTIMATE SHORE

(From a Black & Veatch report submitted to Denver in 1957.)

"The population of Denver in 1935 is estimated at 300,000. By 1950, the expected population will be 350,000."

(From a Black & Veatch report submitted to the city in 1946.)

"Denver's population, 1950—415,786." (From the U.S. census published in 1950.) "Denver's population in March 1959 is esti-mated at 531,750, an increase of 27.9 percent over 1950."

(From the Denver Chamber of Commerce in March 1959.)

These reports and these figures tell the story of sewer problems in Denver from no treatment as late as 1937 for 300,000 Denverites to a good primary treatment but no secondary treatment for 531,750.

On December 11, 1937, Denver's main plant went into operation.

It was designed for complete treatment of sewage from a population of 317,000 or a flow of 54 million gallons per day.

That was not quite 22 years ago.

#### OTHER THOUSANDS

Now, in addition to its own population of 531,750, Denver is serving other thousands who live outside the city.

And all population forecasts call for tre-

mendous increases in Denver and surrounding areas during the decades to come.

C. P. Gunson, quiet-speaking, pipe-smoking Denver Sewage Plant superintendent. came to Denver when the plant was built. He is still the superintendent.

He watched as the giant bar screens first took the brunt of the sewage water pouring into the plant from Denver sewsr 22 years ago. He became concerned as the secondary treatment filters eroded and failed.

Through the years he watched the population grow and the sewage flow increase.

Two expansions were carried out, one in 1948 to increase the plant capacity to million gallons per day and a second in 1956 when two new digestors (where solids are treated and eventually turned into fertilizer) were added.

Gunson and his immediate superior, Robert Peterson, Denver sanitary engineer, look back over the years—at the present plant operation and at the future—with mixed emotions.

They are convinced the Denver plant and its operation is among the finest in the country-for primary treatment.

#### NEARING CAPACITY

Nonetheless, they know, perhaps better than any two men in Denver, that Denver sewage should receive secondary treatment and that the primary plant also is reaching capacity.

The plant's rated capacity is 84 million gallons per day but its peak maximum is

114 gallons per day.

In 1958 the plan't daily average for 365 day was 58.5 million gallons.

Using these figures, one can be pessimistic or optimistic.

Looking at the capacity and the average per day over a year's period, there would seem to be no problems.

But, during heavy storms which bring on peak loads or at peak period times in the morning, it doesn't look as good.

That's simply because when a plant's ca-pacity—be it Denver's or one belonging to any other city-is reached there is only one answer.

That is to bypass the plant and dump the raw sewage in the river. In Denver's case, the Platte.

Or in the case of a breakdown. This year, during a storm, an 8-inch main broke. Sand and gravel rushed into the treatment plant.

#### ONLY ONE ANSWER

Again there was only one answer. Bypass the plant, dump the sewage in the river or

ruin expensive equipment.

Sewer peak hours come in the mornings. But they also come, in this modern television age, at such unexpected times as immediately following a national championship fight or some other program with a vast viewing audience.

Basically, handling sewage is a simple process. It's collected through pipes and

drained to the sewage plant.

There giant bar screens, with openings of about one inch, prevent large sticks, rags, and similar debris from entering the plant. This refuse is collected and burned.

The sewage flows through grit chambers at a reduced speed and smaller rocks and solids drop to the bottom where they are scraped

out and hauled away.

The process slows even more when the Sewage is gathered in large basins where it is stopped for 30 minutes. In this aeration process, the solids break up even more, oxygen is added by slow mixing and chemicals, if any, are added.

The next move is to the clarifiers, or Settling tanks where the sewage remains for 21/2 hours. Here the settleable solids slowly sink to the bottom and are scraped to a central collection sump while floating matter is skimmed off the top.

Denver heavily chlorinates its final effluent

before it is dumped in the Platte.

The solids are pumped to a digester where they are heated to permit rapid decomposition into gases and liquids. The residual sludge, after prolonged treatment, acquires a black color and an inoffensive tarry odor. It is taken to beds where it is dried and then is used as a soil conditioner or fertilizer.

#### OTHER SALVAGE

This is not the only salvage operation. The Denver plant produces nearly 1.7 million cubic feet of gas, which is about 65 percent methane and 35 percent carbon dioxide, a very volatile fuel.

The plant itself uses an average of 300,-000 cubic feet of this gas per day to heat the facility and to operate its digestors.

In addition, it sells approximately 400,000 cubic feet of the gas per day to the American Smelter and Refining Co. Sales for the year netted the city \$12,099.

"Denver's plant is the only one in the country that disposes of all its fertilizer and sells all its gas," Gunson said. "The gas we sell pays for a good percentage of our electricity bills."

Whenever the question of sewage comes up someone invariably refers to Milwaukee and its sale across the country of a commercial fertilizer.

LOSING VENTURE

This seems like a sensible, profitable answer to the problem. But Gunson points

"Very few people realize that Milwaukee does this because it loses less money this way than by utilizing other methods of disposing of its sewage," he said.

"These big cities have a tremendous chore of disposing of their sludge. While Mil-waukee markets commercial fertilizer it loses about \$300,000 a year on the total operation. That's not sour grapes, on my part. It's a cheaper method than any other the city

Denver does not sell its sludge-fertilizer. Its total production of more than 5,000 yards in 1958 was absorbed by the Denver parks.

All in all, Denver's plant operation with 49 employees, costs the city about \$450,000 per year. This includes a fully-staffed laboratory where tests are constantly made and experiments carried on.

Annual per capita operating costs for Denver, serving an estimated 550,000 people in 1956, were \$0.62 in 1956.

Smaller plants, one for example serving 26,000, have an average cost ranging from a low of \$0.92 to as much as \$1.68.

While the city's main plant is located at E. 51st Avenue and Marion Street, Denver has a second or East Side Treatment Plant. It is located on Sand Creek north of Stapleton Field and serves part of Lowry Field and a small area north of the field.

#### NOT SATISFYING

It provides primary treatment and treats about 1.5 million gallons of sewage per day. It is not satisfactory and the city eventually plans to abandon it when other arrangements can be made.

While the city may quarrel with the State about its requirements and it might disagree with its standards. Denver recognizes one basic fact.

The city knows it must develop a long range plan to take care of the sewage needs. It is working toward this goal now-a goal

that includes secondary treatment-and it has strived for this in years past.

# Why You Should Own a Gun

EXTENSION OF REMARKS OF

## HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. SIKES. Mr. Speaker, I believe that an article appearing in the April 12, 1959, issue of the Miami News will prove of interest to my colleagues and it is with pleasure that I am having it inserted in the Congressional Record. The article was written by Edith K. Roosevelt on "Why You Should Own a Gun" and I feel that Miss Roosevelt has expressed the feeling of many public The article officials and citizens. follows:

[From the Miami News, April 12, 1959] THE CONSERVATIVE VIEWPOINT-WHY YOU SHOULD OWN A GUN

#### (By Edith K. Roosevelt)

You can no longer rely on law enforcement authorities to protect you from an increasing wave of theft and violence. You should own a gun, keep it on hand, and learn to use it wisely and safely.

This opinion was voiced by the National Rifle Association, a group which since 1871

has been the watchdog over the right of American citizens to own weapons for sport and defense and to be trained in their safe and efficient use.

The FBI estimates that during 1957 one major crime was committed for each 61 persons. Our overburdened police officials need the help of each individual citizen if they are to cope with what FBI Director J. Edgar Hoover terms our "appalling" increase in crime.

Many law enforcement authorities claim that the number of persons victimized by criminals could be almost halved were every law-abiding American trained in the use of

But although the second article of our Bill of Rights say that "the right of the people to keep and bear arms shall not be infringed" yet each year there is an increase in the number of laws that would abridge this constitutional right.

In 31 of our 48 States there are some positive restrictions on the free ownership of firearms, particularly pistols. In New York State, with the highest crime rate of any State, there is, significantly perhaps, the most restrictive gun law. It requires a license to carry a pistol or a revolver concealed on the person or even to possess such a firearm in one's home.

Some firearms regulations are obviously necessary. Among such are laws to prohibit persons convicted of a crime of violence and mental incompetents from owning guns. Other sound legislation in effect in some States provides for the safe use of guns by juveniles. Some States make the sale of firearms subject to parental consent and their use in public subject to adequate supervision.

However, other gun laws, particularly those dealing with gun registration, subject the ownership of guns to the whim of a public official.

There are four principal groups backing firearms registration:

Law enforcement and civic groups: These well-intentioned persons believe that it permits the police to trace firearms used in crimes. The facts are otherwise. Firearms registration does not disarm criminals, since as in the case of automobiles, most weapons used by criminals are stolen.

Mothers' groups: They believe that fire-arms cause accidents and warp the minds of the young. Yet, in every single State where there are widespread programs of fire-arms familiarization, primarily for hunting but also for target sports, the number of firearms accidents have dropped.

Subversives: One of the tenets of the Communist philosophy is a disarmed citizenry, the first objective of dictatorship everywhere.

Already the thinking of these groups has adversely affected our national security.

In this country, it is important that every citizen keep his arms all the time, not only as his right but as his responsibility. In the last analysis, each individual American must stand ready to defend himself and his family against the criminal or the foreign foe.

#### Federal Aid to Education

EXTENSION OF REMARKS OF

# HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, June 30, 1959

Mr. PROXMIRE. Mr. President, Congressman Stewart L. Udall has written in a recent issue of the Reporter magazine a realistic and yet basically optimistic analysis of the Federal aid for education situation. This article enlightened me, and I am sure could inform many Members of the Congress about what many of us feel is the No. 1 issue today. For this reason I ask unanimous consent that the article, entitled "Our Education Budget Also Needs Balancing," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR EDUCATION BUDGET ALSO NEEDS BALANCING (By Representative STEWART L. UDALL)

Over the years, few issues have consumed more committee time in Congress than that of Federal aid to education. The problem has been studied so exhaustively that last year one of my colleagues remarked wearily, 'If we could convert our man-hours of committee work into scaffold-hours with bricks, the classroom shortage would be practically licked." Unable to make up his mind on the big question. Congress thus far has settled for patchwork programs, and has dabbled about as an educational repairman (in the 1958 National Defense Education Act), as a payer of lieu taxes (in the "defense impact" programs), and as a provider of school

Despite the fact that the platforms of both major political parties have endorsed the principle, general school-aid bills have never mustered the necessary congressional ma-jorities. The boxscore shows that from 1943 to 1957, six such bills failed to be enacted.

It was the late Senator Robert A. Taft who dominated consideration of the first bills. Taft's shifting policy on school aid was surely one of the most fascinating stories of his legislative career. The Ohio Senator almost singlehandedly defeated the 1943 school bill, terming it "the most revolutionary legislation ever to come before the Congress." But when the plight of our schools became more acute in the postwar period, his thinking changed radically and he became one of the leading proponents of Federal aid. Taft saw a national interest in the performance of our schools and once said that the Federal Government should not stand by and let a poor State do the best it could "if its best is not good enough."

In 1948, as majority leader, Taft pushed his aid-on-the-basis-of-need bill through the Senate, and then teamed up with Democratic Senators to pass it again the following year. On neither occasion, however, did House Education Committee vote the issue on its merits. Fears and emotions dominated deliberations, and the members became so deeply embroiled in a running fight over aid to parochial schools that the Senate bills were never cleared for floor action. Taft and his colleagues had deftly skirted the parochial-aid issue, but the House committee met it head-on, and the contention finally became so heated throughout the Nation that it reached the boiling point in an exchange between Cardinal Spellman and Mrs. Eleanor Roosevelt.

This conflict left such deep scars that nearly 5 years elapsed before the House committee again considered general aid plans. In the interim, Senator LISTER HILL'S oil-for-education rider to the Tidelands bill kept the idea alive; and after the Senate rejected it, Congress marked time by authorizing the nationwide discussions that culminated in the White House Conference on Education in November 1955.

The next forward movement came in 1956, when a reconstituted House committee sent the Kelley school construction bill to the House floor. But once again partisan quibbling and a new controversy-over ADAM CLAYTON POWELL'S amendment forbidding Federal aid to segregated systems-combined to hand the opponents the extra votes they needed to kill the bill.

A year later, with the same forces at work, the House by the narrowest of margins again defeated Federal aid, and the special programs included in the National Defense Education Act were passed last year only because of the postsputnik panic over scientific and technical education.

It is ironical that while Congress has consistently refused to give aid outright, since 1943 various bootleg school-aid bills have been enacted: the \$14-billion-plus GI bill of rights scholarship-tuition plan whooped through as a veterans' rehabilitation measure; and both the "defense impact" assistance and defense education bills passed disguised in the braid and brass of defense.

#### TWO BILLS, THREE FACTIONS

The bills now pending in Washington represent new approaches to Federal aid. The first plan, the 4-year, \$4.4-billion Murray-Metcalf bill (awaiting action by the Rules Committee for debate on the floor) provides outright support on a nonmatching basis for the public schools. This bill provides \$25 per student for classroom construction and/ or teachers' salaries, with State and local schoolmen determining needs and priorities.

The other plan, put forward by the Eisenhower administration, is a matching-grant proposal to help needy school districts amortize their construction bonds. It would in-volve Federal outlays of \$2.1 billion during

the next 25 years.

These bills are widely divergent in scope and intent, and any compromise was foreclosed earlier this month when Secretary Arthur S. Flemming of the Department of Health. Education, and Welfare, fiatly announced that no bill except the one sponsored by the administration would be signed by the President Aside from the special problem of overriding a veto, any compromise is further complicated by the fact that there are no less than three distinct views on education within Congress.

The first main division takes in the hardcore conservatives of both parties. Members are opposed in principle to Federal aid to education, and the roll of this group would surely comprise the 140 House Members and 26 Senators who voted against initial action on the Defense Education Act. Generally speaking, these men believe our schools are "second to none," tend to belittle talk of a national school crisis, and are satisfied that the States will do an adequate job of financing schools. It is an article of faith with them that national bankruptcy poses a far greater danger to our security than educational shortcomings, and they also make liberal use of the Federal control

The opponents of more general school aid have always argued that even partial Federal financing would necessarily subvert local control of schools. Many conservatives sincerely entertain such fears, but one tends to question the good faith of those opponents who are for local decision in Washington debates but in their home States favor the vesting of absolute school powers in a Governor of some other State official. Nevertheless, this argument has been taken into account by provisions in the Murray-Metcalf bill, which would insulate local school boards from Federal contacts: the chief State school officer would be the sole agent for each State-and his reports to Federal officials would be little more than what Taft used to call "an audit proposition."

The second'big group of Congressmen are the philosophical heirs of Senator Taft and the supporters of the current Eisenhower proposal. They have a sober view of our educational deficits, and in the main are dissatisfied with the current performance of the States. Their remedy is short-term, self-starting Federal programs that pinpoint glaring school weaknesses and spur action through grants that the States must match. Believing as they do that a Federal carrot will induce State action, they express concern that too much Federal support might stifle State-local initiative.

The third group, whose members probably constitute a solid majority in the Senate and a near majority in the House, includes those who will vote for the Murray-Metcalf bill. Most of these Congressmen share the view expressed in a recent Rockefeller report that "All of the problems of the schools lead us back sooner or later to one basic problem-financing." They have turned to Federal support as a last resort largely out of & conviction that the States, unaided, either the capacity or the will to break the tax barrier of educational finance.

#### A QUESTION OF MONEY

I would say that the two groups that favor Federal school aid have the same general concept of national goals. For the most part they would agree with Secretary Flemming that a 100 percent increase in teachers' salaries within the next 5 to 10 years is essential; and they have no quarrel with the recent Killian report recommendation that school outlays be doubled "as a minimal rather than an extravagant goal." But these men part company in a discussion of the means of reaching their common goals: the advocate of limited aid still casts a hopeful eye on the States, while his counterpart is almost convinced there will be no breakthrough without Federal support.

As the supporter of the Murray-Metcalf bill sees it, there are built-in ceilings that restrict the efforts of most states. It is, he holds, the inherent weaknesses in state and local taxing systems-not indifference-that have paralyzed state action, and he doubts that tax reform will occur in those states where many hard-pressed communities are under-represented in "rotten borough" leg-

Furthermore, local school moneys are largely derived from the least equitable of all taxes-the property tax. A good wealthmeasuring device a hundred years ago, this tax no longer reflects economic realities. The tax no longer reflects economic realities. modern problem is dramatized by the cir-cumstance that the gross income of General Motors in its nation-wide operations in 1955. for example, exceeded the entire locally assessed property-tax base of at least seven states. Indeed, most of the monetary troubles of public schools today can be traced to the fact that revenue has been tied to the property tax. It has always seemed to me that tax equalization is the strongest argument for Federal assistance: studies clearly show that new school outlays would cost the average home-owning taxpayer three or four times as much if financed at the local level rather than through the Federal income tax. One of the mysteries of the Federal-aid fight is the neglect of this forceful argument by its proponents.

No congressman believes that money alone provides a panacea for education. A massive fiscal transfusion will improve our schools only if it is accompanied by reforms in curricula, use of teacher personnel, and exploitation of student talent. But additional funds, as well as creative reform must be forthcoming, if we are to implement the best parts of the Conant, Rockefeller, and Killian reports.

What, then, are the prospects for school legislation in the 86th Congress? To be candid, they are not promising. Under the di vided powers of our government a highly controversial bill cannot be enacted unless large areas of common ground are staked out while at present the Democrats believe that the administration proposal is both unworks able and inadequate and the Republicans feel that the Murray-Metcalf bill gives too much aid-under the wrong conditions.

Another complicating factor is that President Eisenhower's concern over the plight of our schools, never more than halfhearted, is visibly waning. This is the first year since 1954 that he has not sent a special message to the Hill recommending new education legislation, and his commitment to his budget would seem to make a veto of the Murray-Metcalf bill a foregone conclusion.

There will be no concerted action until we have national leadership which is deeply concerned with the need to balance our educational budget and which is willing to tell the people the facts of our school crisis. Such leadership would surely jolt the American people out of the superiority complex that has caused them to misjudge the importance and quality of their schools.

#### READING THE OMENS

Looking ahead, then, it is easy to predict that aid to education will be one of the prime issues in the 1960 campaign, and that it will take its accustomed place on the calendars of unfinished business of the next

But some of us in Congress are convinced that the long-run outlook is bright. We believe that a rising rate of urgency will be felt in our deliberations as the ferment over schools spreads. Fifty years ago the States woke up to the fact that they had a crucial stake in good schools. They responded by setting up workable systems of State aid. we have a profound national interest in maintaining first-rate schools. As this national interest asserts itself—and Congress ultimately acts—one might guess that not many years hence men will be at a loss to imagine what all the fuss over Federal support for education was about.

# Businessman Praises Ed Sullivan for His Inspirational TV Programs

EXTENSION OF REMARKS

# HON. THOMAS J. LANE

OF MASSACHUSETTS IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1959

Mr. LANE. Mr. Speaker-

I have always considered myself as a player on a religious team alongside of my the double of the d the dedication of the brotherhood of man.

This is but one sentence from a sincere and moving letter sent to Ed Sullivan, star of television, by one of my neighbors,

Mr. Benjamin Russem, of Andover, Mass. Mr. Russem, who is a businessman in Lawrence, Mass., believes that if more Deople and nations lived up to the teachings of the Old and the New Testaments, there would be peace and harmony throughout the world.

He and his wife drew deep inspiration from the reading of I Corinthians 13, by Miss Luise Rainer, on Ed Sullivan's Easter Sunday program.

In the belief that all of us will beneht from the thoughts expressed in Mr. Russem's letter of appreciation, I include it in the Congressional Record.

Mr. ED SULLIVAN, ANDOVER, MASS., May 1959. Columbia Broadcasting System

New York City, N.Y.

Dear Mr. Sullivan: My wife and I habitually watch your television program every

Sunday night and we have great admiration for the talent that you choose and the inspirational subject matter presented.

Easter Sunday night, March 29, Miss Luise Rainer recited I Corinthians 13. Because I am of the Jewish faith, I identify Paul's message in the New Testament as the same ingrédients which are spread over various parts of the Old Testament (the Mosaic law). However, Paul's presentation in capsule form. pertaining to charity, love, kindness, gentility, social justice, is more effective and is sufficiently potent to reach the heart, mind, and soul of man.

I am enclosing for you a copy of Henry Drummond's "The Greatest Thing in the World," which you might have read. To me, it elicits and amplifies meaningfully the instructive message of Paul so as to stimulate in the mind of man the great truths of the message. The wording of the message is so beautiful that we might often be carried away with its phraseology, losing the essence of the message. I can only compare it to the charm of a beautiful lady, who carries us away with her loveliness so that we might even overlook the beauty of her soul and the ideals of her good life. So to me, Henry Drummond's interpretation leads us to a most effective analysis of the deep meaningfulness of Paul's words.

I first came across this booklet about 25 years ago. I was so inspired by it that I have used its philosophy when confronted with controversies in social, business, and religious life. I have often found myself taking the shorter end of a bargain or having to give just a little bit more beyond the conventional obligations—but this extra giving has never failed in helping me to come out on the winning side eventually.

When I first discovered this book, I took pleasure in distributing over 2,000 copies. After that, I have never been without them, and have continued to pass them out wherever I thought they would do most good. This I have taken to heart-hoping to compensate in a small way for the blessing of God's revelation that has come to me through the vision and efforts of the late Henry Drummond.

I will be 70 on my next birthday and I can say that the grace of God and man has never deserted me and I have enjoyed a full, happy life. As the walls of Jericho have fallen before Joshua, so the barriers of religion, race, and nationality have been neutralized before me by this book and I have found myself a free man spiritually. It appears to me that I have developed the practice of seeing some godliness in every person near me and thus I am able to find the true meaningfulness of God to better satisfy my inquisitive

I don't know of any other instrumentality that can bring man nearer to the realization of Isaiah's prophecy "Nation shall not lift up sword against nation, neither shall they learn war any more." No. I don't know of any other means which might bring peace of mind to the soul of man everywhere, on a national, international and individual basis than the hidden meaning behind the words of Paul's I Corinthians 13, as explained by Henry Drummond. To me, it also infers a most profitable psychiatric healing to the soul of anyone who dedicatively reaches out for it.

In alluding to the above, I don't intend to imply that the great masses of people are too dumb to understand it. But I do believe that in order to apply this message to our daily lives effectively, it calls for more than a casual acquaintance with its phraseology and therefore Jews, as well as Christians, have a great responsibility to clarify the philosophy implied in Jesus' name to the New Testament and also to make crystal clear the message of the Old Testament and the messages of later years by such great rabbis as Hillel, who admonished us all to "love peace and pursue it. Love all creatures and then bring them closer to Torah."

"Not by might, nor by power, but by my Spirit," saith the Lord. To me, the prophetic statement just quoted from the Old Testament falls directly in line with Paul's I Corinthians 13, and with what you hope to accomplish by bringing it to the attention of your vast audience.

I therefore thank you, not only for my wife and myself, but also on behalf of the many thousands who have listened attentively to Miss Rainer's recitation on Easter Sunday, and I do hope that we will hear it again on your entertaining and inspirational

television programs.

By way of introducing myself to you, Mr. Sullivan, the tenure of my life has not been spent in total on religious subjects, as you might have suspected from my letter. vocation, I am neither priest, minister, nor rabbi, but an everyday businessman who has been running a retail women's ready-to-wear business in the city of Lawrence for nearly I was born in Russia and came to this country in 1906, a stranger to the English language. I was one of six children. My parents and family remained scattered in Russia and Poland—all of them and their families being destroyed during the Hitler upheaval.

America has been very good to me and I have used its ideals as a dedication and as a means to acquire a share in the practice of its philosophy. All my active years, I have remained loyal in principle and attendance to my Jewish religion and faith, interpreting it in a modern conservative philosophy.

In the pursuance of my Jewish religion, its national and international aspects, I have always considered myself as playing on a religious team alongside of my Christian neighbors for the glory of God and the dedication of the brotherhood of man.

Prayerfully wishing you continued good health and success and with a deep sense of appreciation to your sponsors,

Most sincerely,

RENJAMIN RUSSEM.

# Story of a Million Jobs Exported From United States

EXTENSION OF REMARKS

#### HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, June 30, 1959

Mr. PROXMIRE. Mr. President, the current U.S. News & World Report carries an expert analysis entitled, "Story of a Million Jobs Exported From United States." This careful study is so pertinent to the resolution I introduced earlier, and which is to be considered soon by the Banking and Currency Committee, that I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STORY OF A MILLION JOBS EXPORTED FROM UNITED STATES

In the years since World War II, American business has invested more than \$27 billion in factories, oil wells, mines, and other en-terprises in foreign lands.

These American billions are estimated to have created more than 1 million jobs over-They are part of a flow of dollars abroad that has turned a dollar shortage throughout the world into an abundance of dollars that is causing concern in the United States.

More than 3,000 American companies have operations outside the United States. Business done by these branches or subsidiaries in countries abroad last year amounted to about \$30 billion—almost twice as much as the value of goods exported commercially by U.S. companies in the same period.

What accounts for the growing interest of American business in establishing or expanding operations in countries outside the

United States?

To get a broad view of what is happening, U.S. News & World Report surveyed an important segment of U.S. industry. This survey disclosed the many reasons that motivate American companies in decisions to establish or expand foreign operations.

Lower wages are one factor. Markets that often are expanding more rapidly abroad than in the United States are an attraction. Desire to overcome tariff and quota barriers and to get inside the new Common Market in Europe has its effect in convincing companies to move overseas.

The following examples illustrate the trend in business today.

#### TYPEWRITERS

It soon will be possible to choose among a number of typewriters made overseas but bearing the names of American manufac-Each will be priced considerably lower than American-made machines bearing the same names.

Royal McBee Corp., of Port Chester, N.Y., now has three manufacturing plants in Holland, is building a fourth. Total employ-ment in the 4 factories will be 1,600. An-other plant, in Italy, makes accounting

equpiment. Royal plans to import a lightweight, portable typewriter from Holland to compete in this country with rising sales of portables made by Italian, Swiss, German, and Japanese firms.

The Royal McBee import will cost about \$75, as compared with the selling price of \$145 for its American-made counterpart,

which is slightly larger.

From Britain will come a similar portable made by Smith-Corona Marchant, Inc., with home offices in Syracuse, N.Y. This company recently purchased the firm of British Typewriters, Ltd., in order to compete with foreign portables sold in this country. Its labor costs in the British plant are estimated at about 70 cents an hour.

Remington Rand International is another American firm that is expanding its extensive foreign operations, in which it has invested nearly \$36 million. It has 23,000 workers in 29 oversea plants around the globe. Latest venture of this firm is an agreement with a Japanese company to make business machines for the Far Eastern mar-

ket.

Remington portable typewriters made in Holland are flowing into the United States at the rate of a few hundred a month. Some standard typewriters produced in Scotland also are imported.

Another American firm that makes typewriters abroad, the Underwood Corp., reports that its plant in Britain is "bursting its seams and expansion of our facilities there is under consideration." The output of this factory is sold in the European mar-

Underwood earlier this year opened a new factory in Italy that turns out adding machines and may produce a standard type-writer for the U.S. market. It also bought a factory in Germany that makes addressing machines.

All four typewriter firms are banking on their overseas operations to keep them competitive-both in the foreign market and at home.

OFFICE EQUIPMENT

Many American firms that make office equipment are busily expanding their operations in Europe.

The National Cash Register Co. has plants in Britain, Germany, France, Switzerland, Sweden, Brazil, and Japan, which employ a total of about 7,300.

In Holland, Friden, Inc., of San Leandro, Calif, which makes calculators and billing machines, is about to add a full line of products. Some office-equipment parts made in Holland are to be exported to the United States for use in assembling Friden domestic products. The company estimates that its labor costs abroad are about one-third of U.S. costs.

The Burroughs Corp., of Detroit, has just bought a plant in France, where it will employ 600 people in the manufacture of adding machines. These will be sold only in the European common market area, according to present plans.

Burroughs officials say that expansion of the company's foreign operations has enabled it to increase some types of exports. If France, for example, can buy Burroughsmade adding machines for francs instead of dollars, it is able to order for dollar purchase more complex machines, such as large computers, made in the United States.

A veteran of foreign operations, International Business Machines, has 25,850 employees in 22 plants in 18 countries. Additions to plants in Germany, France, and Italy now are going up. A large new factory is under construction in Holland, and others are being built in Japan and Argentina.

IBM's overseas branches make punch-card equipment, computers, and electric type-writers. At this time none of these products or components comes into the American

market as an import.

In a few months the Minnesota Mining & Manufacturing Co., of St. Paul, will begin making recording tapes and other office supplies in a new plant in South Africa. Company officials also are looking for suitable property in Italy to build a factory with an initial investment of \$750,000.

Throughout the entire industry large and small companies are maneuvering to get established overseas and to share in the successes of these pioneers.

#### WATCHES

In Japan, the average wage for workers in the precision industries-making watches, radios, cameras, and optical instrumentsis \$46 a month.

The Hamilton Watch Co., of Lancaster, Pa., recently signed an agreement with a Japanese firm. This company, borrowing Hamilton's know-how, will make quality watches for sale throughout the world. In return, Hamilton gets sole distribution rights within the United States.

The Japanese manufacturer hopes reach an output of 20,000 watches a month, 40 percent of which will be shipped to Hamitton for sale in this country. This comes to 95,000 watches a year. The remainder will be sold in Japan, southeast Asia, and other foreign markets.

Hamilton also has just purchased a factory in Switzerland, where movements will be made for Hamilton watches. The Swiss subsidiary in addition will make a full line of watches to be marketed under another name. It employs about 250.

Another American firm, the Elgin National Watch Co., leases a small factory in Switzerland for the manufacture and assembly of watch movements. This venture will permit Elgin to import some components of its watches at lower prices than previously.

The U.S. Time Corp., another big manufacturer, has taken over two German firms that, between them, make 1.2 million watch movements a year. U.S. Time plans in Ger-

many, England, and France now employ a total of 3,700. All movements for the com-pany's low-priced watches sold in the United States, however, are made in the United States.

All major watchmakers in the United States, whether or not they have manufacturing facilities abroad, depend heavily on movements purchased in Switzerland, where average wage rates of 60 cents an hour are about one-fourth of the U.S. rate.

#### SEWING MACHINES

In 1958, Americans purchased from Britian \$3 million worth of sewing machines-most of them made by a subsidiary of the Singer Manufacturing Co. Singer is the only large producer of sewing machines left in the United States.

A low-priced machine, called the Spartan, is being made by Singer in Scotland to sell for \$69.50 in the United States. It was introduced about a year ago to compete with foreign-made machines, mostly Japanese, which sell for as low as \$49.50. The British machine is made by labor that is paid about \$1 an hour.

Singer has had plants in Britain, Germany. Italy, and France for many years. The company is now constructing a plant in Turkey. and is starting manufacturing in Australia and Mexico. It also has a part interest in & company in Japan, but the mchines made there are not sent to this country for sale.

Singer has quite definitely cut back manufacturing activities in the United States, mostly of its cheaper models, a company spokesman said. No plants have been closed. but employment is down-a trend the company attributes to increased automation, reduction in the number of models and greater use of common parts.

Since 1949, employment at Singer's largest American plant, at Elizabethport, N.J., has dropped from 9,000 to less than 5,000.

#### AUTOS

Alongside a highway that links Melbourne and Sydney, in Austrlia, a \$25 million auto-motive plant is rising. The name on the building is Ford. When construction is completed, this Australian subsidiary of the Ford Motor Co. will employ 2,750 workers and will turn out 200 vehicles a day.

This is but one example of how American automakers—hit by falling exports—are in-creasing production abroad to keep sales and profits up.

Ford also plans to make trucks in Argen tina. Cost of a new plant to be built soon in Buenos Aires is estimated at \$15 million. It will employ 1,200 workers.

At São José, in Brazil, a new General Motors truck plant is nearing completion-The average number of persons employed by GM's overseas division increased from 97,000 in 1957 to 107,000 in 1958. The company's net investment outside the United States and Canada at the end of last year was \$330.5

Chrysler Corp. last year bought a 25 per cent interest in Simca, a French auto manufacturer, and plans to increase its holdings. Recently, Chrysler announced that it studying a plan for making auto parts in Mexico. Later, it hopes to produce 12,000 Simca and Chrysler-line cars a year there.

At the same time, Detroit's Big Three have raised their sights on the share of the American market set aside for the cars they make overseas.

General Motors, with two entries, plans to import 40,000 of its German-made Opels and 24,000 British-made Vauxhalls this year. In 1958, combined sales of the two cars in this country totaled just under 33,000.

Ford's goal is 44,000 sales of its English Fords and German-made Taunus cars in the U.S. this year—an increase of about 2,000

Chrysler, a late starter in the import business, shipped about 12,800 Simcas to this country from September through December last year. It is aiming for 50,000

sales this year.

A glance at comparative wages of auto workers here and abroad shows the com-petitive advantage of manufacturing in Europe. In Britain, the average hourly pay in the auto industry is \$1.26. In Germany, it is 69 cents; in France, a little higher. The average American auto worker is paid \$2.66 an hour-plus fringe benefits,

#### TIRES

The boom in foreign-car sales is a major factor in the expansion plans of American rubber companies with overseas operations. Many of these cars are equipped with smalldiameter tires made by U.S. firms abroad, and tire imports are growing as the need for replacements arises in this country.

One of the companies that exports tires to the United States is the General Tire & Pubber Co., which has plants in 18 foreign countries, including Canada. Its principal products are tires and tubes, plus some plas-

tics and tiles.

The B. F. Goodrich Co. has new plants under construction or planned in Brazil, Australia mulher fac-Australia and Iran. A synthetic-rubber fac-tory in Holland is scheduled to get into production this summer.

More than \$18 million is being poured into a building and expansion program overseas by the Firestone Tire & Rubber Co. Major areas for this expansion are Argentina, Brazil, Venezuela, India, Portugal, and Germany. All told, Firestone has 15,000 factory employees in 17 countries abroad.

The U.S. Rubber Co. recently acquired a majority interest in one of the largest rubber companies in Germany. It also has manufacturing facilities in Belgium and France to feed Europe's growing demand for tires

One of the biggest new plants in France costing \$7 million is to be built for the Goodyear Tire & Rubber Co. This firm and ready ready is making tires and tubes in 29 foreign countries.

In all, these investments by American rubber companies are helping to strengthen the economies of many lands.

The largest single manufacturing plant ever built in Britain at one time was opened this spring by an American firm—the H. J. Heinz Co. It is one of several Heinz facilities in Britain that employ more than 7,500 workers to turn out a full line of the company's famous "57 varieties" of food.

The largest food-processing plant in Australia also is a Heinz plant. It was opened in 1955.

In Holland, Heinz purchased a Dutch ompany a year ago and recently started thipping food from there under the Heinz label. label. It is investigating the possibilities of opening. opening other plants in Europe and South

The president of the Borden Company is planning a trip to Europe this summer to look for areas in which to expand. Borden already is producing dried milk in Holland and Denmark.

Borden has cut down the volume of U.S. production for export. It closed two plants in this in this country because dried milk couldn't be produced at a price low enough to ex-

These are but two of a number of American firms that are expanding their foodprocessing operations throughout the world.

In at least one field, that of pharmaceutical at least one field, that of pharmaceutics, products, expansion of oversea operations has been a boon to related areas of U.S. industry. dustry. The demand for basic materials produced in this country and shipped to foreign plants for processing has resulted in increased production at home.

Typical of the growth of American pharmaceutical firms abroad is the experience of Parke, Davis & Co., of Detroit. pany is rapidly expanding its manufacturing and distributing facilities in foreign countries because of the high cost of exports, its president, Harry J. Loynd, said recently.

"We can't compete in foreign trade as long as our hourly wages continue to grow," he

as our hourly wages continue to grow," he said. Mr. Loynd cited wages in Germany, for example, as being only one-fourth of those in the United States.

Parke, Davis has built or has under construction new plants in Belgium, Italy, Spain, South Africa, Australia, Puerto Rico, Teach Colombia, Argenting and Chille. Brazil, Colombia, Argentina, and Chile. Its British plant has been in operation since before 1900, and now employes more than 1,500

All told, the firm has close to 5,000 foreign

employees, exclusive of Canada.

Johnson & Johnson, of New Brunswick, N.J., in making its baby products and health and hospitalization specialties in 20 countries, employs about 6,500 in its oversea operations. The company has no plan to manufacture abroad especially for the U.S. market, although this is being done to a minor degree with specialized products.

The largest chemical and pharmaceutical manufacturing plant under private owner-ship in India is owned by Merck Sharp & Dohme, of Rahway, N.J. Other units in Hol-land, Britain, and Australia are being expanded. The company reports no drop in employment at its home factories—just increased consumption abroad. Its plan is to export from the United States only basic chemicals for processing.

Bristol-Myers has just bought a German firm, and plans to build a new plant that will employ 250 people in the manufacture of toothpaste, hair tonics, shaving cream, and other products. It has other operations in Britain, Latin Amelrca, South Africa, Aus-

tralia, and New Zealand.

In the Philippines, at one of the three oversea plants owned and operated by the Vick Chemical Co., the wage scale-based on the official rate of exchange-is around \$3.62 a day.

Labor costs in that range provide one of the big attractions to U.S. firms that are looking abroad as part of their expansion

#### FARM EQUIPMENT

From the hold of a ship docked at Jacksonville, Fla., a few weeks ago, workers unloaded a shipment of tractors. They looked just like tractors you might see coming off an American assembly line—but there was this difference: All were made in a British plant of the International Harvester Co., and were imported for sale in the southeastern States at bargain prices.

International Harvester plans to import at least 300 of these diesel-powered tractors this year as an experiment. If they prove popular, volume will be increased. They sell for about \$2,800. Company officials estimate that they would cost \$550 more if made here.

International Harvester, world's largest manufacturer of farm equipment, is not alone in entering the U.S. market with its foreign-made products.

The Ford Motor Co.'s tractor division is importing two models of diesel tractors made in its British factories. In the last few years, \$28 million worth of one of these models was sold in this country.

J. I. Case Co., a big manufacturer in Racine. Wis., has purchased a controlling interest in a French company that makes tractors and other farm equipment. Case has not announced plans to import any of the French production, but as president, Marc B. Rojt-man, said recently: "There's a strong possibility we'll import a small diesel tractor."

The company plans to turn over some of its designs to the French firm and ultimately to bring out a full line of Case products over-

Deere & Co., of Moline, Ill., has an 85 sercent interest in a plant in Germany that turns out tractors, combines, and other farm equipment. Deere has built a plant in Mexico, and is putting up another in Argentina,

Allis-Chalmers Manufacturing Co., of Milwaukee, has a plant in Britain and recently purchased others in Australia and Mexico.

A look at wage rates here and abroad, however, shows why many businessmen think imports of farm equipment made in oversea plants of U.S. owned firms may

International Harvester pays about 80 cents an hour in Britain and a little more than 70 cents an hour in Germany and France. The average wage for its hourly employees in the United States is \$2.59.

#### MACHINE TOOLS

Here is what an official of the Ex-Cell-O Corp., of Detroit, a machine-tool maker, says about the export-import situation:

"We feel we are being priced out of the world market, and the only way to stay in business is to make your product overseas. Formerly, 25 percent of American-made machine tools went into the export market. Now the flow is the other way. with the competition of imports."
As a result, Ex-Cell-O has bought plants

in Britain and Germany and is planning expansion to other countries—perhaps to

German labor costs are only about 25 percent of those in Detroit. In England, the company finds skilled labor available at less than \$1 an hour. Products made in the oversea plants are grinders, gearmaking machines and a broad range of other tools, including lathes, which Ex-Cell-O doesn't make in its American plants.

Ex-Cell-O's domestic employment is down from 10,000 a couple of years ago to 6,750 now. The firm is not bringing its foreignmade products back to the United States but a company spokesman says: "We have no qualms about doing so, and it may come

in the future."

#### HEAVY MACHINERY

The Goss Printing Press Co., of Chicago, employs 800 people in a new plant it opened 2 years ago in Britain, where it first started

operations in 1934. A smaller plant now is under construction in Germany.

Goss has not tried to sell any of its Britishmade printing presses in the United States because of a backlog of demand for its prod-

ucts in Europe.

Comparative labor costs are 80 cents an hour in Britain, as against \$2.72 an hour in Chicago.

The British subsidiary could undersell us by 25 percent any day in the U.S. market, says Robert C. Corlett, the firm's president.

Within the last 5 years the Hyster Co., of Portland, Oreg., has opened new plants in Britain, Holland, and Brazil. The company makes forklift trucks, yard cranes, and lum-ber carriers, as well as construction equip-

#### OTHER PRODUCTS

In fust about every field of manufacturing, company officials are signing new agreements, arranging for construction or purchase of oversea facilities. Some examples:

The Minneapolis-Honeywell Regulator Co. has wrapped up a 50-50 ownership deal with a Japanese firm which employs close to 13,000 workers. It will make industrial instru-ments, valves, and heating controls.

About a year ago, Outboard Marine International bought a newly built plant in Belgium, where it assembles Evinrude and Johnson outboard motors of the small sizes popular in Europe. The present investment of \$2.6 million will be increased by a million-

dollar program of expansion this year.

The Otis Elevator Co., with a number of oversea plants, has a policy of importing some of the more complicated components of elevators which, in its U.S. plants, result in high labor costs. Despite import duties, these parts are less expensive than if made here.

In Europe, Otis figures its manufacturing costs are two thirds raw material and onethird labor, in the United States it's the reverse.

Yale & Towne has metal-products plants in Britain and Germany and two licensees in France that manufacture its locks, hardware, and materials-handling equipment. It plans to open another plant in Brazil.

Eversharp, Inc., recently announced plans to import razor blades from a newly pur-

chased plant in Sweden.

The Johns-Manville Corp. has working agreements with 13 companies in 10 European countries to manufacture 6 of its major products. In addition, it is opening two new plants in Italy to make floor tiles and heat-resistant materials. Johns-Manville also is currently investing several million dollars in existing plant facilities in Latin America, and has acquired a majority interest in a Mexican factory that will turn out packing materials.

Du Pont has under construction in Europe 3 new plants that will employ about 1,000. The factories—in Holland, Belgium, and Northern Ireland-will produce fibers, paints, and synthetic rubber for the Euro-

pean market.

An example of the growing importance of foreign production is provided by the Worthington Corp., of Harrison, N.J., which makes pumps, compressors, and other industrial equipment in 11 countries. Worthington is about to open a new plant in Italy, and is contemplating expansion in South America.

Although Worthington's sales abroad represent about one-fourth of its total business, 60 percent of those sales are based on production overseas. Only 40 percent represents exports from this country.

#### Medicine and International Diplomacy

EXTENSION OF REMARKS

## HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Tuesday, June 30, 1959

Mr. HILL. Mr. President, appearing in the June 1, 1959, edition of Modern Medicine magazine is a concise and excellent article entitled, "Medicine and International Diplomacy." This article lends strong support to the belief that a world which enjoys good health is a world which enjoys political stability. This article diligently expounds the thesis that by extending the boon of good health to all peoples we can advance at the same time the causes of international peace, understanding, and good will.

Mr. President, an overwhelming majority of U.S. Senators demonstrated that they believe in this thesis when they voted recently in favor of the international health and medical research bill.

The article "Medicine and International Diplomacy," is written by Dr. Howard Rusk and one of his associates at the New York University-Bellevue Medical Center, Mr. Eugene J. Taylor. Dr. Rusk is not only one of the most outstanding physical medicine and rehabilitation experts in the world today, but a dedicated champion of the health for peace cause. Dr. Rusk is professor and chairman of the department of physical medicine and rehabilitation at New York University-Bellevue Medical Center in New York City, and Mr. Taylor is assistant professor in the department.

Mr. President, I ask unanimous consent that this special article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEDICINE AND INTERNATIONAL DIPLOMACY

(By Howard A. Rusk, M.D., and Eugene J. Taylor, M.A., New York University-Bellevue Medical Center, New York City)

Writing in the New York Times Sunday magazine 7 years ago, Arnold Toynbee said, "The 20th century will be chiefly remembered \* \* as an age in which human society dared to think of the welfare of the whole human race as a practical objective."

One, and perhaps the most significant, feature of social development which gives hope of Mr. Toynbee's objective becoming reality is the increasing recognition throughout the world that the security and welfare of the human race are interdependent within each geographic area of the world and that the security and welfare of each geographic area is dependent upon the security and welfare of the world as a whole.

Some of this recognition has been forced upon us by the technologic advances of the 20th century which have created a shrinking world in terms of communication, transportation, trade, and devastating effects of modern weapons of warfare. Mankind through the ages has been forced, for practical purto develop social concepts to fit the realities of his changing environment.

#### DESIRE TO SHARE AND HELP

This growing recognition of interdependence has not resulted solely from practical necessity. We believe that it also represents our ability, as society matures, to give fuller expression to a feeling that is as old as mankind itself; the desire to share with and help one's neighbor.

This concept has long been practiced by religious and private organizations, but it has been only within recent years that govcrnment groups have conducted technical assistance programs, in which one portion of

the world alds another.

The first really global recognition of this multilateral responsibility came with the establishment of the United Nations and Its specialized agencies. In addition to these multilateral programs, several governments throughout the world have initiated bilateral programs for technical assistance outside of the framework of the United Nations.

#### RESPONSIBILITY OF ALL

Even the greatly increased attention to such activities through the multilateral programs of the limited nations and the bilateral programs of individual nations has not, however, filled the need which most of us feel within our minds and our hearts for increasing international cooperative activities. Consequently, within the past decade there has been a great surge forward of international communication and sharing of knowledge among professions.

We recognize that in today's world, international diplomacy and the development of international understanding cannot be the responsibilities solely of the diplomat. These responsibilities must be assumed by all of us as professional persons and individual citizens.

In the field of health and rehabilitation, we have a uniquely effective area of service and of responsibility for working toward international understanding. Health, includ-ing rehabilitation of the handicapped, is fundamental to the prime democratic concept of equal opportunity for all. A world in which good health is enjoyed by only a few cannot be a politically stable world. How can the man who is crippled by pain and disability stand up and fight for the principles of democracy and freedom? Unless he can work and produce, how can he enjoy the fruits of his labor and become & customer for the goods which all of the world wants to sell him? Unless he can produce and earn and then buy from the rest of the world, how can his standards of living be increased?

#### "HEALTH FOR PEACE" BILL

Good health is fundamental to economic self-sufficiency, Dr. Charles W. Mayo summed up this relationship aptly when he said with great simplicity, "Poverty makes people sick—sickness makes people poor."

A major contribution toward breaking this chain described by Dr. Mayo is the International Health and Medical Research Act of 1959 (S.J. Res. 41), introduced in the Senate by the dean of American health legislators, Senator LISTER HILL, of Alabama, on Alabama, on February 2 with 59 cosponsors.

This legislation, known popularly as the "health for peace" bill, would create within the National Institutes of Health a new National Institutes of Health and Health a new N tional Institute of International Medical Research, with an annual appropriation of \$50 million.

These funds would be used to encourage of and support research and the exchange of information on research, the training of research personnel, and the improvement of research facilities throughout the world. The bill would authorize grants to support such activities ranging from research in basic science to research in rehabilitation. Grants could be made to foreign and American universities and research organizations and to voluntary and governmental international agencies, such as the World Health Organization.

#### MEANS FOR UNITING SCIENCE

Under the plan, a National Advisory Council for International Medical Research. composed of nongovernmental leaders, would establish policies, make recommendations, and approve grants and loans.

The existing specialized institutes within the National Institutes of Health-the National Heart Institute, National Cancer Institute, National Institute of Neurological Diseases and Bindness, National Institute of Arthritis and Metabolic Diseases, and so on—the Office of Vocational Rehabilitation and the Children's Bureau would advise the National Advisory Council for International Medical Research on specific projects within their areas of interest and competence.

The program would not replace any of the current programs for multilateral international health activities through the World Health Organization or UNICEF or any of our bilateral activities conducted through the International Cooperation Administra-tion. Nor would it supplant the research programs being conducted in the United States through the National Institutes of Health Health. It would enhance these activities and at the same time provide a mechanism and funds for uniting science throughout the world in a greatly expanded global attack on disease and disability.

## INTERNATIONAL IMPLICATIONS

The key factor in grants from the National Institute for International Medical Research over and above the usual criteria applied to research projects, would be their international implications.

Although there are innumerable corollary values in the International Health and Medical Research Act of 1959, it is based pri-marily on recognition of the fact that research in health, medicine, and rehabilita-tion is so highly complex and interrelated that victory over any disease or disability can be achieved only through the research results of many scientists, clinicians, public health specialists, and vocational rehabilitation specialists throughout the world.

#### PROGRESS IS WORK OF MANY

The history of medicine is replete with examples of this.

It was a Dutch scientist in 1676 who first revealed the world of microorganisms. An English physician, Edward Jenner, who observed in 1796 that vaccination prevented smallpox, provided the basis for modern immunologic concepts. Iwanowski, a Russian, identified the first virus in 1892. Canadians Sir Frederick Banting and Charles Best were the first to isolate insulin in 1921. The Spanish neuroanatomist, Santiago Ramon y Cajal, and the Italian histologist, Camillo Golgi, shared the Nobel prize in 1906 for their work on the structure of the nervous system.

The list goes on and on-penicillin from England, cortisone from the United States, Rauwolfia from India, sulfonamides from Germany.

## GLOBAL ATTACK ON DISEASE

The "health for peace" bill is a direct outgrowth of the proposals of President Fisenhower in his 1058 state of the Union nessage for a "science for peace" plan to "attain a good life for all." As the first step in some formal that in such a plan, President Eisenhower at that time invited the Soviet Union to join in the current 5-year program for the global eradication of malaria.

The President stated our willingness to pool efforts with those of the Russians in Campanians campaigns against cancer and heart disease and the other scourges of mankind. people can get together on such projects, he said, "is it not possible that we could then go on to a full-scale cooperative program of science for peace?"

It was to discuss the proposals for a Steatly expanded international medical re-search was to discuss the proposals for a search program that Senator Hubert Hum-Penery, Democrat, of Minnesota, went to Moscow in early December for his now famous s. b. early December for his now famous 8-hour interview with Soviet Premier Nikita S. Khrushchev. The first two hours of the interview were spent discussing international medical research.

# AREA FOR U.S.-U.S.S.R. EFFORT

In a statement issued in Moscow after the an a statement issued in Moscow after the interview, Senator Humphrey reported the Soviet Premier Lad given "enthusiastic approval" proval" to the proposal.

He said further: "During my interview with the Premier, I had noted that areas of disagreement between our respective foreign policies." eign policies remain broad and deep. does not appear that, for a considerable time, these differences will be resolved. In the meantime, we need to learn how to work meantime, we need to learn how to well together, and the best place to start is in the nonpolitical area. The world is hungry for some for some evidence of effective Soviet-American contains best areas can collaboration. One of the best areas in Which to start is the field of health."

Fortunately, there is a growing recognition throughout the United States of the effectiveness of international health and rehabilitation as a major program in our American foreign policy. Congress last year gave more impetus to international health than any previous Congress. than any previous Congress.

# FUNDS FOR RESEARCH ABROAD

Our Mutual Security Act now proclaims it to be the policy of the United States to continue and strengthen mutual efforts among nations for research against disease in all parts of the world, noting that such diseases as cancer as cancer constitute "a major deterrent in the efforts of many people to develop their economic resources and productive capacitles and to improve their living conditions."

Another amendment to the Mutual Security Act authorizes the use of funds obtained from the sale of surplus foods abroad for the support of medical research in foreign countries.

Last year, the Senate unanimously passed resolution urging the President of the United States, through the medium of the World Health Organization and related groups, to invite the nations of the world to designate an International Health and Medical Research Year.

#### GROUNDWORK BEING LAID

A very modest start toward the general objectives of the plan is already underway with the \$300,000 grant made by the United States to the World Heatlh Organization for a preliminary study to lay the groundwork medical research on an international basis. This grant was announced by Dr. Milton Eisenhower, president of Johns Hopkins University, as the personal representa-tive of the President at the annual World Health Organization assembly in Minneapolis last June.

Dr. Eisenhower said at that time that the United States was prepared to give such a program substantial support. In February of this year, the Executive Board of the World Health Organization meeting Geneva approved a six-point program for extended medical research drawn up by the Director General of the World Health Organization, Dr. M. G. Candau, as the result of the instructions he received at the World Health Organization assembly.

The fact that 59 other Senators joined with Senator Hill in cosponsoring his "health for peace" bill indicates that a majority of the Senate agree with the statement of Senator Humphrey on the need for such a program and with Senator Hill that his proposals would help meet that need.

#### INTEREST IS WIDESPREAD

They realize that not only will such a program improve the international understanding but also may well provide a breakthrough on the killing and crippling diseases that plague mankind.

This enthusiastic support is not limited to the Congress. Today there is widespread interest in all walks of life in the United States in this and other international health legislation. The people of the United States have demonstrated, through their willingness to contribute both tax and voluntary funds, their firm belief in the value of research in health, medicine, and rehabilitation. Most also agree that, while the United States and the rest of the world are spending billions of dollars negatively for research for instruments of death and destruction, we should spend a few millions positively for promoting health, happiness, and human understanding. The race for control of outer space is not so important in the long road ahead as the control for inner space in the minds and hearts of mankind,

### PUT MEN AHEAD OF MOON

In a nationwide survey conducted by the University of Michigan Survey Center for the National Association of Science Writers and New York University, 54 percent of those questioned reported that, if forced to choose between spending money for medical research or putting the first man on the moon, they would favor medical research.

The "health for peace" bill gives dimension and significance to the aphorism of the late Sir William Osler: "The great republic of medicine knows and has known no national boundaries."

Over 300 years ago, an English philosopher said: "If every man would but mend a man, the world would all be mended." The International Health and Medical Research Act of 1959 is a significant step toward this goal.

Are the Americas Breaking Apart?

EXTENSION OF REMARKS

# HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. REECE of Tennessee. Mr. Speaker, a very elucidating editorial appears in the July edition of Fortune magazine and I wish to place it in the RECORD that it might be available to Members of Congress and others over the country who may be interested:

#### ARE THE AMERICAS BREAKING APART?

In Haiti last month, Foreign Minister Louis Mars complained of feeling like a passenger on a ship who knows there is dirty weather about, but who cannot make out what is going on over the horizon. This sentiment must accurately reflect the feelings of many U.S. businessmen about Latin America these days. We have been witness-ing in Cuba a confiscation of property unequaled since the Mexican oil seizures in 1938. There have been incipient revolts and street fighting in Nicaragua, Paraguay, Bolivia, and Uruguay. Peru is in exchange difficulties and Brazil continues to pursue inflationary policies that are self-defeating and that have led to an open break with the officials of the International Monetary Fund.

It is easy to conclude from all this that U.S. policy toward Latin America is a complete failure. Adolf Berle, former Assistant Secretary of State for Latin-American affairs, writing in the Reporter, states that "for the first time since the Monroe Doctrine was proclaimed in 1823, the Americas could break in two." This would indeed be a disaster of the first order. Of the some \$25 billion of direct investment that U.S. business has made around the world, some \$8.8 billion is invested south of the Rio Grande and in the islands of the Caribbean. About 30 percent of all U.S. imports come from this area and about 25 percent of our exports go there. The United States is de-pendent on Venezuelan oil, Peruvian and Chilean copper, and Brazilian coffee. And militarily, no less than economically, the interests of the Northern and Southern Hemispheres are interlocking.

In view of these stakes, present concern over Latin America is fully justified. Fortunately, however, U.S. policy is not quite as inept as some critics make out. Latin America is a big and enormously diverse area that includes some 20 different countries and 183 million people. Some are doing well. In others—Ecuador, Chile, and Colombia, for instance—progress is being made to balance budgets and to adopt sensible trade and investment policies. U.S. business this year will confidently put an estimated \$400 million into Latin-American mines and factories, and U.S. imports and exports will be considerably higher than they were in 1958. This is no time to lose faith in American solidarity. But it is time to sort out and face up to the real dangers.

#### THE MOST SACRED RIGHT

The first and obvious danger lies in Cuba. which Fidel Castro in a few brief months has managed to reduce to a state of chaos where literally anything can happen. When Batista fell, there was considerable rejoicing that another dictator had toppled. But Castro's land-reform program has turned out to be a deadly serious threat to property, security, and peace. It is a body blow to big foreign companies like Atlantica del Golfo, which owns some 500,000 acres in Cuba, to the Rionda group, Cuban-American Sugar, and United Fruit. Castro's land reform must also adversely affect the whole Cuban economy, which is already plagued with massive unemployment. And it is not only the big foreign companies that will suffer. At a recent meeting of tobacco growers, Castro's policies were criticized as "an open attack on the most sacred right of civilized society," and a small landholder stated; "I will continue to defend my land as long as I have breath, because I obtained it with the sweat of my brow and it is the only thing I have to leave to my children." These are gallant words indicating how far Castro has betrayed the real interests of his own people.

But it is not only the property confiscation in Cuba that is of concern to businessmen. Equally serious is the fact that Latin America has been increasingly subject to Communist infiltration, Castro himself may not be a Communist, but he is surrounded by Communists, and there is no doubt that the Kremlin is underwriting a strong and flexible strategy to subvert other nations. In Guatemala 3 years ago, Communists came within an ace of taking over the government. In Colombia, Communists maintain a small enclave around the town of Viota and have made some progress at penetrating the country's unions. In Venezuela, Communists technically control only about 3 percent of the labor movement, but their influence spreads much wider and is felt in the universities. In Argentina, Com-munists moved in on the wreckage left by Perón and are today strongly entrenched in nineteen major unions, among these the building-trades and the lumber and chemical unions; and in Uruguay the Communists have a powerful headquarters that speaks with its own radio station. In Brazil the party has been banned since 1957, but Communists exert decisive influence in about 30 percent of Brazil's 1,347 union locals,

#### FOR THOSE WHO HELP THEMSELVES

The threat to Latin-American stability, however, is not just communism. It is also the fact that so many Latin-American nations are caught up in a complex of social and economic forces-forces pushing them into unsound economic policies that play into the hands of agitators of all kinds and impoverish their own peoples. Over threequarters of Latin America's population still live on the land, and agriculture remains this great southern community's basic asset. Yet few countries have paid sufficient attention to increasing their agricultural output, which has, in fact, barely kept pace with growing populations. Instead, there has been forced-draft industrialization, which all too often has led to credit inflation, unbalanced budgets, and soaring prices. In-flation creates a strong demand for imports, penalizes exports, and leads on inevitably to exchange controls and balance-of-payments difficulties. Brazil is the supreme example of a potentially rich country that has been ruining itself by way of the printing press. Even Peru, which made enormous economic progress under the Odria regime, has been getting into trouble.

Yet in financial matters the United States can and should evert constructive influence, and here there have been signs of change. In Chile and Colombia the printing presses have been slowed. In Argentina it is to be hoped that Dr. Frondizi and the military can reconcile their differences and that the government will continue its austerity program. The United States has rightly emphasized that sound money is the key to progress. It is also right in turning down Brazil's demand for further loans until Brazil elects to curb its internal spending. It is sometimes said that this country has channeled all of its aid to Europe and to the Far East and forgotten about its southern neighbors. The charge does not stand up on analysis, and in any case misses the point. The nations of Latin America do not need another Marshall plan. What they

do need is adequate credit if they meet certain minimum conditions of fiscal prudence. The proposed \$1 billion Inter-American Development Bank may help enlarge credit facilities. But it will succeed only as it adheres to the general philosophy of the International Monetary Fund and the World Bank and helps those who have begun to help themselves.

#### THE ENDURING PARTNERSHIP

Once this philosophy is accepted, new horizons will open up. Governments can lay down the ground rules of economic ad-But the main engines of progress are trade, foreign investment, and above all free economic activity within the Latin-American nations themselves. In the matter of trade, the United States has needlessly offended Peru and Venezuela by its restrictive policies regarding copper and oil. Brazil has needlessly hurt itself by its illfated price-propping schemes on coffee (copied, it must be said, directly from the U.S. farm policy). Where trade and investment have been allowed to run free, they have forged a proud record, and there are plently of opportunities left. Increasingly, U.S. enterprises have met nationalist propaganda by offering partnerships. Beth-lehem Steel, for instance, accepted a 49 per-cent minority interest in Brazil's \$52-million Amapa manganese operation. Willys-Overland do Brasil, which may outproduce Willys in the United States, financed a large part of its investment by selling shares to Brazilians and now has some 40,000 local stockholders. Brazilian Traction is now selling \$12 million worth of stock in Brazil thereby acquiring both new capital and allies. Combinations of this kind may not always be practical, but where they are, they are a potent means of meeting the false charge of "foreign exploitation."

Perhaps the largest truth that needs emphasis is that there is an essential link between so-called underdeveloped nations and developed ones. As an eminent lawyer of Mexico, Gustavo R. Velasco, has said: "An underdeveloped country is a poor country considered to have a possibility of becoming less poor \* \* \* underdeveloped countries are not subject to a set of economic principles different from those to which the advanced countries are subject." In other words, the principles of the free market, of sound money, of private property and respect for law, are general propositions that can hold good everywhere. Recently Charles S. Rhyne, former president of the American Bar Assoclation, made much the same point when he emphasized that the rule of law is the most precious inheritance of the Western World. and specifically proposed setting up a regional Court of Justice for the Americas. Such a court would not have been able to stop the expropriation of property in Cuba. But it would serve as a symbol that the United States and its Latin American neighbors stand for the same rules of judicial process and common decency. It is by emphasizing and implementing this common bond of liberty under law, no less than by increasing commerce and investment, that the Americas will be held together.

#### Guess Who Pays?

EXTENSION OF REMARKS

#### HON, GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. WALLHAUSER. Mr. Speaker, I recommend to my colleagues a timely editorial that states the highway con-

struction payment problem very wellwhich appeared in the Newark (N.J.) Star-Ledger under date of June 28, 1959.

It would serve a good purpose if all of our citizens would face up to the facts that are pointed out in these revealing paragraphs:

#### GUESS WHO PAYS?

Uncle Sam's highway construction kitty too often is viewed as a grab-bag that is filled with goodies that cost no one anything. This can lead to the erroneous conclusion that all the new ribbons of concrete are being built for free.

Money for highway construction is apportioned to the States for building roads in the Federal highway network. The Federal Government picks up the tab for 90 percent of the cost of most these roads.

But suddenly Congress was warned the kitty was all but depleted, and President Eisenhowed asked for a boost in gasoline taxes from 3 to 4½ cents a gallon. That's a 50 percent markup and a stiff increase.

Congressmen are not eager to go along with any plan to hit the motorist in the pocketbook. There's an election coming up. And a gas tax increase is something the motorist will feel right away. By contrast, the money spent on roads will not produce any tangible benefits for months, if not years.

This controversy demonstrates pretty conclusively-the fallacy of the belief that money dished out by the Federal Government is a handout—or something for nothing. The motorist (and that includes just about every one of us) is being told in no uncertain terms that he is going to have to pay for every mile of new highway that's built. He's going to pay in a very direct manner: It makes no difference whether he is required to hand over 1½ cents for every gallon of gasoline he buys, or whether some other method of getting the funds is used.

The highways may be well worth the money and the motorist may be willing to pay for them. But he should be under no illusion that he is getting something for nothing because most the money is coming out of a Federal fund. The fund is only a means of collection and distribution. The meney comes out of the motorist's pocket.

Resolution Urges Correction of Inequities in Military Pay Act of 1958

EXTENSION OF REMARKS

# HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1959

Mr. ROBERTS. Mr. Speaker, the House of Representatives of the State of Alabama has adopted the following resolution, concurred in and adopted by the

Senate.

It relates to inequities existing in the Military Pact Act of 1958, and I have joined those sponsoring legislation to correct these inequities.

The resolution referred to follows:

Whereas this Nation has long accepted the fair and just practice of gearing the pay of naval, military, and airmen who received by the active members of the Armed Porces of the country; and

Whereas the Military Pay Act of 1958 continued this practice as to all such persons retired from active service after the effective

date of that Act, and even as to the pensions of widows of officers who had retired prior to this date, but departed from this custom as to living members of the Armed Forces who had retired prior to this date, and prescribed for this latter group a lower rate of pay as a retired member of such forces than that accorded members of corresponding rank who retire after such date, thus unjustly and arbitrarily discriminating against a segment of our uniformed servicemen; and

Whereas this act has resulted in such anomalies as an officer who was retired prior to the effective date of the act, because of a disability—possibly a wound incurred in the line of duty perhaps in the frontlines of a hard-fought battle in which he displayed outstanding courage and valor-receiving a much smaller monthly retirement pay than an officer of the same rank, retired after the effective date of the act, due to a nonservice-connected disability, who has never seen a day of combat duty; and

Whereas there appears to be no logical reason or basis for this gross discrimination against those members of the uniformed services who retired prior to the effective

date of the Military Pay Act of 1958; and
Whereas equity and justice demand that the same standard for computation of re-tirement pay be applied to all members of the A the Armed Forces, without regard to date of retirement; and

Whereas fallure to maintain such just and equitable standards will inevitably lead to defections from active service by career officers, and thus prove detrimental to the national defense and security of the United States: Now therefore, be it

Resolved by the Legislature of Alabama (the House of Representatives and Senate concurring):

That the Legislature of Alabama hereby urges Senator Richard Russell and Representation of the Senator Richard Russell and Representations of the Senator Richard Russell and Representation of the Senator Richard Russell and Russ Sentative CARL VINSON, chairmen of the Senate and House Armed Services Committees, respectively, to schedule hearings at their earliest that would earliest convenience on bills that would equalize the pay of military retirees; be it further

Resolved, That the Legislature of Alabama deplores the fact that those loyal, faithful members of the Army, Navy, Air Force, Marine Conditions of the Army, Navy, Air Fo rine Corps, Coast Guard, Geodetic Survey, and Public Health Service who had retired prior to the William Pay prior to the effective date of the Military Pay Act of 1958 have been unjustly discriminated against by that act; and hereby memorializes the Congress of the United States to eliminate pay discrimination against these persons and as to them to restore the traditional relationship between their pay and the pay of active service members of the Armed Forces of this Nation.

The Clerk of the House of Representatives of Alabama is hereby directed to transmit a copy of this resolution to Senator RICHARD RUSSELL, a copy to Representative CARL VINson, a copy to Representative Cast, Sen-ator Jacoby each to Senator Lister Hill, Senator John Sparkman, Senator James O. East-LAND, Senator John Stennis, a copy to each members. member of Alabama's congressional delegation, a copy to the Secretary of the U.S. Senate for ate for delivery to that body, and a copy to the Clerk of the House of Representatives of the Unit of the House of Representatives of the United States for delivery to that body.

Adopted by the house of representatives

June 5, 1950

Concurred in and adopted by the Senate June 9, 1959. Approved by the Governor June 18, 1959.

## Resolution by the Estonians, Latvians, and Lithuanians of Detroit

EXTENSION OF REMARKS OF

# HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mrs. GRIFFITHS. Mr. Speaker, the Estonians, Latvians, and Lithuanians of Detroit in their 18th annual gathering on June 14, 1959, at the International Institute of Detroit, in commemoration of the mass deportations by the Communists from the Baltic States, unanimously adopted the following resolution:

Whereas in June 1940 the sovereign and independent republics of Estonia, Latvia, and Lithuania were illegally occupied by Soviet Russia and in June 1941 many thousands of Estonians, Latvians, and Lithuanians were seized and deported to the tundras of Siberia for torturious death, thus beginning a series of acts of systematical genocide carried out by the Kremlin since; and

Whereas international communism seeks complete domination of the world, thus being a menace to all freedom loving people;

and

Whereas the United States of America continues to recognize the Baltic Republics and their diplomatic representatives constantly denouncing the illegal occupation of these states by the Soviet Russia: Therefore be it

Resolved. That hereby we, who have assembled today to commemorate this tragic anniversary, once again express our deep gratitude to the U.S. Government for not recognizing the fabricated incorporation of the Baltic States into Soviet Union and allowing many thousands of refugees to find new homes in this land of liberty; and be It further

Resolved, That this meeting unconditionally condemns the Soviet aggression and destructive occupation of the Baltic States and all the other enslaved countries and respectfully recommends and urges the U.S. Government, as a member of the United Nations, to take the Soviet Union to the United Nations International Court of Justice for aggression and mass murder; and be it further

Resolved. That we respectfully ask the U.S. Government to take a firm stand against imperialistic communism and to demand that freedom and independence be returned to the Baltic States; and be it further

Resolved, That this is the unanimous opinion of this meeting that only free and democratic election in the captive countries, including East Germany and the Berlin area, would bring world peace and justice to the innocent victims of Russlan communism. Peaceful coexistence and appeasements lead to the final destruction of the free world; and be it finally

Resolved. That this resolution be forwarded to the President of the United States, the Secretary of State, the majority leader of U.S. Senate, the minority leader of U.S. Senate, chairman of the U.S. Senate Foreign Relations Committee, the majority leader of the House of Representatives, the minority leader of the House of Representatives, the chairman of the House Committee on Foreign Affairs, the U.S. Delegate to the United Nations, both the Senators of the United States from the State of Michigan, the Michigan Congress delegation, the Governor of the State of Michigan, and the mayor of the city of Detroit.

Adopted in Detroit, Mich., this 14th day

of June A.D. 1959.

THE BALTIC NATIONS COMMITTEE OF DETROIT.

## Elevation of Bishop Bernard J. Sheil

EXTENSION OF REMARKS OF

# HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. PUCINSKI. Mr. Speaker, it gives me great pleasure to call attention of the House today to the recent elevation of Auxiliary Bishop Bernard J. Sheil to the rank of titular Archbishop of Selge. This great honor bestowed upon Archbishop Sheil by His Holiness Pope John XXIII was received with great joy by people of all creeds in Chicago and throughout the Nation, for Archbishop Sheil's great contributions as a spiritual leader to humanity have served as inspiration to people not only in Chicago but throughout the Nation.

Because I know that Archbishop Sheil has admirers throughout this great Nation of ours, I am taking the privilege today of enclosing an editorial which recently appeared in the Chicago Sun-Times commenting on his elevation.

Archbishop Sheil is a native-born Chicagoan, and we in Chicago have been proud of his great accomplishments and his unyielding service to God for many years, but his tireless efforts in the service of God have helped all of humanity. Archbishop Sheil, as was recently stated in one of the Chicago newspapers, has exerted one of the most telling voices on the social order of Chicago and the Nation.

The editorial follows:

IT'S NOW ARCHBISHOP SHEIL

Chicagoans of all creeds can rejoice with Archbishop Bernard J. Sheil and can take civic pride in the honor which Pope John XXIII has bestowed upon the widely known auxiliary bishop of the Roman Catholic archdiocese here.

His personal elevation to the rank of archbishop is a papal tribute to the many years that the 73-year-old prelate had devoted to his church, to the city of Chicago, to the underprivileged, to oppressed minorities, and

to humanity everywhere.

It will take a little time to get used to his new title. For more than 30 years, "Bishop Sheil" has been a household word across Chicago, in homes of every faith and of all economic levels.

Archbishop Sheil has been a stalwart champion of human rights in many ways.

He was an outspoken foe of Hitlerism and warned early of its rise in Germany. He is an implacable enemy of communism, a severe critic of McCarthyism. He has fought against prejudice and injustice wherever and whenever they reared their heads.

An exponent of his church's great tradition of social justice, he has been a vocal defender of the rights of the laboring man.

One of his great accomplishments was his devotion to youth, through the Catholic Youth Organization and the many facets of its work. He is no longer active in its leadership, but the CYO, now spread throughout the archdiocese on a parish level, still retains his spirit.

The honors given him have been many and varied in recent years. His new rank is a well deserved accolade. There is a hint that the Vatican may have a future assignment for him. We wish him well in whatever it may be, knowing he will bring to it a great faith and ability.

# The Problems of Small Business in the Field of Organized Labor

EXTENSION OF REMARKS

## HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. HIESTAND. Mr. Speaker, some 3 weeks ago I made a speech on the House floor in which I quoted portions of a letter I had received from Wendell B. Barnes, Administrator of the Small Business Administration, relative to the difficulties American small businesses are experiencing under present labor laws—or, rather, a void of labor laws.

The Wall Street Journal, in its issue of June 29, carried a front-page article which vividly verifies Mr. Barnes' observations. It tells how small merchants are victimized by a powerful labor union which is trying to close down one of the merchants' suppliers.

It is a sad state of affairs, Mr. Speaker, when a small store operator is picketed and forced to quit selling the products of a manufacturer of good repute with whom he has done business for many years.

As a member of the Committee on Education and Labor, I have gone deeply into the problems of small businesses in the field of organized labor. I wish to emphasize that I favor organized labor. The fundamentals of labor unions are good; they are sound. I applaud the principles of men like Samuel Gompers and other great labor union organizers and leaders. But when we allow racketeering practices to coerce our legitimate enterprises and literally blackmail them out of business, it is time to take corrective action.

Should any of my colleagues want copies of Mr. Barnes' letter to me, I shall be glad to furnish them. In the meantime, I hope they will take time to read the Wall Street Journals' article which I herewith present:

TILLAMOOK'S CHEESE IS UNFAIR, TEAMSTERS CRY, ASK CONSUMER BOYCOTT—PICKET PRESSURE CAUSES SOME STORES TO STOP SELLING IT; UNCLE SAM MAY PAY THE BILL

PORTLAND, OREC.—Two Teamster pickets paraded in front of Glenn Gaylord's Food-liner supermarket here during the morning shopping hours one day recently. They wore signs that read: "To the customers: This store sells Tillamook cheese, an unfair product."

By afternoon, Mr. Gaylord had removed the Tillamook cheese from his dairy case and had agreed to Teamster demands not to buy anymore of that particular brand until a labor dispute between the union and the Tillamook County, Oreg., Creamery Association—the maker of the cheese—is settled.

This scene currently is being repeated throughout Oregon and 10 other Western States where Tillamook cheese is a major market item. The campaign marks use by Teamsters Union locals of a powerful weapon in bringing pressure to bear on employers during contract disputes—an effort to persuade consumers to boycott the firm's product at the retail level.

EIGHTY-THOUSAND-DOLLAR-A-WEEK SALES LOSS

"We're losing \$80,000 a week in sales right now and it may go higher," declares Hubert Dixon, general manager of the Tillamook Cooperative Association, which is owned by 900 farmers. This association has nine factories along the Oregon coast in Tillamook County and is among the Nation's largest suppliers of orange-colored Cheddar cheese. The association markets nearly 10 million pounds of cheese a year, worth about \$5 million.

Safeway Stores, Inc., is among the large chains from whose shelves Tillamook cheese is vanishing up and down the Pacific coast. A top Oregon Teamsters official boasts 98 percent of the State's groceries, excluding small, family type operations, currently are refusing to sell Tillamook cheese.

U.S. taxpayers, too, have a stake in the dispute. Uncle Sam, if asked, will be obligated to purchase Tillamook's unsold surplus cheese. The inventory now is piling up as the farmer-owners continue to operate their largest factory, in the place of the striking Teamsters. The union's workers have not struck at the eight smaller plants. The possible U.S. bill: \$61,000 a week.

"We've never sold any surplus cheese to the Government, but we might have to soon," asserts Mr. Dixon. Such sales could make up for most of the association's sales losses, which currently amount to about 20 percent of normal volume.

#### UNION SEEKS PAY RISE

Ironically, the original dispute involved not cheeseworkers, but 17 fluid milk handlers in the association's main plant near the town of Tillamook. The Teamsters seek about a 30-cents-an-hour increase for the milk handlers and the association offers 10 cents. The boycott was touched off after 130 Teamsters in the main factory walked off their jobs April 30 in support of the milk handlers after 14 months of unsuccessful negotiations.

The 10,000-member Oregon Farm Bureau Federation added a new dimension to the dispute recently when it decided to fight the Teamster boycott. In Midford, Oreg., some farmers already are reported to be fighting boycott with boycott. They go into stores and, if Tillamook cheese is not being sold, they threaten to quit buying there, according to George Dewey, executive secretary of the farm federation.

"This has become a strike of workers against farmers," adds Gerald Detering, the federation's president. "Somewhere we

must draw a line on the increasing prices, and the stand of Tillamook farmers should be of interest to farmers and consumers all over the Nation."

The Teamsters' action appears to be legal, concedes an attorney for the creamery association. Actually, it isn't an entirely new weapon. The Teamsters in several instances have used it in forcing contract talks with employers. As far back as 1951, a U.S. circuit court of appeals upheld the legality of product boycotting by the Teamsters under the Taft-Hartley law. The issue so far has not been appealed to the U.S. Supreme Court for a final determination.

A Teamsters attorney in Portland, Oreg. notes that the union is carefully directing boycotting of the cheese to the customer on its picket signs to avoid secondary boycott "Any attempt by the union to incharges. terfere with store employees handling the cheese, or to keep truck drivers from making deliveries to stores selling it, could be classified as a secondary boycott under the Taft-Hartley law," he declares. Companies can, after determination by the National Labor Relations Board that a secondary boycott condition exists, seek an injunction against union pickets or file suit for damages in a Whether the advertising Federal court. boycott is legal or not, however, a grocery chain executive terms it a stinking deal. He has pulled the cheese off his own stores' shelves for two reasons: Many customers won't walk through the pickets even though the pickets are only charging the cheese is unfair, and the executive has negotiations of his own coming up with the Teamsters Union and fears "those boys will take it out of our hide on other issues if we don't go along now.

"I want to sell Tillamook cheese but I don't dare," declares Oregon grocer Gaylord. "Many customers don't read the signs. They just see the pickets and won't come in to buy groceries."

Not everybody is giving in, of course. "We are going to sell any product we think our customers want to buy. Nobody is going to intimidate us-union or other wise," declares a spokesman for Meler & Frank Co., Inc., a big Portland department store that had pickets against Tillamook cheese at its doors a short while back. The pickets gave out handbills reading, "To the customer: Our membership is on strike against Tillamook Country Creamery Association over wages and working conditions. This establishment seils Tillamook cheese. We would appreciate your cooperation in refusing to purchase this product until this dispute ends. Teamster Local 569." Subsequently the pickets have been withdrawn. Meier & Frank still sells the Tillamook

The usual method used by the local union is to talk with a store's owner and ask him to take Tillamook cheese off his shelves and refuse to buy any more from the producer until the strike is settled. If the owner, balks, pickets are placed in front of the store for varying lengths of time.

Oregon Teamster, official union newspaper, calls the dispute with Tillamook Creamery Association an all-out economic war. It charges the association with being out to break the union. In turn, William O'Connell, Oregon representative on the Teamsters Joint Council 37, frankly warns: "Our goal is cut off the sales of Tillamook cheese 100 percent in the 11 Western States where it is a major market item. We will spread the boycott to every State in the Union is necessary."

But the battle may be a long one. Bucking the Teamster demands are a band of determinated and traditionally stubborn dairy farmers, man proudly boasting Swiss an-

"The battle is far more than the wages of 17 men. It's the existence of an industry. I'd rather give up my farm than back down firmly declares Willard Balley, Tillamook dairy farmer with 60 acres on which he handles 50 dairy cows. Like many other association member-owners today, Mr. Balley, the father of four children, is manning the Production facilities at the main cheese factory while the Teamsters are on strike.

Bailey notes his cows produce 1,800 pounds more butterfat last year, than 1957, Yet he realized only \$3 more profit. "Why should some guy who is handling my milk get \$45 a month more in wages?" he asks.

The milk handlers get \$2.19 to \$2.24 an hour, Mr. O'Connell of the Teamsters Union contends: "Tillamook's milk handlers are

the lowest pair for their category in Oregon." In the town of Tillamook, Mayor Lauren D. McKiniey, a pioneer resident, has wired the local Congressman, Walter Norslab, to ask the Senate's Select Committee on Improper Activities in the Labor or Management Field to investigate the situation immediately. A Tillamook Chamber of Commerce official estimates over 30 percent of the country's payrolls comes from the cheese-making as-Sociation. The chamber's slogan for 20,000-population county is "The land of cheese, trees, and ocean breeze."

### Useful Idiots

EXTENSION OF REMARKS OF

# HON, EDWARD J. DERWINSKI

OF HAINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1959

Mr. DERWINSKI, Mr. Speaker, the Members of the House quite often display considerable interest in the thoughts and expressions of folks back home. The same consideration is often given the utterances of local community newspapers, which frequently, in their editorial comments, truly reflect local grassroot thinking rather than the more generalized and all-embracing approach of newspapers with huge metropolitan area circulation.

The following editorial from the June 23 edition of the Chicago Daily Calumet. a daily community newspaper, is, I believe, a most stimulating and thoughtprovoking commentary on a matter of great current interest to us all:

USEFUL IDIOTS

Why this mad rush of Americans to Mos-National political figures, churchmen, businessmen, and now nine Governors in-clude. cluding our own Governor Stratton of Illinois are going to Moscow.

Why do these Governors go? What do

they expect to accomplish? Apparently these Governors have not conaldered the effect of their visit to Moscow on the leaders of Africa and Asia who have the leaders of Africa and Asia who have retrained from accepting repeated invitations to visit Moscow. We criticized Nasser and Nahaman an and Nehru for accepting such invitations and held their motives suspect. What now will the will the Africans and Asians make of these visiting Governors? Are we less immune to

the tricks of the Communists than they? Chancellor Adenauer recently appealed to America for help in halting the Soviet peace offensive which he says "threatens to draw free Europe into the Russian current."

Seventeen thousand youths from the free world have been invited to the Communist Youth Festival in Vienna, Austria, next month. The Asian and African governments are gravely concerned over the Soviet invitation to their youth to go to Moscow after the festival.

Thousands of American youths will also be in Europe this summer. They have been advised not to visit Soviet Russia. What effect will the visit of the nine Governors have on our youth and our friends abroad? The governors by their visit will help to establish the acceptability and respectability of the

Soviet communism.

Has communism suddenly been washed clean? Are these communist experts of subterfuge and duplicity suddenly to be trusted and visited?

This is a trap to draw flies. This mecca of atheism has not changed its stripes of anti-God, antifreedom and antidemocracy. The Soviet-professed program to conquer and dominate the world has not changed. The Communist offer of friendship is but a trick to soften up the West and to put us to sleep to the real Communist Intent.

The Soviet strategy is stated by Dmitri Manuilsky as "war to the hilt between communism and the free world is inevitable. The bourgeoisie will have to be put to sleep, so we will begin by launching the most spectacular peace movement on record. There will be electrifying overtones and unheard of concessions. The stupid and decadent will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down we shall smash them with our clenched

Who arranged the visit of the nine governors to Moscow?

This is the cold war. The leaders of the states and of the nations, instead of going in droves to Moscow and becoming what Lenin calls useful idiots in the Communist game, should go to Mackinac Island, Mich., to the moral rearmament ideological war college where thousands of our friends from the free world are coming to plan global strategy to answer communism.

Americans, including these nine Governors, need to arm themselves with a superior ideology to Communism, without which we will be outthought and outfought.

# Third Anniversary of the Poznan Uprising

EXTENSION OF REMARKS OF

# HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES.

Tuesday, June 30, 1959

Mr. LESINSKI. Mr. Speaker, the attached resolution I believe is very interesting for it parallels fairly well my own thoughts on the current negotiations at the Geneva conference.

I personally believe that prior to any further meeting Soviet Russia must come up with some concrete proposal or at least some commitment to ease the world tensions.

We should deal under an agreement that we will adhere to our part only if Soviet Russia performs her part. Meaning that the agreement must be so made that Russia must fulfill her commitments before we implement any part of our part of the agreement.

Naturally, Russia would not agree to

Therefore it is this arrangement. fruitless even to try to come to some agreement with her. We know this to be a fact, because the last conference was fruitless and hurt us greatly.

I am glad that the present Secretary of State is holding his ground against any concession that would weaken our position.

The resolution follows:

RESOLUTION ADOPTED AT THE MEETING COM-MEMORATING THE ANNIVERSARY OF THE POZNAN UPRISING, BOSTON, JUNE 27, 1959

Assembled in the hall of the International Institute in Boston, to commemorate the third anniversary of the Poznan uprising, we pay homage to the memory of those were murdered in Poznan in June 1956, on orders of the Communist government supported by the Soviets, while demanding bread, freedom, and withdrawal of Soviet troops from Poland.

The Poznan uprising had a great impact upon the subsequent events in Poland, and its echo vibrated in the captive countries as well as those which are menaced by Communist aggression.

However, the Poznan cries for bread and freedom have not been heeded by the Com-munist regime in Poland. Every effort that is being made is only for the preservation of the shaken structure of the Polish Communist Party. The momentary changes in tactics and dialectics are merely means to this goal.

Free elections have not been allowed, independent political parties are not per-mitted to exist.

TT

Upon the occasion of the third anniversary of the Poznan uprising we send our heartiest greetings to the Polish nation, assuring it of our complete solidarity in support of its aspirations, aims and struggle, and we earnestly desire to make the following appeal to the democratic governments and to the public opinion of the free world. We hope that it will, in the face of an aggressive and imperialistic communism remain united and determined in all its actions and will form a common ideological front with the captive nations against Communist dictatorship.

We condemn all outrages and abuses the Communists have committed, and continue to commit against the Polish nation. protest most vehemently against the criminal acts of the Communist regime in Poland, acts through which it intends to deprive the people even of the minimum of civil liberties which they had won in 1956 and thus transform them into a more pliable tool in the hands of Soviet imperialism.

Therefore we declare, resolve and request as follows:

That Soviet Armies and Soviet civil employees be withdrawn from Poland.

That the Polish frontiers on the Oder and Nelsse Rivers be ratified by the West.

That all deportees to Soviet Union be freed and returned to Poland.

That freedom to organize independent political parties, economic associations, independent youth and social groups be restored in Poland, together with freedom of press.

That free elections, under international supervision, be held in Poland.

IV

The Geneva Conference as of today has made no progress, it succeeded to show that the Soviets through this propaganda has lowered our defensive position and the eager wishes of the people desiring freedom and

Protesting most vehemently against these newly revealed murders and, in order to prevent additional slaughter of innocent people for Soviet political aims, we demand that the free world:

1. Stop all preparatory work for the summit conference until the problem of the captive peoples of central and eastern Europe is placed on the agenda of the summit conference in order that a satisfactory settlement concerning the freedom and independence of the captive peoples and peace and security of the world be attained.

2. Call a meeting of the Security Council of the United Nations and if the United Nations resolutions are not respected and followed, expel the Soviet Union and its puppets

from the United Nations.

ANTI-COMMUNIST CONFEDERATION OF POLISH FREEDOM FIGHTERS. Presented in behalf of the committee by: JOZEF MLOT-MROZ,

President. JOHN J. TWARGG, Vice President.

## Democracy and Communism

EXTENSION OF REMARKS

## HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. SIKES. Mr. Speaker, I want to take this opportunity to call to the attention of my colleagues a very fine letter which I received from one of my constituents, Mrs. Martha A. Smith, of Fort Walton Beach. I was very much impressed by Mrs. Smith's comparison of democracy and communism and the comprehensive way in which she wrote concerning matters of national and international interest. I feel that this letter stands in a class by itself as an inspiring, patriotic statement and it is with pleasure that I submit it for inclusion in the Congressional Record.

The letter follows:

FORT WALTON BEACH, FLA., June 17, 1959. Hon. Bos Sikes, Member of Congress,

County Courthouse, Crestview, Fla.

DEAR SIR: In regards to Geneva, Berlin, East-West, etc.; I think we've backed down just about as far as our democratic principles should allow. "They don't have to recognize our right to be in West Berlin." "We'll withdraw our troops gradually and leave only a token force." "We'll continue leave only a token force." the talks if they will agree to anything we've proposed."

As one person put it, "What ever happened to the iron hand in the velvet glove and the walking softly with a big stick? We seem to be treading softly enough and the velvet glove is apparent—but the iron hand and big stick of military might, readiness, preparedness-whatever we want to call it, is misplaced from the look of things.

If we have no right to be in West Berlin, we're an honest enough people to admit it and withdraw. If we're needed there, let's build up our armed forces and rattle sabers and pour billions into missiles—the heck with balanced budgets and military force rivalry. Let's be placed and humorous, unit-

ed and dangerous.

And I say this with a boy going into military service tomorrow, God help me.

Mr. Webster defines "democracy" as "Government by the people"; "Republic" as "Free popular government, no classes having any political privileges." He defines "communism" as "A system of social organization involving common ownership of the agents of production and some approach to equal distribution of the products of industry."

The people in Russian-dominated countries are welcome to pool resources and split everything, so far as I'm concerned. We have communities (co-ops) in our own country where they do this, unhampered. But when the majority of Russian citizens-no, subjects is a better word-allow a few to control them and everything they produce, that is a far cry from what they profess to foster.

Americans can complain. And do. But I'm proud of why our country is and what she stands for and the way we stick together without backing down when the going gets tough. If we belong in Berlin, let's stay. And tax the daylights out of ourselves to weld the Iron hand that makes it possible. It seems a whole lot smarter to show the offsetting entry in the budget as "The Future" than to show current taxes covering smaller expenditures with the possibility we may never have to consider a future! Sincerely,

Mrs. Martha A. Smith.

#### Waste in Driblets

EXTENSION OF REMARKS

# HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. PATMAN. Mr. Speaker, an editorial by a well known editor, Mr. J. Q. Mahaffey, which appeared in the July 27, 1959, issue of the Texarkana Gazette, published at Texarkana, Tex., my hometown, entitled "Waste In Driblets," mentions points which deserve careful study and earnest consideration. I commend it to my colleagues in Congress.

The editorial is as follows:

#### WASTE IN DRIBLETS

Whenever instances of relatively minor waste in the Federal Government are uncovered, there are always those who suggest that such things are scarcely worth fussing about. Why not, it is asked, forget such trivia and go after the far more significant examples of waste that send millions down the drain?

Although there is some merit in this argument, the fact is that plugging many small leaks is an effective way of stopping waste. It is effective especially because it calls repeated attention to the idea that improper use of taxpayers' money, whether large sums or small, is not to be tolerated.

Representative WRIGHT PATMAN may have unearthed a case in point with his charges that the Nation's Federal Reserve banks have been spending money improperly on such things as dinner parties, golf tournaments, theater tickets, and so forth. The sums involved may not seem large, but the principle is the same as that which applies to sums many times greater.

Parman's charges need not be taken at face value. The Federal Reserve people may have plausible explanations for many expenditures mentioned-even such things as hundreds of dollars for Christmas gifts to private individuals. At this writing, however, it is difficult to see the justification for spending tax money on Christmas gifts, ladies' parties, and dues for memberships in private organizations.

Parman hints at the possible misuse of much larger sums when he declares that the Federal Reserve System spends "millions of dollars of the taxpayers' money without re-straint and without audit" by any outside agency. What he says certainly warrants investigation. And the idea that the Federal Reserve System, like most Government agencies, ought to be subject to outside audit worth considering.

# The American Legion National Convention in the Twin Cities

EXTENSION OF REMARKS

# HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Tuesday, June 30, 1959

Mr. HUMPHREY. Mr. President, in August of this year the American Legion will hold its national convention in the Twin Cities of Minnesota. The Legionnaires and their families who attend this convention will, I know, enjoy Minneapolis and St. Paul as much as we will enjoy having them visit in our State.

The July issue of the American Legion magazine contains a fine article describing the Twin Cities, entitled "A Tale of Two Cities of Special Interest to Legionnaires." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A TALE OF TWO CITIES OF SPECIAL INTEREST TO LEGIONNAIRES

(This year from August 22 to August 27 the center of the American Legion world will shift to Minneapolis and St. Paul when the national convention is held.)

When Legionnaires assemble in the Twin Cities. Minneapolis and St. Paul, for the national convention, they will be following a tradition that is centuries old. Visitors have been enjoying Minnesota hospitality for almost 600 years, Minnesotans say, and they base their contention on a rune stone dated 1362 which in distributions. dated 1362 which indicates that the Vikings hunted and fished there a century before Columbus crossed the Atlantic.

The Twin Cities, only 10 miles apart along the upper Mississippi River, form of sprawling metropolis with a population of sprawling metropolis with a populat approximately 1% million. At the front door of downtown Minneapolis the river drops 65 feet in the five fronts f drops 65 feet in three steps over the Falls of St. Anthony. Indeed, the city owes much to the falls, which generated power for the mills that made the mills that made the city famous.

Many of Minnesota's thousands of lakes can be found in the Twin Cities arealargest is Minnetonka, with 200 miles shoreline. From the eastern end of this lake a creek named Minnehaha spills east ward and tumbles into the Mississippi gorge to create the falls immortalized by Long fellow in "Hiawatha."

Visitors will find the following places of special interest:

Fort Snelling, the oldest landmark of white settlement in the Twin Cities, built in 1819 at the cities of the in 1819 at the junction of the Minnesota and Minneapolis Rivers.

Minneapolis Grain Exchange, on the south edge of the downtown district, the world's largest cash grain market.

St. Paul's Science Museum, just north of downtown St. Paul.

The capitol, at St. Paul, designed by Min-nesota architect, Cass Gilbert, credited for his development of the modern skyscraper.

Como Park, which has excellent zoological gardens and a conservatory.

Minnesota Historical Society, where you can see a collection of priceless documents and photographs.

The "God of Peace," a slowly revolving slant marble statue of an Indian, in the St. Paul courthouse lobby.

University of Minnesota, one of the world's greatest universities, whose buildings domihate the residential district southeast of St. Anthony Falls.

The Minnesota State Fairgrounds, to the east of the agricultural campus of the University of Minnesota.

Southdale, on the southwestern fringe of the Twin Cities, described as the Nation's most spectacular shopping center.

Such well-known manufacturing plants as those of Minnesota Mining and Manufacturing Co., the home of Scotch tape, located in St. Paul; Minneapolis-Honeywell, known for electrical control apparatus; Brown & Bleed, and a nub-Bigelow, the world's largest calendar publishing house in St. Paul; Toro Manufacturing house in St. Paur. 1010 mowers in Minneapolis: Pillsbury's and General Mills, world famous for flour.

The Mary D. Bradford High School Band of Kenosha, Wis., Plays Concert on the Capitol Steps

EXTENSION OF REMARKS

# HON. GERALD T. FLYNN

OF WISCONSIN IN THE HOUSE OF REPRESENTATIVES

Friday, June 5, 1959 Mr. FLYNN. Mr. Speaker, we were honored today by a visit here at the Nation's Capitol from the band of the Mary D. Bradford High School in Kenosha, Wis, This band is one of the outstanding bands in southern Wisconsin and has for several years been under the able leadership of Ralph J. Houghton. Mr. Houghton, who is recognized throughout the State of Wisconsin as one of the most able organizers of musical composition, has personally guided the band since its inception. The band now consists of 85 boys and girls, all of high school age, and most of whom are accomplished musicians in their own right. The band members were resplendent in red and white West Point uniforms with tails. The group has won many awards especially for its herold

trumpet effect, et cetera. The band from the Mary D. Bradford High School is presently on its way to New York to participate in the activities of the control of the co of the Lions International convention which is being held there. They will parade Darade in a 7-hour parade down 42d Street and compete with bands from several nations. The annual parade at the Lions' convention is one of the most colorful of all the conventions in the country and this year will take from 7 to 8 hours to pass the reviewing stand.

The Mary D. Bradford High School band legal public holiday for Government emin making the trip to New York is paying special honor to a Wisconsin citizen who has been selected as the international head of the Lions organization for the coming year. I know that the Members of Congress who had the privilege and opportunity of hearing the concert played by the Mary D. Bradford Band on the House steps of the Capitol this morning will testify to the excellence of their performance.

The members of the band of the Mary D. Bradford High School of Kenosha. Wis., are: Lee Aiello, Don Anderson, Joy Anderson, Kay Anderson, Kent Anderson, Irene Andrade, Roger Andreoli, Tom Asboth, Charles Ashley, George Bagdon, Larry Benefiel, Sherrill Block, James Buss, Pat Calvert, Connie Cassidy, Barbara Christian, Pat Christian, Marilyn Copen, Don Deeder, Larry Eils, Jerry Fenske, James Firchow, Pete Gallo, Gary Garcia, Pete Gentile, Judy Gentz, Sheryl Glinski, Gail Hansen, Jim Hendrickson, Robert Hockney, Alice Jackson, Ron Jensen, Eric Johnson, Edith Jornt, Ken Kastman, Nancy Kemp, Mike Kempainen, Elaine Kirk, Carol Klitzke, Gary Laba, Lynn Langenbach, Bruce Larsen, Jim Lemke, Marjorie Leppanen, Shelby Leschinsky, David Linn, Marsha Mathews, Gene Mentink, Joan Metten, Marilynn Milaux, David Mink, Terry McNeil, Kathy Neil, Don Neau, Carol Norman, Pat Navoichik, Sue Odelberg, Lynn Paulsen, Kay Paulsen, Jerry Perona, Kent Peterson, John Petzke, Sandra Ponzio, Robert Richards, Marilynn Rosemann, Dennis Roseth, Joe Ruffalo, Virginia Schenk, Sue Schmelling, Carol Schnell, Lowell Schroeder, John Steddick, Judy Stewart, Jim Szantor, Veronica Szeliga, Lucille Turco, Doug Vacarello, Bill Van Caster, Ken Wermeling, and William Yankus,

These fine boys and girls, in their trip to Washington and New York, were under the supervision of their bandmaster, Ralph J. Houghton, and a number of parents and friends of the band, as follows: Mrs. Ralph Houghton, Mr. and Mrs. D. Hale, Mr. and Mrs. G. Hendrickson, Mr. and Mrs. T. Eils, Mr. and Mrs. G. Schmelling, Mr. and Mrs. G. Metten, Mr. and Mrs. Walter Anderson, Mrs. Benefiel, Mrs. E. Wermeling, Mrs. F. Schnell, Mrs. A. Anderson, Mike Szelgia, Mrs. F. Perona, Mr. and Mrs. W. Van Caster, John Houghton, David Houghton and Roger Wermeling.

I join with the other Members of Congress in expressing our thanks to this fine band for the concert they played for us on the Capitol steps.

Endorsement of H.R. 5752

EXTENSION OF REMARKS OF

## HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. CANFIELD. Mr. Speaker, I desire to add my endorsement of H.R. 5752, a bill which provides for Friday as a ployees when Federal holidays occur on

Federal employees are supposedly entitled to eight paid holidays a year, although they are deprived of the benefits of such holidays should they fall on Saturday. H.R. 5752 will correct this situa-

It was pointed out in the hearings on this bill that the tendency in private industry is to increase the number of paid holidays and liberalize worker benefits. The lease we can do for our Federal employees is to insure that all of them receive equal treatment in terms of holiday observances.

Existing laws and regulations provide that holidays falling on Sunday be observed Monday. In the spirit of fairness I think this same principle should apply when holidays fall on Saturday or on a regular weekly nonworkday of an employee whose basic workweek is other than Monday through Friday. I urge adoption of the measure.

Twenty-third International Convention, Retail Clerks International Association (AFL-CIO)

EXTENSION OF REMARKS

## HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. PUCINSKI. Mr. Speaker, last week, during the 2 days that no official business was scheduled in the House of Representatives, I took advantage of the interlude to attend the 23d international convention of the Retail Clerks International Association-AFL-CIO-which was held in Los Angeles.

As a member of the House Committee on Education and Labor, which is now studying labor reform legislation, I wanted to see firsthand how a large international, like the Retail Clerks, conducts its deliberations in convention.

Much has been said in recent months about democracy in unions and about abuses by union officials and, undoubtedly, much of the criticism is justified. But I should like to assure my colleagues that the Retail Clerks convention exemplified the very essence of a model union. and I wish that every Member of this Congress could observe firsthand the high standards followed by the officers of this large international throughout the convention.

Mr. James A. Suffridge, president of the Retail Clerks International Association, and his entire board are to be commended for upholding the highest principles of democratic processes throughout this convention. I believe that those who have made broad charges against the entire labor movement because of the defalcation of the few in this movement would have an entirely different attitude toward the legitimate aims of organized labor, as exemplified by the Retail Clerks during their convention, and would then see this problem of labor-management reform legislation in its proper perspective if they had an opportunity to observe this convention personally as I did.

Lest I be accused of being prejudiced because I have a high regard for the Retail Clerks, particularly in the past few years when they have had the good fortune of having for their president a man of such outstanding character as Mr. Suffridge, I am taking the privilege today of enclosing in the Congressional Record the speech made by Senator John L. McClellan, of Arkansas, chairman of the Senate Rackets Committee, to the Retail Clerks convention.

Senator McClellan has, indeed, become known as quite an authority in this country on labor unions, and I am very happy to subscribe to his very complimentary remarks about the Retail Clerks Union. I am particularly impressed with his statement that if he were a retail clerk instead of a U.S. Senator, he would be a member of a union.

Coming from so outstanding an authority as Senator McClellan, his statement to the convention that "so far as I know, your union is clean and operated as it should be," perhaps takes on a greater meaning than anything that I might say in the way of my own personal observations about the Retail Clerks.

The high standards practised by the Retail Clerks International Association is at once a reflection and a tribute to the determination of President Suffridge and his entire executive board to uphold the highest traditions of true trade unionism. For this, I join in congratulating them.

I can assure you that my 2-day personal observation of the retail clerks convention has helped me better understand the great problems facing this Congress and has perhaps given a more profound meaning to the determination of many of my colleagues that we indeed want to adopt legislation which will eliminate those who have abused their privileges and trust as union officials; but we want to study carefully before adopting any legislation which would either curtail or, yes, possibly even destroy the high standards of trade unionism exemplified at the retail clerks convention.

Mr. Speaker, for the benefit of my colleagues, Senator McClellan's remarks delivered to the Retail Clerks International Association in Los Angeles on June 23, as reported in the official transcript of the proceedings, follow:

President Suffrings. Senator McClellan, this is indeed the highlight of our convention. We are honored, we are proud, to have you with us here today.

I am not going to take a lot of time in giving introductions to someone who is probably better known right now than anyone I can think of in the United States.

It is a pleasure to have you with us. The microphone is yours. You are free to greet us; you are free to tell us anything that is on your mind. If you think that we are not covering the base right, tell us so. We are happy to have you, and we shall be glad to hear whatever you have to say and bring whatever message you wish to our organization. [Loud applause.]

see this problem of labor-management ADDRESS OF JOHN L. MC CLELLAN, U.S. SENATOR

Senator McClellan. Thank you, Mr. Suf-

Ladies and gentlemen, members of the Retail Clerks International Association, I am very happy to have this opportunity to appear in person and extend you my warmest greetings. I had not anticipated this pleasure. I did not know that I would be invited. A short time ago your president did me a courtesy that I shall not forget. I appreciated it. When asked to come here for a few minutes and speak to you briefly, I was happy to accept.

I don't know whether you think I come as an antilabor Senator or not. In my heart I'm not. I was raised a poor boy. I know what work is and I believe in work. I believe in it to the extent that I work now from 12 to 14 hours a day and try to do it conscientiously and try to do a good job. I believe in the virtue of labor and I believe in labor people being treated right.

in labor people being treated right.

And I think I can say to you at this hour and at this moment, without any reservation, so far as I know your union is clean and operated as it should be.

I wouldn't have said that if I didn't mean it, and I think if it is different I would know something about it by this time.

We have a job to do. Whether we like it, whether we wish it that way or not, some legislation is needed. I don't make many speeches, possibly a half a dozen a year, except in my home State when I go down there to greet my own people. But I am talking about accepting speaking engagements like this that brought me to Los Angeles on this occasion. But I say that we have a job to do in legislation.

It is not because that there is anything wrong with unionism as such. It is not. I have said repeatedly and almost on every platform where I speak that if I was a workingman in a factory, and I would assume it would be true if I were a retail clerk, I would be a member of a union. But I would want to be a member of a clean union, one that respected me as a man and as a woman.

I hope that I never do anything, it shall never be my purpose (and if I ever undertake it, I hope that I don't succeed) to do anything in my official life that is ulti-mately detrimental to the interest of working people in my country. But I do say there is a need for legislation. There are some things that have to be cleaned up in the interest of decent unionism, in the interest of Americanism, in the interest of your rights, of the freedom of the individual. No man, no officer of a union, no set of men, under any circumstances should be permitted to exploit the working people of this country; and I am ready to pass some laws that will give to the working people the freedom and the protection that are guaranteed to them in the Bill of Rights or the Constitution of the United States.

I see no reason why the Bill of Rights should not be observed and respected in the halls of Masonic lodges, in the halls of any fraternal organization, in the halls of any labor organization. Why should a man lose his rights, his liberties, his privileges, that are guaranteed to him by the fundamental laws of the land when he walks into a union hall or into the hall of any other society or organization.

It isn't that this law is needed, as I say, to protect the great rank and file of workers in this country. Not now. The great majority of union officers are honorable, decent, dedicated men. But tragically and unfortunately in a few areas of the labor movement and in business we have an element that acts contrary to the interests of the many. It is not just confined to the labor

movement. We have it in business, too. We passed some laws undertaking to clean that up. We may need some more. But we do have to have laws, not for the majority but for the minority—that element which actually reflects upon unionism and does it no good.

You don't have to have laws against larceny for 99 percent of the citizens of the United States, but we do need them for possibly 1 percent. Should we repeal the laws of larceny just because the great majority of the people are honest? No. Should we tolerate in one union or two unions or a half dozen unions some of the conduct and activities and practices and corruption that we know have existed in certain unions? I say no. I say, unionism, the character of people that constitute unions and the union movement in the country, can live under laws that will hinder and hamper and drive the crooks out of unionism and let decent unionism survive and grow, as it should. As America grows in her population, as she grows in her strength and in every other way, so should unionism grow in this country. I wish you the best.

I bid you Godspeed. I will continue to do what I believe to be right. I will carry on where I believe legislation is needed for the good of the whole and for the good of decent unionism in this country.

Thank you. [Loud applause.]

Remarks of Senator A. Willis Robertson Before Home Builders Association of Virginia

EXTENSION OF REMARKS

## HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. DOWNING. Mr. Speaker, on last Saturday evening, Senator A. WILLIS ROBERTSON, of Virginia, delivered the main address at the annual meeting of the Home Builders Association of Virginia, held at Virginia Beach. His speech was timely, interesting, and informative, and it deserves to be made a part of this Record. I commend it to my colleagues for their thoughtful reading. Remarks of Senator A. WILLIS ROBERTSON.

AT THE INSTALLATION OF OFFICERS BANQUET. HOME BUILDERS ASSOCIATION OF VIRGINIA. CAVALIER HOTEL, VIRGINIA BEACH, VA., JUNE 27, 1959

It always is an inspiration to me to visit this historic area of the State which cradied and defended the infancy of our Republic and which in more modern years, through its great Navai base has become a world symbol of our military power. No mountainer ever has loved more than I the constant motion of the restless waves nor enjoyed more the recreational opportunities of this area. By a happy coincidence, however, an area which first concentrated on its recreational opportunities has in recent years led the State in industrial development. And that development, of course, included your splendid homebullding program to meet the needs of a rapidly increasing population.

needs of a rapidly increasing population.

I have not always been able to vote for everything advocated by spokesmen for the building industry but I believe those of you who are familiar with my record in the Con-

gress will agree that my views have not often been out of line with those of the free enterprise homebuilders of my own State.

We have agreed that homebuilding should not be a direct function of government because once the Government embarks on a program of providing housing at less than commercial rates we face the impossible Problem of drawing the line as to where such services should end. If through the ex-penditure of billions the Government could Provide subsidized housing for 10 percent of the population with the lowest income, the hext lowest 5 percent will feel discriminated against and will demand inclusion and the same thing would happen if the level were raised to 50 percent. Consequently, I have opposed further expansion of the public housing program and urged instead that favorable conditions be provided, through such sound programs as sium clearance and FHA financing, to stimulate the private building industry to do the necessary job of Providing homes for people of low income.

During the 25 years since FHA was started 5 million American families have acquired homes and additional millions have made improvements under this plan which re-Quires sound appraisal procedures and underwriting principles, the pooling of risks in a self-supporting mutual insurance system and reliance on private financial institutions for loans. Losses under FHA have amounted to only three-tenths of 1 percent of the insurance exposure. These have been covered, of course, by the insurance feature and nearly \$100 million of the premiums paid by borrowers have been returned to them as dividends from the mutual insurance fund.

This record is in sharp contrast with the tost to the taxpayers of the public housing program. Inclusion of large new authorizations for public housing was one of my major reasons for voting against the omnibus housing bill both as originally passed by the Senate and in the conference report approprial.

approved by the House and Senate this week.
Obligational authority for annual contributions on the 45,000 units definitely authorized in the bill would cost \$874 million and if the full discretionary authority were used the total cost would be around \$3.7 billion

I objected to the Senate bill and the conference report also because of the proposals
to finance programs of urban renewal, speclai assistance by the Federal National Mortgage Association, college housing, and housing for elderly persons through borrowing
authority, which has been called "the back
door to the Treasury," instead of requiring
these programs to meet the test of annual review by the Senate and House Appropriations Committees.

I realize that some leaders of the housing Industry have feared that the requirement for appropriations would hamstring programs in which they are interested, but I hope our Virginia homebuilders will realize that the utimate prosperity of their industry is more delignate prosperity of their industry is more delignate. dependent on a sound national economy than on any specific program of Federal asstrance. We cannot have a sound economy unless we reverse the trend toward unbalanced we reverse the trend toward balanced budgets and deficit spending. And balancing the budget requires, among other things, the budget requires, among other things, the kind of control over annual ex-penditures which is exercised by the Appro-priations of the control over annual expriations Committees, in preference to drafts on the proon the Treasury under a blank-check pro-Brain supposed to involve loans, but which go into so-called revolving funds and never

You may be assured, however, that as chairman of the Senate Banking and Curfort housing legislation, I shall see that all on that subject receive prompt atten-

tion and fair hearings, whether I approve of them or not. And I shall, of course, be happy when I can personally support sound proposals such as the one we recently approved to make the GI loan rate realistic and permit a resumption of activity under that program.

Homebuilders have said they regarded approval of the 5.25-percent GI interest rate as a vital factor in their expectation that newhousing starts in the last half of 1959 would be as good as in the first half. I am interested in this, not only from your standpoint, but also because I recognize the strategic role which private residential construction has played in the recent recovery and current expansion of business. Since you hold this key position, I want to discuss with you today the current economic situation generally and some of the problems which it involves.

Economists, who a few months ago were divided on the outlook, now are generally agreed that the U.S. economy is in a strongly expansive phase. Gross national product, our most comprehensive measure of total output, was at a seasonally adjusted annual rate of \$467 billion in the first quarter of 1959, which was 5 percent above the prerecession high in the summer of 1957. Total personal income in May advanced to a new record, 7 percent above a year ago, and industrial production in May also rose to a new alltime high of 152 percent of the 1947-49 average.

Unemployment, which concerned so many persons last year, and nearly led to unjustified Federal emergency spending programs, has declined to the point that in May it was the lowest since the end of 1957 while the number of employed persons last month actually reached a new high.

Housing, as I previously indicated, has shared in the upturn with the rate of new starts for private nonfarm dwelling units running close this spring to the record levels of late 1954 and early 1955. This has led, naturally, to strong demands for real estate loans and for consumer loans needed for home furnishings at a time when industrial expansion has called for an increase in bank loans generally.

All these facts indicate that the problems of recession are behind us and that we now must cope with the problems of expansion in a high-employment economy.

We must, therefore, face the very essence of the economic problem, namely, the pressure of rapidly expanding wants on limited resources. This pressure takes the form of money offers for goods and services. If personal income increases faster than the supply of goods, the prices of goods start up and we have the beginnings of inflation.

The stage for inflation is generally set

The stage for inflation is generally set up in the money markets. A rapidly expanding economy is usually marked by a swelling demand for credit. Borrowed funds are sought to finance plants and equipment, home construction and ownership and government projects.

Where do we get the funds to finance such demands for credit? The supply of loanable funds includes current savings, the accumulation of past savings, and bank credit. As long as the demand for credit is satisfied by savings only, there is no tendency for the money supply to increase, nor any tendency for income payments to increase. The investment spending of the economy is matched by the savings which had been earlier withdrawn from the income stream.

But when the borrowing demands are fed not only by savings but also by bank credit, the money supply increases, and income payments increase. If a substantial amount of bank credit is inserted into the economy at a time when the economy is approaching full utilization of its resources, you produce a growing competition of money demands for scarce goods with the net resultrising prices and erosion of the dollar's purchasing power.

This is the danger we now face. Such a situation calls for both Federal fiscal restraint and general monetary restraint.

Unfortunately the Federal Reserve Board

Unfortunately the Federal Reserve Board in its policy of monetary restraint has received no support from Federal fiscal policy. At a time when the Federal Government should have a a budget surplus or at least a balanced budget, it confronts the economy with a staggering deficit which requires the Treasury to enter the capital markets for new funds as a tremendous borrowing force, to compete with all other sectors of the economy in an ever growing demand for borrowed funds.

A policy of monetary restraint, in the face of the normal credit demands marking any rapid expansion, is bound to raise the structure of interest rates. But when the Treasury adds its tremendous credit demand to the demands of other borrowers, we experience, as we do now, an even greater upward thrust in interest rates.

I share the feelings of those who deplore the rise in interest rates. I am fully aware of the difficulties imposed on the Treasury by rising rates of interest. I sympathize with the small businessman who finds that tight money and higher borrowing costs may pinch severely.

Of course, the most obvious impact of the rising market structure of interest rates is the unfortunate drying up of FHA and VA mortgage money when the market rates rise above the FHA and VA ceiling rates. You homebuliders have suffered this blow before and may face a similar situation in the near future. In the face of rising rates, FHA and VA mortgages will be downgraded by the market just as Government bonds are downgraded today with their 4½ percent statutory ceiling.

The best solution of the problem of sharply rising interest rates would be a drastic curtailment of Treasury borrowing needs. Although I have fought and will continue to fight for restraints in Government spending programs. I must be realistic and admit that for the duration of the cold war defense requirements will continue at a high level.

Those of you who live in this part of the State must be particularly aware of this problem. I can recall when the Hampton Roads area was known chiefly for its recreational resources, but it has become not only one of the key defense areas of the United States but also the largest industrial area in Virginia. This would be, of course, a prime target for attack in any future war and residents here certainly recognize how essential it is for us to continue to have forces so powerful for retailiation that they will stay the hand of an aggressor.

Therefore, if in the immediate future the size of our defense budget makes it impractical to sharply reduce Government credit demands, continued high interest rates must be regarded as a necessary price to be paid for the failures of fiscal policy and the avoidance of inflation.

Proposals to have the Federal Reserve hold down interest rates by purchases of Government securities seem to me highly unrealistic. They overlook the fact that to halt the upward trend of interest rates in this expanding period of our economy would require a tremendous volume of open market purchases of Government bonds. This could not be done without promoting infiation and, indeed, without converting the Federal Reserve System into an engine of infiation,

Remember, that when the Federal Reserve purchases Government bonds, it does not actually pay out currency but merely sets up a credit for the Federal Government in the form of a deposit and that deposit, like other deposits, requires only a limited reserve and can be the basis for other loans. Actually, each dollar of open market purchases of Government bonds by the Federal Reserve make available about \$6 for additional loans—a tremendous inflationary factor.

We found out during and following World War II the difficulties involved when the Federal Reserve Board tried to peg interest rates on Government obligations. The rates were held down but a dangerous inflation developed under the blanket of direct price, wage, and materials controls and when these wartime controls were removed the inflation broke out and threatened to destroy our free seconomy.

free economy.

Even if we accepted the inflationary consequences, it is doubtful whether the Federal Reserve System could peg interest rates on Government obligations under normal peacetime conditions, because the inflationary influence of such huge increases in credit would accelerate a further diversion of savings from investments in bonds and other fixed income obligations into stocks and other equities. It would lead to speculative buying of commodities and securities to beat higher costs and prices in the fu-ture. Thus, such efforts to stabilize interest rates would have a reverse effect and would push up interest rates in most sectors of the credit markets, including mortgages, even if the Government obligations were protected.

I need not spell out the evils of inflation. You are well aware of the price rises and the corresponding decline of the purchasing power of the dollar that has been going on since 1939.

Rising interest rates in a period of monetary restraint are cost burdens to be sure, but it is useful to remember that a 1 percent general price increase applied to consumer expenditures now at the rate of \$300 billion would mean an added annual cost of \$3 billion.

I might add that there is a direct relationship between our ability to prevent inflationary pressures and the availability of residential mortgage funds in the years ahead. This is so because the availability of mortgage credit depends ultimately on the volume of long-term savings. And an increased flow of savings depends importantly on allayed fears of inflation on the part of the American consumer. If an inflationary psychology dominates the long-term actions of consumers and investors, the flow of residential mortgage funds will diminish drastically. Thus, while in the short run it may appear that residential mortgage markets suffer in a period of monetary restraint, only through such a policy can the supply of mortgage credit be increased in the long run.

I hope you will realize, also that there will be periods in the 1960's as there were in the 1950's when it will be best in the longrum public interest for housing demands to be temporarily restrained as the Nation seeks to maintain integrity of the dollar. Public policy cannot be unequivocably committed to the ready availability of mortgage credit, regardless of overall economic and financial conditions.

I am confident that the homebuilders of Virginia will recognize this as sound businessmen and also as citizens serving the public interest. Accepting such restraints as are necessary to prevent inflation will be your share in a program which must include willingness of businessmen generally not to squeeze out the last dollar of profit in periods when demand for goods exceeds the supply and willingness of labor leaders to keep their demands for higher wages and benefits within the limits justified by increased efficiency of production.

Address of Vice President Richard M. Nixon at the Opening of the Soviet Exhibition in New York City, Monday Evening, June 29, 1959

EXTENSION OF REMARKS

# HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1959

Mr. FULTON. Mr. Speaker, as one of the officials who attended the opening of the Soviet Exhibition of Science, Technology, and Culture, Monday evening, June 29, 1959, at the Coliseum in New York City, I recommend that Americans go to see the exhibition to learn of the scientific, technological, and cultural achievements of the peoples of the Soviet Union.

The exhibition is one of the major steps in the cultural exchange program between the United States and the Soviet Union. It is certainly interesting and worthwhile to learn of the many developments in all lines—machinery, equipment, automobiles, atomic energy, theater, music, sculptoring, fabrics, fashions, plastics, and especially to see the various models of the sputniks.

Vice President RICHARD M. NIXON represented the United States at the official opening ceremonies. Mr. NIXON made the following address:

This Soviet exhibition, which Mr. Kozlov opens tonight, and the U.S. exhibition, which I will be privileged to open in Moscow on July 25, represent the most significant results to date of the exchange agreement between the United States and the Soviet Union, which has been in effect since January 1958.

In view of the disappointing lack of progress at the foreign ministers conference at Geneva, it seems appropriate on this occasion that we take a new look at the exchange program and appraise what contribution it can make in developing better relations between the United States and the Soviet Union.

It will be recalled that the 1958 agreement provided for a broad program of exchanges in the arts, sciences, professions and industries. Up to this time approximately three-fourths of the exchange enumerated in it have been carried out. If the difficulties that exist between our two nations were based merely upon misunderstandings and lack of contact, the success of this program would be grounds for great optimism.

But it would be completely unrealistic to pretend that lack of understanding is the only obstacle to peaceful friendship between the Communist world and those outside its borders. There are basic conflicts of interest and deeply clashing ideologies that are not easily removed. It would be no service to either of our great nations to base efforts for peace upon a superficial and even false analysis of the differences that divide us.

On the other hand, because we do have differences and because we both recognize the folly of allowing them to develop into a conflict which would result in the destruction of our civilization, it is all the more important that we increase exchange and contact between our two peoples so that our differences can be discussed in the best possible climate of understanding.

In other words, there is no magic formula which will settle the differences between us, no conference at the summit which will dramatically end world tensions. The road to peace is long and hard and if we are to stay on it both our people and our leaders must display patience and understanding to a maximum degree.

We both recognize that the visits to our country of Russian students, entertainers, scientists, and doctors does not imply any endorsement on our part of the Soviet system, nor do our visits there mean that they endorse us.

But this program has helped to underline some facts that we should never forget—that the Russian people and the American people instinctively like each other, that both of our peoples want peace, that the average Russian and the average American would be most happy to reduce the production of arms and to direct the great economic power of his country into a program to provide a better life for every citizen.

In this exhibition we open tonight, the American people will have an opportunity to see examples of the great achievements of the U.S.S.R.—increased industrial output advances in sciences and technology and significant strides forward in transportation construction, health, and welfare. I know that I speak for all of our people when I say that we rejoice in the material progress you have made and are making.

We welcome the idea of peaceful competition between nations and systems of government—competition which if directed into peaceful channels can only result in improving the lot of all mankind. But we believe that if competition is to be peaceful it must be fair. If certain rules of the game are not followed by all parties concerned, healthy competition can become unhealthy.

And we further suggest that this competition be extended to include not only the material achievements which this exhibition so magnificently demonstrates, but the spiritual values which have distinguished our civilzation.

As you travel through our country and visit our farms and factories, Mr. Kozlov, you will see that we too are making great material progress. You will also have an opportunity to see that we Americans have a great zest for discussing the pros and cons of every issue affecting the national interest and that we recognize and cherish the right of every citizen to freely criticize our Government and our Government officials.

You will discover that the debate in the Halis of Congress and our legislatures is lively and sometimes long and that it faithfully reflects the broad spectrum of view-points incorporated in a free society.

You will see free enterprise at workfree labor unions and free managements sometimes at odds over the division of rewards flowing from the enterprise, united in the knowledge that without free enterprise there would be much fewer rewards to divide.

You will have an opportunity to study our courts of law, our churches, our libraries, our universities. I know that when the complete your visit you will return to the U.S.S.R. convinced that not only is his Nation strong materially, but that united behind the leadership of our president in working for a world in which med can live together in peace, justice, and freedom.

You will find that the American people and the American Government do not want an acre of land from any other people—that we have no desire to impose our system of government on any other nation-that we want for others only what we enjoy for ourselves, the right for a nation to be independent, its citizens to be free, and for peoples to live at peace with each other.

We do not expect that this great exhibi-tion and your visit here or our exhibition in Moscow and my visit there will resolve the basic differences which exist between our Governments. But I know you will agree with me when I say that these events do Provide a unique opportunity to reduce to extent the misunderstandings which exist between our people and our Governments and thereby to further the cause of Peace to which we are dedicated.

In that spirit we hope that thousands of Americans will visit this exhibition so that they may see firsthand the achievements of the Russian people, and we wish you well as you travel through our country and get to know better the true ideals and aspira-

tions of the American people.

# Poison in Your Water-No. 135

EXTENSION OF REMARKS OF

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1959

Mr. DINGELL. Mr. Speaker, for some time now I have been inserting into the Appendix of the Congressional Record articles from newspapers around the country chronicling the frightening dan-Bers to the health of our people from sewage, industrial waste, and other germ laden and poisonous substances that we have been dumping by the hundreds of millions of tons into the streams and lakes of our beloved land.

A frightening instance of using waters of the United States for dumping of poisonous and toxic substances appeared in an article in the Denver (Colo.) Post of Wednesday, June 24, 1959, describing how the U.S. Public Health Service had stopped to the Color. stopped use of the Animas River in Colorado and New Mexico for the disposal of

radioactive substances. The danger inherent in such use is plain in the article to some 1,845 people living along the Animas in northern New Mexico and 100 in southwestern Colorado who use untreated river water. These people are ingesting radium and strontium 90 at an estimated rate of 160 percent above maximum permissible levels, Another 28,000 people living in Aztec and Farmington, N. Mex., have a daily intake of treated water ranging from 40 to the control of from 40 to 60 percent above permissible levels for radium and strontium 90 established by the National Committee on Radiation Protection.

While the Vanadium Corp. of America is to be commended for its prompt action in terminating use of the water for such purposes, it has created the gravest danger to thousands of people who must use that water to live. The Public Health Service is really to be congratulated, because if it were not for its vigorous and speedy action the situation would still continue to the grave danger of some 30,-000 domestic daily water users in the area.

The Denver Post article follows: REPORT SHOWS U-MILL WASTES POLLUTE ANIMAS

Santa FE, N. MEX., June 24.—Radioactive waste materials from the Vanadium Corp. of America uranium mill at Durango, Colo., are contaminating the Animas River, the U.S. Public Health Service said Wednesday.

As a result, some 30,000 persons living downstream from the mill in northern New Mexico are ingesting radium and strontium 90 in their water and food in concentrations above maximum permissible levels, the report said.

Dr. E. C. Tsivoglou, Chief of the U.S. Public Health Service team which made the report, said only the radium could be traced to the VCA mill. Strontium 90 in the river, he said, comes from fallout from atomic weapons testing. But both isotopes must be considered together, he said, because they follow similar routes in the body. It is their combined amounts which have public health

significance, he said.

The report said strontium 90 content of the river is not particularly high, but the radium content is. Thus the combined amounts are significantly elevated. Dr. Tsivoglou said he understood VCA already has started to take steps to reduce contribu-

tion of radium to the waterway.

The report was made public at the opening of a conference on interstate pollution of the Animas River called as the result of New

Mexico charges against Colorado. The survey report was not complete when presented Wednesday. It was based largely on tests made in the summer and fall of 1958. Tests made in early 1959 have yet to be completed and integrated into the final

report.

#### PERMISSIBLE LEVELS

The report pointed out that maximum permissible levels of internal ingestion of radioactive materials for the population at large are based on one-tenth of the levels permitted for persons working with radiation in their occupations.

The maximum permissible levels also are based on continuous lifetime patterns and ingestion of any particular radioisotope in amounts somewhat higher than the allowable for relatively brief periods of time may not result in undue harm.

But the report added that the National Committee on Radiation Protection has said "the goal should be no radioactive contamination of air and water and of the body if it can be accomplished with reasonable effort and expense."

VCA officials were to be given the opportunity of rebuttal later in the conference proceedings.

The U.S. Public Health Service report estimated that the 28,000 persons living in Aztec and Farmington, N. Mex., where water supplies are treated, have a daily intake of radium and strontium 90 ranging from 40 to 60 percent above permissible levels estab-lished by the National Committee on Radiation Protection.

There are another 1,845 persons living along the Animas in northern New Mexico and 100 persons along the waterway in southwestern Colorado who use untreated river water, the report said. These, the U.S. Public Health Service said, are ingesting radium and strontium 90 at an estimated rate of 160 percent above maximum permissible

#### POSSIBLE INCREASE

If VCA raises the amount of uranium ore it processes daily at the Durango mill from 500 tons to 700 tons, as planned, the radioactive contamination problem will be magnified, the report said.

Per capita ingestion estimates were made on the basis of the 1958 Animas streamflow which was comparatively large. During years of lower streamflow—such as occurred in 1955-56—ingestion rates would be greater because of the diminished amount of water available to dilute the waste, the report

Radium and strontium 90 when taken internally tend to simulate calcium and be-come deposited in bones from where they emit harmful radiation.

#### Lewis L. Strauss

EXTENSION OF REMARKS OF

# HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. DEROUNIAN. Mr. Speaker, here are the thoughts of a lifelong Democrat on the action taken by the Senate, on the nomination of Lewis L. Strauss, as appeared in a letter to the editor of the Washington Post on June 24 and signed by Marx Leva:

#### AFTERTHOUGHTS ON STRAUSS

Now that the long ordeal of Lewis Strauss is at an end, I can no longer refrain from writing my first letter to your newspaper in order to make the following comments:

1. As a long-time admirer of the Washington Post, in my opinion you slanted the Strauss story in your news columns in an inexcusable manner for a reputable news-paper. Your technique in this instance was more typical of the Chicago Tribune in its days of glory under Colonel McCormick than of the Post in its days of glory under Eugene Meyer.

2. As an ardent Democrat who intends to work for the election of a Democratic President in 1960, I think that the members of my party who led in bringing about the defeat of the Strauss nomination will regret the day that they assisted in this act of

political assassination.

3. I think that many able and dedicated Senators came to believe the charges against Strauss-and cast their votes against him on that account. I further think that many of these Senators were substantially misinformed on the basic facts, as a result of the very skillful tactics of those (including your newspaper) who led the anti-Strauss, anti-Eisenhower crusade. In my opinion, your newspaper contributed very greatly to the final outcome in this matter, and contributed greatly also to the spread of misinformation as to facts and misinterpretation as to the meaning of such facts.

4. I think that the following facts and viewpoints—which have not heretofore been called to the attention of your readers, I believe, but which I have called to the attention of a number of Senators during the past several weeks-should be set out in your

letters column:

(a) When President Truman, at the request of General Marshall, appointed Anna Rosenberg, a liberal Democrat, to be Assistant Secretary of Defense in 1951, and when the late Senator McCarthy and others spread the false rumor that she was a Communist in an effort to defeat her confirmation by the Senate, Lewis Strauss, a conservative Republican who was then in private life, came down to Washington to help bring about the confirmation of Assistant Secretary Rosenberg.

To my personal knowledge (since I was Assistant Secretary of Defense for Legal and Legislative Affairs at the time), he spoke to or went to see Senators Robert Taft, William Knowland, Bourke Hickenlooper and Harry Byrd, to urge that Anna Rosenberg be confirmed. At a time when McCarthyism was at its height, this was an act of courage and nonpartisanship on the part of Strauss-and I think your readers should know about it.

(b) Almost 2 years earlier than the Anna Rosenberg episode, in the late winter of 1949, while Strauss was still serving as a member of the Atomic Energy Commission, he phoned me at the Pentagon (where I had stayed on in the Office of the Secretary of Defense at Forrestal's request, after having served with Forrestal both at Navy and at Defense) to say that there was a matter on which he was in a minority position on the Commission—a matter which he regarded as vital to the security of the United States.

He asked if I could arrange for him to see the then Secretary of Defense, Louis Johnson, I did so. After Strauss saw Johnson, Johnson went to see President Truman. Immediately thereafter, in early November 1949, President Truman designated a three-man special committee of the National Security Council to look into the matter. (The issue involved, of course, was whether the United States should seek to produce the H-bomb.

This committee reported to President Truman that the United States should proceed with the H-bomb. President Truman so or-dered, in January of 1950—and the rest is history.

Obviously, Lewis Strauss was not the only man responsible for the H-bomb. In the last analysis, President Truman was respon-

But I think that for his role in the H-bomb matter, even if he had done nothing else for the national good, Lewis Strauss deserves the undying gratitude of the people of the United States-and by the Senate vote, that gratitude has been expressed in a manner which, in my opinion, constitutes a national dis-

MARX LEVA.

BETHESDA.

## Market Research Reveals Demand for Self-Retirement Plans

EXTENSION OF REMARKS

# HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following article by Charles M. Bliss, executive vice president of the Bank of New York which ap-peared in the June issue of the Trusts and Estates magazine:

MARKET RESEARCH REVEALS DEMAND FOR SELF-RETIREMENT PLANS

(By Charles M. Bliss, executive vice president, the Bank of New York)

On May 19, Senator George Smathers, Democrat, of Florida, introduced a bill to permit self-employed individuals to take a current tax deduction of 10 percent of their net earnings, with a maximum limitation of \$2,500 a year or \$50,000 in a lifetime, provided the self-employed individual makes an investment in certain types of retirement annuity or a specific type of retirement trust. The bill, identified as S. 1979, is now pending before the Finance Committee of which the Senator is a member.

This bill, with one exception, is identical to H.R. 10, commonly referred to as the Keogh-Simpson bill, which passed the House on March 16 and would become effective January 1, 1959. It differs from the House-passed measure in that it would become effective for taxable years beginning in 1961 and thereafter. This change, Senator SMATHERS explained, was made to meet opposition to the pending proposal predicated primarily on revenue loss. The Senator hopes that by 1961 the budget will be in a more healthy state than it is today. Meanwhile, he said, "I have chosen this course of procedure to give impetus to what I believe is rather slow progress in removing a glaring tax inequity toward 10 million selfemployed citizens."

#### FINDINGS OF SURVEY DISCLOSED

By coincidence, on the same day the Smathers bill was introduced, the findings of a research questionnaire sent to more than 30,000 professional men and women on the general subject of pensions for the selfemployed were disclosed for the first time at a seminar arranged by the Bank of New York, for the benefit of its correspondent banks. Some 128 representatives of 101 banks from 28 States were in attendance at the full-day session.

The survey was planned in the fall of 1957. Legislation to provide a solution to the tax plight of the self-employed had been enacted in Great Britain in 1956 and in Canada early in 1957. The Bank of New York after weighing the evidence at home and abroad, decided there would be adequate time and a favorable climate in which to conduct a market research survey and to build a pro-gram around the self-retirement prospect in this country. The bank could thus give professional men and women both information and encouragement on a new and useful development affecting them and, at the same time, measure the size and quality of the market for self-pensions.

First, a test was made by mailing the questionnaire to a selected list of 600 physicians and dentists in mid-Manhattan. About onethird were the bank's customers and twothirds were prospects. Altogether some 35.5 percent responded: 43 percent of the customers and 32 percent of the prospects.

The test mailing not only caused much favorable comment but the questionnaire gained the attention of key officials of large and important professional groups who, in turn, requested that their full membership lists receive the bank's informative material in order to gain a better understanding of the promising new self-retirement development.

In the spring of 1958, the questionnaire was mailed to some 20,000 professional persons in the New York area. The identical questionnaire went to an additional 13,000 in the Boston area through mailings of the Old Colony Trust Co. Of the professional men and women who received the questionnaire approximately one out of four asked to be put on the special list to receive further informative releases on the subject of pensions for the self-employed.

One out of five indicated their age and profession, whether they had any sort of retirement plan, whether they expect to set up a plan under new legislation, the amount they would set aside each year, how they wanted their retirement savings invested, whether they preferred life insurance or bank trustee management, and whether they would use an individual or an association

THE COMPOSITE PROFESSIONAL MAN

In general, a professional person starts his career with low pay for the years of specialized training. Therefore, one important purpose of the survey was to develop a composite picture of the professional man who would become eligible for self-retirement upon the enactment of permissive legislation.

The survey disclosed that the composite professional man in a metropolitan community arrives at the crossroads of his career at about age 35, when apparently there is an equal division between the professional men (and women) who are in employment and those who have established themselves as self-employed. Ten years later, and continuing through the balance of the professional carrer, 8 out of 10 become self-employed. This trend to self-employment in relation to age is illustrated in chart I [not printed in RECORD |.

On the question of financial planning for old age, the survey disclosed another significant pattern. Professional persons in empolyment and those who are self-employed are in the same relative position at age 35-2 out of 10 have made some provision for retirement. Ten years later, however, 5 out of 10 of those who are employees are members of a qualified plan, although many of them feel their particular provisions for re-tirement are inadequate. But, as for those who are self-employed, 7 out of 10 still by their own admission—have no planned retirement program of any kind. The incidence of retirement planning in relation to age is shown in chart II [not printed in RECORD |.

The survey's findings, based on 6,200 responses from lawyers, physicians, dentists, and accountants, indicates that within a random group of professional persons in the community 7 out of 10 are fully self-employed; 1 out of 10 is a full-time employee; 2 out of 10 are both employed and selfemployed-one mostly employed, the other mostly self-employed; on average, only 3 out of 10 have some sort of planned individual old-age retirement program.

Responses to particular questions were as

Nineteen out of twenty expect to set up a retirement savings plan if permitted to use tax-deferred dollars under new law.

Would you in general elect to have your program with a bank trustee or with a life insurance company? Bank trustee, 63 per-cent; life insurance, 12 percent; both, 3 percent; no election, 22 percent.

How much would you expect to put aside into such savings? On average, \$2,500 per year (but the questionnaire then indicated a \$5,000 ceiling and, in many cases amounts shown appeared to be wishful thinking).

Would you in general prefer to establish your own individual plan or to participate as a member of an association plan? Response inconclusive, but a slightly larger numberthough not a clear majority—would consider an association plan, if it could be demonstrated to have administrative advantages or economies.

In the matter of investment: Only 5 percent said they would not want to use any common stocks; and only a little more than 10 percent said they would want all their retirement savings invested in common

Indicated by the responses was the need for two collective funds: one invested largely in common stocks; the other invested in fixedincome securities. The indicated divisions of investment in these two funds, on the whole, were on the fairly conservative side.

#### WIDESPREAD NEED OF INFORMATION

The survey established the existence of broad interest in self-pensions and the present lack of financial planning among professional persons in general. In particular, it disclosed the widespread need for information on retirement planning based on Keoghtype legislation.

With the questionnaire a return reply card was sent which enabled respondents to request a booklet entitled "Pensions for the self-employed," written as an educational In the summer, the bank mailed to the special list a second booklet which commented on similarities in the positions of professional practitioners and small business proprietors in the matter of retirement. and discussed Keogh-type legislation being proposed by the Senate Small Business Committee. The mailing was timed to coincide with the agreement in executive session of the House Ways and Means Committee to report the Keogh bill to the House for the first time since the bill's introduction by Representative KEOGH, Democrat, of New York, in 1951.

In the fall, following passage of the bill in the House, a third booklet highlighted benefits that would accrue to the individual self-pensioner under the proposed legislation. And, because Keogh-type legislation would create a new form of savings, the bank offered a special account for the accumulation of individual retirement sav-Ings. Experience in Canada has disclosed that there had not been sufficient prior Planning by those who were entitled to benefits.

With passage of the Keogh-Simpson bill in the House in mid-March, the bank decided to intensify its educational program. First, a new informative booklet was published consolidating and updating the earlier series of three. Now, the new booklet is being mailed to additional self-employed groups and is being offered by radio spot announcements and by advertising in metropolitan newspapers.

Altogether the survey has aroused considerable interest and clearly the educational Program has created good public relations among professional men and women and others in the community who are self-employed, regardless of the fate of the Keogh-Simpson bill in the Senate.

#### PROSPECT FOR FURTHER PROGRAMS

The question of educational programs built around the self-retirement prospect came up at the bank's seminar on May 19, and it was indicated that, although about One-half of the representatives present said their institutions had decided to handle Reogh-type business, only about one-tenth said they had presented any sort of information or publicity program pointing out the benefits of this important new development. Therefore, Senator SMATHERS' postponement of the effective date of the proposed legislation is significant for it indicates there may well be time for further educational effort by banks over the country.

Meantime if Congress can be induced to limit the bill to the basic point of correcting the inequity so as to make it possible under the law for all employed and self-employed persons to be entitled to tax-deferral privileges on funds set aside for retirement benefits, self-interest and competition will provide the stimulus to greater use of the privilege. But if the legislation attempts to force broader coverage, the cost in terms of immediate lost revenue can become so staggering that the measure will lack the necessary support. Organizations representing self-employed persons will have an opportunity to be heard by the Senate Finance Committee and much will depend upon the effectiveness of their presentation.

The Bank of New York feels that the House-passed proposal now pending before the Sanata Proposal now pending head the Senate Finance Committee points ahead to promising new developments in the trust and banking field.

Exemptions Under the Fair Labor Standards Act Applying to the Forest Products Industries

> EXTENSION OF REMARKS OF

# HON, CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1959

Mr. McINTIRE. Mr. Speaker, the forest products industry is vital not only to the economy of the State of Maine but also to the industrial complex of America.

This industry has recently set forth its views as to existing exemptions under the Fair Labor Standards Act, and because this presentation is both comprehensive and edifying, I commend it to the attention of my colleagues in the Congress:

EXEMPTIONS UNDER THE FAIR LABOR STAND-ARDS ACT APPLYING TO THE FOREST PRODUCTS INDUSTRIES

#### 1. THE 12-MAN EXEMPTION

(a) What is it?

Small-scale forestry and logging operations were exempted from the minimum wage and overtime pay provisions of the Fair Labor Standards Act by the 1949 amendments, effective January 25, 1950. This exemption is identified as section 13(a)(15), which reads:

'The (minimum-wage and overtime-pay) provisions \* \* \* shall not apply with respect to any employee employed in planting or tending trees, cruising, surveying, or felling timber, or in preparing or transporting logs or other forestry poducts to the mill, processing plant, railroad, or other transportation terminal, if the number of employees employed by his employer in such forestry or lumbering operations does not exceed 12."

(b) Why is this exemption essential to our

industry?

1. The great bulk of all pulpwood consumed in the United States today is produced by many, thousands of small business-

men employing 12 or fewer persons.

2. Pulpwood is generally produced by groups of men scattered over large areas working alone or at most with one or two other people. Very often a worker may be a half mile or more from another. In all forest regions but the West there are few large timber stands and most productive land is owned by small farmers. A single producer's crew may be scattered even further among a number of woodlots in different areas. Under these conditions the small businessman producer cannot possibly keep the detailed time records on his employees which are required by law except where the exemption applies.

3. Loss of the exemption would mean that the smaller employer would either have to hire a timekeeper or become one himself thus substantially increasing his cost of doing business or reducing his own chances of do-

ing productive work.

4. Production of forest products, like farming cannot be conducted on the basis of a regularly scheduled workweek of 40 hours or even a day of 8 hours as in the

case of a factory operation. Weather plays an important part. Many available work-men cut wood as a means of supplementing their regular earnings so that they may work part-time or at times most convenient to themselves. They may work half of 1 day, 8 hours the next, none for a couple of days, any maybe 10 hours another day. Eliminating the exemption would make this kind of work impossible without violating the law.

5. Compensation in small forestry operations has always been paid on a piecework basis. Under this system woodsworkers have always been able to earn at least, and usually substantially more than, the prevailing minimum wage. Under this practice it has been possible to employ handicapped workers which would become uneconomical if the

exemption were lost.

6. Between 1938 when the Fair Labor Standards (Wage and Hour) Act was passed and 1949 there was no 12-man exemption. Pulpwood producers, dealers and other operators found it impossible to comply with the law which called for factory-type recordkeeping. Many operators were charged with violations of the law which they were unable to avoid. Congress recognized the unfairness of the situation and clearly felt that the Wage and Hour Division could not and should not force these requirements on small operators who did not and could not pay workers on an hourly basis. This resulted in the enactment of the present 12-man exemption which some Congressmen would now take away from the industry.

7. Elimination of the exemption would not raise the earnings of woodsworkers. It would force higher nonproductive costs on small producers. Without the exemption, the wood which is being produced by the small producer today would, of necessity, in many cases be produced by large operators who can stand the extra expense of supervision and recordkeeping. Thus the small operator would be gradually forced out of busi-

#### 2. THE SEASONAL EXEMPTION

(a) What is it?

An industrywide 14-week exemption from the overtime-pay provisions of the Fair Labor Standards Act is available to employers in Standards Act is available to Employers in seasonal industries. The exemption relieves employers of overtime pay liability for hours worked up to 12 daily or 56 weekly; it does not relieve them of liability for the minimum wage. This seasonal exemption is contained in section 7(b) (3) of the act. It is offered to industries found by the Administrator to be of a seasonal nature.

The exemption does not automatically apply to an industry. Application must first be filed for exemption, and then the Administrator determines whether the industry

falls within the seasonal category.
Shortly after the act was passed in 1938 the American Pulpwood Association applied for seasonal exemptions for certain activities common to northern operations. These included ice and snow road hauling, sap peeling and spring freshet driving. After hearings and rehearings in May of 1939 the Administrator granted the industry seasonal exemptions for these three activities.

(b) Why is this exemption essential to our

Industry?
1. In these seasonal operations because of the laws of nature the whole year's work must be done in the space of a few weeks. The work is usually done in the forests far removed from workers' homes so that camps must be constructed. Loss of the exemption would mean increasing the capacity of the camps to take care of larger numbers of men on a straight-time basis. This would result in higher costs and workers would each receive less pay because of the shorter hours of work. Usually one of the accepted reasons for overtime pay penalties is to encourage employers to hire more employees rather than work the normal number overtime. In a factory this is a workable idea. More than one shift can be put on. You cannot operate two 8-hour shifts in the woods. There are only a limited number of daylight hours. In addition, this would be futile because of constant woods labor shortages in the northern States, Canadian workers must be imported.

2. The producer in the areas where the seasonal exemptions apply must have all of his wood cut, peeled, and out of the forest within the few weeks he can operate. Already at an operating disadvantage because of nature, this producer cannot survive if additional costs are imposed upon him. His employees going into the woods to work and living at camps want to be able to work longer hours during the short time allotted by nature if the job is to be attractive at all.

3. Wood produced in the northern States is directly competitive with Canadian wood. Canada has no lag which arbitrarily forces higher costs in the production of wood. Substantial increases in the costs of American wood such as would be caused by eliminating the seasonal exemptions would put the product of American producers at a serious competitive disadvantage.

#### 3. SUMMARY

After thorough study Congress and the Wages and Hours Administrator has respectively seen fit to grant the forest products industries certain partial exemptions from the Fair Labor Standards Act.

Ill-advised or uninformed legislators would rescind these exemptions apparently for the purpose of improving wages of workers in the woods by bringing them to the minimum prescribed by law. Wages in this industry already are at or well above the minimum level so that eliminating the exemptions would not have this intended result. Instead unintended effects would come about. The cost of doing business for the small producer would be increased without an off-seting increase in his productivity. Small producers would be enmeshed in record keeping redtape which has already been proven unworkable. Small producers would be forced out of business or else have to operate in violation of the law. Work opportunities would be eliminated and American wood would be placed at a competitive disadvantage.

#### Yellow Journalism: A Case History

EXTENSION OF REMARKS

# HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Friday, June 26, 1959

Mr. WILLIAMS. Mr. Speaker, the readers of the New York Herald Tribune are familiar with the Tallahassee case where four white men committed a horrible crime involving a Negro girl. Last week an equally horrible crime was committed in the city of New York. Six Negro youths brutally raped a 14-year-old white girl on the premises of a school.

However, the Herald Tribune, in its June 21 edition, carried a story on page 2 about this crime but specifically avoided mention of the racial identity of the principals. In the Florida case, they had gone out of their way to play up the racial aspect of the case. It is another example of yellow journalism, wherein the eastern metropolitan press magnifies a southern interracial crime but conceals from public view one on its own doorstep.

Where are the heated editorials, demanding justice in the Corona, Queens, case? Where are the front page headlines screaming that six Negroes hit a 14-year-old white girl, dragged her onto a nearby stair landing, and raped her three times while two held her and two acted as lookouts?

Where are the cries of anguish from Members of Congress? Will they be as swift to demand justice, passage of protective laws, and general condemnation of the culprits as they are when similar incidents occur in the South?

Under leave to extend my remarks I include the Herald Tribune story and also an Associated Press story so that they can be compared.

Responsible journalists should demand the immediate cessation of slanted, discriminatory, and yellow reporting such as cited herein.

In a city where it is reported that volunteer vigilantes must assist regular police in patrolling Central Park, the newspapers should take the lead in ridding New York of crime infestation instead of headlining articles which seek to embarrass the South. But, on the contrary, they sweep their own trash under the rug while condemning the South for refusing to adopt policies and practices which would create the ill will and high crime rates, existing in New York City.

Also included is an Associated Press story describing how New York newspapers treated the Queens rape case as compared with the Tallahassee case.

The articles follow:

[From the New York Herald Tribune, June 21, 1959]

HIGH BAIL FOR FOUR YOUTHS IN SCHOOL RAPE—SHE IS THREATENED BY ONE AT STA-

Four youths implicated in the raping of a 14-year-old girl on a stair landing behind a junior high school in Corona, Queens, were ordered held in \$25,000 ball each yesterday by a magistrate who remarked, "I thought the days of barbarism and savagery were over."

Police, meanwhile, reported that one of the youths, Jacob Bethea, 16, of 32-43 107th Street, Corona, threatened the girl when he was led past her in the Eimhurst precinct station Friday night. "When I get up my bail, I'll get you," he was quoted as saying. Bethea has been identified by police as the leader in the incident.

#### TWO WERE LOOKOUTS

Bethea and the three others taken to Ridgewood Felony Court yesterday—John Rich, 16, of 31-10 103d Street, Astoria; Henry Stokes, 16, of 93-16 Corona Avenue, Corona; and Edward Jacobs, 17, of 32-15 95th Street, Corona—are charged with rape and acting in concert. Two other youths, one 14 and one 15, are to be taken to Children's Court Monday.

According to Assistant District Attorney Bernard Patten, Bethea and Rich have admitted raping the girl, Stokes and Jacobs have admitted holding her during the assault, and the other two youths have admitted serving as lookouts.

#### MAGISTRATE IS ANGRY

When an attorney for the Rich youth asked Magistrate Milton J. Solomon to set low bail, saying the charges were mere accusations, the magistrate exploded:

"If this complaint were true, they should be held without ball. I thought the days of barbarism and savagery were over. This is an outrageous, unconscionable, and dastardly crime."

The girl was in court and, when the complaint was read by the court clerk, she was asked to swear that the complaint against each youth was true. Four times she raised her right hand and replied, "I do,"

She wore a white blouse and a black skirt. She did not have on makeup and her hair was brought back in a pony tail. One eye was discolored and the knuckles of both hands were scratched. The black eye allegedly was inflicted by Bethea during the assault, which occurred behind Junior High School 16, 41st Street and 104th Avenue, Thursday night.

[From the Washington Sunday Star, June 21, 1959]

NEW THREAT TO VICTIM OF RAPE NOTED

New York, June 20.—One of six teenage Negro boys charged with raping a 14-yearold white girl in a schoolyard Thursday night was accused today of threatening her in a police station after his arrest.

"I'll get you," the boy was quoted as saying to the girl as she was identifying the group to officers. The six had been taken into custody and were in a Queens stationhouse last night.

An account given in Ridgewood Felony Court today by Detective Lt. Matthew Birmingham apparently stirred the wrath of Magistrate Milton Solomon as the four older boys were brought before him for arraignment on first-degree rape charges.

An attorney for one of the four asked Magistrate Solomon to set reasonable bails saying the charges were mere accusations. But the magistrate exploded:

"If this complaint is true they should be held without bail. I thought the days of barbarism were over. This is an outrageous, unconscionable, dastardy crime."

The magistrate then fixed the bail figure at \$25,000 for each of the four youths, 18 and 17 years old. They will receive a further hearing Wednesday. Ordinarily, bond in rape cases is around \$2,500.

The four defendants are John Rich, Jacob Bethea and Henry Stokes, all 16, and Edward Jacobs, 17. The two others arrested, 14 and 15, were charged earlier with juvenile delinquency because of their ages.

Also because of the age factor, names of the latter two boys and the girl were not made public.

#### [From the Jackson Daily News, June 20, 1959]

#### NEW YORK'S REIGN OF TERROR PLAYED DOWN BY NEWSPAPERS

New York.—New York newspapers, which gave considerable page 1 attention to last week's Tallahassee, Fla., race trial, Friday did not front page the New York rape of a white teenager by six Negro youths.

The post gave the New York story a column on page 4. In an adjoining column on the same page it ran a two-column story on the Little Rock, Ark., rape of a Negro girl by two white men. A five-column headline linked both stories.

The New York rape made page 10 of the Journal-American, page 21 of the World-Telegram, page 5 of the Morning Daily News, page 3 of the Morning Mirror, page 3 of the

Morning Herald Tribune, and page 11 of the Times.

In Tampa the Tribune's Saturday edition carried a 10-inch page-1 story entitled "Terror in New York." Inserted in the body of the story was a parenthetical statement saying some papers extensively played the Tallahassee trial under such headlines as "Terror in Tallahassee."

# Boyd Campbell Opposes Civil Rights Legislation

EXTENSION OF REMARKS

# HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. WILLIAMS. Mr. Speaker, one of the most forceful arguments I have heard against pending civil rights measures was made on April 22, 1959, before the Civil Right Subcommittee of the House Committee on the Judiciary by Mr. A. Boyd Campbell of Jackson, Miss.

Mr. Campbell is a former president of the U.S. Chamber of Commerce. His views on this subject should receive the careful attention of every Member of Congress from all sections of the country.

Under leave to extend my remarks, I include his statement:

STATEMENT OF BOYD CAMPBELL, OF JACKSON, MISS., BEFORE THE CIVIL RIGHTS SUBCOM-MITTEE OF THE HOUSE JUDICIARY COM-MITTEE, WASHINGTON, APRIL 22, 1959

My name is Boyd Campbell. I am a small businessman from Jackson, Miss. I appear before you in my individual capacity and not as the representative of any organized group. I must, therefore, ask your indulgence if I make frequent use of the first person singular pronoun.

When I made known by intention to request the privilege of making a statement to your committee on the proposed legislation that is currently under consideration—in particular, HR. 4457, HR. 3147, and HR. 619—some of my friends, with apparent genuine concern about by sanity and safety, warned me to stay away.

I was reminded that no southerners were on the committee. I was told that my statement would be me with hoslity. One counsellor said I would be "clobbered." Another said I would be drawn and quartered.

I admit that I am without experience in this role, but if there was ever any doubt about the rightness of my request for a hearing, it was resolved when I encountered so much misunderstanding about legislative processes on Capitol Hill. The misconception about the treatment of an American citizen who is a spirit of good will and sincere conviction makes statements before a committee of the Congress that might possibly be in conflict with the equally sincere convictions of the committee members was amazing.

Even though we are dealing with a highly controversial subject, the discussion of which is a constrained to believe that the goals of the sponsors of these bills are not vastly different from my own in the area of improved race relationship. The difference between us arises out of the proposed methods by which they are sought to be attained. Without meaning to be presumptuous, I am

inclined to believe that there are thousands, probably millions of unorganized Americans who believe as I do.

Before proceeding further, I wish to present my credentials for the sincerity of what

I will try to say.

I am the grandson of two non-slave-owning Confederate soldiers, both of whom returned from the War with wounds that crippled them for life. In their reminiscences and discussions of the war, I never heard from them one word of recrimination or bitterness. From them I learned the meaning of good will. I did not appreciate its value then. I do now. In too many of our relationships, domestic and foreign, the factor of good will appears to be eroding at a time when our national well-being requires that it should be increasing.

For all of my mature life, as have thousands of my white neighbors in Mississippi, I have advocated better education, better economic opportunity, better living conditions, better health services, and equality before the law for Mississippi Negroes.

In 1950, as a member of a statewide group of educators and laymen, I was privileged to raise a sum of money from friends and associates to finance a study of Mississippi's school system in an effort to create sentiment for the enactment of an education code that would correct inequalities and inequities; that would establish uniform standards, and would eliminate discrimination between the races in salaries and facilities.

With the aid and assistance of the State chamber of commerce and the support of a sympathetic State administration, Mississippi's Education Foundation program was enacted into law in the year 1953.

Early in the year 1954 there was author-

Early in the year 1954 there was authorized to be spent by the State to supplement local funds a total of \$180 million for public school buildings. To date approximately \$63 million has been allocated, of which 70 percent is for schools for Negrocs.

It is my privilege to serve as a member of the board of trustees of one of our finest institutions of higher learning for Negroes. I refer to the Piney Woods Country Life School, which was founded and is still administered by Dr. Laurence C. Jones, one of Mississippi's most distinguished and highly esteemed citizens.

On Sunday, April 5, here in Washington, an American vocalist, who has received international acclaim, gave a concert in Constitution Hall. She is Leontyne Price, a Negro soprano of Laurel, Miss., whose first public concert it was my pleasure to sponsor when the young artist was still a student at Julillard.

Against this background, I am here to express grave concern as to the effect of this proposed legislation upon the well-being of southern Negroes in particular and upon our national unity in general.

The integration decision of May 17, 1954, appears to have become the inspiration for legislation and litigation designed to take over and expedite the program which was making great progress voluntarily through the joint efforts of leaders in both races, in thousands of communities throughout the entire South.

The result has been exactly the opposite. I can express this conviction no better than to quote a telegram to the Christian Science Monitor, in which I responded to a request from its editor, Dr. Erwin Canham, for a statement on southern state of mind and specific American attitudes necessary to avoid violence and bring healing to a deteriorating situation.

Following is the telegram, which the Monitor carried in full on March 10, 1956:

"The vast improvement in race relationship and the progress of southern Negroes in education, health, and economic opportunity was brought about by the enlightened leadership of men of good will in both races,

This progress came to a jarring halt when the NAACP usurped local Negro leadership and undertook to speedily compel a condition by methods that are abhorrent to the American tradition. The problem is one that will not be solved by name-calling and weight-throwing. The deteriorating rela-tionship between the races in the South will continue as long as outside groups attempt to force integration upon us. History does not record a single instance of compulsory integration. It will not do so in this instance. Meantime, there are heartaches aplenty on both sides as we witness the result of years of patient effort being swept away ruthlessly by methods that engender hatred rather than good will. We can only hope that those who condemn us would first try to understand us, and to understand the vastly complex problem which is ours and which lends itself to no superimposed solution. If and when methods of pressure and compulsion are abandoned, the voices of the moderates of both races will be heard

In support of the foregoing statement, Editor Percy Greene of the Jackson Advocate, leading Negro newspaper, made the following editorial comment:

"That this statement by Mr. Campbell is indisputably true can be easily seen by looking at conditions in Mississippi as well as elsewhere in the South.

"Prior to the decision in the school segregation cases, using Mr. Campbell's assumption, when the NAACP took over Negro leadership, there were many easily seen signs of Negro progress toward first-class citizenship.

"It had been pretty generally conceded that the Negro had been extended the right to vote along with other citizens of the State, a view that had been supported by many white editors of small but influential newspapers. There had also developed a real and honest effort to provide equal educational opportunities for Negro and white children of the State and equal pay for Negro and white teachers.

"There were many other signs then evident to the intelligent and fairminded observer that time and space will not permit mentioning here.

"Perhaps greater than all the factors mentioned and those that could be mentioned, was the fact that the lines of communication between the two races were wide open and the leaders of both races were getting together at local levels to discuss their problems in an intelligent and understanding manner.

"Since the 1954 decision nothing which could then be pointed to affirmatively is now true as regards the progress of Negro citizens in the State toward first-class citizenship."

The telegram to the Monitor was dated March 6, 1956. If I were called upon to appraise the situation today, I could do no better than repeat it and add that Federal laws enacted subsequent to that date—for example, the civil rights bill of 1957 and the decisions of the Federal courts—have solved nothing.

They are creating a chasm of bitterness. As history repeats itself, they are setting neighbor against neighbor, friend against friend, and brother against brother. Human dignity cannot be preserved or protected by penalizing one minority to befriend another,

In a dynamic society like our own, change is inevitable, but change in attitudes, change in human relationships—the kind of change that endures because all men accept it and live with it—does not come suddenly. It is a maturing and a ripening. We of this generation should have learned that it cannot be accelerated by edict or decree. It cannot be accelerated—with def-

erence to the honorable members of the Congress who think otherwise—by the enactment of Federal laws.

Our memories are short. We need to remind ourselves of the 18th amendment and the Volstead Act. The great experiment failed because it undertook at one fell swoop to accomplish that which can only be attained by a change in the attitudes of citizens of a free society toward moral and so-

zens of a free society toward moral and social accountability. There is a parallel here. The mores and traditions of 40 million free people cannot be changed by compulsion.

Recently we have been hearing a lot about second-class citizenship. The words are used in at least one of the bills which you are considering. I am not sure that I know what second-class citizenship means, but if it means what I think it does, it will never be abrogated by statute. First-class citizenship is a status that has to be earned. It cannot be attained by any short cuts.

Long before the Supreme Court's decision in 1954 men of good will in the South wrestled with the problem of improving race relationships and enhancing the condition of southern Negroes. The people of the South felt then, as they do now, that the solution of this problem was their responsibility, their obligation—the obligation of white people and colored people working together.

Meantime, southern people were not concerning themselves with the problem of relationships with other ethnic groups—for example, the Mexicans in the Southwest, the Asiatics on the Pacific coast, and the Puerto Ricans in New York. They conceded to the people who lived closest to these problems the right to work out their own solutions within the framework of moral and ethical considerations.

Since the precedent of quoting laymen in a judicial decision—in particular, Mr. Gunnar Myrdal, a Swedish sociologist—has been established by the Supreme Court, I feel privileged to quote an American novelist and Nobel prizewinner in support of my views. He is William Faulkner of Mississippi, who, in an article titled "A Letter to the North," which was published in the March 5, 1956, issue of Life magazine, said:

"From the beginning of this present phase of the race problem in the South, I have been on record as opposing the forces in my native country which would keep the condition out of which this present evil and trouble has grown. Now I must go on record as opposing the forces outside the South which would use legal or police compulsion to eradicate that evil overnight. I was against compulsory segregation. I am just as strongly against compulsory integration. Firstly, of course, from principle. Secondly, because I don't believe compulsion will

The white people of the South are constantly told that their so-called treatment of Negroes is a liability in our country's international relationships. We are said to be providing fuel for Communist fire. Therefore, Congress should pass a law to force people to maintain the right attitude toward each other.

I submit that the charge is as false as the remedy is futile.

I do not pretend to be an authority on international relationships, but I have been exposed to the relentless, unchanging Communist conspiracy, the purpose of which is to dominate the world.

They cannot do this while we stand strongly in their way. Every official act—legislative, judicial, or executive—that concentrates power in Washington at the expense of our sovereign States brings joy to those who would destroy us.

As I come to the close of this statement, I fully recognize how inadequate my words have been in an effort to portray a condition that needs to be experienced to be under-

stood—that needs to be studied at firsthand rather than from afar.

The hardest working people I know are Members of the Congress of the United States. There are many more demands upon their time than they can possibly meet. I thank you heartly for the time which you have given me today but, in connection with the problem with which we are mutually concerned, I sincerely wish you could find the time—and on behsif of all Mississippians for whom I now presume to speak, I invite you—to come to Mississippi and talk to the leaders of both races. I think you would find, gentlemen, that, almost with a united voice, you would be told that more legislation is not the answer to our problem.

# Will Keep America Free

EXTENSION OF REMARKS

# HON. WALTER NORBLAD

OF CREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. NORBLAD. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the Record, an article entitled "Will Keep America Free" published in the National Tribune—The Stars and Stripes of June 25, 1959.

WILL KEEP AMERICA FREE

A highly placed spokesman of the Department of Defense expressed the gratification and pleasure early this week at the announcement of the signing of a pact between Pan American World Airways and four unions that provide services to the airlines.

The agreement, which the Defense spokesman described as a very definite and forward step in labor management relations in defense interests, provides assurances that cargo and personnel essential to national defense will be transported even though union members may have withdrawn from commercial airline service due to labor disputes.

The latest unions to sign the agreements are: The International Brotherhood of Teamsters. Chauffeurs, Warehousemen and Helpers of America covering service supply-clerks and lead supply clerks, the Brotherhood of Rallway and Steamship Clerks AFL-CIO, covering clerical and related employees: the United Plant Guard Workers of America; the Transport Workers Union of America, AFL-CIO, Air Transport Division, covering mechanics, flight service personnel and port stewards.

Previously similar agreements had been made by Pan American with:

The Air Line Pilots Association, the Flight Engineers International Association, the Air Line Dispatchers Association.

The agreements provide for the following:

1. Even though the unions should withdraw from commercial airline service because
of labor disputes, they will continue at their
respective jobs to insure the airlift of cargo

and personnel essential to national defense.

2. A company official will certify in writing that the flight concerned will be exclusively for these purposes.

 The agreements will not be altered or terminated without at least 2 years' written notice by either the company or the unions.

 The agreements with the seven unions have been incorporated into their regular collective bargaining agreements.

The significance of the agreements lies in the fact that the Government can be assured that traffic essential to the Department of Defense will continue to move despite

labor disputes involving any of the unions directly concerned with Pan American's flight operations.

(This newspaper feels that both Pan American and the labor unions concerned in this agreement deserve commendation for putting their country's defense above their own personal desires and as long as this type of teamwork exists America will always be free.)

# Key Questions for Awakening Africa

EXTENSION OF REMARKS

# HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 30, 1959

Mr. HUMPHREY. Mr. President, the great continent of Africa is alive with portent and promise. The drama of emerging Africa is unfolding more rapidly than most Westerners suspect.

Mr. Tom Mboya, a member of the legislative council of Kenya and chairman of the All-African People's Conference, has written a perceptive article which I should like to invite to the attention of my colleagues in the Senate. Mr. President, I ask unanimous consent that Mr. Mboya's article, "Key Questions for Awakening Africa," which was published in the June 28, 1959, issue of the New York Times magazine, be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

KEY QUESTIONS FOR AWAKENING AFRICA (By Tom Mboya)

Namoria Kenya.—At the invitation of the American Committee on Africa, I recently visited the United States for a 6-week lecture tour in an effort to explain the new Africalits problems and aspirations, to the American people. I spoke in every section of the country, and met people of widely varied interests: Congressmen and Senators, State Department officials, labor leaders, Governors and mayors, college and university students and teachers, newspapermen and broadcasters, and Negro leaders. I think, therefore, that my impressions are fairly representative of a cross section of the American people.

Having visited the United States in 1956, I was much impressed with the increase in knowledge about Africa. The questions I was asked were based more on interested understanding than on detached curiosity. Four questions in particular which seemed to trouble Americans came up at almost every meeting. I should like to answer them here.

(1) Are Africans ready for self-government?

I was often reminded of the lack of adequate numbers of educated personnel to run the new governments which we in Africa have been demanding. I was told that the high illiteracy rate in many dependent territories would make it impossible for Africans to operate a democracy successfully.

While conceding that Africa has a long way to go toward creating a generally literate community, I answered that this was a common argument used by colonial powers in defense of their continued rule. Often my questioners assumed that the colonial powers were primarily concerned with the education of our people, and that there were deliberate training programs looking toward the day of independence.

In fact, however, colonial systems give priority to, and indeed are based upon, such activities as permit or promote the human and material exploitation of the people and territories concerned. Effort is concentrated on extractive industries and quick profits. In every case, investment in education, public health, and other social development programs lags behind.

Ghana's recent history clearly illustrates what I mean. When the all-African Cabinet took over the Government, about 20 percent of the country's children were in school. In 5 years, this Government has raised the figure to 85 percent and continues to open a new school every other day. There had been nothing to equal this in 80 years of colonial rule.

In areas with a European settler community the problem is even worse. Not only does African education lag behind, but African political rights are subordinated to European domination. Thus, while France has ultimately conceded freedom for Tunisians and Moroccans, she refuses to recognize that Algerians—a people with similar aspirations, history and background—are entitled to the same status. The British concede the rights of Africans on the West Coast, in Somalia and Uganda—and soon in Tanganyika—but refuse to go all the way in Kenya, and certainly dispute these rights in the Central African Federation of Nyasaland and the Rhodesjas.

In Africa, Britain has adopted various formulas of qualitative franchise, not based on any training program for independence, but aimed at preserving the position of the white settlers. Thus, in Uganda, where there is a comparatively small settler community, literacy in the vernacular is the minimum qualification for the vote. But in Kenya, where adult suffrage is granted settlers and Asians, the African franchise is limited by such qualifications as an income of £120 or 8 years of education. In Central Africa, in addition to rigid control of the number of Africans allowed in the Parliament, the initial qualification for the vote is a £750 income.

In Portuguese areas there is not even a pretense at development or training for future self-government. The Portuguese maintain that Angola and Mozambique are integral parts of Portugal, and insist that all indigenous people may be assimilated as Portuguese citizens, but less than 1 percent of the African population has been. Slave labor, forced labor and brutal treatment of Africans is common. No freedom of assembly, association or the press exists and schools are rigidly controlled by the state with the apparent sanction of the church.

In these so-called multiracial areas, representation in the legislatures is based on bers for 60,000 Europeans and an equal number for 6 million Africans in Kenya, 10 elected members for 20,000 Europeans and an equal number members for 20,000 Europeans and an equal number for 8 million Africans in Tanganyika. In Kenya, the per capita expenditure on the 532 a year, while that for an African child is 55.

This, then, is my answer to those who ask us to wait until we are prepared by the colonial powers for self-government. While we are appreciative of the benefits we have derived from our contacts with Europe and other parts of the world—especially in the postwar period—we are convinced that if we are to develop rapidly and effectively, as innological and scientific challenges of the century, we must not only have an effective voice in the government of our case. To suggest that this would lead to an

overnight reversion to barbarity shows an utter disregard for history and the fact that Africa, despite her many temporary handicaps, lives in the 20th century, receptive to all the influences of the attitudes and developments of the present.

The question is not whether African freedom will come, but how and when. Even in areas where there is white settlement it must come, and it is futile to think otherwise. In this context, all one can say about South Africa is that her prospects look blacker each year.

(2) Is the African independence movement democratic?

African nations, like all others, enjoy the right to experiment, and above all the right to make mistakes. It is true that a lot depends on the personality of the leadership, especially during the early days of independence. There does not seem to be, however, any alternative to this period of youth and adventure. To think that continued colonial rule would offer a solution is not only to be unrealistic but to indulge in the highest degree of wishful thinking.

If honest mistakes are made we should

If honest mistakes are made we should not be apologetic, for this is part of the process of operating a democracy the world over. It is ironic—and, indeed, flattering—that the older powers should ask us to guarantee perfection when they have not, even after hundreds of years, reached perfection themselves.

Some non-Africans are concerned about the development of opposition parties and others about the forms that governmental institutions will take. Many people seem to expect that Africa must keep what she inherits from her former colonial masters. Africa cannot, however, for very obvious reasons, adopt a blueprint of European or American institutions. Her governmental institutions must recognize Africa's cultural and social background and must move away from the forms used by the colonial powers—fitted for indirect rule—to a representative system.

Opposition parties are a desirable and healthy development, but they must not merely point accusing fingers at the party in power when difficulties arise. Both sides must play the game according to certain rules

It is unrealistic to expect effective opposition parties in the early days of independence, when the momentum and personality of the liberation movement is still strong and popular, and when genuine differences are usually lacking. To suggest that the popular leaders who combine during the struggle for liberation should break up and form different parties because the book so requires is not only reckless but is to ig-nore the urgent problems that a new state faces. The solution to these problems requires a stable government that can also offer security for expanded economic growth. The responsibility thrust on the shoulders of both the party in power and the often weak, ineffective opposition party is tremendous and one which requires strength of character, honesty of purpose and, above all, a deep conviction in the service of the country and the people.

(3) Does the policy of nonalinement adopted by Africans mean that they are falling victim to Communist propaganda?

Insofar as the African struggle is one against colonial rule, and since all leaders have publicly committed themselves to freedom and universal suffrage, Africa is essentially committed to the democratic tradition. In this common identity the freeworld has a position of advantage over the Communists.

But, although African leaders do not take a neutral position in their choice of democracy and freedom, I doubt whether this is the position the West truly represents in the eyes of the uncommitted world today, Inconsistencies between standards preached and actual practices based on expediency, and the priority given alliances over the basic human rights of peoples in Africa, Asia, and the Middle East have contributed to a loss of faith and confidence.

The West has friendly embraces for the Union of South Africa, despite her racist policies and denial of human rights to 11 million nonwhite people. Why, our people ask, doesn't the West put South Africa in the same category with the Soviet Union? Why is Portugal's use of slave labor not classified with the Siberian slave labor camps? France uses NATO arms supplied by the United States against Algerians. The British shoot more than 50 unarmed demonstrators in Nyasaland and their agents beat to death 11 Kenyans in the Hola detention camp. The free world raises not a finger. Contrast this with the reaction to Hungary and Tibet. The Africans wonder why double standards are used where human rights are involved, and naturally suspect the motives of some of the nations in the free world.

It should be understood that we feel a special kinship with American Negroes, and that we see our struggles as closely related. Segregation robs the United States of the moral standing she needs if she is to give effective leadership to the free world. All the good that she does—even the existence of Supreme Court judgments and other efforts to secure integration—is hardly noticed, whereas Little Rock or a Mississippi lynching receives front-page publicity.

One cannot overlook the fact that condi-

One cannot overlook the fact that conditions exist in all underdeveloped areas that provide fertile ground for Communist propaganda. As I look at this situation, I have come to the conclusion that if the free world is to be effective it must concern itself with how best to remove these conditions—poverty, disease, ignorance, and racism. It should devise a freedom offensive rather than merely engaged in a negative opposition to communism. Too often the free world moves only in emergency situations, pouring in money and guns too late. It is the compromise with principle to accommodate colonialism and racism practiced by countries in the West that undermines the moral capacity of the free world.

(4) What is the future of the white settlers in Africa?

The fear of possible victimization of immigrant groups or of anti-white racism on the part of Africans is often expressed. On the contrary, experience in the independent states so far has shown a deliberate policy of assuring foreign investors of their safety.

The problem really is one for the immigrants themselves. They have come to regard as a right the position of privilege and domination they have always enjoyed. They refuse to adapt themselves to change, and regard equality for all as injustice.

When Europeans emigrate to America they are content to be called Americans; equally they are content to be called Canadians when they go to Canada. They insist on democratic equality there. But in Africa, they are ashamed to be called Africans. How then can we solve this problem for them?

In conclusion, one thing that I must emphasize is that no country can afford to ignore the emergence of new nations in Africa. Each year new states will be born, and with these changes must be established new relationships. Above all, it must be recognized that emergent Africa must not only claim but assert her right to interpret and speak for herself.

Address of Frol R. Kozlov, First Deputy Chairman of the U.S.R.R. Council of Ministers at the Opening of the Soviet Exhibition in New York City, Monday Evening, June 29, 1053

EXTENSION OF REMARKS

# HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1959

Mr. FULTON. Mr. Speaker, as one of the major steps in the cultural exchange program between the United States and the Soviet Union, the First Deputy Chairman of the U.S.S.R. Council of Ministers, Frol R. Kozlov, opened the Soviet Exhibition of Science, Technology and Culture at the Coliseum in New York City, Monday evening, June 29, 1959.

Vice President RICHARD M. NIXON will fly to Moscow to open the American National Exhibition in Moscow on July 25,

1959.

As one of the officials who attended the opening of the Soviet exhibition, I recommend that Americans go to see the exhibition to learn of the scientific, technological, and cultural achievements of the peoples of the Soviet Union. It is certainly interesting and worthwhile to learn of the many developments in all lines—machinery, equipment, automobiles, atomic energy, theater, music, sculptoring, fabrics, fashions, plastics, and especially to see the various models of the sputniks.

In opening the Soviet exhibition Mr. Kozlov made the following address:

ADDRESS OF FROL R. KOZLOV AT OPENING OF SOVIET EXHIBITION IN NEW YORK CITY

Mr. Vice President, Mr. Mayor, ladies and gentlemen, the Government of the Union of Soviet Socialist Republics has authorized me to open here in New York the exhibition of the U.S.S.R.'s achievements in the fields of science, technology, and culture.

science, technology, and culture.

Naturally the exhibition cannot reflect the entire gamut of life in such a large country as the Soviet Union. But we do hope that it will nonetheless help you gain an understanding of how Soviet people live and work, of their achievements and to what they

Twenty years separate us from the time when Americans visited the Soviet pavilion at the New York World's Fair. These 20 years were for us not only years of creative labor but also years of severe trials.

Our country suffered an invasion that has no precedent in history and has sustained unparalleled damage. In the struggle against the Fascist invaders, millions of sons and daughters of our country gave their lives man's most precious possession.

lives, man's most precious possession.

Despite tremendous losses, the Soviet people found strength not only to eliminate in a short period of time the aftermath of war but also to make a big stride forward along the road of economic and technical progress.

A vivid expression of the outstanding successes of our country is the launching in the Soviet Union of the first artificial satellites of the earth and the sun which showed mankind the road to outer space. We do not conceal that this required us to tax our strength considerably, but neither do we conceal our pride in the results of our toil.

You citizens of the United States, a coun-

try that has done a lot to develop science and engineering, will surely understand more than anyone else the ardor instilled in the Soviet people by the colossal upsurge of construction in our country, by the rapid development of science and industry, the large-scale harnessing of the vast natural wealth of our country, particularly in Siberia and the Far East.

Acquaintance with the Soviet exhibition will show you with still greater clarity that Soviet people, who are engaged in peaceful creative labor and who have focused their efforts on fulfilling the grand new plans for the development of peaceful economy, cannot harbor any evil intentions in regard to other nations.

We are staunch supporters of peace and of peace alone. We love and cherish peace, but not, of course, the shaky peace which not without reason is called the "cold war." No, the Soviet people want a genuine, stable peace which can be insured only in the event that states are guided in their interrelationships by the principle of peaceful coexistence. This principle is equally just in its application of all states. At the same time, however, hardly anyone will dispute that the application of this principle to relations between the United States and the Soviet Union is of particular significance to the destiny of peace.

The U.S.S.R. and the United States are universally known to possess the greatest economic and military potentials. The development of international relations and the lessening of international tension depend in a decisive way on how sincere and friendly will be the bonds between us.

I can tell you in all candor that there are strong sympathies in our country toward the American people. We value highly their creative genius, businesslike approach, technical ingenuity, and sense of humor. We value the contributions of Franklin, Edison, and other American scientists and engineers to the development of world science and engineering.

We in our country also speak with admiration of Washington, Jefferson, Lincoln and other outstanding American politicians who fought for democracy and the equality of men. We appreciated the aspirations and hopes of Franklin Roosevelt, our comrade in arms during the years of World War II. Feelings of profound respect are engendered by his appeal to cultivate the science of human relationships, the ability of all peoples of all kinds to live together, to work together in the same world at peace. These

are wonderful words.

After World War II relations between our countries unfortunately deteriorated. An allenation and mutual mistrust arose between us. Economic, scientific and cultural ties between our two countries decreased considerably. And as the American philosopher and poet, Emerson, justly remarked, "Fear always springs from ignorance." In turn fear and mistrust are a scrious barrier in the way of mutual understanding and the improvement of relations between our peoples.

I would like to note with gratification that recent years have seen a certain revivial of the tles between our countries in the fields of science, culture and the arts. It suffices to recall the warmth and cordiality accorded to representatives of Soviet culture and science in the United States and to their America counterparts in the U.S.S.R. to see how advantageous can be the development of such contacts in improving relations among nations.

Let us hope that the exchange of exhibitions, along with other measures to develop exchanges in the fields of science, culture, and art, will become yet another breath of the warm wind which is destined to melt the ice of prejudices and mirconceptions that cloaks American-Soviet relations.

Ladies and gentlemen, it is another heartening fact that of late personal contacts between leading personalities of our two countries have begun to be restored. I would like to note in this context that the Soviet Government and all Soviet people learned with gratification of the forthcoming visit to the U.S.S.R. of U.S. Vice President Nixon.

Certain progress has lately been made in the improvement of Soviet-American relations, particularly in the expansion of cultural ties. But these are doubtless only the first small steps. Extremely little, for example, has as yet been done in the field of developing trade between the United States and the Soviet Union. There did indeed exist animated trade relations between our countries just before the war, and this trade brought both countries nothing but advantages and use.

Under present conditions the successful development of trade between the U.S.R. and the United States of America on the basis of equality would undoubtly also respond to the interests of the Soviet and American peoples, would lead to the consolidation of political relations between our countries and would also serve the purpose of further easing international tension.

of further easing international tension.

There also exist in our opinion objective possibilities to develop other economic ties between the United States of America and the Soviet Union. We both stand to learn from one another. We pay tribute to the United States as a technically highly developed country. You, however, are aware that today the Soviet Union has also achieved great successes in the sphere of technical progress.

We have now launched plans for the further economic development of our country. The Soviet people have undertaken the task not only to catch up with, but let me say outright, to surpass you in the not-too-distant future, both as regards the overall volume of output of peaceful production and in per capita production too. This is a noble task which is in the interests of both states, of both peoples.

This then is the Soviet challenge of which so much has lately been said and written in the West, our intention often being distorted in the process, which we sincerely regret.

But this challenge of ours is not a call to armed struggle. We want to compete for our country to become more prosperous, for our people to live a better life, for them to be better fed and clothed, to have more good homes, to be able to actisfy more fully their spiritual requirements.

Do these intentions of ours threaten any one? All the nations of the world including the Soviet and American peoples can only stand to gain as a result of this sort of competition and challenge.

There is no need to conceal that we have different social systems and that our views on many international issues often do not coincide. But we do live on one planet, and therefore no one from any other world will resolve the question of our interrelationships for us. The affairs of the earth should be solved by people who live on the earth.

I would like here to lay particular emphasis on the following: It is for all of us an indisputable fact that all international issues must be solved peacefully by negotiation. The Soviet Union stints no effort to establish good neighborly relations with the United States and is ready to support any steps in this.

The Soviet Government is an advocate of the idea of statesmen, including heads of government, having more roundtable neetings to exchange opinions on urgent problems of the day.

In conclusion, may I read the address of the chairman of the Council of Ministers of the U.S.S.R., Nikita Sergeyevich Krushchev, on the opening of the Soviet exhibi-

tion in New York:

"I am happy to avail myself of the opening of the Soviet exhibition in New York to convey to the American people hearty greetings and best wishes for prosperity on behalf of the people of the Soviet Union, on behalf of the Soviet Government as well as on my own behalf.

The Soviet Government hopes that the exchange of exhibitions will help the peoples of our two countries to know each other better, which in turn will undoubtedly contribute to better understanding between the United States and the Soviet Union. The achievement of understanding and the establishment of friendly relations between our two countries would be the best guarantee for the preservation of world peace.

"We Soviet people are deeply convinced that differences in our ways of life and in our political and social systems should not be an obstacle to fruitful cooperation in the interests of the peoples of the Soviet Union and the United States. May competition in producing means of destruction be replaced by competition in producing material bene-fits and accumulating spiritual values.

"May the peoples of America and the Soviet Union join their efforts in safeguarding peace and creating on our planet conditions under which people will have no fear for their future and that of generations to come."

# The Sword of Fact for the Chinese Dragon

EXTENSION OF REMARKS

# HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Thursday, June 18, 1959

Mr. PORTER. Mr. Speaker, as many of my colleagues may know, I have expressed myself in favor of looking the facts in the face regarding our relations with mainland China. Robert S. Elegant, chief of Newsweek magazine's Hong Kong Bureau, apparently feels the same way as a result of his experience in the Far East. His book "The Dragon's Seed" was recently published.

Under a previous consent I include in the Appendix an article which appeared in the Honolulu Advertiser of June 13, 1959, in which he points out myths which are governing much of the official thinking about mainland China and makes concrete suggestions for our future relations.

AUTHOR SAYS UNITED STATES-ASIA POLICY BASED ON MYTHS

U.S. foreign policy in Asia is "based on a series of myths \* \* \* and we are losing southeast Asia," Robert E. Eiegant, chief of Newsman Aria," Newsweek magazine's Hong Kong bureau warned here yesterday.

Elegant said the major myths are:

1. That the Chinese Nationalists still play an influential role in Asia.

2. That India serves as a counterbalance for the growing power of the Chinese Com-

Elegant, author of "The Dragon's Seed," a book on southeast Asia to be published next West next week, called for recognition of Red China, the establishment of effective military security in southeast Asia ("which hasn't

been done") and a policy designed "to make the people feel they have a stake in what's going on," including a mass scholarship program for southeast Asia students.

"I don't for a minute mean we should turn Formosa over to the Communists," Elegant said. "I think it can work itself out as a Formosan Republic."

Elegant said the State Department seems to take the position that nonrecognition and firmness are synonymous and that recognition and softness are synonymous.

"But I think that recognition and firmness

can go together."

Virtually every move the United States makes now only drives the Chinese Communists farther into the arms of Russia," Elegant said. "Recognition would put the monkey on their back.

"There are strains in any alliance," Elegant said of the Chinese-Russian relationship. "Recognition would help the Chinese get to know the outside world. It might take 10 years or more, but meanwhile we could allow the strains to develop."

The State Department is far behind the people on the recognition issue, Elegant is convinced.

He said his advocacy of recognition of Red China was greeted with interest on a recent mainland lecture tour. "People are getting fed up with the impasse—they're frightened, perhaps but they recognize that our policy just isn't dealing with the situation."

As for India as a counterbalance in Asia, Elegant said India is too far behind Red China in its industrialization and agricultural program to impress other Asiatic coun-

He said Indians tend to rationalize Communist gains "so long as the only country thing about it-isn't."

Elegant said Red China is using many of the 13 million overseas Chinese in southeast Asia as a potent political weapon.

More sophisticated and energetic than the native peoples, the overseas Chinese are in a position to exercise critical control of commerce and transport in southeast Asia, he said.

The leftist People's Action Party which scored a major victory in Singapore recently received grassroots financial aid from a Chinese rubber tycoon. Elegant said the party was built up under directions from

Elegant said the political influence of the overseas Chinese "is just incredibly out of proportion, to their numbers." Unfortunately, he said, most of them have an unreasoning attachment to the great land mass of China and tend to identify themselves with it instead of assimilating with their adopted countries.

# Congress Considers Libraries and Education

EXTENSION OF REMARKS OF

# HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES Monday, June 29, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address which I delivered at the American Library Association conference, Sheraton Park Hotel, Washington, D.C., on June 26, 1959.

KEYNOTE ADDRESS OF HON. JOHN E. FOGARTY, U.S. REPRESENTATIVE, SECOND CONGRESSIONAL DISTRICT OF RHODE ISLAND, AT AMERICAN LIBRARY ASSOCIATION CONFERENCE, SHERA-TON PARK, WASHINGTON, D.C., FRIDAY, JUNE 26, 1959

CONGRESS CONSIDERS LIBRARIES AND EDUCATION

I am grateful for this opportunity to meet with an organization that is doing so much on behalf of causes that I have long been proud to serve. I refer particularly to the broad fields of health and education. Few groups are more important than the American Library Association in meeting these national challenges.

These are times when every institution concerned with maintaining a free and in-formed citizenry is playing a critical part in our Nation's destiny. Public libraries, as a mainstay of our communications structure, are indispensable in this era of science and technology, of farflung interests abroad, of international tensions and complex domestic problems. These are times when every thinking person needs the information, the background that only reading can give, and the kind of stimulation and diversion that literature alone affords.

Let me say at the outset that the library's role in meeting the intellectual challenge of today is not, in my opinion, a passive one. It is a dynamic role that calls for action on the part of librarians, trustees, and the friends of libraries. It is a role that demands a strong organization, in which all members are highly sensitive to social needs, their own goals, and the roads that are open to those goals. The needs that face usand I think again of our many interests in common-urge an attack with all our resources.

For many years I have been concerned with those needs, both as a Representative to Congress from the Second District of Rhode Island and as chairman of the subcommittee in the House of Representatives which is responsible for appropriations to the Department of Health, Education, and Welfare. Libraries share many of the Department's interests in the fields of health and education, particularly those of the Public Health Service in aging, juvenile delinquency, and blindness. Other common interests are the program of scientific translation and the National Library of Medicine. which became a part of the Service in 1956.

Since ancient times libraries have served the civilized community as storehouses of information. The importance of this func-tion alone is attested by the fact that an ability to accumulate knowledge and transmit it down the generations is an essential difference between man and the lower animals. Increasingly, however, libraries have assumed additional functions—have taken a more active role in the community. The library today is not only a medium of communication; it is an integral part of our educational structure. One of its principal functions is to teach.

We think immediately of school libraries and their importance in general and professional education. But I have in mind a broader concept. The educational institution-the school or college-must not only teach: it must point the student down the road of knowledge. With school behind us, our education has only begun. Here, then, is perhaps the main role of the library-to help us gain the education we need our own way through life. In this, the school library is joined by the public and special librariesthose of industry, societies, government. Together, these facilitate our self-development, our intelligent participation in public affairs, and our pursuit of special interests.

The broader role of the library, in the eyes of a mere observer, calls for more intensive development of special resources for communication, such as films and recordings. The addition of musical and audio-visual dimensions to literature can provide a rounded approach to the library's educational mission. To be sure, there are many difficulties. But only through such expanded programs can libraries, it seems to me, realize their full potential for education and creative experience.

This is most obvious with respect to special groups I have mentioned. Recordings for the blind, for example—an extremely valuable service—certainly bring the library into the forefront of educational institutions. The same might be said of records and prints used in seminars on music and art for the elderly. Or the showing of films in conjunction with courses underway in local schools, as an aid to the guidance of youth. It is these active ventures into education that I, in my work for these groups, find most gratifying in the progressive library of today.

I should like to make a special point about the efforts of the ALA toward the control of juvenile delinquency. This is a problem that has come often to my attention as a legislator. We have worked out, I believe, some good measures, such as the collaborative activity proposed in the current appropriation bills for the Children's Bureau and the National Institute of Mental Health. This is an effort to provide coordination and leadership through two agencies with interest, experience, and rescurces in the fields of child welfare, child behavior, and child psychology. But legislation, however, sound, can never solve this problem alone. It is a problem for the total community: the school, the church, the family—all of our social institutions. The library is very important here, primarily as a preventive, for it can offer books and programs to help our young adults understand themselves and adjust to life.

Many of you have given real thought to the problem of juvenile delinquency, and some of you, I know, are very active in this field. Libraries can reach children early and maintain contact as they grow and develop. Good progress has been made in bringing libraries to low-income areas; and in some cities, librarians trained for service to young people work cooperatively with welfare agencles. Given adequate funds and staffs, libraries can offer individual help, particularly to those who cannot read well. I believe larly to those who cannot read well. the services to young people should be extended and promoted through adult groups, collaborative projects with juvenile courts, and mass media such as radio and television. To learn the best role of libraries in this problem, studies might well be done in collaboration with research and welfare agen-

A realistic view of the library as an educational institution must take into account the question of funds. Legislation for the support of educational and research programs should generally be interpreted to include libraries as educational and research facilities. In the current research construction program of the Public Health Service for example, the National Advisory Council that recommends grants to the Surgeon General holds that libraries are definitely research facilities. Few projects to date have included library construction because the funds have been insufficient to meet the need for laboratories, but the Council at its October meeting will consider whether research library construction can be ex-

One of the Nation's most pressing medical and social problems is blindness. There are about 350,000 blind persons in this country, and the number is increasing despite public

and private efforts over many years. The Public Health Service's National Institute of Neurological Diseases and Blindness is attacking the problem from the medical standpoint. On the social side, I have introduced a bill to establish a temporary Presidential commission to study and report on problems related to blindness and the needs of the blind. A prime objective is to help create a national atmosphere more favorable to the blind person and his role in society. This will call for studies of existing conditions, including rehabilitation programs, the education of blind children, and social services and research. One consideration will be how to provide books and recordings, including problems of procurement and distribution.

I am confident that standards and legislation will be developed through which the best library services now available for the blind will be augmented and extended. It gives me great satisfaction to work toward that end

Among the most important library services are those extended to the older citizen. The magnitude of the aging problem demands that major resources such as libraries, so valuable in guidance, recreation, and many special activities, be encouraged in every way possible to do more in this field. Since 1900, people over 50 have increased in our population from 13 percent to more than 22 percent. By 1970, nearly 25 percent of the American people will be over 50, and 10 percent will be over 65. Social institutions should prepare for the impact of this growth. In an effort to help libraries in this regard. I will urge that they be cited in current bills before Congress.

Probably the legislation most directly significant to the ALA is the Library Servides Act. As you know, the Congress has never appropriated the full \$7.5 million authorized for this Office of Education program. But much progress has been made under the act, such as the extension of library services to 11 million people in rural American areas. I understand that 50 States and Territories are now participating, and that the matching requirements have stimulated State and local governments to put 45 percent more money in libraries than they did before the program began.

Because this is one of the appropriations my subcommittee handles, I am proud of my own part in these achievements. The President's budget called for only \$3 million last year. We in Congress raised this to \$6 million—twice the budgeted amount. This year, the President's budget was \$5 million. We in the House voted an additional million making it \$6 million, the same amount as The Senate on last Wednesday last year. voted for \$7.5 million. If a reasonable compromise is agreed to the tremendous task of providing library services for 25 million more rural people in this country who do not now have access to public library service will be able to proceed. Having followed the program closely in Rhode Island, I am determined to see similar benefits extended throughout the greater United States.

I should like now to discuss some broad problems in which libraries are involvedproblems impeding social and scientific progress, particularly in the field of medical research. One of these is the problem confronting the scientist when he searches the literature before undertaking an experiment. Although he may work in a highly specialized area, the information he needs will be widely scattered. Annually throughout the world, about 180,000 research reports appear in some 5,000 journals, and an estimated 10,000 books are published on medical and scientific subjects. The libraries can do little, of course, to control this volume of publication, although I am sure they would like to. There is, however, a major library responsibility for documentation—the vast field of lending order to this mountain of words.

I do not presume to understand the problem in detail—the many good proposals for solving it, the new equipment available, the programs underway. I do know that researchers in all fields, including the biological, physical, and social sciences, depend largely on libraries for the storage and retrieval of information. Those who write it and those who print it share the responsibility, but cannot come to grips with the problem because they are independent workers. The one unified element—the library—well organized and influential, should take the lead.

If some major library organization, such as the ALA or Library of Congress, were to adopt a plan acceptable to scientists and editors, cooperation would be assured through the desire of authors to be included in the system. For instance, authors would submit abstracts through editors to a central point for indexing, storage, and electronic retrieval. But this is just a thought; many of you are way ahead of me. I only mean to stress that the library—not the individual author, editor or reader—is the place to begin. It is the logical point of vantage for instituting a system that would streamline the search for data, now a task of such proportions as to threaten the value of reports themselves—even to threaten the continuity of knowledge.

Another major need-one in which libraries could play a larger part-is the distribution of educational material on science and health. People are eager for literature on these subjects—current, factual, plain materials that answer their questions and expand their understanding. Federal, State and local health departments, voluntary health agencies, and many other groups pub lish pamphlets and other materials on all the major health problems. Unfortunately. public libraries are often excluded from the distribution lists through doubt that the materials would be promoted or displayed And the libraries have been unable to afford stocks of giveaways, the best approach to meeting the need. I believe, however, that cooperative arrangements could be worked out in which public libraries would play a key role in health education.

In making these various suggestions. have falled to specify how they might best be adopted. Who should set the ball rolling? Certainly, librarians and ALA officials can do much in their own right, and it is they who must follow through once the services are instituted. But their authority and influence are limited. I appeal to the trustees and friends of libraries. They should take the initiative more often, lending their names and efforts to increasing support for their public libraries. Without the active participation of trustees and friends the library can be little more than a storehouse With their active aid, the library can be dynamic agency working side by side with educational, research and welfare groups.
It is largely through trustees and friends that an ancient and honorable institution a latent force for social bettermentrealize its potential in the modern world.

To my mind, the most important ancillary function that a library can perform (a function so intangible that legislators can only talk about it) is to further the spirit of learning in this country. Basic to the improvement of domestic and foreign relations, supremacy in science and technology, to the attainment of major national goals, must be a climate of public opinion more favorable to science, education, and scholarship in general. Our need for this is felt keenly whome talks to scientists and educators, to pople abroad. We need a national shift toward deeper appreciation of all that the library represents in our culture—knowledge, and their advancement through communication.

Librarians, through the selection of reading matter, group activities, and individual guidance, can help immeasurably to further the understanding of science and of the need for research. They can help acquaint young people with names and events in science, shaping their image of the scientists and a research career. They can call attention to opportunities in the sciences courses of study, scholarships, positions. And above all, they can capture and stimulate that interest in the humanities which affects so strongly our sense of values, and thus our attitude toward the learned professions and

their contribution.

To summarize, I would urge librarians to continue developing their programs along educational lines. You have an important inission in helping young people—the misguided and the gifted—older people, and many special groups. Health education is a particularly appropriate field. I urge you, collectively and individually, to further the sciences through advances in documentation and efforts to improve the national climate for scientific endeavor. And I call especially upon the trustees and friends of libraries to Work on behalf of their institutions in such matters as support and the expansion of library functions.

For my part, I will do all I can to help the libraries of the Nation extend their basic and special services to every citizen.

# Equality of Congressional Districts

EXTENSION OF REMARKS

# HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1959

Mr. MULTER. Mr. Speaker, it was my privilege, on June 29, 1959 to present a statement to the House Judiciary Committee in support of my bill, H.R. 575, which would require the establishment of congressional election districts composed of contiguous and compact territories, and would require that the districts so established within any one State contain approximately the same number of inhabitants.

My statement follows:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT, NEW YORK, BEFORE THE HOUSE JUDICIARY COMMITTEE IN SUPPORT OF H.R. 575, JUNE 29, 1959

Mr. Chairman and members of the committee, I appreciate the opportunity afforded to me to submit to you my views in support of my blil, H.R. 575.

Equality among congressional election districts is so axiomatic to our ideas of democratic government that the subject never relarge headlines and is seldom discuased around the country. Few elements of the electorate ever stop to consider the realities of the situation.

Theoretically, the House of Representa-tives is the ultimate symbol of equality of representations. representation in the Federal Government. The name itself was chosen because it was interested that the legisintended to be a truly representative legis-

It is assumed that each congressional district is roughly equal, in total population, to every other district. Certainly the intention of the Foundtion of the Constitution and of the Founding Fathers is clear enough: the House was to represent the people; the Senate was the Chamber of the States. Most people take it for granted that the House of Representatives is actually representative.

Reality, however, falls seriously behind Reality, however, fails seriously behind theory in many cases and, in some cases, out-rageously so. The inequities that were per-petrated or perpetuated in the redistricting that followed the 1950 census are instructive. In no less than 25 States there was a difference of more than 100,000 between the populations of their largest and smallest congressional districts. In 13 of those 25, the difference was more than 200,000. And in five States there were actually districts with populations that outnumbered other districts in the same State by more than 300,000 inhabitants.

The practical effect of such disproportions obvious. In one of our States, about 170,000 citizens were given exactly the same voice and voting strength in our House as another group of more than 400,000. The inequity becomes even more absurd when that group of 170,000 is made equal in status with a group from another State consisting of more than 600,000. We have here a situa-tion in which the individual citizen in the smaller district is given as much power as five citizens in the larger district.

Primary responsibility for these inequities rests with the State legislatures, but Congress is also at fault. The State legislatures control the details of redistricting and, because of carelessness, or ignorance, or design, they have permitted or fostered this undemocratic pattern. Many States have not bothered to redistrict for as much as 3 or 4 decades.

Under article I, section 4, of the Constitution, Congress has the power to correct the inequities. This section states that Congress "may at any time by law make or alter \* \* \* regulations" as to the "times, places, and manner of holding elections for \* \* \* Representatives \* \* \*." Congress has, in fact, acted in the past. The act of January 16, 1901 (31 Stat. 734), for example, provided that Representatives "shall be elected by districts composed of a contiguous and compact territory, and containing as nearly as practicable an equal-number of inhabitants."

Unfortunately, that language was omitted from the act of 1929 (46 Stat. 26) and subsequent apportionment legislation. To remedy this omission, I have introduced H.R. 575 to amend section 22 of the act of June 18, 1929, as amended.

This bill restores the provision that each district shall be composed of contiguous and compact territory, a safeguard against gerrymandering. It further provides that the number of inhabitants in any district shall not vary more than 10 percent from the average district within such State as computed from the figures of the immediately preceding census. By providing a 10 percent leeway, the bill recognizes and allows for the difficulties in arriving at exact equality.

Authorities differ as to the ideal maximum percent of deviation from the average. A committee of the American Political Science Association recommended a 15 percent maximum. My own opinion is that 10 percent is a sufficiently flexible guide.

Recently, the New York State Republican chairman in addressing a political gathering, referred to the fact that in that State it was constitutionally impossible to elect a State legislative body controlled by the Democratic Party. He, of course, meant that as long as the State legislature could arbitrarily, even capriciously, fix district lines, subject to no review by any court, the Republican Party would continue to gerry-mander that State.

With about 55 percent of the population New York City gets only about 45 percent of the representation. Only the Congress can remedy that unfair, inequitable and immoral situation.

Finally, H.R. 575 authorizes the Clerk of the House to refuse the credentials of any Representative elected from a district not conforming to these requirements. Congress is thus given a procedure for enforcing

the standards it establishes.

Presumably, the inequities that were established following the 1950 census will have become even more aggravated by 1960. It is my sincere conviction that H.R. 575 or similar legislation is urgently required if we are to reestablish the democratic composition of the House of Representatives.

# Resolution Urges Enactment of H.R. 6571

EXTENSION OF REMARKS OF

# HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. ROBERTS. Mr. Speaker, the House of Representatives of the State of Alabama has adopted House Joint Resolution 37, concurred in and adopted by the Senate, which refers to a bill which I have introduced, H.R. 6671, to extend social security child's insurance benefits to age 22 as long as the child attends

Of course I am delighted that the Alabama State Legislature has endorsed this legislation, and I am pleased to present the resolution for the attention of the membership.

The resolution referred to follows: HOUSE JOINT RESOLUTION 37

To the Honorable Senate and House of Representatives of the United States of of America, in Congress Assembled:

We, your memorialists, the Legislature of Alabama, in regular session assembled, respectfully represent as follows:

Whereas there is pending before the Congress a measure, H.R. 6671, to amend title II of the Social Security Act to provide that the child of an insured individual, after attaining age 18, may receive a child's in-surance benefits until he attains age 22 if he is a student attending school; and

Whereas the education of youth is impera-tive in this era and should be promoted and encouraged in every possible way: Now, therefore, be it

Resolved by the House of Representatives of the State of Alabama (the Senate con-curring), That the Congress of the United States be memorialized to enact as speedily as possible the bill, H.R. 6671, 86th Congress, 1st session, introduced in the House of Representatives of the United States April 27, 1959, by Mr. Roberts, of Alabama.

Resolved further, That copies of this memorial be sent to the Honorable Speaker of the House of Representatives, to the Honorable President of the Senate of the United States, and to all Members of the Alabama congressional delegation.

Adopted by the house of representatives, June 5, 1959.

Concurred in and adopted by the senate. June 9, 1959.

Approved by the Governor, June 18, 1959.

# A Bill To Protect Domestic Industry and Labor

EXTENSION OF REMARKS OF

# HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 24, 1959

Mr. PELLY. Mr. Speaker, I take this means of informing my colleagues that I have introduced H.R. 8013 which would amend the so-called Buy America Act in such a way as to protect American workers and wages against low substandard foreign competition in connection with Federal Government purchases.

My bill provides that the United States in acquiring materials and products for public use inside the United States States would make awards competitively between domestic and foreign bidders on the basis of a preference to offset the differential between average wages prevailing in our country as against the corresponding foreign pay scale.

As Members know, at present the law provides for a flexible preference-presently set by Executive order at 6 per-cent—which is meaningless to a large extent as far as domestic portection is concerned.

As an example of how our American standards of living are being undermined by the operation of the present unrealistic 6 percent differential, I should like to cite a situation in my own State of Washington. In this case the Bonneville Power Administration issued a bid invitation on 14,000 tons of structural tower steel. The lowest domestic bidder in this instance was the Bethlehem steel fabricating plant in Seattle, with a price of \$4,074,406. The low foreign bid was \$3,324,555 by a firm in Milan, Italy, which made the difference between the two low bids about 22 percent.

Under the law, the Bonneville Power Administration had no choice but to award the contract to the Italian firm, whereas had a realistic differential existed, as provided in my bill, H.R. 8013, the Seattle firm would have been the successful bidder. The fabrication of these towers for the Bonneville Power Administration would have provided 21/2 years' work with a payroll which would have assured better than 200 American families the means of livelihood with a return of taxes to the Federal Treasury from the company and the workers.

I wish to make it clear, Mr. Speaker, that this proposed change in the law would not be susceptible to allowing exorbitant profits on monopolistic items. In this respect, to prevent profiteering, I have included a provision in my bill for exclusion of bids where a domestic price is unreasonably high. Likewise I have exempted purchases abroad or during a national emergency or where the national security would be jeopardized. Any cost to the Government under my bill which exceeded 25 percent more than a foreign bid would be deemed unreasonable.

The wage comparison would be established by uisng current official wage rates as published by the Bureau of Labor Statistics of the Department of Labor.

Mr. Speaker, Congress has the obligation of protecting our standard of living from being undermined by cheap foreign scales of pay. H.R. 8013 will accomplish such protection without extra cost to the Government on account of profiteering by industry. I hope, Mr. Speaker, that the House Committee on Public Works will give speedy consideration to this desirable legislation. The increased business as a result of my bill will create jobs and benefit business. It will stimulate the overall economy of the country. This is the type of legislative measure that will tend to lift wages and working conditions in other nations rather than for foreign industries, as they do now, to depress wages and employment conditions in the United States.

Congress should act promptly to correct the Buy America Act and relieve our American industry and labor from unfair foreign competition.

Tribute Paid to Veterans' Administrator Sumner Whittier

> EXTENSION OF REMARKS OF

# HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. BOLAND. Mr. Speaker, last Sunday Drew Pearson paid tribute to Administrator Sumner Whittier of the Veterans' Administration in the Washington Merry-Go-Round column which appeared in the Washington Post and Times Herald.

As a member of the Appropriations Subcommittee which reviews the Veterans' Administration's budget estimates. I have had a firsthand opportunity to observe Mr. Whittier on many occasions since he assumed that responsible post, and I concur with the sentiments expressed by Columnist Drew Pearson.

Mr. Speaker, under leave to extend my remarks, I include Mr. Pearson's article in the Appendix of the RECORD:

VETERANS' ADMINISTRATOR

It may be a shock to Washington's burgeoning bureaucracy, but Veterans' Administrator Sumner Whittier has taken steps to humanize the giant, sprawling agency under his command.

"Human dignity is the first objective of our personnel policy," he explained to this column. "We don't want our workers to feel like cogs in a cold, impersonal machine."

To achieve this, the former lieutenant governor of Massachusetts consults with employees about new moves, informs them of decisions ahead of the press, encourages them to add homey touches to their offices. He even polled the employees in the central office to find out what hours they preferred to work. Abiding by the majority verdict, he set the hours from 8 a.m. to 4:30 p.m.

Yet Whittier has been able to give his

agency a personal touch without sacrificing necks and streamlined operations. He keeps efficiency. In fact, he has smashed bottle-his fingers on what each division is doing through a control room filled with up-to-theday charts on all veterans' activities.

His humanizing efforts extend also to those who are served by the Veterans' Administration. He has speeded up action on inquiries, cut gobbledegook out of VA letters and stressed courtesy in all dealings with vet-

Without fanfare, Whittler has been doing a great job.

(Note,—Whittier assigned two Negro doctors to Mount Alto Veterans' Hospital here— Martin Booth and Charles Epps. Southern veterans pay tribute to their ability.)

### Is Thrift a Mockery?

EXTENSION OF REMARKS OF

# HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 30, 1959

Mr. DIXON. Mr. Speaker, the Deseret News, published in Salt Lake City, deserves special congratulations for its contest on what inflation means to the average person. An expense-paid trip to Washington was offered for the most outstanding letter written to the News-I am inserting in the Appendix to the RECORD the remarkable winning letter written by Mr. Jay B. Horrocks, of Salt Lake City.

I would also like to call the attention of Congress to the outstanding Deseret News editorial which appeared at the same time on inflation:

How Inflation Has Hurt Me-Our FRIENDS HAVE SCOFFED

(By Jay B. Horrocks)

Inflation hurts most where it cuts deepest-The real hurt is inflation's effect upon our attitudes and basic beliefs. Age-old virtues are being proved questionable. My faith in the doctrine of self-government is severely shaken.

My wife and I have carefully saved since we were married 9 years ago. Our car is an old one, our clothing is modest. My insur-ance program is permanent and adequate. of which I am proud. We have believed that through adhering to sound financial principles, spendies and ples, spending less than we made, we could accumulate money that would provide us a nice home and a good standard of living, our children could be educated to professional levels, and we could afford to be generous to those less fortunate. Retirement has been planned in terms of today's dollar.

Has this way of life earned us respect? No. Our friends have scoffed at our sacrifice and, to this point, have proved us wrons.
The savings that were to have built our home 3 years ago are still inadequate. Our friends and to borrow all we can and let inflation have of the bull to be a second to be pay off the bill. We've defended ourselves by quoting Benjamin Franklin, our church leaders, and others who have said thrift is a virtue. Our friends retort, "Because of inflation, it is safer to speculate than to save." It seems to

save." It seems almost the truth.

My father has a favorite saying. "My word
is as good as my bond." "Bond" has always
is as good as my bond." "Bond" has always meant respect, sureness, and safety to me. Now Uncle Sam is paying off his bonds with depreciated dollars. Inflation degrades both bonds and Uncle Sam.

Our thoughts suggest that tomorrow values may be restored. Again our friends point out the campaign promises made in the last election. Millions and billions off their tongues as glibly as though they were talking about grains of sand at the seashore. Reason tells us this doesn't curb inflation.

The plight of the pensioned is pitiful. Their S-O-\$ (save our dollars) is desperate. They mind not so much the reduced living standards as the loss of self-respect that accompanies a dole. Increased social security benefits, which weren't paid for by the recipients, are a Government dole forced to be paid by that devil inflation. This dole does have a terrible price in the misery of our oldsters, the confusion of our family heads, and the "something for nothing" attitude it

is breeding in our younger generation.

The country grew strong in an atmosphere that valued and rewarded individual initia-

tive, sacrifice, and foresight.

My wife and I don't ask for sympathy. We're strong and healthy. We don't mind Working extra hard for a cause we believe in. We'll gladly tighten our belts, and widows and old people will, too, just as they did after Pearl Harbor, to protect our way of life against an insidious enemy.

Inflation is not prosperity. Inflation is too heavy a tax to pay for new roads, wheat stockpiles, and trips to the moon. Get this monster "inflation" off our backs.

### WHAT THIS EROSION MEANS TO YOU-EVILS OF CREEPING INFLATION

Recently the distinguished industrialist, Clarence B. Randall, published an article protesting most vehemently against the idea that creeping inflation is a small and necessary price to pay for continuing industrial expansion.

Creeping inflation is really creeping catastrophe, he wrote, declaring that it can no more be tolerated than a creeping avalanche

moving inexorably down on a Swiss village, It's worse, in fact, he wrote, because everyone is aware of the avalanche and can protect himself, while for the most part the man in the street or the shop or the office neither sees nor fully understands what is going on in respect to creeping inflation.

What Mr. Randall says about the need of protecting the integrity of the dollar and the vigor of the economy is true and tremendously important. His observations, however, on the ignorance of the American common man about this problem, as evidenced in the flood of letters received in response to this newspaper's request for personal experiences with inflation, does not apply to people in this area.

The man in the street, or the shop, or the office does understand what is going on. Scores upon scores of them—the teacher in the classroom, the widow on the farm, and a great many other Americans—have written the Deseret News the past 2 weeks describing in considerable detail what is going on, and what inflation's effect has been in their personal lives.

These letters have come from people in virtually every walk of life. They have emphasized many themes. But three or four themes have dominated.

One is the grim truth that inflation sucks at the moral strength of America—that a man can't teach his children integrity very

effectively when his own Government doesn't practice it.

Another is that thrift and saving have become discredited—are actually scoffed at by one's neighbors, as the prizewinning letter points out. And what is to happen to the American economy when the savings that are the lifeblood of new investment are dried

A third theme is the unemployment that results from the flight of American capital overseas by inflation. New industrial plants are going up all over the world, producing goods that are then shipped to America or to markets that America used to dominate. Complete new steel mills are being built in India, Germany, Red China, South Africa. But in America? None. American labor will be seriously hurt if this trend is allowed to continue.

And a fourth dominant theme, emerging in a heartbreaking number of letters, is the complete unfairness of shifting the burden of inflation not to shoulders of able-bodied working men, but to shoulders of the unemployables. From the sick, the aged, the retired, the widow came letter after letter tragically telling of plans for security that had soured under inflation's grinding pres-

Representative CHARLES E. BENNETT, notable economy advocate in the House, spells out in an article on this page some approaches for Congress to get spending under control. Many of them sound good. Recognition of Congressmen for economy efforts, insistence on pay-as-you-go principles, routing of all appropriations through a single committee and perhaps in a single bill, and giving the President the right of line veto of appropriation items, all could help the fight for fiscal sanity.

But essentially, the job gets back to the public. As long as the public feels that economy is fine for the other fellow, as long as the lobbyist for spending speaks lounder than the taxpayer for economy, as long as the attitude persists among Conresemen that nobody ever gets a statue built for economizing, the inflationary pressures will continue to grind away.

The results of our letterwriting contest encourage us to hope that the basic public attitude is changing. Inflation is being recognized for what it is. The public is prepared as never before, we believe, to reward honest, effective efforts to control inflationary spending.

#### LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

# GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

#### RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at \$1.50 per month, and where single copies may also purchased. Orders are also accepted for the printing of speeches in pamphlet form.

## CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p.

#### PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

#### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.
